

### CORROSION CONTROL MONITORING WORKSHEET - ENTRY POINT SAMPLES

Monitor at least every two weeks for pH, corrosion inhibitor dose rate reading, corrosion inhibitor concentration measurement, and chlorine residual at the entry point to the distribution system. Enter the results in the table below and submit the completed form to the Division every six months. Use a separate form if more than one entry point exists.

System Name:  
Monitoring Period:  
Entry Point Location:

System Number:

Date	pH	Orthophosphate Dose Rate (mg/L)	Orthophosphate Concentration (mg/L)	Chlorine Residual (mg/L)
