Subject: PG&E Proposed CAO
Date: Friday, March 13, 2015 11:32:53 AM

I own property in Hinkley and would like to submit comments on the water boards proposed hinkley PG&E cleanup order. The water board should require PG&E to monitor the northern plumes more than what is proposed. The use of monitoring wells and domestic wells is important. PG&E should supply the residents in the northern area with complete whole house replacement water systems if there is an increase of chromium 6 concentrations measured in domestic and or monitoring wells. Residents in the northern plume areas have been forced to drill deep wells to avoid PG&E contaminated water but also due to that are now drinking water high in arsenic (can't win). The water board should order full whole house replacement water in the north and not just undersink reverse osmosis units just because PG&E doesn't want to monitor in that area as much as they do in the south, for the residents that show increasing trends of chromium in either domestic and monitoring wells. The water board has even shown proof that the chromium in the north is PG&E's responsibility. This order should also increase the monitoring for arsenic and uranium in the north due to PG&E remediation activity and also require PG&E to supply whole house water to residents that are affected by PG&E arsenic, uranium, and water elevation dropping due to their remediation. Everyone is now focusing only on the "south" plume and not the north plume. The north plume is just as important as the south plume because this could have been stopped from migrating several years ago.

Sincerely,
Sam
