**April 28, 2009 Webinar Announcement**

**Global Climate Change Impacts on California's  
Hydrology**

Dear GeoSym09 Participant:

In order to reduce our impact on the climate and on California's economy, the planning committee is changing the venue for GeoSym09 from a conference format at CalEPA Headquarters in Sacramento to a series of Webex seminars (Webinars). If conditions allow, we plan to resume the conference format in 2010.

For GeoSym09, we are scheduling three webinars. Our first Webinar will focus on ***The Impact of Climate Change on Water Resources***. Subsequent webinar topics we are considering include: abandoned mines, database tools and geo-technological updates.

**Join us** for our first Webinar on the afternoon of April 28, 2009 at 1300 PDT. Speakers include Dr. Graham Fogg (UC Davis) presenting "Subsurface Storage and Recovery: Perspective on Climate Change and Sustainability of Groundwater Quantity and Quality in California." John Andrew (DWR) will present on "Climate Change Initiatives in California."

To encourage interaction and networking between colleagues at different agencies and to cut down on web access, we welcome you to attend the webinar at a satellite meeting location, such as DTSC's office in Cypress or Chatsworth, or the Water Board's office in Oakland.

**REGISTER SOON.** Yes, GeoSym '09 webinars are free (no registration fees) to attend but you will need to register! We will post updates on the Water Board Academy webpage <http://www.waterboards.ca.gov/academy/> on registration, satellite office locations, schedule and program soon. We look forward to your participation. Directions for logging on to Webex will follow.
