Former Naval Training Center Boat Channel, Installation Restoration Site 12, Sediment Remediation Project, Record of Decision (RoD) – 30 Day Public Notice.

Staff Contact: Sherrie Komeylyan

The Department of the Navy (DoN) has provided the San Diego Water Board with the *Final Record of Decision/Final Remedial Action Plan for Installation Restoration Site 12, Boat Channel Sediments, Former Naval Training Center, San Diego, California*. The RoD presents the selected remedy for Installation Restoration Site (IR) 12, Boat Channel Sediments. The selected remedy includes removing chemically impacted sediments from areas of concern by dredging and proper disposal of the sediments in a regulated solid waste landfill. These remedial efforts will help to minimize the potential for ecological exposure to contamination present within the sediments that may pose an unacceptable ecological risk. In selecting this remedy for IR Site 12, the DoN has determined that the site will be protective of human health and the environment and will comply with Federal and State Requirements.

The DoN provided a public comment period from September 22, 2016 through October 24, 2016, and held a public meeting on October 6, 2016. No significant changes to the remedy, as originally identified in the Proposed Plan, were necessary or appropriate based on public comments.

Additional details about this case are available to public review by submitting a file review request to the San Diego Water Board office, or by accessing the information on-line in the GeoTracker database. Provided no significant issues arise during this public notification period (May 8, 2017– June 8, 2017), the San Diego Water Board will authorize the RoD thereby concurring with the proposed activities.
