Subject: SFWPA Draft TSO R5-2010-0060-1 Review Comments

Scott,

We reviewed the draft TSO you provided and have the following questions/comments.

1. Section 16c on page 4 – “ *This Order establishes a time schedule to bring the waste discharge into compliance with final effluent limitations that is as short as possible, taking into account technological, operational, and economic factors that affect design, development, and implementation of control measures that are necessary to comply with copper and lead effluent limitations.*” – Should this be copper & aluminum ?
2. Section 18 on page 4 – This section references WDR Order R5-2010-0059 in regards to copper effluent limitations. I believe WDR Order R5-2010-0059 is for aluminum effluent limitations and copper effluent limitations are contained in WDR Order R5-2010-0060.
3. Section 5 & 6 on page 8 – It looks like these sections need to be combined.

These were the only items that we noticed in our review.

Thank you

Scott Alcantara
