## **NOTICE OF APPLICABILITY (NOA), CHEVRON PIPE LINE COMPANY, WATER QUALITY ORDER NO. 2003-0003-DWQ-0006, DEWATERING DISCHARGE TO LAND, SOLANO COUNTY**

Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff received a Notice of Intent (NOI) on 29 January 2009 from the Chevron Pipe Line Company (Discharger) for the Bay Area Products Line Repair Project. The NOI is for State Water Resources Control Board regulatory coverage under the *Statewide General Waste Discharge Requirements for Discharges to Land with a Low Threat to Water Quality* (Order). Based on the information in the NOI, we have determined that the project meets the required conditions for approval under this Order for your dewatering project and the discharge to land.

A copy of the Order is enclosed and you may also view the Order on our website at [http://www.waterboards.ca.gov/board\\_decisions/adopted\\_orders/water\\_quality/2003/wqo/wqo2003-0003.pdf](http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf). You are urged to familiarize yourself with the contents of the entire Order which prescribes mandatory discharge monitoring requirements. The project activities must be operated in accordance with the requirements contained in the Order and with the information submitted in the NOI.

### **PROJECT DESCRIPTION**

The Chevron Pipe Line Company (CPL) owns and operates the Bay Area Products Line. Refined petroleum products are transported from Richmond to a station near Brentwood through this pipeline system. CPL has determined that repairs are needed to a portion of the pipeline along the Sacramento Leg. The proposed repair activities at Site No. 116 include excavating a 300 foot trench (20 feet wide and six feet deep) to expose the pipeline for repair. The trench will transect Hass Slough where it will be necessary to install temporary dams to stop water from collecting in the trench. Dewatering of the trench is necessary to provide a dry area for maintenance operations. Approximately 380,400 gallons per day of groundwater and surface water, from Hass Slough that may enter the trench, will be discharged to 70 acres of agricultural fields located on Main Prairie Road in Solano County for irrigation, percolation, and/or evaporation.

The entire project will last approximately 10 days, and will begin once all of the necessary permits are obtained. All the work necessary to complete this project will be accomplished within this construction season, which ends **15 October 2009**. Once pipeline repairs have

*California Environmental Protection Agency*

been completed, the temporary dams will be removed and all excavated soil will be used as backfill. All impacted areas will be returned to pre-construction conditions.

The groundwater discharged will be extracted from the same aquifer with little potential for evapoconcentration. Therefore, the discharge poses a low threat to groundwater quality.

### **MONITORING AND REPORTING**

The Discharger shall comply with the monitoring and reporting requirements prescribed in Monitoring and Reporting Program No. 2003-0003-DWQ.

Please review this Notice of Applicability carefully to ensure that it completely and accurately reflects the proposed project and dewatering discharge. If the discharge violates the terms or conditions above, the Central Valley Water Board may take enforcement action, including assessment of administrative civil liability. If the method of waste disposal changes from that described in the NOI, you must submit a new NOI. As required by the Order, all discharged water must remain on the agricultural field.

### **GENERAL INFORMATION AND REQUIREMENTS**

The Discharger shall comply with the Prohibitions, Discharge Specifications, Provisions, and Standard Provisions of Water Quality Order No. 2003-0003-DWQ. The Discharger will discharge the waste subject to the terms and conditions of Water Quality Order No. 2003-0003-DWQ and will maintain exclusive control over the discharge. As such, the Discharger is primarily responsible for compliance with Water Quality Order No. 2003-0003-DWQ.

Failure to comply with the requirements in the Order may result in an enforcement action as authorized by provisions of the California Water Code. Discharge of material other than described in the application is prohibited.

Within **60 days** of completion of the project, the Discharger shall submit a Notice of Termination using the standard form that accompanies Water Quality Order No. 2003-0003-DWQ.

If you have any question or comments regarding this NOA, please contact Mary Serra at (916) 464-4732 or at [mserra@waterboards.ca.gov](mailto:mserra@waterboards.ca.gov). If you have questions regarding monitoring or compliance issues, please contact Steve Rosenbaum at (916) 464-4631 or [srosenbaum@waterboards.ca.gov](mailto:srosenbaum@waterboards.ca.gov).
