Recent studies of restaurants and automotive-related facilities (gas stations, auto repair shops, etc.) show that these facilities are consistently potentially high sources of pollutant contributions to the storm drain systems. (For example, this was the conclusion of the survey recently performed by Hermosa Beach.) Accordingly, these facilities should be frequently inspected. Similarly, facilities that are already being inspected by a municipality (such as facilities in an industrial waste inspection program) should be inspected frequently -- the current inspection should just be expanded to include a storm water component. Further, the current draft in section III.D.1.b. provides that municipalities with a population of greater than 250,000 must inspect only a "subset" of facilities identified in sections III.B.1.a.2. and III.B.1.a.3. NRDC does not agree that a City's population size should limit the range of facilities that it should have to inspect.

Instead, we propose that the Permit set the following minimum inspection requirements:

(1) The Permittees must create a list of all facilities in their jurisdictions subject to the State Industrial Activities Storm Water Permit and determine whether each applicable facility has submitted a Notice of Intent (NOI) as required by the State Permit, which database will be created by a review of SIC codes and other available data, questionnaires, phone surveys and, as necessary, performing site visits and other appropriate follow-up;

(2) If the industrial facility is already being inspected by the Permittee through an existing program, a stormwater component must be added to that inspection;

(3) The Permittees shall conduct annual storm water inspections of all restaurants, gas stations, and automotive-related facilities (auto repair shops, auto body shops, etc.);[1]

(4) The Permittees shall inspect the remaining Phase I facilities according to the following minimum schedule: 30% of the remaining facilities annually; 30% of the facilities biannually; and the remaining 40% of the facilities triannually. The Permittees shall divide the facilities for purposes of annual, biannual, and triannual inspections according to the relative likely contribution of stormwater pollution posed by each facility (i.e., the highest priority facilities must be inspected annually);

(5) The Permittees shall annually inspect malls, amusement parks, commercial and industrial business parks, and commercial nurseries.

(6) The Watershed Management Committees shall develop a schedule on a watershed-specific basis for inspections by Permittees of Phase II facilities, which schedules will be based on the relative likely contribution of stormwater pollution posed by each type of Phase II facility.

---

[1]We hope that the County Department of Health will be able to help the Permittees fulfill this restaurant inspection requirement by offering to add a stormwater component to its restaurant inspections at a nominal charge to cover this additional cost. We urge the Permittees immediately to commence discussions with the County to determine if this is feasible. We should note that the County Department of Public Works has agreed to use its best efforts to try to obtain an agreement by the County Department of Health to add a stormwater component to County restaurant inspections.

We note also that the County of Los Angeles has committed, as part of its settlement with NRDC and the BayKeeper to implement the inspection program outlined in paragraphs (1), (2), (3) and (5) above. The cities of Beverly Hills and El Segundo have implemented comparable or more stringent programs to that of the County (to the extent applicable in their jurisdictions).

The County, NRDC and the BayKeeper did not reach agreement as to paragraph (4), instead leaving open the level of these industrial inspections for determination by the Regional Board in the new Permit (paragraph 6 was not discussed).

Sections III.E.6. and 7. have been removed from the prior draft of the Permit. These sections should be reinstated as follows. First, section III.E.6. required the development of a uniform checklist to be used for guidance by the public and during inspections. The checklist serves an important function, both in ensuring adequate inspections and in providing the public with information regarding the requirements necessary to comply with storm water regulations.

Section III.E.7. from the prior draft specifically required reinspection until a facility complies with the storm water regulations. This was a critical component of the May draft Permit and should be reinstated in future drafts.

Section E -- Reporting

The reporting requirements should specifically require an evaluation of the effectiveness of this component of the program as part of the annual report. In addition, the new reporting section provides that the Permittees should "recommend a strategy" for storm water management for the following year. This section should be more concrete and require submittal of proposed changes to the Permittee's program based on this evaluation (instead of just "recommendations").

Other Deleted Sections

Other elements left out of the Draft Permit that weaken the Permit include the elimination of the requirement to report industrial Permit non-compliance to the Board and the elimination of the public viewing via electronic bulletin board system of the NOI listings.

IV. PROGRAM REQUIREMENTS FOR NEW DEVELOPMENT AND REDEVELOPMENT

On a general note, this section continues to combine long-term requirements for new and redevelopment with construction requirements. This is often confusing. We recommend

separating out the construction requirements. As we discuss below, the new development and redevelopment requirements are generally quite comprehensive and provide a reasonable level of specificity. Most of our concerns lie with the establishment of minimum requirements for construction BMPs.

Section A. -- Regional Policy

The term "regional" is used in sub-section IV.A.1. without any reference as to what that encompasses. Does this mean area-wide or does it apply only to specific watersheds? Please define this term or use a term that is already defined.

This section provides for the development of a "policy" and "minimum requirements" for new development and redevelopment. As noted above with respect to development of the Illicit Connections and Illegal Discharges/Disposal programs by the EAC, it is essential that the proposed policy and minimum requirements be subject to public review and comment and then approval by the Regional Board. Similarly, sections IV.B.1. through 3. should be subject to public review and comment provisions. Subsection 6 should provide for Permittees to "propose and implement a program to encourage developers to maximize pervious areas and storm water infiltration ...."

In subsection IV.A.2.b., the Permit provides that the EAC establish minimum requirements for "construction best management practices." We urge the Regional Board to include certain minimum requirements, which we will discuss below.

We support the requirement of submission of an Urban Runoff Mitigation Plan ("URMP") as the best vehicle for providing review of development plans with respect to storm water runoff and guidance for inspectors. Unfortunately, there is no comparable provision for the submittal of a written plan for the control of erosion and storm water pollution generally from construction sites. Our experts consistently have found that requiring submittal of a written plan for storm water control has a beneficial impact on erosion and storm water pollution control because it forces the developer/contractor to consider erosion and other storm water pollution controls *prior* to construction during the rainy season and allows for review of those controls by the municipality.

We propose minimum requirements for construction activities (which requirements have been agreed to by Los Angeles County). These requirements, as set out in full below on page 13 in our discussion of construction activities.

Section C -- Identification of Sources

The term "screening criteria" is not defined in the Permit. It appears that in this section the Regional Board intends to allow the EAC to determine the criteria for when

construction sites should be subject to various regulations. We believe that this is proper role for the regulating body, the Regional Board, and not the regulated community. Accordingly, we propose that the permit specifically include a definition of "small" construction sites. All construction sites should be subject to some form of regulation, but the requirements for those smaller sites would be somehwat less restrictive. We recommend that the Permit incorporate the definitions that have been agreed upon by the County, after consultation among the parties' storm water experts, as discussed below in our comments on construction practices.

Section D -- Prioritization of Sources

As noted above, we urge the Regional Board to determine appropriate levels of regulation. Accordingly, the prioritization provided by this section would not serve that purpose, except to the extent certain types of construction sites are singled out for separate more stringent treatment because of a higher pollution potential.

Section E -- Control Measures

This section of the Permit requires the most revision: it improperly only focuses upon construction sites of greater than five acres. Erosion, sediment, and storm water pollution controls should be required at all sites regardless of size. The Permittees should therefore be required to perform all the activities set forth in this section (i.e., development of checklists, evaluation of BMPs, etc.) for all construction sites. There is no reasoned basis for separate regulation of only construction sites over five acres. Permittees may provide for separate requirements for projects in different categories, but each category must be regulated. Given the existing planning process, this does not impose a significant burden on the municipalities. The County and the cities of Beverly Hills, El Segundo and Hermosa Beach have all agreed to regulate storm water runoff from all construction sites.

We propose the following additional minimum requirements for the Permittees (which have been agreed to by the County):

(1) Erosion (Stormwater) Control Plan

The Permittees shall require submittal of a written Storm Water Control Plan that includes specification of erosion control and other storm water control measures that will be implemented on the construction site. Projects over two acres shall provide a narrative description of how and why specific control measures specified on the plan were selected (and why others were rejected). However, projects less than two acres would not be required to comply with the stricter requirements of a narrative description of how

specified BMP measures were selected or rejected, except in special circumstances; rather, a checklist would be developed for those projects.

(2) Storm Water Pollution Prevention Plans

The Permittees shall verify that Storm Water Pollution Prevention Plans ("SWPPPs") have been prepared for projects in their jurisdictions (the County shall do so for the unincorporated County areas) subject to the State Construction Activities Storm Water Permit ("Construction Permit"). If the project proponent cannot show that a NOI and a SWPPP has been prepared, a Permittee shall not issue the proponent a grading and/or building permit.

A municipality could choose to have its inspectors review the SWPPP prepared under the State construction Permit for projects over five acres in lieu of a separate local requirement for submittal of a written storm water plan for those projects. However, we are not in these comments seeking imposition of a requirement that municipalities generally review the SWPPP prepared under the State Permit for adequacy.

(3) Permittee construction requirements

As to construction projects sponsored or undertaken by a Permittee, that Permittee shall include stormwater control measures as a separate bid item.

(4) Private/Public Requirements

The Permittees shall ensure that the same requirements (and procedures, for example, a plan check process and review of the Erosion Control Plan) apply for public and private projects.

(5) Training

a. Permittee Staff

The Permittees shall provide comprehensive training to their inspection and erosion control/stormwater plan check staffs on new program requirements and other applicable standards and practices prior to October 15, 1996.

b. Construction contractors and developers

The Permittees shall provide free training to construction contractors and developers on its regulations and requirements, including changes brought about by its new Stormwater Program. Permittees shall also provide for free or on an at-cost basis stormwater pollution prevention training for construction contractors and developers where that training is not being provided locally by the APWA or another appropriate entity.

(6) Guidance documents

The Permittees shall develop comprehensive guidance documents that provide general guidance on stormwater pollution control and that cover specific BMPs for certain types of projects. The Permittee's Stormwater Program will provide that BMP standards of quality will be specified as in the State Task Force BMP Handbook and/or another guidance document.

Section E.1.b. should contain a section that specifically references erosion control BMPs. This is a serious omission from the development of source controls and we assume it was an oversight. As noted earlier, this section on control measures should make clear those sections that apply to construction activities and those that only apply to post-construction.

Section IV.E.4. should make clear that the BMPs set out in subsections a-e apply to grading activity. Section IV.E.4. should also include a provision requiring the proper containment and storage of construction materials/waste and demolition debris that have the potential to leach, generate sediment, or otherwise contaminate storm water. Such materials should be bermed and either covered, stored indoors or have some other overhead protection. Sub-sections IV.E.4.f. through i. should be listed separately as post-construction new development and redevelopment controls (instead of as demolition/construction activity BMPs).

The Permit should also require that the specific BMPs mandated under sub-sections IV.E.4. and 5. should be included in the checklist developed for section IV.E.1. Also, section IV.E.3. should require the use of the checklist developed under E.1. and require pre- and post-storm event inspections as was required in the May draft. Another element that was eliminated from the May draft which we believe should be put back in future drafts is the requirement to conduct pilot studies or other reviews of effectiveness for post-construction BMPs. Under Section IV.E.5., there should be more elaboration on what constitutes a "sensitive case".

The provision in the May draft Permit (section IV.E.6.) for evaluating the feasibility of retrofitting existing development with treatment controls should be put back in future drafts. This is a significant element for addressing existing pollution sources -- it is important for the Permittees to determine whether such retrofit opportunities are feasible in order to develop appropriate requirements for redevelopment.

Section F -- Source Inspections

As with the earlier inspection provisions in the current draft, sub-section IV.F., "Source Inspection," should specify inspection frequency minimums and require the use of the checklist developed in IV.E.1. The Permit should provide for inspections of all construction sites, not just those over five acres. As noted above, as a practical reality, these sites are already inspected as part of the Permit approval process. Adding a storm water component to these inspections is essential. In addition, this draft appears to suggest that sites with fewer than five acres can be inspected as infrequently as once during a five year period. This is not a sensible distinction. All construction sites should be inspected regularly during the rainy season.

Section G -- Reporting

We incorporate by reference our comments set forth above on this subject.

V. PUBLIC AGENCY REQUIREMENTS

Section B -- Sewage Systems

Generally, here, as elsewhere in the draft Permit, the Permit bestows a critical role on the EAC in developing procedures and requirements. NRDC's and the BayKeeper's general comments (set out above) regarding the critical importance of subjecting the EAC to public accountability specifically applies here (as it does to in each similar instance in the Permit, for example, with respect to the development of procedures to detect illicit sewer connections). Further, in each case in which the EAC develops program elements, including here, these requirements should be minimums that are subject to increase, as appropriate, given the nature of the municipality at issue and its experience in the field. The Permit should use mandatory language that makes it clear that Permittees must implement EAC guidelines. Finally, in this regard, it is also important to emphasize that the EAC's goal should be to develop model programs that are useful to the municipalities (see, for example, Section V.C.1., discussing vehicle maintenance and material storage facility pollution prevention plans, and Section D.1.a., discussing a plan to apply pesticides and fertilizers).

We do not agree with the weakened language relating to sewage spills in sub-section V.B.1. that has been changed from "must not be allowed to enter" storm drains to "all reasonable efforts shall be undertaken". Also eliminated from this sub-section were the guidelines for disinfection of contaminated areas. Since many Permittees currently have such guidelines as existing BMPs it seems impractical to leave these out of the new Permit.

Additionally, the September draft leaves out provisions requiring sewage spill containment and collection, storm drain ranking for dry weather flow, diversion to POTWs, and more frequent cleaning of trouble areas. These provisions are significant measures for the prevention and control of storm water pollution which should be included in future drafts.

Requiring pollution prevention plans for each public maintenance yard and material storage facility is a strategy with which we agree. Furthermore, the provision requiring a list of all the public yards and storage areas by watershed should be put back in future drafts in order to make this information accessible to the Regional Board and the public.

The September draft eliminates certain provisions from sub-section V.D.2. (Facility Management) that we think should be put back in. For example, storm water from parking lots is often contaminated with high concentrations of grease, oil, suspended particles, metals and other petroleum by-products of engine combustion. Parking lots should be required to implement BMPs specific to their use. Additionally, weed abatement requirements should be put back in future drafts because this activity is important for proper maintenance of open storm channels and for inhibiting illegal dumping of waste.

Also, the provision requiring the identification of storm drain ownership by a given date should be restored because this information will help determine who is responsible in the case that problem areas are reported either by scheduled inspections or through public complaint. Furthermore, the provision requiring known problem basins to be inspected and cleaned more frequently should be restored.

Since public facilities include golf courses, schools, ponds, fountains, multi-use parks, fairgrounds, and stadiums, and all of these facilities contribute to storm water pollution, they should also be covered in this section. The May draft included them and the September draft has left them out. Unless there is a clear explanation of why these facilities should not be regulated, they should be included in future drafts.

Section C -- Vehicle Maintenance/Material Storage Facilities

In section C.2.c, the Permit sets out a list of possible BMPs that may be used to address storm water pollution. These BMPs should be mandatory for use in those instances in which they are appropriate. In Section C.2.e, the Permit should include a an additional

BMP set out in Section D.1.c.i, that materials be stored inside or under cover on paved surfaces.

Section D -- Parks and Recreation

In section 2.b., the language in the Permit is unclear: the phrase "loss to storm water" should be clarified to read "the amount of these materials reaching storm water." Further, with respect to each subsection of section 2., the Permit should clarify that each Permittee must undertake the actions set forth here.

Section E -- Storm Drain System Operation and Management

In Section E.1.a., the Permit should make clear that the schedule for catch basin cleaning provided therein is a minimum and should be expanded, as necessary, after evaluation by the Permittees. In addition, catch basin "maintenance" between October 15 and April 15 should include catch basin inspection and cleaning, as appropriate.

VI. PUBLIC INFORMATION AND PARTICIPATION

The Permit language in Section C. of the section Outreach Material should be clarified to specify that catch basin stenciling is mandatory. Permittees should be required to evaluate how often stenciled catch basins must be re-stenciled to account for paint fading and, thereafter, institute a program to keep stenciling in a state where it attracts the public's attention (i.e., not smeared or faded).

Sub-section B. in the section General Education Strategy does not specify who is responsible for carrying out the provisions it contains. This should be remedied in future drafts.

Sub-section A. of the section Outreach Based on Activity-Type should provide a minimum list of industry categories. The September draft begins by stating that the list "shall include at a minimum," but ends the listing with "etc." This is inappropriate -- especially because evaluations conducted by the County as part of a public survey provide specific guidance about these issues. For example, the County has determined that, at a minimum, restaurants, automotive related facilities, and gardeners are necessary targets of the education program. These must be added to an appropriate minimum list that is complete and comprehensive.

Sub-section B. of the same section above should include a provision requiring that developers be provided with any submittals required of them (BMPs, URMPs, SWPPPs, and any other plans) at their initial visit to the planning counter. Providing them with this

information should also be an item on any related checklist to ensure that developers have indeed been provided with the necessary information and guidance.

Sub-section D. of this section should specify that public agency employees whose jobs or activities may contribute to storm water pollution (e.g., construction and maintenance personnel) receive training. In addition, appropriate training regimes must be included in the Permittee's implementation plans.

Thank you for the opportunity to comment on the September 15, 1995 draft. If you have any question regarding our comments, please call us.

Sincerely,

Maribel Marín

Comments on the September 15, 1995, Draft Permit

The Natural Resources Defense Council and the Santa Monica BayKeeper appreciate this opportunity to comment on the September 15, 1995 Draft Permit. Overall, we found that this draft was much better organized than previous drafts, has been strengthened in some areas, and in many respects, has increased clarity. For example, the Legal Authority aspects which have been added to various sections are a big improvement.

However, we also believe that there are several fundamental deficiencies with the provisions of the proposed Permit. We feel that until these major issues are resolved, detailed comments on particular aspects of the new Permit are premature. Nevertheless, given the rapid time frame of the negotiations, we will provide specific comments this week.

We feel that in the following key respects, the proposed Permit is deficient:

1. Lack of Sufficient Minimum Standards

In general, the September draft Permit focuses on the process for developing stormwater management programs and the issues which various plans must address. These are important elements but they do not provide the regulatory framework necessary for determining whether a Permittee's program is adequate. The lack of specific minimums or standards of measure in many areas of the draft Permit creates an untenable situation where cities cannot plan for concrete requirements and where some may argue that adequate compliance is subjective. This is not acceptable to NRDC, nor do we believe it should be acceptable to the Permitees who are charged with complying with the new Permit. The Permit must contain clear baseline requirements and/or provide for the adoption of clear baseline requirements, as appropriate. The draft Permit must not relegate the prescription of minimum BMPs or other required procedures to external documents.

In this regard, the September draft Permit places too much responsibility for the

development of stormwater program details on the Principal Permittee and the Executive Advisory Committee (EAC). This is problematic for two reasons. First, it places the specific program requirements outside of the regulatory framework provided by the Permit. This raises questions of enforceability and creates opportunities for legal challenges if Permittees choose not to implement all or some of the activities identified by the Principal Permittee or EAC under the contention that if it is not in the Permit it is not legally required. Currently, the draft Permit is not consistent in stating that implementing the Principal Permittee or EAC guidelines is mandatory. Indeed, the delegation of Permit-related standards to the regulated community, even with Board oversight, raises a serious question about legality.

Second, relying on external sources rather than providing minimums in the Permit itself may have the effect of distancing the Permittees from direct accountability for implementing necessary programs. It is important that each Permittee understand that it retains full responsibility for implementing an adequate stormwater program: cities cannot merely rely upon the Principal Permittee or the EAC to develop their programs. The Principal Permittee's and the EAC's role instead should be to provide model programs and BMPs to the Permittees as guidance for enhancing the Permittees' own programs.

2. Lack of Performance Standards for Determining Program Adequacy

In addition to a lack of specifics on minimum requirements, the September draft Permit is further deficient by not providing standards for measuring program adequacy. It is not sufficient for the new Permit to require programs and procedures for such activities as inspections, outreach, monitoring, reporting, corrective action, and enforcement without also providing some measure for determining a program's adequacy. By leaving performance standards out of the new Permit, we are in essence ascribing discretionary authority for determining program adequacy to the Principal Permittee or the EAC. Determining the adequacy of a program must be a ministerial action and for this purpose the new Permit must contain specific performance standards or other similar measures regarding programs and procedures.

For example, the provisions requiring the development of a "Baseline Stormwater Management Plan" and "Watershed Management Plans" do not even provide an outline or listing of which minimum areas these plans should cover. Considering that these plans will provide the backbone of the Permittees' plans, it is essential that the Permit clearly identify what these base plans should contain.

Similarly, adequate standards are essential in the September draft Permit's budget requirements. The September draft no longer contains the provision in previous drafts requiring that municipal budgets ensure that there is adequate training to carry out the Permittees' planned stormwater management activities. Providing minimums for the training required gives the Permittees clear targets for which they can budget.

3. Lack of Public Participation/Oversight Opportunities

Another major deficiency of the September draft Permit is the elimination of the public representative from the Watershed Management Committees. The plans developed by the WMCs are to contain specific activities and they represent one of the few areas in the Permit where clear compliance is required of the Permittees via the "Implementation Plan" (sub-section III.B.2.b). We believe that the public must be allowed to participate as a WMC member in the development of the plan provisions. It is unacceptable to create a Permit mechanism whereby those responsible for complying with the Permit conditions develop compliance standards without public involvement. This same problem infects the current EAC framework. This is particularly true because in the September draft, the EAC has been assigned the bulk of the responsibility for developing specific program implementation guidelines.

4. Inadequate Legal Authority

While the September draft Permit's Legal Authority provisions have been strengthened, the Permit must go further and specifically require a stormwater ordinance or unified stormwater guidance manual. It has been our experience that the Legal Authority requirement of the existing Permit has led to inadequate results. We also believe that the Legal Authority checklist proposed in the May draft was useful and should be retained. The lack of such provisions in this section will undoubtedly lead to the continuation of existing conditions whereby Permittees rely on a combination of sources which in many cases only indirectly deal with stormwater management and/or provide insufficient enforcement authority.

Inadequate Legal Authority is directly related to inadequate stormwater pollution management; it also makes Permittees vulnerable to legal challenges from a number of quarters. In this critical area, we feel that the Permit must provide strict and specific directives that will ensure that every Permittee is fully complying with these requirements.

5. Industrial Facility Inspections

We also believe that the new Permit must address directly a critical source of stormwater pollution: restaurants, gas stations, auto-related businesses, and industrial facilities.

After extensive discussion with numerous experts in the area, we believe that an appropriate inspection protocol for these types of facilities includes, at a minimum:

(1) The Permitees must create a list of all of the facilities in Los County that may be subject to the Industrial Stormwater Permit, and further determine whether each applicable facility has or has not submitted a Notice of Intent (NOI) as required by the Industrial Stormwater Permit, using physical inspections and review of SIC codes and other data necessary to create comprehensive database;

(2) The Permitees must survey the aforementioned facilities to determine whether they are potentially subject to the Industrial Stormwater Permit;

(3) If the industrial facility is already being inspected by an agency through an existing program, a stormwater component must be added to that inspection. In addition, the remaining facilities shall be inspected as follows: the Permitees shall thereafter inspect 30% of the remaining facilities subject to the Industrial Stormwater Permit annually; another 30% of the facilities biannually; and the remaining 40% of the facilities every third year. The Permitees shall divide the facilities for purposes of annual, bi-annual, and tri-annual inspections according to the relative likely contribution of stormwater pollution posed by each facility (i.e., the highest priority facilities must be inspected annually);

(4) The Permitees shall also conduct annual inspections of all County restaurants, gas stations, and automotive service facilities with a specific focus on stormwater; and

(5) The Permitees shall also biannually inspect malls, amusement parks, commercial and industrial business parks and commercial nurseries.

6. Compliance with the Existing Permit

A deficiency in the September draft -- which we also noted in our previous comments to the May draft -- is the lack of a clear and unequivocal provision stating that in order for the Permittees to be in compliance with the new Permit, they must be in compliance with the existing Permit. One version of this requirement was in section VIII(A)(5) of the February Draft. A similar provision is essential for successful operation of the new Permit. Otherwise, cities that have continued to avoid compliance with the existing Permit will gain an unfair advantage over those cities that have worked hard to come into compliance. The new Permit will also need to incorporate those requirements of the existing Permit for phases II and III which have not come due.

While the latest draft of the Permit contains language addressing this issue, the language must be made clearer.

7. Deadlines

We had hoped that the September draft would include compliance and deadline dates considering that we are so close to the proposed new Permit adoption date. One of our principal concerns is that the new Permit remain on schedule for adoption in December 1995. We fear that many cities are delaying further stormwater program improvements until adoption of the new Permit. While we disagree with this approach, it is imperative that new guidance in the form of a new Permit be issued as soon as possible.

In addition, this timing is critical for a smooth transition to the new Permit. Municipal fiscal years begin in July and city staff will need time to research and design programs that

meet the new Permit requirements and to develop budgets to take to their city councils. Delays that move the adoption of the new Permit into 1996 may throw off the timing for getting budget items approved and programs implemented.

Another concern is the establishment of sufficiently short-term deadlines for the various new Permit provisions. The February Draft contained many 1995 or January 1996 deadlines. We hope the next draft will similarly contain short deadlines. Since many of the proposed new Permit requirements are the same as those required under the existing Permit, the short-term deadlines should be easy for cities now in compliance to meet. Cities which have lagged in implementing their stormwater programs must be forced to come into compliance quickly -- since they already had up to five years in which to comply under the existing Permit. Further, the cities that are behind should be able (and encouraged) to borrow programs from other cities and therefore speed up their program implementation.

In cases where the ability of the Permittees to carry out their programs is dependent upon the completion of another task, it is particularly important to keep the deadlines short. For instance, the provisions requiring the EAC to develop program guidelines must be done within the first 60 days after the new Permit is adopted to reduce the delay in getting the Permittees to implement the programs within the first year.

Thank you for your consideration of these comments. If you have questions or wish clarification, please do not hesitate to contact either one of us.

Sincerely,

Terry Tamminen

SUBJECT: Comments on the September 15 Draft Permit

Dear Mr. Wolfe:

Since I sit on the Executive Advisory Committee (EAC), my comments will only pertain to the major problem areas of the draft permit as the EAC along with the County will be submitting a detailed review. The extensive corrections being submitted by the EAC could have been minor had not the Regional Water Quality Control Board staff taken such liberties in changing what the EAC had negotiated in good faith. The areas of concern are as follows:

- The EAC should only be an advisory committee to all watersheds. No legal responsibilities should be made of the EAC. All legal responsibilities should lie with 1) the Regional Water Quality Control Board, 2) the principal permittee, and 3) the permittees. The EAC should be designed to aid in the planning and development of programs.
- Permitted discharges should at a minimum include all federally-approved discharges to date, which include waterline flushing, uncontaminated pumped ground water, discharges from potable water sources, and lawn watering.
- The final permit should have a finding by the Regional Water Quality Control Board that justifies that all activities and the extent of the activities are required by the Clean Water Act.

The City of Paramount would very much appreciate your careful consideration of these comments in the permit renewal process.

Attention: Ms. Catherine Tyrrell, Assistant Executive Director

Subject: ***Proposed Los Angeles County Storm Water Discharge Permit Comments***

Dear Ms. Tyrrell:

Per our discussion at the September meeting, I am returning our comments to you late. I was on vacation from September 29th until today; however, I did take the opportunity to review, in detail, the proposed permit while I was out of the area. I did review the EAC comments on the notated copy so my list was substantively shorter than when I started from the 15 September draft , which by the way, I did not receive. Many of the comments are procedural in nature or refer to typographic errors, and I am certain that you and your staff have already made the corrections.

The only really significant comments that I would hope you can take special note of are in regard to the apparent conflicts between State Health Department Requirements and your requirements with regard to system flushing: one agency demanding that the water purveyors flush hydrants, wells and pipelines and the other stating that it does not approve - both threatening fines for non compliance. The really difficult part is both you and the Health Department are quoting different parts of Federal EPA regulations. In this regard we feel that it is incumbent that the State agencies work out the differences to achieve the goals of safe drinking water systems and clean receiving waters; goals that should not cause any significant conflicts. The permittees need to be involved, to supply data and identify areas of conflicting regulations; however, the principal resolution burden needs to be born by the State.

City Hall, 505 So. Garey Ave., Box 660, Pomona, CA 91769, (909) 620-2261

Again my apologies for the lateness in this submittal. I would hope that you view the criticism for what it is: an effort to provide all with a realistic, workable permit that will be enforceable without causing undue economic burdens on our depressed Southern California Economy. Please feel free to call if you have any questions with regard to the comments and suggestions offered.

Sincerely yours,

ROBERT A. DELOACH
Director of Public Works

Charles L. Sihler,
Engineering Associate

VOL 24

0539

City of Pomona Comments on Proposed Los Angeles County Storm Water Discharge Permit

EAC comments of 09/25/95 are acceptable as recommended, unless otherwise noted.

1. Page 1 or 2 - Proposed permit should supply a glossary of terms, in the front of the permit OR , throughout the permit, utilizing a uniform process or methodology that, in all cases, the item is spelled out, followed by the abbreviation to be utilized, throughout the permit [Exception - re-use as a title or major heading]

2. Page 3 -line 5 add italicized baseline BMP's, in addition to all others ***that they have individually proposed*** in the ROWD.

3. Page 3 - Paragraph "ii" - substitute ***Permittees*** for Discharger.

4. Page 4 - Paragraph "D" - add, in brackets, after the title ***[EAC].***

5. Page 5 - Paragraph "E" add, in brackets, after the title ***[WMC].***

6. Page 6 - Add new paragraph 3 as follows & change existing 3 to 4.
3 ***Each WMC shall appoint their own Chairperson and secretary, however in the absence of a volunteer(s) for those positions, the Principal Permittee shall assume those roles in each WMC, until a qualified person is otherwise approved by the WMC.***

7. Page 6 - Item "G" Fiscal Resources - Somewhere within the item, I would suggest that the following verbiage be inserted. ***A sample format for the budget is included as [attachment XX, enclosure xx or whatever other method], and it is suggested that the budget be done in this format; however, if an agency can provide all of the necessary data in some other format, it will be acceptable to the Board.***

8. Page 7 - H.3.d. - Clarification, as requested by the EAC, is definitely required, especially any differentiation between Charter and General Law Cities [Pomona is a Charter City].

9. Page 7 - H.4. - We are referring this item to our City Attorney for review and comment. This may take some additional time that is not available to the Board.

10. Page 8 - It would appear that the Regional Board [Item J], should appear prior to their duties [Item I Administrative Review] & thus change the Item designations; otherwise we concur with the EAC recommendations.

11. Page 9 - It would certainly appear that current item **III "PROGRAM REQUIREMENTS FOR INDUSTRIAL/COMMERCIAL SOURCES"** [pages 14 thru 17] should appear ahead of current Item **II "ILLICIT DISCHARGES\DISPOSAL"** [pages 9-13] for a variety of reasons. Not only do I personally feel that legal sources should be addressed ahead of illegal

VOL 24

0540

ones, but the data base development in III should also include the data required in II; the definitions of sources & prioritizations show up in III - basically you have the cart before the horse. While I feel that they should be reversed, the balance of my comments on both will reflect the pages and sections as presented.

12. Page 9 - II A.1.f - Suggest that the standard records keeping system be the same as the data base required in III A.1.

13. Page 11 - II C.2. Add under Conditionally Exempted Discharges, as item o. or p., the following: ***State Health Department mandated well flushing, unless containing known contaminants.***

14. Page 14 - III A.1.b. i. & ii. - Question - has the EPA not made this determination?? It would appear that the permittees should review businesses within their jurisdiction, based upon SIC, if the industries are conducting activities that might impact runoff discharges. Not just start from ground zero to re-invent the wheel!!

15. Page 14 - III B. 2. Order of priority needs to be defined; i.e., shall we rank on the degree of pollutant hazard, that the potential quantity of pollutant materials that might be introduced or the qualities of the materials [a million gallons of a 1% solution of "X" or 100,000 gallons of a 15% solution of "X"].

16. Page 15 - III C.2.e. - Sweeping of private parking lots, in excess of 10 spaces, previously constructed. Great idea - but how do we require?? New lots can be mandated thru the permitting process, however unless we can PROVE public health & safety, we cannot go back and impose new conditions on old, properly maintained parking lots. Not realistic from an implementation standpoint!!

17. Page 15 - III C. 3 & III C. 4 - Where are they????

18. Page 15 - III C. 5 - Suggest that some possible examples be listed to insure compliance - Say your "industrial facilities" to most cities & the response will be "Not Applicable, Next item!!"

19. Page 20 - We concur totally with the EAC comments - That the planning process cannot be dictated to a City - Only recommended.

20. Page 21 - IV B. 7. a. iii. c. As an absolute, I definitely concur with the EAC comments; however, if the phrase "***Where economically feasible and practicable by the permittee,***" was inserted in front and the phrase, "to the extent practicable" deleted, it would provide a strong suggestion to explore all available options, without unduly burdening anyone.

VOL 24

0541

21. Page 21 - IV B. 7. a. v. - That the determination as to the degree of criminal violation; i.e., felony, misdemeanor, infraction, etc. will be a part of each permittee's legal authority and cannot be set by the regional board, unless they are ready to get it into the California Penal Code.

22. Page 21 - IV C. 2. e. - While I concur that the permittees have no control [EAC comments], the dates could and should be requested as a part of the construction permit process.

23. Page 23 - If item 2, on page 22 is deleted, then items 3 & 4 should be renumbered 2 & 3.

24. Page 26 -Item IV H. - Firstly, we concur with the EAC comment with regard to placement, but we feel very strongly that the Regional Board should assume the leadership in any conflicts that cannot be readily resolved by the permittees, especially when the other mandates are at the state and federal level. If it is a conflict for one Permittee, it most definitely will be a conflict for others of the 87, especially in the area of State Health Department jurisdictions where two state agencies are placed in the position of giving contradictory instructions due to federal mandates. For each permittee to argue the point of the conflict(s) is a criminal waste of funds that could be much better spent on other issues.

25. Page 28 - Item V C.2.c. Add the word should in the 2nd sentence as follows: BMP's that can be used to improve the quality of runoff ***should*** include, but are not limited to:

26. Page 28 - Item V C.2.d.i. - Rewrite as follows:
Delete the words *or Contractors* from the statement as presented and add a second sentence. ***If feasible, any contractors of the permittees should also receive such training.***

27. Page 28 - Item V C.2.e. Conventional paragraphing outline procedures need to be followed and the item is very narrow - covering only chemical storage spills/or other similar problems. Needs to be re-written to cover a wider area of materials storage - yes it addresses the most significant potential problem, however it may cause some to pass over the item as not applicable.

28. Page 29 - Item V C.2.f.iii - Redundant - should be incorporated with V C.2.c.

29. Page 30 - Item V D.2.f. -Second line add the words as noted: . . . only be discharged to the ***storm drain system*** under separate Waste Discharge Requirements.

30. Page 30 - Item V D.2.g. - Third line - add the words as noted: . . . recreational water bodies, ***if applicable,*** by _____. We all wish we had them but few of the 87 really do!!

31. Page 31 - Item V E.1.d. - Unclear - needs to be re-written to define how to track the amount of waste material collected; i.e., tons, loads, cubic yards etc.

32. Page 30 - Item V G.2. - Possibly for the principal permittee. This is not a feasible item for the

substantive majority of the Co-permittees; either from a staffing level or as a fiscal drain -NOT FEASIBLE!!

33. Page 34 - Section VI - General - That the Conventional paragraphing outline procedures need to be followed; i.e., Outreach Materials should be "A", with the Written material being "1." and the 1& 2 under "Written Material being a. & b.. However, for purposes of clarity, all comments will refer to the sections as named in the draft report.

34. Page 34 - Item VI B.1.- Add the words to the beginning of this section: ***"If fiscally feasible."***

35. Page 34 - Item VI C.2 - Add the following words to the EAC revision as noted:
. . . stations and cable access programs throughout all watersheds on a regular basis, ***to the maximum extent that the Permittees can request the showings.***

36. Page 35 - General Education Strategy - Add, in the first line of "A", as follows:
That the EAC ***& the PIPP Committee*** shall develop and the permittees shall . . .

37. Page 36 - Item at top of page should have the designation "d."

38. Page 36 - Next to top paragraph noted as "C" - Add the following to the proposed paragraph:
That the Permittees shall ***request a listing of*** pertinent City phone numbers . . . .; and delete the word *list* from the same space. While the EAC's comments are valid, I feel that the cities should be required to at least make a good faith attempt to have their numbers listed - if the telephone companies ignore - no harm done. If they do include, we are all the better for it.

39. Page 36 - Third paragraph noted as "D" - Add the following to the proposed paragraph in the last line: . . . Harbors, ***Metropolitan Water District of Southern California;*** Resource Agencies, etc.

40. Page 36 - First line in the unnumbered paragraph under Outreach to Target Audiences - Add the following to the last line of the proposed paragraph: That the program may be developed locally or regionally and ***should include,*** as a minimum: Followed by the listed programs. While the EAC is trying to simplify the requirements, "should include" is permissive as opposed to the mandatory "shall" and many of the agencies have developed or are in the process of developing the listed items as a part of their obligation under the existing permit.

41. Page 40 - Item VIII A. 2. Add the following wording in the sentence:
That the Watershed Management Committees are responsible for demonstrating the effectiveness of other *Watershed Specific* BMPs through . . .

42. Page 41 - VIII B. 1. - Delete the Italicized words at the end of the first sentence as follows:
. . . to be used by all Permittees *within the watershed*

43. Page 41 - VIII B. 2. - Modify the sentence as follows: "All records shall be retained by the Permittees for a period of five years ***or as otherwise*** required by ***competent authority, such as*** the USEPA or the Regional Board."

44. Page 41 - VIII C. 1.a - Change from 30 days to a minimum of 45 - preferably 60 days. Larger municipalities take a significantly longer time, not only to acquire and process data but to get the applicable signatures for submission once the reports are completed.

45. Page 43 - VIII C. 2.e - Change from 30 days to a minimum of 45 - preferably 60 days. See above.

46. Page 43 - VIII D. 1.a - Line 2 - Add the following words: That the EAC ***or Permittees*** can recommend and request revisions . . .

47. Page 44 - Item IX General - That the conventional paragraphing outline procedures need to be followed; i.e., Item I under general should be "A."

48. Page 44 - Item IX I. 1. Remove the words *"discharger is"* and substitute the words ***"Permittees are"***.

49. Page 47 - Throughout remove the word *"discharger "* and substitute the word ***"Permittees"***.

Re: Draft NPDES Permit No. CAS0061654

Dear Ms. Tyrrell:

The purpose of this letter is simply to request that our office be placed on your mailing list for all future correspondence and proposed draft NPDES permits for the Los Angeles basin. Recall that our office submitted comments to you on behalf of the Cities of Baldwin Park, Lawndale, Signal Hill and West Covina on October 18, 1995, and we appreciate being kept apprised of the status of the Regional Board's revisions to the draft permit.

Thank you in advance for your consideration of the above and your cooperation in this matter.

Sincerely,

RUTAN & TUCKER

Re: Comments to September 15, 1995 NPDES Draft Permit No. CAS0061654--Cities of Baldwin Park, Lawndale, Signal Hill and West Covina

Dear Ms. Tyrrell:

This letter provides the comments of the Cities of Baldwin Park, Lawndale, Signal Hill and West Covina to the draft NPDES Permit dated September 15, 1995. The comments below track the order of the provisions within the Draft Permit itself, and are provided to each of the eight Roman numeraled Titles of the Draft, as well as the initial preliminary findings.

We want to thank you for the opportunity to comment on the Draft and hope the comments prove productive towards our mutual goal of arriving at an NPDES Permit that complies with both the letter and the spirit of the Clean Water Act and the applicable regulations.

PRELIMINARY FINDINGS

1. With respect to the "findings" of the Regional Board and the recognition of the EAC ("Executive Advisory Committee"), we believe assigning responsibilities to the EAC in this document is

practically and legally troubling. The EAC is not a separate legal entity, nor is it an entity with a separate governing body, budget and/or location. Rather, its makeup is a group of individual employees of the respective Co-Permittees who have come together for the sole purpose of working towards the completion of the present Draft NPDES Permit, by providing comments and input to the Regional Board. Thus, any reference to the EAC in the Draft and more importantly any obligations and responsibilities imposed on the EAC within the Draft Permit should likely be deleted.

2. Three subsections appear to have been added to the Draft Permit in the findings portion of the Permit, the first is labeled "A. Discharge Prohibitions," the second is labeled "B. Receiving Water Limitations," and the third is labeled "C. Provisions." Initially, the concern with these sections is that they do not appear to be incorporated into the findings, nor do they appear to be part of any other section or provision. They, thus, need to be reformatted.

3. As to subsection "A. Discharge Prohibitions," this paragraph seems to paraphrase language from the Clean Water Act, but fails to except the exempted and conditionally exempted discharges, and "permitted" non-stormwater discharges.

I. PROGRAM MANAGEMENT

4. Throughout this section and throughout the entirety of the Permit, the EAC is referenced and responsibilities are placed on the EAC. For the reasons set forth above, we believe placing responsibilities on the EAC is inappropriate. We will assume this issue would be addressed consistently each time the EAC is referenced in the Draft Permit and will not hereafter point out EAC references. We would propose, however, that many, if not all, of the responsibilities placed on the EAC in the Draft are more appropriately placed on the Regional Board and/or the Principal Permittee.

5. Subsection "E. Watershed Management Committee" refers to meetings of the WMC being open to attendance by the public, but that the "WMC may hold closed sessions at its discretion to discuss permit-related issues." We are concerned that this language could result in violations of the Ralph M. Brown Act, and would suggest you confer with your legal counsel on potential problems created by this wording.

6. Subtitle "H. Legal Authority" appears to be overly broad and is vague. We would recommend that this section be modified and limited in accordance with federal regulations, 40 CFR Section 122.26(d)(2)(i). As written, the Draft provides that the Co-Permittees shall exercise their legal authority and require compliance. It thereafter requires each Permittee to have their legal counsel complete a review of their existing legal authority to ensure compliance with the order. What is intended by these provisions is unclear. For example, does the requirement that a Co-Permittee exercise its legal authority and require compliance mean that all violations must be criminally prosecuted? Civilly prosecuted? Sent a notice of violation? If, moreover, a Permittee does not prosecute a violator or seek fines civilly or send out a notice of violation, does this then mean the Permittee has violated the terms of the Permit because the Permittee has not exercised its "legal authority and required compliance"? Also, what is intended by the requirement that legal counsel complete a "review of its existing authority"? Does this simply mean the Permittee is to insure that it has an ordinance on file to enforce the terms of the Permit as to facilities and persons within its jurisdiction? Please consider clarifying these issues.

7. Subtitle "I. Administrative Review" allows the Executive Officer to find a Permittee's program is insufficient and thereafter issue a Notice of Intent to Meet and Confer to a particular permittee. However, there is no requirement the Executive Officer make specific "findings" in support of the NIMC, nor is there an administrative process in the Permit for a Permittee to challenge any NIMC issued by the Executive Officer. Thus, there are serious due process issues raised by these omissions. If the Administrative Review Section is to remain, please consider amending to address these concerns.

II. ILLICIT DISCHARGES/DISPOSAL

8. There are a number of references in this Title to the development of guidelines and enforcement procedures. It is our understanding, however, that the Regional Board recently assumed responsibility for developing these guidelines, and that the Regional Board has already retained a consultant to start this process. If the Regional Board would like to proceed with the development of the guidelines, we feel the Regional Board should bear the financial responsibility, and, more importantly, we believe the permit should indicate that the Regional Board will be developing these guidelines. Moreover, if the Regional Board is to

develop these guidelines, given the import of the guidelines on the process, we would suggest the guidelines be developed and available for the Co-Permittees' review prior to the time the Permit is to be approved by the Regional Board, so that the Permittees have an opportunity to comment on the guidelines and understand how the guidelines and the Permit will work together. If, on the other hand, the Regional Board would like the Permittees to establish the guidelines as implied by the references to the EAC, we would suggest that language to this effect be included in the Permit, i.e., that the Co-Permittees shall establish the guidelines.

9. With respect to subtitle "A. Illicit Connections," subsection 1(B) of this subtitle refers to "major" problem areas, which is defined to include but is not limited to "older business areas." This provision appears vague and overly broad, and should be modified to provide more definition and limitation on its application.

10. In addition, with respect to a Permittee identifying an "Illicit Connection" and "Illegal Discharges," any program to be developed by a Permittee must be developed in accordance with existing resources and personnel of the Permittee. If these provisions are interpreted to require Permittees to purchase expensive geographic informational systems, while although these systems would be extremely helpful, many of the Permittees simply cannot afford either the initial capital costs or the people power necessary to obtain and input this data into such systems. Thus, imposing overly burdensome requirements will be counterproductive and result in provisions which many of the Permittees simply cannot comply with.

11. Within this Title II "Illicit Discharges/Disposal," we would suggest that language be added clarifying responsibility as between Co-Permittees for addressing cleanup and removal of pollutants from stormwater facilities. Specifically, we would suggest that language to the effect that as between the Co-Permittees, primary responsibility for cleanup and removal of pollutants in a stormwater facility from an illicit discharge shall be the responsibility of the owner/operator of the stormwater facility. However, there should also be a qualification that nothing contained in the Permit is intended to in any way prevent action against the party responsible for the illicit discharge.

12. With respect to the Exempted and Conditionally Exempted Discharges under subsection "C. Non-Stormwater Discharges," we would recommend that additional Exempted Discharges include discharges from firefighting, landscape irrigation to property "one-half acre in size or less," and individual residential carwashing. In addition, with respect to Conditionally Exempted Discharges, we would recommend that fire hydrant flushing, water line flushing, flushing of inductive traffic loops and "hydraulic graffiti abatement" be added, and that the catch-all language within section 2(n) be changed to read as follows:

> "Other discharges identified by either the Permittee or the Executive Officer as not being a source of pollutants to receiving waters or as being a source where appropriate control measures can be taken to minimize the adverse impacts of such source."

13. Within subsection "D. Other Permissible Activities," subsection 1(B) appears to be redundant and should probably be deleted.

14. Subsection 2(C) within subtitle "D. Other Permissible Activities" is overly broad and vague in that it requires sweeping of all commercial and industrial motor vehicle parking lots, regardless of size. It also fails to set forth a standard or frequency for sweeping parking lots. From both a legal and a practical standpoint, this requirement should be written as requiring owners of commercial/industrial vehicle parking lots of 10 or more spaces to sweep the lots as necessary to avoid excess accumulation of debris. Also, an exception should be provided to this requirement, if the owner or operator has already taken other source control measures or has otherwise shown that runoff from the vehicle parking lot in issue does not contribute to stormwater pollution.

15. Similarly, subsection 2(D) is vague in that it fails to identify what is meant by "potentially harmful materials"; nor is there a definition of "areas susceptible to runoff." If these phrases are to be left in the Permit, some additional definition should be provided.

16. Subtitles "E. Public Reporting" and "F. Reporting" are problematic because they are a number of instances throughout the Permit where public reporting is required. In order for each of the Permittees to understand all of their reporting obligations,

including the frequency of the various reports, to whom the reports are to be provided, and the contents of the reports, we would recommend that each reporting requirement be consolidated into one Title, that the reporting provisions themselves be coordinated, that the various reports be provided on an annual basis unless otherwise necessitated by the report, and that the reports only provide information that can reasonably be obtained and compiled. As presently written, the reporting obligations under the Draft Permit are burdensome, somewhat inconsistent and complex, and very few of the Permittees would likely be able to comply with all of these obligations.

III. PROGRAM REQUIREMENTS FOR INDUSTRIAL/COMMERCIAL SOURCES

17. Subtitle "C. Source Control Measures," particularly subdivisions 2 and 3, are probably more appropriately addressed in subsection "D. Source Inspection," and we would suggest that these provisions be redrafted and incorporated therein.

18. Subtitle "D. Source Inspection," as written, is overly broad and appears to apply to every industrial/commercial facility within the city, which would, for most cities, make this provision impossible to implement. We would suggest that a random inspection schedule be adopted by the Permittees for prioritized facilities.

19. With respect to subsection "E. Reporting," again, we would stress the need to consolidate all reporting obligations into one Title in the Permit, and that the reporting obligations be consistent and not overly burdensome.

20. Subtitle "G. Conflict of Mandates" appears in several locations in the Draft Permit and should probably be added as a separate Title to apply to the entire Permit.

IV. PROGRAM REQUIREMENTS FOR NEW DEVELOPMENT AND REDEVELOPMENT

21. With respect to subtitles "A. Regional Policy" and "B. Planning Process," many of the cities in the County do not have the in-house geotechnical or soils engineering expertise to comply with these provisions. Development of an overall regional policy should therefore come from either the Regional Board or the Primary Permittee, including the development of guidelines for stormwater management for new development projects, and the development of an urban runoff mitigation plan.

22. Within subtitle "B. Planning Process" there is a provision indicating that failure to comply with the urban runoff mitigation plan is a misdemeanor. Enforcement of any violation of this Permit by an individual person or entity is probably more appropriately set forth within a Co-Permittee's ordinance, rather than in the Permit itself.

23. To enforce violations of this Permit by any private party, as indicated above, it is agreed that the Co-Permittees should include language within their own individual ordinances to give them this legal authority. On the other hand, with respect to development projects in excess of five acres, as you know, these development projects will require obtaining a separate permit from the Regional Board. Thus, the present Permit should make it clear that the Co-Permittees will not have the responsibility of enforcing the terms of this separate permit obtained by the party from the Regional Board. In that event, the language of the present Permit should clarify that the Regional Board will have enforcement responsibility since the Regional Board would have issued the individual permit to govern that circumstance.

24. Subtitle "E. Control Measures," subdivision 3, requires the incorporation of BMPs in private development, including through CC&Rs. It also imposes other maintenance obligations. The provisions in this section, however, are broad and burdensome in their requirement on the Permittees to design, install and maintain BMPs for construction sites. We would suggest that these provisions be revised and modified so that procedures are adopted by the Regional Board and/or Primary Permittee to be enforced by the Co-Permittees, and to be carried out by the contractor.

25. Subtitle "E. Control Measures," section 4, should be modified to allow the washing of vehicles on construction sites where the runoff is treated to remove sediments and pollutants.

26. Subtitle "E. Control Measures," section 5, should be limited to construction sites in excess of a certain size. Unless limited, it appears overly broad and will require BMPs for any construction on a hillside area or in an area adjacent to natural waterways.

27. Subtitle "F. Source Inspection," section 3, allows a Permittee to report "problematic construction sites" to the Regional Board. What is meant by "problematic" should be clarified, as well as whether at that time the Regional Board is to

assume full responsibility for the site and whether this then relieves the Permittee of responsibility.

V. PUBLIC AGENCY REQUIREMENTS

28. The pollution prevention plan for vehicle maintenance and material storage facility should be a standardized plan and should probably be developed by the Regional Board and/or the Primary Permittee.

29. Subtitle "H. Parking Facilities" should similarly be limited to parking lots with 10 of more parking spaces to be swept to avoid the accumulation of excess debris.

VI. PUBLIC INFORMATION AND PARTICIPATION

30. This title contains several subsections entitled "Outreach Materials," "General Education Strategy," "Outreach and Target Audiences," "Outreach Based on Activity--Type," and "Evaluation." However, these individual provisions are not formatted and numbered in accordance with the other provisions of the Permit. Obviously the format throughout the Permit should be consistent.

31. Subsection "C. General Education Strategy" places a requirement on individual Permittees to list certain city phone numbers in local directories. As pointed out by the EAC, this requirement is subject to the discretion of the company publishing the phone listing.

32. Subtitle "D. Construction" of the section entitled "Outreach Based on Activity--Type" appears to require the Permittee to take measures to ensure that contractors comply with certain BMPs. This provision should be deleted, however, since the requirements on construction activities appears earlier in Title IV of the Permit. We believe the provisions concerning "Outreach Based on Activity--Type" should be limited to programs to inform and educate the community.

VOL 24

VIII. PROGRAM EVALUATION AND REPORTING

33. First, please recognize that there is no VII, and this title needs to be retitled "VII."

34. Title VIII initially requires that a procedure be imposed to "develop action-specific performance indicators and criteria, perform evaluation of compliance and effectiveness based on the performance criteria . . . ." This language is vague and it is unclear what is being required.

35. The second full paragraph under this Title is somewhat redundant with the initial paragraph. We would recommend that Paragraphs 1 and 2 be consolidated and rewritten.

36. Subtitle "D. Storm Water Management Plan Revisions" restricts revisions to the Stormwater Management Plan unless certain circumstances occur. This provision is far too restrictive since until the Stormwater Management Plan is actually developed, it is uncertain as to what and when revisions may be necessary.

0513

IX. MONITORING PROGRAM OUTLINE

37. This Title should be reorganized. It initially addresses revisions to the Monitoring Plan, then identifies "Objectives" and finally sets forth the "Monitoring Program Requirements." We would recommend that what is labeled as "II. Objectives" (which, to be consistent with the other format of the Permit, should be labeled with a capital letter rather than a roman numeral) be moved as the first section in this Title. Sections 2-4 within "I. General" of this Title, moreover, all concern monitoring information and data, and we would recommend that these provisions be incorporated within the "Monitoring Program Requirements."

38. The provision entitled "I. General," subsection 1, concerns revisions to the monitoring and reporting program, and should be moved to the end of the "Monitoring Program Requirements" section.

39. The very last page of the text of the permit refers to an attached "Monitoring and Reporting Program," and this term appears to refer to a formal, defined program, which was not previously defined in the Draft Permit. We suggest that if such a program is to be complied with by any discharger, that the program be defined and that it actually be included as an attachment to the Permit so

that the respective Permittees can review the program to determine whether they have comments to the same.

We want to thank the Regional Board for the opportunity to review the Draft Permit and to provide these comments to you. We hope the above has been helpful and constructive.

Please contact the undersigned should you have any questions with respect to any of the above or if we can be of any further assistance.

Thank you for your attention to this matter.

Sincerely,

RUTAN & TUCKER

RE: RENEWAL OF THE LOS ANGELES COUNTY MUNICIPAL STORM WATER NPDES PERMIT

Dear Ms. Tyrrell: Catherine

Strong and effective management of storm water and urban runoff is a key component of the Santa Monica Bay Restoration Plan. This Plan, the product of a five-year, consensus-based effort by the Bay's stakeholders, provides detailed and extensive information that should be utilized in developing the new permit. The Plan includes recommendations for implementation of specific Best Management Practices and for improving the design and effectiveness of the County's monitoring program.

At its September 28, 1995, the Bay Oversight Committee (BOC) of the Santa Monica Bay Restoration Project (member list attached) discussed the Los Angeles County municipal storm water permit currently under development by the Regional Board staff. To ensure that the new permit moves us toward our goal of a clean and healthy Bay, the BOC urges the Los Angeles Regional Water Quality Control to:

(a) Develop a strong, environmentally sound storm water permit, consistent with conservation principles of aquatic biology, that incorporates the recommendations contained in the Bay Restoration Plan, and

(b) ensure timely implementation of permit requirements, in particular, development and implementation of the storm water monitoring program.

Thank you for the opportunity to comment on the permit at this time. I will be pleased to forward more detailed comments to you as SMBRP members have the opportunity to reviews future drafts.

Sincerely,

Marianne Yamaguchi

Subject: Draft Municipal N.P.D.E.S. Permit

Dear Mr. Wolfe:

As requested, our staff has reviewed the draft permit dated September 15, 1995, and are submitting the attached comments. We did submit comments in response to the previous draft permit, but feel that our concerns were not addressed as many items are still included in this latest draft permit. The problem may be that "target dates are being ignored, and we are being rushed into reviewing two different versions of the permit which makes our task twice as difficult and confusing. Therefore, we would like to reiterate some of the concerns which we feel have not been properly addressed:

- The permit needs to clearly identify responsibilities for permit tracking and enforcement. We believe permits issued by the State should be administered and enforced by the State as they collect the fees and set the standards to be met.

- The permit should include an administrative review process to mitigate the need for third party legal action to ensure that the terms of the permit are met and to establish a procedure for Board enforcement of the permit of each Co-permittee.

- San Dimas, as with many other cities, has experienced financial cutbacks, and is operating on a severely reduced budget, and manpower has been cut to a minimum. It is extremely difficult to budget for this unfunded, yet mandated program since the new permit has yet to be adopted. The proposed reporting requirements alone would be an enormous hardship on us. We suggest using a more feasible, simplified check list format which is not so time consuming.

245 EAST BONITA AVENUE • POST OFFICE BOX 307 • CALIFORNIA 91773 • (909) 394 6200 • FAX (909) 394 6209

- A budget review and reporting process should be developed by the Water Management Committee as a part of the Stormwater Management Plan.

The amount of work required for implementation of this permit is enormous, therc fore, we should concentrate on realistically achievable goals. In general, we need to develop a program (GOAL) to minimize pollutants, which is both effective and realistic for both the public and private sector (OBJECTIVE). The permit should have clear, specific objectives which address pollution problems and their order for resolution.

While great strides have been made in developing the new permit, we believe that consideration should be given in extending the existing permit to allow time for the development of a Stormwater Management Plan. The new permit could then adopt an approved plan and limit the permit requirements to water quality objectives, program management, and enforcement. Also, the permit could be conditioned to be reviewed and revised in accordance with any Federal Legislation passed in the process of reauthorization of the Clean Water Act or any other legislation granting relief from this unfunded Federal Mandate.

Thank you in advance for your consideration of our concerns. We look forward to our continued working relationship with your staff.

Sincerely,

Rosemarie Peterson

VOL 24

COMMENTS ON DRAFT NPDES PERMIT OF SEPTEMBER 15, 1995

I. PROGRAM MANAGEMENT

A. PRINCIPAL PERMITTEE

2a-d Time frame for providing personnel and fiscal resources still needs to be resolved.

2h Implement stormwater activities of "regional significance"---We have already divided permittees by watershed areas.

D. EXECUTIVE ADVISORY COMMITTEE

The EAC should be an advisory and coordinatng body, not an implementation or regulatory body. Tasks assigned to the EAC in the permit should be divided among the Board, the principle permittee, and the co-permittees.

E. WATERSHED MANAGEMENT COMMITTEE

3d. How are we to assess the effectiveness of plan and WMP's?

G. FISCAL RESOURCES

Submit an annual budget...which summarizes and identifies capital, operation and maintenance, funding and staff resources, contract services, funding shortfalls, etc.---:---Our City uses a line item budget. This detailed budget would place an additional burden on our City and gets us no closer in meeting our objectives.

Area Wide Resources - An agreement and budget is required for jointly funded area-wide program.---Would this apply to our fair display next season, and what benefit would be achieved from having an other agreement or budget?

H. LEGAL AUTHORITY

We believe we have the appropriate legal authority to control discharges and require compliance and have submitted copies of our ordinances to the State. Why is it necessary to expend resources to provide the Board with certification on our legalauthority.?

I. ADMINISTRATIVE REVIEW

3. The time that the Executive Officer has to either reject or accept a SPCA should be more specific--such as the thirty day limit to remedy a deficiency.

4. The frequency of progress reports for a SPCA needs to be more specific, such as monthly, quarterly, etc. Quarterly reports would seem adequate.

0579

VOL 24

II. ILLICIT DISCHARGE/DISPOSAL

A. ILLICIT CONNECTIONS

Since not all unauthorized connections discharge pollutants, emphasis should be placed on identifying and eliminating illicit discharges.

B. ILLEGAL DISCHARGES/DISPOSAL

4. The surveillance program outlined in this section would create an extreme financial burden on our City with our limited budget and manpower.

D. OTHER PROHIBITED ACTIVITIES

2. Storage of Materials, Machinery and Equipment

c. The requirement that parking lots of 10 spaces or more should be vacuum swept is too cost restrictive. Also, enforcement would not be cost effective.

E. PUBLIC REPORTING

2. The reporting procedures outlined is too cumbersome and unnecessary. A once a year reporting would be adequate.

F. REPORTING

1. A detailed reporting procedure outlined is too cumbersome. A checklist type of reporting system would accomplish the same results and not be as burdensome.

G. COORDINATION WITH STATE PERMITS

1. With the ease of using an electronic bulletin board, it should be possible for the State to provide us with a monthly updated list of NPDES permits issued. It would be better if they could provide a copy of every permit issued or applied for within our local jurisdiction. (i..e., by Zip code identification)

IV. PROGRAM REQUIREMENTS FOR NEW DEVELOPMENT AND REDEVELOPMENT

F. SOURCE INSPECTION

2-f. Why is it necessary to have an electronic recording system for inspections?

0580

V. PUBLIC AGENCY REQUIREMENTS

D. PARKS AND RECREATION

2. Facility Management.

ff. Why should commercial/municipal swimming pools be required to have a separate waste discharge requirements.

E. STORM DRAIN SYSTEM OPERATION AND MANAGEMENT

1-d. How is it proposed to track the amount of waste collected in inlets.

GENERAL COMMENTS:

1. We need to adequately measure of effectiveness and impact of our baseline BMP's --which are working--which need revision. Also, we need to ascertain that the BMP's are addressing the major pollutants of concern?

2. We need to better identify the main pollutants of concern so that we can better focus on them. We need to identify the quality of water runoff and set up an adequate monitoring system. Both require better guidance from the State on possible illegal discharges.

3. The permit, in an outline fashion, should clearly establish the functions of a stormwater management plan, include a summary of the existing BMP's, and have a definite schedule for the development of the stormwater management plan. The proposed permit is too long, unnecessarily complicated, and there are far too many ambiguities.

4. We need to establish a funding program which will be equitable to all parties involved. Possibly, this can be done on a proportionate share based on population. We still need to look at the possibility of an overall County assessment district.

5. We need to determine who is responsible for determing if a SWPPP is required, and for compliance monitoring. If local jurisdictions are responsible, we need to set up training workshops so inspectors can be better trained for commercial and industrial inspections. We cannot have rules to enforce if no one will follow through with proper enforcement

6. Overall, we need a program that is easy to enforce, administer and report. There needs to be clear, defined specific tasks where everyone knows their area of responsibilities and duties. Cooperatively, we need to develop an effective program to reduce pollutants, but at the same time not be to burdensome on either the public or private sector.

Attention: Catherine Tyrrell, Assistant Executive Officer Surface Water Programs

Dear Ms. Tyrell:

As requested at the September open forum meeting, I am submitting for your information a few general comments regarding the latest draft of the proposed new NPDES Permit. After reviewing both the permit and the response letters from surrounding cities, this is to document the City's concurrence of the problem areas brought to your attention by other agencies in the San Gabriel River Watershed. I would also like to take this opportunity to emphasize a few of our basic concerns with this permit as follows:

1. The monitoring, reporting, and inspection requirements in this permit are excessive. Such requirements will place an intense strain on our already fragile budget.

2. The Administrative Review section is far too intense for this stage of the program. We are still in the initial implementation stages of many aspects of the program. This type of police review would be better suited for an already established program. Cities that are making honest attempts at compliance should not be graded to such an intense degree.

3. The enforcement of Board issued Permits such as general industrial/commercial and construction sites should not in any way involve the affected City. A permit issued by the Regional Board should be enforced only by the Board itself.

The intent of this permit is to improve storm water quality. This goal can be achieved through various alternatives, but we have to remember that if the route by which we choose to achieve this goal is unrealistic for those involved, it would never be reached. Please take into consideration the fragile state of many of our budgets as impacted by unfunded mandates, and the political arena in which we are all involved.

Thank you for your time and consideration. If you have any questions or comments, please feel free to contact George O'Brien at this office at (310) 868-051, Extension 267.

Very truly yours,

John R. Price

Re: Comments on the September 15th Draft NPDES Permit CAS0061654

Dear Ms. Tyrell:

Thank you for allowing us the opportunity to comment on the draft NPDES permit dated September 15, 1995.

As a general comment, the draft is very lengthy and too complex for effective implementation. In addition, the issuance of two different versions of the draft, i.e. the official and the EAC versions, made the review process even more time consuming.

The permit seems to over-address specifics. It would have been better to incorporate those specifics in the overall watershed management plan instead of narrowing down the focus on marginal details.

Many permittees have already finalized their budget for fiscal year 1995-96 by the beginning of July, when the permit has not been yet adopted. It is very unlikely that sufficient allocations were made for costly items such as inspection programs. However, it seems that this fact was not taken into consideration when preparing the draft, as it contains phrases such as:

"The _____ shall develop by _____"
"The _____ shall establish by _____"

In addition, the reporting requirements could be an enormous burden on co-permittee staff. It would be less encumbrant to submit a yearly report instead. A simplified check list demonstrating the permittees compliance with the intent of the permit should be used rather than concentrating on details such as the amount of debris collected from catch basins, and the frequency of street sweeping, and the like.

The amount of work required for implementation of this permit will be considerable. The work should concentrate on realistically achievable goals for the first five years. The exempted stormwater discharges, as proposed by the EAC, should be fully adopted.

0584

In regards to incorporating the guidance document, currently under development, as part of the permit, we are concerned that this will make modifications to operating procedures, no matter how minute, difficult to achieve without prior board approval.

I also would like to make additional comments on the handling of our feedback on the previous draft permit. It seems that our comments were totally ignored. The concerns that we have previously voiced were not reflected in the September 15th draft permit. In addition, the time table which was initially set up were consistently ignored. In fact, the new general meeting was pushed back and the permit review time had shrunk to one week. Without reasonable amount of time to review the draft permit, adequate comments are difficult to present.

In its present form, the permit is lengthy in process and short on results. Should further questions arise, please contact me at (818) 300-0708.

Sincerely,

Debbie Bell

Subject: Comments September 15th Draft NPDES Permit CAS0061654

Dear Ms. Tyrell:

This letter is in response to the Draft NPDES permit dated September 15, 1995. In general, the draft permit is too lengthy and complex for effective implementation. The permit should provide a framework for watershed management and not concentrate on specifics. The specifics should be developed as part of an overall watershed management plan. Other comments are:

1. The draft permit contains many phrases such as:

   "The ____ shall develop by ____"
   "The ____ shall establish by ____"

   Since the new permit has not yet been adopted, it is unlikely that many permittees have budgeted for high cost items such as inspection programs for this fiscal year. All high cost items should be scheduled to begin no earlier that July 1, since that is the beginning of the fiscal year for most permittees.

2. The EAC should be an advisory and coordinating body, not an implementation or regulatory body. The amount of work and responsibility for the members of

the Executive Advisory committee is enormous. This will make membership on the EAC a nearly full time position (and volunteers for the EAC may become very scarce).

The tasks assigned to the EAC in the draft permit should be divided among the Board, the principle permittee and the co-permittees. This most recent draft appears to have placed many regulatory and semi-regulatory responsibilities on the shoulders of the EAC. These responsibilities should be assigned to the Board.

3. The number of groups required by the permit to develop and implement the many tasks will lead to confusion. There should be only three groups identified by the permit:

   The Board,
   The principle permittee, and
   The co-permittees

   Participation in the Executive Advisory Committee and the Watershed management committees should be voluntary (although encouraged).

4. The reporting requirements could be an enormous burden on co-permittee staff. Reports should be required no more than once per year. A simplified check list which demonstrates the permittees compliance with the intent of the permit should be used rather than concentrating on minutiae such as how much debris was collected from catch basins (which have been regularly cleaned since well before the stormwater program) and how often streets are swept (which also has been done since well before the stormwater program).

   Written descriptions should be required only for anomalies.

5. A specific comment on Section IV.F.3. (pg 23) and similar sections:

   In a program of this magnitude, it is likely that many problem sites will be encountered which will need direct Board involvement for problem resolution. If a problem site is referred to the Board, does that relieve the permittee from the responsibility of taking further actions until a ruling is made by the Board?

6. The amount of work required for implementation of this permit will be considerable. During the first five years, the work should concentrate on realistically achievable goals. The exempted stormwater discharges, as proposed by the EAC, should be fully adopted.

7. It has been suggested that the guidance document currently under development be incorporated as part of the permit. We are concerned that this

VOL 24

0588

will make any modifications to operating procedures, no matter how minor, difficult to make without prior board approval.

We appreciate the opportunity to offer our comments to you. Please call me at (310) 802-7880 if you have any questions.

Sincerely,

Re: Comments - September 15th Draft NPDES Permit CAS0061654

Dear Ms. Tyrell:

This letter is in response to the Draft NPDES permit dated September 15, 1995. In general, the draft permit is too lengthy and complex for effective implementation. The permit should provide a framework for watershed management and not concentrate on specifics. The specifics should be developed as part of an overall watershed management plan. Other specific comments are as follows:

1. The draft permit contains many phrases such as, "The ____ shall develop by _____" or "The ____ shall establish by _____". High cost items such as inspection programs must be scheduled to begin no earlier than July 1, since that is the beginning of the fiscal year for most permittees. To require activities that are currently un-budgeted is not only impractical; but a farce.

2. True to its name, the EAC should be an advisory and coordinating body; not an implementation body. The amount of work and responsibility for the members of the Executive Advisory Committee is enormous. This will make membership on the EAC a nearly full-time position; making volunteers for the EAC scarce and effectively denying small-city representation on the EAC.

0592

The tasks assigned to the EAC in the draft permit should be divided among the Board, the principle permittee and the co-permittees.

3. The number of groups required by the permit to develop and implement the many tasks will lead to confusion. There should be only three groups identified by the permit: the Board; the Principle Permittee; and the Co-permittees. Participation in the Executive Advisory Committee and the Watershed Management Committees, while being encouraged, must be voluntary.

4. The reporting requirements will be an enormous burden on co-permittee staff. Reports should be required no more than once per year. A simplified check list which demonstrates the permittee's compliance with the intent of the permit should be used rather than concentrating on minutiae such as how much debris was collected from catch basins (which have regularly been cleaned since well before the stormwater program) and how often streets are swept (which also has been done since well before the stormwater program).

5. A specific comment on Section IV.F.3 (page 23) and similar sections:

In a program of this magnitude, it is likely that many problem sites will be encountered which will need direct Board involvement for resolution. If a problem site is referred to the Board, does that relieve the permittee from the responsibility of taking further actions until a ruling is made by the Board?

6. The amount of work required for implementation of this permit will be considerable. During the first five years, the work should concentrate on realistically achievable goals. The exempted stormwater discharges, as proposed by the EAC, should be fully adopted.

7. It has been suggested that the guidance document currently under development be incorporated as part of the permit. We are concerned that this will make any modifications, no matter how minor, difficult to achieve without prior Board approval.

We appreciate the opportunity to offer our comments and thank you in advance for your consideration of our concerns.

Re: Draft NPDES Permit No. CAS0061654

Dear Ms. Tyrell:

The purpose of this letter is to inform you that the City of West Covina, one of the co-permittees under NPDES No. CAS0061654, is in the process of reviewing and commenting on the above-referenced draft permit.

As you know, the draft is quite lengthy and the provisions of the permit are quite complex, and I would prefer to provide all of my comments to you on the present draft at one time. I intend to have comments on behalf of the City of West Covina forwarded to you by no later than October 20, 1995.

If you have any questions, or need any additional information with respect to the above, please do not hesitate to contact the undersigned.

Thank you for your cooperation in this matter.

Sincerely,

Louis M. Winters

Monterey Park, CA 91754-2156

Attention: Catherine Tyrrell

Re: Comments on September 15, 1995, Draft Waste Discharge Requirements for Stormwater Management/Urban Runoff Discharges within the County of Los Angeles (NPDES No. CAS0061654)

Dear Ms. Tyrrell:

The Regional Water Quality Control Board staff has invited written comments on the draft "Waste Discharge Requirements for Stormwater Management/Urban Runoff Discharges within the County of Los Angeles (NPDES No. CAS0061654)." The two-week comment period has not provided us sufficient time to carefully review and evaluate the current draft permit or to obtain outside input. However, the City of West Hollywood considers it very important to provide its initial and preliminary comments on a permit which will ultimately have a significant impact upon the City's operations and its fiscal resources and, most importantly, upon West Hollywood's residents and businesses.

As the negotiation of the terms of the proposed permit has proceeded, we have become extremely concerned about both the direction the permit has taken and the scheduling for the renewal of the permit. Before addressing specific portions of the permit, we thought it would be appropriate to first discuss some of our general concerns, which we understand are shared by many of the other co-permittee cities.

In considering our comments, the Board should recognize that, even aside from federal and state statutory and regulatory requirements, the City of West Hollywood is fully committed to and shares the Board staff's objective of implementing a realistic stormwater program which is designed to reduce the discharge of pollutants to the maximum extent practicable.

\sharon\wastr.com

1. Complexity and Length of the Draft.

West Hollywood is particularly concerned about the fundamental change in philosophy reflected by the Board's staff's approach to the proposed new permit. The current permit provides a regulatory framework for cities such as West Hollywood to develop and implement stormwater management programs tailored to the unique local environmental characteristics of this city.

The current proposed draft of the permit seems to reflect a presumption that co-permittee cities, such as West Hollywood, have not fully complied with the terms of the existing permit in developing stormwater management programs, leading the Board to unilaterally dictate the programs which each of the co-permittee cities must implement regardless of whether the programs permit requirements are suitable or even relevant to the unique circumstances of an individual city. The City of West Hollywood believes that such an underlying presumption is fundamentally incorrect and certainly as applied to the City of West Hollywood.

The City has fully complied with the terms of its existing permit. In fact, by letter dated August 1, 1995, the Regional Board commended the City of West Hollywood's program as being a model for other local agencies' programs. I am enclosing a copy of that letter for your reference.

It appears that the incorrect underlying presumption of non-compliance by the cities is what compelled the Board staff to suggest a nearly 50 page renewed permit with very specific requirements and programs in place of the more general and flexible current 16 page permit which was carefully reviewed and approved not only by the Regional Board but also the State Water Resources Control Board. Regrettably, the Board staff has not taken the time to explain at any public meetings what it believes needs to be fixed in the current permit and why it is departing from the State Board's preferred approach to the NPDES permit process. Accordingly, we question the need for the new approach to the permit.

We are particularly concerned about the length and complexity of the draft permit. We share the concerns previously expressed by the City of Long Beach and the City of Carson that the permit should be simple, clear and concise, and establish a framework for a stormwater management plan, rather than an attempt to dictate numerous, inflexible management programs. Both the existing permit, as well as other permits currently being issued in other regions, utilize a framework approach that allows the individual co-permittees to select the BMP's which best suit their needs while accomplishing the objectives of the Clean Water Act and state law. The current draft runs over 45 pages and is not even complete and contains numerous inflexible dictates.

The current approach to the proposed permit seems to run contrary to the objectives expressed in the State's Stormwater Municipal Best Practices Handbook, which allow municipal permittees flexibility in selecting effective BMP's themselves, which would (1) adequately address the pollutants of concern; (2) be compatible with stormwater regulations, as well as other regulations for air, hazardous waste, and solid waste disposal, (3) have public support, (4) be compatible with land uses and facilities, (5) be technologically feasible, considering soils, geography and water resources, and (6) balance the cost for implementing specific programs against the pollution control benefits expected to be achieved.

For these reasons, we believe that the renewed permit needs to be drastically reduced in size and verbiage to reflect the State's own objective of allowing municipal co-permittees and individual watersheds the flexibility to select the best and most effective BMP's to fit their unique environmental conditions.

2. Scheduling of the Renewed Permit.

Neither the City's staff, the residents of our City, nor other interested parties have been provided sufficient time to carefully evaluate either the specific language of the proposed permit or its impact. We understand that the Board's staff is hoping to complete the negotiation process as soon as possible so that the permit can be considered by the Regional Board at either its December or January meeting. While we appreciate the staff's concern that this matter be brought to a conclusion, we do not believe that the current schedule is realistic for a number of reasons.

First, we have not yet received a full version of the draft permit. Even now, there are numerous versions of the permit which are being discussed. The draft which we have been asked to comment upon has been modified significantly. This piecemeal modifications have created a moving target. This, of course, makes it very difficult to intelligently comment upon the draft permit when the version we are reviewing has most likely been revised two or three times.

Second, to our knowledge, the Regional Board has not made substantial effort to date to obtain input from other interested parties. This permit when adopted will have a significant impact on not only the cities and their administration but also on the residents and businesses in each of the co-permittee cities.

The City is very concerned that no opportunity has been provided for involvement in the process by businesses stakeholders. For example, restaurants comprise a high percentage of the commercial uses within West Hollywood. The draft permit contains a number of provisions directly affecting restaurant waste handling operations, many of which are addressed

by our current program. However, we have not been told what efforts have been made by the Board staff to obtain input from the restaurant industry regarding the terms of the proposed new permit.

We believe that, before the draft permit is presented to the Regional Board, all interested parties who have a stake in the process should be given a fair and meaningful opportunity to participate in the process through workshops and public meetings.

The 30 or 60 day public notice period before the permit is actually adopted would not really be sufficient for all of the interested parties to carefully review and evaluate the permit and provide a meaningful input as to its terms.

Accordingly, the City would prefer to work out a realistic schedule for the renewal of the permit which allows sufficient time for careful evaluation and meaningful input from our business and residents, as well as other interested parties. That objective cannot be achieved on the time schedule under which the Board staff has been operating.

3. Limitations on Co-Permittee's Efforts.

West Hollywood's fiscal and administrative resources for implementing additional unfunded mandates are limited. West Hollywood's objective in the permit renewal process is to continue the implementation of its current effective stormwater management program. We have been provided with no technical or scientific data which demonstrate the effectiveness of many of the programs dictated by the current draft of the permit or any cost justification or which show that our current programs have not been effective. To our knowledge, the Board's staff has not yet suggested any factual findings in connection with the proposed permit which would require the adoption of the many new programs which would be required by the permit if adopted in its current form.

A number of sections of the draft permit impose a variety of data gathering requirements, many of which have no substantial relevance to West Hollywood. We believe it is important to ensure that the data proposed to be gathered at considerable cost to the City is meaningful and useful, both for the Board's purposes as well as the City's.

West Hollywood needs to be sure that the money it spends on stormwater management is utilized in a cost-effective manner. As a comparatively small city, West Hollywood does not have the administrative or fiscal resources to implement programs that are neither mandated or funded by federal or state law and are not demonstrably more effective in meaningfully reducing stormwater pollution than the City's current programs.

4. Failure to Incorporate Prior Comments.

The City has commented regarding the draft permit at public meetings. While we have presumed that some note has been made of those comments, they are rarely responded to.

In order to ensure that permittee and public participation in the process is meaningful and that comments are seriously considered, we believe that it would be appropriate for the Board staff to collect and summarize the public comments made regarding the draft permit and directly respond to them either in writing or at a public meeting.

5. Specific Dictates of the Permit.

We are concerned that specific programs are being dictated in the draft permit to cities without a clear understanding of the water quality goals that the permit aims to achieve and, most importantly, without the benefit of an accurate assessment of existing conditions.

Each of the co-permittee cities has very definite local areas of concern and thoughts as to what actions it is willing to take to address those interests. Those interests, however, can only be fully determined through public workshops where the cities, as well as citizens and other interested parties, are informed about stormwater pollution problems and are invited to present their views.

The City of West Hollywood would very much appreciate your careful consideration of our preliminary comments in the permit renewal process and a response to them.

Very truly yours,

Sharon Perlstein, P.E.
City Engineer

NPDES MUNICIPAL STORM WATER DISCHARGE PERMIT FOR LOS ANGELES COUNTY ANNUAL REPORT (CA0061654, CI 6948)

This Regional Board received your annual report under the NPDES Municipal Storm Water Discharge Permit for Los Angeles County for fiscal year 1994/95 on June 28, 1995. We apologize for the delay in reviewing and commenting.

The background included in the report submitted about the City was very clear and concise. It explained the programs being implemented by the City, which is very helpful in determining compliance with the Permit. More importantly, however, was the fact that the City of West Hollywood under your direction is taking a rational, well thought out approach to managing urban runoff, and not simply trying to comply with a permit.

This Regional Board commends what you and the City of West Hollywood have accomplished, and looks forward to other agencies using your program as a model. We are hopeful that your public education and outreach materials will help in the City's efforts to educate the public and reduce urban runoff pollution. Please let us know if there is anything that this Board can do to assist you.

If you have any questions or comments, please feel free to call me directly at (213) 266-7515, or Carlos Urrunaga of my staff at (213) 266-7598.

MEMORANDUM

TO: Catherine Tyrell, RWQCB, L.A. Region
Gary Hildebrand, L.A. County

FROM: Gail Ruderman Feuer, Maribel Marin, NRDC

DATE: December 7, 1995

RE: **Thresholds for Triggering the Urban Runoff Mitigation Plan Requirement**

We urge that the threshold for requiring an URMP should be based on parcel size rather than floor area. We propose that the cut-off for requiring an URMP or, more generally, the cut-off for a priority site, be set at 10,000 square feet.

Our rational for going with parcel size as opposed to floor area is basically that in commercial/industrial and multi-family residential, the majority of the parcel is developed with impervious surface so it makes sense to target the lot sizes which have the potential to contribute the highest pollutant loads. Since a 10,000 square foot is probably close to the smallest lot size that could be developed as a mini-mall or fast-food type of use, it seemed like a reasonable place to draw the line. Additionally, we felt that at 10,000 square feet, most mom-and-pop style businesses would fall below the threshold. We feel comfortable with this line based on conversations with city planners.

We absolutely cannot accept the 100,000 square foot or the 40,000 square foot alternatives being proposed. Projects of that size are considered major projects that trigger site plan reviews, environmental review, and traffic studies. They also represent a very small percentage of the projects that get permitted. Too many projects that need storm water controls would be exempted.

As discussed at our meeting, we still feel that the following should be categorically exempt from a written plan requirement and/or subject only to "limited" requirements:

- single-family dwellings;
- duplexes; and
- lot sizes greater than 10,000 square feet if they can demonstrate that impervious area on the parcel is less than 10,000 square feet.

QUALITY CONTROL BOARD
LOS ANGELES REGION

MEMORANDUM

TO: Catherine Tyrrell/RWQCB

FROM: Maribel Marin, Gail Ruderman Feuer

DATE: December 14, 1995

RE: Background Data for URMP Thresholds Recommended by NRDC

As we explained in our last memo to you dated 12/7/95, we feel that the thresholds for requiring an URMP are much to high and would exempt many of the land uses that contribute to stormwater pollution. We have obtained data from the City of Los Angeles which we believe indicates that the much lower thresholds NRDC has recommended are more appropriate.

The following list provides parcel sizes for projects typical of what can be found all over Los Angeles and that presently would fall under the "Limited Priority" category for stormwater mitigation. These include:

Burger King	17,119 square feet
Mc Donald's	20,168 square feet
Wells Fargo Bank	29,142 square feet
Ship's Restaurant	23,174 square feet
Trader Joe's Market	17,163 square feet
7-Eleven Food Store	13,634 square feet
Unocal Gas Station	19,150 square feet
Mobil Gas Station	21,240 square feet
NRDC's Office Bldg.	36,242 square feet
12 Unit Apt. Bldg. (2 stories)	11,500 square feet
26 Unit Apt. Bldg.	20,473 square feet
62 Unit SRO Hotel (2 stories)	11,021 square feet
27 Story Office/Pkg. complex	14,636 square feet

As currently written, the draft Permit would not require these projects to do anything more than reference appropriate post-construction BMPs on their development plans. However, because these projects require a substantial amount of parking and generate a significant number of automobile trips, they should be targeted for more extensive stormwater mitigation measures. It would be more appropriate for uses such as those listed above, to fall into the "Priority Project" category which additionally requires the maximization of pervious surfaces and the minimization of parking lot pollution. Accordingly, we reiterate the recommendation in our 12/7/95 memo that the "Priority Project" threshold be set at parcels measuring at least 10,000 square feet but less than 40,000 square feet. The list shows that "mom and pop" style uses would most likely be exempted since most would be smaller than a typical 7-Eleven store (with its own parking lot) which registers at about 13,000 square feet.

40 West 20th Street
New York, New York 10011
212 727-2700
Fax 212 727-1773

1350 New York Ave., N.W.
Washington, DC 20005
202 783-7800
Fax 202 783-5917

71 Stevenson Street
San Francisco, CA 94105
415 777-0220
Fax 415 495-5996

212 Merchant St., Suite 203
Honolulu, Hawai'i 96813
808 533-1075
Fax 808 521-6841

We also object to limiting the "High Priority" category threshold to projects over 100,000 square feet because it misses projects that would benefit highly from the control measures recommended for this level of development. For example, developments such as the Hillcrest Promenade (47,480 square feet), Vons Super Market (87,120 square feet), and the 14 unit, Wilshire-Crescent Mini Mall (43,996 square feet) which have extensive parking areas would be exempted from putting in filters, lot and roof drainage systems, and berms. Uses such as these should be obvious targets for additional controls because they have extensive parking areas (over 100 in many cases), generate extremely heavy traffic volumes, and in many cases house food service, auto-related, and other businesses that pose heightened stormwater threats. We recommend that this category include projects above 40,000 square feet.

In any case, our information from the City shows that very few projects over 100,000 square feet get permitted on a regular basis. Based on data for projects valued at over $1,000,000, out of roughly 77,000 permits issued this past year, only about 200 projects were over 100,000 square feet. On a monthly basis, projects of this size ranged from 9 to 34 permits issued with an average of 20.

We believe that the threshold levels recommended by NRDC are the only ones substantiated by actual data. Recommendations for higher thresholds appear to be based solely on guesstimates or motivated by the desire to evade regulation. This is not acceptable nor is it effective for achieving the Permit's objectives. We strongly urge you to modify the current thresholds to reflect our data. It makes much more sense to start with low thresholds that capture a wider range of uses and allow negotiations to start from that basis. It will be much more difficult if not impossible to lower the thresholds after the draft Permit is circulated for public comment.

We have enclosed copies of the data from the City. Please call if you have any questions or comments.

MONTHLY BUIDLING PERMITS W/VALUATIONS IN EXCESS OF 1 MILLION DOLLARS - DECEMBER 1994

During the month of December 1994, the Department of Building and Safety issued 34 building permits with valuation in excess of $1,000,000. The highest of these was a $5,530,000 permit issued for a Retirement Hotel at 1030 W. 85th Street. These permits are listed below. Direct any questions to the General Analysis and Budget Services Section located in room 424, City Hall, or by calling (213) 847-4100 between the hours of 7:30 am and 4:30 pm, Monday through Friday.

Permit #: LA26277

Dear Ms. Jennings:

ADMINISTRATIVE RECORD OF THE LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD – IN RE: THE CITIES OF BELLFLOWER, ET AL., CITY OF ARCADIA, AND WESTERN STATES PETROLEUM ASSOCIATION (REVIEW OF JANUARY 26, 2000, ACTION OF THE REGIONAL BOARD AND IT EXECUTIVE OFFICER PURSUANT TO ORDER NO. 96-054, PERMIT FOR MUNICIPAL STORM WATER AND URBAN RUNOFF DISCHARGES WITHIN LOS ANGELES COUNTY [NPDES NO. CAS614001]). [SWRCB/OCC FILES A-1280, A-1280(a) AND A-1280 (b)]

We are transmitting, herein, the pertinent Administrative Record and Administrative Record Index in response to the above named Petitions that are for review before the State Board. Regional Board Counsel Leon submitted an advance copy of the Administrative Record Index to you via e-mail on May 2, 2000.

Please note we reserve the right to introduce additional documents into the Administrative Record, that may have been inadvertently omitted at this time.

Should you have any questions or need more information, please call me at (213) 576 –6654 or Parvaneh Khayat at (213) 576 – 6740, or Regional Board Counsel, Jorge Leon at (916) 657-2428.

Sincerely,

Xavier Swamikarinu

Pasadena, California

Item 11 will be heard during the morning session. All enforcement actions will be heard during the afternoon following the lunch break.

Immediately following the Board Meeting, the Regional Board is celebrating their 50th Anniversary at the Doubletree Hotel in Pasadena.
Please contact Robyn Goodman, Exec. Asst. at 213/576-6613 for more information.

Agenda

Submittal of Written Material for Regional Board Consideration

To ensure that the Regional Board has the opportunity to fully study and consider written material, it is necessary to submit 15 copies at least five (5) days before the meeting. This will allow distribution of the material to the Board Members and appropriate staff in advance of the meeting. Pursuant to Title 23 California Code of Regulations Section 648.2, the Regional Board may refuse to admit written testimony into evidence unless the proponent can demonstrate why he or she was unable to submit the material on time or that compliance with the deadline would otherwise create a hardship. If any other party demonstrates prejudice resulting from admission of the written testimony, the Regional Board may refuse to admit it. If you are reading a statement at the meeting, please provide the Executive Assistant with a copy at the meeting.

The Board will recess for a 15-minute break at approximately 10:15 a.m. and recess for lunch at approximately 12:00 p.m. The meeting will reconvene at approximately 1:30 p.m.

Pledge of Allegiance.

1. Roll Call.
   [Robyn Goodman, 213/576-6613].....Board Members Present

2. Order of Agenda.....Board Direction
(The agenda items are numbered for identification purposes only and will not necessarily be considered in this order).

STANDARD URBAN STORMWATER MITIGATION PLANS (SUSMP) PUBLIC HEARING

11. Report from staff and consideration of a Resolution regarding Standard Urban Stormwater Mitigation Plans (SUSMPs) which have been submitted to the Executive Officer pursuant to requirements of the Los Angeles County Municipal Stormwater Permit, Order No. 96-054. (*During a public hearing, staff will provide a report to the Board detailing the Executive Officer's intention to approve the SUSMP's with changes, and ask the Board to adopt a Resolution expressing the Regional Board's expectations regarding SUSMP approval).* [Xavier Swamikannu, 576-6654/Dennis Dickerson, 576-6605].....Board Action

ENFORCEMENT ISSUES

12. Consideration of Complaint No. 99-122 for Administrative Civil Liability (ACL) against Sun Coast Calamari for discharges to Port Hueneme Harbor in violation of sections 13264, 13376, and 13265 of the California Water Code. *(The Board will conduct a public hearing to receive evidence and testimony concerning the ACL issued in the amount of $19,900. Following the public hearing, the Board may take action to affirm, modify, or rescind the ACL.)*
[Tracy Patterson, 576-6661].....Board Action

13. Consideration of Waste Discharge Requirements (WDR) and a Time Schedule Order (TSO) for the County of Los Angeles, Department of Public Works, Trancas Water Pollution Control Plant, Malibu, under section 13263(e) of the California Water Code. *(The Board will conduct a public hearing to receive evidence and testimony concerning the WDR and TSO, requiring repair and upgrade of wastewater treatment facilities. Following the public hearing, the Board will be asked to adopt the WDR and TSO.)*
[Jay Das, 576-6784/Hugh Marley, 576-6687].....Board Action

13.1 Consideration of Waste Discharge Requirements
13.1 Consideration of a Time Schedule Order

14. Consideration of Complaint No. 99-009 for Administrative Civil Liability (ACL) against the Ojai Valley Sanitary District, for effluent violations under sections 13376 and 13377 of the California Water Code. *(The Board will conduct a public hearing to receive evidence and testimony concerning the ACL issued in the amount of $223,000. Following the public hearing, the Board may take action to affirm, modify, or rescind the ACL.)*
[Hugh Marley, 576-6687].....Board Action

15. Consideration of Complaint No. 99-097 for Administrative Civil Liability (ACL) against the Los Angeles Turf Club for a discharge violation under section 13260. *(The Board will conduct a public hearing to receive evidence and testimony concerning the ACL in the amount of $150,000. Following the public hearing, the Board may take action to affirm, modify, or rescind the ACL.)*
[Hugh Marley, 576-6687].....Board Action

OTHER BUSINESS

*16. Consideration of a Resolution in Support of the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000; and the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Act. *(The Board will be asked to adopt a resolution supporting both Bond measures.)* [Marianne Yamaguchi, 576-6614].....Board Action

INFORMATION ITEMS *(Please note that these items are for information only. There will be no voting or formal action taken by the Board on these items.)*

17. Briefing of SB 709. *(Staff will brief the Board on SB 709: The Clean Water Enforcement and Pollution Prevention Act of 1999, became effective on January 1, 2000.)*
[Marleigh Wood, Legal Counsel, 916/653-9317].....Information

18. Board Member Communications.....Information/Discussion
(The Board Members may discuss communications, correspondence, or other items of general interest relating to matters within the Board's jurisdiction.)

19. Executive Officer's Report.....Information/Discussion

20. Closed Session. .....By Board

At any time during the regular session, the Board may adjourn to a closed session to consider litigation, personnel matters, or to deliberate on a decision to be reached based upon evidence introduced in a hearing. Discussion of litigation is within the attorney-client privilege and may be held in closed session. Authority: Government Code Sections 11126(a)(d)(q).

21. Adjournment of Current Meeting. A Special Meeting is scheduled for January 31, 2000, at 1:00 p.m. at the Richard H. Chambers U.S. Court of Appeals Building, 125 S. Grand Avenue, Pasadena. Immediately following the adjournment of today's meeting, the Regional Board will celebrate their 50th Anniversary event at the Doubletree Hotel, Pasadena. Board members will be present during the event but no business will be conducted and no action will take place.

**

A copy of the complete agenda package is available for examination at the Regional Board Office during regular working hours. Questions about specific items on the agenda should be directed to the staff person whose name is listed with the item.

***

Material presented to the Board as part of testimony that is to be made part of the record must be left with the Board. This includes photographs, slides, charts, diagrams, etc. All Board files pertaining to the items on this Agenda are hereby made a part of the record submitted to the Regional Board by staff for its consideration prior to action on the related items.

****

Pursuant to Water Code Section 13320, any aggrieved person may file a petition to seek review by the State Water Resources Control Board (SWRCB) of any action taken by the Regional Board. Such petition must be filed within 30 days of the action. Petitions must be sent to SWRCB, P.O. Box 100, 901 P St., Sacramento CA 95812.

Gray Davis
Governor

TO: **Interested Parties**

FROM: **Dennis A. Dickerson**
Executive Officer

DATE: **January 21, 2000**

SUBJECT: **Procedure for Public Comment on January 26, 2000**

On January 26, 2000, the Los Angeles Regional Water Quality Control Board will consider the matter of Standard Urban Storm Water Mitigation Plans. This matter has been preceded by many opportunities for discussion including a formal workshop on August 10, 1999, a Board hearing on September 16, 1999, and many informal discussions with staff. An extensive written record has been received and provided to the Regional Board members.

The Standard Urban Storm Water Mitigation Plan item will be the principal item on the agenda and most of the Board meeting will be dedicated to hearing this matter. Approximately 3 hours will be dedicated to public comment. It is expected that many individuals will attend the meeting on January 26th. To accommodate as many speakers as possible in the limited time available, and to provide for as fair a distribution of the available time, the following protocol has been developed to guide the Regional Board in hearing public comment.

Speaker cards for the Standard Urban Storm Water Mitigation Plan item will be collected prior to the commencement of this item. Speakers should indicate on their card what position they are taking, i.e., in favor of the staff proposal or opposed.

All speakers will be limited to 3 minutes each.

A segment of time for speakers will be set aside immediately following the staff presentation for a statement in favor of or in opposition to the Staff's proposal before the Board. 30 minutes will be available for 10 speakers in favor and 30 minutes and 10 speakers in opposition. Questions from the Board will be held until the conclusion of each 30 minute segment. The Board will accept, at the beginning of the meeting, a list of 10 speakers from those in favor and a list 10 speakers from those in opposition who will use this time.

All other speakers will follow and will be alternated as to their position on the proposal to ensure that equal time is provided to each position.

Speakers will not be allowed to reserve their time for another speaker.

The Board Chair may, at his discretion, and if time permits, allow speakers who have already commented to add to their comments if any issues have arisen during the meeting that they wish to augment their statements to include.

DISCUSSION: Any member of the public may address the Board relating to any matter within the Board's jurisdiction. This need not be related to any item on the agenda.

OPENING STATEMENT
NPDES - ITEM 9

THIS IS A PUBLIC HEARING TO CONSIDER ADOPTION BY THIS BOARD, IN ACCORDANCE WITH STATE AND FEDERAL LEGISLATION, OF NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMITS AND WASTE DISCHARGE REQUIREMENTS FOR DISCHARGES TO NAVIGABLE WATERS OR TRIBUTARIES THERETO. THESE DISCHARGES ARE LISTED IN THE MEETING AGENDA. COPIES OF THE AGENDA HAVE BEEN MAILED TO ALL KNOWN INTERESTED PERSONS AND AGENCIES, AND ARE ALSO AVAILABLE AT THE REAR OF THE ROOM NEXT TO THE SIGN-IN SHEET.

A NOTICE OF THIS HEARING AND OF THE BOARD'S INTENT TO PRESCRIBE WASTE DISCHARGE REQUIREMENTS WAS PUBLISHED IN A DAILY NEWSPAPER OF GENERAL CIRCULATION IN THE GEOGRAPHICAL AREA OF THE DISCHARGE, AS PRESCRIBED BY LAW.

COPIES OF THE TENTATIVE ORDERS WERE SENT TO THE DISCHARGERS, THE ENVIRONMENTAL PROTECTION AGENCY, THE STATE WATER RESOURCES CONTROL BOARD, AND OTHER INTERESTED AGENCIES, PERSONS AND ORGANIZATIONS.

THE ORDER OF PRESENTATION OF TESTIMONY AT THIS HEARING WILL BE: BOARD STAFF, PUBLIC AGENCIES, OTHER INTERESTED AGENCIES AND GROUPS, AND THE DISCHARGER. ANYONE SO DESIRING WILL BE HEARD; IF YOU HAVEN'T FILLED OUT ONE OF THE CARDS LOCATED ON THE TABLE AT THE BACK OF THE ROOM, PLEASE RAISE YOUR HAND AND WE'LL GET A CARD TO YOU TO FILL OUT.

IT WILL BE APPRECIATED IF ALL PERSONS APPEARING BEFORE THE BOARD TODAY WILL LEAVE WRITTEN COPIES OF THEIR TESTIMONY. THE BOARD WILL CONSIDER ALL TESTIMONY; HOWEVER, IN THE INTEREST OF TIME, IT IS REQUESTED THAT ALL REPETITIVE AND REDUNDANT STATEMENTS BE AVOIDED.

MR. CHAIRMAN, WILL YOU NOW OPEN THE HEARING, PLEASE?

ITEM: 9

SUBJECT: WASTE DISCHARGE REQUIREMENTS CONSIDERATION OF NPDES REQUIREMENTS – NEW, RENEWAL, RESCISSION

DISCUSSION: In accordance with the Federal Clean Water Act, as amended, all waste discharges to navigable waterways, or tributaries thereto, require National Pollutant Discharge Elimination System (NPDES) permits.

The Regional Administrator of the Environmental Protection Agency (EPA) has waived the right to comment on, or object to, the reports of waste discharge and the tentative waste discharge requirements for "minor discharges". Minor discharges are generally defined as discharges from publicly-owned treatment works with a yearly average flow of 0.5 million gallons per day (mgd) or less, or from industrial sources with a yearly average flow of 0.1 mgd or less.

The minor discharges need to be regulated because, in the absence of requirements, they could cause water quality problems, either individually or because of cumulative effects with other discharges.

For the new cases, this is the first time they are being presented for Board consideration. For the renewal cases, staff has reviewed the applications and the past monitoring and technical reports submitted, and has inspected the facilities in the last six months. The attached summary sheets also include a discussion on the compliance history for these cases.

To save paper and space, the "Standard Provisions and General Monitoring and Reporting Requirements" have been included only in the first permit in your agenda folder. They are, however, part of each permit, and will be included with the final copies sent to each discharger and his respective mailing list. The "Attachment A, Storm Water Pollution Prevention Plan" has been included only with the first permit to which it applies. However, the Plan is also included in the other permits which have identified the plan's inclusion in their "REQUIREMENTS AND PROVISIONS" section and will be included with the final copies sent to the discharger and his respective mailing list.

A notice of this hearing and of the Board's intent to consider these tentative waste discharge requirements has been published or posted in the geographic area of the discharge, as required by law. The tentative requirements, when adopted, will also serve as a Federal Permit pursuant to the California Water Quality Control Act and Federal Clean Water Act.

RECOMMENDATION: The tentative Orders be adopted.

Item # 9.1

DISCHARGE REQUIREMENTS SUMMARY

Discharger/Facility: Tosco Marketing Company (Service Stations Ventura County)

Type/Location of Facility: Treated well purged water and decontamination water/Various Cities in Ventura County

Watershed/Subwatershed: Miscellaneous Coastal Watershed
or Groundwater Basin: Oxnard Plain

Case File #: CA0064360 **NPDES #:** CA0064360

Permit Status: New _x_ Renewal ___ Revision ___

Type of Discharge: Surface Water _x__ Groundwater ___ Land Disposal ___

If Surface Water: Inland X Ocean ___ Bay/Estuary ___

Frequency of Discharge: Continuous ___ Intermittent _x__
Estimated Frequency: minimum 4 times per year

Type of Waste/Volume of Discharge: purged groundwater, decontamination water associated with site assessment and remedial action activities/ up to 1,500 gpd per station. There are eight stations where discharge will take place.

Discharge Point/Receiving Water:
Outfall 001/ Oxnard Industrial Drain
002/ Oxnard Industrial Drain
003/ Hueneme Drain
Outfall 004/ Arundell Barranca
005/ Prince Barranca

Issues related to Discharge/Pollutants of Concern:
Total petroleum hydrocarbons (TPH) and volatile organic compounds.

Facility Improvements to Meet the Discharge Limits: None known.

Key Discharge Limits/Beneficial Uses Protected:
Key discharge limits include benzene, MTBE, and TPH./ wildlife habitat, industrial process and service supply, ground water recharge, contact and non-contact water recreation, warm and cold freashwater habitat, migration of aquatic organisms, spawning, reproduction, and/or early development.

Risk Levels Associated With Discharge Limits: Benzene risk based on 10^{-6} human health.

Wastewater Reuse Potential: None.

R0067639

MONITORING PROGRAM COST SUMMARY

Total Annual Monitoring Costs: $7,010.00

Change (+/-) vs. Existing Program: N/A

Justification for Changes: N/A

Monitoring Objectives/Estimated Annual Cost

Influent Monitoring: N/A

Effluent Monitoring: $7,010.00

Receiving Water/Groundwater Monitoring: N/A

Other Monitoring: N/A

Variable Monitoring Costs

Start-up Costs: **$** **Per**

Non-compliance Costs: **$** **Per**

Potential Changes to Monitoring Requirements/Effects on Costs: Sample collection frequency may be reduced by the Executive officer, as warranted by future data.

Item #: 9.2

DISCHARGE REQUIREMENTS SUMMARY

Discharger/Facility: Wheelabrator Norwalk Energy Co. Inc./same

Type/Location of Facility: Power Generation Plant/11500 Balsam Street, Norwalk, CA, Los Angeles County

Watershed/Subwatershed: San Gabriel River
or Groundwater Basin:

Case File #: **NPDES #:** CA0059927

Permit Status: **New**___ **Renewal** X **Revision**____

Type of Discharge: **Surface Water** X **Groundwater** __ **Land Disposal** _

If Surface Water: **Inland** X **Ocean** ___ **Bay /Estuary** ___

Frequency of Discharge: ___ **Continuous** x **Intermittent**
Estimated Frequency:depends on blowdown and cycles of cooling tower as well as storm events during wet season.

Type of Waste/Volume of Discharge: Cooling tower blowdown, demineralizer waste and stormwater runoff/117,700 gallons per day.

Discharge Point/Receiving Water/User: Outfall 001/Coyote Creek, tributary to the San Gabriel River.

Issues Related to Discharge/Pollutants of Concern: Volatile organics, metals/requires limits for volatile organic compounds and metals.

Facility Improvements Required to Meet Discharge Limits: N/A

Key Discharge Limits/Beneficial Uses Protected: Limits are based on California Department of Health Services Drinking Water Action Levels, National Recommended Water Quality Criteria, and best professional judgement (See attached limits comparison table)/groundwater recharge, water contact and non-contact recreation, warm freshwater habitat and wildlife habitat; and (within the estuary) industrial service supply, ocean commercial and sport fishing, preservation of rare and endangered species, marine habitat and saline water habitat.

Risk Levels Associated With Discharge Limits: Effluent limits for organics are for protection of aquatic habitat (10^{-5} risk level).

Wastewater Reuse Potential: No reuse potential due to intermittent flow .

MONITORING PROGRAM COST SUMMARY

Total Annual Monitoring Costs: $16,036.00

Change (+/-) Vs Existing Program: +$9,666.00

Justification for Changes: Wheelabrator will use city-supplied water as the influent to the cooling system and proposes to alternate the use of city-supplied water with reclaimed water from the Central Basin Municipal Water District. Consequently the monitoring program has being modified to reflect this change.

Monitoring Objectives/Estimated Annual Cost:

Influent Monitoring: None

Effluent Monitoring: Sampling (monthly, quarterly, semiannually and annually) to determine compliance with effluent limits/$16,036.00

Receiving Water/Groundwater Monitoring: N/A

Other Monitoring: None

Explanation of Variable Monitoring Costs:

Start-up Costs: **$** N/A **Per**

Non-compliance Costs: $ N/A **Per**

Potential Changes to Monitoring Requirements/Effect on Costs:

None

R0067646

Item # 9.3

DISCHARGE REQUIREMENTS SUMMARY

Discharger/Facility: Camrosa Water District, Camrosa Water Reclamation Facility

Type/Location of Facility: POTW/ 1900 S. Lewis Road, Camarillo

Watershed/Subwatershed: Calleguas Creek Watershed
or Groundwater Basin:

Case File #: **NPDES #:** CA0059501

Permit Status: **New** ___ **Renewal** _X__ **Revision** ___

Type of Discharge: **Surface Water** _X__ **Groundwater** ___ **Land Disposal** ___

If Surface Water: **Inland** _X__ **Ocean** ___ **Bay/Estuary** ___

Frequency of Discharge: **Continuous** ___ **Intermittent** _X__

Estimated Frequency: Only discharge during heavy storm events, when land reclamation is not feasible or effective due to ground saturation.

Type of Waste/Volume of Discharge:
Tertiary treated wastewater/ Design capacity = 1.5 MGD; Average flow for 1998 = 1.318 mgd

Discharge Point/Receiving Water:
One outfall (001) discharges tertiary treated wastewater into Calleguas Creek.

Issues related to Discharge/Pollutants of Concern:
In the past, the limits for TDS, chloride, total suspended solids, coliform and nitrate-N have been violated. The plant has been operating much better since the plant upgrade.

Facility Improvements to Meet the Discharge Limits:
Since the plant was upgraded recently, there are no foreseen improvements at this time. The new plant went on line in April 1997. Among the improvements were the additional treatment processes of nitrification & denitrification, which reduce the amount of Nitrogen discharged in the effluent.

Key Discharge Limits/Beneficial Uses Protected:
Limits were set based on the Basin Plan, USEPA Gold Book, California Title 22, to protect human health, warm water habitat, municipal & domestic supply, and other beneficial uses in the receiving water.

Risk Levels Associated With Discharge Limits:
Trace metal risk levels are 1/100,000.

Wastewater Reuse Potential:
A portion of the treated effluent is reclaimed for farmland irrigation and is regulated under Order No. 95-059.

MONITORING PROGRAM COST SUMMARY

Total Annual Monitoring Costs: $87,585

Change (+/-) vs. Existing Program: (-) $32,518

Justification for Changes:
Changes were made to assess compliance with new Basin Plan objectives and EPA Gold Book objectives, to format the permit consistently with others in the watershed, and to reduce the frequency of monitoring for constituents that had a long history of consistent compliance.

Monitoring Objectives/Estimated Annual Cost

Influent Monitoring:
$ 4,400. To provide data to calculate BOD and Suspended solids removal efficiency.

Effluent Monitoring:
$60,213 (increase of $684)
To determine compliance with effluent limitations, and to protect Beneficial Uses.

Receiving Water/Groundwater Monitoring:
$11,486 (per station, one upstream & one downstream of discharge point)
To assess the impact to Calleguas Creek from POTW's discharge and from non-point sources, and protect the beneficial uses.

Other Monitoring:
The pretreatment program requires additional monitoring. We do not know what the discharger currently spends.

Variable Monitoring Costs

Since the POTW only discharges to surface water on an emergency basis, roughly three months per year, the actual cost of monitoring is closer to 1/4 the cost indicated above (i.e. $21,896).

Start-up Costs: $ **Per**

Non-compliance Costs: $ **Per**

Potential Changes to Monitoring Requirements/Effects on Costs:

Item #: 9.4

DISCHARGE REQUIREMENTS SUMMARY

Discharger/Facility: Golden West Refining Company/same

Type/Location of Facility: Former oil refinery currently being demolished for construction of light industrial buildings/13539 E. Foster Road, Santa Fe Springs, CA, Los Angeles County

Watershed/Subwatershed: San Gabriel River
or Groundwater Basin:

Case File #: **NPDES #:** CA0055115

Permit Status: New___ Renewal_X_ Revision____

Type of Discharge: Surface Water _X_ Groundwater __ Land Disposal _

If Surface Water: Inland _X_ Ocean ___ Bay /Estuary ___

Frequency of Discharge: ___ Continuous _x_ Intermittent
Estimated Frequency: depends on storm events during wet season.

Type of Waste/Volume of Discharge: Stormwater runoff/12.7 million gallons per day.

Discharge Point/Receiving Water/User: Outfall 001/Coyote Creek, tributary to the San Gabriel River.

Issues Related to Discharge/Pollutants of Concern: Volatile organics and metals/requires limits for volatile organic compounds and metals.

Facility Improvements Required to Meet Discharge Limits: N/A

Key Discharge Limits/Beneficial Uses Protected: Limits are based on Best Professional Judgment, National Recommended Water Quality Criteria, Basin Plan, and California Department of Health Services Drinking Water Action Levels (See attached limits comparison table)/groundwater recharge, water contact and non-contact recreation, warm freshwater habitat, cold freshwater habitat, and wildlife habitat; and (within the estuary) industrial service supply, ocean commercial and sport fishing, preservation of rare and endangered species, marine habitat and saline water habitat.

Risk Levels Associated With Discharge Limits: Effluent limits for organics are for protection of aquatic habitat (10^{-5} risk level).

Wastewater Reuse Potential: No reuse potential due to intermittent flow .

MONITORING PROGRAM COST SUMMARY

Total Annual Monitoring Costs: $5,850.00

Change (+/-) Vs Existing Program: +$2,200.00

Justification for Changes: Although Golden West Refining Company is no longer refining crude oil, there are some areas that are still in the dismantling process and the soil may still be contaminated; consequently the monitoring program has being modified to reflect this change.

Monitoring Objectives/Estimated Annual Cost:

Influent Monitoring: None

Effluent Monitoring: Sampling to determine compliance with effluent limits./$5,850.00

Receiving Water/Groundwater Monitoring: N/A

Other Monitoring: None

Explanation of Variable Monitoring Costs:

Start-up Costs: **$** N/A **Per**

Non-compliance Costs: $ N/A **Per**

Potential Changes to Monitoring Requirements/Effect on Costs:

None

R0067651

COMPLIANCE HISTORY
NPDES PERMIT

RENEWAL

CAMROSA WATER DISTRICT – Camrosa Water Reclamation Facility (CA0059501)

Discharger self-monitoring reports indicated the following:

Within the past six years, Camrosa Water District (CWD) Water Reclamation Facility (WRF) had violations of Total organic carbon, BOD, and Oil & grease on an almost quarterly basis; and occasional violations of the TDS and chloride limitations.

On April 13, 1998, the Regional Board adopted Order No. 98-027, which amended CWD CWRF's chloride daily maximum water quality objective requirement to 190 mg/L, until January 9, 2001, in acordance with Regional Board adopted Resolution No. 97-02, *Amendment to the Water Quality Control Plan to incorporate a Policy for Addressing Levels of Chloride in Discharges of Wastewaters*. CSD has been able to meet the 190 mg/L interim limit. In 1998, the weekly chloride concentrations of the final effluent ranged from 149 mg/L to 189 mg/L, and averaged 161 mg/L.

CSD has made modifications and upgrades to its wastewater treatment plant, to ensure consistent compliance with the Board's waste discharge requirements. The new facilities were placed in service in April 1997. Since the plant upgrade, the discharger has had significantly fewer violations. During 1998, the TDS load limit (in pounds per day) was exceeded once in February and the Nitrate-N load limit (lbs/day) and concentration limit (mg/L) were exceeded once in March. No other violations were noted.

9.1

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

ORDER NO. 00-XXX

NPDES NO. CA0064360

WASTE DISCHARGE REQUIREMENTS
for
TOSCO MARKETING COMPANY
(GASOLINE SERVICE STATIONS, VENTURA COUNTY)

The California Regional Water Quality Control Board, Los Angeles Region finds:

1. Tosco Marketing Company (Tosco) has filed a report of waste discharge and has applied for waste discharge requirements and a National Pollutant Discharge Elimination System (NPDES) permit for discharges of wastes to surface water.

2. Tosco owns and operates gasoline service stations in Ventura County. Tosco is responsible for the assessment and remediation of groundwater contamination, if any, caused by Tosco operations. Tosco has contracted with Environmental Resolutions, Inc., to perform groundwater treatment, monitoring, and sampling at its gasoline service stations in Ventura County.

3. Tosco proposes to discharge ground water purged from monitoring wells for sampling purposes and sampling equipment decontamination at a total of 14 gasoline stations. These stations are located throughout the Miscellaneous Coastal Watersheds as shown in Figure 1 (Vicinity Map). Treatment systems will be set up at 5 stations to treat on-site wastes and wastes transported from other stations. Table 1 lists the locations of the 5 stations. Table 2 shows the locations (including latitudes and longitudes) of the discharge points and receiving waters.

4. Tosco proposes the discharge of treated wastes (ground water and decontamination water) at a rate of up to 1,500 gallons per day per station. The discharge will generally be on a quarterly basis. The wastes will be treated through particulate filters and in a granular activated carbon adsorption system consisting of three canisters in series before discharge into storm drain systems. The storm drains flow to the Oxnard Industrial Drain, Hueneme Drain, Arundell Barranca, and Prince Barranca then to the Pacific Ocean, at points above the estuary.

5. Federal law stipulates that NPDES permits require the use of Best Available Technology (BAT) economically achievable to treat these wastes. GAC filters have been used extensively for clean up of contaminated groundwater, particularly for the removal of volatile organic compounds. These methods are currently considered to be the BAT economically achievable.

TENTATIVE

Figure 2 shows the flow diagram of the treatment system.

6. As proposed in the Report of Waste Discharge, the discharger will treat the wastes prior to discharge in an activated carbon adsorption system consisting of three 200 pound canisters of activated carbon connected in series. The first canister will be removed when breakthrough has been observed. The second canister will be rotated to the first position, the third canister will be rotated to the second position, and a fresh canister will be installed in the third position to ensure that breakthrough at the first and second canisters is captured before discharge.

7. The Board adopted a revised Water Quality Control Plan (Basin Plan) for the Coastal Watersheds of Los Angeles and Ventura Counties on June 13, 1994. The Basin Plan contains beneficial uses and water quality objectives for the coastal drainages flowing to the Pacific Ocean and the Oxnard Plain ground water basin.

8. The beneficial uses of the receiving waters are: municipal and domestic supply (potential); wildlife habitat, industrial process and service supply, agricultural, ground water recharge, water contact recreation, non-contact water recreation, warm freshwater habitat, cold freshwater habitat, migration of aquatic organisms, and spawning, reproduction, and/or early development (intermittent beneficial use).

9. The 1996 State Water Resources Control Board's (SWRCB) Water Quality Assessment (WQA) identified the water quality conditions of water bodies in the state. Within the Miscellaneous Coastal Watershed, the coastal drainages are classified as impaired water bodies. Impaired waters do not support beneficial uses.

   Contaminants of concern at petroleum hydrocarbon cleanup sites are not expected to further impair the listed water bodies.

10. The issuance of waste discharge requirements for this discharge is exempt from provisions of chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code in accordance with Water Code Section 13389.

The Board has notified the discharger and interested agencies and persons of its intent to issue waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Clean Water Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, EPA, has no objections.

TENTATIVE

IT IS HEREBY ORDERED that Tosco Marketing Company, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Clean Water Act and regulations and guidelines adopted thereunder, shall comply with the following:

I. EFFLUENT LIMITATIONS

A. Wastes discharged shall be limited to treated ground water, decontamination water, and waste water generated under assessment only, as proposed.

B. The discharge of an effluent from Discharge Serial No. 001 through No. 005 with constituents in excess of the following limits is prohibited:

Constituent	Units	Discharge Limitations Daily Maximum
Turbidity	NTU	150
Settleable solids	ml/L	0.3
Suspended solids	mg/L	150
Oil and grease	mg/L	15
$BOD_5$20°C	mg/L	30
Sulfides	mg/L	1.0
Benzene	µg/L	1.0
Toluene	µg/L	150
Xylene	µg/L	1750
Ethylbenzene	µg/L	700
Ethylene Dibromide	µg/L	0.05
Methyl Tertiary Butyl Ether	µg/L	13
Total Petroleum Hydrocarbons	µg/L	100

TENTATIVE

C. Acute Toxicity Limitation:

The acute toxicity of the effluent shall be such that the average survival in undiluted effluent for any three (3) consecutive 96-hour static or continuous flow bioassay tests shall be at least 90%, with no single test producing less than 70% survival.

If the discharge consistently exceeds the acute toxicity limitation, a toxicity reduction evaluation (TRE) is required. The TRE shall include all reasonable steps to identify the sources of toxicity. Once the sources of toxicity are identified, the discharger shall take all reasonable steps necessary to reduce toxicity to the required level.

D. Receiving Water Limitations:

The discharge shall not cause the following to be present in receiving waters:

1. Toxic pollutants at concentrations that will bioaccumulate in aquatic life to levels that are harmful to aquatic life or human health;
2. Chemical substances in amounts that adversely affect any designated beneficial use;
3. Visible floating materials, including solids, liquids, foams, and scum;
4. Oils, greases, waxes, or other materials in concentrations that result in a visible film or coating on the surface of the receiving water or on objects in the water;
5. Suspended or settleable materials in concentrations that cause nuisance or adversely affect beneficial uses;
6. Taste or odor-producing substances in concentrations that alter the natural taste, odor, and/or color of fish, shellfish, or other edible aquatic resources; cause nuisance; or adversely affect beneficial uses;
7. Substances that result in increases of $BOD_5$20°C that adversely affect beneficial uses;
8. Concentrations of toxic substances that are toxic to, or cause detrimental physiological responses in, human, animal, or aquatic life.

TENTATIVE

II. REQUIREMENTS AND PROVISIONS

A. Discharge of wastes to any point other than specifically described in this order is prohibited and constitutes a violation thereof.

B. This Order includes the attached "Standard Provisions and General Monitoring and Reporting Requirements". If there is any conflict between provisions stated hereinbefore and attached "Standard Provisions", those provisions stated hereinbefore prevail.

C. This Order includes the attached Monitoring and Reporting Program. If there is conflict between provisions stated in the Monitoring and Reporting Program and the Standard Provisions, those provisions stated in the former prevail.

D. This Order may be modified, revoked and reissued or terminated in accordance with the provisions of 40 CFR Part 122.44, 122.62, 122.63, 122.64, 125.62, and 125.64.

E. Discharger authorized under this Order shall maintain a copy of this Order at the waste discharge facilities where it will be available at all times to operating personnel.

F. This Order neither exempts the discharger from compliance with any other laws, regulations, or ordinances that may be applicable, nor legalizes the waste disposal facilities.

G. The discharger shall allow the Regional Board and its authorized representatives entry to the premises to inspect and undertake any activity to determine compliance with this Order, or as otherwise authorized by the California water Code.

H. All applications, reports, or information submitted to the Regional Board shall be signed by a principal executive officer at least of the level of vice president or his duty authorized representative, if such representative is responsible for the overall operation of the facility from which discharge originates.

TENTATIVE

III. EXPIRATION DATE

This Order expires on December 20, 2004.

The discharger must file a Report of Waste Discharge in accordance with Title 23, California Administrative Code, not later than 180 days in advance of such date as application for issuance of new waste discharge requirements.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region on January 26, 2000.

DENNIS A. DICKERSON
Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

MONITORING AND REPORTING PROGRAM NO.
for
TOSCO MARKETING COMPANY
(Gasoline Service Stations, Ventura County)
(CA0064360)

I. REPORTING REQUIREMENTS

The discharger shall implement this monitoring program on the effective date of this order. The first monitoring report under this program must be received by this Regional Board by April 15, 2000.

Monitoring reports shall be received by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15
Annual Report	March 1

If there is no discharge, the report shall so state.

II. EFFLUENT MONITORING REQUIREMENTS

A. A sampling station shall be established for each point of discharge and shall be located where representative samples of that effluent can be obtained. In the event that waste streams from sources are combined for treatment or discharge, representative sampling stations shall be at that place to ensure that the quantity of each pollutant or pollutant property attributable to each waste source regulated by effluent limitations can be determined.

B. The detection limits employed for effluent analyses shall be lower than the permit limits established for a given parameter, unless the discharger can demonstrate that a particular detection limit is not attainable and obtains approval for a higher detection limit from the Executive Officer. At least once a year, the discharger shall submit a list of the analytical methods employed for each test and associated laboratory quality assurance/quality control procedures.

TENTATIVE

C. This Regional Board shall be notified in writing of any change in the sampling stations once established or in the methods for determining the quantities of pollutants in the individual waste streams.

D. Effluent Monitoring Program

Before the first discharge at each station, a representative sample must be taken and analyzed for all required constituents. The results must be in full compliance with Effluent Limitations I-B. prior to discharge.

The following shall constitute the effluent monitoring program for the final effluent at each of the five discharge points:

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
Total waste flow	gal/day	----	once per discharge event
Temperature	°F	grab	once per discharge event
pH	pH units	grab	once per discharge event
BOD_5 20°C	mg/L	grab	once per discharge event
Turbidity	NTU	grab	once per discharge event
Oil and grease	mg/L	grab	once per discharge event
Settleable solids	mL/L	grab	once per discharge event
Suspended solids	mg/L	grab	once per discharge event
Total dissolved solids	mg/L	grab	once per discharge event
Chloride	mg/L	grab	once per discharge event
Sulfides	mg/L	grab	once per discharge event
Nitrogen (NO_3 - N + NO_2 - N)	mg/L	grab	once per discharge event
Benzene	µg/L	grab	once per discharge event
Toluene	µg/L	grab	once per discharge event
Ethylbenzene	µg/L	grab	once per discharge event
Xylene (total)	µg/L	grab	once per discharge event
Methyl Tertiary Butyl Ether (MTBE)	µg/L	grab	once per discharge event
Total Petroleum Hydrocarbons	µg/L	grab	once per discharge event
Toxicity – Acute[1/]	% survival	grab	annually[2/]

TENTATIVE

1/ By the method specified in "Methods for Measuring the Acute Toxicity of Effluents to Freshwater and Marine Organisms" – September 1991, (EPA/600/4-90/027). Submission of bioassay results should include the information noted on page 70-73 of the "Methods". The fathead minnow (Pimephales Promelas) shall be used as the test species.

2/ Acute Toxicity test must be done for all five discharge locations. If the results of the toxicity test yields a survival of less than 90%, then the frequency of analyses shall increase to once per discharge until at least three test results have been obtained and full compliance with Effluent Limitations has been demonstrated, after which the frequency of analyses shall revert to annually. Results of toxicity tests shall be included in the first monitoring report following sampling.

III. HAULING REPORT

A statement shall be included in each quarterly monitoring report indicating the amount of solid and/or liquid waste associated with the discharge hauled from each gasoline service station. In addition, information regarding replacement of activated carbon canisters in the treatment system shall be provided.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

ORDER No. 00-XXX

NPDES No. CA0059927

WASTE DISCHARGE REQUIREMENTS
FOR
WHEELABRATOR NORWALK ENERGY COMPANY INC.
(Metropolitan State Hospital Cogeneration Plant)

The California Regional Water Quality Control Board, Los Angeles Region, (hereinafter Regional Board) finds:

1. Wheelabrator Norwalk Energy Company Inc. (Wheelabrator), discharges wastes under waste discharge requirements contained in order No. 93-037 adopted by this Board on June 14, 1993. This Order serves as a permit under the National Pollutant Discharge Elimination System (NPDES Permit No. CA0059927).

2. The Regional Board is implementing a Watershed Management Approach to address water quality protection in the Los Angeles Region. Pursuant to this Regional Board's watershed initiative framework, the San Gabriel River Watershed is the targeted watershed for the fiscal year 1999-2000. Accordingly, the Regional Board has been reviewing the Waste Discharge Requirements and NPDES permits for the facilities that discharge wastes to the San Gabriel River (including Wheelabrator). As a result of the review, this new Order is prepared to replace Order No. 93-037 adopted on June 14, 1993.

3. Wheelabrator operates the Metropolitan State Hospital Cogeneration Plant, a natural gas-fired cogeneration facility at 11500 Balsam Street, Norwalk, California. The plant can generate 696 megawatts per day of electricity for sale to Southern California Edison Company and also produces steam and chill water for sale to the Metropolitan State Hospital. This facility discharges up to 117,700 gallons per day of demineralizer waste, cooling tower blowdown and stormwater runoff into a storm drain (Discharge Serial No. 001) adjacent to the facility at Latitude 33° 15' 29" and Longitude 118° 04' 13", thence to the Coyote Creek, a tributary to the San Gabriel River, a water of the United States, above the estuary. See Figure 1 for location map.

4. Wheelabrator will use city-supplied water as the influent to the cooling system and proposes to alternate the use of city-supplied water with reclaimed water from the Central Basin Municipal Water District (CBMWD). The water from the San Jose Creek Water Reclamation Plant is the supply for the Rio Hondo Pumping Station, which in turn will serve the Wheelabrator facility. See Figure 2.

5. The cooling tower blowdown will be discharged directly from the closed-loop recirculation system to the storm drain without treatment. This waste stream may contain residual additives from water treatment chemicals added for pH control, disinfection, and corrosion and scaling control.

TENTATIVE

The demineralizer will purify municipal water, and wastes will be produced from regeneration of ion-exchange resin beds with acid and caustic solutions. The wastes will be collected, mixed, and neutralized in a neutralization tank equipped with devices for monitoring pH and automatic addition of acid or caustic.

The treated demineralizer wastes and cooling tower blowdown will combine at an interceptor before discharge into the storm drain.

Discharges of stormwater runoff (approximately 11,600 gallons per day) are from the water treatment area including sulfuric acid and sodium hydroxide storage tanks, the demineralizer unit, and the neutralization tank for the demineralizer wastes. The water treatment area is contained and allows stormwater to accumulate until the volume increases to a point that requires discharge. Before discharge, the stormwater will be sampled, tested for pH, and if necessary will be neutralized.

6. All other industrial and sanitary waste waters are discharged into the community sewer system.

7. The Environmental Protection Agency (EPA) promulgated Effluent Guidelines and Standards for the "Steam Electric Power Generating Point Source Category" on November 19, 1982. These regulations became effective on January 3, 1983, and prescribe effluent limitation guidelines for various inplant waste streams.

8. On June 13, 1994, this Regional Board adopted a revised Water Quality Control Plan, Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan). The Basin Plan contains beneficial uses and water quality objectives for the Coyote Creek and San Gabriel River.

9. The beneficial uses of the receiving waters are:

   Groundwater recharge, water contact and non-contact recreation, warm freshwater and wildlife habitats; and (within the estuary) industrial service supply, ocean commercial and sport fishing, preservation of rare and endangered species, marine habitat and saline water habitat.

   The requirements in this Order are intended to protect designated beneficial uses and enhance the water quality of the watershed.

10. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code in accordance with Water Code Section 13389.

The Regional Board has notified the discharger and interested agencies and persons of its intent to prescribe the waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

TENTATIVE

9-34-A

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Clean Water Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided that the Regional Administrator of the U.S. Environmental Protection Agency has no objections.

IT IS HEREBY ORDERED that Wheelabrator Norwalk Energy Company Inc., in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the Federal Clean Water Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. EFFLUENT LIMITATIONS

1. Wastes discharged shall be limited to cooling tower blowdown, demineralizer wastes, and storm water runoff only, as proposed.

2. The discharge of an effluent from Discharge Serial No. 001 (combined cooling tower blowdown using city supplied-water, demineralizer waste, and storm water runoff) with constituents in excess of the following limits is prohibited:

Constituents	Units	Discharge Limitations Monthly Average	Daily Maximum
Total suspended solids	mg/L lbs/day[1]	30 29.5	100 98
Settleable solids[2]	ml/L	0.1	0.3
BOD_5 20°C	mg/L lbs/day[1]	20 19.6	30 29.5
Oil and grease	mg/L lbs/day[1]	10 9.8	15 14.7
Turbidity[2]	NTU	50	150
Sulfides	mg/L	----	1.0
Surfactants (as MBAS)[2]	mg/L	----	0.5
Residual chlorine[2]	mg/L	----	0.1

[1] Based on the maximum discharge flow rate of 117,700 gallons per day.
[2] Not applicable to discharge containing rainfall during or immediately after periods of rainfall.

TENTATIVE

3. The discharge of an effluent from Discharge Serial No. 001 (combined cooling tower blowdown using reclaimed water, demineralizer waste, and storm water runoff) with constituents in excess of the following limits is prohibited:

Constituents	Units	Discharge Limitations Monthly Average	Daily Maximum
Total suspended solids	mg/L lbs/day[1]	30 29.5	100 98
Settleable solids[2]	ml/L	0.1	0.3
$BOD_5$20°C	mg/L lbs/day[1]	20 19.6	30 29.5
Oil and grease	mg/L lbs/day[1]	10 9.8	15 14.7
Turbidity[2]	NTU	50	150
Sulfides	mg/L	----	1.0
Chromium (VI)	µg/L	11.43[3]	16.29[3]
Zinc	µg/L	121.70[3]	122.70[3]
Surfactants (as MBAS)[2]	mg/L	----	0.5
Residual chlorine[2]	mg/L	----	0.1
Phenol	µg/L	----	1.000
Phenolic compounds	µg/L	----	1.0
Benzene	µg/L	----	1.0
Toluene	µg/L	----	150
Xylene	µg/L	----	1750
Ethylene dibromide	µg/L	----	0.05
Ethylbenzene	µg/L	----	700
Carbon tetrachloride	µg/L	----	0.5

[1] Based on the maximum discharge flow rate of 117,700 gallons per day.
[2] Not applicable to discharge containing rainfall during or immediately after periods of rainfall.
[3] Expressed as total recoverable metals.

TENTATIVE

Constituents	Units	Discharge Limitations Monthly Average	Daily Maximum
Tetrachloroethylene	µg/L	----	5.0
Trichloroethylene	µg/L	----	5.0
1,1-dichloroethylene	µg/L	----	6.0
1,4-dichlorobenzene	µg/L	----	5.0
1,1-dichloroethane	µg/L	----	5.0
1,2-dichloroethane	µg/L	----	0.5
Methyl Tertiary Butyl Ether (MTBE)	µg/L	----	13
Vinyl chloride	µg/L	----	0.5
Lindane	µg/L	0.08	0.2
Methylene chloride	µg/L	----	5
Chloroform	µg/L	----	100
Bromodichloromethane	µg/L	----	100
Arsenic	µg/L	----	50[3]
Cadmium	µg/L	2.42[3]	4.56[3]
Copper	µg/L	9.38[3]	13.54[3]
Lead	µg/L	3.16[3]	82.17[3]
Mercury	µg/L	0.906[3]	1.65[3]
Selenium	µg/L	5.0[3]	50[3]
Silver	µg/L	----	4.0[3]

[3] Expressed as total recoverable metals.

4. The pH of wastes discharged shall at all times be within the range of 6.5 to 8.5.

5. The temperature of the wastes discharged shall not exceed 80°F.

6. The acute toxicity of the effluent shall be such that the average survival in undiluted effluent for any three (3) consecutive 96-hour static or continuous flow

TENTATIVE

bioassay tests shall be at least 90%, with no single test producing less than 70% survival.

If the acute toxicity limitation is violated three consecutive months, the Discharger shall conduct a toxicity identification evaluation (TIE). The TIE shall include all reasonable steps to identify the sources of toxicity. Once the sources are identified, the Discharger shall take all reasonable steps to reduce toxicity to meet the objective.

B. EFFLUENT LIMITATIONS FOR INPLANT WASTE STREAMS

The discharge of demineralizer wastes and cooling tower blowdown with constituents in excess of the following limits is prohibited:

Constituents	Units	Discharge Limitations Monthly Average	Daily Maximum
Total suspended solids	mg/L	30	100
Oil and grease	mg/L	10	15
Total residual oxidant	mg/L	0.2	0.5
Total chromium	mg/L	0.05	0.05
Total zinc	mg/L	1.0	1.0

C. NARRATIVE WATER QUALITY LIMITATIONS

1. The wastes discharged shall not degrade surface water communities and populations, including vertebrate, invertebrate and plant species.

2. The wastes discharged shall not produce concentrations of toxic substances in the receiving waters that are toxic to or produce detrimental physiological responses in human, animal or aquatic life.

3. The wastes discharged shall not result in problems due to breeding of mosquitoes, gnats, black flies, midges or other pests.

4. The wastes discharged shall not contain biostimulatory substances in concentrations that promote aquatic growth to the extent that such growth causes nuisance or adversely affects beneficial uses.

5. The wastes discharged shall not cause any increase in turbidity to the extent that such an increase causes nuisance or adversely affects beneficial uses.

D. REQUIREMENTS AND PROVISIONS

1. The discharger must comply with the lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding discharges of storm water to storm drain systems or other water courses under their jurisdiction; including applicable requirements in municipal storm water management programs

TENTATIVE

developed to comply with NPDES permits issued by the Regional Water Board to local agencies.

2. This order may be modified, revoked, reissued, or terminated in accordance with the provisions of 40 CFR, Parts 122.44, 122.62 to 122.64, 125.62, and 125.64. Cause for taking such action includes, but is not limited to: failure to comply with any condition of this order and permit, endangerment to human health or the environment resulting from the permitted activity, or acquisition of newly obtained information which would have justified the application of different conditions if known at the time of order adoption and permit issuance.

   The filing of a request by the discharger for an Order and permit modification, revocation and issuance, or termination; or a notification of planned changes or anticipated noncompliance does not stay any conditions of this Order and permit.

3. This Order may also be modified, in accordance with the provisions set forth in 40 CFR Parts 122 and 124, to include requirements for the implementation of the watershed protection management approach.

4. This Order includes the attached "Standard Provisions and General Monitoring and Reporting Requirements" ("Standard Provisions" Attachment N). If there is any conflict between provisions stated hereinbefore and the attached "Standard Provisions and General Monitoring and Reporting Requirements," those provisions stated hereinbefore prevail.

5. The discharger must develop and implement a Storm Water Pollution Prevention Plan in accordance with Attachment A: Page 11, Section A, Storm Water Pollution Prevention Plan and submit to the Board within 90 days from the effective date of this order.

E. EXPIRATION DATE

This order expires on December 10, 2005.

The discharger must file a Report of Waste Discharge in accordance with Title 23, California Codes of Regulations, not later than 180 days in advance of the expiration date as application for issuance of new waste discharge requirements.

TENTATIVE

F. RESCISSION

Except for enforcement purposes, Order No. 93-037, adopted by this Board on June 14, 1993 is hereby rescinded.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region on January 26, 2000.

Dennis A. Dickerson
Executive Officer

MONITORING AND REPORTING PROGRAM No. CI-6767
for
WHEELABRATOR NORWALK ENERGY COMPANY, INC.
(Metropolitan State Hospital Cogeneration Plant)
(CA0059927)

I. REPORTING REQUIREMENTS

A. The discharger shall implement this monitoring program on the effective date of this Order. The first monitoring report under this program shall be received by April 15, 2000.

Monitoring reports shall be submitted by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15
Annual	March 1

B. If no discharge occurs during any monitoring period, the report shall so state.

C. The monitoring reports shall specify the type of water discharged to Discharge Serial No. 001. If the discharger starts to use reclaimed water at any given time, the monitoring frequency of analysis shall be conducted according to Section III.B.

D. Laboratory analyses - all chemical, bacteriological, and toxicity analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services Environmental Laboratory Accreditation Program (ELAP). A copy of laboratory certification shall be provided each time a new and/or renewal is obtained from ELAP.

E. For every item where the requirements are not met, Wheelabrator shall submit a statement of the cause(s) and actions undertaken or proposed which will bring the discharge into full compliance with waste discharge requirements at the earliest possible time, and submit a timetable for implementation of these actions.

F. By March 1 of each year, Wheelabrator shall submit an annual report to the Regional Board. The report shall contain both tabular and graphical summaries of the monitoring data obtained during the previous calendar year. In addition, Wheelabrator shall discuss the compliance record and the corrective actions taken or planned which may be needed to bring the discharge into full compliance with waste discharge requirements.

TENTATIVE

II. MONITORING REQUIREMENTS

A. Sampling station(s) shall be established at the discharge point and shall be located where representative samples of the effluent can be obtained. Provisions shall be made to enable visual inspections before discharge. In the event of presence of oil sheen, debris, and/or other objectionable materials or odors, discharge shall not be commenced before compliance with the requirements is ascertained. Any visual observation shall be included in the monitoring report.

B. Quarterly monitoring shall be performed during the months February, May, August and November. Annual monitoring shall be performed during the month of January.

C. If any result of any analysis exceeds the effluent limitations, the frequency of analysis shall be increased to weekly within one week of knowledge of the test result. Weekly testing shall continue for at least 4 consecutive weeks until full compliance with the discharge limitations has been demonstrated, after which the frequency shall revert to as previously designated.

D. All analyses shall include the chain of custody (including but not limited to date and time of sampling, date of analyses, name of person who performed the analyses), QA/QC, method of analysis and detection limits, copy of laboratory certification, and a perjury statement executed by the person responsible for the laboratory.

E. The detection limits employed for effluent analyses shall be lower than the permit limits established for a given parameter, unless the discharger can demonstrate that a particular detection limit is not attainable and obtains approval for a higher detection limit from the Executive Officer. At least once a year, the discharger shall submit a list of the analytical methods employed for each test and associated laboratory quality assurance/quality control procedures.

III. EFFLUENT MONITORING

A. The following shall constitute the effluent monitoring program for Discharge Serial No. 001 using city-supplied water:

TENTATIVE

Constituents	Units	Type of Sample	Minimum[1] Frequency of Analysis
pH	pH units	grab	daily
Total waste flow	gal/day	-----	daily
Temperature	°F	grab	daily

FACT SHEET
WASTE DISCHARGE REQUIREMENTS
FOR
CAMROSA WATER DISTRICT
(Camrosa Water Reclamation Facility)

NPDES NO. CA0059501
Public Notice No.: 99-083

REVISED TENTATIVE

I. INTRODUCTION

The Camrosa Water District (hereinafter CWD or Discharger), discharges municipal and industrial wastewater from the Camrosa Water Reclamation Facility (CWRF) under waste discharge requirements contained in Order No. 93-053 (NPDES No. CA0059501) adopted by this Regional Board on September 27, 1993.

CWD has filed a Report of Waste Discharge (ROWD) and has applied for renewal of its waste discharge requirements and National Pollutant Discharge Elimination System (NPDES) permit.

FACILITY MAILING ADDRESS	FACILITY LOCATION
7385 Santa Rosa Road	1900 S. Lewis Road
Camarillo, CA 93012	Camarillo, CA 93012
	Contact: Christopher M. Smith, (805) 482-4677

The proposed waste discharge requirements and NPDES Permit will expire on December 10, 2003.

II. DESCRIPTION OF FACILITY

CWD operates the CWRF, located at 1900 Lewis Road, Camarillo, California. CWRF is a tertiary wastewater treatment plant with a design capacity of 1.5 million gallons per day (mgd). Treatment consists of a bar screen, headworks lift station, Eimco© Carousel denitIR© extended aeration system, anoxic denitrification, secondary clarification, Parkson upflow sand filtration, chlorination, and impoundment for reclamation. Biosolids from the secondary clarifiers are impounded, dried in sludge drying beds at the plant, and transported to a land application project in Kern County to be used for soil reclamation.

III. DESCRIPTION OF DISCHARGE

Tertiary treated effluent is discharged to Calleguas Creek, through Discharge Serial No. 001 (Latitude 34°10'53", Longitude 119°01'43"), only during rainy periods, when land

reclamation is not feasible or effective due to ground saturation. Calleguas Creek is tributary to Mugu Lagoon, and is part of the Calleguas Creek Watershed Management Area. Treated effluent is normally discharged into four storage ponds prior to reclamation under separate Waste Discharge Requirements contained in Order No. 95-059. Under these requirements, treated wastewater is reclaimed and used for irrigation of various food crops.

The ROWD describes the 1998 discharge as follows:

Constituent	Unit	Annual Average	Lowest Monthly Avg.	Highest Monthly Avg.
Total dissolved solids	mg/L	850	750	950
Suspended solids	mg/L	1	0.5	4
Settleable solids	ml/L	< 0.1	< 0.1	< 0.1
Nitrate-N	mg/L	4	2	6
Nitrite-N	mg/L	0.01	0.01	0.01
Ammonia-N	mg/L	< 0.1	< 0.1	< 0.1

IV. BASIS FOR THE PROPOSED WASTE DISCHARGE REQUIREMENTS

A. BENEFICIAL USES

Receiving Surface Waters are:

(Calleguas Creek - Hydro Unit 403.11)
- potential: municipal and domestic supply;
- existing: agricultural supply, groundwater recharge, freshwater replenishment, contact and non-contact water recreation, warm freshwater habitat, cold freshwater habitat, wildlife habitat, rare, threatened or endangered species, and wetland habitat;

(Calleguas Creek Estuary - Hydro Unit 403.11)
- potential: navigation, water contact recreation;
- existing: non-contact water recreation, commercial and sport fishing, estuarine habitat, wildlife habitat, rare, threatened or endangered species, migration of aquatic organisms, spawning, reproduction, and/or early development, and wetland habitat;

(Mugu Lagoon - Hydro Unit 403.11)
- potential: water contact recreation;
- existing: navigation, non-contact water recreation, commercial and sport fishing, estuarine habitat, marine habitat, wildlife habitat, preservation of biological habitats, rare, threatened or endangered species, migration of aquatic organisms, spawning, reproduction, and/or early development, shellfish harvesting, and wetland habitat.

REVISED TENTATIVE

B. WATER QUALITY IN CALLEGUAS CREEK WATERSHED

The 1998 State Water Resources Control Board's (SWRCB) Water Quality Assessment (WQA) identified the water quality conditions of water bodies in the state. Within the Calleguas Creek Watershed the following water bodies are classified as impaired waterbodies, and are listed on the 1998 303(d) List: Mugu Lagoon, tributaries from duck ponds to Mugu Lagoon, Calleguas Creek (Reaches 1 through 3), Revolon Slough and Beardsley Channel/Wash, Conejo Creek, Arroyo Conejo, Arroyo Conejo North Fork, Arroyo Las Posas, and Arroyo Simi. Impaired waters do not support beneficial uses.

Water quality problems associated with this watershed are: algae, ammonia, boron, chloride, metals, nitrogen, nitrate and nitrite, pesticides, low dissolved oxygen, PCBs, sediment toxicity, sedimentation, sulfate, total dissolved solids (TDS), and trash. Known and/or suspected pollution sources include: urban and agricultural runoff, septic tanks, abandoned wells, seawater intrusion, mining operations, and storm water.

C. STATUTES, RULES, AND REGULATIONS APPLICABLE TO DISCHARGE:

1. Section 301(b)(1)(B) of the Clean Water Act requires publicly owned treatment works (POTWs) to meet effluent limitations based upon secondary treatment.

2. Effluent limitations, national standards of performance, toxic and pretreatment effluent standards, established pursuant to Section 208(b), 301, 302, 303(d), 304, 306, 307, and 405 of the Federal Clean Water Act (CWA) and amendments thereto.

3. CWA 402 and 40 CFR Parts 122, 123, and 124 regulations, (and therefore State Board Order Nos. 91-13-DWQ and 92-12-DWQ), for storm water discharges.

4. CWA Section 303(d)(4) and CWA Section 402(o)(2), USEPA Antibacksliding Policy.

5. Section 176(c) of the Clean Air Act requires POTWs to conform to the State Implementation Plan which places limitations on anticipated growth and emissions.

6. 40 CFR Part 133 Secondary Treatment Regulations.

7. 40 CFR Part 304 regulations for implementation of USEPA's water quality-based limitations for toxic pollutants.

8. 40 CFR Part 403 regulations for the development and implementation of industrial wastewater pretreatment program.

9. Division 7 of the California Water Code is applicable to discharges to navigable water and tributaries thereto.

9-51

10. Wastewater Reclamation Criteria (Title 22, Division 4, California Code of Regulations).

11. California Drinking Water Standards (California Domestic Water Quality and Monitoring Regulations, Title 22, California Code of Regulations).

12. State Water Resources Control Board Thermal Plan (revised September 18, 1975).

13. State Water Resources Control Board Resolution No. 68-16, (adopted on October 28, 1968), and USEPA 40 CFR 131.2, "Antidegradation Policies."

14. State Water Resources Control Board Resolution No. 77-1, Policy with Respect to Water Reclamation in California (Adopted January 6, 1977).

15. Los Angeles Regional Board Resolution No. 97-02, "Amendment to the Water Quality Control Plan to incorporate a Policy for Addressing Levels of Chloride in Discharges of Wastewaters," adopted January 27, 1997. This Basin Plan amendment was adopted by the State Water Resources Control Board (Resolution No. 97-094) and by the Office of Administrative Law on January 9, 1998.

16. Water quality objectives for surface water and groundwater recharge are followed, according to the Water Quality Control Plan (Basin Plan) for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted June 13, 1994.

D. SPECIFIC RATIONALES FOR EACH OF THE NUMERICAL EFFLUENT LIMITATIONS:

1. The following pollutants are in the current permit (Order No. 93-053) and the numerical limitations are taken from:
   1/ 40 CFR Part 133;
   2/ The Basin Plan;
   3/ The Thermal Plan;
   4/ National Toxics Rule;
   5/ EPA Gold Book (National Recommended Water Quality Criteria) ; or,
   6/ MCL.

a. Conventional and nonconventional pollutants:

		DISCHARGE limitations		
Constituents	Units	30-Day Average	7-Day Average	Daily Maximum
pH	pH units	(within the range of 6 - 9) [1/]		
Settleable solids	ml/L	0.1 [2/]	----	0.3 [2/]

REVISED TENTATIVE

9-54

R0067690

a/ The Daily Average limitation for Cadmium = e[0.7852 ln(Hardness) – 2.715] and the Instantaneous maximum = e[1.128 ln(Hardness) - 3.687], where Hardness is expressed as mg/L of $CaCo_3$.

b/ The Daily Average limitation for Copper = e[0.8545 ln(Hardness) - 1.702] and the Instantaneous maximum = e[0.9422 ln(Hardness) - 1.700] , where Hardness is expressed as mg/L of $CaCo_3$.

c/ The Daily Average limitation for Lead = e[1.273 ln(Hardness) - 4.705] and the Instantaneous maximum = e[1.273 ln(Hardness) - 1.460], where Hardness is expressed as mg/L of $CaCo_3$.

d/ The Daily Average limitation for Nickel = e[0.8460 ln(Hardness) + 0.0584] and the Instantaneous maximum = e[0.846 ln(Hardness) + 2.255], where Hardness is expressed as mg/L of $CaCo_3$.

e/ The Daily Average limitation for Silver = e[1.72 ln(Hardness) - 6.52], where Hardness is expressed as mg/L of $CaCo_3$.

f/ The Daily Average limitation for Zinc = e[0.8473 ln(Hardness) + 0.884] and the Instantaneous maximum = e[0.8473 ln(Hardness) + 0.884], where Hardness is expressed as mg/L of $CaCo_3$.

2. The following pollutant is being added to the current permit and the limitation is taken from the Basin Plan.

Constituent	Units	30-Day Average	7-Day Average	Daily Maximum
Detergents (as MBAS)	mg/L	----	----	0.5 [2/]

E. SPECIFIC RATIONALES FOR EACH OF THE NUMERICAL RECEIVING WATER LIMITATIONS

Receiving water requirements are based on 40 CFR Part 122.44 (Establishing limitations, standards, and other permit conditions) and California Water Code (CWC) Section 12363 (Prescribing requirements, considerations, effect of); CWC Section 13267 (Investigation, monitoring, and inspections); CWC Section 13377 (Permits to comply with Federal Acts); and CWC Section 13383 (Monitoring., Inspection, entry, reporting, and record keeping requirements).

The numerical limitation for temperature is based on the Basin Plan and the Thermal Plan.

The numerical limitations for pH, ammonia, and fecal coliform are based on the Basin Plan.

Ammonia limitations are being added to the current permit. The Discharger will have up to 8 years following the adoption of the Basin Plan (i) to make the necessary adjustments/ improvements to meet these objectives; or (ii) to conduct studies leading to an approved, less restrictive, site specific objective for unionized ammonia.

REVISED TENTATIVE

V. MONITORING

A. INFLUENT MONITORING

The following pollutants are in the proposed tentative Influent Monitoring Program (Order No. 00-XXX):

Constituent	Minimum Frequency of Analysis	Current MRP
Flow	daily	not required
Suspended solids	weekly	same
BOD_5 (20°C)	weekly	same
Chloride	monthly	not required

Additionally, all monitoring under the approved pretreatment program, as previously submitted to this Regional Board, shall remain in force. Priority pollutants not listed in the influent monitoring program shall be monitored according to the previously submitted and approved pretreatment program. Those results shall be reported in the annual report.

B. EFFLUENT MONITORING

The following pollutants are in the proposed tentative Effluent Monitoring Program (Order No. 00-XXX):

Constituent	Minimum Frequency of Analysis	Current MRP
Total waste flow	daily	same
Turbidity	daily	same
Total residual chlorine	daily	same
Total coliform	daily	same
Fecal coliform	daily	not required
pH	daily	same
Temperature	weekly	same
Settleable solids	weekly	same
Suspended solids	weekly	same
BOD_5 (20°C)	weekly	same
Dissolved oxygen	weekly	not required
Total dissolved solids	weekly	same
Sulfate	weekly	same
Chloride	weekly	same
Hardness	monthly	same
Oil and grease	monthly	weekly (more freq.)
Ammonia nitrogen	weekly	same
Nitrate nitrogen	weekly	same
Nitrite nitrogen	weekly	same
Organic nitrogen	weekly	not required
Total nitrogen	weekly	not required

REVISED TENTATIVE

Constituent	Minimum Frequency of Analysis	Current MRP
Total kjeldahl nitrogen(TKN)	weekly	not required
Total phosphate	weekly	not required
Boron	monthly	weekly (more freq.)
Fluoride	quarterly	same
Surfactants (anionic, cationic, and nonionic)	quarterly	same
Cyanide	quarterly	same
Phenols	quarterly	same
Aldrin	quarterly	same
Arsenic	quarterly	same
Cadmium	quarterly	same

Hexachlorocyclohexane		
alpha	annually	same
beta	annually	same
gamma (Lindane)	annually	same
Polyaromatic hydrocarbons (PAHs)	annually	same
Polychlorinated biphenyls (PCBs)	annually	same
Pentachlorophenol	annually	same
Toluene	annually	same
Toxaphene	annually	same
Tributyltin	annually	same

REVISED TENTATIVE

Constituent	Minimum Frequency of Analysis	Current MRP
Tetrachlorodibenzo-p-dioxin (TCDD) equivalents	annually	same
2,4,6-trichlorophenol	annually	same
Radioactivity	annually	same

C. RECEIVING WATER MONITORING PROGRAM

The current MRP lists these as the receiving water monitoring stations:

Station No.	Description
R-1	Calleguas Creek, about 91.5 meters (300 feet) upstream from the discharge.
R-2	Calleguas Creek, about 91.5 meters (300 feet) downstream from the discharge.
R-3	Calleguas Creek, about 30.5 meters (100 feet) downstream from the discharge.

CWD is one of the Dischargers participating in conducting the Calleguas Creek Characterization Study (CCCS) Surface Water Element (SWE)& Groundwater Element (GWE). The SWE consisted of 15 surface water monitoring locations and 8 source monitoring locations. CWD was responsible for sampling the following stations for one year:

Station	Location Description
D	Camrosa Water Reclamation Facility Discharge point
#6	Calleguas Creek below Camrosa Water Reclamation Facility, at Camarillo Drive (Downstream of the discharge point)
#7	Calleguas Creek above Mugu Lagoon
#14	Ag drain at Calleguas Creek
#15	Mugu Lagoon

Under the CCCS SWE, General water quality constituents were monitored monthly, metals and organics quarterly, and toxicity bi-monthly.

CWD no longer has access to stations SWE-7, SWE-14, and SWE-15. CWD was given temporary access to the Navy base for the duration of the CCCS SWE monitoring. The following pollutants are in the proposed tentative Receiving Water Monitoring Program (Order No. 00-XXX), for Stations R-1 and SWE-6:

REVISED TENTATIVE

R0067694

Lead	semi-annually	not required
Zinc	semi-annually	not required
Chlorinated pesticides	semi-annually	not required
N and P pesticides	semi-annually	not required
Base, neutral, & acid extractable (BNA)	semi-annually	not required
Total petroleum hydrocarbon (TPH)	semi-annually	not required

VI. WRITTEN COMMENTS

Interested persons are invited to submit written comments upon these tentative Waste Discharge Requirements. Comments should be submitted either in person, or by mail to:

REVISED TENTATIVE

Veronica Cuevas-Alpuche
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Written comments regarding the tentative Order must be received at the Regional Board office by the close of business on January 7, 2000, in order to be evaluated by Board staff and included in the Board's agenda folder. Comments received after that date will be provided, ex agenda, to the Board for consideration, but may result in delay of the tentative Order.

VII. PUBLIC HEARING

The proposed Waste Discharge Requirements will be considered by the Regional Board at a public hearing to be held on December 9, 1999, at the Camarillo City Hall, City Council Chambers, 601 Carmen Drive, Camarillo, CA at 9:00 A.M..

VIII. WASTE DISCHARGE REQUIREMENTS APPEALS

Any person may petition State Water Resources Control Board to review the decision of the Regional Board regarding the final Waste Discharge Requirements. A petition must be made within 30 days of the Regional Board public hearing.

IX. ADDITIONAL INFORMATION

The application, related documents, tentative effluent limitations and special conditions, comments received, and other information are on file and may be inspected at 320 West 4th Street, Suite 200, Los Angeles, CA 90013, at any time between 8:30 AM and 4:45 PM, Monday through Friday by calling (213) 576-6600.

X. REGISTER OF INTERESTED PERSONS

Any person interested in this particular application or NPDES permit may leave their name, address, and phone number with the Board as a part of the Board's file.

REVISED TENTATIVE

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

ORDER NO. 00-XXX

NPDES NO. CA0059501

WASTE DISCHARGE REQUIREMENTS FOR CAMROSA WATER DISTRICT (Camrosa Water Reclamation Facility)

REVISED TENTATIVE

The California Regional Water Quality Control Board (RWQCB), Los Angeles Region (Regional Board), finds:

1. Camrosa Water District (hereinafter CWD or Discharger) discharges municipal and industrial wastewater from the Camrosa Water Reclamation Facility (CWRF) under waste discharge requirements contained in Order No. 93-053 (NPDES No. CA0059501) adopted by this Regional Board on September 27, 1993.

2. CWD has filed a Report of Waste Discharge (ROWD) and has applied for renewal of its waste discharge requirements and National Pollutant Discharge Elimination System (NPDES) permit.

3. CWD operates the CWRF, located at 1900 Lewis Road, Camarillo, California. In 1995, CWD began upgrading the secondary wastewater treatment plant. In April 1997, the upgrade was completed and the new tertiary wastewater treatment plant was put on line. CWRF has a design capacity of 1.5 million gallons per day (mgd), and a treatment system consisting of: a bar screen, headworks lift station, Eimco© Carousel denitIR© extended aeration system, anoxic denitrification, secondary clarification, Parkson upflow sand filtration, chlorination, and impoundment for reclamation. Biosolids from the secondary clarifiers are impounded, dried in sludge drying beds at the plant, and transported to a land application project in Kern County to be used for soil reclamation. CWD submitted a Classification Certification Form, to the State Water Resources Control Board (SWRCB), so that the CWRF can be certified as a tertiary wastewater treatment plant. Their certification is pending SWRCB approval.

   Figures 1 and 2 show the location of the plant and the schematic of wastewater flow.

4. Treated effluent is typically reclaimed and used for irrigation of various food crops, while any unused effluent is discharged into four storage ponds under separate Waste Discharge Requirements contained in Order No. 95-059. The discharge of treated effluent to surface water occurs during rainy periods only, when there is little or no demand for irrigation water and the storage ponds are at or nearing their storage capacity. Treated effluent from the storage ponds, which has a detention time prior to

discharge of at least 50 days, is discharged to Calleguas Creek, through Discharge Serial No. 001 (Latitude 34°10'53", Longitude 119°01'43"). Calleguas Creek is tributary to Mugu Lagoon, and is part of the Calleguas Creek Watershed Management Area.

3. The ROWD describes the 1998 discharge as follows:

Constituent	Unit	Annual Average	Lowest Monthly Avg.	Highest Monthly Avg.
Total dissolved solids	mg/L	850	750	950
Suspended solids	mg/L	1	0.5	4
Settleable solids	ml/L	< 0.1	< 0.1	< 0.1
Nitrate-N	mg/L	4	2	6
Nitrite-N	mg/L	0.01	0.01	0.01
Ammonia-N	mg/L	< 0.1	< 0.1	< 0.1

6. The Regional Board has classified this discharge as a significant discharge, since it has a Threat to Water Quality of Category 2 and Complexity rating of B, or a combined rating of 2-B.

7. The Board adopted a revised Water Quality Control Plan (Basin Plan) for the Coastal Watersheds of Los Angeles and Ventura Counties on June 13, 1994. The plan contains beneficial uses and water quality objectives for Calleguas Creek and its tributaries, and for the Ventura Central ground water basin.

8. The beneficial uses of the receiving waters are:

(Calleguas Creek - Hydro Unit 403.11)
- potential: municipal and domestic supply;
- existing: agricultural supply, groundwater recharge, freshwater replenishment, contact and non-contact water recreation, warm freshwater habitat, cold freshwater habitat, wildlife habitat, rare, threatened or endangered species, and wetland habitat;

(Calleguas Creek Estuary - Hydro Unit 403.11)
- potential: navigation, water contact recreation;
- existing: non-contact water recreation, commercial and sport fishing, estuarine habitat, wildlife habitat, rare, threatened or endangered species, migration of aquatic organisms, spawning, reproduction, and/or early development, and wetland habitat;

(Mugu Lagoon - Hydro Unit 403.11)
- potential: water contact recreation;
- existing: navigation, non-contact water recreation, commercial and sport fishing, estuarine habitat, marine habitat, wildlife habitat, preservation of biological habitats, rare, threatened or endangered species, migration of aquatic organisms, spawning, reproduction, and/or early development, shellfish harvesting, and wetland habitat.

REVISED TENTATIVE

9. Effluent limitations, national standards of performance, and toxic and pretreatment effluent standards established pursuant to Sections 208(b), 301, 302, 303(d), 304, 306 and 307 of the Federal Clean Water Act and amendments thereto, are applicable to the discharges to navigable waters and tributaries thereto.

10. The 1998 SWRCB Water Quality Assessment (WQA) identified the water quality conditions of water bodies in the state. Within the Calleguas Creek Watershed the following water bodies are classified as impaired waterbodies, and are listed on the 1998 California 303(d) List and TMDL Schedule: Mugu Lagoon, tributaries from duck ponds to Mugu Lagoon, Calleguas Creek (Reaches 1 through 3), Revolon Slough and Beardsley Channel/Wash, Conejo Creek, Arroyo Conejo, Arroyo Conejo North Fork, Arroyo Las Posas, and Arroyo Simi. Impaired waters do not meet water quality objectives.

    Water quality problems associated with this watershed are: algae, ammonia, boron, chloride, metals, nitrogen, nitrate and nitrite, pesticides, low dissolved oxygen, PCBs, sediment toxicity, sedimentation, sulfate, total dissolved solids (TDS), and trash. Known and/or suspected pollution sources include: urban and agricultural runoff, septic tanks, abandoned wells, seawater intrusion, mining operations, and storm water.

11. On March 26, 1990, the Board adopted Resolution No. 90-004, "Effects of Drought Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region." This resolution, commonly referred to as the Drought Policy, was intended to provide short-term and temporary relief to publicly owned treatment works (POTWs) who were unable to comply with limits for chloride due to the effects of drought on chloride levels in supply waters imported into the Region.

    On January 27, 1997, the Regional Board adopted Resolution No. 97-02, Amendment to the Water Quality Control Plan to incorporate a Policy for Addressing Levels of Chloride in Discharges of Wastewaters." This Basin Plan amendment was adopted by the State Water Resources Control Board (Resolution No. 97-094) and by the Office of Administrative Law on January 9, 1998. Resolution No. 97-02 revised water quality objectives for certain surface waters. However, due to concerns about the potential future impacts to agricultural resources in Ventura County, the Resolution granted a three-year variance for interim relief to the POTW Dischargers in the Santa Clara River Watershed and the Calleguas Creek Watersheds, until the water quality standards issue is resolved.

    On April 13, 1998, the Regional Board adopted Order No. 98-027, which temporarily amended CWD CWRF's chloride daily maximum effluent limit to 190 mg/L. This interim limit will expire on January 9, 2001, or whenever the water quality objective is revised (if ever), whichever is sooner.

    In 1998, CWD discharged treated effluent to surface waters only during the months of February and March. During that time, weekly chloride concentrations of the final effluent ranged from 149 mg/L to 189 mg/L, and averaged 161 mg/L. The daily maximum chloride limitation in Order No. 93-053 was 150 mg/L.

REVISED TENTATIVE

12. There is public contact in the downstream areas; hence, the quality of treated effluent discharged to Calleguas Creek and its tributaries must be such that no health hazard is created.

13. CWD has filed a Notice of Intent (NOI) and has implemented a Storm Water Pollution Prevention Plan (SWPPP), to comply with the general NPDES permit for stormwater discharges associated with industrial activity. Those storm water requirements shall be incorporated into this Order.

14. Pursuant to 40 CFR Part 403, the CWD has developed and implemented a USEPA approved industrial wastewater pretreatment program.

15. The requirements contained in this Order are based on the Basin Plan, USEPA National Recommended Water Quality Criteria, other Federal and State plans, policies, guidelines, and best engineering judgement, and, as they are met, will be in conformance with the goals of the aforementioned water quality control plans and will protect and maintain existing beneficial uses of the receiving water.

16. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code (California Environmental Quality Act) in accordance with Water Code Section 13389.

The Regional Board has notified the Discharger and interested agencies and persons of its intent to issue waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Clean Water Act or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, USEPA, has no objections.

IT IS HEREBY ORDERED that Camrosa Water District, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Clean Water Act and regulations and guidelines adopted thereunder, shall comply with the following:

I. DISCHARGE LIMITATIONS

A. Effluent Limitations

1. Waste discharged shall be limited to treated municipal wastewater only, as proposed.

REVISED TENTATIVE

R0067700

9-64

2. The discharge of an effluent from Discharge Serial No. 001 with constituents in excess of the following limits is prohibited:

a. Conventional and nonconventional pollutants:

		Discharge Limitations		
Constituents	Units	30-Day Average [1/]	7-Day Average [1/]	Daily Maximum [2/]
Settleable solids	ml/L	0.1	----	0.3
BOD_5 (20°C)	mg/L	30	45	---
	lbs/day[3/]	375	563	---
Suspended solids	mg/L	30	45	---
	lbs/day[3/]	375	563	---
Oil and grease	mg/L	10	----	15
	lbs/day[3/]	125	----	187
Total dissolved solids	mg/L	----	----	850
	lbs/day[3/]	----	----	10633
Sulfate	mg/L	----	----	250
	lbs/day[3/]	----	----	3127
Chloride	mg/L	----	----	190 [4/]
	lbs/day[3/]	----	----	2377
Boron	mg/L	----	----	1.0
	lbs/day[3/]	----	----	12.5
Fluoride	mg/L	----	----	1.2
	lbs/day[3/]	----	----	15
Total residual chlorine	mg/L	----	----	0.1
	lbs/day	----	----	1.25
Detergents (as MBAS)	mg/L	----	----	0.5
	lbs/day[3/]	----	----	6.25
Nitrate-nitrogen plus Nitrite-nitrogen	mg/L	----	----	10
	lbs/day[3/]	----	----	125

REVISED TENTATIVE

1/ As defined in Standard Provisions, Attachment N.

2/ Except for grab samples, the daily maximum effluent concentration limit shall apply to flow-weighted 24-hour composite samples.

3/ Based on the plant design flow rate of 1.5 mgd. During events such as storms in which the flow exceeds the design capacity, the mass discharge rate limitations will be tabulated using the concentration limits and the actual flow rates.

4/ The Instantaneous Maximum chloride limitation of 150 mg/L shall apply after January 9, 2001, when the interim limitation of 190 mg/L expires.

b. Toxic pollutants:

		Discharge Limitations		
Constituent	Units	Instantaneous Maximum	Daily Average 5/	30-Day Average
Arsenic	µg/L	----	----	50 6/
Cadmium	µg/L	a	a	----
Chromium (VI) 7/	µg/L	16 6/	11	----
Copper	mg/L	b	b	----
Lead	µg/L	c	c	2.5
Mercury	µg/L	----	----	2
Nickel	µg/L	d	d	----
Selenium	µg/L	---	5	----
Silver	µg/L	e	e	----
Zinc	µg/L	f	f	----
Endrin 8/	µg/L	----	----	0.8
Chlordane	µg/L	2.4	0.0043	0.002
Toxaphene	µg/L	0.73	0.0002	----
Dieldrin	µg/L	----	----	0.00014
Endosulfan	µg/L	0.22	0.056	----
Heptachlor	µg/L	0.52	0.0038	----

REVISED TENTATIVE

Constituent	Units	Discharge Limitations Instantaneous Maximum	Daily Average 5/	30-Day Average
Hexachlorocyclohexane				
alpha	µg/L	----	----	0.0039
beta	µg/L	----	----	0.014
gamma	µg/L	----	----	0.019
Halomethanes 9/	µg/L	----	----	100
Chloroform	µg/L	----	----	5.7
Heptachlor epoxide	µg/L	0.52	0.0038	----
Phenol	µg/L	----	----	300
Toluene	µg/L	----	----	150
Aldrin	µg/L	----	----	3
Polyaromatic hydrocarbon (PAHs)	µg/L	----	----	0.0028
DDT	µg/L	----	----	0.00059
Polychlorinated biphenyls (PCBs)	µg/L	----	----	0.014

5/ Compliance may be determined from a single analysis or from the average of the initial analysis and three additional analyses taken one week apart once the results of the initial analysis are obtained.

6/ Based on total recoverable metals. These limits may be modified to total dissolved metals if the Discharger requests and has conducted a study on the water-effect ratio (WER) according to USEPA guidance document and/or state protocols, if applicable.

7/ The Discharger may, at his option, meet this limitation as total chromium.

8/ ENDRIN shall mean the sum of endrin and endrin aldehyde.

9/ HALOMETHANES shall mean the sum of bromoform, chloroform, bromomethane, chloromethane, chlorodibromomethane, and dichlorobromomethane.

a/ The Daily Average limitation for Cadmium = e[0.7852 ln(Hardness) – 2.715] and the Instantaneous maximum = e[1.128 ln(Hardness) - 3.687], where Hardness is expressed as mg/L of $CaCo_3$.

b/ The Daily Average limitation for Copper = e[0.8545 ln(Hardness) - 1.702] and the Instantaneous maximum = e[0.9422 ln(Hardness) - 1.700] , where Hardness is expressed as mg/L of $CaCo_3$.

c/ The Daily Average limitation for Lead = e[1.273 ln(Hardness) - 4.705] and the Instantaneous maximum = e[1.273 ln(Hardness) - 1.460], where Hardness is expressed as mg/L of $CaCo_3$.

REVISED TENTATIVE

d/ The Daily Average limitation for Nickel = e[0.8460 ln(Hardness) + 0.0584] and the Instantaneous maximum = e[0.846 ln(Hardness) + 2.255], where Hardness is expressed as mg/L of $CaCo_3$.

e/ The Daily Average limitation for Silver = e[1.72 ln(Hardness) - 6.52], where Hardness is expressed as mg/L of $CaCo_3$.

f/ The Daily Average limitation for Zinc = e[0.8473 ln(Hardness) + 0.884] and the Instantaneous maximum = e[0.8473 ln(Hardness) + 0.884], where Hardness is expressed as mg/L of $CaCo_3$.

3. Radioactivity of the wastes discharged shall not exceed the limits specified in Title 22, Chapter 15, Article 5, Section 64443, of the California Code of Regulations, or subsequent revisions.

4. The arithmetic mean of BOD_5 (20°C) and suspended solids values, by weight, for effluent samples collected in a period of 30 consecutive calendar days shall not exceed 15 percent of the arithmetic mean of values, by weight, for influent samples collected at approximately the same time during the same period.

5. The wastes discharged to water courses shall at all times be adequately disinfected. For the purpose of this requirement, the wastes shall be considered adequately disinfected if the median number of coliform organisms at some point in the treatment process does not exceed 2.2 per 100 milliliters, and the number of coliform organisms does not exceed 23 per 100 milliliters in more than one sample within any 30-day period. The median value shall be determined from the bacteriological results of the last seven (7) days for which analyses have been completed. Samples shall be collected at a time when wastewater flow and characteristics are most demanding on treatment facilities and the disinfection processes.

6. The wastes discharged to water courses shall have received treatment equivalent to that of filtered wastewater. Filtered wastewater means oxidized and coagulated wastewater which has been passed through natural undisturbed soils or filter media, such as sand or diatomaceous earth, so that the turbidity of the filtered wastewater does not exceed (a) a daily average of 2 Nephelometric turbidity units (NTU's), (b) and does not exceed 5 NTU's more than 5 percent of the time (72 minutes) during any 24 hour period.

   "Oxidized wastewater" means wastewater in which the organic matter has been stabilized, is nonputrescible, and contains dissolved oxygen. "Coagulated wastewater" means oxidized wastewater in which colloidal and finely divided suspended matter have been destabilized and agglomerated upstream of a filter by the addition of suitable floc-forming chemicals.

7. Acute Toxicity Limitation:

   a. The acute toxicity of the effluent shall be such that the average survival in the undiluted effluent for any three (3) consecutive 96-hour static or

continuous flow bioassay tests shall be at least 90%, with no single test less than 70% survival.

b. If the discharge consistently exceeds the acute toxicity limitation, a toxicity investigation evaluation (TIE) is required. The TIE shall include all reasonable steps to identify the source(s) of toxicity. Once the source of toxicity is identified, the Discharger shall take all reasonable steps necessary to reduce toxicity to the required level.

II. RECEIVING WATER REQUIREMENTS

A. Receiving Water Limitations

1. The temperature of the receiving water at any time or place and within any given 24-hour period shall not be increased by more than 5°F (or above 70°F if the ambient receiving water temperature is less than 60°F) as a result of the waste discharged.

2. The pH of the receiving water shall not be depressed below 6.5 or raised above 8.5 as a result of wastes discharged. Ambient pH levels shall not be changed more than 0.5 units from natural conditions as a result of wastes discharged.

3. The dissolved oxygen in the receiving water shall not be depressed below 5 mg/L as a result of the wastes discharged.

4. The wastes discharged shall not contain substances that result in increases in the BOD which adversely affect beneficial uses of the receiving water.

5. The wastes discharged shall not contain biostimulatory substances in concentrations that promote aquatic growth to the extent that such growth causes nuisance or adversely affects beneficial uses of the receiving waters.

6. The wastes discharged shall not cause the receiving waters to contain any substance in concentrations that adversely affect any designated beneficial use.

7. The wastes discharged shall not degrade surface water communities and populations, including vertebrate, invertebrate, and plant species.

8. The wastes discharged shall not result in problems due to breeding of mosquitos, gnats, black flies, midges, or other pests.

9. The wastes discharged shall not result in visible floating particulates, foams, and oil and grease in the receiving water.

REVISED TENTATIVE

10. The wastes discharged shall not contain any individual pesticide or combination of pesticides in concentrations that adversely affect beneficial uses of the receiving waters. There shall be no increase in pesticide concentrations found in bottom sediments or aquatic life.

11. The wastes discharged shall not alter the natural taste, odor, and color of fish, shellfish, or other surface water resources used for human consumption.

12. In order to protect aquatic life, ammonia in receiving water shall not exceed concentrations specified in Tables 3-2 and 3-4 of the Basin Plan (Attachment 2) as a result of the wastes discharged, subject to the following conditions:

    The Discharger will have up to 8 years following the adoption (June 1994) of the Basin Plan (i) to make the necessary adjustments/improvements to meet these objectives; or (ii) to conduct studies leading to an approved, less restrictive, site specific objective for ammonia. If it is determined that there is an immediate threat or impairment of beneficial uses due to ammonia, the objectives in Tables 3-2 and 3-4 of Attachment 2 shall apply and the timing of compliance will be determined on a case-by-case basis.

13. In order to protect underlying groundwater basins, ammonia shall not be present at levels that, when oxidized, to nitrate, pose a threat to groundwater.

B. Receiving Water Quality Objective

There shall be no chronic toxicity in ambient waters as a result of wastes discharged.

If the chronic toxicity in the receiving water downstream of the discharge point consistently exceeds 1.0 TU_c in a critical life stage test, the Discharger shall determine if the cause of the exceedance is the wastes discharged. If it is determined that the wastes discharged caused the exceedance, the Discharger shall conduct a toxicity reduction evaluation (TRE). The TRE shall include all reasonable steps to identify the sources of toxicity. Once the sources are identified, the Discharger shall take all reasonable steps to reduce toxicity to meet the objective.

III. BIOSOLIDS REQUIREMENTS

For biosolids management, the Discharger must comply with all requirements of 40 CFR Parts 257, 258, 501, and 503, including all monitoring, recordkeeping, and reporting requirements.

REVISED TENTATIVE

Since the State of California, hence the Regional Board, has not been delegated the authority to implement the biosolids program, enforcement of the biosolids requirements contained in this Order and permit shall be the sole responsibility of USEPA.

IV. PRETREATMENT REQUIREMENTS

A. This Order includes the Discharger's pretreatment program as previously submitted to this Regional Board. Any change to the program shall be reported to the Regional Board and USEPA in writing and shall not become effective until approved by the Executive Officer and the USEPA Regional Administrator.

B. The Discharger shall implement and enforce its approved pretreatment program. The Discharger shall be responsible and liable for the performance of all pretreatment requirements contained in Federal Regulations 40 CFR Part 403 including subsequent regulatory revisions thereto. Where Part 403 or subsequent revision places mandatory actions upon the Districts as Control Authority but does not specify a timetable for completion of the actions, the Discharger shall complete the required actions within six months from the effective date of this Order or the effective date of Part 403 revisions, whichever comes later. For violations of pretreatment requirements, the Discharger shall be subject to enforcement actions, penalties, fines, and other remedies by the Regional Board, USEPA, or other appropriate parties, as provided in the Clean Water Act. The Regional Board or USEPA may initiate enforcement action against an industrial user for non-compliance with acceptable standards and requirements as provided in the Clean Water Act and/or the California Water Code.

C. The Discharger shall enforce the requirements promulgated under Sections 307(b), 307(c), 307(d), and 402(b) of the Federal Clean Water Act. The Discharger shall cause industrial users subject to the Federal Categorical Standards to achieve compliance no later than the date specified in those requirements or, in the case of a new industrial user, upon commencement of the discharge.

D. The Discharger shall perform the pretreatment functions as required in Federal Regulations 40 CFR Part 403 including, but not limited to:

1. Implement the necessary legal authorities as provided in 40 CFR 403.8(f)(1);
2. Enforce the pretreatment requirements under 40 CFR 403.5 and 403.6;
3. Implement the programmatic functions as provided in 40 CFR 403.8(f)(2); and
4. Provide the requisite funding of personnel to implement the pretreatment program as provided in 40 CFR 403.8(f)(3).

E. The Discharger shall submit annually a report to the Regional Board, the State Board, and the Environmental Protection Agency, Region 9, describing the Discharger's pretreatment activities over the previous twelve months. In the event

REVISED TENTATIVE

the Discharger is not in compliance with any conditions or requirements of this permit, then the Discharger will also include the reasons for non-compliance and state how and when the Discharger shall comply with such conditions and requirements. This annual report is due on March 1 of each year and shall contain, but not be limited to, the information required in the attached "Requirements for Pretreatment Annual Report." (Attachment P), or any approved revised version thereof.

V. REQUIREMENTS AND PROVISIONS

A. Discharge of wastes to any point other than specifically described in this Order and permit is prohibited and constitutes a violation thereof.

B. The Discharger shall comply with all applicable effluent limitations, national standards of performance, toxic and pretreatment effluent standards, and all federal regulations established pursuant to Sections 301, 302, 303(d), 304, 306, 307, 316 and 405 of the Clean Water Act and amendments thereto.

C. This Order includes the attached Monitoring and Reporting Program (Attachment T). If there is any conflict between provisions stated in the Monitoring and Reporting Program and the Standard Provisions, those provisions stated in the Monitoring and Reporting Program prevail.

D. This Order includes the attached "Standard Provisions and General Monitoring and Reporting Requirements" (Standard Provisions, Attachment N). If there is any conflict between provisions stated hereinbefore and the attached "Standard Provisions", those provisions attached hereinbefore prevail.

E. This Order includes the attached "Storm Water Pollution Prevention Plan" (Attachment A). If there is any conflict between provisions stated hereinbefore and the attached "Standard Provisions", those provisions attached hereinbefore prevail.

F. The Discharger shall provide standby or emergency power facilities and/or storage capacity or other means so that in the event of plant upset or outage due to power failure or other cause, discharge of raw or inadequately treated sewage does not occur.

G. The Discharger shall protect the facility from inundation which could occur as a result of a flood having a predicted frequency of once in 100 years.

H. This Order may be modified, revoked, and reissued or terminated in accordance with the provisions of 40 CFR Parts 122.44, 122.62, 122.63, 122.64, 125.62, and 125.64.

REVISED TENTATIVE

VI. EXPIRATION DATE

This Order expires on December 10, 2003.

The Discharger must file a Report of Waste Discharge in accordance with Title 23, California Code of Regulations, not later than 180 days in advance of the expiration date as application for issuance of new waste discharge requirements.

VII. RESCISSION

Order No. 93-053, adopted by this Board on September 27, 1993, is hereby rescinded.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region on January 26, 2000.

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

MONITORING AND REPORTING PROGRAM NO. CI - 6769
FOR
CAMROSA WATER DISTRICT
(Camrosa Water Reclamation Facility)
(NPDES NO. CA0059501)

REVISED TENTATIVE

I. REPORTING REQUIREMENTS

A. The Discharger shall implement this monitoring program on the effective date of this Order. All monthly monitoring reports shall be received by the fifteenth day of the second month following each monthly sampling period, addressed to the Regional Board, Attention: Information Technology Unit. The first monitoring report under this Program is due in our office, on or before April 15, 2000, and will cover the monitoring period of February 2000. Weekly effluent analyses shall be performed on different weekdays during each month. Quarterly monitoring shall be performed during the months of February, May, August, and November. Semiannual monitoring shall be performed during the months of February and August. Annual monitoring shall be performed during the first calendar quarter of each year. If no flow occurred during the month, the report shall so state, and the annual sampling event will be completed when the next discharge occurs to surface water.

All water quality sampling analyses shall specify the USEPA analytical method used and its Method Detection Limit (MDL). For the purpose of reporting compliance with effluent limitations, performance goals, and receiving water limitations, analytical data shall be reported with an actual numerical value or "nondetected (ND)" with the MDL indicated for the analytical method used. The maximum allowed MDLs are those published by the USEPA. The Discharger shall not use a MDL higher than that published by the USEPA unless the Discharger can demonstrate that a practical detection limit is not attainable and obtains approval for a higher MDL from the Executive Officer.

B. If the Discharger performs analyses on any influent, effluent, or receiving water constituent more frequently than required by this Program, using approved analytical methods, the results of these analyses shall be included in the report. These results shall also be reflected in the calculation of the average values used in demonstrating compliance with average effluent, receiving water, etc., limitations.

November 9, 1999
Revised: December 29, 1999

C. Analytical data reported as "less than" or below the detection limit, for the purpose of reporting compliance with permit limitations, shall be reported as "less than" a numeric value or "below the detection limit" for that particular analytical method (also giving the detection limit).

D. The Discharger shall immediately notify Board staff, by telephone, of any confirmed coliform counts that could cause a violation of the 30-day median limit, or that exceed the applicable maximum effluent limit, including the date(s) thereof. This information shall be confirmed in the next monitoring report; in addition, for any actual coliform limit violations that occurred, the report shall also include the reasons for the high coliform results, the steps taken to correct the problem (including dates thereof), and the steps being taken to prevent a recurrence.

E. The Discharger shall submit an annual summary report containing a discussion of the previous year's effluent and receiving water monitoring data, as well as graphical and tabular summaries of the data. This annual summary report is due by April 1st of the year following data collection.

II. REGIONAL MONITORING PROGRAM

A. Pursuant to the Code of Federal Regulations [40 CFR §122.41 (j) and §122.48 (b)], the monitoring program for a discharger receiving a National Pollutant Discharge Elimination System (NPDES) permit must determine compliance with NPDES permit terms and conditions, and demonstrate that State water quality standards are met.

B. Since compliance monitoring focuses on the effects of the point source discharge, it is not designed to assess impacts from other sources of pollution (e.g. non-point source runoff, aerial fallout) nor to evaluate the current status of important ecological resources on a regional basis.

C. A watershed-wide Regional Monitoring Program was created for the Calleguas Creek Watershed to determine: compliance with effluent and receiving water limits, trends in surface water quality, impacts to beneficial uses, data needs for modeling contaminants of concern, and potential impacts to ground water.

D. The Discharger shall participate in the Regional Monitoring Program by monitoring the receiving water stations listed in Section V.A. and taking part in the Calleguas Creek Characterization Study Surface Water Element (SWE).

9-77

III. INFLUENT MONITORING

Influent monitoring is required to:

- determine compliance with NPDES permit conditions and water quality standards.
- assess treatment plant performance.
- assess the effectiveness of the pretreatment program.

Sampling stations shall be established at each point of inflow to the sewage treatment plant and shall be located upstream of any in-plant return flows and where representative samples of the influent can be obtained. The date and time of sampling shall be reported with the analytical values determined.

Samples for influent BOD_5 (20°C) and suspended solids shall be obtained on the same day that effluent BOD_5 (20°C) and suspended solids samples are obtained in order to demonstrate percent removal.

The following shall constitute the influent monitoring program:

Constituent	Units	Type of Sample	Minimum Frequency of Analysis
Flow	mgd	recorder/totalizer	daily
Suspended solids	mg/L	24-hour composite	weekly
BOD_5 (20°C)	mg/L	24-hour composite	weekly
Chloride	mg/L	24-hour composite	monthly

Additionally, all monitoring under the approved pretreatment program, as previously submitted to this Regional Board, shall remain in force.

IV. EFFLUENT MONITORING
(Footnotes on pages T-10 to T-12)

Effluent monitoring is required to:

- determine compliance with NPDES permit conditions, identify operational problems, and improve plant performance.
- assess the effectiveness of the pretreatment program.
- provide information on wastewater characteristics and flows for use in interpreting water quality and biological data.

An effluent sampling station shall be established for each point of discharge and shall be located downstream of any in-plant return flows where representative samples of the effluent (after receiving all treatment) may be obtained. Effluent samples may be obtained at a single station provided that station is representative of the effluent quality at all discharge points. Any changes in sampling station locations shall be approved by the Executive Officer.

A. The following shall constitute the effluent monitoring program:

Constituent	Unit	Type of Sample	Minimum Frequency of Analysis
Total waste flow	mgd	------	daily[1/]
Turbidity[2/]	NTU	------	daily[1/]
Total residual chlorine	mg/L	grab	daily[1/]
Total coliform[2/]	MPN/100 mL	grab	daily
Fecal coliform[2/]	MPN/100 mL	grab	daily

2,4,6-trichlorophenol	µg/L	24-hour composite	annually
Radioactivity	pCi/L	grab	annually

Additionally, all monitoring under the approved pretreatment program, as previously submitted to this Regional Board, shall remain in force.

V. RECEIVING WATER MONITORING REQUIREMENTS
(Footnotes on pages T-10 through T-12)

A. Receiving water stations shall be established at the following location:

Station No.	Description
R-1	Calleguas Creek about 300 feet upstream of the discharge point.
SWE-6	Calleguas Creek below Camrosa Water Reclamation Facility, at Camarillo Drive (bridge crossing to CSU Channel Islands)

B. The following shall constitute the receiving water monitoring program:

1. The following analyses shall be conducted on grab samples obtained at Stations R-1 and SWE-6:

Constituent	Units	Minimum Frequency of Analysis
Flow	cfs	monthly
Temperature	°F	monthly
pH	pH units	monthly
BOD_5 (20°C)	mg/L	monthly
Dissolved oxygen	mg/L	monthly
Chloride	mg/L	monthly
Turbidity	NTU	monthly
Residual chlorine	mg/L	monthly
Total coliform	MPN/100 mL	monthly

Constituent	Units	Minimum Frequency of Analysis
Fecal coliform	MPN/100 mL	monthly
Settleable solids	ml/L	monthly
Nitrate nitrogen [4/]	mg/L	monthly
Nitrite nitrogen [4]	mg/L	monthly
Ammonia nitrogen [4]	mg/L	monthly
Organic nitrogen [4]	mg/L	monthly
Total kjeldahl nitrogen (TKN) [4]	mg/L	monthly
Total nitrogen [4]	mg/L	monthly
Total surfactants	mg/L	quarterly
Total phosphate	mg/L	quarterly
Suspended solids	mg/L	quarterly
Total dissolved solids	mg/L	quarterly
Oil and grease	mg/L	quarterly
Sulfate	mg/L	quarterly
Boron	mg/L	quarterly
Hardness	mg/L	quarterly
Chronic toxicity	TU_C	quarterly
Arsenic	mg/L	semi-annually
Cadmium	mg/L	semi-annually
Chromium	mg/L	semi-annually
Copper	mg/L	semi-annually
Nickel	mg/L	semi-annually
Lead	mg/L	semi-annually
Zinc	mg/L	semi-annually
Chlorinated pesticides	mg/L	semi-annually
N and P pesticides	mg/L	semi-annually
Base, neutral, & acid extractable (BNAs)	mg/L	semi-annually
Total petroleum hydrocarbon (TPH)	µg/L	semi-annually

2. In the event of a spill or bypass of raw or partially treated sewage into Calleguas Creek, total and fecal coliform analyses shall be made on grab samples collected at all potentially affected downstream receiving water areas and at least one unaffected upstream receiving water area. Coliform samples shall be collected on the date of the spill or bypass, if possible, and daily on each of the following four days.

3. At the time of sampling, the following observations shall be made at all the stations and the times of the observations shall be noted:

9-82

a) Measurement of flow
b) Odor of water
c) Color of Water
d) Occurrence of significant storm runoff (flowing into the river)
e) Presence of floating solids (Type)
f) Presence of any sludge banks or deposits, grease, oil, foam, or visible solids of waste origin
g) Wind conditions
h) Presence of any aquatic plant growth, sessile or floating
i) Any unusual occurrence

4. The time, date, and weather conditions (including air temperature) at the time of sampling shall be reported.

5. The color of the effluent shall be contrasted with that of the receiving water and reported descriptively.

6. Sampling may be rescheduled at stations W-18 and W-19, if weather and flow conditions would endanger personnel collecting receiving water samples. The monthly monitoring report shall note such occasions.

7. The results of receiving water monitoring and observations shall be submitted with the effluent monitoring reports. A standardized receiving water observation form is under development by the Regional Board staff.

VI. STORM WATER MONITORING AND REPORTING

Upon adoption of this Monitoring and Reporting Program, the Discharger shall file a notice of termination (NOT) with State Board, for their General Storm Water NPDES permit associated with industrial activity, since such requirements have been incorporated into this Order. The Discharger shall implement the attached Storm Water Monitoring and Reporting Program (Attachment T-2).

VII. COMPLIANCE WITH DAILY AVERAGE, INSTANTANEOUS MAXIMUM, AND 30-DAY AVERAGE LIMITS

A. If the result of any analysis exceeds the 30-day average limit, the frequency of analysis shall be increased to weekly within one week of knowledge of the test result. Weekly testing shall continue for at least 4 consecutive weeks and until

9-83

compliance with the 30-day average limit is demonstrated, after which the frequency shall revert to the frequency specified in the monitoring and reporting program.

B. If the result of any analysis exceeds the daily average limit, the frequency of analysis shall be increased to daily within one week of knowledge of the test result. Daily testing shall continue for at least 4 consecutive days and until compliance with the daily average or instantaneous maximum limit is demonstrated, after which the frequency shall revert to the frequency specified in the monitoring and reporting program.

C. If any result of any analysis exceeds the instantaneous maximum limit (1-hour average), the frequency of analysis shall be increased to hourly, within one week of knowledge of the test result and the Regional Board shall be immediately notified. A minimum of four consecutive 1-hour samples shall be analyzed to demonstrate compliance with the instantaneous limit. Once compliance has been demonstrated, the frequency shall revert to as previously designated. In the event that compliance with the 1-hour average limit has not been demonstrated, the Regional Board shall be consulted to determine the appropriate sampling frequency.

VIII. QUALITY CONTROL PROGRAM

This Discharger, in cooperation with the other discharger in the watershed, shall develop and submit a quality control program for approval by the Executive Officer no later than six months from the date of permit issuance. The program shall be implemented no later than one year from the date of permit issuance.

IX. HAULING REPORTS

In the event that other wastes (besides sludge) associated with wastewater treatment are transported offsite during the reporting period, the following shall be reported:

A. Type(s) of waste and quantity of each type;
B. Name and either the address or the State registration number for each hauler of wastes used (or the method of transport, if other than hauling); and,
C. Address or specific location of the final point(s) of disposal for each type of waste.

If no wastes are transported offsite during the reporting period, a statement to that effect shall be submitted.

X. FOOTNOTES (Apply to T-4 A, T-5 A, T-6 A, and T-7 B)

1/ Where continuous monitoring of a constituent is required, the following shall be reported:

Total waste flow - Total daily flow and peak daily flow (24-hour basis);

Total chlorine residual - maximum daily value (24-hour basis); and,

Turbidity - maximum daily value, total amount of time each day that turbidity exceeded five (5) turbidity units, the flow-proportioned average daily value and the monthly mean value.

2/ Coliform and turbidity samples shall be obtained at some point in the treatment process at a time when wastewater flow and characteristics are most demanding on the treatment facilities, filtration, and disinfection procedures.

Fecal coliform analysis shall be conducted parallel to total coliform analysis.

3/ If any result of weekly BOD analysis yields 90% or greater of the 30-day average limit, the frequency of analyses shall be increased to daily within one week of knowledge of the test result for at least one month and compliance with the 7-day and 30-day average BOD limits is demonstrated; after which the frequency shall revert to weekly.

4/ Samples for the receiving water nitrogen series (nitrite, nitrate, ammonia-N, and organic nitrogen) shall be obtained at the same time that temperature and pH are recorded in order to calculate unionized ammonia.

5/ Chlordane shall mean the sum of chlordane-alpha, chlordane-gamma, chlordene-alpha, chlordene-gamma, nonachlor-alpha, nonachlor-gamma, and oxychlordane.

6/ For Cr(VI) analysis, the appropriate sampling and analytical method must be used. The Discharger may, at their option, meet this limitation as total chromium.

7/ Initial screening shall be conducted using a minimum of three test species with approved test protocols to determine the most sensitive test organism for chronic toxicity testing. The initial screening process shall be conducted for a minimum of three months, but not to exceed five months, to account for potential variability of the effluent/ receiving water. If possible, the test species used during the screening process should include a fish, an invertebrate, and an aquatic plant.

Upon approval of the Executive Officer, and after the initial screening period, chronic toxicity testing may be limited to the most sensitive test species. However, the initial screening process shall be repeated annually, with a minimum of three test species with approved test protocols, to ensure use of the most sensitive species for chronic toxicity testing.

R0067721

9-95

REVISED TENTATIVE

Dilution and control waters for the effluent should be obtained from an unaffected area of the receiving waters. Standard dilution water may be used if the above source exhibits toxicity greater than 1.0 TU_C. The sensitivity of the test organisms to a reference toxicant shall be determined concurrently with each batch of bioassay tests and reported with the test results.

Chronic Toxicity shall be expressed and reported as toxic units, where:

$$TU_C = 100/NOEC$$

The No Observable Effect Concentration (NOEC) is expressed as the maximum percent effluent/ receiving water that causes no observable effect on a test organism, as determined by the result of a critical life stage toxicity test.

Except with prior approval from the Regional Board Executive Officer, ammonia shall not be removed from bioassay samples. The wastewater used for the toxicity test shall be analyzed for ammonia, and the result, along with an interpretation, shall be submitted with the toxicity data. If the test result is greater than the permit limitation, parallel tests or 100% effluent without ammonia removal and 100% effluent with ammonia removed shall be conducted.

8/ By methods specified in "Methods for Measuring the Acute Toxicity of Effluent to Freshwater and Marine Organisms" (March 1985, EPA/600/4-85/013). Submission of bioassay results should include the information noted on pages 45 through 49 of the "Methods" where appropriate. The fathead minnow (Pimephales promelas) shall be used as the test species.

Except with prior approval from the Regional Board Executive Officer, ammonia shall not be removed from bioassay samples. The wastewater used for the toxicity test shall be analyzed for ammonia, and the result, along with an interpretation, shall be submitted with the toxicity data. If the test result is greater than the permit limitation, parallel tests or 100% effluent without ammonia removal and 100% effluent with ammonia removed shall be conducted.
The Acute toxicity analysis shall be conducted on a dechlorinated final effluent sample.

9/ Endosulfan shall mean the sum of endosulfan-alpha and -beta and endosulfan sulfate.

10/ Endrin shall mean the sum of endrin and endrin aldehyde.

11/ Halomethanes shall mean the sum of bromoform, bromomethane (methyl bromide), chloromethane (methy chloride), chlorodibromomethane, and dichlorobromomethane.

12/ PAHs shall mean the sum of acenaphthylene, anthracene, 1,2-benzanthracene, 3,4-benzofluoranthene, benzo[k]fluoranthene, 1,12-benzoperylene, benzo[a]pyrene, chrysene, dibenzo[ah]anthracene, fluorene, indeno[l,2,3-cd]pyrene, phenanthrene, and pyrene.

13/ PCBs shall mean the sum of chlorinated biphenyls whose analytical characteristics resemble those of Aroclor-1016, Aroclor-1221, Aroclor-1232, Aroclor-1242, Aroclar-1248, Aroclor-1254, and Aroclor-1260.

14/ TCDD Shall mean the sum of the concentrations of chlorinated dibenzodioxins and chlorinated dibenzofurans multiplied by their respective toxicity equivalence factors, as shown in the following (constituent/factor): 2,3,7,8-tetra CDD/1.0, 2,3,7,8-penta CDD/0.5, 2,3,7,8-hexa CDD/0.1, 2,3,7,8-hepta CDD/0.01, octa CDD/0.1, 2,3,7,8-tetra CDF/0.1, 1,2,3,7,8-penta CDF/0.05, 2,3,4,7,8-penta CDF/0.5, 2,3,7,8-hexa CDFs/0.1, 2,3,7,8-hepta CDFs/0.01, octa CDF/0.001.

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

ORDER No. 00-XXX

NPDES No. CA0055115

WASTE DISCHARGE REQUIREMENTS
FOR
GOLDEN WEST REFINING COMPANY
(Santa Fe Springs Refinery)

REVISED TENTATIVE

The California Regional Water Quality Control Board, Los Angeles Region, (hereinafter-Regional Board) finds:

1. Golden West Refining Company (Golden West), discharges wastes under waste discharge requirements contained in Order No. 91-046 adopted by this Board on April 22, 1991. This Order serves as a permit under the National Pollutant Discharge Elimination System (NPDES Permit No. CA0055115).

2. The Regional Board is implementing a Watershed Management Approach to address water quality protection in the Los Angeles Region. Pursuant to this Regional Board's watershed initiative framework, the San Gabriel River Watershed is the targeted watershed for the fiscal year 1999-2000. Accordingly, the Regional Board has been reviewing the Waste Discharge Requirements and NPDES permits for the facilities that discharge wastes to the San Gabriel River (including Golden West). As a result of the review, this new Order is prepared to replace Order No. 91-046 adopted on April 22, 1991.

3 Golden West formerly operated an oil refinery and tank farms at 13539 East Foster Road, Santa Fe Springs, California. However, in February 1992, Golden West ceased its crude oil operations and in August 1997 terminated its terminalling operations. In addition, in August 1997, Golden West commenced the dismantling of the refinery and the construction of light industrial buildings. Golden West continues with the dismantling and development of industrial buildings and proposes to discharge up to 12.7 million gallons per day (mgd) of rainfall runoff. A flow rate of approximately 8.509 mgd is considered as contaminated runoff from the areas where dismantling continues. The rainfall runoff flows to the southeastern corner of the facility into a retention basin (outfall 001) passing through oil traps, trash screens, and straw filters prior to discharge to the North Fork Coyote Creek with Latitude 33° 54' 15" and Longitude 118° 02' 30". North Fork Coyote Creek is tributary, via Coyote Creek, to the San Gabriel River, a water of the United States, above the estuary. See Figure 1 for location map.

In addition, up to 4.514 mgd of stormwater runoff, from the west property boundary, flows towards the retention basin as described above. Specifically, this area is an open area where remediation activities have occurred, and buildings have already been constructed, thus reducing the possibility of contamination.

4. All other industrial process wastes and domestic wastes from this facility are discharged to the sanitary sewer system. Golden West will also receive the groundwater from the City of Santa Fe Springs, Carmenita Road Underpass to be processed with its industrial wastes.

5. On June 13, 1994, this Regional Board adopted a revised Water Quality Control Plan, Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan). The Basin Plan contains beneficial uses and water quality objectives for the Coyote Creek and San Gabriel River.

6. The beneficial uses of the receiving waters are:

   Water contact and non-contact recreation, warm freshwater, cold freshwater, and wildlife habitats; and (within the estuary) industrial service supply, ocean commercial and sport fishing, preservation of rare and endangered species, marine habitat, shellfish harvesting, and saline water habitat.

   The requirements in this Order are intended to protect designated beneficial uses and enhance the water quality of the watershed.

7. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code in accordance with Water Code Section 13389.

The Regional Board has notified the discharger and interested agencies and persons of its intent to prescribe the waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Clean Water Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided that the Regional Administrator of the U.S. Environmental Protection Agency has no objections.

IT IS HEREBY ORDERED that Golden West Refining Company, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the Federal Clean Water Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. EFFLUENT LIMITATIONS

1. Wastes discharged shall be limited to storm water runoff only, as proposed.

2. The discharge of an effluent from Discharge Serial No. 001 (storm water runoff) with constituents in excess of the following limits is prohibited:

REVISED TENTATIVE

Constituents	Units	Discharge Limitations Daily Maximum
Total suspended solids	mg/L lbs/day[1]	33 2,340
$BOD_5$20°C	mg/L lbs/day[1]	30 2130
Oil and grease	mg/L lbs/day[1]	15 1065
COD	mg/L lbs/day[1]	360 25,600
Phenolic Compounds	µg/L	1.0
Ethylbenzene	µg/L	700
Benzene	µg/L	1.0
Toluene	µg/L	150
Xylene(Total)	µg/L	1750
Total chromium	µg/L	600
Arsenic	µg/L	50
Cadmium	µg/L	4.6[2,3,4]
Copper	µg/L	13.6[2,3,4]
Lead	µg/L	82[2,3,4]
Chromium(VI)	µg/L	16.3[2,3,4]
Zinc	µg/L	123[2,3,4]
Mercury	µg/L	1.7[2,3,4]
Selenium	µg/L	50
Silver	µg/L	4[2,3,4]

[1] Based on a discharge flow rate of 8.509 million gallons per day.

[2] Concentrations are expressed as total recoverable metal. For the purpose of calculating effluent limits under the effluent limitations section of this permit, dissolved 304(a) criteria are translated to total recoverable effluent limitations using the default translators listed in

REVISED TENTATIVE

USEPA's NRWQC (i.e., freshwater conversion factors in NRWQC Correction dated April 1999 – page 24 of EPA 822-Z-99-001), because site-specific translators are not available.

[3] The permit may be reopened by the Regional Water Quality Control Board and effluent limitations recalculated using approved site-specific translators developed according to USEPA guidance documents and/or state protocols, if applicable.

[4] The permit may be reopened by the Regional Water Quality Control Board and effluent limitations recalculated using approved site-specific water quality criteria. Site-specific water quality criteria must be developed according to recognized USEPA procedures.

3. The pH of wastes discharged shall at all times be within the range of 6.5 to 8.5.

4. The temperature of the wastes discharged shall not exceed 80°F.

5. The acute toxicity of the effluent shall be such that the average survival in undiluted effluent for any three (3) consecutive 96-hour static or continuous flow bioassay tests shall be at least 90%, with no single test producing less than 70% survival.

B. REQUIREMENTS AND PROVISIONS

1. The discharger must comply with the lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding discharges of storm water to storm drain systems or other water courses under their jurisdiction; including applicable requirements in municipal storm water management programs developed to comply with NPDES permits issued by the Regional Water Board to local agencies.

2. This order may be modified, revoked, reissued, or terminated in accordance with the provisions of 40 CFR, Parts 122.44, 122.62 to 122.64, 125.62, and 125.64. Cause for taking such action includes, but is not limited to: failure to comply with any condition of this order and permit, endangerment to human health or the environment resulting from the permitted activity, or acquisition of newly obtained information which would have justified the application of different conditions if known at the time of order adoption and permit issuance.

   The filing of a request by the discharger for an Order and permit modification, revocation and issuance, or termination; or a notification of planned changes or anticipated noncompliance does not stay any conditions of this Order and permit.

3. This Order may also be modified, in accordance with the provisions set forth in 40 CFR Parts 122 and 124, to include requirements for the implementation of the watershed protection management approach.

4. This Order includes the attached "Standard Provisions and General Monitoring and Reporting Requirements" ("Standard Provisions" Attachment N). If there is any conflict between provisions stated hereinbefore and the attached "Standard Provisions and General Monitoring and Reporting Requirements," those provisions stated hereinbefore prevail.

REVISED TENTATIVE

5. The discharger must develop and implement a Storm Water Pollution Prevention Plan in accordance with Attachment A: Page 11, Section A, Storm Water Pollution Prevention Plan within 90 days from the effective date of this order.

C. EXPIRATION DATE

This order expires on December 10, 2005.

The discharger must file a Report of Waste Discharge in accordance with Title 23, California Code of Regulations, not later than 180 days in advance of the expiration date as application for issuance of new waste discharge requirements.

D. RESCISSION

Except for enforcement purposes, Order No. 91-046, adopted by this Board on April 22, 1991 is hereby rescinded.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region on January 26, 2000.

Dennis A. Dickerson
Executive Officer

MONITORING AND REPORTING PROGRAM No. CI-6083
for
GOLDEN WEST REFINING COMPANY
(CA0055115)

REVISED TENTATIVE

I. REPORTING REQUIREMENTS

A. The discharger shall implement this monitoring program on the effective date of this Order. The first monitoring report under this program shall be received by April 15, 2000.

Monitoring reports shall be submitted by the dates in the following schedule:

Reporting Period	Report Due
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15
Annual	March 1

B. If no discharge occurs during any monitoring period, the report shall so state.

C. Laboratory analyses - all chemical, bacteriological, and toxicity analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services Environmental Laboratory Accreditation Program (ELAP). A copy of laboratory certification shall be provided each time a new and/or renewal is obtained from ELAP.

D. For every item where the requirements are not met, Golden West Refining Company shall submit a statement of the cause(s) and actions undertaken or proposed which will bring the discharge into full compliance with waste discharge requirements at the earliest possible time, and submit a timetable for implementation of these actions.

E. By March 1 of each year, Golden West Refining Company shall submit an annual report to the Regional Board. The report shall contain both tabular and graphical summaries of the monitoring data obtained during the previous calendar year. In addition, Golden West Refining Company shall discuss the compliance record and the corrective actions taken or planned which may be needed to bring the discharge into full compliance with waste discharge requirements.

9-95

REVISED TENTATIVE

II. MONITORING REQUIREMENTS

A. Sampling station(s) shall be established at the discharge point and shall be located where representative samples of the effluent can be obtained. Provisions shall be made to enable visual inspections before discharge. In the event of presence of oil sheen, debris, and/or other objectionable materials or odors, discharge shall not be commenced before compliance with the requirements is ascertained. Any visual observation shall be included in the monitoring report.

B. All analyses shall include the chain of custody (including but not limited to date and time of sampling, date of analyses, name of person who performed the analyses), QA/QC, method of analysis and detection limits, copy of laboratory certification, and a perjury statement executed by the person responsible for the laboratory.

C. The detection limits employed for effluent analyses shall be lower than the permit limits established for a given parameter, unless the discharger can demonstrate that a particular detection limit is not attainable and obtains approval for a higher detection limit for the Executive Officer. At least once a year, the discharger shall submit a list of the analytical methods employed for each test and associated laboratory quality assurance/quality control procedures.

III. EFFLUENT MONITORING

The following shall constitute the effluent monitoring program :

Constituents	Units	Type of Sample	Minimum Frequency of Analysis
pH	pH units	grab	Once per discharge event[1]
Total waste flow	gal/day	-----	Once per discharge event[1]
Temperature	°F	grab	Once per discharge event[1]
Suspended solids	mg/L	grab	Once per discharge event[1]
Oil and grease	mg/L	grab	Once per discharge event[1]
COD	mg/L	grab	Once per discharge event[1]
$BOD_5 20°C$	mg/L	grab	Once per discharge event[1]
Phenolic compounds	µg/L	grab	Once per discharge event[1]
Benzene	µg/L	grab	Once per discharge event[1]

R0067732

9-96

REVISED TENTATIVE

Constituents	Units	Type of Sample	Minimum Frequency of Analysis
Ethylbenzene	µg/L	grab	Once per discharge event[1]
Toluene	µg/L	grab	Once per discharge event[1]
Xylene(Total)	µg/L	grab	Once per discharge event[1]
Methyl Tertiary Butyl Ether	µg/L	grab	annually[2]
Arsenic	µg/L	grab	annually[2]
Cadmium	µg/L	grab	annually[2]
Copper	µg/L	grab	annually[2]
Lead	µg/L	grab	annually[2]
Mercury	µg/L	grab	annually[2]
Chromium (VI)	µg/L	grab	annually[2]
Total chromium	µg/L	grab	annually[2]
Selenium	µg/L	grab	annually[2]
Silver	µg/L	grab	annually[2]
Zinc	µg/L	grab	annually[2]
Acute Toxicity[3]	%Survival	grab	annually[2]
Priority pollutants (See attached list)	µg/L	grab	annually[2]

[1] During periods of extended rainfall, no more than one sample per two weeks need be obtained. Sampling shall be during the first hour of discharge. If, for safety reasons, a sample cannot be obtained during the first hour of discharge, a sample shall be obtained at a safe opportunity and the reason for delay shall be included in the monitoring report.

[2] The report for January – March quarter shall include the results of the annual analyses. For the Environmental Protection Agency's priority pollutants (list attached), the discharger shall obtain representative samples at each effluent sampling stations for the first discharge of storm runoff on the effective date of this Order.

[3] By the method specified in "Methods for Measuring the Acute Toxicity of Effluents to Freshwater and Marine Organisms" -September 1991, (EPA/600/4-90/027). Submission of bioassay results should include the information noted on pages 70-73 of the "Methods". The fathead minnow (Pimephales promelas) shall be used as the test species.

If the results of the toxicity test yields a survival of less than 90%, then the frequency of analyses shall increase to monthly until at least three test results have been obtained and full compliance with Effluent Limitations has been demonstrated, after which the frequency of analyses shall revert to annually. Results of toxicity tests shall be included in the first monitoring report following sampling.

REVISED TENTATIVE

IV. STORM WATER POLLUTION PREVENTION PLAN

The monitoring program shall also document the elimination or reduction of specific pollutants, resulting from implementation of Best Management Practices (BMPs).

Santa Fe Springs, CA 90670-4619

Dear Mr. Welland:

RESPONSE TO COMMENTS ON TENTATIVE WASTE DISCHARGE REQUIREMENTS – GOLDEN WEST REFINING COMPANY, LOCATED AT 13539 E. FOSTER ROAD, SANTA FE SPRINGS, CA (NPDES PERMIT NO. CA0055115, CI-6083)

We have received your letter dated January 6, 2000, commenting on the tentative Waste Discharge Requirements for the Golden West Refining Company. After reviewing your comments, we provide you with the following responses:

1. Page 1, item 3, second paragraph: The wording has been changed to recognize that remediation activities have occurred on the west side of the Golden West Refining facility, however, this Board has not issue a "No Further Action Letter".

2. Pages 2 and 3, item A.2. Effluent Limitations: Lead is being analyzed as total lead which includes organic lead, therefore organic lead will not be included separately.

   The limitations for xylene is for total xylenes, therefore the word (total) has been added to clarify that total xylenes include o, m, and p xylene.

3. Pages T-2 and T-3, Effluent Monitoring: Organic lead is included in the total lead analysis, therefore organic lead will not be monitored separately.

4. Page T-3: Since the discharger has been requested to test U.S EPA priority pollutants, we believe that the testing for pollutants in the 8260 list is not necessary. Methyl tertiary butyl ether (MTBE) has been added in the monitoring program.

Enclosed is the revised tentative order that incorporates the above appropriate changes. If you have any questions please call José M. Morales at (213) 576-6667.

Sincerely,

W. Chiu

Wayne Chiou, Chief

Los Angeles, CA 90013

Dear Mr. Chiou:

SUBJECT: TENATIVE WASTE DISHARGE REQUIREMENTS – GOLDEN WEST REFINING COMPANY, LOCATED AT 13539 FOSTER ROAD, SANTA FE SPRINGS, CA (NPDES PERMIT NO. CA0055115, CI-6083)

The Santa Fe Springs Fire Department (SFSFD) is in receipt of the Tentative Waste Discharge Requirements (WDR) and Monitoring and Reporting Program for Golden West Refinery (GWR). Thank you for including the City of Santa Fe Springs on your distribution list and inviting our comments. As the agency charged with administration of the Uniform Fire Code, Certified Unified Program Agency (CUPA) Programs, and other environmental regulations, the City is concerned about protection of human health and the environment. Accordingly, the SFSFD offers the following minor comments to the Tentative WDR:

1. *Page 1, item 3, second paragraph.* This paragraph refers to the GWR west property boundary and states "this area is an open area where the contamination has been cleaned up". While the SFSFD recognizes remediation activities have occurred on the west side of the GWR facility, the Regional Water Quality Control Board has not yet issued a "No Further Action Letter" and the status of the site is still being determined.

2. *Page 2 and 3, item A.2. Effluent Limitations.* The SFSFD requests organic lead be included as a constituent analyte and that daily maximum discharge limitations be established in accordance with RWQCB standards.

   Daily maximum discharge limitations for xylene should specify that the limitation is for total xylenes, including o, m, and p xylene.

R0067738

9-102

3. *Page T-2 and T-3, Effluent Monitoring.* The SFSFD requests organic lead be added to the list of constituents analyzed in the effluent monitoring program.

4. *Page T-3.* Constituents listed on page T-3 include priority pollutants which are attached on the last page of the subject document. The SFSFD requests all 8260B analytes, including methyl tertiary butyl ether (MTBE) be included in the analysis for volatile organics.

Thank you for considering our comments. Should you have any questions regarding this matter, please contact Environmental Protection Inspector, Brenda Nelson at (562) 941-7483 extension 155.

Sincerely,

Neal Welland

Golden West Refining Company submitted a letter dated January 11, 2000, commenting on the tentative Waste Discharge Requirements sent to them on December 24, 1999. We have scheduled a meeting (January 20, 2000) with them to discuss and hopefully clarify their concerns.

Attn: Wayne Chiou, Chief
Los Angeles Inland Watershed Unit

Subject: Tentative Waste Discharge Requirements; Golden West Refining Co.; NPDES Permit No. CA0055115, CI-6083.

Dear Mr. Chiou:

We have reviewed the subject tentative NPDES permit issued on Dec. 24, 1999 (expiring on Dec. 10, 2005) which we received on Dec. 29, 1999. We are desirous of complying with all permit requirements but, based on past sampling results, it appears that Golden West Refining Company (GWRC) may not be able to meet some of the new discharge limits listed for the various components.

Even for an operating refinery, some time would be needed to construct the facilities needed to treat the storm water to meet the new requirements. In GWRC's case, the refinery has not been in operation since 1992 and is presently being demolished for redevelopment as an industrial business park. We are in a transition phase at this time. To date, we have completed approximately one third of the project. In three to five years, the conversion from a refinery to an industrial business park should be complete depending on the economy. Meanwhile, we request that the requirements remain more compatible with the existing permit. As demolition and redevelopment proceed, the quality of the storm water runoff will approach the limits set in this new permit.

GWRC had submitted permit renewal plans about five years ago when it appeared that the refinery could be put back into operation. The plans were revised recently to reflect the current program to develop an industrial park when it was realized that the refinery would never be restarted. At no time during this period did we imagine that new permit limits would be so restrictive. It was never presented to us that major changes were coming so it came as a complete surprise to see the new requirements. It appears that many of the new limits are the same as for drinking water.

We have data from past testing showing that the requirements cannot always be met for some of the constituents and the proposed lower limits may indicate additional constituents. In particular, the proposed limits should be higher for Suspended Solids, BOD, Phenolic Compounds and Benzene. No limits should be imposed at

13539 E. Foster Road Santa Fe Springs, CA 90670 ~~(310)~~ 562 921-3581

present for metals. After five years or when the business park has been completed (whichever comes first), prevailing NPDES standards for like uses will be met.

There are presently no facilities existing at GWRC to improve the storm water runoff quality to the proposed requirements. Since water quality will improve as the site is remediated, the continuation of the demolition / redevelopment project would serve the same purpose as installing treatment facilities. Also, the construction of unnecessary treating facilities would interfere with the existing remediation plan.

A meeting with Jose Morales has been tentatively set for Thursday, January 20, 2000 at 10:30AM to discuss these issues. If you have any questions, please call me at (562) 921-3581, extension 310.

Very truly yours,

W.A.(Bill) Koch

NPDES Rescissions
9.5 – 9.6

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION
Pasadena, California
January 26, 2000
42?th Regular Meeting

ITEM: 95-96

SUBJECT: WASTE DISCHARGE REQUIREMENTS (NPDES PERMIT RESCISSION)

DISCUSSION: In accordance with the Federal Clean Water Act, as amended, all waste discharges to navigable waterways, or tributaries thereto, require National Pollutant Discharge Elimination System (NPDES) permits.

This Board adopted NPDES permits for the listed dischargers; they have been found to no longer need a permit and have been field-checked and verified by staff. Therefore, these permits should be rescinded.

A tentative Order has been prepared which proposes to rescind these permits.

RECOMMENDATION: The tentative Order be adopted.

R0067744

9-108

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION

ORDER No. 00-XXX

RESCINDING WASTE DISCHARGE REQUIREMENTS
AND
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS
FOR DISCHARGES IN THE LOS ANGELES REGION

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. This Regional Board adopted waste discharge requirements for discharges to surface waters which also served as the National Pollutant Discharge Elimination System (NPDES) permits for the dischargers listed below.

2. These dischargers have been enrolled under a general NPDES permit or have eliminated their discharges to surface waters.

3. Therefore, the following waste discharge requirements and NPDES permits are no longer necessary and should be rescinded.

4. The rescission of waste discharge requirements is exempt from the provisions of Chapter 3 (commencing with Section 21100), Division 13, Public Resources Code, in accordance with Water Code Section 13389.

The Regional Board has notified the dischargers and interested agencies and persons of its intent to consider rescission of the following waste discharge requirements and has provided them with an opportunity to submit their written views and recommendations.

The Regional Board, in a public hearing, heard and considered all comments and testimony pertinent to this matter.

IT IS HEREBY ORDERED that the following waste discharge requirements be rescinded:

Discharger (NPDES No.)	Order No. (Adoption Date)	Reason for Rescission
Certified Alloy Products (CA0059498)	94-123 (12-05-94)	Enrolled under General permit

TENTATIVE

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 10

SUBJECT: WASTE DISCHARGE REQUIREMENTS CONSIDERATION OF NON-NPDES REQUIREMENTS – RESCISSION

DISCUSSION: In accordance with the Porter-Cologne Water Quality Control Act, all dischargers of wastes which could affect the waters of the State, other than into a community sewer system, must file a Report of Waste Discharge Requirements with a Regional Water Quality Control Board and receive requirements. The Board is also required to periodically review active requirements and to update, revise or rescind the requirements, as necessary.

Tentative waste discharge requirements have been prepared for the dischargers listed on the attached Summary Sheet. The requirements are similar to others adopted previously for similar dischargers. No water quality problems are expected as a result of these discharges. The waste discharge requirements as they are met, are in conformance with the goals of this Board's Water Quality Control Plans.

For new cases, this is the first time they are being presented for Board consideration. For renewal or revised cases, staff has reviewed the applications or current requirements, and the past monitoring and technical reports submitted, and has inspected the facilities in the last six months. The attached summary sheets also include a discussion on the compliance history for these cases.

To save paper and space, the "Standard Provisions Applicable to Waste Discharge Requirements" have been included only in the first requirement in your agenda folder. They are, however, part of each requirement, and will be included with the final copies sent to each discharger and his respective mailing list.

RECOMMENDATION: The tentative Orders be adopted.

10.1

This item will be submitted with the Addendum package mailed on January 21, 2000.

Non - NPDES Rescissions
10.2 – 10.10

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION
Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 10) - 10.10

SUBJECT: Consideration of Non-NPDES Requirements - Rescission

DISCUSSION: In accordance with the Porter-Cologne Water Quality Control Act, all dischargers of wastes which could affect the waters of the State, other than into a community sewer system, must file a Report of Waste Discharge with a Regional Water Quality Control Board and receive requirements. The Board is also required to periodically review or rescind the requirements, as necessary.

The Board had adopted Waste Discharge Requirements for the listed dischargers. The discharges have either been terminated or never occurred or no longer need requirements as verified by staff. Therefore, the Waste Discharge Requirements should be rescinded.

A tentative Order has been prepared that rescinds these Waste Discharge Requirements.

RECOMMENDATION: The tentative Order be adopted.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION

ORDER NO. 00-XXX

RESCINDING WASTE DISCHARGE REQUIREMENTS
FOR DISCHARGES TO LAND/GROUNDWATER

The California Regional Water Quality Control Board, Los Angeles Region finds:

1. This Regional Board has adopted waste discharge requirements for the dischargers listed below.

2. The dischargers have since terminated their waste discharges or have not had any discharge from their facilities since issuance of the waste discharge requirements.

3. Board staff has verified, by inspection, that these facilities have discontinued discharging or there had been no waste discharged.

4. The Board finds that these requirements are no longer applicable and should be rescinded.

5. The Board has transmitted copies of this tentative Order to the dischargers and to interested agencies and persons, and has notified them of its intent to rescind requirements at a public meeting to be held on January 26, 2000.

6. At that public meeting, the Board gave the opportunity for a hearing and considered comments and correspondence pertaining to these discharges.

IT IS HEREBY ORDERED that the following requirements be rescinded:

Discharger	Order No.	Date Adopted	Reason for Rescission
Port of Los Angeles Berths 118-120 (File No. 98-053)	98-062	August 3, 1998	Dredging completed
Port of Los Angeles Berths 216-221 (File 97-120)	98-039	May 18, 1998	Dredging completed

Item 11 is submitted under a separate cover.

California Regional Water Quality Control Board, Los Angeles Region

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 12

SUBJECT: Administrative Civil Liability (ACL) Complaint No. 99-122 for Sun Coast Calamari

DISCUSSION: Regional Board staff identified a water quality problem in Port Hueneme Harbor. Squid offloading operations caused or contributed to high ammonia concentrations and very low dissolved oxygen concentrations in the harbor. Regional Board staff met with the squid fishing and processing businesses and concerned parties to address the water pollution problem and potential solutions. The squid processors agreed to implement five Best Management Practices (BMPs) to mitigate the pollution in the harbor water. These BMPs did not result in the expected improvement of harbor water quality, based on chemical analyses conducted by Channel Islands Marine Resources Institute. Therefore, on November 24, 1999, the Executive Officer issued Notice of Violation (NOV) letters to the squid processors in Port Hueneme Harbor directing them to cease all discharge of squid offloading process wastewater into the harbor. Sun Coast Calamari continued to discharge wastewater from their squid offloading operations into Port Hueneme Harbor in violation of waste discharge prohibitions contained in the NOV. This discharge has continued to contribute to the pollution the harbor resulting in poor and potentially toxic water quality.

Sun Coast Calamari is alleged to have violated:

1. Sections 13260, 13264, and 13376 of the California Water Code;
2. The California Ocean Plan; and,
3. The Basin Plan.

These violations occurred on at least five separate occasions. The maximum civil liability that could be imposed under section 13265(d)(1) of the Porter-Cologne Water Quality Control Act is $5,000 per day for each violation. Therefore, the maximum civil liability that could be imposed is $25,000 (5 x $5,000). In addition, the Regional Board can be reimbursed for staff costs, $4,900, bringing the total maximum civil liability to $29,900.

OPTIONS: The Regional Board has the option to affirm, reject, or modify the attached ACL. Affirmation of the attached ACL would maintain consistency with prior Regional Board enforcement of the California Water Code and the Basin Plan. The recommended penalty in this ACL was calculated using a method consistent with other ACLs, while considering those factors as required by law.

RECOMMENDATION: Staff recommends that the Regional Board affirm the attached ACL in the amount of $19,900, which includes:

- $15,000 for discharge of ammonia-laden and high biological oxygen demand-laden wastewater to the harbor ($5,000 per discharge event), and
- $4,900 for reimbursement of staff costs.

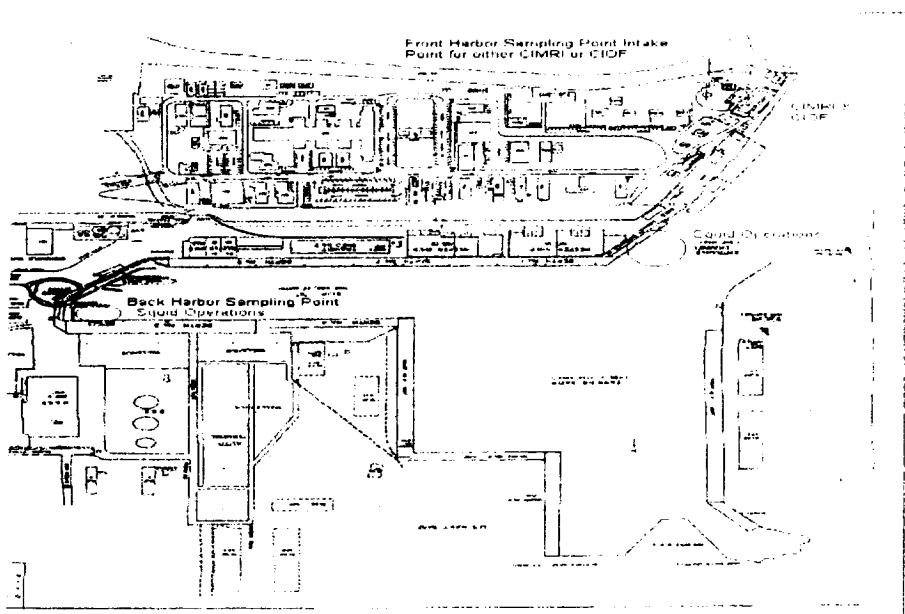
California Regional Water Quality Control Board, Los Angeles Region
427th Regular Meeting (Pasadena)
January 26, 2000
Enforcement Agenda Item No. 12
Staff Report for Administrative Civil Liability Complaint No. 99-122
For Sun Coast Calamari

Introduction

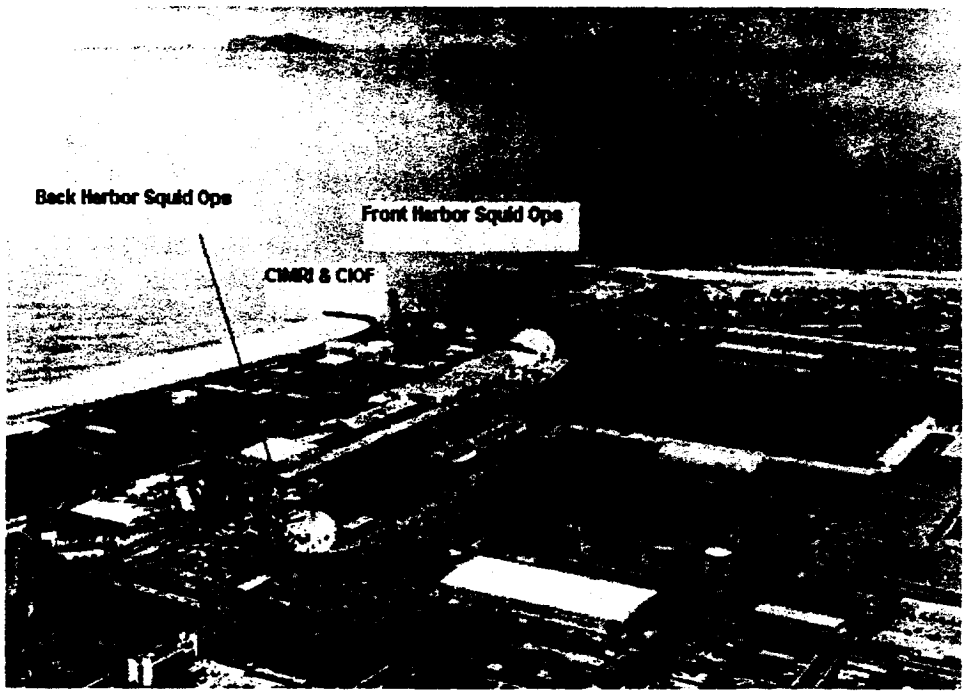
On December 2, 1999, and on four other documented occasions, Sun Coast Calamari discharged waste, in violation of the Porter-Cologne Water Quality Control Act, into Port Hueneme Harbor, California (Ventura County). Regional Board staff have prepared Administrative Civil Liability Complaint No. 99-122 to address these violations.

Background

Port Hueneme Harbor is located in Ventura County, between the cities of Oxnard and Ventura. It is a naval and industrial-based harbor. "The Port of Hueneme is the only deep water harbor between Los Angeles and the San Francisco Bay area and is the U.S. Port of Entry for California's Central Coast region. It serves international businesses and ocean carriers from both the Pacific Rim and Europe. The Port of Hueneme ranks among the top seaports in California for general cargo throughput. The niche markets that Hueneme serves include: the import and export of automobiles, fresh fruit, fresh produce, and forest products. The Port of Hueneme is the top seaport in the United States for citrus export and ranks among the top ten ports in the country for automobile and banana imports" (from www.portofhueneme.org).



Port Hueneme Harbor map



Port Hueneme Harbor aerial photo

October 27, 1999
Regional Board staff were notified by Channel Islands Ocean Farms (CIOF) that they were in violation of their National Pollutant Discharge Elimination System (NPDES) permit (NPDES NO. CA0063070, Order No. 92-082, CI No. 7219) for ammonia, dissolved oxygen, and biological oxygen demand. They stated that the violations were caused by the intake water from the harbor exceeding the discharge limits causing a toxic effect to their marine organisms. CIOF is an aquaculture business located within Port Hueneme Harbor which cultures abalone. They circulate saltwater from the harbor through their tanks and the saltwater is discharged back into the harbor.

Channel Islands Marine Resources Institute (CIMRI) is a non-profit organization which is also located within Port Hueneme Harbor. CIMRI provides education to local schools and the community on marine life and effects of pollution. CIMRI operates much the same as CIOF and was also in violation of their permit (NPDES No. CA0064131, Order No. 97-137, CI No. 7854) during the same time period. The organisms in CIMRI's tanks had to be relocated to another facility because of the deleterious effects of the harbor water's toxicity. CIMRI has ceased operating, resulting in no incoming funds to run their programs.

These two facilities are required to monitor for certain pollutants as a condition of their NPDES permits. Water chemistry results indicated very low levels of dissolved oxygen in the water which would essentially cause aquatic organisms to suffocate. Further data indicated high ammonia levels. Ammonia can potentially be extremely toxic to aquatic organisms.

The squid-fishing season, which began in the beginning of October, was producing bountiful harvests, and the offloading operations in the harbor seemed to be a potential explanation of our water quality test results. When squid die, they release their ink and ammonia. The biological components of squid ink are such that when it decomposes, it requires a large amount of oxygen in the process. This could be the source of the oxygen depletion seen in the

water chemistry analyses. Further, the addition of ammonia into the harbor had the potential to be toxic to the animals in the facilities and within the harbor as the concentration increased.

October 28, 1999
Regional Board staff investigated the complaint received from CIOF and collected water samples from the harbor for analysis. Initial dissolved oxygen (DO) levels taken in the field were recorded at 3 mg/L near CIMRI and CIOF and at 0.3 mg/L near the boats where squid offloading was occurring. Dissolved oxygen levels should be around 7 mg/L. Ammonia levels ranged from 2 to 5 mg/L from the facilities to the boats. Ammonia levels have to be less than 0.1 mg/L before CIMRI can bring their organisms back. Samples were collected and taken to the California State Department of Health Services laboratory in Los Angeles for analysis. Sample 1 was collected from harbor water in the back basin near a squid boat offloading its catch. Sample 2 was collected across the harbor from a drain on the dock where wastewater was flowing into the harbor. The following results were reported (all are in mg/L):

Source	Sample 1	Sample 2	Limit
Nitrate nitrogen	0.40	1.80	0.20
Ammonia nitrogen	22.8	4.40	0.05
Nitrite nitrogen	< reportable limit	0.04	0.03
Organic nitrogen	55.7	15.2	0.05
BOD – 5 day	> 500	104	2.00

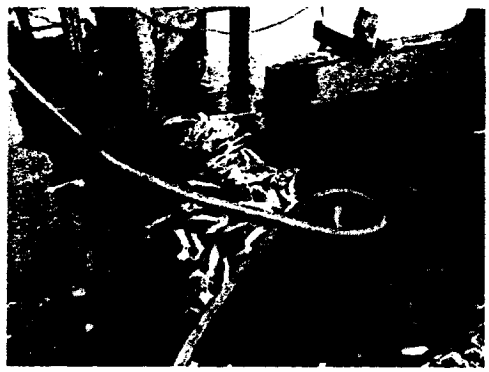
Nine out of the ten analyses exceeded established limits.

Thick foam was observed in the water near the boats and offloading operations. The water was dark purple-black in color.

Regional Board staff observed very sloppy housekeeping practices in the harbor as well as on the dock. The squid boats have tanks where the squid are kept after they are caught. When the squid die, ammonia and ink become concentrated in these tanks. The water in the tanks is discharged before the squid are offloaded to minimize the volume of unnecessary water which must be handled when they offload the squid. This water was being discharged into the harbor as the boats entered and left, as well as at dockside. Squid and water spilled during the offloading operation was being rinsed off the dock into the harbor.

November 1, 1999
A meeting was held on November 1, 1999, with representatives of the Regional Board, the Department of Fish and Game, port officials, the squid fishing companies, CIMRI and CIOF, and the Santa Barbara Channel Keeper.

Foam in the water on October 28, 1999.



Squid on the docks on October 28, 1999.

The meeting was called to address the seriousness and immediacy of the problem of toxicity in the harbor and to consider potential solutions. The representatives from the squid seafood companies agreed that the problems were most likely the result of their activities in the harbor. After discussing the role of the Regional Board in protecting water quality and outlining the violations of the Porter-Cologne Water Quality Control Act and the Water Quality Control Plan for the Los Angeles Region (also known as the Basin Plan) that were occurring, several options to correct the problem were discussed. The decision was made to implement several Best Management Practices (BMPs) that would alter the method of squid offloading and processing to decrease the amount of wastewater and biological material that was being flushed into the harbor. The squid companies agreed to implement these BMPs and CIMRI agreed to continue monitoring the water quality of the harbor to determine whether these changes would abate the pollution and improve water quality in the harbor.

The extent these BMPs were implemented is unknown. However, water chemistry data indicated the quality of the water was not improving. Graphic analysis of the data showed that the water quality deteriorated during the week and improved over the weekends when squid fishing did not occur. Continued complaints were made to the Regional Board about the squid companies' non-compliance with implementation of the agreed-upon BMPs and their continued discharge of waste into the harbor.

On November 24, 1999, the Executive Officer of this Regional Board issued Notice of Violation letters to the five squid companies operating in Port Hueneme Harbor. The companies were directed to cease discharging into the harbor immediately, and that any further discharges would be subject to enforcement action by the Regional Board, including a possibility of administrative civil liability of up to $5,000 for each day of violation. Some possible options were listed for the companies to pursue as alternatives to discharging into the harbor. These alternatives included applying for a NPDES permit through the Regional Board, submitting a new list of BMPs that could be implemented to successfully abate the pollution in the harbor, obtaining an industrial user permit to allow the squid waste to be discharged to the sanitary sewer system, or discharging the waste water from the holding tanks prior to entering waters of the State.

November 25-28, 1999

During the four day Thanksgiving holiday, when there was no fishing and very high tides flushed the harbor, there was a noticeable improvement in the water quality in the harbor. However, once fishing operations resumed, the water quality decreased rapidly again.

December 3, 1999
Regional Board staff inspected the squid offloading operations in Port Hueneme to determine whether the squid companies were complying with the Notice of Violation letters and had ceased discharge to the harbor. Extreme high wind conditions had resulted in a small craft warning being issued by the Wharfinger's office.

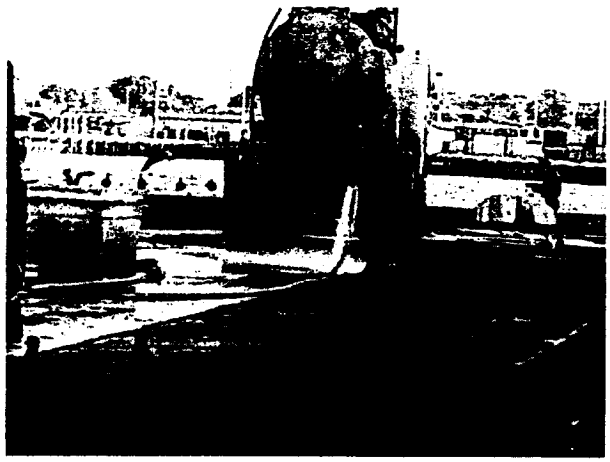
There were only two companies in operation during the inspection. It was obvious by the tanks hooked up to their operations that they had implemented some of the suggested BMPs. These tanks had been loaned to them by CIOF. There was no foam in the water around these ongoing operations and spillage onto the dock was minimal. The high winds were mixing the water a little and the minimal squid operations explain our field measurements of DO in the front of the harbor being 7.4 and 7.3 mg/L which are within Basin Plan standards. In the back basin of the harbor, the DO concentration was recorded at 5.4 mg/L.

Personnel from the Wharfinger's Office and indicated that Sun Coast Calamari had been unloading squid between 0100 and 0500 hours and a thick layer of foam had been observed around their boat and their offloading operations. Sun Coast Calamari received their Notice of Violation letter, sent by registered mail, on November 30, 1999. Regional Board staff also observed Sun Coast Calamari personnel hosing off the dock and offloading equipment. The wastewater then drained directly into the harbor.

Sun Coast Calamari personnel hosing off equipment and dock on December 3, 1999.

Sun Coast Calamari truck on December 3, 1999.

12-6



Sun Coast Calamari Tanker and personnel hosing down the dock on December 3, 1999.

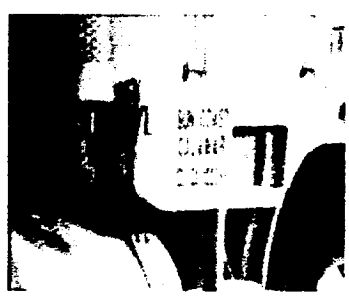
December 9, 1999

Regional Board staff again inspected the squid offloading operations at Port Hueneme Harbor on December 9, 1999. While observing dock offloading operations at Sun Coast Calamari, staff observed a large quantity of foam in the water around the vessel, *Nicholas Michael*, which is contracted to them. The pipes and hoses of their offloading equipment were leaking significant amounts of water, which was draining into the harbor, the most likely cause of the foam. There was a large overflow of water and squid from the conveyor belts and discharging foam and squid all over the dock. DO levels next to the boat were 5.75 mg/L and ammonia levels were 0.6 – 0.8 mg/L.

Foam in the water around *Nicholas Michael* on December 9, 1999.

Spilt squid on the docks on December 9, 1999.

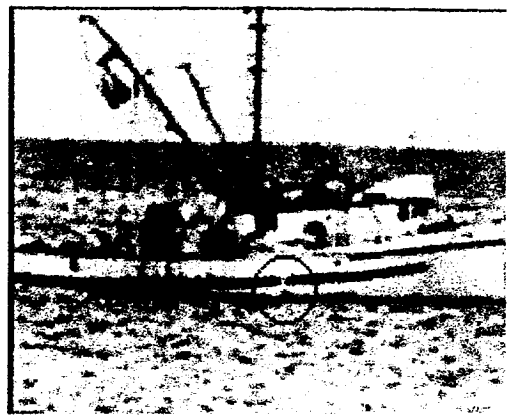
Water and foam being spilled from Sun Coast Calamari offloading operations on December 9, 1999.



Sun Coast Calamari truck on December 9, 1999.

Another boat contracted with Sun Coast Calamari, *Junior*, was observed right outside of the harbor dumping water. This does not meet the requirement of three miles outside of the harbor to release the hold water into waters of the United States.

Boats discharging within the 3 mile limit on December 9, 1999.



A close up of the *Junior*, contracted with Sun Coast Calamari, discharging water on December 9, 1999.

Impacts to Water Quality

These poor housekeeping practices have created a pollution nuisance in Port Hueneme Harbor. A bait company, which supplied baitfish to fishing boats, cannot keep their baitfish alive in their pens. CIMRI cannot maintain its marine organisms in their tanks. These organisms continue to be housed offsite at additional cost to CIMRI. The increased levels of ammonia in the harbor are toxic to the marine life. The depressed levels of dissolved oxygen suffocate those organisms that are not sensitive to the high ammonia levels. The combined effect is that the harbor is uninhabitable for many marine organisms usually found here. The Basin Plan states that DO levels should be 7.0 mg/L on the average, with no reading under 5.0 mg/L. Ammonia standards are dependent on the species of the organism, and the temperature and pH of the water. For CIMRI to bring their animals back and be operational again, the ammonia levels need be below 0.1 mg/L. Water quality samples taken by CIMRI were collected at two different locations twice a day. The first location was the intake for their water. This represents the front of the harbor and a best case scenario. The second sampling point was in the back of the harbor behind a boat named the *California Responder*. This sample would represent the worst case scenario since this water is not mixed as much and the water is subject to longer detention times which increases the amount of time necessary for its recovery. Below are the minimum and maximum values as well as the average values for dissolved oxygen and ammonia measured during November and December, 1999, by CIMRI.

Dissolved Oxygen	**November**	**December**
Front Harbor		
Average	6.21 mg/L	5.96 mg/L
Minimum	3.56 mg/L	4.39 mg/L
Maximum	8.00 mg/L	7.53 mg/L
Back Harbor		
Average	4.73 mg/L	5.05 mg/L
Minimum	2.59 mg/L	3.13 mg/L
Maximum	6.85 mg/L	6.80 mg/L

12-8

Ammonia	November	December
Front Harbor		
Average	1.12 mg/L	0.24 mg/L
Minimum	0.00 mg/L	0.00 mg/L
Maximum	4.00 mg/L	0.80 mg/L
Back Harbor		
Average	1.25 mg/L	0.38 mg/L
Minimum	0.20 mg/L	0.00 mg/L
Maximum	4.00 mg/L	0.80 mg/L

On December 31, 1999 Regional Board staff received a phone call from CIOF. A diver had been in the harbor and noticed all the red and coraline algae was bleached and dying as if it had been burned. High ammonia levels are one of the suspected causes.

Alleged Violations

Sun Coast Calamari is alleged to have violated Sections 13260, 13264, and 13376 of the California Water Code, in addition to both the Basin Plan and the California Ocean Plan, by discharging squid holding tank water high in Biological Oxygen Demand substances and ammonia and squid wastes into Port Hueneme Harbor. The California Regional Water Quality Control Board, Los Angeles Region (hereinafter Regional Board), as a legal authority may impose civil liability under Sections 13265 and 13385 of the California Water Code (CWC). For reference, relevant portions of Sections 13260, 13264 and 13376 of the CWC are stated below:

California Water Code Section 13260.

(a) All of the following persons shall file with the appropriate regional board a report of the discharge, containing the information which may be required by the regional board:

(1) Any person discharging waste, or proposing to discharge waste, within any region that could affect the quality of the waters of the state, other than into a community sewer system.

(b) Every person subject to subdivision (a) shall file with the appropriate regional board a report of waste discharge relative to any material change or proposed change in the character, location, or volume of the discharge.

California Water Code Section 13264. Prerequisites to discharge.

(a) No person shall initiate any new discharge of waste or make any material changes in any discharge, or initiate a discharge to, make any material changes in a discharge to, ...prior to the filing of the report required by Section 13260.

California Water Code Section13376. Reports of discharges

Any person discharging pollutants or proposing to discharge pollutants to the navigable waters of the United States within the jurisdiction of this state.....shall file a report of the discharge in compliance with the procedures set forth in Section 13260..... The discharge of pollutants ...or fill material... by any person except as authorized by waste discharge requirements is prohibited...

The Water Quality Control Plan for the Los Angeles Region (Basin Plan) adopted by the Regional Water Quality Control Board, Los Angeles Region on June 13, 1994, includes water quality objectives regulating ammonia and dissolved oxygen levels. The water quality

objectives for dissolved oxygen are: "At a minimum, the mean annual dissolved oxygen concentration of all waters shall be greater than 7 mg/L, and no single determination shall be less than 5.0 mg/L, except when natural conditions cause lesser concentrations". The water quality objectives for ammonia are based on pH and temperature, but are normally toxic to aquatic organisms in the harbor at levels greater than 2 mg/L..

The California Ocean Plan adopted by the State Water Resources Control Board on July 23, 1997 includes general requirements for the management of waste discharges to the ocean. It states: "Waste management systems that discharge to the ocean must be designed and operated in a manner that will maintain the indigenous marine life and a healthy and diverse marine community.", and "Waste discharged to the ocean must be essentially free of: Material that is floatable or will become floatable upon discharge. ... Substances which will accumulate to toxic levels in marine waters, sediments, or biota."

Proposed Civil Liability

Sun Coast Calamari is civilly liable for $19,900 in accordance with Section 13265 of the CWC. For reference, the relevant portion of Section 13265 of the CWC is listed below:

California Water Code Section 13265. *Civil Liability*

(a) Any person discharging waste in violation of Section 13264, after such violation has been called to his attention in writing by the regional board, is guilty of a misdemeanor and may be liable civilly in accordance with subdivision (b). Each day of such discharge shall constitute a separate offense.

(d)(1) Civil liability may be administratively imposed by a regional board in accordance with Article 2.5 (commencing with Section 143323) of Chapter 5 for a violation of subdivision (c) in an amount which shall not exceed five thousand dollars ($5,000) for each day in which the violation occurs.

Penalty Calculations

Regional Board staff or other agencies observed Sun Coast Calamari violating the CWC on at least five separate occasions. This discharge of wastes to a navigable water of the United States is contrary to the CWC, the California Ocean Plan, and the Los Angeles Basin Plan. Therefore, under section 13265 (d) (1) of the CWC, the maximum civil liability that could be imposed for these violations is $5,000 each day for 5 days, for a total of $25,000.

Pursuant to section 13385 (e) of the SWC, the Regional Board is required to consider the following factors in determining the amount of civil liability to be imposed: the nature, circumstances, extent, and gravity of the violation, and, with respect to the violator, the ability to pay, any prior history of violations, the degree of culpability, economic benefit or savings, if any, resulting from the violation; and other matters that justice may require.

A. Nature, circumstances, extent, and gravity of the violations – The discharge of pollutants including ammonia and biological oxygen demand-laden materials to the harbor created a nuisance and was the source of pollution of the harbor. The increased levels of ammonia were toxic to aquatic organisms. Further, low dissolved oxygen will suffocate aquatic organisms. CIMRI was forced to relocate their aquatic organisms to another facility because they were unable to survive in this poor quality water. Therefore, a reduction of the maximum civil liability is not warranted.

B. The ability of the discharger to pay – The ability of the discharger to pay is unknown. However, the proposed civil liability assessment is not a significant amount compared to the ultimate value of changes if they had been made and the discharger came into compliance. Therefore, a reduction of the maximum civil liability is not warranted.

C. Prior history of violations – Regional Board staff is not aware of any previous violations. Therefore, a reduction of the maximum civil liability is warranted.

D. Degree of culpability - Sun Coast Calamari willfully allowed wastes from the squid offloading operations to be discharged into Port Hueneme Harbor. Sun Coast Calamari failed to take adequate measures to prevent the discharge of pollutants. The chilled seawater is not being discharged outside the waters of the United States nor is it being recycled in a holding tank during the offloading process. These options were discussed and agreed upon at the meeting held on November 1, 1999. Sun Coast Calamari was informed of, and understood, the impacts of their actions when they chose not to comply. Therefore, a reduction of the maximum civil liability is not warranted.

E. Economic benefit or savings - Sun Coast Calamari has realized an economic benefit by not having to pay for the refitting of the offloading area, or the changes in offloading procedures. This saving ranges anywhere from $5,000 to $15,000. Implementation of the suggested BMPs would not constitute a significant cost. Three of the other companies who offload squid were able to make these changes without expending large amounts of money. Further, CIOF offered the use of their large storage tanks to hold the wastewater during offloading so it could be recycled back onto the boat for discharge more than three miles outside the harbor. These tanks are valued between $3,500 and $4,800 in their used condition. Monterey Fish Company estimated the total cost of the modifications to their operations to meet compliance was $5,000. Therefore, a reduction of the maximum civil liability is not warranted.

F. Other matters as justice may require - Other matters to consider include time spent by the staff of the Regional Board in evaluating the violations and preparing this Order and related documents. The Regional Board charges a rate of $70 per hour for recovery of staff costs. Regional Board staff time is conservatively estimated at 70 hours, staff costs incurred by the Regional Board total $4,900.

After consideration of the factors listed in Section 13327 and Section 13385(e) of the CWC, the Regional Board Executive Officer recommends that civil liability be imposed by the Regional Board in the amount of $19,900. This includes $15,000 as an assessment for the violations and $4,900 for staff costs.

Options

1. Adopt a directive supporting the attached Complaint No. 99-122 for Administrative Civil Liability in the amount of $19,900.
2. Modify Complaint No. 99-122 for Administrative Civil Liability.
3. Rescind Complaint No. 99-122 for Administrative Civil Liability.

Conclusion

1. Sun Coast Calamari was given a reasonable amount of time to come into compliance with the Notice of Violation dated November 24, 1999.

2. Other squid processing companies were able to come into compliance with the Notice of Violation in a reasonable amount of time and with a reasonable expenditure.
3. The penalty of $19,900 is more than fair with regard to the repeated violations.
4. It is important for the Board to sustain its position that compliance with the California Water Code, the California Ocean Plan, and the Basin Plan will be enforced.

Recommendation

Affirm the attached Complaint No. 99-122 for Administrative Civil Liability in the amount of $19,900, which includes $15,000 as an assessment for the violations and $4,900 for staff costs. Please note that the statutory maximum the Regional Board could assess is $29,900.

Winston H. Hickox
Secretary for Environmental Protection

Gray Davis
Governor

December 28, 1999

Mr. John Borman
Sun Coast Calamari
928 E. 3rd Street
Pier of Oxnard, CA 93032

Dear Mr. Borman:

COMPLAINT NO. 99-122 FOR ADMINISTRATIVE CIVIL LIABILITY FOR VIOLATIONS OF THE CALIFORNIA WATER CODE, THE CALIFORNIA OCEAN PLAN, AND THE WATER QUALITY CONTROL PLAN OF THE LOS ANGELES REGION

Enclosed is Administrative Civil Liability Complaint No. 99-122, for Sun Coast Calamari, which addresses the squid offloading operations and procedures still occurring in Port Hueneme Harbor after a Notice of Violation letter was received by you on November 30, 1999. The continued violations are creating pollution and a nuisance resulting in poor water quality in the harbor. The amount of civil liability is nineteen thousand, nine hundred dollars ($19,900).

Sun Coast Calamari may waive the right to a hearing. Should Sun Coast Calamari choose to waive the right to a hearing, an authorized agent must sign the waiver form attached to Complaint No. 99-122, and return it to the Regional Board by January 15, 2000. If we do not receive your waiver by January 15, 2000, we will calendar this matter for a public hearing before the Board on January 26, 2000, at the Richard H. Chambers U.S. Court of Appeals Building, 125 South Grand Avenue, Pasadena, California.

Please contact me at (213) 576-6605 or Tracy Patterson at (213) 576-6661 should you have any questions.

Sincerely,

Dennis A. Dickerson
Executive Officer

Matt Phillips, Santa Barbara Channel Keeper

State of California
California Regional Water Quality Control Board, Los Angeles Region

In the Matter of:	)	Complaint No. 99-122
SUN COAST CALAMARI PORT HUENEME HARBOR OPERATIONS	)	ADMINISTRATIVE CIVIL LIABILITY FOR VIOLATIONS OF THE CALIFORNIA WATER CODE, THE WATER QUALITY CONTROL PLAN FOR THE LOS ANGELES REGION, AND THE CALIFORNIA OCEAN PLAN

YOU ARE HEREBY GIVEN NOTICE THAT:

1. Sun Coast Calamari is alleged to have violated Section 13264 and Section 13376 of the California Water Code (CWC), by illegally discharging oxygen depressing compounds and ammonia-laden holding tank water into Port Hueneme harbor. Further, this discharge is contrary to the Water Quality Control Plan for the Los Angeles Region (hereinafter the Basin Plan) for water quality objectives specified by the Regional Water Quality Control Board as mandated in Section 13241 of the CWC. Finally, the alleged discharge violated Chapter III of the California Ocean Plan which defines general requirements for management of waste discharge to the ocean. For these violations, the California Regional Water Quality Control Board, Los Angeles Region (hereinafter Regional Board), may impose civil liability under section 13385 of the CWC.

2. Unless waived, a hearing on this matter will be held before the Regional Board at a regularly scheduled public meeting that will start at 9:00 a.m. on January 26, 2000, at the Richard H. Chambers, U.S. Court of Appeals Building, 125 S. Grand Avenue, Pasadena. You and/or your representatives will have an opportunity to be heard and to contest the allegations in this Complaint and the imposition of civil liability by the Regional Board. An agenda for the hearing will be mailed to you not less than ten days before the hearing date.

   At the hearing, the Regional Board will consider whether to affirm, reject or modify the proposed administrative liability, or whether to refer the matter to the Attorney General for recovery of judicial civil liability, or any other action appropriate as a result of the hearing.

ALLEGATIONS

3. On or about October 27, 1999, an agent for the owner(s) of Sun Coast Calamari, a seafood company located at 928 E. 3rd Street, Pier of Oxnard, California (Ventura County), violated Sections 13264, 13376, and 13385 of the California Water Code, in addition to both the Basin Plan, and the California Ocean Plan, by discharging wastes including: squid holding tank water high in Biological Oxygen Demand substances and ammonia, as well as squid wastes into the harbor at Port Hueneme, a water of the State of California. The following facts are the basis for the alleged violations:

a. On October 27, 1999, Channel Islands Oceans Farms (CIOF), located on the southern side of the entrance channel of Port Hueneme Harbor, contacted Regional Board staff to file a complaint and give notice that it could not meet the waste discharge requirements of its NPDES permit (NPDES No. CA0063070, Order No. 92-082, CI No. 7219) because the intake water from the harbor was already exceeding the discharge limits set. Specific discharge violations included high levels of ammonia and low levels of dissolved oxygen. Violation of the NPDES permit can result in enforcement action against CIOF.

b. Channel Islands Marine Resources Institute (CIMRI) located at 432 West Port Hueneme Road adjacent to the Port Hueneme Harbor (NPDES No. CA0064131, Order No. 97-137, CI No. 7854) was also in violation of its NPDES permit effluent discharge requirements. CIMRI is a non profit company which promotes education of marine life and pollution effects to local communities and schools. Both CIMRI and CIOF house marine organisms and use a constant flow of harbor seawater in their tanks to hold and grow these marine organisms. Toxicity in the harbor water forced CIMRI to move their aquatic organisms to another facility pending water quality improvement and the cessation of discharge.

c. On October 28, 1999, Regional Board staff inspected the water quality conditions of Port Hueneme Harbor. The water was found to be dark in color with a thick white foam present where offloading of squid occurred. There were dead squid floating in the harbor due to the washing of the docks when squid, packing ice, and process water were hosed into the harbor. Ammonia toxicity was recorded between 2-5 mg/L while dissolved oxygen (DO) levels were measured at less than 1 mg/L near the boats. These extreme low dissolved oxygen conditions occurred where the squid offloading operations took place, and appeared to be the result of those operations.

d. On November 1, 1999, Regional Board staff attended a meeting with representatives from the five squid industries of Port Hueneme Harbor (Del Mar Seafood, Monterey Fish Company, Sea Products, Southern Cal Seafood, and Sun Coast Calamari), CIMRI, CIOF, Department of Fish and Game, the Santa Barbara Channel Keeper and Oxnard Harbor District to discuss the impacts to the harbor from the squid offloading operations. Representatives from the squid processing facilities, including Sun Coast Calamari, acknowledged that the problems associated with the water quality of the harbor were associated with their procedures. Implementation of the following five Best Management Practices were agreed upon for implementation with the intent to bring the harbor waters back into compliance with Basin Plan objectives in order to avoid the issuance of Clean Up and Abatement Orders:

i. Discharge approximately half of the holding tank's chilled water greater than three miles outside of the harbor to reduce the amount of waste discharged in the harbor;
ii. Require waste on the docks to be removed to dumpsters instead of washed into the harbor;
iii. Recycle the chilled water when off-loading squid; recirculate this water back into the holding tank for discharge outside of the harbor;
iv. CIMRI would continue with their water quality monitoring program; and,
v. Coordinate vessel traffic within the harbor to minimize loss of squid.

e. Subsequent discharge monitoring and analytical water chemistry results do not indicate an improvement of the water quality to achieve water quality objectives. It is unknown whether the agreed-upon BMPs were implemented or were effective. CIMRI agreed to test water quality twice a day at the front and back of the harbor. Water quality results are reported to the involved parties to track levels of ammonia and dissolved oxygen as the primary indicators of the harbor's water quality.

f. On November 24, 1999, Notice of Violations (NOVs) were issued by the Regional Board's Executive Officer to the five known squid processing facilities within the harbor including Mr. John Borman, Sun Coast Calamari, 928 E. 3rd Street, Pier of Oxnard, CA 93032. The NOVs were sent by registered mail. Sun Coast Calamari received their NOV on November 30, 1999.

g. The NOVs directed the squid industries to cease all dumping of waste into the harbor and offered the following options for continued operation of their facilities:

i. Apply for and receive a National Pollutant Discharge Elimination System (NPDES) permit from this Board (per Sections 13260 and 13263 of the Porter-Cologne Water Quality Control Act);
ii. Modify and submit a list of BMPs that will abate the effects of the discharge on the receiving water;
iii. Discharge the waste to the sanitary sewer system (under industrial user permit with the City of Oxnard); or
iv. Discharge the waste prior to entering waters of the State.

The NOV noted that continuing violations would result in further enforcement action by this Regional Board, including administrative civil liability of up to $5,000 for each day of violation.

h. On December 3, 1999, Regional Board staff inspected the squid offloading procedures at Port Hueneme Harbor. During this inspection only two of the five companies were operating due to strong winds and small craft advisories. The two companies Regional Board staff inspected were Monterey Fish and Sun Coast Calamari. Regional Board staff observed Sun Coast Calamari personnel hosing off equipment and the dock, thereby discharging waste water directly into the harbor. Dissolved oxygen and ammonia levels continue to violate Basin Plan and Ocean Plan objectives. While some squid operators have implemented the suggested BMPs, others have not. Those implementing BMPs have expended between five thousand and fifteen thousand dollars to achieve compliance.

i. During the December 3, 1999 inspection, Regional Board staff reviewed the patrol logs in the Wharfinger's Office, which contained observations of incidents that were violations of the CWC. These incidents occurred after the NOV was recorded as received by Sun Coast Calamari on November 30, 1999. Board staff also inspected ship traffic logs, which contained notations of discharges to the harbor after the NOVs were delivered.

j. The following is a list of the squid boats known to be working with Sun Coast Calamari: *No. Viking*, *Spartan*, *Junior*, *Nicholas Michael*, and *Anthony G.*

k. Regional Board staff again inspected the offloading procedures of four of the five squid processors on December 9, 1999. Each company responded to the NOV in a unique manner. CIOF loaned large holding tanks to three companies to store the water mixed with the squid during the offloading process. The water could then be transferred back to the boat for discharge into the ocean three miles out from the harbor. Southern Cal Seafood installed drip trays which captured any spillage that previously went to the docks or harbor. This spillage was then collected and discharged with the other wastewater three miles outside of the harbor. However, upon inspecting Sun Coast Calamari, Regional Board staff observed foam in the water around the boat and on the dock around their equipment. There was a large quantity of water leaking out of their pipes and draining into the harbor. Major overflows of wastewater and squid were falling from the processing equipment thus increasing the amount of foam already present. The overall process was not meeting agreed-upon BMPs.

l. On December 10, 1999, Regional Board staff requested copies of the Wharfinger's logs of ship traffic in the harbor as well as the daily logs of events. The following entries supplement the Regional Boards observations:

i. December 2, 1999, 0300 "Mr. Mark Mayberry (DelMar) reports *Nicholas Michael* pumping dishcharge H_2O in harbor Not the first time he's noticed Suncoast doing this"

ii. December 2, 1999, 0330 "Rounds made Notify Sun Coast and So Cal to comply with tariff"

iii. December 3, 1999, 0330 "Fish ops Channel Entrance (Sun Coast) much foam in H_2O So Cal ops ok"

iv. December 6, 1999, 0355 "Returned: Sun Coast pump leaking waste water on dock and into harbor. Monterey and Del Mar areas clean"

v. December 7, 1999, 0215 "Returned: Sun Coast pump leaking considerable amounts of waste water into harbor"

vi. December 7, 1999, 0315 "Toured property: Sun Coast shut down for repairs to pump, So Cal also losing waste water into harbor; moderate amounts."

4. The Water Quality Control Plan for the Los Angeles Region (Basin Plan) adopted by the Regional Water Quality Control Board, Los Angeles Region on June 13, 1994, includes water quality objectives regulating ammonia and dissolved oxygen levels. The water quality objectives for dissolved oxygen are: "At a minimum, the mean annual dissolved oxygen concentration of all waters shall be greater than 7 mg/L, and no single determination shall be less than 5.0 mg/L, except when natural conditions cause lesser concentrations". The water quality objectives for ammonia are based on pH and temperature, but are normally toxic in the harbor at levels greater than 2 mg/L.

5. The California Ocean Plan for the State of California adopted by the State Water Resources Control Board on July 23, 1997 includes general requirements for the management of waste discharge to the ocean. It states: "Waste management systems that discharge to the ocean must be designed and operated in a manner that will maintain the indigenous marine life and a healthy and diverse marine community.", and "Waste discharged to the ocean must be essentially free of: Material that is floatable or will become floatable upon discharge. ... Substances which will accumulate to toxic levels in marine waters, sediments, or biota." Ammonia is known to be potentially acutely toxic to aquatic organisms. Squid secrete ammonia when they are in a high stress environment such as being caught in a net or when they die.

6. The Basin Plan lists the beneficial uses of Port Hueneme Harbor as industrial process supply, navigation, water contact recreation, non-contact recreation, commercial sport fishing, marine habitat, and wildlife habitat.

PROPOSED CIVIL LIABILITY

7. Section 13265(d)(1) of the CWC authorizes a maximum civil liability of $5,000 per day. The Notice of Violation written by this Regional Board cited a possible fine of $5,000 per

day of violation. By continuing to discharge wastes after receiving the NOV on November 30, 1999 to a navigable water of the United States, contrary to the discharge prohibitions of the Clean Water Act, The California Ocean Plan, and contrary to the Los Angeles Region Basin Plan, Sun Coast Calamari is alleged to have violated the CWC for multiple days. Since the NOV was sent registered mail, and receipts were returned to the Regional Board indicating receipt on November 30, 1999, any days of discharge thereafter are subject to this fine.

Therefore, the maximum allowable assessed fine is $5,000/day for 5 days (December 2, 1999; December 3, 1999; December 6, 1999; December 7, 1999; and December 9, 1999) equal to a fine of $25,000. The following provides details of alleged violations:

- December 2, 1999: Wharfinger's log records *Nicholas Michael* dumping into the harbor as well as reprimand to comply with tariff. DO level 4.52 mg/L and ammonia readings are 0.6 mg/L in the back basin.
- December 3, 1999: Regional Board staff observes Sun Coast Calamari personnel hosing off equipment and the dock, thereby directly discharging into the harbor. Wharfinger's log notes large amount of foam around Sun Coast Calamari's offloading operations. DO is measured at 4.61 mg/L and ammonia readings are 0.6 mg/L in the back basin.
- December 6, 1999: Wharfinger's log indicates water leaking from Sun Coast Calamari's pump onto the dock and into the harbor. DO measured at 4.67 mg/L and ammonia is 0.4 mg/L in the back basin.
- December 7, 1999: Wharfinger's log indicates Sun Coast Calamari's pumps leaking considerable amounts of water onto dock and into harbor. They finally shut down to repair the pump. DO is measured at 4.8 mg/L in the back basin and ammonia readings range from 0.4 – 0.8+ mg/L from the front to the back basin.
- December 9, 1999: Regional Board staff observes foam around *Nicholas Michael*, where Sun Coast Calamari is offloading squid. Large overflows of water from the equipment are resulting in increasing foam and squid on the dock. DO is measured at 4.06 mg/L in the back basin and ammonia ranges from 0.6 – 0.8+ mg/L throughout the harbor.

Pursuant to section 13385(e) of the CWC, the Regional Board is required to consider the following factors in determining the amount of civil liability to be imposed: the nature, circumstances, extent, and gravity of the violation, and, with respect to the violator, the ability to pay, any prior history of violations, the degree of culpability, economic benefit or savings, if any, resulting from the violation; and other matters that justice may require:

a. Nature, circumstances, extent, and gravity of the violations: The discharge of pollutants including ammonia and biological oxygen demand to the harbor created a nuisance and was the source of pollution of the harbor. The increased levels of ammonia are toxic to aquatic organisms. Further, low dissolved oxygen will

suffocate aquatic organisms. CIMRI was forced to relocate their aquatic organisms to another facility because they were unable to survive in this poor water quality. Therefore, a reduction from the maximum civil liability is not warranted.

b. The ability of the discharger to pay: The ability of the discharger to pay is unknown. However, the proposed civil liability assessment is not a significant amount compared to the ultimate value of changes if they had been made to meet compliance. Therefore, a reduction from the maximum civil liability is not warranted.

c. Prior history of violations: Regional Board staff is not aware of any previous violations. Therefore, a reduction from the maximum civil liability is warranted.

d. Degree of culpability: Sun Coast Calamari willfully allowed wastes from the squid offloading operations to be discharged into Port Hueneme Harbor. Sun Coast Calamari failed to take adequate measures to prevent the discharge of pollutants. The chilled seawater is not being discharged outside the waters of the United States nor is it being recycled in a holding tank during the offloading process. These options were discussed and agreed upon at the meeting held on November 1, 1999. Sun Coast Calamari was informed of and understood the impacts of their actions when they chose not to comply. Therefore, a reduction from the maximum civil liability is not warranted.

e. Economic benefit or savings: Sun Coast Calamari has realized an economic benefit by not having to pay for the refitting of the offloading area, or the change in procedures. This savings ranges anywhere from $5,000 - $15,000. Implementation of the suggested BMPs would not constitute a significant cost. Three of the other companies involved in the squid offloading procedures were able to make these changes without expenditure of a large amount of money. Further, CIOF offered the use of their large storage tanks to hold the wastewater during offloading so it could be recycled back onto the boat for discharge further than three miles outside the harbor. These tanks are valued at between $3,500 - $4,800 in their used condition. Sal Tringali of the Monterey Fish Company estimated the total cost of their modifications to his operations to meet compliance was $5,000. Therefore, a reduction from the maximum civil liability is not warranted.

f. Other matters as justice may require: Other matters to consider include time spent by the staff of the Regional Board in evaluating the violations and preparing this Order and related documents. The Regional Board charges a rate of $70 per hour for recovery of staff costs. With staff time of 70 hours, staff costs incurred by the Regional Board total $4,900.

9. After consideration of the factors listed in Section 13327 and Section 13385(e) of the CWC, the Regional Board Executive Officer recommends that civil liability be imposed by the Regional Board in the amount of $19,900. This includes $15,000 as an assessment for the violations and staff costs of $4,900.

10. In the event that Sun Coast Calamari chooses to waive their right to a hearing, an authorized agent must sign the waiver attached to this Complaint, and return it to the Regional Board by January 15, 2000. The signed waiver must be accompanied by payment of the civil liability of $19,900 in the form of a cashier's check made payable to the "State Water Resources Control Board Cleanup and Abatement Account."

11. Should Sun Coast Calamari not waive their right to a hearing, a hearing will be held during the regularly scheduled public meeting of the Regional Board on January 26, 2000. In the event that the Board affirms this Complaint, payment of the total civil liability will be due on February 2, 2000.

12. In the event that Sun Coast Calamari fails to make payment as specified above, the Executive Officer is authorized to refer this matter to the State of California Attorney General for enforcement.

13. This Complaint is issued to enforce a permit duly adopted by this Regional Board and is, therefore, exempt from the requirements of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.), pursuant to Title 14, CCR, Section 15321.

DENNIS A. DICKERSON
Executive Officer

Dated: December 28, 1999
/tlp

WAIVER OF THE RIGHT TO A HEARING

By signing below and attaching a check for the amount of civil liability proposed in Administrative Civil Liability Complaint No. 99-122, Sun Coast Calamari, on behalf of itself, waives the right to a hearing before the Regional Board. Sun Coast Calamari understands that it is giving up its right to argue against the allegations made by the Executive Officer in this Complaint, and against imposition of, and the amount of, civil liability imposed.

Subject: Squid

Dear Tracy

I am preparing my defense of the charges levied against us. Specifically they have merit. However it was our (all squid handlers) understanding that we were trying to "significantly reduce" water going back into the harbor. Not eliminate it. I will demonstrate that I played a leadership role in this effort and that our company was the first to implement the changes adopted by the 5 companies. Furthermore that we spent more money, not less, and sooner, not later than our competitors. Please see my letter dated Nov 9 to all the fish companies challenging them to step up to the line. Note the Nov. letter to all the boats selling there catch to Sun Coast asking them to comply. Pete Wallace, the harbor master will verify my on site involvement and improvements as togeather we toured all facilities including our own. That I had made significant changes and reduced effluent water by a minimum of 80% which was our objective.

In review of the complaint I note that it has three major sources:

1. Hearsay of a competitor, Mark Mayberry of Del Mar . I do not deny that the boat in question had mistakenly left his overboard pump on after discharging outside the harbor. In fact I personally made an issue out of this event using it as an example to all. ALL fish handlers experienced any number of like incidence. Please verify that the compliance period took time and mistakes were common among many baots AND fish handlers. At any rate I do not believe hearsay should be a factor nor are we responsible for the actions of those boats that sell fish to our company.

2. Wharfinger reports noting foam and leakage. I have reviewed these reports. Reports enclosed. Note that Sun Coast was mentioned "negatively" 4 times, South Coast Seafood 4 times, Sea Products 4 times and Monterey Fish 1 time. Del Mar was not working most of this time. Please review these reports and you will see that we were not mentioned more than our competitors.

3. Please note that on your complaint you mention the events of Dec 7. We experienced a break in our discharge hose (newly modified). We did spill water (highly diluted from our fresh water

12-24

928 East Third Street, P.O. Box 151, Oxnard, California 93032 FAX (805) 385-9056 (805) 385-0056

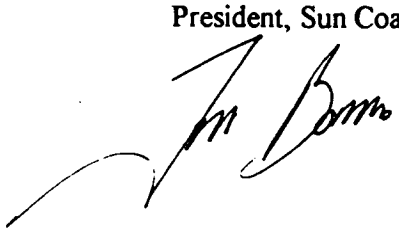
tanker) and stopped operations for repairs. This was the worse day to be observed due to the break in our discharge hose. Murphys law.

Concerning the hosing off of equipment. It is the practice of all unloading squid to hose off the equipment at the end of operations each day. This practice continues. It was our understanding that this amount did not harm the water quality and actually showed benefits. Expressed in our first meeting by Cal F&G officer Jorge Gross. At this time Sun Coast calamari captures ALL hose down water AND all effluent water and discharges nothing into the harbor. We are the only fish Co. practicing a zero effluent policy. Foam is a constant in squid operations. It is not necessarily bad and is very hard to attribute to any one unloading operation when in close proximity to others. Foam moves rapidly with tide and winds.

As for willfulness. I personally feel that myself and our company took this problem very seriously and did the most to reduce effluent water into Port Hueneme. I expect when you research my claims and the facts I have presented you will agree that the problem with waste water at Port Hueneme was effectively reduced beyond the goals established at our original meeting. Furthermore that you will find that Sun Coast Calamari did there part and more in achieving this goal. As of last week we became the only Co. With zero effluent. However I feel this is not necessary and not in keeping with the spirit of our endeavor. I will ask that we be forgiven our discretions and be relieved of the financial liability of this complaint. We have suffered from the many press articals in the LA times, Oxnard Star Free Press and the Fish Industry reporting services.

I look forward to meeting with you on the 14th and hope to resolve this matter with mutual positive results.

Sincerely, John Borman
President, Sun Coast Calamari



This item will be submitted with the Addendum package mailed on January 21, 2000.

California Regional Water Quality Control Board, Los Angeles Region
January 26, 2000
427th Regular Board Meeting (Los Angeles)

ITEM: 14

SUBJECT: Ojai Valley Sanitary District (OVSD): Complaint No. 99-009 for Administrative Civil Liability (ACL) in the amount of $233,000.

BACKGROUND: OVSD provides wastewater collection services for the City of Ojai, the unincorporated communities of Meiners Oaks, Mira Monte, Oak View, Casitas Springs, and Foster Park, and a small portion of the City of Ventura. Wastewaters are collected through 125 miles of pipelines and are treated at and discharged from the OVSD Wastewater Treatment Plant, under waste discharge requirements specified by this Board.

VIOLATION: OVSD discharged an estimated 1.2 million gallons of raw sewage into Canada Larga Creek over a period of up to nine days, ending on October 2, 1998. Regional Board staff concluded that the spill was avoidable and, on December 9, 1999, the Executive Officer issued Complaint No. 99-009 in the amount of $233,000. This penalty is based on:

- $ 90,000 at $10,000 per day for 9 days of discharge;
- $119,900 for a discharge of 1,199,000 gallons
  (1,200,000 gallons – 1,000 gallons x $0.10 per gallon = $119,900);
- $ 7,200 in avoided costs; and
- $ 5,900 for reimbursement of staff costs.

ACTION: No action is required; this is provided for the Board's information. On January 13, 2000, the Regional Board received an executed waiver of OVSD's right to a public hearing, accompanied by a check for $55,750 and a letter indicating that OVSD is electing to pay the remaining portion of the penalty in the form of a Supplemental Environmental Project (which will be subject to Board approval). Accordingly, there is no need to conduct a hearing.

California Regional Water Quality Control Board, Los Angeles Region
January 26, 2000
427th Regular Board Meeting

ITEM: 15

SUBJECT: Los Angeles Turf Club (LATC): Complaint No. 99-097 for Administrative Civil Liability (ACL), issued on October 28, 1999 in the amount of $150,000.

PURPOSE: To conduct a public hearing that will allow the LATC and any other interested parties to submit evidence regarding Complaint No. 99-097. Following the hearing, staff will ask the Board to affirm, modify, or rescind the complaint.

BACKGROUND: LATC owns and operates the Santa Anita Race Track, where up to 2,000 horses are stabled and trained, and where horseracing events are conducted. These operations generate significant loads of nonpoint source-type wastes and pollutants, among which include coliform, suspended solids, and nutrients. LATC currently discharges up to 130,000 gallons per day of untreated process wastewater and non-process wastewater to storm drains leading to the Arcadia Wash, the Rio Hondo and the Los Angeles River. The Regional Board regulates this discharge under requirements contained in Board Order 97-03.

VIOLATION: Staff alleges that LATC violated waste discharge requirements contained in Regional Board Order No. 97-03, by discharging at least 15,000 gallons of non-stormwater waste to the storm drain on August 31, 1999. These wastes were discolored, odiferous, and contained straw, paper, mud, and solid material, including manure.

Evidence supporting staff's allegation includes:

- A video tape of the discharge, taken by stormwater staff at the County of Los Angeles, Department of Public Works (LADPW) staff.
- Findings during a Regional Board inspection on September 9, 1999, prepared by Kwang Il Lee.
- Other findings from the LADPW inspection on August 31, 1999 and LADPW's subsequent channel cleanup efforts.

LATC EVIDENCE: As of January 14, 2000, Regional Board staff has received evidence from LATC contesting the volume (estimated at 150,000 gallons by LATC in a letter dated October 19, 1999, and again in a report dated

October 12, 1999). On December 20, 1999, LATC revised this estimate to a range between 4,000 gallons and 10,000 gallons, and submitted two sworn affidavits from LATC employees stating that the quantity of wastewater discharged may have been less than previously reported.

Regional Board staff find that the revised estimate, citing a range of range 4,000 gallons to 10,000 gallons, is speculative in that neither employee obvserved the yard being washed down, or saw the discharge. Rather, observations made by LATC's consultant, who spoke directly to a truck driver shortly after the incident, seem more reliable.

OTHER:

Following the incident on August 31, 1999, the Executive Officer issued Cleanup and Abatement Order No. 99-008 on September 10, 1999. This CAO ordered the LATC to delineate and remediate the effects of the discharges observed by the Regional Board and LADPW staff. LATC is in compliance with this Order. The Executive Officer also issued two 13267 letters, directing LATC to submit analytical data related to LATC's discharges to the Arcadia Wash and sanitary sewer.

Furthermore, the Board adopted a Cease and Desist Order on October 28, 1999, requiring LATC to cease discharge of wastes to Arcadia Wash under a two-year time schedule.

CONCLUSION:

Staff believes that the penalty of $150,000, the statutory maximum, was correctly set. The penalty includes the following components:

- an assessment of $140,000 at $10 per gallon of discharge over 1,000 gallons observed;
- a statutory assessment of $7,000 for one day of effluent limit violations; and
- an assessment of $3,000 for staff costs.

Known impacts from these discharges include: (i) violation of established standards for protection of aquatic life, (ii) public health risk from exposure to pollutants and (iii) public nuisance resulting from exposure to pollutants. Impacts to other beneficial uses such as groundwater recharge are not quantified.

OPTIONS:

1. Affirm the administrative civil liability in the amount of $150,000, as proposed. Affirming the penalty, as proposed, will support progress toward achieving one of the Board's high priorities of addressing nonpoint source pollutants in the Region.

2. Modify the amended administrative civil liability. However, staff believes that the penalty has been appropriately set, and that the evidence very recently submitted by LATC was not timely and is vague as to the number of trucks and gallons of water used, and is written by employees who did not observe the discharge.

3. Recsind the administrative civil liability. However, if no action is taken, process wastewater containing elevated levels of solids, total suspended solids, fecal coliform and other pollutants may continue to be discharged to waters of the State. Rejection of this ACL would be inconsistent with other actions taken by this Board.

4. Refer the matter to the Attorney General for recovery of judicial civil liability, or any other action appropriate as a result of the hearing.

RECOMMEN-DATION: Affirm the administrative civil liability in the amount of $150,000, as proposed.

ATTACHMENTS: Amended Administrative Civil Liability 99-097
Regional Board Inspection Report
County of Los Angeles DPW Inspectors Report
LATC Affidavits (2)

Also, please note that portions of the videotape will be available for viewing at the Board meeting.

OTHER: Staff is in the process of investigating past discharges and an additional discharge reported on or around the week of November 8, 1999, from the LAATC to the Arcadia Wash, in violation of the General Permit. Enforcement action relating to these spills may be forthcoming.

RETURN RECEIPT REQUIRED
CLAIM No. P 442 570 685

Dear Mr. Austin:

COMPLAINT NO. 99-097 FOR ADMINISTRATIVE CIVIL LIABILITY LOS ANGELES TURF CLUB (ORDER NO. 97-03-DWQ)

Enclosed is Complaint No. 99-097 for Administrative Civil Liability against the Los Angeles Turf Club, Inc. for violations of the California Water Code and Regional Water Quality Control Board Order No. 97-03.

Unless waived, a public hearing on this matter will be held before the Regional Board, pursuant to the California Water Code, Section 13323(b). Should the Los Angeles Turf Club choose to waive its right to a public hearing, an authorized agent must sign the waiver form attached to Complaint No. 99-097, and return it to the Regional Board before November 18, 1999. If we do not receive your waiver and payment of civil liability by November 18, 1999, we will calendar this matter for a public hearing before the Board, that starts at 9:00 a.m. on December 9, 1999, at the Camarillo Council Chambers, 601 Carmen Drive, City of Camarillo.

If you have any questions, please contact Hugh Marley at (213) 576-6687. The Board's Counsel, Mr. Jorge Leon, may be reached at (916) 657-2428.

Sincerely,

Dennis A. Dickerson

STATE OF CALIFORNIA
REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION

In the matter of:	)	COMPLAINT NO. 99-097
	)	ADMINISTRATIVE CIVIL LIABILITY FOR
LOS ANGELES TURF CLUB,) INC.		VIOLATIONS OF THE CALIFORNIA WATER CODE AND ORDER NO. 97-03-DWQ

YOU ARE HEREBY GIVEN NOTICE THAT:

1. The Los Angeles Turf Club, Inc. (LATC) is alleged to have violated requirements contained in Board Order 97-03, Section 13264, Section 13376 and Section 13377 of the California Water Code. The California Regional Water Quality Control Board, Los Angeles Region (hereinafter Regional Board), as a legal authority may impose civil liability under Section 13385 of the (CWC).

2. Unless waived, a hearing on this matter will be held before the Regional Board at a regularly scheduled public meeting that will start at 9:00 a.m. on December 9, 1999, at the Camarillo Council Chambers, 601 Carmen Drive, City of Camarillo. You and/or your representatives will have an opportunity to be heard and to contest the allegations in this Complaint and the imposition of civil liability by the Regional Board. An agenda for the hearing will be mailed to you not less than ten days before the hearing date.

3. At the hearing, the Regional Board will consider whether to affirm, reject or modify the proposed administrative liability, or whether to refer the matter to the Attorney General for recovery of judicial civil liability, or any other action appropriate as a result of the hearing.

4. The LATC is alleged to have violated waste discharge requirements contained in Regional Board Order No. 97-03, adopted by this Board on April 17, 1997, by discharging at least 15,000 gallons of non-stormwater waste to the storm drain on August 31, 1999. Known impacts from these discharges include: (i) violation of established standards for protection of aquatic life, (ii) public health risk from exposure to pollutants and (iii) public nuisance resulting from exposure to pollutants. Impacts to other beneficial uses such as groundwater recharge, are not quantified.

BACKGROUND

5. The Los Angeles Turf Club Inc. (Discharger) operates the Santa Anita Park (Park) located at 285 West Huntington Drive, Arcadia, California, where horses are stabled and trained, and horseracing events are conducted. The Park area covers 310 acres near the residential community of City of Arcadia and lies within the Los Angeles River Watershed. The Arcadia Wash bisects the Park in a northwesterly to southeasterly direction.

6. The Park includes horse racing tracks, grandstands, decorative fountains, a paddock, horse stables, a maintenance area and a parking lot. The stable area houses up to 2,000 horses in about 80 stables at different times of the year. The term "stables" refers to the stables themselves and the area between and immediately surrounding the stables. Pursuant to 40 CFR 412.11(c), "process wastewater" means any process generated wastewater (e.g., stable wash water or horse wash water from outside the stables) and any precipitation which comes into contact with any manure or bedding from the stables, whether the manure or waste bedding is stored inside the stables or outside.

7. The Santa Anita Park stables, pursuant to 40 Code of Federal Regulations (CFR) Part 122 Appendix B, and Part 122.23, is a concentrated animal feeding operation (CAFO) because over 500 horses are stabled for over 45 days per year and forage growth does not exist in the stables. The Park is also a confined animal facility pursuant to California Code of Regulations, Title 27, Section 20164. A CAFO is a point source subject to a NPDES permit to lawfully discharge wastewater and storm water. Discharge of pollutants from point sources to navigable waters without an NPDES permit is not allowed.

8. LATC discharges up to 130,000 gallons per day (gpd) of wastewater during dry weather seasons (dry-weather wastes), including approximately 70,000 gpd of water used to wash horses in the stable area to the Arcadia Wash. The Arcadia Wash flows southwest for about seven miles prior to reaching the Rio Hondo and then the Los Angeles River, each of which are waters of the United States.

9. On January 19, 1995 the Los Angeles Turf Club filed a notice of intent (NOI) to comply with the requirements of the Industrial Activities General Stormwater Permit.

10. On September 8, 1999, Regional Board staff were advised by the Los Angeles County Department of Public Works (DPW) personnel that discharges of non-stormwater waste from the LATC outfalls were resulting in greatly increased amounts of sediment being deposited in the Arcadia Wash. DPW personnel also showed Regional Board staff a videotape depicting a non-stormwater waste discharge from LATC in violation of their General Permit as follows:

    a) On August 31, 1999, Los Angeles County Flood Maintenance Division personnel observed a high volume of non-stormwater being discharged from the LATC's outfalls. The discharge was discolored, odiferous, and contained straw, paper, mud, and solid material, including manure. The County DPW inspector returned to videotape the discharge later in the day. He noted that the water upstream of the LATC's outfalls was clear. He also stated that this type of discharge has been occurring for several years and that during racing season, the amount of debris and volume flow is much greater. Flow in the wash upstream of the LATC's outfalls was noted to be clear. LATC stated that the discharges consisted of 15,000 gallons of water used to wash down a maintenance yard, in addition to the roughly 35,000 gallons of horsewash water discharged from the stable area.

    b) On September 2, 1999, DPW personnel again observed and videotaped discolored discharge from the LATC's outfalls. DPW personnel also noted piles of debris collecting downstream of the LATC's outfalls.

11. On September 9, 1999, the Regional Board and the County of Los Angeles DPW conducted a joint inspection in the Arcadia Wash and collected samples of LATC's discharge. Regional Board staff observed a turbid, greenish-brown effluent being discharged out of the North and South Stable Area outfalls into Arcadia Wash. The effluent contained solid materials, including straw, manure, and trash. Staff also observed a significant amount of sediment from the discharge being deposited in the bottom of the channel. Furthermore, staff noted a strong manure-like odor emanating from the effluent being discharged into Arcadia Wash. In addition, staff noted that water upstream of the LATC's outfalls was clear.

12. Between September 7, 1999 and September 10, 1999 the DPW collected and hauled away 34.87 tons of debris and sediment from the Arcadia Wash downstream of the LATC's outfalls.

13. On September 10, 1999, the Regional Board Executive Officer issued Cleanup and Abatement Order No. 99-008 ordering the LATC to delineate and remediate the effects of the discharges observed by the Regional Board and DPW staff.

14. On September 10, 1999, the County of Los Angeles DPW conducted another inspection of Arcadia Wash and noted an accumulation of sediment, as well as mud and debris in the water flowing from both drains.

15. On September 15, 1999, the County of Los Angeles DPW conducted a fifth inspection of Arcadia Wash and recorded the continuing discharge from the LATC's outfalls.

16. On September 24, 1999, the Regional Board Executive Officer issued a 13267 letter requiring that the LATC submit, for Regional Board review, analytical data related to LATC's discharges to the Arcadia Wash and sanitary sewer.

17. On October 7, 1999, the Regional Board issued, in accordance with Section 13267 of the CWC, a letter requiring that the LATC submit a report of events leading to the discharges observed by the DPW and Regional Board staff.

18. On October 15, 1999, Regional Board staff issued a tentative Cease and Desist Order, proposed for adoption by the Board on October 28, 1999, to the Discharger, requiring that the Los Angeles Turf Club cease and desist from discharging waste into Arcadia Wash in violation of the tentative NPDES permit, and by complying with the time schedule provided to achieve full compliance with the provisions of the tentative NPDES permit.

19. Regional Board staff are currently evaluating and pursuing enforcement action for past violations of the General Permit other than the 15,000 gallon non-stormwater waste discharge event addressed by this ACL. The past violations being evaluated include, but are not limited to, the September 2, 1999, September 9, 1999, September 10, 1999 and September 15, 1999 discharges referenced in paragraphs 10, 11, 13 and 14 above.

20. The discharge of non-stormwater waste is a violation of California Water Code Section 13264. Discharge without a permit is a violation of California Water Code Section and 13260 and 40 Code

of Federal Regulations (CFR) Parts 122, 123, and 124; and is contrary to the requirements contained in Board Order No. 97-03-DWQ.

21. The Regional Board adopted a revised Water Quality Control Plan (Basin Plan) for the Coastal Watersheds of Los Angeles and Ventura Counties on June 13, 1994. The Basin Plan designates beneficial uses and establishes water quality objectives for Arcadia Wash, the Rio Hondo River and the Los Angeles River.

22. Surface water in Arcadia Wash, the Rio Hondo River and the Los Angeles River is beneficially used for municipal and domestic supply, groundwater recharge, freshwater replenishment, contact and noncontact recreation, warm freshwater habitat, wildlife habitat, and preservation of rare, threatened or endangered species. The Rio Hondo spreading grounds located downstream of LATC are significant groundwater recharge areas. Several parks with public access, including the Whittier Narrows Recreation Area, are also located along waterways downstream of LATC.

IMPACTS RESULTING FROM THE EFFLUENT LIMIT VIOLATIONS

23. The discharge of effluent in violation of requirements contained in Order No. 97-03, into the Arcadia Wash, and downstream waters violated established standards for protection of aquatic life, degraded waters of the state and caused a public nuisance resulting from exposure to pollutants. Impacts to public health and other beneficial uses have not been quantified.

CONCLUSION

24. Regional Board staff conclude that impacts resulting from the discharge of effluent in violation of Order No. 97-03, could have been avoided had LATC diverted it's process water, non-process water from the infield, paddock, and maintenance yard areas, and its horse-wash water to the sanitary sewer, or treated the wastewater being discharged to the Arcadia Wash to levels that would not have degraded waters of the state. Furthermore, the risk to public health and aquatic life could have been mitigated had the effluent limit violations been promptly addressed.

ALLEGED VIOLATIONS:

25. The discharge of non-stormwater waste into the Arcadia Wash and downstream waters observed on August 31, 1999 was in violation of discharge requirements contained in Board Order No. 97-03.

26. Sections 13376 and 13377 of the CWC prohibit the discharge of pollutants to surface waters, except as authorized by waste discharge requirements that implement the provisions of the Federal Clean Water Act.

27. Section 13385(a) of the CWC states that "any person who violates any of the following shall be liable civilly in accordance with subdivisions (b), (c), (d), (e), and (f): ... (2) Any waste discharge requirements or dredged and fill material permit."

28. Section 13385(c)(1) of the CWC states that "Civil liability may be imposed administratively by the state board or a regional board pursuant to Article 2.5 (commencing with Section 13323) of Chapter

5 in an amount not to exceed ten thousand dollars ($10,000) for each day in which the violation occurs.

29. Section 13385(c)(2) of the CWC states that "Where there is a discharge and the volume discharged exceeds 1,000 gallons, an additional liability not to exceed ten dollars ($10) times the number of gallons by which the volume discharged exceeds 1,000 gallons."

POTENTIAL CIVIL LIABILITY:

30. The total maximum civil liability authorized by the California Water Code is $150,000, which includes $10,000 under section 13385(c)(1) and $140,000 under section 13385(c)(2) of the California Water Code.

    a. Under section 13385 (c)(1), the maximum civil liability that could be imposed by the Regional Board for violation of the California Water Code is $10,000 per day per violation. LATC is alleged to have had been in violation of Section 13285 of the California Water Code for one day. Therefore, the maximum liability under 13385(c)(1) of the California Water Code is:

    1 day x $10,000 per day = $10,000

    b. Under section 13385 (c)(2), the maximum civil liability that could be imposed by the Regional Board for violation of the California Water Code is $10 per gallon for every gallon over 1,000 gallons discharged, but not cleaned up. LATC is alleged to have discharged a total of 15,000 gallons in violation of Section 13285 of the California Water Code on August 31, 1999. Therefore, the maximum liability under 13385(c)(2) of the California Water Code is:

    (15,000 – 1,000 gallons) x $10 per gallon = $140,000

PROPOSED CIVIL LIABILITY:

31. Pursuant to section 13385(e) of the California Water Code, the Regional Board is required to consider the following factors in determining the amount of civil liability to be imposed: the nature, circumstances, extent, and gravity of the violations; with respect to the violator, the ability to pay; any prior history of violations; the degree of culpability; economic benefit or savings, if any, resulting from the violation; and other matters as justice may require.

    "a" Nature, circumstances, extent, and gravity of the violations: LATC has discharged effluent into the Arcadia Wash and downstream waters in violation of the California Water Code. The discharges degraded water quality and impaired the designated beneficial uses in the Arcadia Wash, the Rio Hondo River and the Los Angeles River. Therefore a reduction from the maximum civil liability is not warranted.

    "b" The ability of the discharger to pay: The Regional Board is not aware that maximum liability of $150,000 would result in financial hardship. Therefore, a reduction from the maximum civil liability is not warranted.

"c" Prior history of violations: LATC's discharge to the Arcadia Wash has been in violations of Order No. 97-03 and of Water Code Sections 13350, 13268 and 13385, dating back to at least January 1995. Therefore, a reduction from the maximum civil liability is not warranted.

"d" Degree of culpability: LATC's effluent limit violations could have been avoided had LATC diverted its effluent to the sanitary sewer, disposed of it off-site, or treated it prior to it being discharged to the Arcadia Wash. Therefore, a reduction from the maximum civil liability is not warranted.

"e" Economic benefit or savings: LATC realized an economic benefit by not bringing the effluent discharged into the Arcadia Wash into compliance with Order No. 97-03 by installing remediation equipment, or diverting the discharge to the sanitary sewer system. Therefore, a reduction from the maximum civil liability is not warranted.

"f" Other matters as justice may require: Time spent by the staff of the Regional Board in evaluating the violations and preparing this Order and related documents. The Regional Board charges a rate of $70 per hour for staff cost recovery. As of October 17, 1999, staff costs incurred by the Regional Board totaled $3,000.

32. After consideration of the factors listed in Section 13385(e) of the California Water Code, the Regional Board Executive Officer recommends that the maximum administrative civil liability be imposed by the Regional Board on October 28, 1999, in the amount of $150,000, which includes a statutory assessment of $7,000 for one day of effluent limit violations, an assessment of $140,000 at $10 per gallon of discharge over 1,000 gallons observed and an assessment of $3,000 for staff costs.

33. The administrative civil liability of $150,000 is due and payable on December 16, 1999, subject to the provisions outlined in paragraph no. 34 below.

34. LATC may elect to pay $112,500 (75%) of the $150,000 administrative civil liability by committing to supplemental environmental projects. In the event that LATC chooses to invest in local environmental projects, a proposal for such projects is due to the Regional Board by December 23, 1999. The proposal for supplemental environmental projects will be subject to public notice and the approval of the Regional Board.

    A payment for the remaining $37,500, in a cashiers check payable to the SWRCB Cleanup and Abatement Account, is due and payable on December 16, 1999.

    Should the Regional Board not approve the LATC's supplemental environmental projects, or should LATC later fail or elect not to implement supplemental environmental projects, the total amount of $150,000 will be due and payable within 30 days of such an event.

35. In the event that the LATC chooses to waive their right to a hearing, an authorized agent must sign the waiver attached to this Complaint, and return it to the Regional Board by November 18, 1999. The

signed waiver must be accompanied by payment of the civil liability of $37,500 in the form of a cashier's check made payable to the "State Water Resources Control Board Cleanup and Abatement Account."

36. Should the LATC not waive their right to a hearing, a hearing will be held during the regularly scheduled public meeting of the Regional Board on December 9, 1999.

37. In the event that the LATC fails to comply with the requirements of this Complaint, the Executive Officer is authorized to refer this matter to the Office of Attorney General for enforcement.

38. Notwithstanding the issuance of this ACL, the Board shall retain the authority to assess additional penalties for violations of the tentative New Permit and for past violations of the General Permit.

39. This enforcement action is exempt from the provisions of the California Environmental Quality Act, California Public Resources Code, Section 21000, et seq., in accordance with California Code of Regulations, Title 14, Chapter 3, Section 15321.

40. Pursuant to California Water Code Section 13320, the Discharger may seek review of this order by filing a petition with the State Water Resources Control Board (SWRCB). A petition must be sent to the SWRCB, P.O Box 100, 901 P Street, Sacramento, 95812, within 30 days of receipt of this letter.

WAIVER OF HEARING:

41. The Los Angeles Turf Club Inc. may waive the right to a hearing. If the LATC chooses to waive the right to a hearing, an authorized agent must sign the waiver form attached to this Complaint, and return it, together with a cashier's check for the amount of the civil liability, to the Regional Water Quality Control Board, Los Angeles Region, 320 West 4th Street, Suite 200, Los Angeles, CA 90013. Regulations of the US Environmental Protection Agency require public notification of any proposed settlement of the civil liability occasioned by violation of the Clean Water Act including NPDES permits. Accordingly, interested persons will be given 30 days to comment on any proposed settlement of this Complaint.

10/26/99

Dated: October 26, 1999
/hm

DENNIS A. DICKERSON
Executive Officer

WAIVER OF THE RIGHT TO A HEARING

By signing below and attaching a check for the amount of administrative civil liability proposed in Complaint No. 99-097, the Los Angeles Turf Club waives its right to a hearing before the Regional Board. The Los Angeles Turf Club understands that it is foregoing its right to argue against the allegations made by the Executive Officer in this Complaint, and against imposition of, and the amount of, the civil liability imposed. Furthermore, the LATC understands that if an Administrative Civil Liability Order is adopted at the Regional Board meeting on December 9, 1999, payment will be due on December 16, 1999.

MEMORANDUM

TO: File

FROM: Kwang Lee

DATE: November 22, 1999

SUBJECT: INSPECTION RESULT OF DISCHARGE FROM SANTA ANITA PARK – ARCADIA WASH

1. FIELD INSPECTION

On September 9, 1999, Board staff (Kwang Lee and Regina Ramirez) conducted an inspection in response to a complaint of the Los Angeles County.

The subject site is the Santa Anita Park (Park) located at 285 West Huntington Drive, Arcadia, California, where horses are stabled and trained, and horse racing events are conducted. The Arcadia Wash bisects the Park in a northwesterly to southeasterly direction. The owner is Los Angeles Turf Club.

The inspection was conducted as a joint inspection with Mr. Dave Robato (Tel: 626-574-0962) of the Los Angeles County. When staff arrived at the site, 10:25 p.m., staff observed turbid, brownish effluent being discharged out of the South and North Stable outfalls into Arcadia Wash (Refer to Picture 1 and 2). The effluent contained foams, solid materials including straw and small trashes. Discharge volumes at the outfalls were not measured. Staff also observed some sediment accumulated in the bottom of the channel near the South and North Stable outfalls.

Mr. Robato indicated that the discharge at the South Stable outfall was the discharge mainly presented in their complaint. In order to evaluate the water quality of the discharge, staff took samples at the South outfall, up-gradient (near Los Angeles County & State Arboretum) and down-gradient (near outfall # N-36) areas in the Arcadia Wash(Refer to Picture 3). Mr. Robato also took samples to be analyzed.

After the sampling, the samples were stored in a cooler with ice. The samples were immediately delivered to the state lab.

2. ANALYTICAL RESULTS

On October 7, 1999, the state lab. reported the following results:

Sampling Location	Constituents	
Up-gradient	Total coliform	<200
	E. coliform	<200
South Stable outfall	Turbidity	239 NTU
	Suspended solids	618 mg/L
	Settleable solids	1 ml/L
	BOD_5	93 mg/L
	Oil and grease	3.3 mg/L
	MBAS	2.38 mg/L
	Nitrate N	4.2 mg/L
	Ammonia N	0.5 mg/L
	Nitrite N	<R.L.
	Total coliform	90000
	E. coliform	30000
Down-gradient	Total coliform	90000
	E. coliform	50000
	BOD_5	Not analyzed due to insufficient volume.

3. FINDINGS

1. The discharger has an Industrial Activities Storm Water General Permit, (CAS000001, Order No. 97-03). That Order does not allow any other discharge to storm drain except storm water runoff.

2. The discharger has submitted a NPDES permit application to this Board for the discharges from the Santa Anita Park to the Arcadia Wash. During the discharge time, the discharger has no a NPDES permit.

3. There are thirty six (36) active outfalls along the Arcadia Wash, which runs through the Santa Anita Park. During the inspection time, only two (2) outfalls (South and North Stable outfalls) were discharging to the Arcadia Wash.

4. The discharger plans to divert all of the dry weather wastes and first 0.1 inch of storm water from the stable areas to the sanitary sewer.

5. Analytical results indicates that the discharge at the South Stable outfall has constituents exceeding the water quality objectives in the Basin Plan. Those are Suspended solids (618 mg/L), Settleable solids (1 ml/L), BOD_5 (93 mg/L), MBAS (2.38 mg/L), Total coliform (90000 MPN/100 ml) and E. coliform (30000 MPN/100 ml). The results also indicates that coliform number in the down-gradient area was impacted by the discharge at the South Stable outfall.

4. DISCUSSION AND RECOMMENDATIONS

Based on the observations and findings as described above, it is evident that the discharger has not complied with the requirements of Industrial Activities Storm Water General Permit. During the time of the discharge, the discharger has no a NPDES permit to allow such discharges. Significant pollutants (Suspended solids, Settleable solids, BOD_5, MBAS, Total coiform and E. coliform) have been discharged into a storm drain without adequate control measures.

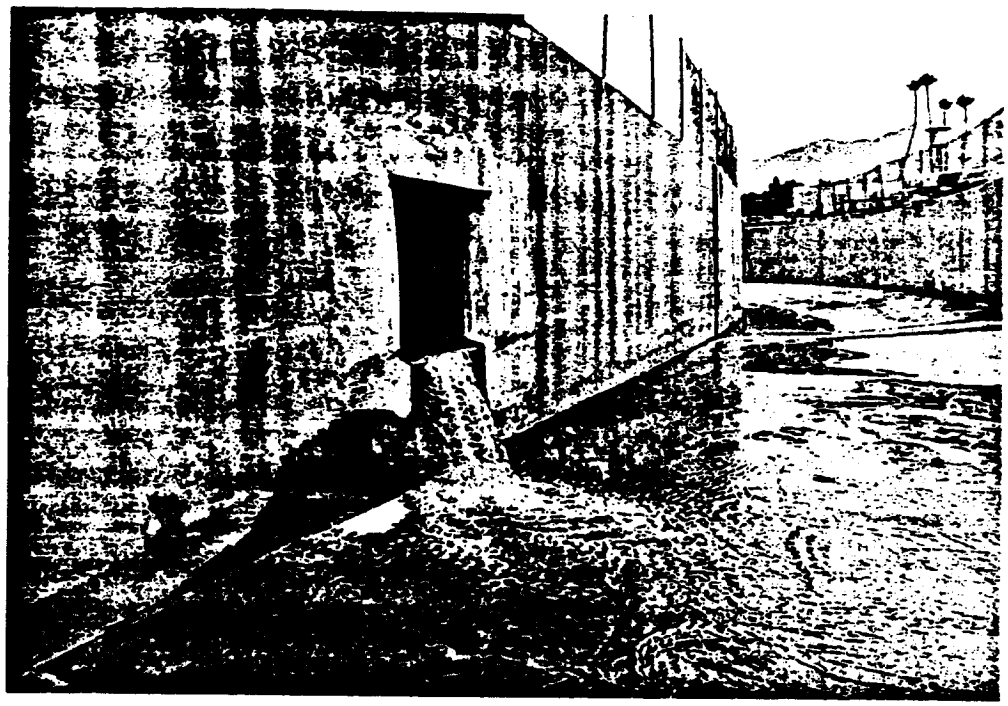
During the inspection time, the origin of the discharge has not been investigated due to limited time and access to each stable.

In the past 30 years, the discharger has been discharging the wastewater from the stables to the Arcadia Wash. Recently, the discharger has upgraded their drain/collection system and implemented the BMPs. But, it appears that they could not adequately control their pollutants. In addition, in the past few years, the discharge has told to this Board that they would divert all dry weather wastewater to the sewer system. But, the sewer connection has never completed.

Staff recommends an immediate enforcement action to take a corrective action, hold the discharger on the responsibility of any illicit discharge in the future and prevent any similar occurrence.

See attached pictures.

Picture 1. Discharge at South Stable Outfall: showing foams, straws, small trashes



Picture 2. Discharge at North Stable Outfall: showing small debris and accumulated sediment

Picture 3. Sampling at South Stable Outfall: showing foams, straw, small debris and sampling.

THE FOLLOWING RULES IN THIS LANDFILL MUST BE OBSERVED

1 No smoking driving to, while in, or returning from the disposal area.
2 No Salvaging of disposed material.
3 Observe all posted speed limit and traffic warning signs. The speed limit on dirt roads and in areas that are not posted is 15 MPH. Drive at safe speeds. Use low gears driving down hills. Reduce speed to allow for road, weather, traffic, load, driver ability and mechanical conditions of vehicle.
4 Dangerous Practices such as rapid backing of vehicle to dislodge loads, unassisted pull-offs or operating vehicle without doors secured are prohibited.
5 Children must remain in vehicles at all times. Anyone who is not engaged in the unloading of a vehicle must remain in the vehicle. All drivers and helpers must remain in the immediate vicinity of the vehicle being unloaded.
6 Dispose of your waste only in operating areas designated by landfill personnel.
7 Tool, tailgates, ETC., must be kept on, in or under your vehicle. The Districts will not accept liability for damage to these items by tractors or other trucks.
8 Injury or damage to persons or equipment must be reported to supervisory personnel prior to leaving the site. Do not move involved vehicle prior to report.
9 Load pull-off is a service accepted at your own risk. The Districts will not accept liability for vehicle damage or personal injury by performing this service.
10 Littering on local streets or roads and other areas within the facility will not be tolerated. Loads containing loose materials must be covered in accordance with state and local laws. Covers on loads must not be removed before arrival at working area. Cover all loads.
11 Hours of operation are rigidly adhered to.
12 Hazardous and Liquid Wastes such as: paints, oils, pesticides, cleaners, and batteries are not accepted at any Districts facility.
13 Consumption of alcoholic beverages or narcotics on Districts property is prohibited.
14 Loitering within the facility is prohibited.
15 Instructions given by Districts personnel must be followed at all times.

These rules are for your benefit. Serious and or frequent violations may result in your exclusion from Districts facilities. Please insure that these regulations are followed by you or your employee.

ELATION YARD

THE FOLLOWING RULES IN THIS LANDFILL MUST BE OBSERVED

1. No smoking driving to, while in, or returning from the disposal area.
2. No Salvaging of disposed material.
3. Observe all posted speed limit and traffic warning signs. The speed limit on dirt roads and in areas that are not posted is 15 MPH. Drive at safe speeds. Use low gears driving down hills. Reduce speed to allow for road, weather, traffic, load, driver ability and mechanical conditions of vehicle.
4. Dangerous Practices, such as rapid backing of vehicle to dislodge loads, unassisted pull-offs or operating vehicle without doors secured are prohibited.
5. Children must remain in vehicles at all times. Anyone who is not engaged in the unloading of a vehicle must remain in the vehicle. All drivers and helpers must remain in the immediate vicinity of the vehicle being unloaded.
6. Dispose of your waste only in operating areas designated by landfill personnel.
7. Tool, tailgates, ETC., must be kept on, in or under your vehicle. *The Districts will not accept liability* for damage to these items by tractors or other trucks.
8. Injury or damage to persons or equipment must be reported to supervisory personnel prior to leaving the site. Do not move damaged vehicle prior to report.
9. Load pull-off is a service accepted at your own risk. *The Districts will not accept liability* for vehicle damage or personal injury by performing this service.
10. Littering on local streets or roads and other areas within the facility will not be tolerated. Loads containing loose material must be covered in accordance with state and local laws. Covers on loads must not be removed before arrival in dumping area. Cover all loads.
11. Hours of operation are rigidly adhered to.
12. Hazardous and Liquid Wastes such as: paints, oils, pesticides, cleaners, and batteries are not accepted at any *Districts facility*.
13. Consumption of alcoholic beverages or narcotics on Districts property is prohibited.
14. Loitering within the facility is prohibited.
15. Instructions given by Districts personnel must be followed at all times.

These rules are for your benefit. Serious and or frequent violations may result in your exclusion from Districts facilities. Please insure that these regulations are followed by you or your employee.

ADDITIONAL PROVISIONS FOR PERMIT NUMBER 97364-A

1. Use of District's right of way for the construction or activity authorized under this permit is tantamount to agreeing to the conditions herein. (G1)

2. Permittee shall be responsible for notifying his contractor and all subcontractors of the provisions of this permit. No work will be started until a copy of this permit is given to the contractor and each of his subcontractors. Further, the copy will be left at the site of the work being done by each contractor. (G2)

3. Permittee is notified that under the terms of the Labor Code of the State of California, the permittee or his contractor may be required to acquire a permit from the State Division of Industrial Safety if the work authorized herein involves excavation more than 5 feet deep. The inspection provided by the District can in no way be construed as a safety inspection. (G3)

4. Unless notified otherwise on this permit, all work authorized by this permit shall conform to the latest edition of the Standard Specifications for Public Work Construction, as amended, and published by Building News, Inc., 3055 Overland Avenue, Los Angeles, CA 90034 and the latest edition of the Los Angeles County Department of Public Works "Additions and Amendments to the Standard Specifications for Public Works Construction". (G4)

5. This permit is subject to such further conditions as the Director or his representative may issue during the period of this use. When possible, such additional conditions shall be promptly delivered in writing to the address shown on page one of this permit. Conditions delivered orally of necessity shall be promptly confirmed in writing. (G5)

6. Issuance of this permit shall not be construed as an obligation on the part of this District for the operation and maintenance of the proposed facilities. (G8)

7. Ingress and egress shall be at locations approved by the District's representative. (G10)

8. The District reserves the right to order the removal of all equipment if District's activities so require. The District assumes no responsibility for any loss to permittee's equipment or personnel. (G13)

9. Upon completion of work authorized under this permit, permittee shall restore the area to the satisfaction of the District's representative. (G14)

ADDITIONAL PROVISIONS FOR PERMIT NUMBER 97364-A

21 . Plans and calculations of any falsework or cofferdam to be placed within the channel waterway area must be submitted to this District for review and approval at least 30 days prior to installation.(W3)

21 . Permittee is advised that the proposed construction is located downstream of Santa Anita Dam, from which releases are made occasionally. Therefore, permittee shall contact the District's Water Conservation/Hydraulic Division, Operations Unit, at (818) 458-6177, before obstructing or removing a portion of the channel. Approval of District's representative for removal or obstruction must be obtained at least 24 hours in advance of initiating work.(W4)

22 . Permittee shall obtain a five-day clear weather forecast before conducting any operations within the channel and shall work only when no rain is forecast for the next five days, as determined by the District's inspector. Operations and access to the channel invert are specifically prohibitted during rainfall or excessive storm flow. Once operations under this permit are intiated, work shall be conducted in a dilligent manner until completed. The permittee shall not hold the District responsible for any damage due to flows within the channel.(W5)

23 . In the event the District's facility fails or needs to be replaced or repaired after the improvements have been constructed, the permittee shall be responsible for all costs and expenses to the District in excess of costs that would have been incurred by the District to replace the facility had said land been left vacant.(W8)

24 . Issuance of this permit shall not be construed as an obligation on the part of the District to assume responsibility for any damages incurred to the permittee's improvements in the event of storm drain and/or channel failure or flooding from rain storms.(W9)

25 . The permittee shall not use the invert during periods of precipitation or storm flow.(W13)

..... 25 PROVISIONS ISSUED

ADDITIONAL PROVISIONS FOR PERMIT NUMBER 97364-A

11 . Permittee shall take the necessary precautionary measures to prevent dust or other nuisances which might be created by reason of his activities. (G16)

11 . Permittee shall keep District right of way clear of obstruction for through access at all times and shall not interfere with the activities of the District's employees or the District's contractors. (G17)

12 . This permit shall not be construed as a permanent right for these operations. (G19

13 . No equipment in excess of H-10 Highway Loading (as specified in the Standard Specification for Highway Bridges of the American Association of State Highway and Transportation Officials) and no stockpiling of materials will be permitted along the channel within a distance equal to the wall height from the channel wall. (G20)

14 . The damage deposit noted on the permit is for the location delineated and is not transferable. The damage deposit will be refunded when the District's right of way and facilities have been restored to the satisfaction of the District's representative. (G15)

15 . Special attention is directed to General Provisions C and D on the reverse side of this permit. (G41)

16 . Permittee shall protect in place all District facilities where the proposed work comes in close proximity to the District's facilities. (G59)

17 . Permittee shall maintain the crossing facility and appurtenances. (X3)

18 . Extra precautions shall be exercised to prevent damage to the District's structures by reason of crossing/bridge construction operations. If in the opinion of the Director permittee fails to take proper precautions, the Director may direct all operations on the District's right of way. (X8)

19 . During the storm season, from October 15 to April 15:

a. No portion of the channel shall be obstructed.
b. No openings in the channel invert or side wall will be permitted. (W1)

Los Angeles County Flood Control District
Job No. C0884500
Arcadia-Sierra Madre System - Arcadia Wash, Arcadia Sierra Madre System - Arcadia Wash - East Branch, and Santa Anita Wash
Permit No. 97364-A - File Nos. 105.032 and 36.032
Permit Writer Il Kim - Dated September 29, 1997

---

1. Request and Location (Thomas Guide new page 567-A4, C4 and D4, old page 28-C4, D4 and F4) Activity Code 3C. July 3, 1997, Mr. Mike Christensen from Arizona Pipeline Co. on behalf of General Telephone, requested permission to cross under the Arcadia - Sierra Madre System - Arcadia Wash and Arcadia - Sierra Madre System - Arcadia Wash Eastern Branch and cross over the Santa Anita Wash on Colorado Boulevard in the City of Arcadia.

2. Jurisdiction

   a. Description: Arcadia Wash at Station 247+85 is a 8-foot by 22-foot reinforced concrete double box as shown on U.S. Army Corps of Engineers' (COE) Drawing No. 372/88. Arcadia Wash-East Branch at Station 63+74 is a 12-foot-wide by 9-foot-high covered reinforced concrete channel as shown on COE Drawing No. 159/76. Santa Anita Wash at Station 247+85 is a 30-foot-wide by 13.5-foot-high reinforce concrete channel as shown on COE Drawing No. 186/29.

   b. Constructed by: U.S. Army Corps of Engineers.

   c. Right-of-way status: Street

   d. Maintenance and future proposals: The permittee will maintain the proposed telephone line conduit at various locations and District will continue to maintain the Arcadia Wash, Arcadia Wash-East Branch, and Santa Anita Wash.

3. Background and Supporting Data

   The ~~proposed~~ cut telephone conduits will be installed at least two below the Arcadia wash and Arcadia wash-East Branch by directional bore method. The third proposed conduit will be installed at the existing Colorado Boulevard bridge over Santa Anita Wash by attaching to the bridge. No problems are anticipated.

TYPICAL FENCE POST EXTENSION DETAILS

Scale: NONE	Date: Feb '75	DWG. NO. 2 · Sheet 1

Los Angeles County Flood Control District

Arcadia-Sierra Madre System-Lima Street Lateral - 105.032
Permit Application No. 77553-B
B. C. Brooks - August 19, 1977

1. Request and Location (Thomas Guide page 28, D-4)

In Letter No. 6459 dated August 1, 1977, Mr. Paul Hvidston of the Los Angeles Turf Club, Inc., requested permission to raise the westerly channel wall fence from Station 209+90 to 215+90. This area is within the Santa Anita Park racetrack property. The fence is being raised to lesson the possibility of riders being thrown from the racehorses who pass adjacent to the fence.

2. Jurisdiction

a. Description: This reach of the channel is 14 feet wide and varies in depth from 12 feet to 13 feet 9 inches as shown on District Drawings Nos. 105-F 285.24 and 285.25.

b. Constructed by: U.S. Corps of Engineers

c. Right of way status: Easement Parcel No. 53 as shown on District Drawing No. 105-RW 61.

d. Maintenance and future proposals: The permittee will maintain the modified fencing.

3. Background and Supporting Data:

Mr. Hvidston first contacted the Permit Section approximately one year ago. He requested information verbally but never followed through and requested a permit.

The fees are being waived since the District's exposure to liability should be reduced by the higher fencing. The permit request is being expedited since the permittee hopes to start construction about August 15, 1977.

Attention: Mr. Pat Emery
Construction Division

Gentlemen:

We request permission to raise the westerly channel fence of the Lima Street Branch channel of the Arcadia Wash System to an 8 foot height from approximately station 209+90 to 215+90. This is to be done in accordance with Flood Control Standard drawing 2-D-473 Type C by slipping 8' posts over existing posts and installing new 8' fabric. This is requested as a safety feature as horses with riders travel adjacent to this fence and the rider could be thrown over the lower fence.

We would like to start construction about August 15, 1977.

Very truly yours,

Paul Hvidston
General Superintendent

15-48

R0067830

GENERAL PROVISIONS

PERMIT NO. 85099B

X 1. Use of District's property for the construction or activity authorized under this permit is tantamount to agreeing to the conditions herein.

X 2. Permittee shall be responsible for notifying his contractor and all subcontractors of the provisions of this permit. No work will be started until a copy of this permit is given to the contractor and each of his subcontractors. Further, the copy will be left at the site of the work being done by each contractor.

X 3. Permittee is notified that under the terms of the Labor Code of the State of California, the permittee or his contractor may be required to acquire a permit from the State Division of Industrial Safety if the work authorized herein involves excavation more than 5 feet deep. The inspection provided by the District can in no way be construed as a safety inspection.

X 4. Unless noted otherwise on this permit, all work authorized by this permit shall conform to the latest edition of the Standard Specifications for Public Works Construction, as amended, and published by Building News, Inc., 3055 Overland Avenue, Los Angeles, CA 90034.

X 5. This permit is subject to such further conditions as the Chief Engineer or his representative may issue during the period of this use. When possible, such additional conditions shall be promptly delivered in writing to the address shown on page one of this permit. Conditions delivered orally of necessity shall be promptly confirmed in writing.

____ 6. Upon satisfactory completion of construction, the District will assume operation and maintenance of the proposed facilities.

X 7. Permittee shall be responsible for the operation and maintenance of the proposed facilities until formally transferred to the District.

____ 8. Issuance of this permit shall not be construed as an obligation on the part of this District for the operation and maintenance of the proposed facilities.

X 9. The only authorized discharge is storm run-off.

____ 10. The authorized discharge shall conform to the requirements of the State of California Regional Water Quality Control Board.

X 11. The discharge of industrial waste or sewage is prohibited.

X 12. Permittee shall immediately notify the District at (213) 226-4308 (24-hour number) of any and all discharges not authorized by this permit.

____ 13. Permittee is advised that _____ is now under construction by _____. Before beginning work, permittee shall obtain permission from this District's contractor so as to cause no extra work or expense to this District or its contractor. No discharge into the District's drain will be permitted until the facility is completed and ready to accept storm flows.

X 14. Should work take place between October 15 and April 15, permittee shall obtain a long-range clear weather forecast before breaking into the main line storm drain. Construction of facilities connecting to the main line will be permitted only during a clear weather forecast that is acceptable to this District's representative. Once operations under this permit are initiated, the work shall be conducted in a continuous manner until completed.

____ 15. Should it become necessary to cut District's right of way fence, permittee shall properly brace fence in accordance with the District's standards and to the satisfaction of District's representative.

____ 16. Upon completion of work authorized under this permit, permittee shall repair District's right of way fence to the satisfaction of the District's representative. Security fencing shall be provided across any opening in the fence at the end of each day's work.

____ 17. Abandoned connector pipes shall be sealed at both ends with 8-inch brick and mortar or 6 inches of concrete.

X 18. All inlet openings shall be provided with protection bars spaced to provide an opening that does not exceed 6 inches.

____ 19. All pipes within District's right of way shall be placed at least 2 feet below the surface of the ground. Polyvinyl chloride pipes shall be placed at least three feet below the surface of the ground within District's right of way.

X 20. All open cuts and trenches within District's right of way shall be backfilled and compacted in accordance with approved methods to the satisfaction of District's representative. Paving shall be replaced in kind.

____ 21. Ingress and egress shall be at locations approved by the District's representative.

____ 22. The connection shall be made in accordance with District Standard Drawing No. _____, a copy of which is enclosed herewith and made a part hereof.

____ 23. Permittee shall telephone the District's representative at the number shown on the permit to arrange for placing his/her own lock on the gate and shall keep the gate locked, except when entering or leaving the District's right of way. The lock shall be identified by means of the brass tag supplied with this permit. The tag must be kept on the lock at all times; and if lost, a replacement tag should be obtained from the Permit Section at (213) 226-4208 immediately or the lock will be removed and discarded.

15-49

R0067831

GENERAL PROVISIONS

PERMIT NO. 85099-B

____ 24. When activities authorized by this permit are completed, permittee shall telephone the District's representative to arrange for final inspection/removal of the permittee's lock. This will reduce the permittee's responsibility for any subsequent damage to the District's facilities and initiate the return of any security deposit being held by the District.

____ 25. The District reserves the right to order the removal of all equipment if District's activities so require. The District assumes no responsibility for any loss to permittee's equipment or personnel.

X 26. Upon completion of work authorized under this permit, permittee shall restore the area to the satisfaction of the District's representative.

____ 27. The damage deposit noted on the permit is for the location delineated and is not transferable. The damage deposit will be refunded when the District's right of way and facilities have been restored to the satisfaction of the District's representative.

X 28. Permittee shall take the necessary precautionary measures to prevent dust or other nuisances which might be created by reason of his activities.

____ 29. Permittee shall keep District's right of way clear of obstruction for through access at all times and shall not interfere with the activities of the District's employees or the District's contractor.

____ 30. Permittee shall not use District's property for the temporary or permanent storage of excavated materials, rock, sand, cement, or other material or any equipment, except as specifically noted.

____ 31. This permit shall not be construed as a permanent right for these operations.

____ 32. No equipment in excess of H- Highway Loading (as specified in the Standard Specifications for Highway Bridges of the American Association of State Highway and Transportation Officials) and no stockpiling of materials will be permitted along the channel within a distance equal to the wall height from the channel wall.

____ 33. The inspection fee deposited with the District is the estimated cost to inspect the work authorized under this permit. Should the actual cost be less than the amount deposited, the District will refund the difference. Should the actual cost be more than the amount deposited, permittee shall submit the difference to the District upon receipt of a written request. In no case will the fee for the actual cost inspection be less than $_____. Actual cost will include cost to the District for inspector's time, if required; interim and/or final inspection; and the connection fees to District's facilities, where applicable.

X 34. Permittee shall submit in writing the name and telephone number of individual(s) authorized to request interim and/or final inspections. Should permittee fail to provide same, it is understood that permittee's contractor has the authority to request inspections. Cost for said inspections will be taken from the amount deposited for actual cost inspection as set forth in the paragraph above.

____ 35. Excavation slopes shall be cut to a slope which will preclude sloughing, but in no case shall excavated slopes be steeper than one horizontal to one vertical.

____ 36. Backfill shall be similar to the existing material but shall not contain organic material, broken concrete or pavement, boulders, or other material unsuitable for compaction. All backfill shall be compacted to a minimum relative compaction of 90% in accordance with ASTM D-1557, Method "C". Water densification is not allowed. Permittee shall provide the District's representative with a compaction report from a soil laboratory.

____ 37. The location of any temporary construction roadways or ramps on District's right of way must be approved by the District's representative. Upon completion of work, all falsework, temporary construction, and any temporary roads or ramps shall be removed by permittee, at his expense, and the area shall be restored to a condition equivalent to or better than the original condition.

____ 38. Steel, concrete, reinforced concrete, asbestos cement, or polyvinyle chloride pipe may be used for the connection to the District's facility.

____ 39. All D-loads for asbestos cement pipe shall be 1-1/2 times that of reinforced concrete pipe.

____ 40. Pipe bedding shall be in accordance with District Standard Drawing No. 2-D 177.

____ 41. During the period of operations conducted under the permit, permittee shall maintain in effect an insurance policy (minimum limit-$_____ million) naming the District and/or U.S. Army Corps of Engineers as co-insured with respect to these operations. A copy of this policy shall be submitted to the District for inclusion in the District file copy of this permit. Expiration or cancellation of the insurance policy shall constitute revocation of this permit.

____ 42. Due to an infestation of alligator weed, this facility has been placed in a state of quarantine by the Los Angeles County Agricultural Commissioner. Clearance shall be obtained from Mr. _____, Office of the Los Angeles County Agricultural Commissioner, at (213) 575-5461, at least ten days prior to the start of work.

____ 43. Prior to discharging water into this District's storm drain, the permittee shall notify _____ Yard at _____ at least 48 hours in advance. This notification is necessary to prevent any hazards to District's or contractor's crews which may be working in the downstream storm drains.

15-50

R0067832

GENERAL PROVISIONS

PERMIT NO. 85099 B

____ 44. Permittee is advised that District's right of way is in the form of an easement. Permittee's attention is therefore directed to Provision F on the reverse side of the permit.

____ 45. Three-thousand (3,000) psi concrete shall be used in structures within channel right of way.

____ 46. Permittee is hereby notified that a bikeway and/or equestrian trail sponsored by _____ is aligned along the _____ channel levee at this location. Permittee shall accept all responsibility for notifying the representative, Mr. _____, telephone extension _____, before beginning each period of activities under this permit. Also in this regard, permittee's attention is drawn to Provision C (on the reverse side of the permit) which specifies that this District will be held free and harmless of any liability which results from this permit.

____ 47. Permittee shall place signs at each end where the haul road overlaps the recreational trails advising "Equestrians Hikers, and Cyclists: Watch for Cross Traffic".

____ 48. Paving within the District's right of way shall be accomplished in such a manner as to insure that surface flows overpour the channel wall.

____ 49. During storm season, from October 15 to April 15, the following provisions shall apply:

a. No portion of the channel shall be obstructed.
b. No openings in the channel invert or side wall will be permitted.

____ 50. During the period from April 15 to October 15, falsework and cofferdams may be placed and excavations made in the channel. However, capacity to convey flows around any obstructions or openings in the channel lining shall be provided as follows:

April 15 to May 31 - one-third channel capacity/Area
June 1 to August 31 - 5 per cent of channel capacity/Area
September 1 to October 15 - one-third channel capacity/Area

The above capacities criterion must be determined by hydraulic calculations. Preliminary information regarding the methods for performing these calculations may be obtained before preparation of cofferdams or falsework plans by contacting the U.S. Army Corps of Engineers, Operations Branch, at 686-4926. For purposes of computing the area of an obstruction, dimensions shall be taken normal to channel flow and two feet added to the faces of the obstructions.

____ 51. Plans and calculations of any falsework or cofferdam to be placed within the channel waterway area must be submitted to this District for review and approval at least 30 days prior to installation.

____ 52. Permittee is advised that the proposed construction is located downstream of _____ Dam, from which releases are made occasionally. Therefore, permittee shall contact the District's Hydraulic Division, Operations Section, at 226-4191, before obstructing or removing a portion of the channel. Approval of District's representative for removal or obstruction must be obtained at least 24 hours in advance of initiating work.

____ 53. Permittee may utilize, for construction operations, portions of this District's right of way within 500 feet of each side of the work site provided channel security and access for the District's operations are maintained.

__X__ 54. Permittee shall paint channel Station Number(s) 179+50 on the channel wall(s) above the connection opening/[redacted] with black paint, large enough to be legible from the opposite bank as directed by the District's representative.

____ 55. Vehicular traffic within the District's right of way shall not exceed a speed limit of 25 miles per hour.

____ 56. No work, as authorized under this permit, shall be started until a Faithful Performance Bond in favor of the District in the amount of $_____ has been approved and acknowledged in writing by this office.

__X__ 57. Permittee shall submit a copy of the as-built drawings for the completed construction authorized by this permit.

____ 58. The letters "LACFCD" shall not be on the manhole covers and catch basin lids.

____ 59. Permittee shall enter into a use agreement with the District for the activities authorized by this permit.

____ 60. Permittee shall submit within six months from the date of issuance of this permit, legal description, plans, and appraisal of the rights of way required for permanent rights. Failure to do so will result in an annual rental of $500 or more starting from the date of issuance of the permit. For information relative to the description, contact Mr. E. Inouye of the Property Management Division at 226-4355. Submittal of the description should include reference to the stream and permit number.

I, Andy La Rocco, declare as follows:

1. I have been employed by Los Angeles Turf Club, Inc. ("LATC") for 18 years. During the period of my employment, I have worked at the Santa Anita facility, located at 285 West Huntington Drive, Arcadia, California ("Racetrack"). I began my employment as a tractor operator and have been Racetrack foreman for the past 8 years. I have personal knowledge of the matters set forth herein, and if called as a witness, could and would competently testify thereto.

2. I submit this declaration in connection with LATC's response to Los Angeles Regional Water Quality Control Board Complaint No. 99-097 filed against Racetrack for Administrative Civil Liability.

3. As Racetrack foreman, I am in charge of all track maintenance. The maintenance equipment for the Racetrack is kept at a location called the corporation yard. One of my responsibilities is to manage activities at this corporation yard. Twenty-four employees report to me, including operating engineers, truck drivers and laborers. They often give me information about what they are doing and, in a general sense, I direct their activities.

4. My office is located in the corporation yard and I have a clear view of corporation yard activities. On a typical day at work, I spend at least half the day in the corporation yard. When it is not racing season, I spend about 6 hours in the corporation yard. August 31, 1999 was a day during our off-season, when there was no racing.

5. Because of my knowledge and experience from years of working at the Racetrack and because of the information I typically receive from the people that report to me, I can make a reasonable estimate of what happens during the day at the Racetrack.

6. Although I worked on Tuesday, August 31, 1999, I have no specific recollection of how many truckloads of water were used to wash down the corporation yard or which truck was used. However, based on my knowledge and experience and

including the area around Gate 7, the guardrail at the main racetrack, the track surface, the chutes, and the barn area. The dust control involves just moistening the ground so as not to bother neighboring homes and businesses. The 2,500-gallon truck is also used to water the training track, because the long-arm trucks do not fit there.

8. The 2,000-gallon "fan" truck is used for dust control in the barn area and to water stress-spots on the track during racing season. Until an irrigation system was installed about mid-October, it was also used heavily to water plants and trees around the facility.

9. Although I do not specifically remember seeing the corporation yard washed down on August 31, 1999, based on my knowledge and experience from years of working at the Racetrack, I can make a reasonable estimate of what probably happened on that day at the Racetrack.

10. The long-arm trucks are not suitable for use as a washdown truck and would not have been used for this purpose, on August 31, or at any other time.

11. It would not take 5 truckloads of water to wash down the yard and I have no personal knowledge of the yard ever being washed down with 5 truckloads of water.

12. Based on past practices, it is my best estimate that 3 or 4 truckloads of water were used on August 31 to washdown this yard. It is also possible that only 2 truckloads of water were used, but not as likely as 3 or 4.

13. Based on my knowledge of equipment capabilities and based on past practices, the 2-fan truck most likely was used on August 31 to wash down the yard. The sprays can be adjusted more easily on the small truck and it is easier to maneuver in the corporation yard, where a lot of equipment is stored.

14. The water trucks are not filled to capacity. This is because it takes about two minutes to shut off the fill water. If the drivers do not start shutting off the water before the truck is filled to capacity, they overfill and spill water on the ground, creating mud around the truck, which we try to avoid. It is my practice not to overtop the

12. The truckloads used to wash down the yard would not have been completely full of water. I base this conclusion on the fact that the shut-off valve for the water does not shut off right away. As the valve is being turned off, water continues to come out for a few minutes. Workers have to stop filling the truck before it is filled to capacity so that water does not spill everywhere and cause mud puddles.

I declare under penalty of perjury that the foregoing is true and correct and that this Declaration was executed this 17th day of December, 1999, at Arcadia, California.

Andy LaRocco

SPECIFIC PROVISIONS

PERMIT NO. 85099-B

A. CONNECTION

X 1. The connection shall be made in accordance with the U.S. Army Corps of Engineers' Junction Structure No. B, a copy of which is enclosed herewith and made a part hereof.

X 2. All work involving removal and restoration of the channel structure shall be accomplished during the period April 15 to October 15.

____ 3. During the period October 15 to April 15, the permittee shall, at the end of each workday, seal the hole in the channel wall with 1/2-inch steel plate extending at least 6 inches beyond the opening in all directions. Securing bolts shall be 1/2-inch in diameter and spaced a maximum of 12 inches center to center.

X 4. (Simple Connection)
Cut a one-inch-deep groove in the concrete at the channel wall removal limits with a chipping hammer. Remove the remaining concrete in a careful manner with hand-operated equipment leaving a clean plane surface for bonding new concrete. Breaking concrete by means of explosives, heavy impact equipment, or a mass attached to a cable or rope will not be permitted within the channel rights of way.

____ 5. (One-half or less channel wall removal)
Make a saw cut one-inch deep on the exposed face of the channel at the removal limits; cut a groove in the concrete adjacent to and within the limits of the saw cut to a depth of the saw cut with a chipping hammer. Remove the remaining concrete in a careful manner with hand-operated equipment leaving a clean plane surface for bonding new concrete. Breaking concrete by a means of explosives, impact equipment, or a mass attached to a cable or rope will not be permitted within the channel rights of way.

____ 6. (Full height of channel wall removal)
Where new concrete is to join existing concrete, the contractor shall saw the existing concrete with an approved concrete saw. Saw cut will not be permitted to extend beyond the removal limits. At corners and intersections of the channel wall and invert, concrete shall be removed with a chipping hammer in a careful manner leaving a clean plane surface. Any irregularities shall be coated with a 5:1 epoxy grout mixture to obtain a smooth plane surface. A 3-inch-diameter circle shall be painted with an epoxy coating around each longitudinal steel bar exposed in the saw cut face to inhibit the formation of rust. Epoxy shall be a commercial quality two-component mixture specially manufactured for the intended purpose. The two components shall be mixed and applied in accordance with the manufacturer's directions for use. Concrete shall be carefully removed with hand-operated equipment; breaking concrete by means of explosives, impact equipment, or a mass attached to a cable or rope will not be permitted within the channel rights of way. The District's representative shall be the sole judge of the acceptability of all equipment to be utilized for the concrete removal operations.

X 7. The drain shall have an alignment such that the edge of the proposed wall opening will be at least five feet away from the nearest vertical wall joint.

B. CROSSING

____ 1. The top of the jacked casing shall be placed at least _____ feet below the invert of the channel.

____ 2. All excavation for the crossing/undercrossing shall not encroach on a 1:1 line extending downward and outward from the top of the channel lining for trapezoidal channels or heel of the channel wall for rectangular channels unless solid sheeting is provided.

____ 3. Permittee shall maintain the crossing facility and appurtenances.

____ 4. Removal of the existing invert slab shall extend a minimum of 2 feet beyond each side of the excavation limits.

____ 5. Overcrossing conduits shall be provided with a security barrier in accordance with the attached detail entitled "Barrier for Conduits Crossing Channels".

____ 6. Overcrossing conduits shall provide a minimum of _____ feet of vertical clearance from the channel invert.

____ 7. The following vertical clearance shall be provided over the surface of the District's access road:

Telephone and communication lines.....27 feet
Low voltage (22.5 kv or less).....43 feet
High voltage (greater than 22.5 kv).....55 feet

____ 8. Extra precautions shall be exercised to prevent damage to the District's structures by reason of crossing/bridge construction operations. If in the opinion of the Chief Engineer permittee fails to take proper precautions, the Chief Engineer may direct all operations on the District's right of way.

____ 9. If any water-borne debris becomes deposited on the bridge/crossing structure, falsework, cofferdams, or other facilities installed by permittee, such debris shall be immediately removed from the channel at his expense. Permittee shall maintain a sufficient number of men and the necessary equipment at the work site to insure that the structure and its appurtenances will be maintained free and clear of debris at all times during periods of storm flow. All equipment shall be removed from the channel during periods of precipitation.

HYA CONSULTING ENGINEERS

March 1, 1985

106-20

Mr. Robert L. Scavarda
Property Management Division
Los Angeles County Flood Control District
2250 Alcazar Street
Los Angeles, California 90023

Subject: City of Arcadia
Huntington Drive and Lovell Avenue Storm Drains
LACFCD M.T.D. No. 1097, Units 1 and 2

Dear Mr. Scavarda:

On behalf of the City of Arcadia, we submitted seven copies of the construction drawings for the subject project as approved by the District to Mr. Stan Dixon of the District's Development Regulation Section on February 25, 1985. In accordance with the District's procedures, we hereby request that the connection permits required for this project be issued to the City of Arcadia. As shown on the construction drawings, the Huntington Drive Storm Drain (LAFCD M.T.D. No. 1097, Unit 1) will be connected to the concrete channel of the West Branch of the Arcadia Wash and the Lovell Avenue Storm Drain (LACFCD M.T.D. No. 1097, Unit 2) will be connected to the District's Project No. 1401, Line A.

We understand that since the requested permits will be issued to a municipality, the permit fee will be waived. As the project is being advertised at this time and bids will be received by the City on March 26, 1985, any action you may take to expedite the permit issuance will be appreciated. If you should need any further information, please do not hesitate to call me.

Very truly yours,

HYA Consulting Engineers

NARRATIVE FROM VIDEO TAPE

First tape was 8/31/99 at approximately 11:00 a.m.

- Entrance to Arcadia Wash was on Huntington Dr. between Huntington Dr. and Campus Dr.

- Debris shown is at entrance of wash north of Campus Dr.

- Cattle entering wash Dennis begins to drive north in the Arcadia Wash

- Dennis shows flow coming from upstream. Low flow curb is located on westside of Channel.

- Dennis makes a comment, "This smells great about 6" deep here" at that point he is downstream of Turf Club Dr.

- Dennis makes a comment "This is running about 1/10 as much as when I got here at 9:30." He is approximately 50' South of 206 +85 station.

- Dennis walks north toward drain 206 +85

- Drain 206 +85 begins to flow

- Flow from 206 +85 water has straw, paper, mud, solid material. As flow slows down more solid material comes out.

- Dennis goes back to 1st drain South of 206 +85 showing flow

- Dennis shows flow upstream of 206+85 Dennis makes the comment "Water above is clear."

BOTH OUTFALLS 206+ES AND N14 SHOWED A DEBRIS PATTER OF STRAW AND DIRT WHICH INDICATED A GREATER FLOW RECENTLY (SEE PHOTOS 1, 2, 3 & 4).

SAMPLES WERE TAKEN TO THE LABORATORY IN SIGNAL HILL LATER THAT AFTERNOON.

MR. KWANG SAID THAT THE RACETRACK HAD SUBMITTED A STORMWATER PROPOSAL IN THE PAST, HOWEVER, IT HAS NOT YET BEEN APPROVED. HE SAID HE WOULD LIKE TO HAVE A COPY OF THE VIDEO. IT WAS EXPLAINED TO HIM THAT AS SOON AS EPD COULD PUT A NARRATIVE PACKAGE TOGETHER HE WOULD GET A COPY.

MR. SANDERS STATED THIS TYPE OF DISCHARGE HAS BEEN ONGOING FOR SEVERAL YEARS AND THAT DURING RACING SEASON THE AMOUNT OF DEBRIS AND FLOW IS MUCH GREATER.

MR. SANDERS TOOK SOME VIDEO SHOTS DURING THE SITE VISIT.

A JOINT INSPECTION WAS MADE WITH MR. KWANG-IL LEE AND HIS ASSISTANT FROM THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD. THIS INSPECTOR WAS ACCOMPANIED BY MR. DENNIS SANDERS FROM THE FLOOD MAINTENANCE DIVISION.

AT THE TIME WE ENTERED THE CHANNEL - ARCADIA WASH - AND ARRIVED IN THE VICINITY OF STATION 206+85 DRY WEATHER FLOW WAS DISCHARGING FROM OUTFALL 206+85 AND ANOTHER OUTFALL ABOUT 75 FT. SOUTH OF STATION 206+85 (NO STATION NUMBER LISTED) WHICH WAS GIVEN AN ABITRARY DESIGNATION AS N14 (SEE PHOTOS 1, 2, 3 & 4).

MR. LEE HAD COME TO TAKE SAMPLES AND THIS INSPECTOR ALSO TOOK DUPLICATE SAMPLES. SAMPLES WERE TAKEN AT N14, 30FT. SOUTH OF N13 (ABITRARY DESIGNATION), AND 50 FT. SOUTH OF N36 (ARBITRARY DESGINATION). SAMPLES AT N14 WAS CLOUDY AND DEBRIS SHOWED STRAW AND DIRT (SP-1 & SP-2). SAMPLES AT 30 FT. SO. OF N13 WERE TAKEN IN CLEAR WATER UPSTREAM OF BOTH N14 AND 206+85 (TAKEN AS A BACKGROUND SAMPLE) (SP-3 & SP-4). SAMPLES WERE ALSO TAKEN 50 FT. SOUTH OF N36.

An inspection of Arcadia Wash was made on 9/10/99. At time of inspection there was a flow discharging to the wash from Station 206+85 and drain 20' Southwest of Station 206+85. Directly south of Station 206+85 there was an accumulation of sediment. See photo 2. Water flowing from both drains was muddy & had small debris material.

DISTRIBUTION: WHITE: REPORT, CANARY: LAB, PI... ELD, GOLDENROD: SAMPLE CONTROL/COURIER

I, David Martinez, declare as follows:

1. I have been employed by Los Angeles Turf Club, Inc. ("LATC") for 25 years. During the period of my employment, I have worked at the Santa Anita facility, located at 285 West Huntington Drive, Arcadia, California ("Racetrack"). I began my employment working in the parking lots and have worked as a Racetrack truck driver for the last 23 years. I have personal knowledge of the matters set forth herein, and if called as a witness, could and would competently testify thereto.

2. I submit this declaration in connection with LATC's response to Los Angeles Regional Water Quality Control Board Complaint No. 99-097 filed against Racetrack for Administrative Civil Liability.

3. As a Racetrack truck driver, I drive water trucks and dump trucks used at the Racetrack. On a typical day, I work from 7 a.m. to 3 p.m., operating the water trucks about 90% of the time. As part of my daily routine, I water the different areas around the Racetrack, principally for dust control purposes.

4. The Racetrack has a total of four water trucks. These are two "long-arm" trucks and two "fan" trucks.

5. The "long-arm" trucks hold 3,500 and 3,000 gallons each and are only used to water the track. The "arms" on these trucks extend laterally away from the trucks and are used to deliver water to the track to moisten the turf. There are sprinklers mounted on the arms. The long-arm trucks are not used in the stable areas because the arms could hit and hurt a horse and would not be used for washdown purposes because they are difficult to maneuver and only sprinkle water, which would not clean a dirty surface.

6. The two "fan" trucks deliver water through water jets that are part of a manifold at the back of the truck. There are two fans on one truck which has a water capacity of 2,000 gallons, and four fans on the other truck which has a 2,500 gallon capacity.

7. The larger "fan" truck is used for dust control around the Racetrack,

In the Matter of the Petition of Los Angeles Turf Club, Inc. for Review of Complaint No. 99-097, Administrative Civil Liability California Regional Water Quality Control Board, Los Angeles Region	No. _____ DECLARATION OF DAVID MARTINEZ IN SUPPORT OF PETITIONER'S REQUEST FOR RECONSIDERATION OF ADMINISTRATIVE CIVIL LIABILITY PENALTY AMOUNT

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Los Angeles, CA
January 26, 2000
427th Regular Meeting

ITEM: 16

SUBJECT: Consideration of a Resolution in Support of the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000; and the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Act

DISCUSSION: The Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000, also known as Assembly Bill 18 or the "Parks Bond," has been placed on the March 2000 statewide ballot as **Proposition 12**. This $2.1 billion bond act, if approved, is expected to provide substantial benefits to all Californians by providing cleaner air and water recreational opportunities, safe urban parks, and new wildlife preserves.

On a local level, funding will be available to support a variety of projects in the Los Angeles Region, including $25 million to assist in implementing the Santa Monica Bay Restoration Plan to continue cleanup and restoration of Santa Monica Bay. This funding would be used to enact innovative urban runoff control projects, restore degraded habitats, strengthen public education programs, and carry out other actions critical to the health of the Bay.

Proposition 12 also provides $25 million for Ballona Wetlands, $25 million for the Los Angeles and San Gabriel River Watersheds and $64.2 million for acquisition, enhancement, restoration and protection of coastal resources.

The Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Act, also known as Assembly Bill 1584 or the "Water Bond," has been placed on the March 2000 statewide ballot as **Proposition 13**. This $1.9 billion bond act is aimed at providing safe drinking water supplies throughout the state; increasing the reliability of the water supply in event of drought or emergency; building necessary flood control projects; improving water quality in our rivers, streams and coastal areas; and protecting and restoring fisheries and wildlife habitat along rivers and streams.

Prop. 13 includes $90 million for Coastal Nonpoint Source Control which would provide funding for projects that restore and protect the water quality and environment of coastal waters, estuaries, bays and nearshore waters and groundwaters. Another $90 million has been allocated for Watershed Protection to develop and implement

watershed plans and to implement projects consistent with local watershed management and regional water quality control plans. Finally, support would be available for water recycling projects and for effective, low-cost flood control efforts.

RECOMMENDATION: The attached resolution supporting Propositions 12 and 13 on the March 2000 be adopted.

RESOLUTION OF CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION IN SUPPORT OF THE SAFE NEIGHBORHOOD PARKS, CLEAN WATER, CLEAN AIR AND COASTAL PROTECTION BOND ACT OF 2000 AND THE SAFE DRINKING WATER, CLEAN WATER, WATERSHED PROTECTION AND FLOOD PROTECTION ACT

WHEREAS, Santa Monica Bay is a treasured local, state and national resource that was nominated and accepted by Congress for inclusion in the Clean Water Act's National Estuary Program in 1988; and

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, has served as a member of the Santa Monica Bay Watershed Council, working with other stakeholders to develop and implement a comprehensive conservation and management plan (known as the Santa Monica Bay Restoration Plan) to restore and protect Santa Monica Bay; and

WHEREAS, the Regional Water Quality Control Board is charged with the protection of water quality in the Los Angeles Region, including Santa Monica Bay and upstream watersheds; and

WHEREAS, the Legislature and the Governor of California have placed the $2.1 billion Safe Neighborhood Parks, Clean Water, Clean Air and Coastal Protection Bond Act of 2000 (hereafter entitled the Parks Bond) before the voters on the March 2000 California ballot; and

WHEREAS, the Legislature and the Governor of California have placed the $1.97 billion Safe Drinking Water, Clean Water, Watershed Protection and Flood Protection Act (hereafter entitled the Water Bond) before the voters on the March 2000 California ballot; and

WHEREAS, the Parks Bond has allocated considerable funding for grants to local agencies and non-profit organizations for acquisition, enhancement, restoration and protection of parks, coastal resources, and wildlife habitat; and

WHEREAS, the Parks Bond has specifically allocated $25 million to implement actions consistent with those in the Santa Monica Bay Restoration Plan, thereby providing badly needed funding to carry out activities vital to protecting and restoring the health of Santa Monica Bay and its natural resources, and

WHEREAS, the Water Bond has allocated to the cities and counties of our State, including those within Los Angeles County, grants and loans to protect watersheds, and to restore and protect the water quality and environment of our State's coastal waters, estuaries, bays and near shore waters and groundwaters;

NOW BE IT HEREBY RESOLVED that the California Regional Water Quality Control Board, Los Angeles Region, formally endorses both the Parks Bond and the Water Bond, and encourages all citizens within its jurisdiction to actively support these bonds and work for their passage, thus helping to maintain, enhance, and restore the many beneficial uses of Santa Monica Bay, a vital and integral representative of our State's precious coastal and natural resources.

SAFE NEIGHBORHOOD PARKS, CLEAN WATER, CLEAN AIR AND COASTAL PROTECTION BOND ACT OF 2000 (VILLARAIGOSA-KEELEY ACT)		
TOTAL	**$2,100,000,000**	
DEPARTMENT OF PARKS AND RECREATION	**$544,750,000**	
a) State Parks Projects	$502,750,000	
b) Natural and Cultural Resource Stewardship projects	$18,000,000	
c) Volunteer participation facilties	$4,000,000	
d) State Park facilities administered by local agencies	$20,000,000	
GRANTS TO LOCAL AGENCIES FOR URBAN PARKS, TRIALS AND RECREATION FACILITIES		
a) Per capital grants to cities, counties and park districts	$388,000,000	
b) Roberti-Z'berg-Harris Urban Open Space Grant program	$200,000,000	
c) Improvement, acquisition, restoration of riparian and riverine habitats	$10,000,000	
d) Park, youth, environmental enhancement projects for low income, at-risk youth	$100,000,000	
e) Non-motorized trail projects	$10,000,000	
f) Urban recreational and cultural centers, zoos, museums, aquariums, and facilities for wildlife, environmental or natural science aquatic education	$71,500,000	
1. Institutions w/ budgets less than $1 million		$2,000,000
2. Facilities seeking accreditation		
3. Facilities that care for injured animals		
4. California Science Center		$10,000,000
5. Facilities for National Marine Sanctuaries		$500,000
6. Discovery Science Center		$10,000,000
7. California Academy of Sciences		$10,000,000
8. Delta Science Center		$2,000,000
9. Turtle Bay Museums, Arboretum on the River		$15,000,000
10. Calif Fairs and Expositions		$4,250,000
11. Kern County Museum		$3,500,000
g) Regional youth soccer and baseball facilities	$15,000,000	
h) Golden Gate Park	$15,000,000	
WILDLIFE CONSERVATION BOARD	**$265,500,000**	
a) Wetlands - Central Valley Habitat Joint Venture	$5,000,000	
b) Wetlands - outside Sacramento-San Joaquin Valley	$5,000,000	
c) Riparian habitat and watershed conservation	$10,000,000	
d) Habitat for threatened or endangered species	$45,000,000	
e) Forest lands, ancient redwoods, oak woodlands	$13,000,000	
f) Habitat and corridors for threatened, protected species	$82,000,000	
g) Natural Community Conservation Partnerships	$100,000,000	
h) Salton Sea Restoration Project	$5,000,000	
STATE COASTAL CONSERVANCY	**$220,400,000**	
a) San Francisco Bay Area Conservancy Program	$25,000,000	
b) Santa Monica Bay Restoration Project	$25,000,000	
c) Grants for acquisition, enhancement, restoration and protection of coastal resources:	$64,200,000	
1. Regional beach erosion reduction		$3,000,000

2. Upper Newport Bay Ecological Reserve Maintenance and Protection Fund		$13,000,000
3. Coastal areas north of Gualala River		$15,000,000
4. Within Santa Cruz, Monterey, SLO or Santa Barbara Counties		$25,000,000
5. Coastal Trail		$5,000,000
6. Guadalupe River Trail and SF Bay Ridge Trail		$2,000,000
d) State Coastal Conservancy for acquisition, restoration etc. that benefit fish and wildlife	$22,000,000	
1. Coastal areas north of Gualala		$10,000,000
2. Restore arroyo, stickleback and steelhead in Orange Co.		$800,000
e) Salmon restoration and protection	$25,000,000	
f) Ballona Wetlands	$25,000,000	
g) Laguna Coast	$12,500,000	
SANTA MONICA MOUNTAINS CONSERVANCY	**$35,000,000**	
COACHELLA VALLEY MOUNTAINS CONSERVANCY	**$5,000,000**	
SAN JOAQUIN RIVER CONSERVANCY	**$15,000,000**	
SAN FRANCISCO BAY CONSERVANCY	**$30,000,000**	
Mount Diablo nonprofit org		$250,000
CALIFORNIA TAHOE CONSERVANCY	**$50,000,000**	
CALIFORNIA CONSERVATION CORPS	**$15,000,000**	
a) For certified local community conservation corps programs	$12,500,000	
b) State Conservation Corps	$2,500,000	
DEPARTMENT OF CONSERVATION	**$25,000,000**	
Agricultural Land Conservation Projects		
DEPARTMENT OF FORESTRY AND FIRE PROTECTION	**$10,000,000**	
For urban forestry programs		
DEPARTMENT OF FISH AND GAME	**$12,000,000**	
a) Waterfowl habitat projects		$5,000,000
b) Wildlife area improvement projects		$5,000,000
c) Removal of nonnative vegetation - ecological reserves		$2,000,000
INTEGRATED WASTE MANAGEMENT BOARD	**$7,000,000**	
Grants to meet accessibility standards at public playgrounds if 50% of funds for equipment using recycled materials		
RESOURCES AGENCY	**$45,850,000**	
a) Sierra Nevada-Cascade Program	$6,250,000	
b) River Parkway and restoration program	$33,500,000	
1. Los Angeles River watershed		$10,000,000
2. San Gabriel River watershed, San Gabriel Mtns and lower LA River		$15,000,000
3 Kern River		$2,500,000
4. Santa Clarita watershed land acquisition		$1,000,000
5. Sacramento River watershed, riparian, wetlands restoration		$3,000,000

6. Visitor center - American River		$2,000,000
c) Resource conservation and urban water recycling Sonoma Co.	$2,000,000	
d) Community centers in San Benito, Galt, Gilroy	$1,100,000	
e) Camp Arroyo, Alameda County	$2,000,000	
f) Wildlife rehab center in San Bernardino Mountains	$1,000,000

ssed the Senate September 3, 1999

rrected 9-7-99

SAFE NEIGHBORHOOD PARKS, CLEAN WATER, CLEAN AIR, AND COASTAL PROTECTION BOND ACT OF 2000

act to add Chapter 1.692 (commencing with Section 5096.300) to, and Chapter 1.693 mmencing with Section 5096.400) to, Division 5 of the Public Resources Code, relating to ıncing a program for the acquisition, development, improvement, rehabilitation, restoration, ıancement, and protection of park, recreational, cultural, historical, fish and wildlife, lake, arian, reservoir, and coastal resources, by providing the funds necessary therefor through issuance and sale of bonds of the State of California and by providing for the handling and position of those funds, and declaring the urgency thereof, to take effect immediately.

GISLATIVE COUNSEL'S DIGEST

18, Villaraigosa. Bond: parks, water, and coastal protection act.
(1) Under existing law, programs have been established pursuant to bond acts for, among er things, the development and enhancement of state and local parks and recreational ılities.
This bill would enact the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal ɔtection Bond Act of 2000 (the Villaraigosa-Keeley Act) which, if adopted, would authorize, the purpose of financing a program for the acquisition, development, improvement, ıabilitation, restoration, enhancement, and protection of park recreational, cultural, torical, fish and wildlife, lake, riparian, reservoir, river, and coastal resources, as specified, issuance, pursuant to the State General Obligation Bond Law, of bonds in the amount of 100,000,000.
(2) The bill would require the Secretary of State to submit the bond act to the voters at the rch 7, 2000, statewide general election.
(3) The bill would require that, to the extent permitted by federal law, if the Camp Pendleton rine Base in the County of San Diego ceases to be used as a federal facility, it be ıverted to an open-space area of greenbelt administered by the Department of Parks and creation.
(4) The bill would declare that it is to take effect immediately as an urgency statute.

e people of the State of California do enact as follows:

CTION 1. Chapter 1.692 (commencing with Section 5096.300) is added to Division 5 of the blic Resources Code, to read:

APTER 1.692. SAFE NEIGHBORHOOD PARKS, EAN WATER, CLEAN AIR, AND COASTAL OTECTION BOND ACT OF 2000

IE VILLARAIGOSA-KEELEY ACT)
cle 1. General Provisions

5096.300. This chapter shall be known, and may be cited, as the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000 (the Villaraigosa-Keeley Act).

5096.301. Responding to the recreational and open-space needs of a growing population and expanding urban communities, this act will revive state stewardship of natural resources by investing in neighborhood parks and state parks, clean water protection, and coastal beaches and scenic areas.

5096.302. The Legislature finds and declares all of the following:

(a) Historically, California's local and neighborhood parks often serve as the recreational, social, and cultural centers for cities and communities, providing venues for youth enrichment, senior activities, and family recreation.

(b) Neighborhood and state parks provide safe places to play in the urban neighborhoods, splendid scenic landscapes, exceptional experiences, and world-recognized recreational opportunities, and in so doing, are vital to California's quality of life and economy.

(c) For over a decade, the state's commitment to parks and natural resources has dwindled. California has not kept pace with the needed funding to adequately manage and maintain its multibillion dollar investment in neighborhood, urban, and state parks and natural areas resulting in disrepair and overcrowding of many park facilities and the degradation of wild lands.

(d) The magnificent Pacific Coast, outstanding mountain ranges, and unique scenic regions are the source of tremendous economic opportunity and contribute enormously to the quality of life of Californians.

(e) Continued economic success and enjoyment derived from California's natural resources depends on maintaining clean water, healthy ecosystems, and expanding public access for a growing state.

(f) The backlog of needs for repair and maintenance of local and urban parks exceeds two billion five hundred million dollars and the need for maintenance of state parks exceeds one billion dollars. The state's conservancies and wildlife agencies report a need for habitat acquisition and restoration exceeding $1.8 billion.

(g) This act will begin to address these critical neighborhood park and natural resources needs.

5096.303. The Legislature further finds and declares all of the following:

(a) Air pollution continues to be a major problem in California which harms the health of our residents, costs our economy billions of dollars related to health care costs, reduced agricultural productivity, and damage to our infrastructure, and otherwise decreases the quality of life in our state.

(b) Forests and trees improve air quality by removing carbon dioxide, particulates, and other pollutants from the air, and by producing oxygen.

(c) Park, open-space, and tree planting projects also improve air quality and decrease congestion by reducing sprawl, improving the quality of life in areas that are already developed by helping local agencies implement sound land use plans that promote energy efficiency, and by providing incentives to reduce development in inappropriate areas.

5096.306. It is the intent of the Legislature to strongly encourage every state or local government agency receiving the bond funds allocated pursuant to this chapter for an activity to give full and proper consideration to the use of recycled and reusable products whenever possible with regard to carrying out that activity.

5096.307. (a) Every proposed activity to be funded pursuant to this chapter shall be in compliance with the California Environmental Quality Act (Division 13 (commencing with Section 21000)).

(b) Lands acquired with funds allocated pursuant to this chapter shall be acquired from a willing seller of the land.

5096.3075. Upon a finding by the administering entity that a particular project for which funds have been allocated cannot be completed, or that the funds are in excess of the total needed, the Legislature may reallocate those funds for other high priority needs consistent with this act.

5096.308. As used in this chapter, the following terms have the following meanings:

(a) "Acquisition" means the acquisition from a willing seller of a fee interest or any other interest, including easements and development rights, in real property from a willing seller.

(b) "Board" me[illegible] Secretary of the Resources Agency designated in accordance with subdivision (b) of Section 5096.362.

(c) "Certified local community conservation corps programs" means programs operated by public or private nonprofit agencies pursuant to Section 14406.

(d) "Committee" means the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (Villaraigosa-Keeley Act) Finance Committee created pursuant to subdivision (a) of Section 5096.362.

(e) "District" means any regional park district, regional park and open-space district, or regional open-space district formed pursuant to Article 3 (commencing with Section 5500) of Chapter 3, any recreation and park district formed pursuant to Chapter 4 (commencing with Section 5780), or an authority formed pursuant to Division 26 (commencing with Section 35100). With respect to any community or unincorporated region that is not included within a district, and in which no city or county provides parks or recreational areas or facilities, "district" also means any other district that is authorized by statute to operate and manage parks or recreational areas or facilities, employs a full-time park and recreation director, offers year-round park and recreation services on lands and facilities owned by the district, and allocates a substantial portion of its annual operating budget to parks or recreation areas or facilities.

(f) "Fund" means the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (Villaraigosa-Keeley Act) Bond Fund created pursuant to Section 5096.310.

(g) "Historical resource" includes, but is not limited to, any building, structure, site area, place, artifact, or collection of artifacts that is historically or archaeologically significant in the cultural annals of California.

(h) "Program" means the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (Villaraigosa-Keeley Act) Program established pursuant to this chapter.

(i) "Secretary" means the Secretary of the Resources Agency.

(j) (1) "Stewardship" means the development and implementation of projects for the protection, preservation, rehabilitation, restoration, and improvement of natural systems and outstanding features of the state park system and historical and cultural resources. Those efforts may not include activities that merely supplement normal park operations or that are usually funded from other sources.

(2) (A) "Cultural resources stewardship" may include, but is not limited to, stabilization and protection of historical resources, including archaeological resources, in the state park system. Those resources may include sites, features, ruins, archaeological deposits, historical landscape resources, rock art features, and artifacts making up the physical legacy of California's past.

(B) "Cultural resources stewardship" does not include the rehabilitation, restoration, reconstruction, interpretation, or mitigation of historical resources typically required as part of a development program.

(3) "Natural resources stewardship" may include, but is not limited to, such objectives as the control of major erosion and geologic hazards, the restoration and improvement of critical plant and animal habitat, the control and elimination of exotic species encroachment, the stabilization of coastal dunes and bluffs, and the planning necessary to implement those objectives.

(k) "Wildlife conservation partnership" means a cooperative acquisition, restoration, or management of wildlife habitat for which the Wildlife Conservation Board provides matching funds to leverage other public, private, or nonprofit resources to maximize the conservation benefits to wildlife and wildlife habitat.

5096.309. Pursuant to guidelines issued by the secretary, all recipients of funding pursuant to this chapter shall post signs acknowledging the source of the funds.

Article 2. Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (Villaraigosa-Keeley Act) Program

5096.310. The proceeds of bonds issued and sold pursuant to this chapter shall be deposited in the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (Villaraigosa-Keeley Act) Bond Fund, which is hereby created. Unless otherwise specified and except as provided in subdivision (m), the money in the fund shall be available for appropriation by the Legislature, in the manner set forth in this chapter, only for parks and resources improvement, in accordance with the following schedule:

(a) The sum of five hundred two million seven hundred fifty thousand dollars ($502,750,000) to the department for the following purposes:

(1) To rehabilitate, restore, and improve units of the state park system that will ensure that state park system lands and facilities will remain open and accessible for public use.

(2) To develop, improve, rehabilitate, restore, enhance, and protect facilities and trails at existing units of the state park system that will provide for optimal recreational and educational use, activities, improved access and safety, and the acquisition from a willing seller of inholdings and adjacent lands. Adjacent lands are lands contiguous to, or in the immediate vicinity of, existing state park system lands and that directly benefit an existing state park system unit.

(3) For stewardship of the public investment in the preservation of the critical natural heritage and scenic features, and cultural heritage stewardship projects that will preserve vanishing remnants of California 's landscape, and protect and promote a greater understanding of California 's past, and the planning necessary to implement those efforts.

(4) For facilities and improvements to enhance volunteer participation in the state park system.

(5) To develop, improve, and expand interpretive 33 facilities at units of the state park system, including educational exhibits and visitor orientation centers.

(6) To rehabilitate and repair aging facilities at winter 36 recreation facilities pursuant to the Sno-Park program, as provided for in Chapter 1.27 (commencing with Section 5091. 01), that provide for improved public safety.

(7) For projects that improve air quality related to the state park system, including, but not limited to, the purchase of low-emission or advanced technology vehicles and equipment and clean fuel distribution facilities that will avoid or reduce air emissions at state park facilities.

(b) The sum of eighteen million dollars ($18,000,000) to the department to undertake stewardship projects, including cultural resources stewardship and natural resources stewardship projects, that will restore and protect the natural treasures of the state park system, preserve vanishing remnants of California's landscape, and protect and promote a greater understanding of California 's past.

(c) The sum of four million dollars ($4,000,000) to the department for facilities and improvements to enhance volunteer participation in the state park system.

(d) The sum of twenty million dollars ($20,000,000) to the department for grants to local agencies administering units of the state park system under an operating agreement with the department, for the development, improvement, rehabilitation, restoration, enhancement, protection, and interpretation of lands and facilities of, and improved access to, those locally operated units.

(e) The sum of ten million dollars ($10,000,000) to the department for purposes consistent with Section 5079.10, for competitive grants, in accordance with Section 5096.335.

(f) The sum of three hundred eighty-eight million dollars ($388,000,000) to the department for grants, in accordance with Sections 5096332, 5096333, and 5096.336, on the basis of population, for the acquisition, development, improvement, rehabilitation, restoration enhancement, and interpretation of local park and recreational lands and facilities, including renovation of recreational facilities conveyed to local agencies resulting from the downsizing or decommissioning of federal military installations.

(g) The sum of two hundred million dollars ($200,000,000) to the department for grants to cities, counties, and districts for the acquisition, development, rehabilitation, and restoration of park and recreation areas and facilities pursuant to the Roberti-Z'berg-Harris Urban Open-Space and Recreational Program Act (Chapter 3.2 (commencing with Section 5620)).

(h) The sum of ten million dollars ($10,000,000) to the department for grants, in accordance with Section 5096.337, for the improvement or acquisition and restoration of riparian habitat, riverine aquatic habitat, and other lands in close proximity to rivers and streams for river and stream trail projects undertaken in accordance with Section 78682.2 of the Water Code, and for

rposes of Section 7048 of the Water Code.
(i) The sum of ten million dollars ($10,000,000) to the department for grants, in accordance h Section
96.337, for the development, improvement, rehabilitation, restoration, enhancement, and erpretation of nonmotorized trails for the purpose of increasing public access to, and joyment of, public areas for increased recreational opportunities. Not less than one million e hundred thousand dollars ($1,500,000) of this amount shall be allocated toward the mpletion of a project that links existing bicycle and pedestrian trail systems to major urban blic transportation systems, to promote increased recreational opportunities and nmotorized commuter usage in the City of Whittier. Of this amount, no less than two hundred venty-five thousand dollars ($275,000) shall be allocated to the East Bay Regional Park istrict toward the completion of the Iron Horse Trail. Of this amount, not less than one million llars ($1,000,000) shall be allocated to a regional park district for the completion of a bike il in the City of Concord.
(j) Th e sum of one hundred million dollars ($100,000,000) to the department for grants to blic agencies and nonprofit organizations for park, youth center, and environmental hancement projects that benefit youth in areas that lack safe neighborhood parks, open ace, and natural areas, and that have significant poverty.
(k) The sum of two million five hundred thousand dollars ($2,500,000) to the California nservation Corps to complete capital outlay and resource conservation projects and ministrative costs allocable to the bond
ided projects.
(l) The sum of eighty-six million five hundred thousand dollars ($86,500,000) to the partment for the following purposes:
(1) The sum of seventy-one million five hundred thousand dollars ($71,500,000) for grants, accordance with Sections 5096339 and 5096.340, for urban recreational and cultural nters, including, but not limited to, zoos, museums, aquariums, and facilities for wildlife, vironmental, or natural science aquatic education or projects that combine curation of chaeological, paleontological, and historic resources with education and basic and applied search, and that emphasize specimens of California's extinct prehistoric plants and animals.
(2) The sum of fifteen million dollars ($15,000,000) for grants for regional youth soccer and seball facilities operated by nonprofit organizations. Priority shall be given to those grant ojects that. utilize existing school
cilities or recreation facilities and serve disadvantaged youth.
(m) Notwithstanding Section 13340 of the Government Code, the sum of two hundred ty-five million five hundred thousand dollars ($265,500,000) is, except as provided in ction 5096350, hereby continuously appropriated to the Wildlife Conservation Board, hout regard to fiscal years, in accordance with Section 5096.350.
(n) The sum of fifty million dollars ($50,000,000) to the California Tahoe Conservancy, in cordance with
ction 5096.351.
(o) The sum of two hundred twenty million four hundred thousand dollars ($220,400,000) to e State Coastal Conservancy, in accordance with Section 5096352.
(p) The sum of thirty-five million dollars ($35,000,000) to the Santa Monica Mountains nservancy, in
cordance with Section 5096.353.

(q) The sum of five million dollars ($5,000,000) to the Coachella Valley Mountains nservancy, in accordance with Section 5096.354.
(r) The sum of fifteen million dollars ($15,000,000) to the San Joaquin River Conservancy, accordance with Section 50963.55.
(s) The sum of twelve million five hundred thousand dollars ($12,500,000) to the California nservation Corps for grants for the certified local community conservation corps program to mplete capital outlay and resource conservation projects.
(t) Th e sum of twenty-five million dollars ($25,000,000) to the Department of Conservation ccordance with Section 5096.356.
(u) The sum of ten million dollars ($10,000,000) to the Department of Forestry and Fire Protection for urban
forestry programs in accordance with Section 4799.12. The grants made pursuant to this subdivision shall be for costs associated with the purchase and planting of trees, and up to three years of care which ensures the long-term viability of those trees.
(v) Notwithstanding Section 711 of the Fish and Game Code, the sum of twelve million dollars' ($12,000,000) to the Department of Fish and Game for the following purposes:
(1) The sum of five million dollars ($5,000,000) for expenditure in accordance with subdivision (a) of Section 5096.357.
(2) The sum of five million dollars ($5,000,000) for expenditure in accordance with subdivision (b) of Section 5096.357.
(3) The sum of two million dollars ($2,000,000) to remove nonnative vegetation harmful to ecological reserves in San Diego County.
(w) The sum o thirty million dollars ($30,000,000) of shall be available for purposes of Chapter 4.5 (commencing with Section 31160) of Division 21. Two hundred fifty thousand dollars ($250,000) shall, be allocated to Mount Diablo State Park.

(x) The sum of seven million dollars ($7,000,000) to the California Integrated Waste Management Board for
grants to local agencies to assist them in meeting state and federal accessibility standards relating to public
playgrounds if the local agency guarantees that 50 percent of the grant funds will be used for the improvement or replacement of playground equipment or facilities through the use of recycled materials and that matching funds in an amount equal to not less than 50 percent of the total amount of those grant funds will be provided through either public or private funds or in-kind contributions. The board may reduce this matching fund requirement to not less than 25 percent if it determines that the 50 percent requirement would impose an extreme financial hardship on the local agency applying for the grant. The board may expend the funds allocated pursuant to this subdivision, upon appropriation by the Legislature, for the purposes specified herein.
(y) The sum of fifteen million dollars ($15,000,000) to a city for rehabilitation, restoration, or enhancement to a city park that is over 1,000 acres that serves an urban area of over 750,000 population in northern California and that provides recreational, cultural, and scientific resources.
(z) (1) The sum of six million two hundred fifty thousand dollars ($6,250,000) to the secretary to administer grants to the Sierra Nevada-Cascade Program, in accordance with Section 5096.34.7.
(2) The sum of thirty-three million five hundred thousand dollars ($33,500,000) to the secretary to administer a river parkway and restoration program to assist local agencies and other districts to plan, create, and conserve river parkways. The secretary shall make funds available in accordance with Sections 7048 and 78682.2 of the Water Code, and any other applicable authority, for the following purposes:
(A) Twenty-five million dollars ($25,000,000) for the acquisition or restoration of public lands within the Los
Angeles River Watershed, the San Gabriel River Watershed, and the San Gabriel Mountains and to provide open space, nonmotorized trails, bike paths, and other low-impact recreational uses and wildlife and habitat restoration and protection. Ten million dollars ($10,000,000) shall be allocated for the Los Angeles River Watershed, and fifteen million dollars ($15,000,000) shall be allocated for the San Gabriel River Watershed and the San Gabriel Mountains and lower Los Angeles River.
(B) Tw o million five hundred thousand dollars ($2,500,000) for river parkway projects along the Kern River between the mouth of the Kern Canyon and I-5.
(C) One million dollars ($1,000,000) for land acquisition in the Santa Clarita Watershed.
(D) Three million dollars ($3,000,000) for watershed, riparian, and wetlands restoration along the Sacramento River in Yolo, Glenn, and Colusa Counties.
(E) Two million dollars ($2,000,000) for the construction of a visitor center at a state recreation area encompassing a body of water along the American River.
(3) The sum of two million dollars ($2, 000, 000) to the secretary for resource conservation

R0067894

and urban water
recycling that addresses multicounty regional recreational needs, provides habitat restoration, and enjoys joint sponsorship by multiple local agencies and nonprofit organizations in the County of Sonoma.

(4) The sum of one million one hundred thousand dollars ($1,100,000) to the secretary, one hundred thousand dollars ($100,000) of which shall be made available to fund a community center in San Benito County, one hundred thousand dollars ($100,000) of which shall be made available to fund a veterans park in San Benito County, five hundred thousand dollars ($500,000) of which shall be made available to fund a community center in the City of Galt, and four hundred thousand dollars ($400,000) of which shall be made available to fund a community center in the City of Gilroy.

(5) The sum of two million dollars ($2,000,000) to the secretary for Camp Arroyo in Alameda County.

(6) The sum of one million dollars ($1,000,000) to the secretary to construct a rehabilitation center for injured endangered and indigenous wild animals at the Wildhaven Center in the San Bernardino Mountains.

Article 3. State Park System Program

5096.320. The Legislature hereby - recognizes that public financial resources are inadequate to meet all capital outlay needs of the state park system and that the need for the acquisition, development, restoration, rehabilitation, improvement, and protection of state, park system lands and facilities has increased to the point that their continued well-being and the realization of their full public benefit is in jeopardy.

(a) The department shall annually submit to the Legislature and to the secretary a report, consisting of a prioritized listing and comparative evaluation of needs.

(b) Projects approved by the secretary shall be forwarded by the secretary to the Director of Finance for inclusion in the Budget Bill.

5096.322. (a) No later than November 1, 2001, the director shall determine the amount of funding that is necessary to complete all deferred maintenance projects within each unit of the state park system.

(b) Except as provided in subdivision (c), no proceeds of the bonds issued and sold pursuant to this chapter may be used to acquire improved property for a unit of the state park system until 75 percent of the amount determined pursuant to subdivision (a) has been appropriated, and allocated to complete deferred maintenance projects within that unit from an appropriated funding source other than the proceeds of the bonds issued and sold pursuant to this chapter.

(c) Real property may be acquired under this chapter for a unit of the state park system that does not meet the requirements of subdivision (b) only if the director finds, with respect to that unit, that a unique opportunity is presented to acquire real property that will constitute a significant improvement of the state park system.

(d) As used in this section, "deferred maintenance project" means any project identified in the department's 2001 Deferred Maintenance Assessment that rehabilitates or repairs a facility to a safe and usable condition for the visiting public.

5096.323. Fifty million dollars ($50,000,000) of the funds allocated pursuant to subdivision (a) of Section 5096.310 shall be expended for the acquisition of land from willing sellers that are a high priority for both the state parks system and for habitat purposes, with priority given to projects that protect habitat for rare, threatened, or endangered species pursuant to a natural community conservation plan adopted pursuant to Chapter 10 (commencing with Section 2800) of Division 10 of the Fish and Game Code, if the acquisition of the land is conducted in conjunction with a natural community conservation plan approved by the Department of Fish and Game prior to January 1, 1999, or if the acquisition is approved by statute. Notwithstanding paragraph (2) of subdivision (a) of Section 5096.310, those land acquisitions may be for either new or existing units of the state park system.

SEC. 2. Section 5096.324 is added to the Public Resources Code, to read:

5096.324. Funds appropriated to the department pursuant to subdivision (a) of Section 5096.310 shall be made available for the following purposes:

(a) The sum of fifteen million dollars ($15,000,000) to preserve and restore a unit of the state parks system that preserves and restores cultural and historical immigration resources in northern California.

(b) The sum of two million six hundred thousand dollars ($2,600,000) to construct visitor centers in state parks, state recreation areas, and state historic parks. The department shall give priority to projects at Chino Hills State Park and California Citrus State Historic Park.

(c) Up to six hundred fifty thousand dollars ($650,000) for playground equipment upgrades in state recreation areas.

(d) The sum of two hundred fifty thousand dollars ($250,000) for restoration of state reserves that maintain the state flower.

(e) The sum of one million dollars ($1,000,000) for restoration of state beaches.

(f) The sum of five million dollars ($5,000,000) for restoration, study, and curation of paleontological, archaeological, and historical resource site protection. Priority shall be given to projects that combine curation of archaeological, paleontological, and historical resources with education and basic and applied research, and that emphasize specimens of California's extinct prehistoric plants and animals.

(g) The sum of two million seven hundred fifty thousand dollars ($2,750,000), two million five hundred thousand dollars ($2,500,000) of which shall be allocated for capital outlay projects at the Empire Mine State Historic Park, and two hundred fifty thousand dollars ($250,000) of which shall be allocated for Columbia State Historic Park.

(h) The sum of ten million dollars ($10,000,000) for the acquisition of lands from willing sellers of lands that are forested with redwoods or that will enhance the protection or preservation of the redwood forest ecosystem. The department shall give preference to projects where matching contributions in funding from other public agencies, private parties, or nonprofit organizations are available.

(i) Up to five hundred thousand dollars ($500,000) to construct trails, trailheads, and parking, and to provide nonvehicular public access between the Bear and Mendoza Ranch open-space and adjacent Henry Coe State Park.

Article 4. Grant Program

5096.331. The Legislature hereby recognizes that public financial resources are inadequate to meet all of the funding needs of local public park and recreation providers and that there is an urgent need for safe, open,
and accessible local park and recreational facilities and for the increased recreational opportunities that provide positive alternatives to social problems. Accordingly, it is declared to be the policy of this state that the funds allocated pursuant to subdivisions (f) and (g) of Section 5096.310 to local agencies shall be appropriated primarily for projects that accomplish all of the following:

(a) Rehabilitate facilities at existing local parks that will provide for more efficient management and reduced operational costs. This may include grants to local agencies for the renovation of recreational facilities conveyed to local agencies resulting from the downsizing and decommissioning of federal military installations.

(b) Develop facilities that promote positive alternatives for youth and that promote cooperation between local park and recreation service providers and youth-serving nonprofit organizations.

(c) Promote family oriented recreation, including art activities.

(d) Provide for open, safe, and accessible local park lands, facilities, and botanical gardens.

5096.332. (a) Sixty percent of the total funds available for grants pursuant to subdivision (f) of Section 5096.310 shall be allocated to cities and to districts other than a regional park district, regional park and open space district, or regional open-space district. Each city's and

ict's allocation shall be in the same ratio as the city's or district's population is to the bined total of the state's population that is included in incorporated areas and corporated areas within the district, except that each city or district shall be entitled to a num allocation of thirty thousand dollars ($30,000). In any instance in which the boundary city overlaps the boundary of such a district, the population in the area of overlapping dictions shall be attributed to each jurisdiction in proportion to the extent to which each ales and manages parks and recreational areas and facilities for that population. In any nce in which the boundary of a city overlaps the boundary of such a district, and in the of overlap the city does not operate and manage parks and recreational areas and lies, all grant funds shall be allocated to the district.

) Each city and each district subject to subdivision (a) whose boundaries overlap shall elop a specific plan for allocating the grant funds in accordance with the formula specified bdivision (a). If, by April 1, 2001, the plan has not been agreed to by the city and district submitted to the department, the director shall determine the allocation of the grant funds ng the affected jurisdictions.

i.333. (a) Forty percent of the total funds available for grants pursuant to subdivision (f) of ion 5096.310 shall be allocated to counties and regional park districts, regional park open-space districts, or regional open-space districts formed pursuant to Article 3 mencing with Section 5500) of Chapter 3.

) Each county's allocation under subdivision (a) shall be in the same ratio as the county's ulation, except that each county shall be entitled to a minimum allocation of one hundred thousand dollars ($150,000).

:) In any county that embraces all or part of the territory of a regional park district, regional and open-space district, or regional open-space district, whose board of directors is not county board of supervisors, the amount allocated to the county shall be apportioned veen that district and the county in proportion to the population of the county that is uded within the territory of the district and the population of the county that is outside the tory of the district.

d) In any county that currently embraces all or a part of the territory of a regional n-space district and an authority formed pursuant to Division 26 (commencing with Section 00), the allocation shall be distributed between the county and these entities as follows:

1) First, the funds shall be apportioned between the district and the county in proportion to population of the county that is included within the territory of the district, and the portion of the population of the county that is outside the district. The amounts resulting this calculation shall be known as the district's share, and the county's first balance. The ict's share shall be allocated to the district. The county's first balance shall be further ortioned as provided in paragraph (2).

2) The county's first balance, as determined in accordance with paragraph (1), shall be er apportioned between the authority and the county in proportion to the population of the ity that is included within the territory of the authority, and the proportion of the population e county that is outside the authority. The amounts resulting from this calculation shall be wn as the authority's share, and the county's second balance.

3) The authority's share shall be divided equally between the county and the authority. The ity shall receive all of the county's second balance.

3.334. Notwithstanding Section 5096.331, of the funds allocated on the basis of population uant to subdivision (f) of Section 5096.310 within counties with a population of five million ons or more, not less than 75 percent of the total amount, shall be available as follows:

a) Not less than 20 percent for land acquisition, construction, development, and abilitation of at-risk

h recreation facilities. As used in this section, "at-risk youth" means persons who have not ned the age of 21 years and are at high risk of being involved in, or are involved in, one or e of the following: gangs, juvenile delinquency, criminal activity, substance abuse, lescent pregnancy, or school failure or dropout.

b) Not less than 40 percent for projects within the most economically disadvantaged areas, h may include projects along river parkways, conservation corridors, and parkways along dors of economic significance.

c) Not less than 10 percent for urban reforestation projects.

(d) Not more than 5 percent for projects that convert publicly owned land to a neighborhood park providing open-space, recreational, cultural, and festival opportunities, if the bond proceeds do not exceed 25 percent of the total project cost and there is a 75 percent funding match.

5096.335. Funds authorized pursuant to subdivision (e) of Section 5096.310 shall be administered by the State Office of Historic Preservation and shall be available as grants, on a competitive basis, to cities, counties, districts, local agencies formed for park purposes pursuant to a joint powers agreement between two or more local entities, and nonprofit organizations for the acquisition, development, rehabilitation, restoration, and interpretation of historical resources.

5096.336. (a) Of the funds authorized pursuant to subdivision (f) of Section 5096.310, three hundred thirty-eight million dollars ($338,000,000) shall be available for grants to cities, counties, and districts on the basis of their populations, as determined by the department in cooperation with the Department of Finance, on the basis of the most recent verifiable census data and other population data that the department may require to be furnished by the applicant city, county, or district.

(b) Of the funds authorized pursuant to subdivision (f) of Section 5096.310, fifty million dollars ($50,000,000) available for grants pursuant to subdivision (f) of Section 5096.310 shall be allocated to cities and districts in urbanized counties providing park and recreation services within jurisdictions of 200,000 or less in population. For purposes of this subdivision, "urbanized counties" means a county with a population of 200,000 or greater.

SEC 3. Section 5096337 is added to the Public Resources Code, to read:

5096.337. (a) Funds authorized pursuant to subdivisions (h), (i), and (z) of Section 5096310 shall be available as grants, on a competitive basis, to cities, counties, districts, local agencies formed for park purposes pursuant to a joint powers agreement as defined in subdivision (b), and other districts, as defined in subdivision (c).

(b) For purposes of this section, "local agency" means any local agency formed for park purposes pursuant to a joint powers agreement between two or more local entities, excluding school districts.

(c) For purposes of this section, "other district include any district authorized to provide park, recreational, or open-space services, or a combination of those services, except a school district.

5096.338. The funds allocated pursuant to subdivision (j) of Section 5096.310 shall, upon appropriation in the annual Budget Act, be available for existing or new entities or programs designated by statute for grants to public agencies and nonprofit organizations, and for related administrative costs. At least 50 percent of the funds shall be available for grants to local public agencies and districts.

SEC 4. Section 5096.339 is added to the Public Resources Code, to read:

5096.339. (a) Not less than 11 percent of the funds authorized in paragraph (1) of subdivision (i) of Section 5096.310 shall be available as grants administered by the department to cities, counties, and nonprofit organizations for the development, rehabilitation, or restoration of facilities accredited by the American Zoo and Aquarium Association (AZA) and operated by cities, counties, and nonprofit organizations, and to cities, counties, and nonprofit organizations for the development, rehabilitation, or restoration of zoos and aquariums operated by cities, counties, and nonprofit organizations, but not yet accredited by the AZA. This program shall be known, and may be cited, as the Dr. Paul Chaffee Zoological Program. Allocation in awarding grants pursuant to this section shall be in accordance with the following schedule:

(1) Individual grants of up to one million dollars ($1,000,000), or an amount to be determined by dividing 95 percent of the total zoo and aquarium funds available pursuant to this subdivision by the number of AZA accredited institutions at the time of enactment of this section, shall be made available to zoos and aquariums that are AZA accredited.

R0067896

(2) Not less than [illegible]cent or two million dollars ($2,000,000), whichever is greater, of the funds available
pursuant to this subdivision shall be reserved for institutions with annual operating budgets of less than one million dollars ($1,000,000).

(3) Not more than 5 percent of the total funds available pursuant to this subdivision, shall be made available as grants to zoos and aquariums that have initiated the AZA accreditation process but are not yet accredited at the time of the enactment of this section. Grants awarded under this subdivision shall be dedicated to projects which will enhance the institution's ability to meet standards of AZA accreditation.

4) Not more than 5 percent of the total funds available pursuant to this subdivision shall be granted for publicly owned or nonprofit zoos and wildlife centers that may not be accredited, but that care for animals that have been injured or abandoned and that cannot be returned to the wild. To be eligible for this portion of those funds, applicants shall demonstrate that they serve a regional area, foster the environmental relationships of animals within that region, and operate outreach and onsite programs communicating those objectives to the public.

(b) At least ten million dollars ($10,000,000) of the funds allocate pursuant to paragraph (1) of subdivision

(1) of Section 5096.310 shall be provided to the California Science Center for implementation of the Exposition Master Plan. Three million dollars ($3,000,000) of this amount shall be made available to the California African-American Museum for completion of its education and visitor facility in Exposition Park and seven million dollars ($7,000,000) of this amount shall be made available for the California Science Center School.

(c) Not less than five hundred thousand dollars ($500,000) of the funds allocated pursuant to paragraph

(1) of subdivision (1) of Section 5096.310 shall be available as grants for facilities for education programs focused on the National Marine Sanctuaries along California 's coast.

(d) Not less than forty-four million seven hundred fifty thousand dollars ($44,750,000) of the funds allocated pursuant to paragraph (1) of subdivision (7) of Section 5096.310 shall be made available for the following
purposes:

(1) At least ten million dollars ($10,000,000) shall be provided to the Discovery Science Center in Santa Ana for capital improvement.

(2) At least ten million dollars ($10,000,000) shall be provided to the California Academy of the Sciences for capital improvement projects.

(3) At least two million dollars ($2,000,000) shall be provided toward the creation of the Delta Science Center to carry out significant marine and delta aquatic education and interpretive programs.

(4) At least fifteen million dollars ($15,000,000) shall be provided to the Alliance of Redding Museums for capital improvements for the Turtle Bay-Museums and the Arboretum on the River

(5) An individual grant of four million two hundred fifty thousand dollars ($4,250,000) shall be made to the
California Division of Fairs and Expositions of the Department of Food and Agriculture for capital outlay to
assist with an approved contract entered into on or before January 1, 2000, for an exposition or state fair relocation in any county with a population greater than 5,000,000.

(6) The sum of three million five hundred thousand dollars ($3,500,000) to enhance the two-acre historical exhibit at the Kern County Museum.

5096.340. (a) Not less than 11 percent of the funds authorized in paragraph (1) of subdivision (l) of Section 5096.310 shall be available as grants on a competitive basis to cities, counties, and nonprofit organizations for the development or rehabilitation of real property consisting of urban recreational and cultural centers, museums, and facilities for wildlife education or environmental education.

(b) To be eligible for funding, a project shall initially be nominated by a Member of the

Legislature for study by the department. The department shall study each proposal nominated and, prior to the April 1 preceding the fiscal year in which funds are proposed to be appropriated, shall submit to the Legislature a prioritized listing and comparative evaluation of all projects nominated prior to the preceding July 1.

(c) In establishing priorities of projects, the department shall consider any favorable project characteristics, including, but not limited to, all of the following:

(1) The project will interpret one or more important California historical, cultural, economic, or resource themes or an important historical, cultural, economic, technological, or resource theme in a major region of California. Higher priority shall be assigned to projects whose themes are not interpreted in any existing museum or have demonstrable deficiencies in their presentation in an existing museum.

(2) The project is proposed to be operated on lands that are already in public ownership or on lands that will be acquired and used for the project in conjunction with adjoining public lands.

(3) Projects that are closely related geographically to the resources, activity, structure, place, or collection of objects to be interpreted, and are close to population centers and access routes.

(4) Projects that are in, or close to, population centers or are adjacent to, or readily served by, a state highway or other mode of public transportation.

(5) Projects for which there are commitments, or the serious likelihood of commitments, of funds or the donation of land or other property suitable for the project.

(d) The department shall annually forward a list of the highest priority projects to the Department of Finance for inclusion in the Budget Bill.

e) An application for a grant for a cooperative museum project shall be submitted jointly by the city, county, or other public agency, an institute of higher learning, or a nonprofit organization that cooperatively is operating, or will operate, the project.

5096.341. (a) The director shall prepare and adopt criteria and procedures for evaluating applications for grants allocated pursuant to subdivisions (f), (g), (h), (i), and (l) of Section 5096.310. Individual applications for funds shall be submitted to the department for approval as to their conformity with the requirements of this chapter. The application shall be accompanied by certification from the planning 'agency of the applicant that the project for which the grant is requested is consistent with the park and recreation element of the applicable city or county general plan or the district park and recreation plan, as the case may be, and will satisfy a high priority need. To utilize available grant funds as effectively as possible, overlapping or adjoining jurisdictions are encouraged to combine projects and submit a joint application.

(b) Any applicant may allocate all or a portion of its per capita share for a regional or state project.

(c) The director shall annually forward a statement of the total amount to be appropriated in each fiscal year for projects approved for grants pursuant to subdivisions (f), (g), (h), (i), and (l) of Section 5096.310 to the Director of Finance for inclusion in the Budget Bill. A list of eligible jurisdictions and the amount of grant funds to be allocated to each shall also be made available by the department.

(d) (1) Funds appropriated for grants pursuant to subdivisions (f), (g), (h), (i), and (l) of Section 5096.310 shall be encumbered by the recipient within three years from the date that the appropriation became effective. Regardless of the date of encumbrance of the granted funds, the recipient is expected to complete all funded projects within eight years of the effective date of the appropriation.

(2) Commencing with the Budget Bill for the 2009-10 fiscal year, any grant funds appropriated pursuant to subdivisions (f), (g), (h), (i), and (l) of Section 5096.310 that have not been expended by the grantee shall revert to the fund and be available for appropriation by the Legislature for one or more of the categories specified in Section 5096.310 that the Legislature determines to be of the highest priority statewide.

5096.342. (a) Grant funds appropriated pursuant to subdivisions (f), (g), (h), (i), and (l) of Section 5096.310 may be expended by the grantee only for projects on lands owned by, or subject to a lease or other interest held by, the grantee.

(b) If a grant applicant does not have fee title to the lands, the applicant shall demonstrate

R0067897

16-13

the satisfaction of the department that the proposed project will provide public benefits that e commensurate with the type and duration of the interest in land that is held by the pplicant.

5096.343. (a) Except as provided in subdivision (c), no grant funds authorized pursuant to ubdivisions (f), (g), (h), (i), and (l) of Section 5096.310 may be disbursed unless the applicant is agreed, in writing, to both of the following:

(1) To maintain and operate the property funded pursuant to this chapter for a period that is mmensurate with the type of project and the proportion of state funds and local matching nds or property allocated to the capital costs of the project. With the approval of the partment, the grantee, or the grantee's successor in interest in the property, may transfer e responsibility to maintain and operate the property in accordance with this section.

(2) To use the property only for the purposes for which the grant was made and to make no her use or sale or other disposition of the property, except as authorized by specific act of e Legislature.

(b) The agreements specified in subdivision (a) shall not prevent the transfer of the operty from the applicant to a public agency, if the successor public agency assumes the ligations imposed by those agreements.

(c) If the use of the property is changed to a use that is not permitted by the category from uch the grant funds were appropriated, or if the property is sold or otherwise disposed of, an mount equal to (1) the amount of the grant, (2) the fair market value of the real property, or the proceeds from the sale or other disposition, whichever is greater, shall be used by the antee for a purpose authorized by that category, pursuant to agreement with the department specified in subdivision (a), or shall be reimbursed to the fund and be available for propriation by the Legislature only for a purpose authorized by that category. If the property ld or otherwise disposed of is less than the entire interest in the property funded with the unt, an amount equal to either the proceeds from the sale or other disposition of the interest the fair market value of the interest sold or otherwise disposed of, whichever is greater, all be used by the grantee for a purpose authorized by the category from which the funds re appropriated, pursuant to agreement with the department as specified in subdivision (a), shall be reimbursed to the fund and be available for appropriation by the Legislature only for rse authorized by that category.

C. 5. Section 5096.344 is added to the Public Resources Code, to read:

5096.344. All grants, gifts, devises, or bequests to the state, that are conditioned upon ng used for park,
nservation, recreational, agricultural, or other such purposes, may be accepted and eived on behalf of the
te by the appropriate departmental director, with the approval of the Director of Finance, d those grants, gifts, devises, or bequests may be available, upon appropriation by the gislature, for expenditure for the
poses specified in Section 5096310.

C. 6 Section 5096.345 is added to the Public Resources Code, to read:

5096.345. Except for funds continuously appropriated by this chapter, all appropriations of ds pursuant to
ction 5096.310 for purposes of the program shall be included in the Budget Bill for the 01-02 fiscal year, and each succeeding fiscal year, for consideration by the Legislature, and ll bear the label "Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal tection (Villaraigosa-Keeley Act) Fund." The Budget Bill section shall contain separate ns for each project, each class of project, or each element of the program for which an propriation is made.

cle 4.5. Clean Air Improvement Program

5096.346. (a) In allocating funds pursuant to subdivision (u) of Section 5096.310, the Department of Forestry and Fire Protection shall give preference to the planting of trees that provide greater air quality benefits and to urban forestry projects that provide greater energy conservation benefits.

(b) The Department of Forestry and Fire Protection shall consult with the State Air Resources Board in developing guidelines for the allocation of grant funds pursuant to subdivision (u) of Section 5096.310 that promote air quality benefits.

(c) State and local agencies shall consider potential air quality benefits when allocating funds received pursuant to this chapter.

Article 4.6. Sierra Nevada-Cascade Mountain Region

SEC. 7. Section 5096.347 is added to the Public Resources Code, to read:

5096.347. (a) The Legislature hereby finds and declares that the Sierra Nevada and Cascade Mountain
Region constitutes a unique and important environmental, anthropological, cultural, scientific, educational, recreational, scenic, water, watershed, and wildlife resource that should be held in trust for the enjoyment of, and appreciated by, present and future generations.

(b) The secretary shall administer grants to the Sierra Nevada-Cascade Program to assist local governments, agencies, districts, and nonprofit organizations working in collaboration with those local governments, agencies, and districts to plan, create, and conserve the Sierra Cascade natural ecosystem. The secretary shall make funds available on a competitive basis for all of the following activities:

(1) The acquisition and restoration of riparian habitat in accordance with Sections 7048 and 78682.2 of the Water Code to improve water quality, and to protect, restore, or rehabilitate watersheds, streams wetlands, or other aquatic habitat.

(2) Capital improvement projects that provide park and recreational opportunities.

(3) Access to trails and public lands, in accordance with Article 6 (commencing with Section 5070) of Chapter 1 of Division 5.

(4) Acquisition of park lands or recreational facilities.

(c) The secretary shall give priority to fund up to two million dollars ($2,000,000) for Commons Beach improvements on properties owned or administered by local agencies in the Lake Tahoe area, that will provide
improved lake access, bicycle and pedestrian trail linkages, and interpretative facilities.

(d) The secretary may provide the following capital outlay grants:

(1) Five hundred thousand dollars ($500,000) for capital outlay to an incorporated city all or part of the
territory of which is located within five miles of the boundary line between San Joaquin County and Sacramento County.

(2) Two hundred fifty thousand dollars ($250,000) to the department for the renovation of a state historical
point of interest near the intersection of Jack Tone Road and State Highway 88.

(e) For the purposes of this article, the Sierra Nevada-Cascade Mountain Region includes those portions of Fresno County, Kern County, Stanislaus County, and Tulare County, and counties with populations of less than 250,000 as of the 1990 United States Census, that are located in the mountains, the foothills, and the area adjacent to the geologic formations of the Sierra Nevada and Cascade mountain ranges.

Article 4.7 Murray-Hayden Urban Parks and Youth Service Program

SEC. 8. Section 5096.348 is added to the Public Resources Code, to read:

5096.348. (a) Notwithstanding any other provision of this chapter, funds allocated pursuant to subdivision (j)
of Section 5096.310 shall be allocated, upon appropriation by the Legislature, for parks, park facilities, or environmental youth service centers that are within the immediate proximity of a neighborhood that has been
identified by the department as having a critical lack of park or open space lands or

deteriorated park f. , that are in an area of significant poverty and unemployment, and that have a shortage of services for youth. Priority shall be given to capital projects that employ neighborhood residents and at-risk youth.

(b) (1) Fifty percent of the funds allocated pursuant to subdivision 6) of Section 5096.310 shall be made available on a competitive basis to heavily urbanized counties and cities or to nonprofit organizations or park districts in those counties and cities, in compliance with subdivision (a) and the matching requirements of the Roberti-Z'berg-Harris Urban Open-Space and Recreation Program Act (Chapter 3.2 (commencing with Section 5620).

(2) No more than 10 percent of the amounts made available pursuant to paragraph (1) shall be allocated to fund grants pursuant to Chapter 2.5 (commencing with Section 990) of Part I of Division 2 of the Welfare and Institutions Code, at least 50 percent of which shall be granted to youth service organizations eligible for tax-exempt status pursuant to Section 501(c)(3) of the Internal Revenue Code that are chartered by a national youth service organization.

Article 5. Wildlife Program

SEC 9. Section 5096.350 is added to the Public Resources Code, to read:

5096.350. (a) Funds appropriated pursuant to subdivision (m) of Section 5096.310 shall be available for expenditure by the Wildlife Conservation Board for the acquisition, development, rehabilitation, restoration, and protection of real property benefiting fish and wildlife, for the acquisition, restoration, or protection of habitat that promotes recovery of threatened, endangered, or fully protected species, maintains the genetic integrity of wildlife populations, and serves as corridors linking otherwise separate habitat to prevent habitat fragmentation, and for grants and related state administrative costs pursuant to the Wildlife Conservation Law of 1947 (Chapter 4 (commencing with Section 1300) of Division 2 of the Fish and Game Code), for the following purposes:

(1) Ten million dollars ($10,000,000) for the acquisition or restoration of wetland habitat, as follows:

(A) Five million dollars ($5,000,000) for the acquisition, preservation, restoration, and establishment, or any combination thereof, of habitat for waterfowl or other wetlands-associated wildlife, as provided for in the Central Valley Habitat Joint Venture Component of the North American Waterfowl Management Plan and the Inland Wetlands Conservation Program, notwithstanding Section 711 of the Fish and Game Code. Preference shall be given to projects involving the acquisition of perpetual conservation easements, habitat development projects on lands which will be managed primarily as waterfowl habitat in perpetuity; waterfowl habitat development projects on agricultural lands; the reduction of fishery impacts resulting from supply diversions that have a direct benefit to wetlands and waterfowl habitat; or programs to establish permanent buffer areas, including, but not limited to, agricultural lands that are necessary to preserve the acreage and habitat values of existing wetlands.

(B) Five million dollars ($5,000,000) for the acquisition, development, restoration, and protection of wetlands and adjacent lands, or any combination thereof, located outside the Sacramento-San Joaquin Valley.

(2) Ten million dollars ($10,000,000) for the development, acquisition from a willing seller, or restoration of riparian habitat and watershed conservation programs.

(3) Forty-five million dollars ($45,000,000), upon appropriation by the Legislature, for the restoration, or acquisition from a willing seller, of habitat for threatened and endangered species or for the purpose of promoting the recovery of those species. Five million dollars ($5,000,000) of that amount shall be for the acquisition of property along the central coast containing coastal terrace prairie, federally listed spineflower state listed San Francisco popcorn flower, and candidates for federal listing including ohlone tiger beetle and opler's longhorned moth. No funds may be expended pursuant to this paragraph for the acquisition of real property or other actions taken pursuant to Chapter 10 (commencing with Section 2800) of the Fish and Game Code.

(4) Thirteen million dollars ($13,000,000) for the acquisition from a willing s. restoration of forest lands, including, but not limited to, ancient redwoods and oak woodlands. Not more than five million dollars ($5,000,000) of this amount shall be expended on the federal Legacy Forest Program (16 U S C Sec 2103) to meet federal matching requirements and not less than five million dollars ($5,000,000) of this amount shall be allocated for the preservation of oak woodlands. Not more than five million dollars ($5,000,000) of this amount shall be expended on the federal Legacy Forest Program (16 U S C Sec 2103) to meet federal matching requirements and not less than five million dollars ($5,000,000) of this amount shall be allocated for the preservation of oak woodlands.

(5) Eighty-two million five hundred thousand dollars ($82,500,000), upon appropriation by the Legislature, to match funds contributed by federal or local agencies or nonprofit organizations for the acquisition, restoration, or protection of habitat or habitat corridors that promote the recovery of threatened, endangered, or fully protected species. Projects funded pursuant to this paragraph may include restoration projects authorized pursuant to Public Law 105-372, the Salton Sea Reclamation Act of 1998. The board shall require matching contributions of funds, real property, or other resources from other public agencies, private parties, or nonprofit organizations, at a level designed to obtain the maximum conservation benefits to wildlife and wildlife habitat. No funds may be expended pursuant to this paragraph for the acquisition of real property or other actions taken pursuant to Chapter 10 (commencing with Section 2800) of the Fish and Game Code.

6) One hundred million dollars ($100,000,000), upon appropriation by the Legislature, for the purpose of funding the acquisition of real property subject to a natural community conservation plan adopted pursuant to Chapter 10 (commencing with Section 2800) of the Fish and Game Code, if the acquisition of the real property is conducted in conjunction with a natural community conservation plan approved by the Department of Fish and Game prior to January 1, 1999, or if the acquisition is approved by statute.

(7) Five million dollars ($5,000,000) for environmental restoration projects for the following purposes approved pursuant to the Salton Sea Restoration Project authorized by Public Law 105-372, the Salton Sea Reclamation Act of 1998, and identified in the Final Environmental Impact Statement of the Salton Sea Restoration Project:

(A) Reduce and stabilize the overall salinity of the Salton Sea.

(B) Stabilize the surface elevation of the Salton Sea.

(C) Reclaim, in the long term, healthy fish and wildlife resources and their habitats.

(D) Enhance the potential for recreational uses of the Salton Sea.

(b) Not more than 5 percent of the funds authorized for expenditure by this section may be used for public access and wildlife-oriented public use projects.

Article 6. Lake Tahoe Program

5096.351. (a) The Legislature has recognized the need to protect and restore the fragile environment at Lake Tahoe, and the Tahoe Regional Planning Agency has prepared an Environmental Improvement Program that outlines a capital outlay approach to help achieve environmental thresholds in the Lake Tahoe Basin, which allocates funding responsibilities over the first 10 years of the program in the amounts of approximately two hundred seventy-four million dollars ($274,000,000) to the State of California, two hundred ninety-seven million dollars ($297,000,000) to the federal government, eighty-two million dollars ($82,000,000) to the State of Nevada, one hundred one million dollars ($101,000,000) to local governments, and one hundred fifty-three million dollars ($153,000,000) to the private sector.

(b) Funds allocated pursuant to subdivision (n) of Section 5096.310 shall be available for expenditure for the development, restoration, acquisition from a willing seller, and enhancement of re al property, by the California Tahoe Conservancy within the Lake Tahoe region pursuant to Title 7.42 (commencing with Section 66905) of the Government Code for the following purposes:

(1) Protecting the natural environment through preservation of environmentally sensitive lands, soil erosion control, restoration or enhancement of watershed lands, and restoration of

enhancement of streams and other natural areas.
(2) Providing public access and public recreation opportunities.
(3) Enhancing and restoring wildlife areas.
(c) The provision of these funds is to meet applicable state responsibilities pursuant to the Tahoe Regional Planning Agency's Environmental Improvement Program.
(d) The allocation of these funds has been made in the expectation that the federal government, the State of Nevada, local jurisdictions, and the private sector will fulfill their respective obligations pursuant to the Environmental Improvement Program. The secretary shall report annually to the Legislature on the progress of the development and implementation of the Environmental Improvement Program, and the provision of these funds may be restricted in the event that the parties are found to be making inadequate progress or are not making good faith efforts towards fulfilling their respective obligations.

Article 7. Coastal Protection Program

SEC. 10. Section 5096.352 is added to the Public Resources Code, to read:

5096.352. Funds allocated pursuant to subdivision (o) of Section 5096.310 shall be available for expenditure by the State Coastal Conservancy pursuant to Division 21(commencing with Section 31000) for the acquisition from a willing seller, preservation, restoration, and enhancement of real property or an interest in real property in coastal areas and watersheds within its jurisdiction and the development of public use facilities in those areas in accordance with the following schedule:
(a) Twenty-five million dollars ($25,000,000) for projects funded pursuant to the San Francisco Bay Area Conservancy Program established pursuant to Chapter 4.5 (commencing with Section 31160) of Division 21.
(b) (1) Twenty-five million dollars ($25,000,000) shall be made available to the Santa Monica Bay Restoration Project to fund grants to public entities and nonprofit organizations to implement storm water and urban runoff pollution prevention programs, habitat restoration, and other priority actions specified in the
Santa Monica Restoration Plan. The Santa Monica Bay Watershed Council shall determine project eligibility and establish grant priority.
(2) The Santa Monica Bay Watershed Council or the State Coastal Conservancy may require the grant
recipient to provide a portion of matching funds for any funding received. The council or the state conservancy
may use the funds as matching funds for federal or other grant funding.
(c) Sixty-four million two hundred thousand dollars ($64,200,000) of the funds available may be expended by the State Coastal Conservancy directly or as grants to government entities and nonprofit organizations for the
purposes of Division 21 (commencing with Section 31000), and for the following and related purposes, including, but not limited to, the acquisition, enhancement, restoration, protection, and development of coastal resources, beaches, waterfronts, and public accessways in accordance with the following schedule:
(1) An amount not to exceed three million dollars ($3,000,000) may be expended on regional approaches to reduce beach erosion. Up to thirteen million dollars ($13,000,000) shall be made available for the restoration and protection of the Upper Newport Bay Ecological Reserve.

(2) At least fifteen million dollars ($15,000,000) shall be expended in coastal areas north of the Gualala River.
(3) At least twenty-five million dollars ($25,000,000) shall be expended within Santa Cruz, Monterey, San Luis Obispo, or Santa Barbara Counties. One million dollars $1,000,000) shall be allocated to the City of Monterey to fund public access and open space along the waterfront for the Window on the Bay.
(4) At least five million dollars ($5,000,000) shall be expended on completion of the Coastal Trail.

(5) Two million dollars ($2,000,000) shall be dedicated to projects for the Guadalupe River Trail and the San
Francisco Bay Ridge Trail.
(d) Twenty-two million dollars ($22,000,000) may be expended by the State Coastal Conservancy directly or as grants to government entities and nonprofit organizations consistent with Division 21 (commencing with Section 31000), and for administrative costs in connection therewith, for the acquisition, development, rehabilitation, restoration, enhancement, and protection of real property, or other actions that benefit fish and wildlife. At least ten million dollars ($10,000,000) of those funds shall be expended in coastal areas north of the Gualala River. Eight hundred thousand dollars ($800,000) shall be spent to restore the arroyo chub, partially
armored stickleback, and southern steelhead fisheries to their native creeks of San Mateo Creek, and its tributary Devil Canyon Creek, and San Onofre Creek located in San Diego county.
(e) Twenty-five million dollars ($25,000,000) shall be available, upon appropriation by the Legislature, to the
State Coastal Conservancy and the Department of Fish and Game for direct expenditure and for grants to public agencies and nonprofit organizations to protect, restore, acquire, and enhance habitat for salmon. These funds may be used to match federal funding available for those purposes.
(f) Twenty-five million dollars ($25,000,000) of the funds shall be allocated to acquire, protect, and restore wetlands projects that are a minimum of 400 acres in size in any county with a population greater than 5,000,000.
(g) Twelve million five hundred thousand dollars ($12,500,000) shall be allocated to acquire land needed to connect important coastal watershed and scenic areas in the Laguna Coast Wilderness Park.

Article 8. Mountain Resource Program

SEC. 11. Section 5096353 is added to the Public Resources Code, to read:

5096.353. Funds allocated pursuant to subdivision (p) of Section 5096.310 shall be available to the Santa Monica Mountains Conservancy for capital outlay and grants for the acquisition from a willing seller, enhancement, and restoration of natural lands, improvement of public recreation facilities, and for grants to local agencies and nonprofit organizations to increase access to parks and recreational opportunities for underserved urban communities, in accordance with the following schedule:
Thirty-five million dollars ($35,000,000) to acquire, improve, or restore park, wildlife, or natural areas, including areas near or adjacent to units of the state park system wherever such units may be situated within a local jurisdiction within the Santa Monica Mountains Zone or Rim of the Valley Trail Corridor.
5096.354. Funds allocated pursuant to subdivision (q) of Section 5096.310 shall be available to the Coachella Valley Mountains Conservancy for expenditure for the acquisition, development, enhancement, and protection of land, and for administrative costs incurred in connection therewith, in accordance with Division 23.5 (commencing with Section 33500).

Article 9. San Joaquin River Program

5096.355. Funds allocated pursuant to subdivision (r) of Section 5096.310 shall be available to the San Joaquin River Conservancy for expenditure of the acquisition, development, enhancement, and protection of land, and for administrative costs incurred in connection therewith, in accordance with Division 22.5 (commencing with Section 32500).

Article 10. Agriculture Program

SEC. 12. Section 5096.356 is added to the Public Resources Code, to read:

R0067900

5096.356. (a) Funds allocated pursuant to subdivision (l) of Section 5096.310 shall be available to the Department of Conservation for grants, on a competitive basis, to state and local agencies and nonprofit organizations for farmland protection and administration of the Agricultural Land Stewardship Program Act of 1995 (Division 10.2 (commencing with Section 102,00)), or its successor program. This purpose shall include, but not be limited to, the placement of improvements and acquisition of agricultural conservation easements and other interests in land pursuant to the Agricultural Land Stewardship Program.

(b) At least 20 percent of the funds allocated pursuant to subdivision (l) of Section 5096.310 shall be available for projects that preserve agricultural lands and protect water quality in the counties that serve the San Pablo Bay.

Article 11. Fish and Game Program

SEC. 13. Section 5096.357 is added to the Public Resources Code, to read:

5096.357. (a) Funds allocated pursuant to paragraph (1) of subdivision (y) of Section 5096.310 shall be
available to the Department of Fish and Game for the development, enhancement, restoration, and preservation of land pursuant to Sections 1580 and 10503 of, and subdivision (b) of Section 1525 of, the Fish and Game Code. The provision of these funds shall be in accordance with an expenditure plan developed by the Department of Fish and Game and approved by the Department of Finance.

(b) Funds allocated pursuant to paragraph (2) of subdivision (y) of Section 5096.310 shall be made available to the Department of Fish and Game for the exclusive purpose of acquiring habitat preservation and enhancement agreements on private wetlands to the California Waterfowl Habitat Program-Phase II and administrative costs incurred in connection therewith. Expenditure of those funds shall be consistent with the purposes identified in Section 3702 of the Fish and Game Code.

Article 12. California Indian Tribe Participation

5096.358. To the extent funds authorized pursuant to this chapter are available for competitive grants to local government entities, federally recognized California Indian tribes may apply for those grants, the tribe's application shall be considered on its merits, and the tribes shall expend any funds received for the purpose authorized by this chapter for which the funds are made available.

Article 13. Fiscal Provisions

SEC. 14. Section 5096.360 is added to the Public Resources Code, to read:

5096.360. Bonds in the total amount of two billion one hundred million dollars ($2,100,000,000), not including the amount of any refunding bonds issued in accordance with Section 5096.370, or so much thereof as is necessary, may be issued and sold to provide a fund to be used for carrying out the purposes set forth in Section 5096.310 and to be used to reimburse the General Obligation Bond Expense Revolving Fund pursuant Section 16724.5 of the Government Code. The bonds, when sold, shall be and constitute a valid and binding obligation of the State of California, and the full faith and credit of the State of California is hereby pledged for the punctual payment of the principal of, and interest on, the bonds as the principal and interest become due and payable. Pursuant to this section, the Treasurer shall sell the bonds authorized by the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (The Villaraigosa-Keeley Act) Finance Committee created pursuant to subdivision (a) of Section 5096.362 at any different times that are necessary to service expenditures appropriated pursuant to this chapter.

5096.361. The bonds authorized by this chapter shall be prepared, executed, issued, sold, paid, and redeemed as provided in the State General Obligation Bond Law (C. , , (commencing with Section 16720) of Part 3 of Division 4 of Title 2 of the Government Code), and all of the provisions of that law apply to the bonds and to this chapter and are hereby incorporated in this chapter as though set forth in full in this chapter.

5096.362. (a) Solely for the purpose of authorizing the issuance and sale, pursuant to the State General Obligation Bond Law, of the bonds authorized by this chapter, the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection (Villaraigosa-Keeley Act) Finance Committee is hereby created. For purposes of this chapter, the Safe Neighborhood Parks, Clean Water, Clean Air and Coastal Protection (Villaraigosa-Keeley Act) Finance Committee is "the committee" as that term is used in the State General Obligation Bond Law. The committee consists of the Controller, the Director of Finance, and the Treasurer, or their designated representatives. The Treasurer shall serve as chairperson of the committee. A majority of the committee may act for the committee.

(b) For purposes of the State General Obligation Bond Law, the secretary is designated the "board."

5096.363. The committee shall determine whether or not it is necessary or desirable to issue bonds authorized pursuant to this chapter to carry out Section 5096.310 and, if so, the amount of bonds to be issued and sold. Successive issues of bonds may be authorized and sold to carry out those actions progressively, and it is not necessary that all of the bonds authorized to be issued be sold at any one time.

5096.364. There shall be collected each year and in the same manner and at the same time as other state revenue is collected, in addition to the ordinary revenues of the state, a sum in an amount required to pay the principal of, and interest on, the bonds maturing each year. It is the duty of all officers charged by law with any duty in regard to the collection of the revenue to do and perform each
and every act which is necessary to collect that additional sum.

5096.365. Notwithstanding Section 13340 of the Government Code, there is hereby appropriated from the General Fund in the State Treasury, for the purposes of this chapter, an amount that will equal the total of the following:

(a) The sum annually necessary to pay the principal of, and interest on, bonds issued and sold pursuant to this chapter, as the principal and interest become due and payable.

(b) The sum necessary to carry out Section 5096.366, appropriated without regard to fiscal years.

5096.366. For purposes of carrying out this chapter, the Director of Finance may authorize the withdrawal from the General Fund of an amount or amounts not to exceed the amount of the unsold bonds that have been authorized to be sold for the purpose of carrying out this chapter. Any amount withdrawn shall be deposited in the fund. Any money made available under this section shall be returned to the General Fund from proceeds received from the sale of bonds for the purpose of carrying out this chapter.

5096.367. Pursuant to Chapter 4 (commencing with Section 16720) of Part 3 of Division 4 of Title 2 of the Government Code, the cost of bond issuance shall be paid out of the bond proceeds. These costs shall be shared proportionally by each program funded through this bond act.

5096.367.5. Actual costs incurred in connection with administering programs authorized under the categories specified in Section 5096.310 shall be paid from the funds authorized by this act.

SEC. 16. Section 5096.368 is added to the Public Resources Code, to read:

5096.368. The secretary may request the Pooled Money Investment Board to make a loan from the Pooled Money Investment Account, including other authorized forms of interim financing that include, but are not limited to, commercial paper, in accordance with Section 16312 of the Government Code, for purposes of carrying out this chapter. The amount of the request shall not exceed the amount of the unsold bonds that the committee, by resolution, has authorized to be sold for the purpose of carrying out this chapter. The secretary shall execute any documents required by the Pooled Money Investment Board to obtain and repay the loan. Any amounts loaned shall be deposited in the fund to be allocated by the board in accordance with this chapter.

5096.369. All money deposited in the fund that is derived from premium and accrued

R0067901

16-17

est on bonds sold shall be reserved in the fund and shall be available for transfer to the eral Fund as a credit to expenditures for bond interest.
096.370. The bonds may be refunded in accordance with Article 6 (commencing with ion 16780) of Chapter 4 of Part 3 of Division 4 of Title 2 of the Government Code, which is rt of the State General Obligation Bond Law. Approval by the voters of the state of the ance of the bonds described in this chapter includes the approval of the issuance of any ds to refund any bonds originally issued under this chapter or any previously issued nding bonds.
096.371. Notwithstanding any provision of this chapter or the State General Obligation d Law, if the Treasurer sells bonds pursuant to this chapter that include a bond counsel ion to the effect that the interest on the bonds is excluded from gross income for federal purposes, subject to designated conditions, the Treasurer may maintain separate accounts he investment of bond proceeds and the investment earnings on those proceeds. The asurer may use or direct the use of those proceeds or earnings to pay any rebate, penalty, ther payment required under federal law or to take any other action with respect to the stment and use of bond proceeds required or desirable under federal law to maintain the exempt status of those bonds and to obtain any other advantage under federal law on ait of the funds of this state.
096.372. (a) The Legislature hereby finds and declares that, inasmuch as the proceeds the sale of bonds authorized by this chapter are not "proceeds of taxes" as that term is d in Article XIII B of, the California Constitution, the disbursement of these proceeds is not ect to the limitations- imposed by that article.
b) Funds provided pursuant to this chapter, and any appropriation or transfer of those s, shall not be deemed to be a transfer of funds for the purposes of Chapter 9 mencing with Section 2780) of Division 3 of the Fish and Game Code.
SEC. 1.5. Chapter 1.693 (commencing with Section 5096.400) is added to Division 5 of the lic Resources Code, to read:

APTER 1.693. CAMP PENDLETON MARINE BASE

096.400. To the extent permitted by federal law, if the Camp Pendleton Marine Base in County of San Diego ceases to be used as a federal facility, it shall be converted to an n-space area or greenbelt that shall be administered by the department.
SEC. 2. Section I of this act shall take effect upon adoption by the voters of the Safe ghborhood -Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000 (the raigosa-Keeley Act), as set forth in Section I of this act.
SEC. 3. (a) Notwithstanding the requirements of any other provision of law, the Secretary tate shall submit Section I of this act to the voters at the March 7, 2000, statewide general tion.
b) Notwithstanding Section 13115 of the Elections Code, if Section I of this act is placed he ballot by the Legislature for the March 7, 2000, statewide general election after the -day deadline set forth in Section 9040 of the Elections Code, it shall be placed on the l following all other ballot measures in the order in which it qualified as determined by ter number.
c) The Secretary of State shall include, in the ballot pamphlets mailed pursuant to Section 4 of the Elections Code, the information specified in Section 9087 of the Elections Code rding the bond act contained in Section I of this act. If that inclusion is not possible, the retary of State shall publish a supplemental ballot pamphlet regarding this act to be mailed the ballot pamphlet. If the supplemental ballot pamphlet cannot be mailed with the ballot phlet, the supplemental ballot pamphlet shall be mailed separately.
SEC. 4. (a) Notwithstanding any other provision of law, with respect to the Safe ghborhood Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000 (the raigosa-Keeley Act), all ballots of the election shall have printed thereon and in a square eof, exclusively the words, "Safe Neighborhood Parks, Clean Water, Clean Air, and stal Protection Bond Act of 2000 (the Villaraigosa-Keeley Act)" and in the same square er those words, the following in 8-point type: "This act provides two billion one hundred on dollars ($2,100,000,000) to protect land around lakes, rivers, and streams and the coast to improve water quality and ensure clean drinking water, to protect forests and plant trees to improve air quality, to preserve open space and farmland threatened by unplanned development, to protect wildlife habitats, and to repair and improve the safety of state and neighborhood parks. [At this point, the Attorney General shall include the financial impact summary prepared pursuant to Section 9087 of the Elections Code and Section 88003 of the Government Code]." Opposite the square, there shall be left spaces in which the voters may place a cross in the manner required by law to indicate whether they vote for or against the act.

(b) Notwithstanding Sections 13247 and 13281 of the Elections Code, the language in subdivision (a) shall be the only language included in the ballot label for the condensed statement of the ballot title, and the Attorney General shall not supplement, subtract from, or revise that language, except that the Attorney General may include the financial impact summary prepared pursuant to Section 9087 of the Elections Code and Section 88003 of the Government Code. The ballot label is the condensed statement of the ballot title and the financial impact summary.

(c) Notwithstanding Section 13282 of the Elections Code, the public shall be permitted to examine the condensed statement of the ballot title in subdivision (a) for not more than eight days, and the financial impact statement from the time it is received by the Secretary of State until the end of the eight days. Any voter may seek a writ of mandate for the purpose of requiring any statement of the ballot label, or portion thereof, to be amended or deleted only within that eight-day period.

(d) Where the voting in the election is done by means of voting machines used pursuant to law in a manner that carries out the intent of this section, the use of the voting machines and the expression of the voter's choice by means thereof are in compliance with this section.

SEC. 5. This act is an urgency statute necessary for the immediate preservation of the public peace, health, or safety within the meaning of Article IV of the Constitution and shall go into immediate effect. The facts constituting the necessity are:

In order that the Safe Neighborhood Parks, Clean Water, Clean Air, and Coastal Protection Bond Act of 2000 (the Villaraigosa-Keeley Act), set forth in Section I of this act, may be submitted for voter approval at the earliest possible time, and in order to make provision for the use of a federal military facility as soon as possible, it is necessary that this act take effect immediately.

SAFE DRINKING WATER, CLEAN WATER, WATERSHED PROTECTION, AND FLOOD PROTECTION ACT	Totals	Specified expenditures within account
TOTAL	**$ 1,970,000,000**	
Safe Drinking Water Program Revolving Fund (CaDHS)	**$ 70,000,000**	
Loans and grants to suppliers		
Technical Assistance Account		$ 2,000,000
FLOOD PROTECTION PROGRAM ACCOUNT	**$ 292,000,000**	
Floodplain Mapping Subaccount (DWR)	$ 2,500,000	
Agriculture and Open Space Mapping Subaccount (Dept. of Conservation)	$ 2,500,000	
Flood Protection Corridor Subaccount (Dept of Water Resources, grants to local public agencies, nonprofit organizations)	$ 70,000,000	
- For acquisition, restoration, enhancement and protection of real property for the purposes of flood control protection, agricultural land preservation and wildlife habitat protection		
- Highest priorities - flood protection, Agricultural Land Stewardship Program, wildlife habitat protection or restoration		
Education, technical assistance to cities and counties re National Flood Insurance Program		$ 1,000,000
Flood protection for street and highways (City of Santee)		$ 5,000,000
Delta Levee Rehabilitation Program Subaccount	$ 30,000,000	
Local assistance, delta levee maintenance subventions		$ 15,000,000
Special flood protection projects (Delta Islands), subsidence studies and monitoring, administration		$ 15,000,000
Flood Control Subventions Program Subaccount	$ 45,000,000	
- Allocated only to counties of Contra Costa, Fresno, Kern, Los Angeles, Marin, Napa, Orange, Riverside, San Bernardino, San Diego, Santa Clara, Sonoma and Ventura		
Urban Stream Restoration Program Subaccount (DWR)	$ 25,000,000	
(a) Grants to local agencies and nonprofit organizations for effective, low-cost flood control projects		
(b) Grants to local community conservation corps and other nonprofit corps for local stream clearance, flood mitigation and cleanup activities		
Flood Protection Programs		
State Capital Protection Subaccount (Sacramento Area Flood Control Agency)	$ 20,000,000	
San Lorenzo River Flood Control Subaccount (Santa Cruz)	$ 2,000,000	
Yuba River Flood Protection Subaccount (DWR or Reclamation Bd to local entity)	$ 90,000,000	
- Flood protection projects		$ 70,000,000
- Local share of levee repairs Sutter County		$ 2,600,000
- Mitigation of adverse impacts to fish, wildlife, habitat (CaDFG)		$ 20,000,000
Arroyo Pasajero Watershed Subaccount	$ 5,000,000	

WATERSHED PROTECTION ACCOUNT	**$**	**468,000,000**		
			At least $35 million to small	
Watershed Protection Subaccount (SWRCB)	$	90,000,000	communities	
- Assist in implementing watershed plans to reduce flooding, control erosion, improve water quality, improve aquatic and terrestrial species habitat, restore natural systems of groundwater recharge, native vegetation, water flows, riparian zones, beneficial uses of state waters				
- Grants to municipalities, local agencies or nonprofit organizations to develop local watershed management plans or to implement projects consistent with local watershed management and regional water quality control plans				
- 60% for projects in Los Angeles, Orange, Riverside, San Diego, San Bernardino, and Ventura Counties			$	54,000,000
- to Pajaro River Watershed Flood Prevention Authority for hydrologic study			$	2,000,000
- to Sonoma County for Russian River Watershed - to develop and implement community-based watershed management activities			$	1,000,000
- Clover Creek Flood Protection and Environmental Enhancement Project			$	5,000,000
- Clear Lake Watershed			$	2,000,000
Water and Watershed Education Program Subaccount	$	8,000,000		
San Joaquin Valley Water Institute (CalSt Fresno)			$	3,000,000
Delta Science Center (DWR)			$	2,000,000
Watershed Science Laboratory for long-term monitoring and research re north delta and tributary watersheds (UC)			$	3,000,000
River Protection Subaccount	$	95,000,000		
- At least 60% for projects located in major metropolitan areas				
San Joaquin River Parkway			$	10,000,000
Kern River Parkway			$	25,000,000
Santa Ana River Watershed Subaccount (SAWPA)	$	235,000,000		
- for basin water banking, contaminant and salt removal, removal of nonnative plants, creation of open space and wetlands, water conservation programs, storm water capture and management, planning and implementation of a flood control program				
Lake Elsinore and San Jacinto Watershed Subaccount (JPA)	$	15,000,000		
- for watershed monitoring, storm channel modification, nutrient control, aeration, wetlands restoration and enhancement, wildlife habitat enhancement, fishery enhancement, for related planning and administration costs				
Coastal Watershed Salmon Habitat Subaccount (CaDFG)	$	25,000,000		
- to protect, restore, acquire and enhance habitat for salmon				

CLEAN WATER AND WATER RECYCLING PROGRAM	**$**	**355,000,000**		
Nonpoint Source Pollution Control Program Subaccount (SWRCB)	$	100,000,000		
- for grants, not to exceed $5 million, to prepare and implement local nonpoint source plans				
- for loans, not to exceed $500,000 to finance construction of animal nutrient management projects			$	5,000,000
- 60% of funds to be allocated to projects in Riverside, Ventura, Los Angeles, San Diego, Orange, San Bernardino Counties				
- for research and source identification (w/ DPR and OEHHA)			$	2,000,000
- for mitigation of effects of pesticides			$	8,000,000
Clean Water Program (SWRCB)				
State Revolving Fund Loan Subaccount	$	30,500,000		
Small Communities Grant Subaccount	$	34,000,000		
Wastewater Construction Grant Subaccount	$	35,500,000		
Water Recycling Program Subaccount (SWRCB)	$	40,000,000		
- loans to municipalities for design and construction of water recycling projects				
- grants for facility planning studies for water recycling projects				
- plans, surveys, research, development and studies				
Coastal Nonpoint Source Control Subaccount (SWRCB)	$	90,000,000		
- for projects that restore and protect the water quality and environmental of coastal waters, estuaries, bays and near shore waters and groundwaters				
- studies and implementation of recommendations to address coastal nonpoint source pollution in tidal marshes and coastal waters (City of Huntington Beach)			$	4,000,000
Loans and grants, not to exceed $5 million per project, for:				
- projects that ensure coastal waters meet bacteriological standards;				
- comprehensive monitoring, collecting and analyzing ambient water quality				
- improvements to existing sewer collection systems and septic systems				
- projects to implement storm water and runoff pollution reduction and prevention programs				
- project consistent with state NPS program, CZARA, 319				
San Diego Regional Conveyance Facility			$	3,000,000
Seawater Intrusion Control Subaccount	$	25,000,000		
WATER CONSERVATION PROGRAM ACCOUNT	**$**	**155,000,000**		
Agricultural Water Conservation Program	$	35,000,000

SAFE DRINKING WATER, CLEAN WATER, WATERSHED PROTECTION AND FLOOD PROTECTION BOND

Assembly Bill No. 1584

CHAPTER 725

An act to amend Sections 13480, 14058, and 78621 of, to add Division 26 (commencing with Section 79000) to, to add and repeal Section 1812.6 of, and to repeal and add Sections 78626, 78648.12, and 78675 of, the Water Code, relating to financing a safe drinking water, water quality, flood protection, and water reliability program, by providing the funds necessary therefor through the issuance and sale of bonds of the State of California and by providing for the handling and disposition of those funds, and declaring the urgency thereof, to take effect immediately.

[Approved by Governor October 7, 1999. Filed with Secretary of State October 10, 1999.]

LEGISLATIVE COUNSEL'S DIGEST

AB 1584, Machado. Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Act; water resources.

Under existing law, various bond acts have been approved by the voters to provide funds for water projects, facilities, and programs.

This bill would enact the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Act which, if adopted, would authorize, for purposes of financing a safe drinking water, water quality, flood protection, and water reliability program, the issuance, pursuant to the State General Obligation Bond Law, of bonds in the amount of $1,970,000,000. The bill would also provide for the use of prescribed bond funds, and funds repaid to the state pursuant to certain loan contracts, for specified programs established by this act.

The bill would require the Secretary of State to submit the bond act to the voters at the March 7, 2000, statewide direct primary election.

The bill would amend a provision relating to the calculations of the interest rate to be applied to certain loans from the State Water Pollution Control Revolving Fund.

The bill would require the Imperial Irrigation District, the Coachella Valley Water District, and the Metropolitan Water District of Southern California to sign and adopt a prescribed quantification agreement on or before October 15, 1999, and, if the districts do not do so, would require the Governor or his sole designee to promulgate a quantification settlement by January 1, 2000, as specified. The bill would impose specified duties on the Governor with respect to the agreement or settlement.

The bill would declare that it is to take effect immediately as an urgency statute.

The people of the State of California do enact as follows:

SECTION 1. Division 26 (commencing with Section 79000) is added to the Water Code, to read:

DIVISION 26. SAFE DRINKING WATER, CLEAN WATER, WATERSHED PROTECTION, AND FLOOD PROTECTION ACT

CHAPTER 1. SHORT TITLE

79000. This division shall be known and may be cited as the Costa-Machado Water Act of 2000.

CHAPTER 2. DEFINITIONS

79005. Unless the context otherwise requires, the definitions set forth in this chapter govern the construction of this division.

79006. "Bay-delta" means the San Francisco Bay/Sacramento-San Joaquin Delta Estuary.

79007. "Board" means the State Water Resources Control Board.

79008. "CALFED" refers to the consortium of state and federal agencies with management and regulatory responsibilities in the bay-delta that are developing a long-term solution to water management, environmental, and other problems in the bay-delta watershed.

79009. "Clean Water Act" means the federal Clean Water Act (33 U.S.C. Sec. 1251 et seq.), and includes any amendments thereto.

79010. "Committee" means the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Finance Committee created by Section 79212.

79011. "Delta" means the Sacramento-San Joaquin Delta.

79012. "Department" means the Department of Water Resources.

79013. "Fund" means the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund created by Section 79019.

CHAPTER 3. SAFE DRINKING WATER, CLEAN WATER, WATERSHED PROTECTION, AND FLOOD PROTECTION BOND FUND

79019. The proceeds of bonds issued and sold pursuant to this division shall be deposited in the Safe Drinking Water, Clean Water,

Watershed Protection, and Flood Protection Bond Fund, which is hereby created.

Chapter 4. Safe Drinking Water Program

Article 1. Definitions

79020. Unless the context otherwise requires, the following definitions govern the construction of this chapter.

(a) "Federal act" means the federal Safe Drinking Water Act (42 U.S.C. Sec. 300f et seq.), and includes any amendments thereto.

(b) "State department" means the State Department of Health Services.

(c) "Supplier" means any person, partnership, corporation, association, public agency, or other entity, including any Indian tribe having a federally recognized governing body carrying out substantial governmental duties in and powers over any area, that owns or operates a public water system.

Article 2. Safe Drinking Water State Revolving Fund

79021. The sum of seventy million dollars ($70,000,000) is hereby transferred from the fund to the Safe Drinking Water State Revolving Fund created by Section 116760.30 of the Health and Safety Code.

Article 3. Safe Drinking Water Program

79022. (a) The money transferred to the Safe Drinking Water State Revolving Fund pursuant to Section 79021, except as otherwise provided in Sections 79022.7 and 79025, shall be used by the state department for loans and grants to suppliers for the purposes of undertaking infrastructure improvements and related actions to meet safe drinking water standards, in accordance with the Safe Drinking Water State Revolving Fund Law of 1997 (Chapter 4.5 (commencing with Section 116760) of Part 12 of Division 104 of the Health and Safety Code).

(b) A supplier that is eligible for grants under Section 300j-12(i) of the federal act (42 U.S.C. Sec. 1452(i)) may concurrently make application for funds annually appropriated under the federal act and for bond proceeds made available under this chapter. The state department shall not place a public water system on the priority list for project funding or enter into a contract and award a grant or loan if a supplier has previously received a grant for public water system expenditure for the same project under Section 300j-12(i) of the federal act (42 U.S.C. Sec. 1452(i)) or if the supplier does not have a public water system permit pursuant to Section 116525 of the

Health and Safety Code. The state department may place a public water system on the priority list for funding if a supplier has not otherwise received a letter of commitment to make a grant from the Administrator of the Environmental Protection Agency after 180 days from the date of the original submission of an application for a grant under Section 300j-12(i) of the federal act (42 U.S.C. Sec. 1452(i)).

(c) The Legislature finds and declares that Indian tribes shall be encouraged to cooperate with an adjacent public water system to determine whether the delivery of water from the public water system to the Indian tribe would be feasible and cost-effective in comparison to the improvement of a public water system owned or operated by the Indian tribe. The determination of feasibility shall include an assessment of whether the tribal water supplier possesses adequate financial, managerial, and technical capability to ensure the delivery of pure, wholesome, potable water to consumers. The Legislature further finds and declares that public water suppliers shall be encouraged to investigate opportunities for Indian tribes to deliver water beyond trust land boundaries to consumers that may not be economically served by a public water system.

(d) The state department shall encourage loan or grant applicants, where feasible, to consider the consolidation of small public water systems and community water systems with other public water systems to reduce the cost of service and improve the level of protection for consumers.

(e) To the extent that loans under this chapter that are made to a public water system regulated by the Public Utilities Commission bear a lower interest rate than that supplier could receive from nongovernmental sources, the Public Utilities Commission shall ensure that the entire benefit of the interest rate differential shall benefit the rate payers of that system by including the lower interest rate when establishing the water system's weighted average cost of capital.

79022.5. Any repayment of loans made pursuant to this article, including interest payments, and all interest earnings on or accruing to, any money resulting from the implementation of this chapter in the Safe Drinking Water State Revolving Fund shall be deposited in that fund and shall be available for the purposes of this chapter.

79022.7. Notwithstanding Item No. 4260-115-0001 of Section 2.00 of the Budget Act of 1999 (Chapter 50, Statutes of 1999), no money transferred to the Safe Drinking Water State Revolving Fund pursuant to this article may be transferred to the General Fund.

79023. There is hereby created in the Safe Drinking Water State Revolving Fund the Technical Assistance Account.

79024. Of the funds transferred pursuant to Section 79021, the sum of two million dollars ($2,000,000) is hereby transferred from the

Safe Drinking Water State Revolving Fund to the Technical Assistance Account.

79025. (a) Notwithstanding Section 13340 of the Government Code, the money in the Technical Assistance Account is hereby continuously appropriated, without regard to fiscal years, to the state department, to provide technical assistance to public water systems in the state in accordance with Section 300j-12(g)(2) of the federal act (42 U.S.C. Sec. 1452(g)(2)). For the purposes of this section, "technical assistance" includes assistance to disadvantaged communities, including Indian tribes.

(b) In carrying out its responsibilities under subdivision (a), the state department may do any of the following:

(1) Assess the technical, managerial, and financial capability of a disadvantaged community.

(2) Assist an applicant in the preparation of an application for funding under Chapter 4.5 (commencing with Section 116760) of Part 12 of Division 104 of the Health and Safety Code or Section 300j-12(i) of the federal act (42 U.S.C. Sec. 1452(i)).

(3) Conduct workshops in locations in or near disadvantaged communities to provide information regarding grants or loans for the design and construction of projects for public water systems.

79026. Not more than 3 percent of the total amount deposited in the account may be used to pay costs incurred in connection with the administration of this chapter.

CHAPTER 5. FLOOD PROTECTION PROGRAM

Article 1. Flood Protection Account

79030. For the purposes of this chapter, "account" means the Flood Protection Account created by Section 79031.

79031. The Flood Protection Account is hereby created in the fund. The sum of two hundred ninety-two million dollars ($292,000,000) is hereby transferred from the fund to the account.

Article 2. Floodplain Mapping Program

79033. (a) There is hereby created in the account the Floodplain Mapping Subaccount.

(b) The sum of two million five hundred thousand dollars ($2,500,000) is hereby transferred from the account to the Floodplain Mapping Subaccount for the purposes of implementing this article.

79033.2. (a) There is hereby created in the account the Agriculture and Open Space Mapping Subaccount.

(b) The sum of two million five hundred thousand dollars ($2,500,000) is hereby transferred from the account to the Agriculture and Open Space Mapping Subaccount.

79033.4. The money in the Floodplain Mapping Subaccount, upon appropriation by the Legislature to the department, may be used by the department for the purpose of assisting local land-use planning, and to avoid or reduce future flood risks and damages. The use of the funds in that subaccount by the department shall include, but is not limited to, all of the following:

(a) Mapping newly identified floodplains.

(b) Mapping rural areas with potential for urbanization.

(c) Mapping flood hazard areas with undefined 100-year flood elevations.

(d) Updating outdated floodplain maps.

(e) Accelerating mapping of riverine floodplains, alluvial fans, and coastal flood hazard areas.

(f) Collecting topographic and hydrographic survey data.

79033.6. (a) The money in the Agriculture and Open Space Mapping Subaccount, upon appropriation by the Legislature to the Department of Conservation, may be used by the Department of Conservation for the purposes of assisting local land-use planning by making available Important Farmland Series maps and Interim Farmland maps, as those terms are defined in Section 65570 of the Government Code. The information provided by the Department of Conservation is intended for local government use in conjunction with floodplain and flood hazard maps developed by the department to protect agricultural land resources coincident with avoidance or reduction of future flood risk and damage to residential or commercial land uses. The use of the funds in that subaccount by the Department of Conservation shall include, but is not limited to, all of the following:

(1) Accelerating production of Important Farmland Series maps and Interim Farmland maps.

(2) Increasing the coverage and availability of soil surveys conducted by the United States Natural Resource Conservation Service.

(3) Increasing topographic, soil, and agricultural crop data collection and enhancing data gathering capability.

(4) Developing integrated mapping that incorporates Important Farmland Series mapping and Interim Farmland mapping data with other relevant information, including, but not limited to, floodplain or flood hazard information, planning designation, and other land and natural resource data.

(b) For the purposes of this article, "maps" and "mapping" may include digital map files.

Article 2.5. Flood Protection Corridor Program

79035. (a) There is hereby created in the account the Flood Protection Corridor Subaccount.

(b) For the purposes of this article, "subaccount" means the Flood Protection Corridor Subaccount created by subdivision (a)

79036. The sum of seventy million dollars ($70,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79037. (a) The money in the subaccount, upon appropriation by the Legislature to the department, may be used by the department for flood control projects through direct expenditure for the acquisition, restoration, enhancement, and protection of real property for the purposes of flood control protection, agricultural land preservation, and wildlife habitat protection, and for grants to local public agencies or nonprofit organizations for these purposes, and for related administrative costs.

(b) The money in the subaccount, upon appropriation by the Legislature, shall be used for the protection, creation, and enhancement of flood protection corridors through all of the following actions:

(1) Acquiring easements and other interests in real property from willing sellers to protect or enhance flood protection corridors and floodplains while preserving or enhancing the agricultural use of the real property.

(2) Setting back existing flood control levees and, in conjunction with undertaking those setbacks, strengthening or modifying existing levees.

(3) Acquiring interests in real property from willing sellers located in a floodplain that cannot reasonably be made safe from future flooding.

(4) Acquiring easements and other interests in real property from willing sellers to protect or enhance flood protection corridors while preserving or enhancing the wildlife value of the real property.

79038. (a) For the purposes of this article, the department shall give highest priority to projects that include either of the following:

(1) Projects that have been assigned high priority for completion by the department for flood protection purposes and by the Department of Conservation for purposes of preserving agricultural land in accordance with the Agricultural Land Stewardship Program Act of 1995 (Division 10.2 (commencing with Section 10200) of the Public Resources Code).

(2) Projects that have been assigned high priority for completion by the department for flood protection purposes and by the Department of Fish and Game for wildlife habitat protection or restoration purposes.

(b) For restoration, enhancement, and protection projects, the services of the California Conservation Corps or community conservation corps shall be used whenever feasible.

79039. (a) In order to ensure that property acquired under paragraph (1) of subdivision (b) of Section 79037 remains on the

county tax rolls and in agricultural use to the greatest extent practicable, the acquisition of easements shall be the preferred method of acquiring property interests under that paragraph unless the acquisition of a fee interest is required for management purposes or the landowner will only consider the sale of a fee interest in the land. No acquisition of a fee interest shall be undertaken under paragraph (1) of subdivision (b) of Section 79037 until all practical alternatives have been considered by the department.

(b) Any proceeds received from the disposal of a fee interest acquired under this article shall be deposited into the subaccount.

79040. Any acquisition pursuant to this article shall be from a willing seller.

79041. Prior to acquiring an easement or other interest in land pursuant to this article, the project shall include a plan to minimize the impact on adjacent landowners. The plan shall include, but not be limited to, an evaluation of the impact on floodwaters, the structural integrity of affected levees, diversion facilities, customary agricultural husbandry practices, and timber extraction operations, and an evaluation with regard to the maintenance required of any facilities that are proposed to be constructed or altered.

79042. Prior to acquiring an easement or other interest in land pursuant to this article, a public hearing in the local community shall be held. Notification shall be given to the county board of supervisors of the affected county, adjacent landowners, affected water districts, local municipalities, and other interested parties, as determined by the department.

79043. Money in the subaccount may be used, upon appropriation by the Legislature, to repair breaches in the flood control system developed pursuant to this article or caused by the development of an easement program financed through this section and to repair water diversion facilities or flood control facilities damaged by a project developed pursuant to this section or financed pursuant to this section.

79044. (a) (1) In expending grant money pursuant to this article to acquire an interest in any particular parcel of land, a local public agency or nonprofit organization may use the money to establish a trust fund in the amount of not more than 20 percent of the amount of money paid for the acquisition. Interest from the trust fund shall be used only to maintain the lands that are acquired pursuant to this chapter.

(2) A local public agency or nonprofit organization that acquires land with money from the subaccount and transfers the land to another public agency or nonprofit organization shall also transfer the ownership of the trust fund that was established to maintain that land.

(b) If the local public agency or nonprofit organization does not establish a trust fund pursuant to subdivision (a), it shall certify to the

department that it can maintain the land to be acquired from funds otherwise available to the agency or organization.

(c) This section does not apply to state agencies.

79044.5. (a) It is the intent of the Legislature to address the problem of soaring federal flood insurance rates by assisting local governments to meet technical requirements for participation in the National Flood Insurance Program and the National Flood Insurance Program's Community Rating System.

(b) Notwithstanding any other provision of this article, of the funds transferred pursuant to Section 79036, the sum of one million dollars ($1,000,000) is hereby continuously appropriated, without regard to fiscal years, to the department, as follows:

(1) Five hundred thousand dollars ($500,000) to educate and provide technical assistance to cities and counties regarding the National Flood Insurance Program and the enrollment process.

(2) Five hundred thousand dollars ($500,000) to educate and provide technical assistance to cities and counties currently enrolled in the National Flood Insurance Program with regard to the National Flood Insurance Program's Community Rating System and the implementation of activities creditable under that system.

79044.6. Notwithstanding any other provision of this article, the sum of five million dollars ($5,000,000), upon appropriation by the Legislature to the department, shall be allocated by the department to the City of Santee for the purposes of flood protection for streets and highways.

79044.7. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay costs incurred in connection with the administration of this article.

79044.9. The department may adopt regulations to carry out this article.

Article 3. Delta Levee Rehabilitation Program

79045. (a) There is hereby created in the account the Delta Levee Rehabilitation Subaccount.

(b) For the purposes of this article, "subaccount" means the Delta Levee Rehabilitation Subaccount created by subdivision (a).

79046. The sum of thirty million dollars ($30,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article pursuant to Section 12986.

79047. Notwithstanding Section 13340 of the Government Code, the money in the subaccount is hereby continuously appropriated, without regard to fiscal years, to the department, as follows:

(a) Fifteen million dollars ($15,000,000) for local assistance under the delta levee maintenance subventions program under Part 9 (commencing with Section 12980) of Division 6, and for the administration of that assistance.

(b) Fifteen million dollars ($15,000,000) for special flood protection projects under Chapter 2 (commencing with Section 12310) of Part 4.8 of Division 6, subsidence studies and monitoring, and for the administration of this subdivision. Allocation of these funds shall be for flood protection projects on Bethel, Bradford, Holland, Hotchkiss, Jersey, Sherman, Twitchell, and Webb Islands, and at other locations in the delta.

(c) Any funds that are made available under subdivision (a) may be used to reimburse local agencies for the state's share of costs for eligible projects completed on or after July 1, 1998.

79048. The expenditure of funds under this article is subject to Chapter 1.5 (commencing with Section 12306) of Part 4.8 of Division 6.

79049. Of the funds appropriated pursuant to subdivision (a) or (b) of Section 79047, not more than 5 percent may be expended by the department to repair levee road pavement if the damage is attributable to flood control maintenance.

79050. No expenditure of funds may be made under this article unless the Department of Fish and Game makes a written determination as part of its review and approval of a plan or project pursuant to Section 12314 or 12987. The Department of Fish and Game shall make its determination in a reasonable and timely manner following the submission of the project or plan to that department. For the purposes of this article, an expenditure may include more than one levee project or plan.

79051. For the purposes of this article, a levee project includes levee improvements and related habitat improvements undertaken in the delta at a location other than the location of that levee improvement.

79052. Following the date on which a program for the bay-delta is adopted by CALFED, the remaining funds in the subaccount shall be used for levee rehabilitation improvement projects that, to the greatest extent possible, are consistent with the program adopted by CALFED.

Article 4. Flood Control Subventions Program

79055. (a) There is hereby created in the account the Flood Control Subventions Subaccount.

(b) For the purposes of this article, "subaccount" means the Flood Control Subventions Subaccount created by subdivision (a).

79056. The sum of forty-five million dollars ($45,000,000) is hereby transferred from the fund to the subaccount.

79057. (a) Notwithstanding Section 13340 of the Government Code, or any other provision of law, the money in the subaccount is hereby continuously appropriated, without regard to fiscal year, to the department to pay for the state's share of the nonfederal costs of

flood control and flood prevention projects adopted and authorized as of January 1, 1999, under The State Water Resources Law of 1945 (Chapter 1 (commencing with Section 12570) and Chapter 2 (commencing with Section 12639) of Part 6 of Division 6), The Flood Control Law of 1946 (Chapter 3 (commencing with Section 12800) of Part 6 of Division 6), and The California Watershed Protection and Flood Prevention Law (Chapter 4 (commencing with Section 12850) of Part 6 of Division 6), including the credits and loans to local agencies pursuant to Sections 12585.3 and 12585.4, subdivision (d) of Section 12585.5, and Sections 12866.3 and 12866.4, and to implement Chapter 3.5 (commencing with Section 12840) of Part 6 of Division 6.

(b) The money in the subaccount shall be allocated only to projects in the Counties of Contra Costa, Fresno, Kern, Los Angeles, Marin, Napa, Orange, Riverside, San Bernardino, San Diego, Santa Clara, Sonoma, and Ventura.

(c) It is the intent of the Legislature that the state's share of the nonfederal costs of projects for flood control and flood prevention adopted and authorized after January 1, 2001, shall not exceed that portion of the nonfederal costs authorized pursuant to Chapter 1 (commencing with Section 12570) of Part 6 or any amendments thereto.

Article 5. Urban Stream Restoration Program

79060. (a) There is hereby created in the account the Urban Stream Restoration Subaccount.

(b) For the purposes of this article, "subaccount" means the Urban Stream Restoration Subaccount created by subdivision (a).

79061. The sum of twenty-five million dollars ($25,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79062. The money in the subaccount, upon appropriation by the Legislature to the department, may be used by the department for both of the following:

(a) Grants to local agencies and nonprofit organizations for effective, low-cost flood control projects pursuant to Section 7048.

(b) Grants to local community conservation corps and other nonprofit corporations for local stream clearance, flood mitigation, and cleanup activities.

79062.5. Notwithstanding any other provision of law, regulations set forth in Chapter 2.4 (commencing with Section 451.1) of Division 2 of Title 23 of the California Code of Regulations that are in effect on March 8, 2000, may be used to carry out this article.

Article 6. Capital Area Flood Protection Program

79065. The Legislature hereby finds and declares all of the following:

(a) Since Sacramento, the state capital, was founded over 150 years ago, it has suffered from flood disasters because of inadequate flood protection. Each year, the State Capitol and more than 1,300 other government-owned buildings and infrastructure of the capital region are at risk because of their location in the worst protected urban area in the country.

(b) The State of California's investment of money and other resources in the state's seat of government is important to preserve and protect.

(c) It is in the best interest of this state to invest in a cost-shared program to protect life and property in the state capital from flooding, thus resulting in opportunities for sustainable economic development and continued protection of the state's natural resources.

(d) The Congress and the President of the United States have recognized the national importance of increasing the level of the state capital's flood protection by authorizing projects in the Water Resources Development Act of 1999.

79065.2. (a) There is hereby created in the account the State Capital Protection Subaccount.

(b) For purposes of this article, "subaccount" means the State Capital Protection Subaccount created by subdivision (a).

79065.4. The sum of twenty million dollars ($20,000,000) is hereby transferred from the account to the subaccount for the purposes of this article.

79065.6. The money in the subaccount, upon appropriation by the Legislature to the Sacramento Area Flood Control Agency, may be used by the Sacramento Area Flood Control Agency to pay the state's share of the costs of flood management projects authorized by the United States to improve the level of flood protection in the state capital region.

79065.8. No money deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

Article 7. San Lorenzo River Flood Control Program

79067. (a) There is hereby created in the account the San Lorenzo River Flood Control Subaccount.

(b) For purposes of this article, "subaccount" means the San Lorenzo River Flood Control Subaccount created by subdivision (a).

79067.2. The sum of two million dollars ($2,000,000) is hereby transferred from the account to the subaccount for the purposes of this article.

79067.4. The money in the subaccount, upon appropriation by the Legislature to the department, shall be allocated by the department to the City of Santa Cruz to pay for the state's share of the costs of flood management projects authorized by the United States to improve the level of flood protection in the Santa Cruz region.

Article 8. Yuba Feather Flood Protection Program

79068. Unless the context otherwise requires, the definitions set forth in this section govern the construction of this article.

(a) "Nonstructural improvements" are projects that are intended to reduce or eliminate susceptibility to flooding by preserving or increasing the flood-carrying capacity of floodways, and include such measures as levees, setback levees, floodproofing structures, and zoning, designating, or acquiring flood prone areas.

(b) "Structural improvements" are projects that are intended to modify flood patterns and rely primarily on constructed components, and include such measures as levees, floodwalls, and improved channels.

(c) "Subaccount" means the Yuba Feather Flood Protection Subaccount created by Section 79068.2.

79068.2. There is hereby created in the account the Yuba Feather Flood Protection Subaccount.

79068.4. The sum of ninety million dollars ($90,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79068.6. Seventy million dollars ($70,000,000) in the subaccount, upon appropriation by the Legislature to the department or Reclamation Board, shall be used by the department or Reclamation Board to fund one or more of the following flood protection projects to be implemented by a local public entity that has legal authority and jurisdiction to implement a flood control program along the Yuba and Feather Rivers and their tributaries:

(a) The construction or improvements of weirs, bypasses, and channels.

(b) The construction of levees or improving publicly maintained levees, including, but not limited to, setback levees, training walls, floodwalls, and streambank protection projects, which provide flood protection or flood damage reduction.

(c) The modification or reoperation of existing dams and waterworks, including spillways or other capital outlay facilities, for the purpose of increased efficiency in managing flood waters.

(d) The installation of tailwater suppression systems, detention basins, relief wells, test wells, flood warning systems, and telemetry devices.

(e) The relocation or floodproofing of structures within floodplains, which meet or exceed a community's floodplain regulations, pursuant to the National Flood Insurance Program.

(f) Implementation of watershed projects, which provide flood protection or flood damage reduction.

(g) The construction of, or improvement to, a state or interstate highway, county road, or a levee road, that is designated a flood emergency evacuation route, or that provides access to a levee for emergency vehicles, flood fights, or levee repair and maintenance, or a project that protects such a road or highway.

(h) The purchase of lands, easements, and rights-of-way.

(i) Capital costs of environmental mitigation.

79068.8. No expenditures of state funds may be made under this article until the department or the Reclamation Board determines that all of the following requirements have been met:

(a) There is a final environmental document prepared pursuant to the California Environmental Quality Act (commencing with Section 21000 of the Public Resources Code).

(b) The project is in compliance with the California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), as demonstrated by documentation such as comments received from the Department of Fish and Game, a permit obtained from the Department of Fish and Game or other appropriate evidence.

(c) The local project proponent agrees to pay at least that portion of the nonfederal capital costs of the project required by Section 12585.5.

(d) The local project proponent agrees to operate and maintain the completed project.

(e) The local project proponent enters into an agreement indemnifying and holding the state, its agencies, officers and employees free and harmless from any and all liability arising out of the design, construction, operation and maintenance of the project.

(f) The project is recommended for implementation by the department or the Reclamation Board.

79068.10. All of the following factors shall be considered by the department and the Reclamation Board for prioritizing projects:

(a) Potential loss of life from flooding.

(b) Increased flood protection or flood damage reduction for areas that have the greatest flood risk or have experienced repetitive flood loss.

(c) The local community is a small community with financial hardship.

(d) Projects that provide multiple benefits.

(c) Projects that are implemented in accordance with the Sacramento/San Joaquin River Basins Comprehensive Study.

(f) Projects that are implemented pursuant to the completion of feasibility studies conducted by the United States Army Corps of Engineers or local agencies.

(g) Projects along the Yuba and Feather Rivers and their tributaries.

(h) Projects that address regional flood problems.

(i) Projects along the Colusa Drain and its tributaries.

(j) Minimizing impacts to the environment.

79068.12. Of the fund appropriated pursuant to Section 79068.6, two million six hundred thousand dollars ($2,600,000) in the subaccount shall be used for the local share of levee repairs and enhancements in Sutter County.

79068.14. (a) Twenty million dollars ($20,000,000) in the subaccount, upon appropriation to the Department of Fish and Game, may be used by that department, if it determines that any flood control project undertaken pursuant to this article would result in a reduction of, or damage to, fish, wildlife, or riparian habitat, to protect, improve, restore, create, or enhance fish, wildlife, and riparian habitat of a comparable type to that which was reduced or damaged.

(b) Any land acquired pursuant to this section shall be acquired from willing sellers.

79068.16. If all of the funds appropriated pursuant to Section 79068.6 are encumbered, and any funds described in Section 79068.14 are not needed for the purposes of that section, as stated in writing by that department to the Legislature, the Legislature may appropriate the funds not needed for the purposes of Section 79068.14 for the purposes of Article 4 (commencing with Section 79055).

79068.18. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this chapter.

79068.20. The department and board may adopt regulations to carry out this article.

Article 9. Arroyo Pasajero Watershed Program

79069. The Legislature hereby finds and declares all of the following:

(a) The Arroyo Pasajero Watershed incurred unprecedented flooding in 1995 that resulted in a loss of lives due to a bridge failure on Interstate Highway Route 5 (I-5).

(b) Flooding in the watershed cause damage to important federal, state, and local public facilities, including the Lemoore Naval Air Station, Interstate Highway Route 5 (I-5), the California Aqueduct, and critical local roads and highways, as well as private property.

(c) It is of statewide importance to undertake projects to eliminate future flooding in the watershed in order to protect life and property and to protect the drinking water supply of southern California.

79069.2. Unless the context otherwise requires, the definitions set forth in this section govern construction of this article.

(a) "Subaccount" means the Arroyo Pasajero Watershed Subaccount created pursuant to Section 79069.4.

(b) "Watershed" means the Arroyo Pasajero Watershed.

79069.4. There is hereby created in the account the Arroyo Pasajero Watershed Subaccount. The sum of five million dollars ($5,000,000) is hereby transferred from the account to the subaccount for the purposes of this article.

79069.6. The money in the subaccount, upon appropriation by the Legislature to the department, shall be used by the department for projects that improve flood protection for State Highway Route 269 in the area north of the City of Huron or improve flood control for the California Aqueduct in the area of the Arroyo Pasajero Crossing.

79069.8. For the purposes of carrying out projects pursuant to this article, the department is encouraged to utilize the services of the California Conservation Corps or community conservation corps or both.

79069.10. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay costs incurred in connection with the administration of this article.

79069.12. The department may adopt regulations to carry out this article.

Chapter 6. Watershed Protection Program

Article 1. Watershed Protection Account

79070. For the purposes of this chapter, "account" means the Watershed Protection Account created by Section 79071.

79071. The Watershed Protection Account is hereby created in the fund. The sum of four hundred sixty-eight million dollars ($468,000,000) is hereby transferred from the fund to the account.

Article 2. Watershed Protection Program

79075. (a) There is hereby created in the account the Watershed Protection Subaccount.

(b) For the purposes of this article, "subaccount" means the Watershed Protection Subaccount created by subdivision (a).

79076. The sum of ninety million dollars ($90,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79077. The purposes of this article are to provide funds to assist in implementing watershed plans to reduce flooding, control erosion, improve water quality, and improve aquatic and terrestrial species habitats, to restore natural systems of groundwater recharge, native vegetation, water flows, and riparian zones, to restore the beneficial uses of waters of the state in watersheds, and to provide matching funds for federal grant programs.

79078. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "Local agency" means any city, county, city and county, district, or other political subdivision of the state.

(b) "Local watershed group" means a group consisting of owners and managers of land within the watershed of interest, local, state, and federal government representatives, and interested persons, other than landowners, who reside or work within the watershed of interest, and may include other persons, organizations, nonprofit corporations, and businesses.

(c) "Local watershed management plan" means a document prepared by a local watershed group that sets forth a strategy to achieve an ecologically stable watershed, and that does all of the following:

(1) Defines the geographical boundaries of the watershed.

(2) Describes the natural resource conditions within the watershed.

(3) Describes measurable characteristics for water quality improvements.

(4) Describes methods for achieving and sustaining water quality improvements.

(5) Identifies any person, organization, or public agency that is responsible for implementing the methods described in paragraph (4).

(6) Provides milestones for implementing the methods described in paragraph (4).

(7) Describes a monitoring program designed to measure the effectiveness of the methods described in paragraph (4).

(d) "Municipality" has the same meaning as defined in the Clean Water Act and also includes the state or any agency, department, or political subdivision thereof, and applicants eligible for technical assistance under Section 319 (33 U.S.C. Sec. 1329) or grants under Section 320 of the Clean Water Act (33 U.S.C. Sec. 1330).

(e) "Nonprofit organization" means any California corporation organized under Section 501(c)(3) or 501(c)(5) of the Internal Revenue Code.

(f) "Regional board" means a regional water quality control board.

79079. The money in the subaccount, upon appropriation by the Legislature to the board, may be used by the board for grants to

municipalities, local agencies, or nonprofit organizations in accordance with this article. The grants shall be used to develop local watershed management plans or to implement projects that are consistent with local watershed management and regional water quality control plans. The board shall ensure that activities funded by these grants will be coordinated with activities undertaken by state and federal agencies, and with other appropriate watershed efforts.

79079.5. The funds used for the purposes described in Section 79079 shall be allocated as follows:

(a) Sixty percent to projects in the Counties of Los Angeles, Orange, Riverside, San Diego, San Bernardino, and Ventura.

(b) Forty percent to projects in counties not described in subdivision (a).

79080. (a) A municipality, local agency, or nonprofit organization may only receive a grant under this article if the board determines that both of the following apply:

(1) The municipality, local agency, or nonprofit organization has adequate legal authority to manage the grant money.

(2) The municipality, local agency, or nonprofit organization is a member of a local watershed group.

(b) Grants may be awarded for projects that implement methods for attaining watershed improvements or for a monitoring program described in a local watershed management plan in an amount not to exceed five million dollars ($5,000,000) per project. At least 85 percent of the total amount in the subaccount shall be used for capital outlay projects described in this subdivision.

(c) Eligible projects under this article may do any of the following:

(1) Reduce chronic flooding problems or control water velocity and volume using vegetation management or other nonstructural methods.

(2) Protect and enhance greenbelts and riparian and wetlands habitats.

(3) Restore or improve habitat for aquatic or terrestrial species.

(4) Monitor the water quality conditions and assess the environmental health of the watershed.

(5) Use geographic information systems to display and manage the environmental data describing the watershed.

(6) Prevent watershed soil erosion and sedimentation of surface waters.

(7) Support beneficial groundwater recharge capabilities.

(8) Otherwise reduce the discharge of pollutants to state waters from storm water or nonpoint sources.

(d) (1) Grants may be awarded to municipalities, local agencies, or nonprofit organizations for the development of local watershed management plans in amounts not to exceed two hundred thousand dollars ($200,000) per local watershed management plan.

(2) Funding under this subdivision may be used to develop components of local watershed management plans that contribute to the development or implementation of species recovery plans.

(e) Grants may be awarded to meet requirements for nonfederal matching funds set forth in Section 205(j) of the Clean Water Act (33 U.S.C. Sec. 1285(j)) or Section 319(h) of the Clean Water Act (33 U.S.C. Sec. 1329(h)).

(f) Projects funded under this article shall be designed to withstand substantial flooding and shall include a minimum 10-year maintenance program and shall demonstrate the potential to provide watershed benefits for 20 years.

(g) A proponent of a project funded from the subaccount, except a grant recipient pursuant to subdivision (d), shall be required to submit to the board a monitoring and reporting plan that does all of the following:

(1) Describes the baseline water quality of the waterbody impacted.

(2) Describes the manner in which the proposed watershed restoration activities are implemented.

(3) Determines the effectiveness of the watershed restoration activities in preventing or reducing pollution.

(4) Determines, to the extent feasible, the changes in the pattern of flow in affected streams, including reduction of flood flows and increases in spring, summer, and fall flows that result from the implementation of the project.

(5) Determines, to the extent feasible, the economic benefits resulting from changes determined pursuant to paragraph (3) or (4).

(h) (1) A grant applicant shall inform the board with regard to necessary public agency approvals, entitlements, and permits that may be necessary to implement the project. The municipality, local agency, or nonprofit organization shall certify to the board, at the appropriate time, that those approvals, entitlements, and permits have been granted.

(2) A grant applicant shall notify, in writing, adjoining landowners of its request for funding under this article and the scope of the project for which the funding is requested. If this paragraph requires notification of more than 200 landowners, notification may be made by letter to the owners of record of the 200 largest parcels and by publication for at least 20 days in a local newspaper of general circulation. Upon completion of the notification required under this paragraph, the municipality, local agency, or nonprofit organization shall inform the board that the notification has occurred.

(i) The board may adopt regulations to carry out this article.

(j) In awarding grants under this article, the board shall consider the extent to which projects do the following:

(1) Consider the entire ecosystem to be protected or restored.

(2) Include definable targets and desired future conditions.

(3) Support local community institutional capacity to restore the watershed.

(4) Include community decisionmaking by affected stakeholders in project design and fund allocation.

(5) Help protect intact or nearly intact ecosystems and watersheds.

(6) Consider the economic benefits of the restoration project or program.

(7) Address the root causes of degradation, rather than the symptoms.

(8) Maximize the use of other restoration funds.

(9) Include an educational component, if appropriate.

(10) Improve the quality of drinking water and support other beneficial uses of waters of the state, including coastal waters.

79081. A grant recipient shall obtain written permission from the landowners of the parcel of land upon which the project is proposed to be carried out. The written permission shall expressly consent to the actions described in the grant application.

79082. Not more than 25 percent of a grant may be awarded in advance of actual expenditures.

79083. (a) A grant recipient shall submit to the board a report upon the completion of the project or activity funded under this article. The report shall summarize the completed project and identify additional steps necessary to achieve the purposes of the local watershed management plan. The board shall make the report available to interested federal, state, and local agencies and other interested parties.

(b) The board shall prepare and submit to the Governor a biennial report regarding the implementation of this article. The biennial report shall include, at a minimum, a discussion relating to the extent to which the purposes described in Section 79077 are being furthered by the implementation of this article.

79084. (a) Of the funds transferred pursuant to Section 79076, at least thirty-five million dollars ($35,000,000) shall be for grants to small communities.

(b) For the purposes of this article, "small community" means a municipality with a population of 10,000 persons or less, a rural county, or a reasonably isolated and divisible segment of a larger municipality where the population of the segment is 10,000 persons or less, with a financial hardship as determined by the board.

(c) If the board determines that any of the funds made available for grants under this section will not be encumbered for that purpose on or before January 1, 2007, the board may use these funds for other purposes of this article.

79085. The board shall give added consideration to projects that utilize the services of the California Conservation Corps, community

conservation corps, or other local nonprofit entities employing underprivileged youths.

79085.5. Notwithstanding any other provision of this article, the following amounts from the subaccount, upon appropriation by the Legislature, shall be allocated as follows:

(a) The sum of two million dollars ($2,000,000) to the board for allocation to the Pajaro River Watershed Flood Prevention Authority for a hydrologic study with regard to the Pajaro River Watershed.

(b) The sum of one million dollars ($1,000,000) to the board for allocation to the County of Sonoma to develop and implement community-based watershed management activities that will protect, restore, and enhance the environmental and economic value of the Russian River Watershed in the County of Sonoma.

(c) The sum of five million dollars ($5,000,000) to the board for the Clover Creek Flood Protection and Environmental Enhancement Project to provide for the acquisition, restoration, and conservation of low-flow stream channel, open water, seasonal wetlands, riparian habitat, oak woodland regeneration, and grassland meadow preservation.

(d) The sum of two million dollars ($2,000,000) to the board to rehabilitate and improve the Clear Lake Watershed by funding one or more of the following projects or activities: Clear Lake Basin 2000 Project, aeration, wetlands restoration, fishery enhancement, and wastewater treatment, or for grants awarded by the board to local public agencies for any of these purposes. The first priority for funding under this subdivision is for a grant award to fund eligible expenses of the Basin 2000 Project.

(e) To the maximum extent feasible, the watershed restoration and flood control projects described in this subdivision shall do one or more of the following:

(1) Preserve agricultural land.

(2) Protect and enhance wildlife habitat.

(3) Protect and enhance recreational and environmental education resources.

(4) Protect lake water quality.

79086. Notwithstanding any other provision of law, the board shall terminate any grant where it is determined that the project is not providing the proposed watershed benefits.

79087. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay costs incurred in connection with the administration of this article.

79088. Where recovery plans for coho salmon, steelhead trout, or other threatened or endangered aquatic species exist, projects funded under this article shall be consistent with those plans, and to the extent feasible, shall seek to implement actions specified in those plans.

Article 3. Water and Watershed Education Program

79090. (a) There is hereby created in the account the Water and Watershed Education Subaccount.

(b) For the purposes of this article, "subaccount" means the Water and Watershed Education Subaccount created by subdivision (a).

79091. The sum of eight million dollars ($8,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79092. Three million dollars ($3,000,000) in the subaccount, upon appropriation by the Legislature to the department, may be used by the department for allocation to California State University, Fresno for the purposes of establishing and furthering the purposes of the San Joaquin Valley Water Institute at that campus.

79093. Two million dollars ($2,000,000) in the subaccount, upon appropriation by the Legislature to the department, shall be used by the department for the development of a Delta Science Center, including, but not limited to, all of the following components:

(a) Public educational opportunities.

(b) Wildlife and habitat enhancement.

(c) Preservation of agricultural lands.

(d) Enhanced levee protection and rehabilitation.

(e) Water quality improvements.

(f) Nonstructural flood protection.

79094. Three million dollars ($3,000,000) in the subaccount, upon appropriation by the Legislature to the University of California, may be used for the purpose of site acquisition, construction, and equipping of a Watershed Science Laboratory, for long-term monitoring and research with regard to the hydrology, geomorphology, water quality and aquatic and riparian ecology of the north delta and its tributary watersheds.

Article 4. River Protection Program

79100. (a) There is hereby created in the account the River Protection Subaccount.

(b) For the purposes of this article, "subaccount" means the River Protection Subaccount created by subdivision (a).

79101. The sum of ninety-five million dollars ($95,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79102. The money in the subaccount, upon appropriation by the Legislature, may be used to meet the requirements of Article 6 (commencing with Section 78682) of Chapter 6 of Division 24.

79103. At least 60 percent of the funds transferred pursuant to Section 79101 shall be used for projects that are located in, or in close proximity to, major metropolitan areas.

79103.2. Notwithstanding any other provision of this article, of the funds transferred pursuant to Section 79101, ten million dollars ($10,000,000) shall, upon appropriation to the department, be allocated to the San Joaquin River Parkway Conservancy for the purposes of the San Joaquin River Parkway.

79103.4. Notwithstanding any other provision of this article, of the funds transferred pursuant to Section 79101, two million five hundred thousand dollars ($2,500,000) in the subaccount shall be used by the department, upon appropriation, for the purpose of the Kern River Parkway Project between the mouth of Kern Canyon and Interstate Highway Route 5.

79104. Not more than 3 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

Article 5. Southern California Integrated Watershed Program

79104.20. The Legislature hereby finds and declares all of the following:

(a) The Santa Ana Watershed is experiencing increased water demands due to significant population growth that has caused undue infrastructure dependence and strain on imported water supplies.

(b) Regional programs have been developed to address the problems facing the watershed. These programs have four main elements, as follows:

(1) Storage of more than one million acre-feet of water from wet years in groundwater storage basins.

(2) Conservation, including water use efficiency and reclamation, that results in the substantial development of new usable supplies.

(3) Desalting and treatment of brackish water to allow poor quality water to be reclaimed and used.

(4) Enhancement of native habitat along the river and its tributaries.

(c) The water supply programs proposed by the Santa Ana Watershed Project Authority will develop significant new water supply and storage capabilities, thereby reducing the imported water needs of urban southern California, especially during dry years.

79104.22. (a) There is hereby created in the account the Santa Ana River Watershed Subaccount.

(b) For purposes of this article, "subaccount" means the Santa Ana River Watershed Subaccount created by subdivision (a).

79104.24. The sum of two hundred thirty-five million dollars ($235,000,000) is hereby transferred from the account to the su[illegible]count.

79104.26. The money in the subaccount, upon appropriation by the Legislature to the board, may be used by the board for allocation to the Santa Ana Watershed Project Authority for all of the following projects for the purposes of rehabilitating and improving the Santa Ana River Watershed:

(a) Basin water banking in one or more of the following basins: Chino, Colton, Orange County, Riverside, San Bernardino, and San Jacinto.

(b) Contaminant and salt removal through reclamation and desalting in Orange County, San Jacinto, or other basins in the watershed.

(c) Removal of nonnative plants, and the creation of new open space and wetlands.

(d) Programs for water conservation and efficiency and storm water capture and management.

(e) Planning and implementation of a flood control program to protect agricultural operations and adjacent property , to assist in abating the effects of waste discharges into waters of the state, consistent with the requirements of Section 13442.

79104.30. It is the intent of the Legislature to urge the federal government to allocate funds for projects to improve the Santa Ana River Watershed to match the state's financial commitment to the projects described in this article.

79104.32. It is the intent of the Legislature that the expenditure of the funds under this article be made through a broad-based watershed stakeholder process.

79104.34. Not more than 3 percent of the total amount deposited in the subaccount may be used to pay costs incurred by the board in connection with the administration of this article.

Article 6. Lake Elsinore and San Jacinto Watershed Program

79104.100. (a) There is hereby created in the account the Lake Elsinore and San Jacinto Watershed Subaccount.

(b) For the purposes of this article, "subaccount" means the Lake Elsinore and San Jacinto Watershed Subaccount created by subdivision (a).

79104.102. The sum of fifteen million dollars ($15,000,000) is hereby transferred from the account to the subaccount.

79104.104. The money in the subaccount, upon appropriation by the Legislature to the board, may be used by the board to rehabilitate and improve the Lake Elsinore Watershed and San Jacinto Watershed and the water quality of Lake Elsinore by funding one or more of the following projects: watershed monitoring, storm channel modification, nutrient control, aeration, wetlands restoration and enhancement, wildlife habitat enhancement, fishery enhancement, calcium quicklime treatment, and sediment removal, or for grants

awarded by the board to the Santa Ana Watershed Project Authority, other joint powers authorities, or local public agencies for any of these purposes, and for related planning and administrative costs.

79104.106. To the maximum extent feasible, the watershed management and flood control projects described in Section 79104.104 shall do one or more of the following:

(a) Preserve agricultural land.

(b) Protect wildlife habitat.

(c) Protect and enhance recreational resources.

(d) Improve lake water quality.

79104.108. It is the intent of the Legislature to urge the federal government to allocate funds for projects to improve the Lake Elsinore Watershed and San Jacinto Watershed, and lake water quality by matching the state's financial commitment to those projects.

79104.110. The funds appropriated pursuant to Section 79104.104 shall be allocated to a joint powers agency consisting of the City of Lake Elsinore, the Santa Ana Watershed Project Authority, the Elsinore Valley Municipal Water District and other agencies for implementation of programs to improve the water quality and habitat of Lake Elsinore, and its back basin consistent with the Lake Elsinore Management Plan.

79104.114. Not more than 3 percent of the total amount deposited in the subaccount may be used to pay costs incurred in connection with the administration of this article.

Article 7. Coastal Watershed Salmon Habitat Program

79104.200. (a) There is hereby created in the account the Coastal Watershed Salmon Habitat Subaccount.

(b) For the purpose of this article, "subaccount" means the Coastal Watershed Salmon Habitat Subaccount created by subdivision (a).

79104.202. The sum of twenty-five million dollars ($25,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79104.204. The money in the subaccount, upon appropriation by the Legislature to the Department of Fish and Game, shall be used by the Department of Fish and Game for direct expenditure and for grants to public agencies and nonprofit organizations to protect, restore, acquire, and enhance habitat for salmon. These funds may be used to match federal funding available for those purposes.

79104.206. Not more than 3 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

Chapter 7. Clean Water and Water Recycling Program

Article 1. Clean Water and Water Recycling Account

79105. For the purposes of this chapter, "account" means the Clean Water and Water Recycling Account created by Section 79106.

79106. The Clean Water and Water Recycling Account is hereby created in the fund. The sum of three hundred fifty-five million dollars ($355,000,000) hereby transferred from the fund to the account.

Article 2. Nonpoint Source Pollution Control Program

79110. The purpose of this article is to provide grant funding for projects that protect the beneficial uses of water throughout the state through the control of nonpoint source pollution.

79111. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "Best management practices" means those practices or set of practices determined by the board, a regional board, or the water quality planning agency for a designated area to be the most effective feasible means of preventing or reducing the generation of a specific type of nonpoint source pollution, given technological, institutional, environmental, and economic constraints.

(b) "Capital costs" has the same meaning as "cost," as defined in Section 32025 of the Public Resources Code.

(c) "Management measures" means economically achievable measures to prevent or control the addition of pollutants to state waters, which reflect the greatest degree of pollutant prevention achievable through the application of the best available nonpoint source pollution control practices, technologies, processes, siting criteria, operating methods, or other alternatives.

(d) "Regional board" means a regional water quality control board.

(e) "Subaccount" means the Nonpoint Source Pollution Control Subaccount created by Section 79112.

79112. There is hereby created in the account the Nonpoint Source Pollution Control Subaccount.

79113. The sum of one hundred million dollars ($100,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79114. (a) The money in the subaccount, upon appropriation by the Legislature to the board, may be used by the board to award grants, not to exceed five million dollars ($5,000,000) per project, to local public agencies or nonprofit organizations formed by landowners to prepare and implement local nonpoint source plans. Grants shall only be awarded for any of the following projects:

(1) A project that is consistent with local watershed management plans that are developed under subdivision (d) of Section 79080 and with regional water quality control plans.

(2) A broad-based nonpoint source project, including a project identified in the board's "Initiatives in NPS Management," dated September 1995, and nonpoint source technical advisory committee reports.

(3) A project that is consistent with the "Integrated Plan for Implementation of the Watershed Management Initiative" prepared by the board and the regional boards.

(4) A project that implements management measures and practices or other needed projects identified by the board pursuant to its nonpoint source pollution control program's 15-year implementation strategy and five-year implementation plan that meets the requirements of Section 6217(g) of the federal Coastal Zone Act Reauthorization Amendments of 1990.

(b) The projects funded from the subaccount shall demonstrate a capability of sustaining water quality benefits for a period of 20 years. Categories of nonpoint source pollution addressed by projects may include, but are not limited to: silviculture, agriculture, urban runoff, mining, hydromodification, grazing, onsite disposal systems, boatyards and marinas, and animal feeding operations. Projects to address nonpoint source pollution may include, but are not limited to, wildfire management, installation of vegetative systems to filter or retard pollutant loading, incentive programs or large scale demonstration programs to reduce commercial reliance on polluting substances or to increase acceptance of alternative methods and materials, and engineered features to minimize impacts of nonpoint source pollution. Projects shall have defined water quality or beneficial use goals.

(c) Projects funded from the subaccount shall utilize best management practices, management measures, or both.

(d) If projects include capital costs, those costs shall be identified by the project applicant. The grant recipient shall provide a matching contribution for the portion of the project consisting of capital expenditures for construction, according to the following formula:

Project Capital Cost/Capital Cost Match by Recipient

$1,000,000 to $5,000,000, inclusive	20%
$125,000 to $999,999, inclusive	15%
$1 to $124,999, inclusive	10%

(e) Not more than 25 percent of a grant may be awarded in advance of actual expenditure.

(f) A proponent of a project funded from the subaccount shall be required to submit to the board a monitoring and reporting plan that does all of the following:

(1) Identifies one or more nonpoint sources of pollution.

(2) Describes the baseline water quality of the waterbody impacted.

(3) Describes the manner in which the proposed practices or measures are implemented.

(4) Determines the effectiveness of the proposed practices or measures in preventing or reducing pollution.

(g) Notwithstanding subdivision (b), the board may award up to 5 percent of the total amount deposited in the subaccount for demonstration projects that are intended to prevent, reduce, or treat nonpoint source pollution.

(h) A grant recipient shall submit a report to the board, upon completion of the project, that summarizes completed activities and indicates whether the purposes of the project have been met. The report shall include information collected by the grant recipient in accordance with the project monitoring and reporting plan, including a determination of the effectiveness of the best management practices or management measures implemented as part of the project in preventing or reducing nonpoint source pollution. The board shall make the report available to watershed groups, and federal, state, and local agencies.

79114.2. Notwithstanding any other provision of this article, the sum of five million dollars ($5,000,000) is hereby appropriated from the subaccount, to the board to be used by the board, after consultation with the Department of Food and Agriculture, for loans, not to exceed five hundred thousand dollars ($500,000) per loan, to provide low interest loans to finance the construction of projects designed to manage animal nutrients from animal feeding operations. Grants may be made available to local public agencies to pay for the cost of developing ordinances, regulations, and elements for their General Plan or other planning devices to assist in providing uniform standards for the permitting and operation of animal feeding operations within their jurisdictions. These funds may also be used for the preparation of the related environmental reviews that may be necessary under the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) for approval of the devices.

79114.3. No project shall receive funds under this article if it receives funds pursuant to Article 5 (commencing with Section 79148).

79114.5. (a) Sixty percent of the money in the subaccount shall be allocated to projects in the Counties of Riverside, Ventura, Los Angeles, San Diego, Orange, or San Bernardino.

(h) Forty percent of the money in the subaccount shall be allocated to projects in counties not described in subdivision (a).

(c) This section does not apply to Section 79114.2 or Section 79117.

79115. The board may adopt regulations to implement this article.

79116. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

79117. (a) Notwithstanding any other provision of this article, of the funds transferred pursuant to Section 79113, the sum of ten million dollars ($10,000,000), upon appropriation by the Legislature to the board, may be used by the board, after consultation with the Department of Pesticide Regulation and the Office of Environmental Health Hazard Assessment, for grants as follows:

(1) Two million dollars ($2,000,000) for research and source identification.

(2) Eight million dollars ($8,000,000) for mitigation measures to protect water quality from potential adverse effects of pesticides, which measures have the ability to provide benefits for a period of 20 years, as determined by the board after consultation with the Department of Pesticide Regulation and the Office of Environmental Health Hazard Assessment.

(b) The board shall adopt regulations to carry out this section.

Article 3. Clean Water Program

79120. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "Eligible project" means a project or activity described in paragraph (1), (2), (3), or (4) of subdivision (a) of Section 13480 that is all of the following:

(1) Necessary to prevent water pollution, reclaim water, or improve water quality.

(2) Eligible for funds from the State Revolving Fund Loan Subaccount or federal assistance.

(3) Certified by the board as entitled to priority over other eligible projects.

(4) Complies with applicable water quality standards, policies, and plans.

(b) "Federal assistance" means money provided to a municipality, either directly or through allocation by the state, from the federal government to construct eligible projects pursuant to the Clean Water Act.

(c) "Municipality" has the same meaning as defined in the Clean Water Act and also includes the state or any agency, department, or political subdivision thereof, and applicants eligible for technical

assistance under Section 319 (33 U.S.C. Sec. 1329) or grants under Section 320 of the Clean Water Act (33 U.S.C. Sec. 1330).

(d) "Small community" means a municipality with a population of 10,000 persons or less, or a reasonably isolated and divisible segment of a larger municipality where the segment of the population is 10,000 persons or less, with a financial hardship as determined by the board.

(e) "Treatment works" has the same meaning as defined in the Clean Water Act.

79121. There is hereby created in the account all of the following subaccounts:

(a) The State Revolving Fund Loan Subaccount.

(b) The Small Communities Grant Subaccount.

(c) The Wastewater Construction Grant Subaccount.

79122. (a) The following amounts are hereby transferred from the account to the following subaccounts and, notwithstanding Section 13340 of the Government Code, are hereby continuously appropriated, without regard to fiscal years, to the board, as follows:

(1) Thirty million five hundred thousand dollars ($30,500,000) to the State Revolving Fund Loan Subaccount for the purposes of providing loans pursuant to the Clean Water Act, to aid in the construction or implementation of eligible projects, and for the purposes described in Section 79124.

(2) Thirty-four million dollars ($34,000,000) to the Small Communities Grant Subaccount for grants by the board to small communities for construction of eligible treatment works, and for the purposes described in Section 79124.

79122.2. The sum of thirty-five million five hundred thousand dollars ($35,500,000) is hereby transferred from the account to the Wastewater Construction Grant Subaccount and, upon appropriation by the Legislature to the board, may be used by the board for the purposes of providing grants to aid in the construction of treatment works for the Cities of Manteca, Stockton, Tracy, and Orange Cove.

79122.4. The board may transfer unallocated funds from the State Revolving Fund Loan Subaccount to the State Water Pollution Control Revolving Fund created pursuant to Section 13477 for the purposes of meeting federal requirements for state matching funds to provide loans in accordance with the Clean Water Act.

79123. The board may adopt regulations to carry out this article.

79124. The board may, by contract or otherwise, undertake plans, surveys, research, development, and studies necessary or desirable to carry out this article, and may prepare recommendations with regard thereto, including the preparation of comprehensive statewide or areawide studies and reports on the collection, treatment, and disposal of waste, and wastewater recycling. For the purposes of this section, "research" may include the design, acquisition, installation,

or construction of monitoring and testing equipment and related facilities.

79125. Not more than 3 percent of the total amount deposited in each subaccount created pursuant to this article may be used to pay the costs incurred in connection with the administration of this article.

79126. Not more than 2 percent of the total amount deposited in each subaccount under this article may be used for the purposes of Section 79124.

79127. For the purposes of implementing paragraph (1) of subdivision (a) of Section 79122, the board may make loans to municipalities, pursuant to contract, to aid in the construction or implementation of eligible projects.

79128. (a) For purposes of paragraph (2) of subdivision (a) of Section 79122, the board may make grants to small communities so that any state grant does not exceed 97 1/2 percent of the eligible cost of necessary studies, planning, design, and construction of the eligible project determined in accordance with applicable state law and regulations.

(b) The total amount of grants made pursuant to paragraph (2) of subdivision (a) of Section 79122, for any single project, may not exceed three million five hundred thousand dollars ($3,500,000).

79128.5. For the purposes of paragraph (3) of subdivision (a) of Section 79122, the board may make grants for the cost of planning, design, and construction of treatment works necessary to comply with waste discharge requirements.

79129. Any contract entered into pursuant to this article for a loan or grant may include provisions determined by the board, and shall include all of the following provisions:

(a) An estimate of the reasonable cost of the project.

(b) A description of the type of assistance being offered.

(c) An agreement by the board to pay to the municipality or small community, during the progress of the project or following completion, as agreed upon by the parties, the amount specified in the contract determined pursuant to applicable federal and state laws.

(d) An agreement by the municipality or small community to proceed expeditiously with, and complete, the project, commence operation of the project upon completion, properly operate and maintain the project in accordance with applicable provisions of law, and provide for payment of its share of the costs of the project.

79130. All contracts entered into pursuant to this article for loans or grants are subject to both of the following requirements:

(a) Municipalities seeking assistance shall demonstrate, to the satisfaction of the board, that an adequate opportunity for public participation regarding the project has been provided.

(b) Any election held with respect to the project shall include the voters of the entire municipality unless the municipality proposes to accept the assistance on behalf of a specified portion or portions of the municipality, in which case the election shall be held in that portion or portions of the municipality only.

79131. Any loan made pursuant to Section 79127 shall meet the requirements of paragraph (1) of subdivision (b) of Section 13480.

79132. All principal and interest payments received pursuant to loan contracts entered into pursuant to this article shall be deposited in the State Revolving Fund Loan Subaccount for the purposes of entering into additional loans under this article, and shall not be transferred to the General Fund.

79133. (a) Notwithstanding any other provision of this article, of the continuously appropriated funds described in paragraph (1) of subdivision (a) of Section 79122, the sum of seven million dollars ($7,000,000) shall be used by the Department of Toxic Substances Control for allocation to local agencies for groundwater remediation projects.

(b) The Department of Toxic Substances Control shall adopt regulations to carry out this subdivision.

Article 4. Water Recycling Program

79135. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "Municipality" has the same meaning as that set forth in subdivision (c) of Section 79120.

(b) "Subaccount" means the Water Recycling Subaccount created by Section 79136.

(c) "Water recycling project" means a water recycling project that meets applicable reclamation criteria and water reclamation requirements and that complies with applicable water quality standards, policies, and plans.

79136. There is hereby created in the account the Water Recycling Subaccount.

79137. (a) The sum of forty million dollars ($40,000,000) is hereby transferred from the account to the subaccount for the purposes of this article.

(b) (1) Sixty percent of the money in the subaccount shall be allocated to projects in the Counties of Riverside, Ventura, Los Angeles, San Diego, Orange, or San Bernardino.

(2) Forty percent of the money in the subaccount shall be allocated to projects in counties not described in paragraph (1).

79138. Unallocated funds remaining in the Water Recycling Subaccount in the Clean Water and Water Recycling Account in the Safe, Clean, Reliable Water Supply Fund on March 8, 2000, and any funds deposited into that subaccount after that date, shall be

transferred to, and all money repaid to the state pursuant to any loan contract executed under Chapter 17 (commencing with Section 14050) of Division 7 or Article 3 (commencing with Section 78620) of Chapter 5 of Division 24 shall be deposited in, the subaccount for the purposes of this article.

79139. The board may enter into an agreement with the federal government for federal contributions to the subaccount if all of the following conditions have been met:

(a) The board has identified any required matching funds.

(b) The board is prepared to commit to the expenditure of any minimum amount in the subaccount in the manner required by the Clean Water Act.

(c) Any agreement between the board and the federal government is consistent with the purposes of this article.

79140. (a) Notwithstanding Section 13340 of the Government Code, 50 percent of the money in the subaccount is hereby continuously appropriated, without regard to fiscal years, to the board for loans to municipalities for the design and construction of water recycling projects in accordance with Section 79141, and for the purposes described in Sections 79143, 79144, and Section 79145.

(b) Fifty percent of the money in the subaccount, upon appropriation by the Legislature to the board, may be used by the board for grants to municipalities for the design and construction of water recycling projects in accordance with Section 79141.

79141. The board may enter into agreements with municipalities for loans and grants for projects to recycle water in accordance with this article. Criteria to be considered by the board in determining whether to enter into an agreement under this article may include, but are not limited to, whether the project is a cost-effective means to meet the state or local water supply needs, when compared to other sources of water supply that may be available to the municipality, whether the project is necessary to protect water quality, the readiness of the municipality to proceed with the design and construction of water recycling projects, the degree to which the recycled water improves water supply reliability, water quality, ecosystem restoration, and other environmental benefits, the net water savings benefit, the degree to which the recycled water would reduce water supply demands on the bay-delta system, the Colorado River, or other water systems critical to regional or statewide water supply, the ability to encourage development of new water recycling projects, and the amount of funding that the municipality is requesting under this article. The cost effectiveness of a project when compared to other sources of state or local water supply shall not be the sole factor in determining whether to enter into an agreement.

79142. An agreement entered into pursuant to Section 79141 may include those provisions determined by the board to be necessary for the purposes of this article.

79142.2. (a) A contract for a loan made pursuant to this article may not provide for a moratorium on, or the deferment of, the payment of the principal of, or interest on, the loan.

(b) Any loan made pursuant to Section 79141 shall be for a period not to exceed 20 years.

(c) The board may enter into a contract for a loan that equals up to 100 percent of the total eligible cost of design and construction of an eligible recycling project.

79142.4. (a) The board may establish the interest rate for a loan made pursuant to this article at a rate equal to 50 percent of the interest rate paid by the state on the most recent sale of state general obligation bonds, to be computed according to the true interest cost method.

(b) If the interest rate so determined is not a multiple of one-tenth of 1 percent, the interest rate shall be set at the next higher multiple of one-tenth of 1 percent.

(c) The interest rate set for each contract shall be applied throughout the repayment period of the contract. There shall be a level annual repayment of principal and interest on the loans.

79142.6. All principal and interest payments received pursuant to loan contracts executed pursuant to this article shall be deposited in the subaccount for the purposes of this article, and shall not be transferred to the General Fund.

79142.8. All interest earned by assets in the subaccount shall be deposited in the subaccount.

79143. The board may make grants to municipalities for facility planning studies for water recycling projects. The amount of the grants may not exceed seventy-five thousand dollars ($75,000) per study.

79144. The board may, by contract or otherwise, undertake plans, surveys, research, development, and studies necessary or desirable to carry out this article, and may prepare recommendations with regard thereto, including the preparation of comprehensive statewide or areawide studies and reports on the collection, treatment, and disposal of waste and wastewater recycling. For the purposes of this section, "research" may include the design, acquisition, installation, or construction of monitoring and testing equipment and related facilities.

79145. (a) Not more than 3 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

(b) Not more than 3 percent of the total amount deposited in the subaccount may be used for the purposes of Section 79144.

79146. Notwithstanding any other provision of this article, the money in the subaccount may not be used to provide financial assistance to any water recycling project used to augment water supplies by discharging recycled water into a surface water reservoir

that supplies water directly to a treatment facility for a water supply system that serves domestic uses.

79147. (a) The board may adopt regulations to carry out this article.

(b) The board is encouraged to expedite the review and processing of agreements to carry out the purposes of this article. The board shall report to the Legislature on the progress of implementing this article on or before June 30, 2001.

Article 5. Coastal Nonpoint Source Control Program

79148. The purpose of this article is to provide funding for projects that restore and protect the water quality and environment of coastal waters, estuaries, bays, and near share waters and groundwaters.

79148.2. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "Educational institution" means community colleges, state colleges, and the University of California.

(b) "Local public agency" means any city, county, city and county, district, or other political subdivision of the state.

(c) "Municipality" has the same meaning as defined in the Clean Water Act and also includes the state or any agency, department, or political subdivision thereof, and applicants eligible for technical assistance under Section 319 (33 U.S.C. Sec. 1329) or grants under Section 320 of the Clean Water Act (33 U.S.C. Sec. 1330).

(d) "Nonprofit organization" means any California corporation organized under Section 501(c)(3) or 501(c)(5) of the Internal Revenue Code.

(e) "Regional board" means a regional water quality control board.

(f) "Subaccount" means the Coastal Nonpoint Source Control Subaccount created by Section 79148.4.

79148.4. There is hereby created in the account the Coastal Nonpoint Source Control Subaccount.

79148.6. The sum of ninety million dollars ($90,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79148.7. Notwithstanding any other provision of this article, the sum of four million dollars ($4,000,000), upon appropriation by the Legislature to the board, shall be allocated by the board to the City of Huntington Beach to fund multiagency studies to establish recommendations to address coastal nonpoint source pollution in the tidal marshes and coastal waters, and to implement those recommendations. Agencies authorized to conduct the studies and implement the recommendations may include, but need not be

limited to, municipal and county governments, flood control districts, and sanitation districts.

79148.8. (a) The money in the subaccount, upon appropriation by the Legislature to the board, may be used by the board, in consultation with the California Coastal Commission, to award loans as provided in subdivision (b), and to award grants not to exceed five million dollars ($5,000,000) per project, to municipalities, local public agencies, educational institutions, or nonprofit organizations for the purposes of this article. Grants may be awarded for any of the following projects:

(1) A project designed to improve water quality at public beaches and to make improvements for the purpose of ensuring that coastal waters adjacent to public beaches meet the bacteriological standards set forth in Article 2 (commencing with Section 115880) of Chapter 5 of Part 10 of Division 104 of the Health and Safety Code.

(2) A project to provide comprehensive capability for monitoring, collecting, and analyzing ambient water quality, including monitoring technology that can be entered into a statewide information base with standardized protocols and sampling, collection, storage and retrieval procedures.

(3) A project to make improvements to existing sewer collection systems and septic systems for the restoration and protection of coastal water quality.

(4) A project designed to implement storm water and runoff pollution reduction and prevention programs for the restoration and protection of coastal water quality.

(5) A project that is consistent with the state's nonpoint source control program, as revised to meet the requirements of Section 6217 of the federal Coastal Zone Act Reauthorization Amendments of 1990, Section 319 of the federal Clean Water Act (33 U.S.C. Sec. 1329), and the requirements of Division 7 (commencing with Section 13000).

(b) In addition to the grants authorized pursuant to subdivision (a), the board may make loans not to exceed five million dollars ($5,000,000) per project to municipalities, local public agencies, educational institutions, or nonprofit organizations for the purposes set forth in paragraph (3) of subdivision (a).

(c) The projects funded from the subaccount shall demonstrate the capability of contributing to sustained, long-term water quality or environmental restoration or protection benefits for a period of 20 years, shall address the causes of degradation, rather than the symptoms, and shall be consistent with water quality and resource protection plans prepared, implemented, or adopted by the board, the applicable regional water quality control board, and the California Coastal Commission.

(d) An applicant for funds from the subaccount shall be required to submit to the board a monitoring and reporting plan that does all of the following:

(1) Identifies the nonpoint source or sources of pollution to be prevented or reduced by the project.

(2) Describes the baseline water quality or quality of the environment to be addressed.

(3) Describes the manner in which the project will be effective in preventing or reducing pollution and in demonstrating the desired environmental results.

(e) Upon completion of the project, a recipient of funds from the subaccount shall submit a report to the board that summarizes the completed activities and indicates whether the purposes of the project have been met. The report shall include information collected by the recipient in accordance with the project monitoring and reporting plan, including a determination of the effectiveness of the project in preventing or reducing pollution. The board shall make the report available to the public, watershed groups, and federal, state, and local agencies.

(f) If projects include capital costs for construction, those costs shall be identified by the project applicant. The grant recipient shall provide a matching contribution for the portion of the project consisting of capital costs for construction, according to the following formula:

Capital Cost Project Cost/Capital Cost Match by Recipient

$1,000,000 to $5,000,000, inclusive	20%
$125,000 to $999,999, inclusive	15%
$1 to $124,999, inclusive	10%

For the purposes of this subdivision, "capital costs" has the same meaning as "cost" as defined in Section 32025 of the Public Resources Code.

(g) Not more than 25 percent of a grant may be awarded in advance of actual expenditure.

(h) An applicant for funds from the subaccount shall inform the board of any necessary public agency approvals, entitlements, and permits that may be necessary to implement the project. The application shall certify to the board, at the appropriate time, that those approvals, entitlements, and permits have been granted.

(i) Where recovery plans for coho salmon, steelhead trout, or other threatened or endangered aquatic species exist, projects funded under this article shall be consistent with those plans, and to the extent feasible, shall seek to implement actions specified in those plans.

79148.10. (a) Sixty percent of the money in the subaccount shall be allocated to projects in the Counties of Riverside, Ventura, Los Angeles, San Diego, Orange, or San Bernardino.

(b) Forty percent of the money in the subaccount shall be allocated to projects in the counties not described in subdivision (a).

79148.12. The board shall provide opportunity for public review and comment in awarding funds pursuant to this article, and may, in consultation with the California Coastal Commission, adopt regulations to implement this article.

79148.14. No project shall receive funds under this article if it receives funds pursuant to Article 2 (commencing with Section 79110).

79148.15. Notwithstanding any other provision of this article, three million dollars ($3,000,000), upon appropriation by the Legislature to the board, shall be allocated by the board to the San Diego County Water Authority for environmental studies and engineering studies for the San Diego Regional Conveyance Facility.

79148.16. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

Article 6. Seawater Intrusion Control

79149. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) (1) "Eligible seawater intrusion control project" means a project that meets all of the following requirements:

(A) The project is necessary to protect groundwater and meets both of the following requirements:

(i) The project is within a basin that is subject to a local groundwater management plan for which a review is completed pursuant to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(ii) The project is threatened by seawater intrusion in an area where restrictions on groundwater pumping, a physical solution, or both, are necessary to prevent the destruction of, or irreparable injury to, groundwater quality.

(B) In the case of a project that would provide a substitute water supply, the project is cost-effective when compared to the development of other new sources of water and includes requirements or measures adequate to ensure that the substitute supply will be used in lieu of previously established extractions or diversions of groundwater.

(C) The project complies with applicable water quality standards, policies, and plans.

(2) Eligible projects may include, but are not limited to, wat conservation, freshwater well injection, and substitution groundwater pumping from local surface supplies.

(b) "Local agency" means any city, county, district, joint powe authority, or other political subdivision of the state involved in wat management.

(c) "Subaccount" means the Seawater Intrusion Contr Subaccount created by Section 79149.2.

79149.2. (a) There is hereby created in the account the Seawat Intrusion Control Subaccount. The sum of twenty-five million dolla ($25,000,000) is hereby transferred from the account to tl subaccount for the purposes of implementing this article.

(b) Notwithstanding Section 13340 of the Government Code, tl money in the subaccount is hereby continuously appropriate without regard to fiscal years, to the board for loans to local agenci to carry out eligible seawater intrusion control projects and for tl purposes described in this article and for the administration of th article.

79149.3. Unallocated funds remaining in the Seawater Intrusi Control Subaccount in the Clean Water and Water Recycli Account in the Safe, Clean, Reliable Water Supply Fund on Mar 8, 2000, and any funds deposited into that subaccount after that dat shall be transferred to, and all money repaid to the state pursuant any loan contract executed under Article 6 (commencing wi Section 78648) of Chapter 5 of Division 24 shall be deposited in, tl subaccount for the purposes of this article.

79149.4. The board may enter into contracts to make loans to loc agencies for the purposes set forth in this article.

79149.6. Any contract for a loan entered into pursuant to Secti 79149.4 may include those provisions determined by the board to l necessary for the purposes of this article and shall include both of tl following provisions:

(a) An estimate of the reasonable cost of the eligible seawat intrusion control project.

(b) An agreement by the local agency to proceed expeditious with, and complete, the eligible seawater intrusion control proje commence operation of the project in accordance with applicab provisions of law, and provide for the payment of the local agency share of the cost of the project, including the principal of, and interc on, the loan.

79149.8. (a) A contract for a loan may not provide for moratorium on the payment of the principal of, or interest on, tl loan.

(b) Any loan made pursuant to Section 79149.4 shall be for a peri not to exceed 20 years.

(c) The board may enter into a contract for a loan amount that equals up to 100 percent of the total eligible cost of design and construction of an eligible seawater intrusion control project.

79149.10. (a) The board shall establish the interest rate for a loan made pursuant to this article at a rate equal to 50 percent of the interest rate paid by the state on the most recent sale of state general obligation bonds, to be computed according to the true interest cost method.

(b) If the interest rate so determined is not a multiple of one-tenth of 1 percent, the interest rate shall be set at the next higher multiple of one-tenth of 1 percent.

(c) The interest rate set for each contract shall be applied throughout the repayment period of the contract. There shall be a level annual repayment of principal and interest on the loans.

79149.12. All principal and interest payments received pursuant to loan contracts entered into pursuant to this article shall be deposited in the subaccount.

79149.14. The board may, by contract or otherwise, undertake plans, surveys, research, development, and studies necessary, convenient, or desirable to carry out the purposes of this article.

79149.16. Not more than 3 percent of the total amount deposited in the subaccount may be used to pay for both of the following:

(a) To pay the costs incurred in connection with the administration of this article.

(b) For the purposes of Section 79149.14.

CHAPTER 8. WATER CONSERVATION PROGRAM

Article 1. Findings and Declarations

79150. The Legislature finds and declares that:

(a) Voluntary, cost-effective capital outlay water conservation programs can help meet the growing demand for clean and abundant water supplies throughout the state.

(b) The participation of the state in the construction of local water conservation projects is desirable to further the effective management of the water resources of the state.

Article 2. General Provisions

79151. Unless the context otherwise requires, the following definitions govern the construction of this chapter:

(a) "Account" means the Water Conservation Account created by Section 79152.

(b) (1) "Water conservation program or project" means those feasible capital outlay measures undertaken to improve the

efficiency of water use through projects, the benefits of which exceed the costs.

(2) The programs include, but are not limited to, all of the following:

(A) The lining or piping of ditches.

(B) Improvements in water distribution system controls such as automated canal control, construction of small reservoirs within distribution systems that conserve water that has already been captured for use, and related physical improvements.

(C) Tailwater pumpback recovery systems.

(D) Major improvements to, or replacement of, deteriorated distribution systems to reduce leakage and maximize conservation.

(E) Capital outlay features of agricultural water conservation programs identified in the "Memorandum of Understanding Regarding Efficient Agricultural Water Management Practices," dated July 16, 1997, and endorsed by the Agricultural Water Management Council, and any amendments thereto.

(c) "Economically disadvantaged area" means any area of the state for which both of the following statements apply:

(1) A median household income that is less than forty thousand dollars ($40,000) based on the most recent federal census.

(2) An annual average unemployment rate that is greater than 9 percent based on the most recent federal census.

(d) (1) "Groundwater recharge facilities" means lands and facilities for artificial groundwater recharge through methods that include, but are not limited to, percolation using basins, pits, ditches, and furrows, modified streambeds, flooding, and well injection. For the purposes of this chapter, expenditures for "groundwater recharge facilities" include capital outlay expenditures to expand, renovate, or restructure land and facilities used for the purposes of groundwater recharge and to acquire additional land for recharge basins.

(2) Groundwater recharge facilities may include any of the following:

(A) Instream facilities for regulation of water levels, but not regulation of streamflow to accomplish diversion from the waterway.

(B) Agency-owned facilities for extraction.

(C) Conveyance facilities to convey water to the recharge site, including devices for flow regulation and measurement of recharge waters.

(3) Any part or all of the project facilities, including the land under the facilities, may consist of separable features, or an appropriate share of multipurpose features, of a larger system, or both.

(e) "Infrastructure rehabilitation project" means a project located in an economically disadvantaged area for the repair, replacement, restoration, or rehabilitation of an existing water distribution system that delivers water for domestic, municipal, or

industrial uses, including pipelines, pump stations, valves, meters, reservoirs, and all other appurtenant water delivery facilities that result in the reduction or elimination of significant distribution system water losses or replace a failing system component that threatens the health, safety, welfare, and economy of areas relying on the water distribution system.

(f) "Local agency" or "agency" means any city, county, city and county, district, joint powers authority, or other political subdivision of the state involved with water management. "Local agency" or "agency" also means a mutual water company. For purposes of this chapter, mutual water company means a nonprofit corporation organized for, or engaged in the business of, developing, distributing, supplying, or delivering water for irrigation or domestic use, or both, to its members or shareholders, at actual cost plus necessary expenses.

(g) "Project" may include any of the following:

(1) Water conservation project.

(2) Groundwater recharge facilities.

(3) Urban water conservation project.

(4) Infrastructure rehabilitation project.

(h) "Urban water conservation project" means capital outlay features of urban water conservation programs identified in the "Memorandum of Understanding Regarding Urban Water Conservation in California," as amended on April 8, 1998, by the California Urban Water Conservation Council, and any amendments thereto.

79152. The Water Conservation Account is hereby created in the fund.

79153. (a) The sum of one hundred fifty-five million dollars ($155,000,000) is hereby transferred from the fund to the account for the purposes of this chapter.

(b) Unallocated funds remaining in the Water Conservation and Groundwater Recharge Subaccount in the Water Supply Reliability Account in the Safe, Clean, Reliable Water Supply Fund on March 8, 2000, shall be transferred to, and all money repaid to the state pursuant to any loan contract executed under Article 3 (commencing with Section 78670) of Chapter 6 of Division 24 shall be deposited in, the account for the purposes of entering into additional loans under Article 3 (commencing with Section 79157) and Article 4 (commencing with Section 79161).

79154. (a) Any loan agreement entered into pursuant to this chapter may include provisions determined to be necessary by the department.

(b) Any loan agreement pursuant to this chapter shall include all of the following:

(1) A finding by the department that the agency has the ability to repay the loan, that the project is cost-effective, and that the project is feasible from an engineering or hydrologic standpoint, or both.

(2) An agreement by the agency to proceed expeditiously with, and complete, the project in conformance with approved plans and specifications and to operate and maintain the project properly upon completion throughout the repayment period.

(3) A provision that there shall be no moratorium on, or deferment of, payments of principal or interest.

(4) (A) A loan period of not more than 20 years with an interest rate set at a rate equal to 50 percent of the interest rate paid by the state on the most recent sale of state general obligation bonds, to be computed according to the true interest cost method.

(B) If the interest rate so determined is not a multiple of 1 percent, the interest rate shall be set at the next multiple of one-tenth of 1 percent.

(C) The interest rate for each loan agreement shall be applied throughout the repayment period of the contract. There shall be a level annual repayment of principal and interest on the loans.

79155. (a) Any grant agreement entered into pursuant to this chapter may include provisions determined to be necessary by the department.

(b) Any grant agreement pursuant to this chapter shall include both of the following:

(1) A determination by the department that the project is economically justified, and that the project is feasible.

(2) An estimate of the reasonable cost and benefit of the project, including a feasibility report that sets forth the engineering and financial feasibility of the project, and shall include a description of the proposed facilities and their relation to other water-related facilities in the system service area.

79155.5. Notwithstanding any other provision of law, regulations set forth in Chapter 2.3 (commencing with Section 450.1) of Division 2 of Title 23 of the California Code of Regulations that are in effect on March 8, 2000, may be used to carry out this chapter.

79156. Not more than 3 percent of the total amount deposited in the subaccount may be used by the department to pay the costs incurred in connection with the administration of this article.

Article 3. Agricultural Water Conservation Program

79157. (a) The sum of thirty-five million dollars ($35,000,000) in the account, upon appropriation by the Legislature to the department, shall be used by the department for loans to local agencies to aid in the acquisition and construction of agricultural water conservation projects, and for grants in accordance with Section 79158.

(b) For the purposes of approving a loan under this section, the department shall determine if there will be a net saving of water as a result of each proposed project and if the project is determined by the department to be cost-effective.

(c) A project under this article shall not receive any more than five million dollars ($5,000,000) in loan proceeds from the department.

(d) The department shall give preference to the agencies that propose the most cost-effective projects.

79158. (a) The department may make grants to local agencies, under any terms and conditions that may be determined necessary by the department, for the purpose of financing feasibility studies of projects potentially eligible for a loan under Section 79157.

(b) No single feasibility study shall be eligible to receive more than one hundred thousand dollars ($100,000), and not more than 5 percent of the total amount deposited in the account may be expended for the purposes of financing feasibility studies.

(c) A grant for a feasibility study shall not affect the maximum amount of any loan that may be made under this article.

Article 4. Groundwater Recharge Facilities Program

79161. (a) The sum of thirty million dollars ($30,000,000) in the account is hereby appropriated to the department, without regard to fiscal years, for use by the department for loans and grants to local agencies for the acquisition and construction of groundwater recharge facilities.

(b) A loan application pursuant to this article shall include the reasonable cost and benefit of the proposed project, including a feasibility report that shall set forth the economic justification for the project, and shall include explanations of the proposed facilities and their relation to other water supply related facilities in the basin or region.

(c) A project under this article shall not receive any more than five million dollars ($5,000,000) in loan proceeds from the department.

(d) The department shall give preference under this section to projects that are located in overdrafted groundwater basins, projects of critical need, projects whose feasibility studies demonstrate the greatest engineering and hydrogeologic feasibility as determined by the department, and projects located in areas that have groundwater management plans.

79161.5. (a) The department may make grants to local agencies, under any terms and conditions that may be determined necessary by the department, for the purpose of financing feasibility studies of projects potentially eligible for a loan under Section 79161.

(b) No single feasibility study shall be eligible to receive more than one hundred thousand dollars ($100,000), and not more than 5 percent of the total amount deposited in the account may be expended for the purposes of financing feasibility studies.

(c) A grant for a feasibility study shall not affect the maximum amount of any loan that may be made under this article.

Article 5. Infrastructure Rehabilitation Program

79162. (a) The sum of sixty million dollars ($60,000,000) in the account, upon appropriation by the Legislature to the department, shall be used by the department for grants awarded by the department to local agencies for the purposes of funding infrastructure rehabilitation projects.

(b) (1) For the purposes of making grants pursuant to subdivision (a), the factors to be considered by the department in determining whether to enter into an agreement shall include, but not be limited to, the need to implement projects that provide measurable conservation through the reduction of system water losses by rehabilitating water delivery systems.

(2) Grants awarded pursuant to subdivision (a) shall be available for public water systems owned and operated by local agencies in economically disadvantaged areas with service connections that exceed 200 but are not greater than 16,000 in number. The department shall give highest priority in awarding grants to those agencies with the highest retail water rates and service charges as of January 1, 1999.

(c) No single construction grant under this article shall exceed five million dollars ($5,000,000).

79162.2. (a) The department may make grants to local agencies, under any terms and conditions as may be determined necessary by the department, for the purpose of financing feasibility studies of projects potentially eligible for a grant under Section 79162.

(b) No single feasibility study shall be eligible to receive more than one hundred thousand dollars ($100,000), and not more than 5 percent of the total amount deposited in the account may be expended for the purposes of financing feasibility studies.

(c) A grant for a feasibility study shall not affect the maximum of any construction grant that may be made under this article.

79162.4. The department may adopt regulations to carry out this article.

Article 6. Urban Water Conservation Program

79163. (a) The sum of thirty million dollars ($30,000,000) in the account, upon appropriation by the Legislature to the department, shall be used by the department for grants and loans awarded by the

department to local agencies for the purposes of funding urban water conservation projects.

(b) A project under this article shall not receive more than five million dollars ($5,000,000) in loan proceeds from the department.

79164. (a) The department may make grants to local agencies, under any terms and conditions that may be determined necessary by the department, for the purpose of financing feasibility studies of projects potentially eligible for a loan under Section 79163.

(b) No single feasibility study shall be eligible to receive more than one hundred thousand dollars ($100,000), and not more than 5 percent of the total amount deposited in the account may be expended for the purposes of financing feasibility studies.

(c) A grant for a feasibility study shall not affect the maximum amount of any loan that may be made under this article.

Chapter 9. Water Supply, Reliability, and Infrastructure Program

Article 1. Water Supply, Reliability, and Infrastructure Account

79165. For the purposes of this chapter, "account" means the Water Supply, Reliability, and Infrastructure Account created by Section 79166.

79166. The Water Supply, Reliability, and Infrastructure Account is hereby created in the fund. The sum of six hundred thirty million dollars ($630,000,000) is hereby transferred from the fund to the account.

Article 2. Groundwater Storage Program

79170. The Legislature finds and declares that the conjunctive management of surface water and groundwater is an effective way to improve the reliability of water supply for all sectors in California.

79171. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "Conjunctive use" means the temporary storage of water in a groundwater aquifer through intentional recharge and subsequent extraction for later use. Storage is accomplished by either of the following methods:

(1) "Direct recharge" of an aquifer by conducting surface water into the ground by various means, including, without limitation, spreading ponds and injection wells for the purpose of making the water stored in the aquifer available for extraction and later use in drier years.

(2) "In-lieu recharge" means increasing the amount of groundwater available in an aquifer by substituting surface water supplies to a user who would otherwise pump groundwater.

(b) "Conjunctive use facilities" include land and appurtenant facilities for any phase of a conjunctive use operation. Appurtenant facilities may include subsurface storage, treatment, conveyance, recharge ponds, injection wells, spreading grounds, monitoring, measurements, subsidence detection, flow regulation, detention basins to facilitate recharge, diversion facilities, and extraction facilities.

(c) "Conjunctive use project" means a project that is intended to produce water supply benefits for the local agency or a project that is intended to produce water supply benefits for water users, including the environment, in addition to the local agency.

(d) "Local agency" means any city, county, city and county, district, joint powers authority, mutual water company, or other political subdivision of the state.

(e) "Project participants" means any public agency participating in, and benefiting from, a conjunction use project under this article.

(f) "Subaccount" means the Conjunctive Use Subaccount created by Section 79172.

79172. There is hereby created in the account the Conjunctive Use Subaccount.

79173. The sum of two hundred million dollars ($200,000,000) is hereby transferred from the account to the subaccount for the purposes of implementing this article.

79174. The money in the subaccount, upon appropriation by the Legislature to the department, may be used by the department for grants for feasibility studies, project design, or the construction of conjunctive use projects on a pilot or operational scale.

79175. Not more than 5 percent of the total amount deposited in the subaccount may be expended for purposes of financing feasibility studies.

79176. For the purpose of approving projects pursuant to this article, the department shall give priority to those projects for which there is available third-party funds from any source other than the Central Valley Project Restoration Fund authorized by the Central Valley Project Improvement Act. The department shall also take into consideration all of the following with regard to each proposed project:

(a) The magnitude of the actual increase in water supply yield and reliability compared to preexisting conditions.

(b) The consistency with the plans or recommendations proposed by CALFED.

(c) The distribution of the benefits to water supply and to the environment.

(d) The availability of the storage for conserved water.

(e) The technical and environmental suitability of the groundwater basin for conjunctive use.

(f) The potential to reduce critically overdrafted conditions in a groundwater basin.

(g) The need for the project.

(h) The potential to alleviate salt water intrusion into groundwater basins or other groundwater quality degradation.

(i) The economic, engineering, and hydrogeologic justification for the project.

(j) The availability of third-party or local matching funds from any source other than the Central Valley Project Restoration Fund authorized by the Central Valley Project Improvement Act.

(k) The involvement of one or more local agencies whose jurisdiction or water service area overlies or is adjacent to the aquifer utilized to store water.

(l) The potential to reduce dry year demand for surface water under existing contracts.

(m) The existence of a system for the recovery of the stored water or an agreement with the department or a local agency for the installation of that system.

(n) Whether the project is located in an area that is subject to a groundwater management program.

79177. To be eligible for funding for the construction of a conjunctive use project under this article, an applicant that is other than a local agency shall be required to carry out that project with the participation of a local agency. The department or a local agency may provide technical assistance, coordination, or any other assistance in implementing a project or study if requested by the participating local agency.

79178. No construction project may receive more than fifty million dollars ($50,000,000) from the subaccount.

79179. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

79180. Not less than 40 percent of the total amount deposited in the subaccount shall be expended for studies, projects, and facilities within watersheds of the central valley.

79181. (a) A project undertaken pursuant to this article shall fully protect and preserve the groundwater rights of the overlying landowners and shall fully protect and preserve the water rights of the project participants. The department shall not provide funding for a project unless it determines that the project will be designed and operated in a manner that ensures that other users of the same or a hydrologically related aquifer will not suffer any unreasonable diminution of the quantity or quality of their groundwater supplies or incur additional uncompensated expense as a result of the implementation of the project.

(b) For the purposes of receiving funding for a conjunctive use project pursuant to this article, the applicant shall be required to do both of the following:

(1) Provide for a continuing groundwater monitoring and mitigation program.

(2) Limit the extraction of the groundwater to not more than the amount of water that is stored or recharged by the project participants or the amount that complies with all laws and contract terms governing the extraction, appropriation, and use of groundwater by the project participants.

(c) Persons and agencies participating in the project may not assert a claim or file a cause of action against an overlying landowner who is not exceeding either of the following:

(1) The overlying landowner's historic rate of groundwater pumping.

(2) The full amount of groundwater to which the overlying landowner would be entitled to under state law regarding rights to groundwater and reasonable beneficial use on the landowner's land that overlies the groundwater.

(d) The overlying landowners may not assert a claim or file a cause of action against the persons or agencies participating in the project if the project is implemented in compliance with this section, except as provided by contract between the project participants.

(e) Nothing in this article modifies state law with regard to groundwater rights, regulation, or management.

79182. In carrying out this article and awarding grants, the department shall convene and consult with an advisory committee comprised of technically qualified representatives of local water agencies, project participants, environmental interests, agricultural laborer interests, and interests representing farmers who use groundwater. The advisory committee shall be geographically balanced to reflect the communities that use water in the Central Valley. If a member of the advisory committee, or a member of his or her immediate family, is employed by a grant applicant or the employer of a grant applicant, the committee members shall make that disclosure to the other members of the committee and shall not participate in the review of the grant application of that applicant.

79183. The department may adopt regulations to carry out this article.

Article 3. Bay-Delta Multipurpose Water Management Program

79190. Unless the context otherwise requires, the following definitions govern the construction of this article:

(a) "CALFED Bay-Delta Program" or "program" means the undertaking by CALFED pursuant to the Framework Agreement dated June 20, 1994, to develop a long-term solution to water

management, environmental, and other problems in the bay-delta watershed by means of a programmatic environmental impact statement/environmental impact report.

(b) "CALFED EIS/EIR" means the final programmatic environmental impact statement/environmental impact report prepared by CALFED.

(c) "CALFED stage 1 action" means an action identified in the preferred alternative of the CALFED EIS/EIR as an action intended for implementation during stage 1 of Phase III of the CALFED Bay-Delta Program.

(d) (1) "Eligible project" means a demonstration project, subject to the CALFED adaptive management principle that requires an assessment of the performance of the demonstration projects in order to determine which projects are successful in achieving the goals of the program.

(2) "Eligible project" means a project that meets both of the following requirements.

(A) The project is identified in the CALFED EIS/EIR as a CALFED stage 1 action.

(B) The project does one or more of the following:

(i) Constructs treatment facilities or relocates discharge facilities for agricultural drainage generated within the delta to improve water quality in the delta or the quality of water that is transported from the delta.

(ii) Constructs facilities to control waste discharges that contribute to low dissolved oxygen and other water quality problems in the lower San Joaquin River and the south delta.

(iii) Constructs fish facilities for the State Water Project or the Central Valley Project intakes in the south delta, such as facilities for fish screens, fish handling, and fish passage, or modifications to intake structures or other facilities, to reduce losses of any life stages of fish to water diversions in the San Joaquin River and the delta in accordance with paragraph (1) of Section (C) of Chapter IV of the board's 1995 water quality control plan.

(iv) Constructs a permanent barrier at the head of Old River to improve fish migration and other permanent barriers in the south delta channels to improve water quality and water level for local diversions.

(v) Constructs facilities to control drainage from abandoned mines that adversely affect water quality in the bay-delta.

(vi) Constructs a permanent barrier at Grantline Canal to improve water quality and water levels for local diversion.

(e) "Subaccount" means the Bay-Delta Multipurpose Water Management Subaccount created by Section 79194.

79191. This article does not affect the authority of any agency pursuant to any other provision of law to expend funds for the purposes described in this article.

79192. The Legislature hereby finds and declares all of the following:

(a) CALFED is in the process of preparing a programmatic EIS/EIR for a long-term comprehensive plan that will resolve problems related to ecosystem restoration, including the recovery of endangered species such as chinook salmon, water quality, water supply, water management, and system integrity for the protection of beneficial uses of the bay-delta ecosystem.

(b) The CALFED Bay-Delta Program is of statewide and national importance. The state should participate in the funding of eligible projects as a part of its ongoing program to improve conditions in the bay-delta ecosystem.

(c) The programmatic EIS/EIR will include a schedule for funding and implementing all elements of the long-term comprehensive plan.

(d) The elements of the CALFED Bay-Delta Program will achieve balanced solutions in all identified problem areas, including the ecosystem, water quality, water supply, and system integrity.

79193. (a) This article does not authorize the implementation of the CALFED Bay-Delta Program or any element of that program. The implementation of the CALFED Bay-Delta Program, or any element of that program, shall only be undertaken pursuant to authority provided by law other than this division.

(b) Nothing in this article affects the obligation to comply with provisions of existing law in connection with the implementation of this article.

79194. There is hereby created in the account the Bay-Delta Multipurpose Water Management Subaccount.

79195. The sum of two hundred fifty million dollars ($250,000,000) is hereby transferred from the account to the subaccount.

79196. (a) The money in the subaccount, upon appropriation by the Legislature to the department, may be used by the department to carry out eligible projects and for the purposes of Section 79202.

(b) Money in the subaccount that is allocated to carry out eligible projects, as described in clauses (ii), (iv), and (vi) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190, and is not expended for those purposes, may be reallocated by the department to carry out other eligible projects, as described in clauses (i), (iii), and (v) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

(c) No funds in the subaccount shall be used by the department unless and until the department has consulted, on an annual basis, with the state and federal agencies that participate in CALFED, as well as representatives of the public convened as a duly authorized advisory committee, with regard to the specific projects proposed for funding under this article. Decisions regarding specific expenditures

of funds provided under this article shall be jointly determined, to the maximum extent possible, by the recommendations of the state and federal CALFED agencies with the advice of the advisory committee.

79196.5. The funds appropriated pursuant to Section 79196 shall be allocated as following:

(a) Seventeen million dollars ($17,000,000) for the purposes of the project described in clause (i) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

(b) Forty million dollars ($40,000,000) for the purposes of the project described in clause (ii) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

(c) One hundred twenty million dollars ($120,000,000) for the purposes of the project described in clause (iii) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

(d) Forty million dollars ($40,000,000) for the purposes of the project described in clause (iv) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

(e) Seventeen million dollars ($17,000,000) for the purposes of the project to described in clause (v) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

(f) Sixteen million dollars ($16,000,000) for the purposes of the project described in clause (vi) of subparagraph (B) of paragraph (2) of subdivision (d) of Section 79190.

79197. No funds in the subaccount may be expended until all of the following conditions have been met:

(a) The CALFED EIS/EIR has been certified by the state lead agency and a notice of determination has been issued as required by Division 13 (commencing with Section 21000) of the Public Resources Code.

(b) The CALFED EIS/EIR has been filed by the federal lead agencies with the United States Environmental Protection Agency, the required notice has been published in the Federal Register, and there has been federal approval of a program identical to the program approved by the state.

79198. The state, to the greatest extent possible, shall secure federal and nonfederal funds to implement this article.

79199. Due to the importance of issuing permits and otherwise expediting all elements of the CALFED Bay-Delta Program in a timely and balanced manner, the following procedures shall apply to the use of funds authorized by this article:

(a) After the requirements set forth in Section 79197 are met, funds in the subaccount shall become available for use in accordance with the schedule for eligible projects set forth in the final programmatic EIS/EIR, unless the Secretary of the Resources Agency determines that the schedule established in the final programmatic EIS/EIR has not been substantially adhered to.

(b) On or before November 15 of each year, the Secretary of the Resources Agency, in consultation with state and federal CALFED representatives and other interested persons and agencies, shall review adherence to the schedule.

(c) The absence of funding from nonfederal or nonstate sources shall not be a basis for a determination that the schedule has not been adhered to.

(d) If, at the conclusion of each annual review, the Secretary of the Resources Agency determines that the schedule established in the final programmatic EIS/EIR, or a revised schedule prepared pursuant to this subdivision, has not been substantially adhered to, the secretary, after notice to, and consultation with, state and federal CALFED representatives and other interested persons and agencies, shall prepare a revised schedule that ensures that balanced solutions in all identified problem areas, including ecosystem restoration, water supply, water quality, and system integrity are achieved, consistent with the intent of the final programmatic EIS/EIR. Funds shall be available for expenditure unless a revised schedule has not been developed within six months from the date on which the secretary determines that the prior schedule has not been substantially adhered to. Upon the preparation of any revised schedule under this subdivision, funds shall be expended in accordance with that revised schedule.

(e) Funds in the subaccount shall become available in accordance with the cost-share agreement developed by the CALFED Bay-Delta Program, which shall describe the federal, state, and local share of funding for the programs, projects, and other CALFED stage 1 actions.

79200. On or before December 15 of each year, the Secretary of the Resources Agency shall submit an annual report to the Legislature that describes the status of the implementation of all elements of the CALFED Bay-Delta Program, any determinations made by the secretary pursuant to subdivisions (b) and (d) of Section 79199 and other significant scheduling issues. The report also shall include a detailed accounting of expenditures, descriptions of programs for which expenditures have been made, and a schedule of anticipated expenditures for the next year.

79201. The report prepared pursuant to Section 79200 shall include both of the following:

(a) A summary of the results achieved by the projects funded under this article.

(b) An identification of any necessary modifications that should be made to eligible projects or other CALFED bay-delta projects, to ensure that the goals and objectives of CALFED are met.

79201.5. Nothing in this article shall be construed to address the allocation of benefits from projects or programs funded by this

article. It is anticipated that this issue will be settled in the CALFED process or by the Legislature by statute.

79202. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay the costs incurred in connection with the administration of this article.

79203. The department may adopt regulations to carry out this article.

Article 4. Interim Water Reliable Supply and Water Quality Infrastructure and Management Program

79205.2. (a) "Delta export service area," as used in this article, means both of the following:

(1) The counties included within the Association of Bay Area Governments.

(2) Those areas of the state outside the delta that receive water from the State Water Project or the Central Valley Project, either directly or by exchange, by means of diversions from the delta.

(b) "Local agency," as used in this article, means any city, county, city and county, district, or other political subdivision of the state.

79205.4. (a) There is hereby created the Interim Water Supply and Water Quality Infrastructure and Management Subaccount.

(b) For the purposes of this article, "subaccount" means the Interim Reliable Water Supply and Water Quality Infrastructure and Management Subaccount.

79205.6. The sum of one hundred eighty million dollars ($180,000,000) is hereby transferred from the account to the subaccount for the purposes of this article.

79205.8. (a) The money in the subaccount, upon appropriation by the Legislature to the department, may be used by the department to provide grants or loans, or any combination thereof, which are approved by the Governor, to local agencies located in the delta export service areas for programs or projects that can be completed and provide the intended benefits not later than March 8, 2009, and are designed to increase water supplies, enhance water supply reliability, or improve water quality.

(b) The department shall provide grants for programs or projects located outside the delta and which meet one of the following requirements:

(1) The project or program constructs new or expands existing groundwater storage and recovery projects or acquires rights to use storage in existing reservoirs.

(2) The project or program implements measures that facilitate improved water treatment, water transfers, or exchanges, including, but not limited to, a project that improves water quality by shifting reliance from lower quality to higher quality water supplies.

(3) The project or program implements state of the art agricultural water conservation programs, and programs that treat or manage agricultural drainage water for reuse or instream water quality benefits.

(c) The department shall list the projects that are proposed to be funded from the subaccount.

79205.10. For purposes of prioritizing eligible programs or projects for funding under this article, the department shall give priority to programs or projects that meet one or more of the following requirements:

(a) Can be completed expeditiously and thereby provide near term benefits and more immediate mitigation of urgent problems related to water supply and water quality.

(b) Implements actions to improve water quality and protect water level conditions in San Luis Reservoir.

(c) Includes public-private partnerships or cost sharing arrangements that maximize public benefits.

(d) Sponsored by a public agency with water supplies that are being or would be impacted to a greater degree by delta-related water supply shortages and water quality degradation.

79205.12. The state, to the greatest extent possible, shall seek matching federal funds to implement this article.

79205.14. Funds available from the subaccount shall be available for all phases of project development including, but not limited to, project administration, permitting and environmental compliance, feasibility studies, and construction.

79205.16. Not more than 5 percent of the total amount deposited in the subaccount may be used to pay costs incurred in connection with the administration of this article.

CHAPTER 10. FISCAL PROVISIONS

79210. Bonds in the total amount of one billion nine hundred seventy million dollars ($1,970,000,000), not including the amount of any refunding bonds issued in accordance with Section 79219, or so much thereof as is necessary, may be issued and sold to provide a fund to be used for carrying out the purposes expressed in this division and to be used to reimburse the General Obligation Bond Expense Revolving Fund pursuant to Section 16724.5 of the Government Code. The bonds, when sold, shall be and constitute a valid and binding obligation of the State of California, and the full faith and credit of the State of California is hereby pledged for the punctual payment of the principal of, and interest on, the bonds as the principal and interest become due and payable.

79211. (a) The bonds authorized by this division shall be prepared, executed, issued, sold, paid, and redeemed as provided in the State General Obligation Bond Law (Chapter 4 (commencing

with Section 16720) of Part 3 of Division 4 of Title 2 of the Government Code), except Section 16727, and all of the provisions of that law apply to the bonds and to this division and are hereby incorporated in this division as though set forth in full in this division.

(b) For purposes of the State General Obligation Bond Law, each state agency that administers an appropriation of the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund is designated the "board."

79212. Solely for the purpose of authorizing the issuance and sale, pursuant to the State General Obligation Bond Law, of the bonds authorized by this division, the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Finance Committee is hereby created. For purposes of this division, the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Finance Committee is the "committee" as that term is used in the State General Obligation Bond Law. The committee consists of the Treasurer, the Controller, and the Director of Finance, or their designated representatives. A majority of the committee may act for the committee.

79213. The committee shall determine whether or not it is necessary or desirable to issue bonds authorized pursuant to this division in order to carry out the actions specified in this division and, if so, the amount of bonds to be issued and sold. Successive issues of bonds may be authorized and sold to carry out those actions progressively, and it is not necessary that all of the bonds authorized to be issued be sold at any one time.

79214. There shall be collected each year and in the same manner and at the same time as other state revenue is collected, in addition to the ordinary revenues of the state, a sum in an amount required to pay the principal of, and interest on, the bonds each year. It is the duty of all officers charged by law with any duty in regard to the collection of the revenue to do and perform each and every act that is necessary to collect that additional sum.

79215. Notwithstanding Section 13340 of the Government Code, there is hereby appropriated from the General Fund in the State Treasury, for the purposes of this division, an amount that will equal the total of the following:

(a) The sum annually necessary to pay the principal of, and interest on, bonds issued and sold pursuant to this division, as the principal and interest become due and payable.

(b) The sum necessary to carry out Section 79216, appropriated without regard to fiscal years.

79216. For the purposes of carrying out this division, the Director of Finance may authorize the withdrawal from the General Fund of an amount not to exceed the amount of the unsold bonds that have been authorized by the committee to be sold for the purpose of carrying out this division. Any amount withdrawn shall be deposited

in the fund. Any money made available under this section shall be returned to the General Fund, plus an amount equal to the interest that the money would have earned in the Pooled Money Investment Account, from proceeds received from the sale of bonds for the purpose of carrying out this division.

79217. All money deposited in the fund that is derived from premium and accrued interest on bonds sold shall be reserved in the fund and shall be available for transfer to the General Fund as a credit to expenditures for bond interest.

79218. The agency that administers an appropriation of the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund may request the Pooled Money Investment Board to make a loan from the Pooled Money Investment Account, in accordance with Section 16312 of the Government Code, for the purpose of carrying out this division. The amount of the request shall not exceed the amount of the unsold bonds that the committee, by resolution, has authorized to be sold for the purpose of carrying out this division. The requesting agency shall execute any documents required by the Pooled Money Investment Board to obtain and repay the loan. Any amounts loaned shall be deposited in the fund to be allocated by the requesting agency in accordance with this division.

79219. The bonds may be refunded in accordance with Article 6 (commencing with Section 16780) of Chapter 4 of Part 3 of Division 4 of Title 2 of the Government Code, which is a part of the State General Obligation Bond Law. Approval by the voters of the state for the issuance of the bonds described in this division includes the approval of the issuance of any other bonds issued to refund any bonds originally issued under this division or any previously issued refunding bonds.

79220. Notwithstanding any provision of this division or the State General Obligation Bond Law, if the Treasurer sells bonds pursuant to this division that include a bond counsel opinion to the effect that the interest on the bonds is excluded from gross income for federal tax purposes, subject to designated conditions, the Treasurer may maintain separate accounts for the investment of bond proceeds and for the investment earnings on those proceeds. The Treasurer may use or direct the use of those proceeds or earnings to pay any rebate, penalty, or other payment required under federal law or to take any other action with respect to the investment and use of those bond proceeds required or desirable under federal law to maintain the tax-exempt status of those bonds and to obtain any other advantage under federal law on behalf of the funds of that state.

79221. The Legislature hereby finds and declares that, inasmuch as the proceeds from the sale of bonds authorized by this division are not "proceeds of taxes" as that term is used in Article XIII B of the California Constitution, the disbursement of these proceeds is not subject to the limitations imposed by that article.

SEC. 1.5. Section 1812.6 is added to the Water Code, to read:

1812.6. (a) On or before October 15, 1999, the Imperial Irrigation District, the Coachella Valley Water District, and the Metropolitan Water District of Southern California shall sign and adopt a quantification agreement regarding their respective Colorado River entitlements. The quantification agreement shall secure the approval of the Metropolitan Water District of Southern California and the Coachella Valley Water District for a transfer for the benefit of the San Diego County Water Authority of up to 200,000 acre-feet of water under the exchange agreement between the San Diego County Water District and the Metropolitan Water District of Southern California dated November 10, 1998. The quantification agreement shall be consistent with federal and state law.

(b) If by October 15, 1999, the quantification agreement described in subdivision (a) is not signed by all three districts listed in subdivision (a), the Governor or his sole designee shall promulgate a quantification settlement by January 1, 2000, and impose that settlement on the Imperial Irrigation District, the Coachella Valley Water District, and the Metropolitan Water District of Southern California. The quantification settlement shall meet the requirement of subdivision (a). The Governor, or his designee shall insure that any quantification agreement or settlement, whether imposed by the Governor pursuant to this subdivision or agreed to among the Imperial Irrigation District, the Coachella Valley Water District, the Metropolitan Water District of Southern California and any other parties, shall not limit the right or obligation of the State of California, or the right of any person, to enforce the provisions of the California Constitution and conforming state statutes and regulations.

(c) This section shall remain in effect only until January 1, 2001, and as of that date is repealed, unless a later enacted statute, that is enacted before January 1, 2001, deletes or extends that date.

SEC. 2. Section 13480 of the Water Code is amended to read:

13480. (a) Moneys in the fund shall be used only for the permissible purposes allowed by the federal act, including providing financial assistance for the following purposes:

(1) The construction of publicly owned treatment works, as defined by Section 212 of the federal act (33 U.S.C.A. Sec. 1292), by any municipality.

(2) Implementation of a management program pursuant to Section 319 of the federal act (33 U.S.C.A. Sec. 1329).

(3) Development and implementation of a conservation and management plan under Section 320 of the federal act (33 U.S.C.A. Sec. 1330).

(4) Financial assistance, other than a loan, toward the nonfederal share of costs of any grant-funded treatment works project, but only if that assistance is necessary to permit the project to proceed.

(b) Consistent with expenditure for authorized purposes, moneys in the fund may be used for the following purposes:

(1) Loans that meet all of the following requirements:

(A) Are made at or below market interest rates.

(B) Require annual payments of principal and any interest, with repayment commencing not later than one year after completion of the project for which the loan is made and full amortization not later than 20 years after project completion.

(C) Require the loan recipient to establish an acceptable dedicated source of revenue for repayment of any loan.

(D) (i) Contain other terms and conditions required by the board or the federal act or applicable rules, regulations, guidelines, and policies. To the extent permitted by federal law, the interest rate shall be set at a rate equal to 50 percent of the interest rate paid by the state on the most recent sale of state general obligation bonds and the interest rate shall be computed according to the true interest cost method. If the interest rate so determined is not a multiple of one-tenth of 1 percent, the interest rate shall be set at the multiple of one-tenth of 1 percent next above the interest rate so determined. Any loan from the fund used to finance costs of facilities planning, or the preparation of plans, specifications, or estimates for construction of publicly owned treatment works shall comply with Section 603(e) of the federal act (33 U.S.C.A. Sec. 1383(e)).

(ii) Notwithstanding clause (i), if the loan applicant is a municipality, an applicant for a loan for the implementation of a management program pursuant to Section 319 of the Clean Water Act (33 U.S.C. Sec. 1329), or an applicant for a loan for nonpoint source or estuary enhancement pursuant to Section 320 of the Clean Water Act (33 U.S.C. Sec. 1330), and the applicant provides matching funds, the interest rate on the loan shall be 0 percent. A loan recipient that returns to the fund an amount of money equal to 20 percent of the remaining unpaid federal balance of an existing loan shall have the remaining unpaid loan balance refinanced at a rate of 0 percent over the time remaining in the original loan contract.

(2) To buy or refinance the debt obligations of municipalities within the state at or below market rates if those debt obligations were incurred after March 7, 1985.

(3) To guarantee, or purchase insurance for, local obligations where that action would improve credit market access or reduce interest rates.

(4) As a source of revenue or security for the payment of principal and interest on revenue or general obligation bonds issued by the state, if the proceeds of the sale of those bonds will be deposited in the fund.

(5) To establish loan guarantees for similar revolving funds established by municipalities.

(6) To earn interest.

(7) For payment of the reasonable costs of administering the fund and conducting activities under Subchapter VI (commencing with Section 601) of the federal act (33 U.S.C.A. Sec. 1381 et seq.). Those costs shall not exceed 4 percent of all federal contributions to the fund, except that if permitted by federal and state law, interest repayments into the fund and other moneys in the fund may be used to defray additional administrative and activity costs to the extent permitted by the federal government and approved by the Legislature in the Budget Act.

(8) For financial assistance toward the nonfederal share of the costs of grant-funded treatment works projects to the extent permitted by the federal act.

SEC. 3. Section 14058 of the Water Code is amended to read:

14058. (a) The sum of thirty million dollars ($30,000,000) of the money in the fund shall be deposited in the Water Reclamation Account and, notwithstanding Section 13340 of the Government Code, is hereby continuously appropriated to the board for the purposes of this section.

(b) The board may enter into contracts with local public agencies having authority to construct, operate, and maintain water reclamation projects, for loans to aid in the design and construction of eligible water reclamation projects. The board may loan up to 100 percent of the total eligible cost of design and construction of an eligible reclamation project.

(c) Any contract for an eligible water reclamation project entered into pursuant to this section may include such provisions as determined by the board and shall include both of the following provisions:

(1) An estimate of the reasonable cost of the eligible water reclamation project.

(2) An agreement by the local public agency to proceed expeditiously with, and complete, the eligible water reclamation project; commence operation of the project in accordance with applicable provisions of law, and provide for the payment of the local public agency's share of the cost of the project, including principal and interest on any state loan made pursuant to this section.

(d) Loan contracts may not provide for a moratorium on payments of principal or interest.

(e) Any loans made from the fund may be for a period of up to 20 years. The interest rate for the loans shall be set at a rate equal to 50 percent of the interest rate paid by the state on the most recent sale of state general obligation bonds, with that rate to be computed according to the true interest cost method. When the interest rate so determined is not a multiple of one-tenth of 1 percent, the interest rate shall be set at the next higher multiple of one-tenth of 1 percent.

(f) All money repaid to the state pursuant to any contract executed under this chapter shall be deposited in the Water

Recycling Subaccount in the Clean Water and Water Recycling Account in the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund created by Section 79136, for the purposes set forth in Article 4 (commencing with Section 79135) of Chapter 7 of Division 26.

SEC. 4. Section 78621 of the Water Code is amended to read:

78621. (a) (1) There is hereby created in the account the Water Recycling Subaccount. The sum of sixty million dollars ($60,000,000) is hereby transferred from the account to the subaccount for the purpose of implementing this article.

(2) All money repaid to the state pursuant to any contract executed under the Clean Water and Water Reclamation Bond Law of 1988 (Chapter 17 (commencing with Section 14050) of Division 7) shall be deposited in the Water Recycling Subaccount in the Clean Water and Water Recycling Account in the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund created by Section 79136, for the purposes set forth in Article 4 (commencing with Section 79135) of Chapter 7 of Division 26.

(b) Notwithstanding Section 13340 of the Government Code, the money in the subaccount is hereby continuously appropriated, without regard to fiscal years, to the board for loans to public agencies to construct, operate, and maintain eligible recycling projects, for loans to aid in the design and construction of eligible recycling projects, for grants in accordance with Section 78628, and for the purposes described in Section 78629 and subdivision (a) of Section 78630.

SEC. 5. Section 78626 of the Water Code is repealed.

SEC. 6. Section 78626 is added to the Water Code, to read:

78626. Unallocated funds remaining in the subaccount on March 8, 2000, and any funds deposited into the subaccount after that date, shall be transferred to, and all money repaid to the state pursuant to any loan contract executed under this article shall be deposited in, the Water Recycling Subaccount in the Clean Water and Water Recycling Account in the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund for the purposes set forth in Section 79140.

SEC. 7. Section 78648.12 of the Water Code is repealed.

SEC. 8. Section 78648.12 is added to the Water Code, to read:

78648.12. Unallocated funds remaining in the subaccount on March 8, 2000 and any funds deposited into the subaccount after that date, shall be transferred to, and all money repaid to the state pursuant to any loan contract executed under this article shall be deposited in, the Seawater Intrusion Control Subaccount in the Clean Water and Water Recycling Account in the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund for the purposes set forth in Article 6 (commencing with Section 79149) of Chapter 7 of Division 26.

SEC. 9. Section 78675 of the Water Code is repealed.

SEC. 10. Section 78675 is added to the Water Code, to read:

78675. Unallocated funds remaining in the subaccount on March 8, 2000, shall be transferred to, and all money repaid to the state pursuant to any loan contract executed under this article shall be deposited in, the Water Conservation Account in the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Fund for the purposes of entering into additional loans under Article 3 (commencing with Section 79157) and Article 4 (commencing with Section 79161) of Chapter 8 of Division 26.

SEC. 11. Sections 1, 3, 4, 5, 6, 7, 8, 9, and 10 of this act shall become effective upon the approval by the voters of the Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Act, as set forth in Section 1 of this act.

SEC. 12. Sections 1, 3, 4, 5, 6, 7, 8, 9, and 10 of this act shall be submitted to the voters at the March 7, 2000, statewide direct primary election in accordance with provisions of the Government Code and the Elections Code governing the submission of statewide measures to the voters.

SEC. 13. (a) Notwithstanding any other provision of law, all ballots at the election shall have printed thereon and in a square thereof, the words: "Safe Drinking Water, Clean Water, Watershed Protection, and Flood Protection Bond Act" and in the same square under those words, the following in 8-point type: "This act provides for a bond issue of one billion nine hundred seventy million dollars ($1,970,000,000) to provide funds for a safe drinking water, water quality, flood protection, and water reliability program." Opposite the square, there shall be left spaces in which the voters may place a cross in the manner required by law to indicate whether they vote for or against the act.

(b) Notwithstanding Sections 13247 and 13281 of the Elections Code, the language in subdivision (a) shall be the only language included in the ballot label for the condensed statement of the ballot title, and the Attorney General shall not supplement, subtract from, or revise that language, except that the Attorney General may include the financial impact summary prepared pursuant to Section 9087 of the Elections Code and Section 88003 of the Government Code. The ballot label is the condensed statement of the ballot title and the financial impact summary.

(c) Where voting in the election is done by means of voting machines used pursuant to law in a manner that carries out the intent of this section, the use of the voting machines and the expression of the voters' choice by means thereof are in compliance with this section.

SEC. 14. This act is an urgency statute necessary for the immediate preservation of the public peace, health, or safety within

the meaning of Article IV of the Constitution and shall go into immediate effect. The facts constituting the necessity are:

In order to remedy critical drinking water, water quality, flood protection, and water supply problems, thereby protecting public health and safety, it is necessary that this act take effect immediately.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 17

SUBJECT: Briefing of SB 709.

Winston H. Hickox
Secretary for Environmental Protection

State Water Resources Control Board

Executive Office

Mailing Address: P.O. Box 100 • Sacramento, California 95812-0100
FAX (916) 657-0932 • Internet Address: http://www.swrcb.ca.gov

Gray Davis
Governor

DEC 01 1999

Dear NPDES Permittees:

THE CLEAN WATER ENFORCEMENT AND POLLUTION PREVENTION ACT OF 1999 (SB 709)

In 1999, the Legislature passed and Governor Davis signed SB 709, which goes into effect on January 1, 2000. This act is entitled the Clean Water Enforcement and Pollution Prevention Act of 1999. This act may have a significant effect on NPDES permittees because it requires the Regional Water Quality Control Boards (RWQCBs) or the State Water Resources Control Board (SWRCB) to impose mandatory minimum penalties for certain violations. In addition, the act adds several provisions to California Water Code, Division 7 that include:

1. A new requirement authorizing RWQCBs and Publicly Owned Treatment Works (POTWs) to require NPDES permittees and industrial users (i.e., indirect dischargers) to prepare and implement pollution prevention plans;

2. A new requirement that NPDES permits must include effluent limitations under certain circumstances;

3. A new requirement that the RWQCBs and courts recover economic benefit in assessing civil liability; and

4. New requirements for the SWRCB and the RWQCBs for reporting information to the Legislature.

The SWRCB wants all permittees to be aware of this new legislation and encourages compliance to minimize exposure to the new mandatory penalties. Public documents related to implementation of the new act will be posted on the SWRCB's website at www.swrcb.ca.gov. You may also obtain a copy of available public documents by calling the SWRCB at the number below. The SWRCB's Office of Chief Counsel has prepared a legal analysis with a summary of the new act and questions and answers concerning the act. The SWRCB is required by the act to provide a model format for preparation of pollution prevention plans. Early in 2000, the SWRCB will provide to the public for comment a draft format to be used by dischargers in preparing pollution prevention plans and will consider adoption at a regularly scheduled workshop and meeting.

If you have questions concerning the act or wish to obtain documents, please call the SWRCB at (916) 653-9456.

Sincerely,

Walt Pettit
Executive Director

SUBJECT: THE CLEAN WATER ENFORCEMENT AND POLLUTION PREVENTION ACT OF 1999 ("SB 709"): SUMMARY AND QUESTIONS AND ANSWERS

SUMMARY

In 1999, the Legislature passed and Governor Davis signed SB 709, which goes into effect on January 1, 2000. This act is entitled the Clean Water Enforcement and Pollution Prevention Act of 1999. The act adds several provisions to California Water Code (CWC) Division 7 that address (1) pollution prevention plans; (2) requirement to prescribe effluent limits; (3) recovery of economic benefit in assessing civil liability; (4) mandatory minimum penalties; and (5) reporting to the legislature. Below is a summary of and a legal analysis in the form of Questions and Answers (Qs&As) on the act.

Pollution Prevention Plans. The new CWC section 13263.3 authorizes the State Water Resources Control Board (State Board), a Regional Water Quality Control Board (Regional Board), or a Publicly Owned Treatment Works (POTW) to require a discharger to complete and implement a pollution prevention plan (PPP). A POTW may require industrial dischargers to prepare and implement a PPP and the State Board or a Regional Board may require a POTW and industrial users to prepare and implement a PPP. This authority is discretionary. The legislation defines what constitutes pollution prevention and specifies what is required to be included in the PPPs. The failure to prepare or implement a PPP may subject the discharger to civil liability and penalties.

Mandatory Minimum Penalties. The new CWC section 13385(h), (i), and (j) provide for mandatory minimum penalties of $3,000 per violation as described below. There are two types of mandatory penalties, first time serious violations and ongoing violations.

A. First Time Serious Violations - A mandatory penalty of $3,000 shall be assessed for the first serious violation in any six-month period. In lieu of assessing this penalty, the State or Regional Board may allow the discharger to use the amount to complete a PPP or for a supplemental environmental project.

B. On-going Violations - A mandatory penalty of $3,000 per violation shall be assessed if either of the following occurs in a six-month period:

1. The person commits two or more serious violations. Since a penalty has already been assessed for the first serious violation, this penalty assessment does not count the first violation, and begins with the second violation.

2. The person commits four or more of the following violations. Penalty assessment does not count the first three violations, and begins with the fourth violation. These violations are:

   a. Exceedance of a WDR effluent limitation.

   b. Failure to file a report pursuant to Section 13260.

   c. Filing an incomplete report pursuant to Section 13260.

   d. Exceedance of a toxicity discharge limitation where the waste discharge requirements do not contain pollutant-specific effluent limitations for toxic pollutants.

Just like an ACL, funds collected pursuant to these penalties shall be deposited in the State Water Pollution Cleanup and Abatement Account.

Recovery of Economic Benefit. Language was added to CWC section 13385(e) requiring that "at a minimum, liability shall be assessed at a level that recovers the economic benefits, if any, derived from the acts that constitute the violation." Previously, economic benefit was just one of several factors to be considered in determining the amount of administrative civil liability (ACL); now recovery of economic benefit as part of an ACL is mandatory. Recovery of economic benefit is not required when assessing mandatory penalties under the new CWC section 13385(h) and (i) only. The Economics Unit of the State Board's Office of Statewide Consistency is preparing guidance on how to determine the amount of an ACL, including how to determine economic benefit.

Effluent Limitations. The new CWC section 13263.6 requires the Regional Board to prescribe effluent limitations as part of the waste discharge requirements (WDRs) of a POTW for all substances that the most recent toxic chemical release data reported to the state emergency

response commission pursuant to Section 313 of the Emergency Planning and Community Right to Know Act of 1986 (42 U.S.C. Sec. 11023) indicate as discharged into the POTW, for which the State or Regional Board has:

A. Established numeric water quality objectives, and

B. Has determined that the discharge is or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to, an excursion above any numeric water quality objective.

QUESTIONS AND ANSWERS

I. Pollution Prevention Plans (CWC section 13263.3)

1. Q. **Are all discharges, including those subject to NPDES permits and non-NPDES waste discharge requirements, subject to the pollution prevention plan (PPP) provisions added to the CWC by the act?**

   A. No. The pollution prevention provisions apply only to dischargers subject to NPDES permits and to industrial users that discharge to publicly owned treatment works (POTWs), i.e., subject to the federal pretreatment program. They do not apply to non-NPDES waste discharges. The State and Regional Boards and POTWs may require PPPs of industrial users. The State and Regional Boards may require PPPs of POTWs.

2. Q. **What is a PPP?**

   A. A PPP is a plan that identifies actions that would cause a net reduction in the use or generation of a hazardous substance or pollutant that is discharged into water.

3. Q. **Is the authority to require preparation of a PPP mandatory?**

   A. No. The State Board, a Regional Board, or a POTW may require the discharger to prepare a PPP in the circumstances listed in CWC section 13263.3(d), including chronic violators, significant contributors to creation of a toxic hot spot, or where necessary to achieve a water quality objective.

4. Q. **What is a "chronic violator" for purposes of requiring a PPP?**

   A. The State Board describes the term "chronic violator" and "chronic violation" in the Guidance to Implement the Water Quality Enforcement Policy. For major NPDES permittees, as defined in 40 CFR Section 122.2 (July 1, 1994), the enforcement criterion for chronic violations is exceedance of the monthly average effluent limit for any pollutant in any four months in a six month period, or exceedance of the monthly average effluent limitation for any pollutant in the same season for two years in a row. For purposes of CWC section 13263.3, the term "chronic violator" would apply to all dischargers subject to section 13263.3, not just to major NPDES permittees. See Q&A1 that addresses the application of section 13263.3. In other words, if a discharger subject to CWC section 13263.3 exceeds a monthly average effluent limit for any pollutant in any four months in a six month period or exceeds the monthly average effluent limitation for any

pollutant in the same season for two years in a row, it would be considered a "chronic violator".

5. Q. **How will the State or Regional Board or a POTW determine if a discharger significantly contributes, or has the potential to significantly contribute, to the creation of a toxic hotspot?**

   A. The State Water Board adopted Resolution 99-065, a Water Quality Control Policy that sets forth the Consolidated Toxic Hot Spots Cleanup Plan. The Plan provides guidance to the Regional Boards for implementing the requirements of CWC section 13390 et seq. (Chapter 5.6. Bay Protection and Toxic Cleanup.) The Plan provides guidance for the Regional Boards in determining whether discharges contribute or potentially contribute to the creation and maintenance of a toxic hotspot. In determining whether it is appropriate to require preparation of a PPP, the Regional Boards should apply the Consolidated Toxic Hot Spots Cleanup Plan.

6. Q. **How does the State Board, a Regional Board, or a POTW determine that pollution prevention is necessary to achieve a water quality objective as stated in CWC section 13262.3(d)(1)(C)?**

   A. The provision provides considerable discretion to the State and Regional Boards and POTWs in making the determination that pollution prevention is necessary to achieve a water quality objective. Some examples could include where an industrial user contributes significant pollutant loading to a POTW that may be causing a POTW to exceed a water quality objective, where the discharge is to a Clean Water Act section 303(d) listed water body, where an industrial user is preparing a pretreatment plan, or where a pollutant discharge is causing an upset at the POTW.

7. Q. **What is required to be included in a PPP?**

   A. The State Board or a Regional Board may require a POTW to prepare a PPP and the State Board, a Regional Board, or a POTW may require a discharger other than a POTW to prepare a PPP. The PPP requirements for POTWs are different than the PPP requirements for other dischargers. A PPP prepared by a POTW must address all of the issues specified in CWC section 13263.3(d)(3). A PPP prepared by a discharger other than a POTW must address all of the issues specified in CWC section 13263.3(d)(2).

8. **Q. Is there a special form used in preparing a PPP?**

   A. Yes. The State Board is required to adopt a sample format that will be provided to the dischargers for completing the PPP. Early next year the State Board will adopt the sample format in a public meeting after an opportunity for public review and comment, including Regional Board review. The use of the sample format is not required, but is just a sample to assist dischargers in preparing PPPs. Dischargers may choose their own format so long as they address all the issues required under CWC section 13263.3.

9. **Q. What process is required by CWC section 13263.3 that the State Board, the Regional Boards, and the POTWs must follow in requiring preparation or implementation of or compliance with a PPP?**

   A. CWC section 13263.3(d) authorizes the State or Regional Board or POTW to require a discharger to complete and implement a PPP. The Regional Board may implement this authority by making preparation of a PPP a requirement of the NPDES permit or through an enforcement order. The Regional Board may issue an order pursuant to CWC section 13267, 13300, 13301, or 13304 to a discharger requiring preparation of and implementation of a PPP. The Regional Board may also require preparation of a PPP in lieu of a mandatory penalty for a serious violation pursuant to CWC section 13385(h). A POTW would use its enforcement authority granted by the act (SB709) and its existing pretreatment authority to require preparation and implementation of a PPP. The Office of Chief Counsel has prepared model language for use in permits and orders.

   After the discharger prepares the PPP, the State Board, Regional Board, or POTW must make the PPP available for public review. Trade secret information is exempt from public disclosure and shall be included in a separate appendix not available to the public. The PPP, except for the trade secret information, is a public record that must be provided to the public upon request, following the normal procedure for providing public records. CWC section 13263.3(e) requires the State Board, a Regional Board, or a POTW to provide an opportunity for public comment prior to requiring the discharger to comply with a PPP developed by the discharger. The State Board, a Regional Board, or the POTW may provide that opportunity for comment by holding a public meeting or hearing and/or by providing the public an opportunity to submit comments in writing.

10. **Q. Is the PPP considered a part of the NPDES permit?**

    A. CWC section 13263.3(k) states that the "state board, a regional board, or POTW may not include a pollution prevention plan in any waste discharger requirements

or other permit issued by that agency." In other words, the Regional Board may not incorporate by reference a PPP into an NPDES permit, or otherwise include a PPP in an NPDES permit, but it may make preparation of a PPP a condition of an NPDES permit.

11. Q. **What enforcement actions can be taken against the discharger for failure to prepare or implement a PPP?**

A. The State Board and the Regional Boards may assess administrative civil liability pursuant to CWC section 13385 for failure to complete a PPP, for submitting an inadequate PPP, or for not implementing a PPP, unless a POTW has assessed penalties for the same action. Failure to prepare or implement a PPP is not subject to the mandatory minimum penalty provisions. The Regional Boards should assess liability under CWC section 13263.3(g) in the same way that Regional Boards assess administrative civil liability for other violations of NPDES permits. POTWs may assess civil penalties against the dischargers as specified in CWC section 13263.3(h) or other local legal authority, such as a pretreatment ordinance.

12. Q. **Is the discharger still subject to enforcement actions for violations of its NPDES permit or pretreatment requirements even if it has implemented a PPP?**

A. Yes. The PPP does not take the place of the NPDES permit requirements. The discharger must continue to comply with its NPDES permit even if it is required to prepare and implement a PPP and regardless of the effectiveness of the PPP.

13. Q. **May a discharger change its PPP?**

A. Yes. A discharger may change its PPP, including withdrawing from a measure included in the PPP for several reasons specified in CWC section 13263.3(i), if approved by the State Board, a Regional Board, or a POTW.

14. Q. **Must the State Board, a Regional Board, or a POTW approve a PPP?**

A. No. The State Board, the Regional Board, or the POTW may require preparation of a PPP, but is not required to approve the PPP or assure that it will in fact reduce pollution.

15. Q. **If a Regional Board has previously required a discharger to follow a pollution prevention program, is such a program precluded by the new CWC section 13263.3 concerning PPPs?**

A. No. The Regional Board has authority pursuant to CWC section 13267 to require dischargers to prepare reports and may require other actions to comply with water quality standards. The new provisions do not preclude the Regional Boards from requiring dischargers to prepare technical reports under CWC section 13267 that may include a report similar to a PPP as defined in the new act.

16. Q. **Does the new CWC section 13263.3 affect the requirement to prepare pollution prevention plans required by stormwater NPDES permits?**

A. No. CWC section 13263.3 addresses preparation of a PPP and specifies what must be addressed in a PPP. It does not preempt or preclude the federal requirement to prepare stormwater pollution prevention plans pursuant to individual or general NPDES stormwater permits.

II. Mandatory Minimum Penalties[1] (CWC section 13385(h),(i))

1. Q. **Does the State Board or the Regional Board assess mandatory minimum penalties?**

A. Section 13385 authorizes both the State Board and the Regional Boards to assess administrative civil liability and mandatory penalties. Typically, however, the Regional Board would initially assess the liability or penalties, but such assessments are subject to State Board review through the petition process.

2. Q. **Are all discharges, including those subject to NPDES permits and non-NPDES waste discharge requirements, subject to the mandatory penalty?**

A. No. The mandatory penalty provisions were added to CWC section 13385, which applies only to surface water discharges subject to the NPDES requirements, including individual NPDES permits and discharges subject to general stormwater NPDES permits and other general NPDES permits. Indirect dischargers (those who discharge to a POTW) are not required to obtain NPDES permits for their discharge into a POTW and, therefore, are not typically subject to enforcement actions under CWC section 13385. If such dischargers discharge directly to

[1] For purposes of this Question and Answer (Qs&As) document, the Qs&As will refer to the new mandatory minimum penalty provisions (section 13385(h), (i), and (j)) as the "mandatory penalty" provisions and the existing civil liability provisions (section 13385(a)-(e)) as "discretionary liability" or "liability" provisions.

surface waters without an NPDES permit or in violation of an NPDES permit, they would be subject to CWC section 13385.

3. Q. **Are all violations of an NPDES permit subject to a mandatory minimum penalty?**

   A. No. CWC section 13385(h) and (i) specify the types of violations that are subject to mandatory penalties. If a discharger causes violations, as specified in the new provisions, the penalty is mandatory and must be assessed by the State or Regional Boards.

4. Q. **Both CWC section 13385(h) and (i) mandate the penalty if the violations occur during a six-month period. How is the six-month period determined?**

   A. The act does not define the term "six-month period". The act goes into effect on January 1, 2000, and is not retroactive. The State and Regional Boards must begin applying the act beginning January 1, 2000, and not count violations that precede that date. To calculate violations under the act, the six-month period starts with the first violation in any category subject to CWC section 13385(h) or (i) and runs for six months following the first violation in any category subject to CWC section 13385(h) and (i). For example for violations of CWC section 13385(h), if a discharger causes a serious violation in February 2000 that would begin the six-month period for calculating penalties for serious violations. At the end of six months, the Regional Board must determine how many serious violations occurred during that period and assess the mandatory penalty for those violations. For violations of CWC section 13385(i), if the discharger violates an effluent limitation in March that would begin an independent six-month period for calculating penalties for effluent limitation violations. At the end of six months, the Regional Board must determine how many effluent limitation violations occurred during that period and assess the mandatory penalty, if any. Once the six-month period in which a mandatory penalty was assessed ends, a new six-month period would begin for that discharger when another violation occurs. The six-month period applies independently to violations in separate categories in CWC section 13385(h) and (i).

5. Q. **CWC section 13385(h) now requires the State or Regional Board to assess a mandatory penalty of $3,000 for the first "serious violation"? How is "serious violation" defined?**

   A. CWC section 13385(h)(2) defines a "serious violation" to mean any waste discharge that exceeds the effluent limitation for a Group II by 20 percent or more, or a Group I pollutant by 40 percent or more. Appendix A of Title 40 Code

of Federal Regulations, section 123.45 specifies the Group I and II pollutants. The NPDES permit must include an effluent limitation for a Group I or II pollutant for the mandatory penalty to apply. Constituents that are not Group I or Group II pollutants may be subject to effluent limitations. In such case, violations of those effluent limitations would be addressed by CWC section 13385(i)(2)(A) not (h).

6. Q. **CWC section 13385(h) defines "serious violation" as a violation that exceeds certain effluent limitations? Does the term "effluent limitation" in 13385(h) refer to numeric effluent limitations, or could it also include narrative effluent limitations?**

A. The term "effluent limitation" as used in section 13385(h) does not distinguish between numeric and narrative effluent limitations. In the case of narrative effluent limitations, however, mandatory penalties could not be assessed because it is not possible to determine whether a discharge has exceeded a narrative effluent limitation by 20 percent or 40 percent. However, note that even if the violation is not subject to a mandatory penalty it may still be subject to discretionary administrative civil liability.

7. Q. **How is the mandatory penalty calculated for violations described in CWC section 13385(i)(1), which requires a mandatory penalty where there are two or more serious violations in a six-month period?**

A. CWC section 13385(h) requires a $3,000 penalty for the first serious violation in a six month period and CWC section 13385(i)(1) requires $3,000 for each violation where there are two or more serious violations in a six month period not counting the first violation. For example, if a discharger committed four serious violations in a six-month period, the discharger would be subject to a mandatory minimum penalty of $12,000. The $12,000 would include $3,000 for the first serious violation under CWC section 13385(h) and $9,000 for the additional three serious violations under CWC section 13385(i)(1).

8. Q. **How is the mandatory penalty calculated for violations described in CWC section 13385(i)(2)?**

A. CWC section 13385(i)(2) requires the Regional Board to assess a mandatory minimum penalty of $3,000 per violation, not counting the first three violations, if the discharger does any of the following four or more times in any six-month period: (1) exceed a waste discharge requirement effluent limitation, (2) fails to file a report pursuant to CWC section 13260, (3) files an incomplete report pursuant to CWC section 13260, or (4) exceeds a toxicity discharge limitation

where the waste discharge requirements do not contain pollutant-specific effluent limitations for toxic pollutants.

In determining the amount of the penalty, the Regional Board would assess $3,000 for each violation, not counting the first three violations, where the discharger had four or more violations in any of the four categories. For example, if a discharger violated any non-toxic effluent limitation 10 times in a six-month period and a toxicity discharge limitation four times in that same six-month period, the penalty would be $24,000 ($21,000 for the seven violations that exceeded three violations for the effluent limitation and $3,000 for the one violation that exceeded three violations for the toxicity limitation). If the same discharger filed one incomplete report under CWC section 13260 during the same six-month period, that violation would not be subject to a mandatory penalty because it did not occur four or more times in the six month period. A mandatory penalty is not assessed unless a discharger causes four or more violations within one category of CWC section 13385(i)(2).

CWC section 13385(i)(2)(D) only applies where the permit does not contain pollutant-specific effluent limitations for toxic pollutants. For example, in the above example, if the permit contains a pollutant-specific effluent limitation for a toxic pollutant, the additional $3,000 could not be assessed for the violation of the toxicity discharge limitation.

9. Q. **How does the State or Regional Board determine whether there is a violation under CWC section 13385(h) or (i) if the effluent limitation is lower than the minimum level (ML) as described in State Board plans or policies?**

A. A mandatory penalty should only be imposed where the State or Regional Board can document a measurable violation consistent with federal regulations and State Board plans or policies addressing detection limits. In addition, violations of effluent limitation based on instantaneous maximums or hourly averages should be counted as no more than one violation per day given the difficulty in determining how many violations have occurred.

10. Q. **Should the State or Regional Board consider that a violation occurs each day beginning on the date of sampling until receipt of the sampling results?**

A. Typically, sampling data would only indicate whether there is a violation on the date the data is collected. Other evidence, however, may be used to demonstrate that violations occurred on more than one day.

11. Q. **If there is a single operational upset that results in simultaneous violations of more than one pollutant parameter, should the State or Regional Board consider that one violation or multiple violations?**

A. CWC section 13385(f) states that a single operational upset which leads to simultaneous violations of more than one pollutant parameter shall be treated as a single violation. The act (SB709) did not amend section 13385(f) and it applies to determining penalties under CWC section 13385(h) and (i). Therefore, for purposes of CWC section 13385(h) and (i) exceedances of more than one effluent limitation due to a single operational upset would be considered one violation. CWC section 13385(f) is the same provision contained in Clean Water Act section 309(c)(5), 33 U.S.C. section 1319(c)(5) and must be interpreted consistent with federal law. For purposes of that provision EPA defines "single operational upset" as:

> "an exceptional incident which causes simultaneous, unintentional, unknowing (not the result of a knowing act or omission), temporary noncompliance with more than one Clean Water Act effluent discharge pollutant parameter. Single operational upset does not include . . . noncompliance to the extent caused by improperly designed or inadequate treatment facilities. See EPA Guidance Interpreting "Single Operational Upset."

This Guidance further defines an "exceptional" incident as a "non-routine malfunctioning of an otherwise generally compliant facility."

A decision by the United State Court of Appeals for the Third Circuit interprets the "single operational upset" provision. *See Public Interest Research Group of New Jersey, Inc. et al. V. Powell Duffryn Terminals Inc.*, (1990, 3d Cir.) 913 F.2d 64. The Court considered a "single operational upset" to mean such things as upsets caused by a sudden violent storm, a bursting tank, or other exceptional event, not operational upsets caused by improperly operated or designed facilities. The Court determined that the "single operational upset" provision applies to the determination of the amount of the liability or penalty, it is not a defense to liability. The "single operational upset" defense differs from the "upset" defense provided by EPA's regulations in 40 C.F.R. section 122.41(n). That "upset" defense may be raised as an affirmative defense to liability and the discharger must meet certain requirements, including reporting the incident within 24 hours.

Merely because more than one effluent limitation is violated does not mean that a "single operational upset" occurred. The discharger has the burden of demonstrating that a "single operational upset" occurred. See *Powell Duffryn,*

913 F.2d at 76. For the purposes of determining the number of violations under CWC section 13385(h) and (i), the Regional Boards should apply EPA's Guidance in determining whether a "single operational upset" has occurred.

Additionally, the single operational upset rule applies to multiple violations of the same effluent limitation. For example, where an "exceptional" incident that meets the definition of a "single operational upset" causes an effluent limitation to be violated for 10 days, one violation would be counted for purposes of assessing a mandatory minimum penalty. Conversely, each violation would be counted where the violations stem from an incident that does not constitute a "single operational upset."

12. Q. **If the effluent limitation includes a daily maximum and a monthly average for the same pollutant are violations of each counted as separate violations for purposes of CWC section 13385(h) or (i)?**

A. Yes.

13. Q. **In determining the number of violations for purposes of CWC section 13385(h) or (i) should the State or Regional Board count one violation for each separate limitation regardless of the number of violations?**

A. Unless multiple violations are the result of a single operational upset, violations of separate effluent limitations should each be considered a violation. A violation that fits into more than one category should not be assessed a double penalty. For example, a serious violation could also be a violation of an effluent limitation, but penalties should not be assessed twice for the same violation.

14. Q. **How does the State or Regional Board determine a "violation" for purposes of CWC section 13385(i)(2)(A)?**

A. CWC section 13385(i)(2)(A) requires the assessment of a mandatory penalty of $3,000 "for each violation", not counting the first three violations, if the discharger exceeds an effluent limitation four or more times in a six-month period. For purposes of the mandatory penalty provisions, the Regional Board should determine the number of violations based on monitoring data and other evidence that the discharger has exceeded an effluent limitation. For example, if based on one or more monitoring data points in a month, the Regional Board determines that the discharger has violated a monthly average effluent limitation, the Regional Board should consider that one violation. Note, however that if the Regional Board chooses to assess discretionary administrative civil liability for violations of a monthly average it should consider such a violation of a monthly

average as 30 days of violations in order to be consistent with the Clean Water Act. The new CWC section 13385(h) and (i) requires a mandatory penalty for each violation not per day as required in CWC section 13385(c). If the permit contains an effluent limitation based on a daily maximum, but only requires weekly monitoring, the Regional Board should consider each monitoring data point that exceeds the daily maximum as a violation unless other evidence indicates that a violation has occurred on more days than the day the monitoring data was collected.

15. Q. **What constitutes an incomplete report pursuant to CWC section 13260 for purposes of determining violations subject to CWC section 13385(i)((2)(B) or (C)?**

A. CWC section 13385(i) requires a mandatory penalty only where the discharger fails to file a report under section 13260 or files an incomplete report four or more times in any six-month period. Since NPDES dischargers are required to file a report of waste discharge under CWC section 13260 only once every five years, it is unlikely that mandatory penalties would ever be imposed pursuant to CWC section 13385(i)(2)(B) or (C). It is possible, however, that after receiving a report of waste discharge, the Regional Board could find that it is incomplete four or more times in a six-month period because the discharger fails to provide needed information to complete the report. Note that failure to submit monitoring reports or submitting an incomplete monitoring reports are not subject to mandatory penalties under CWC section 13385(h) or (i).

16. Q. **What constitutes an exceedance of a "toxicity discharge limitation where the waste discharge requirements do not contain pollutant-specific effluent limitations for toxic pollutants" as stated in CWC section 13385(i)(2)(D)?**

A. NPDES permits typically contain an effluent limitation or a receiving water limitation to implement the applicable water quality control plan narrative toxicity water quality objective and contain a requirement to perform toxicity monitoring. CWC section 13385(i)(2)(D) requires that if a "whole toxicity" effluent limitation is exceeded four or more times in a six-month period, mandatory penalties must be assessed. In other words, if the monitoring results indicate toxicity four or more times in a six-month period, the mandatory penalty must be assessed, unless the permit contains pollutant-specific effluent limitations for toxic pollutants. However, if the "whole toxicity" requirement is a receiving water limitation rather than an effluent limitation, it is not subject to a mandatory penalty.

17. Q. **What is a "toxic pollutant" for purposes of CWC section 13385(i)(2)(D)?**

A. The term "toxic pollutant" is defined in the Clean Water Act section 502(13), 33 U.S. C. 1362(13). The United States Environmental Protection Agency has promulgated a list of toxic pollutants found in 40 CFR Part 302. If the NPDES permit contains an effluent limitation for any toxic pollutant on EPA's list, then mandatory penalties would not be assessed under CWC section 13385(i)(2)(D). Instead, penalties for violating pollutant-specific effluent limitations would be assessed under CWC section 13385(i)(2)(A).

18. Q. **Are violations of receiving water limitations in an NPDES permit subject to mandatory penalties?**

A. No. Receiving water limitations are not effluent limitations.

19. Q. **Do the mandatory minimum penalty provisions apply even if the Regional Board has issued a cease and desist order or other order providing a time schedule for achieving compliance with the effluent limitation that is the subject of the violations?**

A. Yes. Issuance of the penalty and the amount of the penalty is mandatory even if there is a cease and desist order or other time schedule order outside of the permit. If, however, the permit itself includes a time schedule before the effluent limitation is in effect, and/or provides for an interim limitation, an exceedance of the effluent limitation would not result in a violation subject to a mandatory penalty. If the permit itself includes interim effluent limitations, violations of those interim limitations would be subject to mandatory penalties. If a cease and desist order includes effluent limitations, violations of those effluent limitations would be subject to mandatory penalties. The Regional Board may also under some circumstances grant variances from effluent limitations; such variances would be contained in the permit and if they are effluent limitations, violations could be subject to the mandatory penalties. An effluent limitation may include a mixing zone and if so the effluent limitation applies outside of the mixing zone. In those circumstances it would not be considered a violation of the effluent limitation if it is exceeded within the mixing zone.

EPA is developing regulations (the "California Toxics Rule" (CTR)) that will establish water quality criteria for toxic pollutants for California. If the Regional Board bases effluent limitations in a permit on the CTR, the Regional Board may adopt a time schedule in the permit to achieve compliance with the effluent limitation. The State Board is also proposing to adopt an "Implementation Plan" addressing the CTR. That Plan will apply to the adoption of effluent limitations

in NPDES permits. As stated above, if the permit itself contains interim limits and/or time schedules such that violations of effluent limitations do not occur, penalties would not be assessed.

20. Q. **Are spills and overflows subject to mandatory minimum penalties under CWC section 13385(h) or (i)?**

A. If a spill or overflow results in a serious violation or any of the violations specified in CWC 13385(i), then it would be subject to a mandatory minimum penalty. Spills and overflows would most likely be subject to the requirement of CWC section 13385(f) related to upsets and would, therefore, be considered one violation. However, note that CWC section 13385(h) and (i) are mandatory penalties, but the Regional Board may also assess administrative civil liability in addition to the mandatory.

21. Q. **Who has the burden of proof, the State or Regional Board or the discharger, in determining whether the violation is subject to the mandatory minimum penalty?**

A. Violations under CWC section 13385 are subject to strict liability and the mandatory penalty provisions do not change the liability scheme. Under strict liability, the State or Regional Board must prove that there have been violations as specified in CWC section 13385(h) or (i). Once the State or Regional Board has demonstrated such violations, it becomes the discharger's burden to establish, by a preponderance of the evidence, that the amount of the penalty imposed should be less than the maximum. Since the new provisions establish statutory minimum penalties, the State or Regional Board may not assess a lessor amount. It is up to the discharger, therefore, to prove that the Regional Board incorrectly calculated the number of violations and the amount of the penalty. See *State of California v. City and County of San Francisco, et al.* (1979) 94 Cal.App.3d 522.

22. Q. **What procedure should the Regional Board use in assessing the mandatory minimum penalty?**

A. To assess mandatory minimum penalties under CWC section 13385(i) or (j), the Executive Officer would issue a "Complaint for Mandatory Penalties", which would provide the discharger the opportunity to pay the stated penalty, to request a settlement meeting with the Executive Officer, or to request a hearing before the Regional Board to challenge the penalty. In the case of the first serious violation, the discharger may be allowed to conduct a supplemental environmental project (SEP) in compliance with State Board policy or to develop a PPP in lieu of the penalty. The discharger, however, may not be allowed to conduct an SEP or PPP

in lieu of any additional serious violations in a six-month period. If the Executive Officer chooses to seek discretionary civil liability that also includes violations subject to mandatory penalties, the Executive Officer would issue a "Complaint for Administrative Civil Liability and Mandatory Penalties." The Office of Chief Counsel has prepared sample complaints.

23. Q. **Can persons aggrieved by the assessment of mandatory penalties file a petition for review with the State Board under CWC section 13320? If so, does the discharger have to pay the penalty while the petition is pending before the State Board?**

A. The discharger and other interested persons may petition the State Board to review the mandatory penalty. While the petition is pending, the discharger is not required to pay the penalty.

24. Q. **Must the Regional Board recover economic benefit in assessing a penalty under CWC section 13385(h) or (i)?**

A. No. The requirement to recover economic benefit is included within CWC section 13385(e), which only applies to assessing discretionary liability not to recovering mandatory minimum penalties. If, however, a Regional Board is seeking both mandatory minimum penalties pursuant to CWC section 13385(h) or (i) and administrative civil liability pursuant to CWC section 13385(a) through (e), it must recover at a minimum the economic benefit, if any, and the mandatory penalty amount.

25. Q. **May the Regional Board assess administrative civil liability in addition to the mandatory penalty?**

A. Yes. Where the Regional Board is required to assess a mandatory minimum penalty, it may also choose to assess a greater amount under the discretionary liability provisions. In such case, the Regional Board Executive Officer would issue a "Complaint for Administrative Civil Liability and Mandatory Penalties." In any settlement of such complaint, or after a hearing before the Regional Board, the Executive Officer or Regional Board must recover at least the mandatory penalties and the economic benefit, if any.

26. Q. **Does the assessment of a mandatory penalty preclude later enforcement by the State or Regional Board or assessment of administrative civil liability pursuant to CWC section 13385(a) through (e) for the same violation that was the subject of the mandatory penalty?**

A. No. The mandatory penalty is a minimum penalty. The State or Regional Board may also assess administrative civil liability pursuant to CWC section 13385 or take other enforcement action.

27. Q. **Are there any exceptions to the requirement to assess mandatory penalties?**

A. Yes. CWC section 13385(j) states that mandatory penalties shall not be assessed if the violations are caused by one or any combination of (1) an act of war, (2) an unanticipated, grave natural disaster or other natural phenomenon of an exceptional, inevitable, and irresistible character, the effects of which could not have been prevented or avoided by the exercise of due care or foresight, or (3) an intentional act of a third party, the effects of which could not have been prevented or avoided by the exercise of due care or foresight.

28. Q. **Are "minor violations" under CWC section 13399 subject to mandatory penalties?**

A. CWC section 13399 requires the Regional Boards to issue a "notice of comply" for violations that constitute "minor violations" as defined in that section. CWC section 13399.2(e) states that the State or Regional Board may not take any other enforcement action under Division 7 of the Water Code against a person who has a received a notice to comply and is in compliance. CWC section 13385(h) and (i) both state, however, that "notwithstanding any other provision of this division [Division 7]" the mandatory penalties apply. Therefore, even if a "minor violation" is subject to a notice to comply it also may be subject to mandatory penalties if the minor violation is also a violation of or results in a violation enumerated in CWC section 13385(h) or (i).

III. Economic Benefit (CWC section 13385(e))

Q. **CWC section 13385(e) now requires the Regional Board, State Board, or superior court, in determining the amount of civil liability for violations of an NPDES permit to, at a minimum, recover the economic benefits, if any, derived from the acts that constitute the violation. How is the economic benefit to be calculated? Will the State Board provide assistance to Regional Boards in calculating economic benefit?**

A. The Office of Statewide Consistency is preparing guidance for the Regional Boards to use in assessing administrative civil liability that will include guidance on calculating economic benefit. In general, the Regional Board staff would determine what actions could have been taken to attain compliance or avoid violations and consider such information as what the costs of those actions would have been, the interest earned by delaying compliance, and what benefit to the discharger occurred as a result of failing to comply or in delaying compliance. The Regional Board may request information from the discharger to use in determining the amount of economic benefit. The complaint for administrative civil liability should specify the basis for the economic benefit determination. It then becomes the discharger's burden to demonstrate that it had no or a lessor amount of economic benefit.

IV. Effluent Limitations (CWC section 13263.6)

1. Q. **The new CWC section 13263.6 requires the Regional Boards to include effluent limitations in NPDES permits for a POTW for (1) all substances reported in toxic chemical release data reports prepared pursuant to Section 313 of the Emergency Planning and Community Right to Know Act of 1986 (42 U.S.C. section 11023), (2) that are indicated are discharged into the POTW, (3) that the State or Regional Board has established numeric water quality objectives, and (4) the Regional Board determines that the discharge is or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to, an excursion above any numeric water quality objective.**

How does the new CWC section 13263.6(a), which requires the Regional Board to include effluent limitations in certain situations differ from existing federal NPDES regulations that require inclusion of numeric effluent limitations in NPDES permits under certain circumstances?

A. EPA NPDES regulations require an NPDES permit to include a water quality based numeric effluent limitation for all pollutants or pollutant parameters that the Regional Board determines:

> "are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including state narrative criteria for water quality." (40 CFR section 122.44(d)(1)(i).)

EPA NPDES regulations specify how to determine whether there is a reasonable potential and provides options for determining the appropriate numeric effluent limitations.

The new CWC section 13263.6 is less broad in certain ways than existing NPDES requirements. Like existing NPDES requirements, effluent limitations are required where the discharge is at a level that will cause, have the reasonable potential to cause or contribute to an excursion above an objective. Unlike existing NPDES requirements, CWC section 13263.6 requires effluent limitations only where the discharge causes excursions above numeric water quality objectives, not all water quality standards, including narrative standards. Also, CWC section 13263.6 requires effluent limitations only for substances discharged to the POTW and reported in toxic chemical release data reports and where the State or Regional Board has established numeric water quality objectives. At the present time there are few numeric water quality objectives in the water quality control plans. If a constituent has or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, e.g., any applicable State or Regional Board numeric water quality objectives, the Regional Board must include a numeric effluent limitation in the NPDES permit. Compliance with existing NPDES requirements would result in compliance with the new CWC section 13263.6.

Unlike existing federal requirements, CWC section 13263.6(a) requires the State or Regional Boards to include effluent limitations only for water quality objectives adopted by the State or Regional Boards. EPA is developing regulations (the "California Toxics Rule" (CTR) that will establish water quality criteria for toxic pollutants for California. Those criteria must be implemented by the State and Regional Board, but they are not and will not be adopted by the State or Regional Boards as part of its current activity so they need not, at this time, be considered in determining the need for effluent limitations under CWC section 13263.6(a). CWC section 13263.6 applies only to water quality objectives adopted by the State or Regional Boards. The Office of Chief Counsel has prepared model permit language.

2. Q. **What is Section 313 of the Emergency Planning and Community Right to Know Act of 1986 (42 U.S.C. Sec. 11023)?**

   A. The Emergency Planning and Community Right to Know Act (EPCRA) is a federal law that establishes programs to provide the public with information about hazardous and toxic chemicals in their communities and establishes emergency planning and notification requirements to protect the public in the event of a release of extremely hazardous substances. EPCRA section 313 requires the owner and operator of certain facilities to complete a toxic chemical release form for listed toxic chemicals used on the facility in quantities exceeding certain thresholds established in section 313. The form must be submitted to EPA and to the state Office of Emergency Response each year.

3. Q. **How does the Regional Board determine which substances are included in the most recent toxic chemical release data reported pursuant to Section 313 of the Emergency Planning and Community Right to Know Act of 1986 (42 U.S.C. Sec. 11023)?**

   A. The Regional Board may request the POTW to submit a report pursuant to Water Code section 13267 (or other means) to the Board specifying what substances have been included in the toxic chemical release reports that are discharged into the POTW. Since, however, effluent limitations are only required where the State or Regional Board has adopted numeric water quality objectives, the Regional Board would comply with CWC section 13263.6 by adopting effluent limitations for excursions above the numeric water quality objectives. To assure compliance with this provision, the Regional Boards should require POTWs to report information provided in Section 313 reports. The Office of Chief Counsel has prepared a model letter for use by the Regional Boards.

V. General Issues

Q. **How does SB 709 relate to AB 1104?**

A. During the 1999-2000 Regular Session, the Legislature adopted both SB 709 and AB 1104, which were signed by Governor Davis and become effective on January 1, 2000. Both laws are identical in most respects, but there are some discrepancies. SB 709 makes clear that SB 709 prevails over AB 1104. In particular, see CWC sections 13263.3(l), 13263.6(b), and 13362(b).

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 18

SUBJECT: Board Member Communications

DISCUSSION: The Board Members may discuss communications, correspondence, or other items of general interest relating to matters within the Board's jurisdiction. There will be no voting or formal action taken.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 19

SUBJECT: EXECUTIVE OFFICER'S REPORT

DISCUSSION: Attached is the Executive Officer's report for January which summarizes significant activities during the months of November and December.

California Regional Water Quality Control Board
Los Angeles Region
EXECUTIVE OFFICER'S REPORT

Wednesday
January 26, 2000

Dennis A. Dickerson
Executive Officer

Former Section Chief Appointed as Principal Engineer

Dennis Dasker has been designated as the Regional Board's Principal Engineer and assumed leadership of the Board's Groundwater Management Division on December 13th replacing Jim Kuykendall who left the Regional Board in November to join the State Board in Sacramento.

Dennis Dasker has been a member of the Los Angeles Regional Board for the past 28 years. His knowledge and scope of experience is clearly without parallel. He has been leading the NPDES permitting program as Chief of the Watershed Regulatory Section for the past five years and has previously led the Chapter 15 program, DOD, DOE, Above Ground Tanks, and the SLIC programs as Chief of what was then called the Land Disposal Section. Dennis received his BS in Engineering from UCLA and is a California Registered Professional Civil Engineer.

With Dennis' appointment, Al Novak has been designated as interim chief of the Watershed Regulatory Section.

A. ENFORCEMENT & REMEDIATION

Administrative Civil Liability Complaints (ACL)

Los Angeles Turf Club

On August 31, 1999, the Los Angeles Turf Club (LATC) discharged effluent in violation of waste discharge requirements specified in Board Order No. 97-03 for the Santa Anita Race Track. On October 28, 1999, the Executive Officer issued Complaint No. 99-097 for administrative civil liability, in the amount of $150,000, based on evidence submitted by LATC that the volume discharged totaled 15,000 gallons. In early January, LATC submitted affidavits which indicate that LATC may have originally overestimated the volume of discharge on August 31, 1999. This information is currently under review by staff. As of January 12, 2000, staff assumes that LATC will contest the amended Complaint at the Board's public meeting on January 26, 2000.

Ojai Valley Sanitary District

During a dry weather period from September 24 to October 2, 1998, the Ojai Valley Sanitary District (OVSD) discharged approximately 1.2 million gallons of raw sewage to Canada Larga Creek and downstream waters, including the Ventura River and the Pacific Ocean, in violation of waste discharge requirements prescribed by the Board Members (Board). On December 9, 1999, the Executive Officer issued Complaint No. 99-009 for administrative civil

liability in the amount of $223,000. This Complaint alleges that OVSD failed to adequately maintain its sewer system, which contributed to intermittent failure of sewage pump failure.

Page Museum

On October 14, 1999, the George C. Page Museum (Museum) discharged an unknown quantity of wastewater containing petroleum and asphalt to storm drains leading to Ballona Creek in violation of waste discharge requirements contained in Board Order No. 97-045. The investigation by Regional Board indicated that the discharge originated from an unpermitted clarifier at the Museum. Additionally, the Museum failed to submit monitoring reports as required by NPDES Permits CAG994001 and CA0059722 for the permitted clarifier. On January 12, 2000, the Executive Officer issued Complaint No. 99-113 for administrative civil liability, in the amount of $22,150. As of January 13, 2000, staff assumes that the Museum will contest the complaint at the Board's public meeting on March 2, 2000.

GATX GX-145 Pipeline Release

On November 24, 1999, the Executive Officer issued Complaint No. 99-100 for administrative civil liability to GATX for an unauthorized discharge of oil to Compton Creek that occurred September 9-12, 1997. This discharge, which leaked from a GX-145 pipeline, migrated through soil, saturated the soil near the south side of the creek bed, and migrated into surface water. The original assessment, which totaled $52,440, was reduced to $40,000 in an amended Complaint issued on January 11, 2000 due to a revised interpretation of penalty provisions in the California Water Code. The penalty in Complaint No. 99-100 does not include a component for discharges to groundwater, however, GATX remains subject to potential enforcement action for those discharges.

Other Enforcement Issues

Baldwin Park Cleanup and Abatement Orders

Significant soil contamination, posing a threat to groundwater, remains in the Baldwin Park Operable Unit of the San Gabriel Basin. In order to ensure that assessments and cleanups progress at a reasonable rate, the Executive Officer issued eight Cleanup and Abatement Orders (CAO) in December to White and White Properties (three facilities), Oil and Solvent Process Company, Rubber Urethanes, Screwmatic, Former Quality Garage Door, and Phaostron Instruments. These CAOs, plus a CAO issued to both Aerojet in November 1999 and to Huffy in December 1999, direct dischargers to assess and cleanup soil contamination and to coordinate groundwater monitoring.

Furthermore, the Orders contain a provision for offsetting impairments to drinking water wells. In the event that water purveyors and their customers end up bearing a significant portion of the groundwater cleanup costs, the Regional Board will consider requiring dischargers to prepare and implement a plan to assist purveyors to offset impairments and ensure an adequate, safe, and dependable supply of drinking water to San Gabriel residents. To date, the La Puente Valley County Water District and the Main San Gabriel Watermaster have each filed a petition, asking the Regional Board to direct dischargers to provide an offset—in the form of replacement water--to affected purveyors. A similar request for Regional Board action was made by the San Gabriel Valley Water Company. A hearing before the Board has not yet been scheduled.

Baldwin Park Groundwater Monitoring Workshop

On January 20, 2000, Regional Board staff held a groundwater monitoring workshop for the Baldwin Park dischargers that just

received CAOs for soil cleanup. The objective is to coordinate monitoring to ensure optimal and cost-effective collection of data. The groundwater sampling data will be used to evaluate the movement of the groundwater contaminant plume and impact to drinking water wells.

Wood-Claeyssens Foundation

On December 29, 1999, the Executive Officer issued a Cleanup and Abatement Order requiring the Wood-Claeyssens Foundation to clean up and abate discharges from an oilfield waste sump on the Taylor Ranch in Ventura. Information was provided to the Regional Board indicating a waste discharge and continued threatened waste discharge in violation of the Basin Plan requirements. The CAO also requires the discharger to submit a Report of Waste Discharge.

Western Pacific Housing

On December 10, 1999, the Executive Officer issued a Cleanup and Abatement Order requiring Western Pacific Housing to clean up and abate the discharges of wastewater, including sediment, from Tract 4494V in Thousand Oaks. The CAO requires the discharger to properly implement the Storm Water Pollution Prevention Plan to control sediment and litter, and to cleanup and appropriately dispose of the accumulated sediment from the storm drains and box culvert. The discharger is also required to submit a report detailing all activities that have been implemented to correct the discharge of non-stormwater wastes into the storm drain.

Malibu Water Pollution Control Plant Rehabilitation Project-Amendment to Time Schedule Order No. 98-089

On November 2, 1998, the Regional Board adopted a Time Schedule Order (Order No. 98-089) for the Malibu Water Pollution Control Plant Rehabilitation Project. The Time Schedule Order (TSO) requires that rehabilitation and upgrade of the existing treatment plant be completed by June 1, 2000. In a letter dated October 14, 1999, the Department of Public Works of Los Angeles County filed a request with the Regional Board to amend the TSO. The County stated that they were experiencing project delays with meeting expanded CEQA requirements, and obtaining both Coastal Commission Approval and a State Revolving Fund loan. Board staff has reviewed the County's proposed revision to the TSO. The Executive Officer approved an amendment to the TSO that extends the rehabilitation and upgrade of the existing treatment plant construction completion date to May 30, 2001.

Trancas Water Pollution Control Plant in Malibu

Regional Board staff revised the existing Waste Discharge Requirements for the Trancas Water Pollution Control Plant, located in Malibu, to include additional findings, sampling requirements, and a monitoring and reporting program. Tentative requirements consisting of a Board Order, a monitoring and reporting program, and a Tentative Time Schedule Order for the rehabilitation and upgrade of the existing treatment plant was prepared.

The Board is expected to take action on the tentative Waste Discharge Requirements and Tentative Time Schedule Order at a public hearing to be held on January 26, 2000.

SB 709 Training

On January 19, 2000, legal counsel from State Board provided training to Regional Board staff on the Clean Water Enforcement and Pollution Prevention Act of 1999 (SB 709). SB 709 is important legislation that became effective on January 1, 2000. SB 709 adds several provisions to the California Water Code Division 7,

among which include pollution prevention plans, requirements to prescribe effluent limits, recovery of economic benefits in assessing civil liability, mandatory minimum penalties, and reporting to the legislature.

B. SURFACE WATER UPDATES

Temporary Stay Granted to the City of Los Angeles

The City of Los Angeles has contested the issuance of National Pollutant Discharge Elimination System (NPDES) permits issued in 1998 for the Donald C. Tillman and the Los Angeles-Glendale Water Reclamation Plants. In 1998, after the permits were adopted by the Los Angeles Regional Water Quality Control Board (Regional Board), the City of Los Angeles petitioned the State Water Resources Control Board (SWRCB) to appeal the issuance of the permits. Subsequently, the City filed a stay of the application of the permits in Los Angeles Superior Court on December 24, 1999. On December 29th, the Court granted a temporary stay regarding the permit and the respective effluent limits. The Deputy Attorney General and the Office of Chief Counsel are currently working on the court action.

Basin Plan Amendment

On November 2, 1998, the Regional Board adopted Resolution No. 98-18 amending the Water Quality Control Plan for the Los Angeles Basin (Basin Plan). The amendment revised the Basin Plan by: 1) removing the municipal and domestic (MUN) beneficial use designation from eight surface water bodies and two specifically defined areas of one ground water basin, 2) assigning additional beneficial use designations to three surface water bodies, and 3) removing the cold water freshwater habitat (COLD) beneficial use from portions of three surface water bodies. On February 18, 1999, the SWRCB adopted Resolution No. 99-20 approving the amendment.

The Office of Administrative Law (OAL) disapproved the amendment on July 22. 1999. In the written discussion of the disapproval, OAL stated that the surface water portions of the amendment did not meet OAL standards for approval but indicated that the ground water portion met the requirements. In the discussion, the OAL stated that "the administrative record demonstrated compliance with these requirements for dedesignation of the two areas of one ground water basin [the portion of West Basin underlying the Chevron facility in El Segundo and the aquifers underlying Terminal Island and portions of the Los Angeles and Long Beach Harbors]."

The State Board has resubmitted the regulatory provisions of this amendment to OAL for consideration with a request to review and consider for approval only those portions of the amendment pertaining to removing the MUN beneficial use designation from the two areas of one ground water basin. As agreed, the administrative record for the amendment was submitted in its entirety and the index to the administrative records is marked to indicate which documents the State Board is requesting the OAL to review.

Administrative Civil Liability Complaint against Sun Coast Calamari (99-122) for Water Quality Impairments in Port Hueneme Harbor

In response to complaints from National Pollutant Discharge Elimination System (NPDES) permittees in the Port Hueneme harbor, Regional Board staff inspected the area on October 28, 1999. Staff determined that the harbor was being impacted by oxygen demanding pollutants and ammonia toxicity. The probable source was determined to be off-loading operations of several squid facilities. Dissolved oxygen near the facilities was <1 mg/L and ammonia nitrogen was in the range of 2-5 mg/L near the squid boats being off-loaded. Lab samples taken during this inspection

had water analyses far in excess of limits. The aquaculture business operations of two of the NPDES permit holders, Channel Islands Marine Research Institute and Channel Islands Ocean Farms, were affected by the low dissolved oxygen and ammonia because their intake pipes are within the harbor.

On November 24, 1999, the Executive Officer transmitted a Notice of Violation (NOV) letter to squid processing facilities at the port. The letter required the facilities to cease all dumping into the harbor and to come into compliance with the requirements of the Porter-Cologne Water Quality Control Act. During subsequent inspections on December 3, 1999 and December 9, 1999, Regional Board staff observed actions by the Sun Coast Calamari in violation of the terms of the NOV letter. Due to these actions, the Executive Officer signed an ACL on December 28, 1999 for $19,900 for Sun Coast Calamari.

Industrial Storm Water Program Compliance Update

Annual Industrial Storm Water Reports for all Industrial Storm Water General facilities were due on July 1, 1999. Approximately 2,525 annual reports for the 2,800 Industrial Storm Water facilities within the Region have been received and entered into the SWRCB database. A more detailed review of the annual reports to determine adequacy of the information submitted is currently underway. On October 26, 1999, 446 Notices of Non-Compliance for Failure to Submit the Annual Reports were mailed out. A 2nd level enforcement letter was sent to the remaining 198 facilities that did not respond to the Level 1 letter. A response to the 2nd level enforcement letter is due by February 1, 2000. Those that do not submit the requested information will require further enforcement action. Two facilities that failed to submit annual reports for previous years were fined at the December Board Meeting. One is currently petitioning the SWRCB to overturn that penalty.

C. TOTAL MAXIMUM DAILY LOADS (TMDL)

Release to the Public of the First Draft for the Los Angeles River Litter TMDL

The first draft of the Litter TMDL for the Los Angeles River is being released to the public on January 18. Because litter is considered a stormwater contaminant, allocations will be incorporated as effluent limits in the stormwater permits, which will be modified in order to address monitoring and implementation of this TMDL. The pollutant load allocated to a given city will depend on the city's land use distribution and total area within the watershed. The implementation of the TMDL will be phased in over a ten-year period. It is to be noted that the load allocation used for this draft does not take the variety of land uses into account because of the lack of data. The proposed numeric target for litter in the river is zero litter in the river.

Santa Clara River – Chloride Policy Public Meeting

The proposed Basin Plan amendment to raise the chloride objectives near Santa Clarita and Santa Paula was released on January 14, 2000. The next meeting on the Santa Clara River chloride policy will be the final Board presentation now scheduled for March 2, 2000. A Memorandum of Agreement to cooperate on monitoring the quality of surface water and groundwater has been circulated to stakeholders and signed by representatives of all publicly owned treatment works that discharge to surface water. All stakeholders are encouraged to participate in the finalization of the monitoring plan and to sign the agreement. For further information please call:

Melinda Becker at (213) 576-6681 or Elizabeth Erickson at (213) 576-6683.

D. GROUNDWATER UPDATES

Southern California Coastal Water Research Project (SCCWRP) MTBE Investigation

In order to investigate the sources, fates, and effects of methyl tertiary butyl ether (MTBE) pollution in the marine environment, the SWRCB contracted with the SCCWRP to: 1) determine the relative importance of MTBE inputs from effluent and stream dischargers, 2) measure the occurrence and concentration of MTBE in coastal receiving waters, and 3) determine whether MTBE contamination levels are toxic to marine life. A draft report was issued by the SWRCB on December 22, 1999, under Agreement No. 8-168-250-0, entitled "Assessment of MTBE Discharge Impacts on California Marine Waters Quality." The draft report does not contain any information on the impacts from MTBE discharges to groundwater resources across the State.

The primary objective of the study was to assess the contribution of MTBE to the coastal environment resulting from both point sources (POTWs, petroleum refiners, and other NPDES dischargers representing 84 total sites) and non-point sources (urban stream locations representing 42 total sites). The surface and ocean water sampling programs were conducted between June 9 and August 4, 1999. Since the sampling programs were conducted during the summer months, no measurements to evaluate stormwater MTBE input could be made. The MTBE mass emission rates presented in the draft report were based upon a limited data set covering a relatively short period of time, and as a result may not be representative of other rainfall events and time periods. Key findings from the draft report include: 1) discharges containing refinery wastewater represents the largest input of MTBE to the marine environment, 2) receiving water contamination is the most prevalent in areas of high watercraft use and less in areas receiving POTW or refinery discharges, and 3) marine receiving water concentrations pose little risk of toxicity to fish and invertebrates.

A copy of the draft report "Assessment of MTBE Discharge Impacts on California Marine Water Quality," can be obtained by contacting Bill Ray of the SWRCB at (916) 657-1123 or Theresa Rodgers of the Regional Board at (213) 576-6621.

Guidelines for Investigation and Cleanup of MTBE and Other Ether-Based Oxygenates

Governor Davis signed Executive Order D-5-99 on March 25, 1999. Item 8 of the Executive Order, in part, required that "...the SWRCB, in consultation with DHS, shall develop a clear set of guidelines for the investigation and cleanup in groundwater...." The SWRCB and the Regional Boards across the State met on several occasions to initiate the process for development of the "Guidelines for Investigation and Cleanup of MTBE and Other Ether-Based Oxygenates." The current draft of the document is available on the Internet at ...[illegible].GOV under "News." A paper copy can be obtained by contacting either Virginia Lopez of the SWRCB at (916) 227-4313 or Theresa Rodgers of the Regional Board at (213) 576-6621. The current draft document is out for a preliminary informal review, with a formal review and comment period to begin by January 31, 2000. It is anticipated that the SWRCB will consider the document at a public meeting in March 2000. Comments on the draft guidelines should be sent to:

Kevin Graves

Charnock Sub-basin MTBE Investigation Area

At present there are 26 active sites in the Charnock Sub-Basin. One previously unknown site has been identified as a former underground storage tank site at a delivery service company. An initial information package will be sent soon. Of the 25 active sites, site assessment has been completed at 16 sites, whereas there are 9 sites where additional site assessment is either underway or planned to be performed in the near future. Groundwater monitoring is being performed at all of the sites.

Quarterly groundwater monitoring reports are received, reviewed, and commented upon within a short time. A total of six sites have approved remediation workplans for the cleanup of the soil and groundwater. Two of the sites needed to pump-and-treat the groundwater and discharge it to the storm drain under an NPDES permit. The NPDES permits were approved by the Regional Board during the July 8, 1999 Board meeting. Soil and groundwater remediation has begun at two of the sites. On-site soil remediation is underway at two additional sites. Limited offsite remediation has been initiated at one site. A pilot plan for dual phase extraction has been approved at an additional site.

Staff performs a project status update telephone conference with the interested parties and the United States Environmental Protection Agency (US EPA). Staff also attends meetings and participates in telephone conferences to discuss the pilot project cleanup alternatives for the remediation of the groundwater.

On September 22, 1999, the Executive Officer and the California EPA issued separate enforcement orders to Shell Oil Company/Shell Oil Products Company/Equilon Enterprises LLC (collectively called Shell) for water replacement costs. The Orders were issued to ensure the residents of the City of Santa Monica and Culver City continue to receive historic water supplies in the wake of MTBE groundwater pollution at the Charnock Wellfields. The enforcement Orders require Shell to either provide replacement water of a suitable quality or to pay the City of Santa Monica and Southern California Water Company to purchase replacement water. The cost to purchase replacement water is estimated at $3.5 million per year. Shell commenced making payments for replacement water starting on January 3, 1999.

A CAO was also issued to CONOCO in April 1999. The CAO required CONOCO to perform site investigation in a tiered approach with on-site soil and groundwater investigation to be followed by off-site assessment and data interpretation of the subsurface lithology. Following the issuance of CAO, staff had a meeting with representatives of CONOCO on May 11, 1999. Tier One work has been initiated at the site under direction from the Regional Board and US EPA.

Arcadia Wellfield MTBE Investigation

The shallow aquifer in the vicinity of the former Mobil Station 18-LDM has been treated with a pump and treat system since October 1997. The treatment system is capable of pumping 35 gallon per minutes (GPM) of extracted groundwater. Currently, approximately 5 to 6 GPM of groundwater are being pumped from eleven groundwater extraction wells. Through December 15, 1999, the treatment system has pumped 6.7 million gallons of groundwater and removed an estimated amount of 52.5 pounds of TPH and 170.9 pounds of MTBE.

The impacted soil in the vadose zone has been treated with a vapor extraction system (VES) since May 1999. A Production Aquifer Remediation System (PARS) using activated carbon filtering to clean up the

production aquifer has been designed and approved by the Regional Board. In a public hearing by City of Los Angeles Planning Department on August 12, 1999, the variance application for the installation of PARS was approved. Mobil has selected a subcontractor, Olson Construction, to construct the PARS. Construction of PARS is underway and expected to be completed by April 2000. PARS operation is scheduled to commence in April 2000.

A Remedial Action Plan to clean up the MTBE contamination in the lower aquifer was approved on May 21, 1999. Mobil has selected a subcontractor, Komex, to build the lower aquifer remediation system (LARS). The use of the cleanup system is expected to begin in mid-February of 2000.

MTBE Investigation Areas within the San Fernando Valley Groundwater Basin

The Los Angeles River Watershed Unit of the Underground Storage Tank Section opened four areas within the San Fernando Valley Groundwater Basin for MTBE pollution investigations. The State Department of Health Services identified where MTBE has been detected in several Drinking Water Systems. Of these, four drinking water wellfields are located in the San Fernando Valley Groundwater Basin. Three of the wellfields are operated by the City of Los Angeles (North Hollywood, Tujunga, and Verdugo wellfields). The fourth wellfield is operated by the City of Burbank (Burbank Operable Unit). The Tujunga wells (No. 4 and 5) are still in operation as the MTBE concentrations were very low. North Hollywood Well No. 17 has been a standby well that was used sporadically. Verdugo wells (No. 1 and 2) have been standby wells that were shut down due to chlorinated solvent contamination. The Burbank Operable Unit is installed to cleanup the solvent contaminated groundwater.

On December 10, 1999, staff in the Underground Storage Tank Section sent out initial questionnaires to 58 potential responsible parties to collect information on their sites, which are located within an approximate one-mile radius of each wellfield area. The questionnaires are due back to the Regional Board by January 21, 2000. Based on the information received, staff will pursue further investigation to identify the source(s), and where appropriate require hydrogeologic assessments and cleanup activities.

Completion of Corrective Action at Leaking Underground Fuel Storage Tank (UST) Sites

Board staff has reviewed corrective actions taken for soil and groundwater contamination problems from leaking USTs for the time period between November 16, and December 31, 1999, and determined that no further corrective actions are required for:

- Thrifty Oil Company Service Station No. 291, Downey (I-10959)
- ARCO Service Station No. 9659 (Former Thrifty No. 270), Downey (R-11259)
- Unocal Service Station No. 2752, Arcadia (R-10996)
- Former Arco Service Station No. 51, Glendale (912040034)
- Maness Industries, Santa Fe Springs (I-22083)
- Mon Van Moving Services, Monrovia (I-20284)
- Recycled Commodities, Inc., Montebello (I-13031)
- ARCO Service Station No. 1360, Inglewood (I-12055)
- Flint Ink Corp., Santa Fe Springs (I-06638)
- L. A. County Manhattan Beach Service Yard, Manhattan Beach (902660034)
- Gardena Nursery, Camarillo (C-99013)
- Exxon Service Station No. 7-4551, City of Industry (I-12221)

- J & S Auto Body, Long Beach (908050361)
- Unocal Facility-Sansinena Field, La Habra Heights (R-10605)

Governor's Y2K Hazardous Materials Project

As a result of Governor Gray Davis' Executive Order D-3-99, the Governor's Office of Emergency Services (OES) initiated a Y2K Hazardous Materials Project. The purpose of the Project was to protect the health and safety of the people of California and its environment by assisting in the Y2K readiness of approximately 130,000 hazardous materials facilities/handlers in California.

Gay Norris from the UST Section participated in the Y2K Project as one of ten Regional Assessment Coordinators statewide. Since September 1999, she assisted OES with 1) communicating with hazardous materials facilities regarding Y2K failures which could impact health, safety, and the environment and 2) conducting onsite visits to the most vulnerable facilities and assisting the appropriate agencies in performing site assessments.

The Y2K Hazardous Materials Project successfully met the Governor's directive to identify Y2K vulnerable hazardous material handlers in the state and assess them for their readiness to transition into the new millennium. The participation of the Regional Assessment Coordinators in the California Y2K Project Implementation Team enabled the state to meet its goal of coordinating the assessment of 12,500 businesses statewide.

E. COASTAL WATERS/ WATERSHEDS UPDATES

Calleguas Creek Watershed

The Water Quality/Water Resources Subcommittee met on August 6, 1999. Updates on TMDLs and strategies for reduction of nitrogen by publicly-owned treatment works (POTW) were major topics of discussion. The Subcommittee is currently in the process of drafting a Water Resources/Water Quality Chapter in the Calleguas Creek Watershed Management Plan, which has gone out for in-house agency review. Subcommittee members have developed a list of their goals and objectives for water quality and water resources and are working to clarify participants' goals and objectives, identify possible solutions to problems, pinpoint concrete actions which will be taken to address the problems, filter out long-term from short-term goals, and reach agreement on what issues to deal with first. Agricultural best management practices (BMP) and concerns over use of household water softeners and their contributions of chlorides to treatment plants are two early action items that have been identified.

The Flood Protection/Sedimentation Subcommittee last met on November 8, 1999. They are currently involved with discussions on conducting a hydrologic study of the watershed and the need for historic photographs to evaluate changes in sedimentation over time.

The Public Education/Outreach Subcommittee has completed the first edition of a newsletter to cover watershed issues and events. It will eventually have its own website with links to other web pages. Additionally, the group has produced a brochure on the management plan process in the watershed.

The Habitat/Recreation Subcommittee met on December 7. They continue to work on a wetlands study which includes a habitat mapping component. The subcommittee will next meet on February 1.

The Steering Committee for the Watershed Management Plan met on September 30. They continue to work on its

expectations/products for 1999. A draft Table of Contents for the Calleguas Creek Watershed Management Plan being developed has been prepared.

The full Management Committee met on November 18. Information about the management committee and its subcommittees can be found at http://www.calleguas.com/.

Data generated by the Surface Water Element of the Calleguas Creek Characterization Study Monitoring Program is being evaluated. Monitoring associated with the Groundwater Element of the program is now being implemented. Another component of the program, funded by Clean Water Act 205(j) monies, is evaluating nonpoint source contributions and is in the data analysis stage.

Los Angeles River Watershed

The Los Angeles and San Gabriel Rivers Watershed Council meets on the third Wednesday of each month. The last meeting was held on December 15 and included meetings of the water resources, water quality, and multi-use projects committees. Shirley Birosik, Regional Board staff member, presented an overview of the San Gabriel River Watershed in the water quality committee meeting. The Council's Internet address is http://www.lasgriverswatershed.org/.

The Friends of the LA River now has a Los Angeles River e-mail discussion forum. To subscribe, send an e-mail to la-river-discuss-subscribe@makelist.com . To view archives of past Los Angeles River discussions on the Internet, go to http://www.egroups.com/list/la-river-discuss.

On August 10, members of the Watershed Council assisted the California Coastal Conservancy in conducting a tour of potential restoration sites in the lower watershed as part of a meeting of the Southern California Wetlands Recovery Project. These sites may be viewed at http://www.[illegible]p/index.html.

Santa Monica Bay Watershed

The Modeling and Monitoring Subcommittee of the Malibu Creek Watershed Advisory Council has drafted a watershed-wide monitoring program for the Malibu Creek Watershed. The group last met on May 6, 1999. A draft monitoring program has been distributed to stakeholders for comment. A major task will be finding partners to participate in this voluntary program to assess and help correct the water quality concerns in this area.

The Malibu Lagoon Task Force last met on September 14, 1999. The Task Force is concerned with lagoon breaching, the septic tracer study, and all aspects of the UCLA study of the lagoon. The study covers a hydrologic evaluation, appropriateness of various biological and water quality objectives, water level management, eutrophication issues, pathogens, and the historical condition of the lagoon. The study was funded by a grant from the California Coastal Conservancy with assistance by local agencies. A recently hired facilitator is now leading the group toward refining the future goals of the Task Force. The next meeting is not scheduled yet.

The Malibu Creek Watershed Advisory Council met on October 19, 1999 and included a report on subcommittee activities. The Council last met on January 18, 2000.

A watershed committee has been meeting in the Topanga Creek Watershed. The most recent meeting was held on December 4, 2000. The meeting included a panel discussion on the state of the watershed. A major near-term goal of this watershed committee is to prioritize potential actions previously identified in a draft Topanga

Creek Watershed Management Study and start a coordinated resource management planning (CRMP) process. A longer-term goal is preparation of a watershed management plan that will help address a number of issues including flood control in the canyon. The next meeting of the watershed committee is scheduled for February 2, 2000 and will focus on planning for the Streambank Stabilization Workshop scheduled for March 4, 2000. The committee's website address is. http://www.TopangaOnline.com/twc/.

The recently formed Technical Advisory Committee to the Topanga Creek Water Quality Study met for the first time on June 15, 1999 to help guide the project and met again on November 30, 1999 to review preliminary data. The Committee is funded through 205(j) monies.

Watershed Management Initiative Chapter

Each Regional Board has completed the process of producing a "chapter" on how that Board is implementing watershed management in the Region. The consolidated statewide chapter will become the basis for funding decisions including allocating money for monitoring, TMDL development, and grant monies disbursement.

Each Region's Chapter is updated on an annual basis. The last update occurred in January 2000 and includes information on Regional Board implementation of the state's upgraded nonpoint source management program.

Copies of this Region's current Chapter and/or its Executive Summary may be obtained by contacting the Regional Board office, Regional Programs Section secretary. The document may also be sent out electronically in MSWord97. It will be available shortly on the Regional Board's webpage.

F. OUTREACH ACTIVITIES

Presentation at a Litter Summit

On December 15, 1999, a litter summit brought together business leaders and city representatives to discuss the issue of litter in rivers and beaches in the greater Los Angeles area. The Executive Officer (EO) gave a presentation entitled "What the Business Community needs to know about Total Maximum Daily Loads (TMDLs)." The presentation outlined how a schedule was established as a result of the March 1999 consent decree between the US EPA, the Santa Monica BayKeeper, and Heal the Bay. Information was also provided on how more than 700 TMDLs grouped into 94 analytical units are scheduled to be completed in the next 13 years. The presentation also included information on the issues that surround litter in our waterways. The EO explained that although the litter TMDL for the Los Angeles River watershed would focus on municipal compliance, opportunities for private sector involvement were significant.

Gateway COG Meeting

On January 5, 2000, the Executive Officer attended the regular meeting of the Gateway Cities Council of Governments in Cerritos to offer comments and respond to questions on the pending proposal regarding Standard Urban Stormwater Mitigation Plans (SUSMP). Following a presentation by Ed Schoeder, Director of Public Works for the City of El Segundo, the Gateway Council approved a resolution at the meeting urging the Regional Board not to approve that portion of the SUSMP proposal that deals with establishing a 0.75 inch rainfall runoff design standard for BMPs.

Regional Board Hosts Resource Management Visitors from China

On December 28, 1999, Regional Board

staff hosted a group of six visitors from the water resource management department of the Inner Mongolia Province, China. Regional Board staff members Rod Nelson, Mark Pumford, and Yue Rong presented Regional Board programs in surface water and groundwater. Board staff also presented the visitors with a copy of the Porter-Cologne Act. The visitors were very interested and asked many questions during the presentation.

G. ADMINISTRATIVE UPDATE

Personnel Report

As of the month of December our staff was 121, consisting of 102 technical staff (including 1 part-time technical staff), 5 permanent administrative support staff, and 14 permanent clerical staff.

Staff is currently taking steps to fill 1 Unit Chief Position, 12 technical positions, 1 Associate Governmental Program Analyst, and 1 Assistant Information Systems Analyst.

Since October, the following appointments have been made:

Arman Toumari, Water Resource Control Engineer in the LA Coastal Unit, appointed 10/15/99.

Rod Collins, Environmental Specialist III in the Standards and TMDL Unit, appointed 11/01/99.

Michael Yang, Water Resource Control Engineer in the L. A. River Unit, appointed 11/01/99.

Khalid Abdullah, Associate Information Systems Analyst in the Information Technology Unit, appointed 11/02/99.

Cody Walker, Engineering Geologist in the San Gabriel/San Fernando Valley Unit, appointed 11/05/99.

Larry Harlan, Environmental Specialist III in the San Gabriel Valley Unit, appointed 11/18/99.

Thomas Sayles, Environmental Specialist III in the L. A. River Unit, appointed 11/18/99.

Melinda Merryfield-Becker, Environmental Specialist IV (Supervisor), Standards and TMDL Unit Chief, appointed 11/29/99.

Cassandra Owens, Environmental Specialist III in the Ventura Coastal Unit, appointed 12/13/99.

Thizar Tintut-Williams, Environmental Specialist III in the Ventura Coastal Unit, appointed 12/13/99.

Jeremy Sokulsky, Water Resource Control Engineer in the Standards and TMDL Unit, appointed 12/13/99.

Megan Fisher, Environmental Specialist in both the Industrial Stormwater and Nonpoint Source Programs, appointed 1/3/00.

The following promotion was made:

Anthony Klecha, from Water Resource Control Engineer to Sanitary Engineering Associate, effective 11/01/99.

The following separated from Region 4:

Cody Walker, Engineering Geologist, transferred to Region 1.

Bryan Schweikert, Environmental Specialist III.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 20

SUBJECT: Closed Session

DISCUSSION: Please note that this item is not open to the public.

At any time during the regular session, the Board may adjourn to a closed session to consider litigation, personnel matters, or to deliberate on a decision to be reached based upon evidence introduced in the hearing. Discussion of litigation is within the attorney-client privilege and may be held in closed session. Authority: Government Code Section 11126(a)(d)(q).

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD,
LOS ANGELES REGION

Pasadena, California
January 26, 2000
427th Regular Meeting

ITEM: 21

SUBJECT: Adjournment of Current Meeting and Arrangements for Next Meeting.

DISCUSSION: The next regular meeting will be held in late March. The Board will adopt the calendar for 2000 at the January 26th Board Meeting.

A special Board Meeting has been scheduled for January 31, 2000 from 1:00 – 5:00 p.m. in Pasadena.

WQCC MEETING

Not yet determined.

STATE BOARD/REGIONAL BOARD CHAIRS and CAL/EPA POLICY MEETINGS

Not yet available.

**All Chairs/Policy meetings will be held in Room, 153 at State Board, 901 P Street, Sacramento. The scheduled meeting time is 10:00 am - 3:00 pm.

Administrative Record: SWRCB/OCC Files A-1280, A-1280(a), A-1280 (b)

IMPORTANT BOARD MEETING UPDATE

We have been informed that Heal the Bay has made arrangements to lease a bus(s) to bring supporters to Wednesday's board meeting. With the expected attendance at the meeting now exceeding the capacity of the courtroom, it is apparent that the location of our meeting must be changed to accommodate a much larger audience than we had expected. We have made last minute arrangements for the Board to conduct its meeting at the Pasadena Holiday Inn. A copy of the public notice with the new location and address is attached.

Chairman Nahai, Jorge Leon, and myself have been working to develop a protocol for the conduct of the meeting with respect to public comment. This also is included for your reference.

With regard to the Board's agenda, in addition to the changes that I have already commented on:

Carrier (Item 10.1) and Golden West Refining (Item 9.4) are both off the calendar to resolve additional issues.

Item 12, Sun Coast Calamari ACL, is being delayed at the request of Sun Coast to allow for additional discussions between Sun Coast and staff.

Item 13, Trancas Water Pollution Control Plant, will be deferred to another meeting at the request of the discharger.

Finally, letters are still pouring in on the SUSMP issue, we are trying to get another Fed Ex out to you tonight.

NOTICE OF RESCHEDULED SPECIAL BOARD MEETING AND 50TH ANNIVERSARY EVENT

(Govt. Code Section 11125)

NOTICE IS HEREBY GIVEN that the Special Board Meeting originally scheduled for January 6, 2000 to consider the Standard Urban Stormwater Mitigation Plan (SUSMP) item has been rescheduled.

The SUSMP item will now be considered at the regularly scheduled Board Meeting on January 26, 2000 at the Richard H. Chambers U.S. Court of Appeals Building, 125 S. Grand Avenue, Main Courtroom #3, Pasadena, California.

Immediately following the adjournment of the regular Board Meeting, the Los Angeles Regional Water Quality Control Board will celebrate it's 50th Anniversary at the Doubletree Hotel in Pasadena, 191 N. Los Robles Avenue. Board members will be present during this event, but no business will be conducted and no voting will take place.

For more information on the Board meeting or Anniversary event, please contact Robyn Goodman, Executive Assistant at (213) 576-6613. For technical questions regarding the SUSMP item, please contact Xavier Swamikannu at (213) 576-6654.

The SUSMP can also be found on our website at www.swrcb.ca.gov/~rwqcb4.

NOTICE OF PUBLIC HEARING

CONSIDERATION OF STANDARD URBAN STORM WATER MITIGATION PLANS

SUBMITTED FOR APPROVAL TO THE EXECUTIVE OFFICER

UNDER

THE LOS ANGELES COUNTY MUNICIPAL STORM WATER PERMIT

This Regional Board will hold a hearing to consider the endorsement of standard urban storm water mitigation plans submitted for approval to the Regional Board Executive Officer under the municipal storm water permit for Los Angeles County and Cities. The Regional Board will also consider the adoption of the standard urban storm water mitigation plan requirements to become applicable to the City of Long Beach under its separate municipal storm water permit, and for numerical water quality design standards contained therein to become applicable to construction projects, in the Los Angeles Region, covered under the state storm water general permit for construction activity.

HEARING DATE AND LOCATION:

DATE: Thursday, January 26, 2000
TIME: 9:00 a.m.
PLACE: Richard H. Chambers U.S. Court of Appeals Building
125 South Grand Avenue, Main Courtroom #3
Pasadena, California

AVAILABILITY OF DOCUMENTS

The Standard Urban Storm Water Mitigation Plans (SUSMP), the SUSMP Record of Decision and other related documents and information are on file, and may be inspected, at the Regional Board office, 320 W. 4th Street, Suite 200, Los Angeles, California, 90013, between the hours of 8:00 a.m. and 5:00 p.m. Arrangements for file review and/ or obtaining copies of documents may be made by contacting Vilma Correa at (213) 576-6617. The proposed Standard Storm Water Mitigation Plan, Response to Comments, and tentative resolution may also be viewed on-line at the California Regional Water Quality Control Board website address, http://www.swrcb.ca.gov/~rwqcb4/html/news.html.

R0067987

Questions regarding the documents or the hearing should be directed to Dr. Xavier Swamikannu at (213) 576-6654.

BACKGROUND

Los Angeles County and Cities (except the City of Long Beach) implement a municipal storm water program to reduce storm water and urban runoff pollution under the requirements of Board Order No. 96-054. The City of Long Beach implements a separate municipal storm water program to reduce storm water and urban runoff pollution under Board Order No. 99-060.

The Regional Board at its April 22, 1999, meeting approved a List of Best Management Practices for Permittees to select from and require implementation of the most effective BMPs in their Development Planning and Development Construction programs (Board Resolution No. 99-03). The Regional Board at that time also requested that the Standard Urban Storm Water Mitigation Plans (SUSMPs) for Priority Planning Project categories, which incorporate the BMPs, be brought to it for discussion. The municipal storm water permit for the City of Long Beach, adopted by the Regional Board on June 30, 1999, includes requirements that make SUSMP provisions adopted by the Regional Board applicable to its program.

On September 16th, 1999, at the Regional Board meeting, the Regional Board Executive Officer advised the Regional Board that additional time to develop a revised SUSMP proposal would be in the best interest of all parties to ensure that the proposal is more fully documented and supported by the record. At that time, he indicated that Regional Board staff would develop a revised proposal at the earliest opportunity but probably not less than 90 days later. This proposal has now been developed and is being public noticed for consideration by the Regional Board at its January 26th meeting.

The proposed SUSMP is designed to ensure that storm water pollution is addressed in one of the most effective ways possible, i.e., by incorporating BMPs in the design phase of new development and redevelopment. The proposal also provides for numerical design standards to ensure that storm water runoff is managed for water quality concerns in addition to flood protection and that pollutants carried by storm water are retained and not delivered to waterways.

The proposed SUSMP adds two additional categories for controls, parking lots and environmentally sensitive areas. The proposal also attempts to respond to various concerns by incorporating provisions that allow for flexibility thereby recognizing that a single numerical standard may not be appropriate in every case. Also, the proposed SUSMP has taken the original language offered by the Principal Permittee and eliminates much of the duplication allowing for a more concise and understandable document.

A Tentative Resolution is also being offered to the Regional Board for their consideration at the January 26, 2000 Board Meeting. This Tentative Resolution acknowledges the structure of both the Los Angeles and Long Beach Municipal Storm Water Permits by allowing the SUSMP approval to be accomplished by the Regional Board Executive Officer for the Los Angeles permit while the Regional Board itself would approve the SUSMP pursuant to the City of Long Beach permit. If adopted by the Regional Board, the tentative resolution would approve the Long Beach SUSMP while encouraging the Regional Board Executive Officer to approve the Los Angeles SUSMP. In addition, the Regional Board is being asked to adopt the numerical design standards as the minimum standards for post-construction BMPs required by the statewide general permit for construction activity for construction projects in the Los Angeles Region.

COMMENTS AND QUESTIONS

Persons wishing to comment on the SUSMPs are invited to submit them in writing at the above address to the attention of Dr. Xavier Swamikannu. In order to be evaluated by Board staff and included in the Board's agenda folder, written comments or testimony on the tentative permit must be received at the Regional Board's office by January 14, 2000. Comments received after that date will be provided, *ex agenda*, to the Board for their consideration.

HEARING PROCEDURE

The Board meeting, in which the hearing will be part of, will start at 9:00 am. Interested persons are invited to attend. Oral statements will be heard; however, for the accuracy of the record, all important testimony should be in writing. Time for oral testimony may be limited depending on the number wishing to be heard. It is expected that many interested parties will wish to speak before the Regional Board. In an effort to ensure that the Regional Board is provided with a comprehensive understanding of the concerns associated with this proposal, special arrangements for the presentation of comments are being considered. Specific details on the presentation arrangements for the January 26th Board meeting will be provided in the regular agenda notice. Interested parties are encouraged to contact the Regional Board Executive Officer to suggest consolidation of comments from many parties into a more comprehensive presentation with an extended time limit.

If you represent a Permittee or other interested party, it would be helpful that by January 14, 2000 you would coordinate with other co-interested individuals and notify this office of (1) lead designated speaker; (2) amount of time needed by the lead speaker; and (3) your request for time for additional speakers and the identity of such additional speakers. The Board will announce the amount of time available for the submission of oral comments in this matter and for discussion among the Board members in the formal notice of the Board's agenda. Upon receipt of the above information, the staff will recommend an allotment of time for all interested parties, based upon the information received. Parties who have not submitted the requested information will be provided any remaining time following allotment.

TO: **Regional Board Members**

FROM: **Dennis A. Dickerson**
Executive Officer

DATE: **January 19, 2000**

SUBJECT: **Board Meeting Package Transmittal Memo**

Introduction

My apologies for being a few days late with this transmittal memo. As you know, the next Board meeting will be held on Wednesday, January 26th, at the US Court of Appeals Building at 125 S. Grand in Pasadena starting at 9:00 a.m. The meeting will be followed by the Regional Board's 50th Anniversary Dinner to be held at the Pasadena Doubletree Hotel. More details on the status of that event are at the end of this memo.

Almost the entirety of the Board meeting will be dedicated to the consideration of the Standard Urban Stormwater Mitigation Plan (SUSMP) proposal since we are expecting a very large turnout. Most other agenda items have dropped from the calendar or should be resolved in the time available.

Please note that we have made arrangements for a "formal" Regional Board member photograph to be taken during the lunch break. We wanted to memorialize the members who are serving on the Board at 50 years.

Review of Agenda

Agenda Items 4 and 5 - The Board meeting will begin by considering several administrative matters including the election of a Board Chair and Vice Chair for 2000. Also to be considered is the adoption of the calendar of Board meetings for 2000.

Agenda Item 11 - Standard Urban Stormwater Mitigation Plan. In 1996, the Regional Board adopted a municipal stormwater permit for Los Angeles County and the 85 municipal co-permittees. The permit was contentious from the very beginning and was soon followed by an appeal from the City of Long Beach which eventually reached Superior Court but was settled last June through the issuance of a separate permit to the City of Long Beach. The permit, as adopted by the Board, left many issues for subsequent development by the permittees with approval delegated to the Executive Officer. For example, the permit required the development of five "model" programs that would be used to provide a framework for the development of ordinances by the permittees to implement the stormwater management program.

At this point, all the "model" programs have been approved. The approval process lasted longer than originally expected because the submittals by the permittees were not as well developed as they could have been (substantial editing was required). Additionally, the inadequate staff support available to this program resulted in our inability to move more quickly. For example, I have had to expend a great deal of my time on technical staff work related to the municipal permit to help close the gap between what we

must do and the limited staffing we have. Only one staff person is assigned to this project and total funding from the permit is $10,000 annually.

Perhaps the only remaining outstanding issue from this permit requiring approval is an element of the Development Planning requirements of the 1996. The remaining element pending approval is a requirement that Standard Urban Stormwater Mitigation Plans or SUSMPs be developed for several categories of new development and redevelopment projects. Under the terms of the municipal stormwater permit, the approval of the SUSMPs is delegated to the Executive Officer. The approved SUSMP would provide a set of Best management Practices or BMPs that would be specific to identified categories of development. Once approved, permittees would be required to ensure that the building permits they issue conform to these requirements.

This issue was first discussed before the Board (briefly) at the April 1999 meeting. The SUSMP issue came up in the context of approval of a list of acceptable BMPs. At that time, the Board suggested that the issue be brought to the Board for discussion. Last summer (August 10) we held a workshop with interested parties to discuss the concept of a design standard to be incorporated within the Standard Urban Stormwater Mitigation Plan. This meeting was well attended with a substantial amount of information shared on the value of a design standard. Shortly thereafter, a proposal was offered to incorporate a design standard for BMPs requiring that the first 0.75 inches of rainfall be subject to BMPs. This proposal was then discussed during the September 16th Board meeting (in keeping with the Board's request from the April meeting). Following detailed discussion with interested parties in the interim, a new SUSMP proposal was released for comment on December 7th.

This matter is now scheduled for Board discussion on January 26th. Recall that the municipal stormwater permit delegates the SUSMP approval to the Executive Officer. As I noted at the September 16th Board meeting, I felt this issue was simply too significant for action by the Executive Officer without direction from the Board and asked for your direction. On January 26th, I intend to provide the Board with a set of options for consideration that will allow you as wide a choice as possible of approaches to consider and from which to provide direction to staff.

A copy of the staff report is enclosed with the mail copy of this transmittal and has already been faxed to you. The staff report should be inserted into the binder of SUSMP comments sent to you yesterday. It is the first document that should appear in the binder in front of the December 7th staff SUSMP proposal.

I expect this item will take nearly the entire day for the Board to consider. We expect many interested parties to testify and we have scheduled this item to be heard nearly the entire day.

Agenda Item 12 – Sun Coast Calamari ACL. This ACL involving discharges of fishery waste to Port Hueneme harbor is likely to be held over for another meeting. The owner of the facility is requesting a delay and given the full agenda with the SUSMP item, we will likely approve their request.

Agenda Item 13 – Trancas WDR and TSO. This is a permit action item and waste discharge requirement (WDR) for a small sewage treatment plant serving a small number of homes in

Malibu. Consideration of this matter should be reasonably straightforward, although there are some issues that local residents will wish to raise. As you know, there is no sewer system in Malibu and smaller treatment facilities will be experiencing additional costs as they upgrade to meet improved operational standards. This item will be faxed to Board members and included in the addendum materials to be sent this Friday.

Agenda Item 14 – Ojai Valley Sanitary District ACL. This ACL has been paid by the Ojai Sanitary District and is off calendar. A set of Supplemental Environmental Projects will be developed and submitted to the Board for approval at an upcoming meeting.

Agenda Item 15 – LA Turf Club ACL is also off calendar. Staff have met with the Turf Club and a proposal for settlement has been offered in the amount of $137,500 (the original ACL was $150,000). Staff are supportive of accepting the lower penalty value given the uncertainty of the exact number of gallons released by the Turf Club and the progress they have made to ensure that the discharge does not recur. A settlement proposal will be formally offered to the Board at a subsequent meeting including Supplemental Environmental Projects for Board approval.

Agenda Item 16 – Resolution in Support of Bond Measures. This matter is designated as consent and does not need to be heard although the Board may wish to express comments on the topic. This matter was on the December 9th calendar but was not considered by the Board given other matters.

Agenda Item 17 – SB 709 Briefing. This is a briefing for Board members on the new legislation that became effective January 1st that requires imposition of mandatory minimum penalties for violations of some aspects of NPDES permits. This item will likely not be heard assuming the SUSMP matter consumes most of the available time. If, however, that matter is resolved, we are prepared to present this briefing. If not heard on the 26th, it will be rescheduled to another Board meeting.

50th Anniversary Dinner – As of today, we have about 120 persons signed up for the dinner (thank you very much for sending your checks in advance). Our program continues to take shape each day and we are gathering interesting facts to share reflecting on our 50 years. The formal program will include comments from David Nahai, Past Board members, Dick Harris (a former AEO who joined the Regional Board in the early 1960s), possibly a slide show by Dennis Dasker (who joined the Board in 1970), a Keynote by Secretary Winston Hickox, and various comments and presentations from Los Angeles and Ventura Counties and a number of cities. We are expecting several Resolutions and Proclamations to be presented honoring the Board for its achievements.

Long Beach Municipal Storm Water and Urban Runoff NPDES Permittee
Interested Parties

FROM: **Xavier Swamikannu**
Storm Water Program

DATE: **December 17, 1999**

SUBJECT: **Proposed Standard Urban Storm Water Mitigation Plan and Supporting Regional Board Resolution**

On December 7, the Regional Board Executive Officer transmitted a memorandum with the proposed Standard Urban Storm Water Mitigation Plan package (the Plan). The memorandum stated that the Regional Board would conduct a special meeting on January 6, 2000, to consider the proposed Plan and a tentative resolution to approve it. The Board Meeting has now been rescheduled to January 26, 2000, and a Public Notice has been sent out notifying the time and location.

Persons wishing to comment on the proposed Plan are invited to submit them in writing to the attention of Dr. Xavier Swamikannu. To be evaluated by Board staff and included in the Board's agenda folder, written comments or testimony on the proposed Plan must be received at the Regional Board's office by January 14, 2000. Comments received after that date will be provided, ex agenda, to the Board for their consideration.

It is expected that many interested parties will wish to speak before the Regional Board on January 26, 2000. In an effort to ensure that the Regional Board is provided with a comprehensive understanding of the concerns associated with this proposal, special arrangements for the presentation of comments are being considered. Specific details on the presentation arrangements for the January 26th Board meeting will be provided in the regular agenda notice. Interested parties are encouraged to contact the Regional Board Executive Officer to suggest consolidation of comments from many parties into a more comprehensive presentation with an extended time limit.

If you represent a Permittee or other interested party, it would be helpful if you would coordinate with other co-interested individuals and notify this office by January 14, 2000, of (1) lead designated speaker; (2) amount of time needed by the lead speaker; and (3) your request for time for additional speakers and the identity of such additional speakers. The Board will announce the amount of time available for the submission of oral comments in this matter and for discussion among the Board members in the formal notice of the Board's agenda. Upon receipt of the above information, the staff will recommend an allotment of time for all interested parties, based upon the information received. Parties who have not submitted the requested information will be provided any remaining time following allotment.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

STAFF REPORT AND RECORD OF DECISION

STANDARD URBAN STORM WATER MITIGATION PLANS

AND

NUMERICAL DESIGN STANDARDS FOR BEST MANAGEMENT PRACTICES

1.0 EXECUTIVE SUMMARY

The Standard Urban Storm Water Mitigation Plan (SUSMP) is a model guidance document for use by builders, land developers, engineers, planners and others to select post-construction Best Management Practices (BMPs) and obtain municipal approval of the urban storm water runoff mitigation plan for projects which fall into selected categories. A proposed SUSMP (December 7, 1999 version) was developed by Regional Board staff and distributed to interested parties.

The proposed SUSMP is designed to ensure that storm water pollution is addressed in one of the most effective ways possible, i.e., by incorporating Best Management Practices (BMPs) in the design phase of new development and redevelopment. It provides for numerical design standards (water quality design standards) to ensure that storm water runoff is managed for water quality concerns in addition to flood protection and that pollutants carried by storm water are retained and not delivered to waterways. Further, two additional categories are being included for storm water control requirements. These categories are, (i) parking lots 5,000 square feet (or with 25 or more parking spaces) and (ii) development of locations discharging to environmentally sensitive areas. The proposed SUSMP also attempts to respond to various concerns by providing a choice of design criteria and incorporating provisions that allow for flexibility thereby recognizing that a single numerical standard may not be appropriate in every case

The proposed SUSMP will require all new development or redevelopment that includes one of the following planning projects to select post-construction treatment BMPs for implementation:

(i) 100+ home subdivision;
(ii) 10-99 home subdivision;
(iii) 100,000+ square-foot commercial development;
(iv) automotive repair facilities;
(v) retail gasoline outlets;
(vi) restaurants;
(vii) parking lots more than 5,000 square feet or more than 25 parking spaces
(viii) hillside located single-family dwelling,
(ix) construction projects in environmentally sensitive areas

Note: The first two categories are combined in the December 7, 1999 proposed SUSMP document.

The Standard Urban Storm Water Mitigation Plan (SUSMP) proposed by the Regional Board staff takes much of the original language offered by the Co-Permittees in their submittal to the Regional Board on August 22, 1999, and consolidates it in a more concise and understandable document without duplication

2.0 STATEMENT OF THE PROBLEM

Water Quality and Storm Water

The water quality impacts of urbanization and urban storm water discharges have been summarized by several recent USEPA reports.[1] Urbanization causes changes in hydrology and increases pollutant loads which adversely impact water quality and impair the beneficial uses of receiving waters. Increases in population density and imperviousness result in changes to stream hydrology including:

(i) increased peak discharges compared to predevelopment levels;
(ii) increased volume of storm water runoff with each storm compared to pre-development levels;
(iii) decreased travel time to reach receiving water; (iv) increased frequency and severity of floods;
(iv) reduced stream flow during prolonged periods of dry weather due to reduced level of infiltration;
(v) increased runoff velocity during storms due to a combination of effects of higher discharge peaks, rapid time of concentration, and smoother hydraulic surfaces from chanellization, and
(vi) decrease infiltration and diminish groundwater recharge.

The Los Angeles County municipal storm water management (municipal separate storm sewer system [MS4]) program conducts monitoring to:

(i) quantify mass emissions for pollutants,
(ii) identify critical sources for pollutants of concern in storm water;
(iii) evaluate BMP effectiveness, and
(iv) evaluate receiving water impacts.

The monitoring indicates that instream concentrations of pathogen indicators (fecal coliform and streptococcus), heavy metals (such as Pb, Cu, Zn,) and pesticides (such as diazinon) exceed state and federal water quality criteria.[2] The mass emissions of pollutants to the ocean are significant from the urban Watershed Management Areas (WMAs) such as the Los Angeles River WMA, Ballona Creek WMA, and Coyote Creek WMA with the Los Angeles River WMA

[2] Los Angeles County 1998-1999 Stormwater Monitoring Report, Los Angeles County Department of Public Works (1999). Data summarizes results of storm water monitoring for the most recent year and the past five years.

providing more than seventy percent of the loadings. Critical sources data for facilities (such as auto-salvage yards, primary metal facilities, and automotive repair shops) showed that total and dissolved heavy metals (Pb, Cu, Zn, and Cd), and total suspended solids (TSS) exceeded state and federal water quality criteria by as much as a hundred times. The results are consistent with a limited term study conducted by the Regional Board to characterize storm water runoff in the Los Angeles region before the issuance of MS4 permits.[3] Storm water runoff data from predominant landuses showed similar patterns. Light-industrial, commercial and transportation landuses showed the highest range of exceedances. A pesticide (diazinon) showed higher ranges from residential landuse. The data for polycyclic aromatic hydrocarbons (PAHs), a known pollutant of concern in urban storm water runoff, is inconclusive but improved analytical methods may yield more definitive results next year. Receiving water impacts studies found that storm water discharges from urban watersheds exhibit toxicity that are attributable to heavy metals. Biosurveys of the sea-bottom showed bioaccumulation of toxicants. Sediment analysis showed higher concentrations of pollutants such as Pb and PAHs than rural watersheds (2 to 4 times higher). In addition, toxicity of dry weather flows was observed with the cause of toxicity undetermined.[4] Previous studies have found chemical concentration of pollutants that exceed state and federal water quality criteria in storm drains flowing to the ocean,[5] and that there are adverse health impacts from swimming near them.[6]

Treatment BMP requirements on new development and redevelopment offer the most cost effective strategy to reduce pollutant loads to surface waters. Retrofit of existing development will be expensive and may be considered on a targeted basis. Studies on the economic impacts of watershed protection indicate that storm water quality management has a positive or at least neutral economic effect while greatly improving the quality of surface waters.[7]

Municipal storm water regulations at 40 CFR 122.26 require that pollutants in storm water be reduced to the maximum extent practicable (MEP). The USEPA's definition is intentionally broad to provide maximum flexibility in MS4 permitting and to and to give municipalities the opportunity to optimize pollutant reductions on a program-to-program basis.[8] The definition of MEP has generally been applied to mean implementation of economically achievable management practices. Because storm water runoff rates can vary from storm to storm, the statistical probabilities of rainfall or runoff events become economically significant and are central to the control of pollutants through cost effective BMPs. Further, it is recommended that

storm water BMPs be designed to manage both flows and water quality for best performance. [9] It is equally important that treatment BMPs once implemented be routinely maintained.

Financing the MS4 program offers a considerable challenge for municipalities. A proven successful financing mechanism is the establishment of a storm water utility.[10] Utility fees, which are assessed on the property owner based on some estimate of storm water runoff generated for the site, are a predictable and dedicated source of fund. Utility fees can also provide a mechanism to provide incentives to commercial and industrial property owners to reduce impervious surface areas. Such incentives offer flexibility to property owners to choose the better economic option – paying more fees or improvements to reduce runoff from the site.

3.0 REVIEW OF STANDARDS FOR DEVELOPMENT PLANNING

The American Society of Civil Engineers (ASCE) and the Water Environment Federation (WEF) have recommended a numerical BMP design standard for storm water that is derived from a mathematical equation to maximize treatment of runoff volume for water quality based on rainfall/ runoff statistics and which is economically sound (ASCE/ WEF 1998).[11] The maximized treatment volume is cut-off at the point of diminishing returns for rainfall/ runoff frequency. On the basis of this equation the maximized runoff volume for 85 percent treatment of annual runoff volumes in California can range from 0.08 to 0.86 inch depending on the imperviousness of the watershed area and the mean rainfall.[12]

Other methods of establishing numerical BMP design standards include: (i) Percent treatment of the annual runoff; (ii) Full treatment of runoff from rainfall event equal to or less than a predetermined size; (iii) Percent reduction in runoff based on a rainfall event of standard size.[13] These numerical design standards have been applied to Development Planning in Puget Sound, WA; Alexandria, VA; Montgomery County, MD; Denver, CO, Orlando, FL and Austin, TX.

The City of Seattle requires that where new development coverage is 750 square feet or more, storm water detention be provided based on a 25 year storm return frequency and a peak discharge rate not to exceed 0.2 cubic foot per second.[14] Additionally, for projects that add more than 9,000 square feet in developmental coverage, the peak drainage water discharge rate is limited to 0.15 cubic feet per second per acre for a two-year storm. The City of Denver requires new residential, commercial, and industrial developments to capture and treat the 80th percentile runoff event. This capture and proper treatment is estimated to remove 80 to 90 percent of the

annual TSS load which is a surrogate measure for heavy metal and petroleum hydrocarbon pollutants.[15]

In the Los Angeles Region, at least three different numerical mitigation measures are in use or have been proposed by a small number of municipalities.

The County of Los Angeles requires that development projects that meet the threshold criteria in the unincorporated area select treatment BMPs that mitigate "runoff generated from each and every storm event of up to and including 0.75 inch rainfall". The point of diminishing return for rainfall treatment for Los Angeles County (Civic Center rainfall record) and the coastal Los Angeles (LAX rainfall records) coincide roughly with 0.75 inch and 1.4 inches.

The City of Santa Monica requires that development projects reduce 20 percent of the projected runoff from a one-inch 24-hour storm using impervious factors based on Los Angeles County flood control benefit assessment[16]. All new parking lots are required to have the capability to treat one inch of precipitation that falls in a 24 hour period. Developers are given the option to pay in lieu fees, to be used for other water quality projects by the City, should the standard be impossible to meet because of limiting considerations.

The City of Calabasas requires that development projects demonstrate an effort to reduce projected runoff by 20 percent from the base 1985 10-year storm basis (approximately 3.5 inches).[17]

Other cities such as Arcadia, Baldwin Park, Cudahy, Culver City, El Monte, Hermosa Beach, Pasadena, Rancho Palos Verdes, Redondo Beach, San Fernando, Sierra Madre, South El Monte, South Gate, Temple City, and West Holywood, while not having formally adopted the numerical design standard of 0.75 inch, have expressed a willingness or have implemented the standard already. These communities express a preference for a simple and easy to recall numerical standard applicable countywide.[18]

Ventura County has proposed draft land development criteria that treatment BMPs be designed for using a unit basin storage volume design based on 70 percent capture of annual runoff and flow based design criteria based on 10 percent of the peak 50 year flow rate from impervious areas.[19]

A few States have already established or are in the process of finalizing numerical standards for sizing storm water post-construction BMPs for new development and significant redevelopment. The State of Maryland has established storm water numerical criteria for water quality of 0.9 to

[16] City of Santa Monica Municipal Code, Chapter 7.10 – Urban Runoff Pollution (1995). The City of Santa Monica's numerical mitigation measure emphasizes flow reduction of about 0.2 inch of rainfall, which limits options for "treatment".

[17] City of Calabasas Municipal Code, Title 17, Chapter 17.56 – Urban Runoff Pollution Control (1998). The City of Calabasas numerical mitigation measure (0.7 in.) appears to be equivalent to the Los Angeles County measure for unincorporated areas (0.75 in.).

[18] See Letter dated January 18, 2000 from John Hunter & Associates, Consultants for these cities, addressed to Dennis Dickerson, Regional Board Executive Officer

[19] Letter from A. Sheyadayi, Ventura Countywide Stormwater Quality Management Program to X. Swamikannu (September 13, 1999) with attachment. 'Stormwater Treatment: A Design Approach for Volumetric and Flow Based Best Management Practices', J. Endicott *et al.*

1 inch and BMP design standards in a unified approach combining water quality, stream erosion potential reduction, groundwater recharge, and flood control objectives.[20] The State of Florida has used numerical criteria to require treatment of storm water from new development since 1982 including BMPs sized for 80 percent (95 percent for impaired waters) reduction in annual total suspended solids load derived from the 90 percent (or greater for impaired waters) annual runoff treatment volume method for water quality.[21] The State of Washington has proposed at least six different approaches of establishing storm water numerical mitigation criteria for new development which add 10,000 square feet of impervious surface or more for residential development and 5,000 square feet of impervious surface or more for other types of development[22]. The mitigation criteria options include the 90th percentile 24-hour rainfall event and the six month 24 hour rainfall event.

On a national level, the USEPA is planning to standardize minimum BMP design and performance criteria for post-construction BMPs under Title III of the Clean Water Act and will likely build from the experience of effective state and local programs to establish national criteria.[23] The USEPA, based on the National Urban Runoff Program, supports the first half-inch of rainfall as generating first flush runoff.[24] First flush runoff is associated with the highest pollutant concentrations, and not pollutant load. The USEPA considers the first flush treatment method, the rainfall volume method, and the runoff capture volume method as common approaches for sizing of water quality BMPs.

4.0 NEW DEVELOPMENT REQUIREMENTS BACKGROUND

Los Angeles County and municipalities within the County (except the City of Long Beach) implement a municipal storm water program to reduce storm water and urban runoff pollution under the requirements of Board Order No. 96-054. The City of Long Beach implements a separate municipal storm water program to reduce storm water and urban runoff pollution under Board Order No. 99-060 adopted by the Regional Board on June 30, 1999. The Los Angeles County Municipal Storm Water Permit include requirements that Standard Urban Storm Water Mitigation Plans (SUSMPs) be prepared for priority planning projects and that they include appropriate Best Management Practices (BMPs) and guidelines to reduce pollutants in storm water to the maximum extent practicable (Permit Pt. 2. III.A.) The City of Long Beach municipal separate storm sewer system (MS4) permit includes requirements that make SUSMP provisions adopted by the Regional Board or approved by the Regional Board Executive Officer for Los Angeles County and Cities applicable to its program.

[22] Storm Water Management in Washington State Volumes 1 – 5. Public Review Draft (Washington Department of Ecology 1999). The volumes 1,3 and 5 are most relevant to new development standards and cover Hydrologic and Flow Control Designs, Minimum Technical Requirements and Treatment BMPs. The volumes will be adopted as statewide standards in early 2000 after completion of public hearings according to the agency.

[23] Storm Water Phase II Final Rule – Pre-Federal Register Version, p 53 (USEPA 1999). See USEPA's discussion on construction and post-construction BMP requirements for Phase II.

[24] A Watershed Approach to Urban Runoff: Handbook for Decisionmakers, Terene Institute and USEPA Region 5 (1996). See discussion on sizing rules for water quality purposes, p 36.

On April 22, 1999, the Regional Board approved a List of BMPs for MS4 Co-Permittees to select from and require implementation of the most effective BMPs in their Development Planning and Development Construction programs (Board Resolution No. 99-03). The Regional Board at that time also requested that the SUSMPs for Priority Planning Project categories, which incorporate the BMPs, be brought to it for discussion.

Los Angeles County Department of Public Works (LACDPW), on behalf of the Co-Permittees, submitted SUSMPs for Regional Board Executive Officer approval on July 22, 1999. These SUSMPs were revised and resubmitted on August 12, 1999, after a joint SUSMP workshop held on August 10, 1999, to clarify the meaning of some text. SUSMPs have been submitted for: (i) 100+ home subdivisions; (ii) 10-99 home subdivisions; (iii) 100+ square-foot commercial developments; (iv) automotive repair facilities; (v) retail gasoline outlets; (vi) restaurants; and (vii) hillside located single-family dwellings. Prior to submittal to the Regional Board, draft versions of the SUSMPs were distributed to environmental groups, contractors, developers, consultants and trade industry groups for review and comment.

The SUSMP requirements within this proposal for the Los Angeles County storm water program, will apply to the City of Long Beach MS4 permit for the following categories only: (i) 10-99 home subdivisions; (ii) 100 or more subdivisions; (iii) 100,000 or more square foot commercial developments; and (iv) projects located adjacent to or discharging to environmentally sensitive areas.

For (i) restaurents; (ii) retail gasoline outlets; and (iii) automotive repair facilities, it is expected that the City of Long Beach will require post construction BMPs to meet the numerical design standard approved by the Regional Board. The City of Long Beach MS4 permit does not require that SUSMPs be prepared for these categories, since the requirements are contained in the City of Long Beach Storm Water Management Program.

The Long Beach MS4 permit requires that the City conduct a parking lot-study (with ten or more spaces) to characterize and evaluate storm water runoff pollution and mitigation and submit a report in July 2000. It is expected that the City of Long Beach parking lot study will consider any requirements approved by the Regional Board for parking-lots, including treatment control BMPs based on a numerical design standard.

The Regional Board provided Public Notice on August 16, 1999, of proposed action on the SUSMP and proposed discussion on September 16, 1999, before the Board and invited comments from interested parties. Comments were received from municipalities, environmental groups, businesses, environmental consultants, and the building industry.

These comments are summarized in "Comments and Response" included in the Record of Decision and was part of the package mailed out with the notice of proposed action for the January 6, 2000, Board meeting.

5.0 STANDARD URBAN STORM WATER MITIGATION PLANS (SUSMPS)

LACDPW and its Co-Permittees submitted for approval by the Executive Officer, SUSMPs for: (i) 100+ home subdivisions; (ii) 10-99 home subdivisions; (iii) 100+ square-foot commercial developments; (iv) automotive repair facilities; (v) retail gasoline outlets; (vi) restaurants; and (vii) hillside located single-family dwellings.

Post-construction BMPs to be selected include: Structural Control BMPs, Treatment Control BMPs, And Source Control BMPs. The list of treatment control BMPs includes (i) vegetated swales and strips; (ii) extended/ dry detention basins; (iii) infiltration basins; (iv) infiltration trenches; (v) wet ponds; (vi) constructed wetlands; (vii) oil/water separators; (viii) catch-basin inserts; (ix) storm drain inserts; (x) media filtration; (xi) bioretention; (xii) dry wells; (xiii) cisterns; and (xiv) foundation planting.

As submitted, the SUSMPs for the 100+ home subdivision, the 10-99 home subdivision, and 100+ square-foot commercial development categories included requirements that storm water runoff be mitigation with source control and treatment control BMPs. The SUSMPs for automotive repair facilities; retail gasoline outlets; restaurants; and hillside located single-family dwellings required only source control BMPs. No numerical design criteria were included. A 0.6-inch 24-hour rainfall criterion that was in earlier drafts of the document and circulated to Co-Permittees and interested parties for comment was deleted from the Co-Permittee's SUSMP proposal submitted to the Regional Board.

6.0 STAFF PROPOSED SUSMP IMPROVEMENTS

At the Regional Board meeting held on September 16th, the only significant difference between the staff's proposal and that of the Co-Permittee's was the inclusion of a numerical design standard for the sizing of Best Management Practices. Without including a specific design standard in the SUSMP proposal, staff hold that the SUSMPs would be left without a key provision that would ensure that BMPs would be utilized in the most effective manner as directed by the Regional Board in its April 1999 approval of the List of Best Management Practices for New Development.

With action on the SUSMP proposal delayed following the September 16, 1999 Regional Board meeting, staff were able to develop a more refined proposal that would build in additional flexibility for Co-Permittees. On December 7, 1999, staff released a revised proposal for public review and comment.

The December 7th SUSMP proposal is a substantial revision to that which was before the Board on September 16th. Much of the language of the original SUSMP proposal submitted by the Co-Permittees remains. The following revisions to the original language (not all of the revisions made are discussed herein) represent the most significant differences between the August 1999 Co-Permittee submittal and the December 7th staff proposal:

Consolidation of Text

The August proposal contained much text that was redundant by replicating language for each individual SUSMP category. This redundant language has been consolidated in a section that applies a set of SUSMP requirements to all SUSMP categories. In addition, the two categories for residential developments have now been consolidated into one category.

Numerical Design Standard

As before the Regional Board in September, the December 7th staff proposal includes numerical design criteria for BMP. Four different numerical design criteria for BMPs have been provided while essentially retaining the technical basis of the September 7 staff proposal for numerical design standards for treatment control BMPs.

As presented in the December 7th document, the post-construction treatment BMPs shall be designed to:

A. mitigate (infiltrate or treat) storm water runoff from either:

1. each runoff event up to and including the 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, (1998)*, or

2. the annual runoff volume, based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial,* (1993), or

3. the volume of runoff produced from each and every storm event up to and including 0.75 inch of rainfall, prior to its discharge to a storm water conveyance system, or

4. the volume of runoff produced from each and every storm event up to and including a historical-record based reference 24-hour rainfall criterion for "treatment" (0.75 inch average for the Los Angeles County area) that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event,

AND

B. control peak flow discharge to provide stream channel and over bank flood protection, based on flow design criteria selected by the local agency.

Significantly, the December 7th staff proposal contains a provision that allows BMPs to not be sized to include runoff from roof structures under certain conditions. These conditions include ensuring that the runoff from the roof surface is directed to a storm drain system prior to allowing any commingling with other surface runoff that may be carrying contaminants. Additionally, the runoff from the roof area should not itself be contaminated. Allowance of a roof runoff exemption allows for BMPs to be designed for a smaller amount of runoff thereby resulting in a smaller structural BMP and less initial construction and maintenance costs.

In addition, staff has recognized that flow considerations may be significant in the design of certain BMPs (such as catch-basin inserts). However, limited analyses exist at this time of flow rate and rainfall intensity statistics for water quality design. Thus staff has provided a general provision, determined by the local agency, to control peak flow discharge to avoid stream channel erosion and over-bank flooding only. Flow rate criteria for flow sensitive BMPs will need to be developed in the future.

Additionally, restaurants involving land area of 5,000 square feet or less are excluded from the numerical design standard.

Definition of Hillsides

The December 7th proposal attempted to provide clarity to the definition of "Hillside" for consistent interpretation. However, the definition in the December 7th proposal was defined broadly and requires modification. A Change Sheet will be offered to modify the definition as property located in an area with known erosive soil conditions, where the development would involve regulated grading on any natural slope that is 25 percent or greater.

Redevelopment Threshold

Comments have suggested the need for a trigger threshold to the definition of 'Redevelopment' for SUSMP requirements to become applicable. A Change Sheet will provide a revision for the definition of "Redevelopment" which will provide that "on an already developed site, the creation or addition of fifty percent or more of impervious surfaces or the making of improvements to fifty percent or more of the existing structure". This change ensures that minor modifications to existing structures or properties do not unintentionally trigger SUSMP requirements.

Parking Lots

A new category subject to SUSMPs "Parking Lots" was added. Parking lots with daily vehicular traffic produce pollutants such as heavy metals, oil and grease, and petroleum hydrocarbons from vehicle drippings and engine system leaks. Studies in the Los Angeles area conducted on the quality of storm water from parking lots indicate that the concentration of the pollutants often exceed water quality criteria.[25] These results affirm studies, conducted by some business groups included in the priority-planning category, which demonstrate that pollution from commercial parking lots is similar.[26]

The Los Angeles municipal storm water permit currently includes requirements for parking lots with the threshold condition of 25 or more parking spaces (equivalent to 5,000 square feet of surface area).[27] Separately, the Long Beach municipal storm water permit includes a special study provision to characterize pollution and evaluate controls for parking lots with 10 or more spaces. It is expected that the Long Beach parking lot study will develop additional information on controls necessary, if any, for these smaller (10-25 space) parking lots.

Comments received have suggested that the staff's original intent with respect to this provision were unclear. A Change Sheet will clarify staff's intent that this requirement be applied only to commercial "stand alone" parking lots, i.e., parking lots that are not associated with small commercial developments.

---

[25] *Santa Monica Bay Area Municipal Storm Water/ Urban Runoff Pilot Project Studies: Evaluation of Potential Catchbasin Retrofits*, Santa Monica Bay Cities Consortium (1998); and *Consent Decree Report: Strip Filter*, City of Los Angeles, Stormwater Management Division (1999), these studies characterized parking lot storm water runoff from areas 10,000 -150,000 square feet and evaluated BMP pollutant removal effectiveness.

[26] *Results of a Retail Gasoline Outlet and Commercial Parking Lot Storm Water Runoff Study*, Western States Petroleum Association and American Petroleum Institute (1994). The study simulated runoff and found that pollutant concentrations from commercial parking lots and gas stations are similar.

[27] Board Order No. 96-054, Pt. 2. 1.E.1.a.ix. The Los Angeles permit requires that Permittees have the legal authority to require sweeping or other equally efective measures to remove debris from industrial commercial motor vehicle parking lots with more than 25 parking spaces.

Environmentally Sensitive Areas

The new category of Environmentally Sensitive Areas was added subject to SUSMPs. Urban storm water discharges that contribute pollutants to areas designated as environmentally significant or environmentally sensitive may adversely impact the ecology that has been designated for protection under state, federal and local laws.

Comments have been received that draw attention to the fact that many different provisions of law, regulation, and guidance define a variety of environmentally sensitive areas that, taken together, may result in the application of SUSMP criteria to an inherently vague definition leading to application of that criteria in situations where it was not intended. The staff proposal's definition requires careful review to ensure that it is defined to reflect Regional Board direction and regulatory clarity. A Change Sheet will address comments received. Some considerations in crafting a definition follow:

Under the federal Endangered Species Act (ESA) agency actions must not jeopardize the existence of listed species or modification of a critical habitat.[28] The Regional Board has a responsibility, as the implementing agency for a federal regulation, to ensure that its actions be consistent with the ESA. Applicability of the requirement to develop a SUSMP has been limited to areas designated as environmentally sensitive or significant by the State Water Resources Control Board, the State Resources Agency, and the County of Los Angeles. The Long Beach municipal storm water permit already requires SUSMP for development in locations discharging to environmentally sensitive areas.[29]

The California Coast Act (CA) Section 30116 defines sensitive coastal resource areas as: "Those identifiable and geographically bounded land and water areas within the coastal zone of vital interest and sensitivity. "Sensitive coastal resource areas" include the following:

(a) special marine and land habitat areas, wetlands, lagoons and estuaries as mapped and designated in part 4 of the coastal plan
(b) areas possessing significant recreational value
(c) highly scenic areas
(d) archaeological sites referenced in the California coastline and recreation plan or as designated by the state historic preservation officer
(e) special communities or neighborhoods which are significant visitor destination areas.
(f) areas that provide existing coastal housing or recreation opportunities for low and moderate income persons.
(g) areas where divisions of land could substantially impair or restrict coastal access."

The Los Angeles County General Plan identifies Ecologically Significant Habitat Areas (ESHAs). Areas in Los Angeles County that are ecologically sensitive were first identified in the early 1970s by a court decision (the Judge Thomas decision) and subsequently modified based

[28] 62 *Fed. Reg.* 7872. The USEPA states in the preamble to the reissuance of NPDES general permits for storm water discharges from construction activities, that prohibition in the Endangered Species Act on harmful agency actions are binding on it, other federal agencies, permittees, and the public at large. EPA writes, "Federal agencies are required to consult with the Fish and Wildlife Service or the National Marine Fisheries Service to ensure that any action authorized, funded, or carried out by them are not likely to jeopardize the continued existence of a listed species or result in the destruction or adverse modification of critical habitat."

[29] Board Order No. 99-060, Pt. 4. 1.D.5. The Long Beach municipal storm water permit states that, "the Standard Urban Storm Water Mitigation Plan [shall] be prepared for...(d) environmentally sensitive areas."

on "the England and Nelson Study" conducted by the Museum of Natural History for the Los Angeles County Department of Regional Planning ((Los Angeles County Significant Ecological Areas Study,1976). Subsequent modifications have been conducted on a case by case basis. These areas are designated Ecological Significant Areas (SEAs) and include all ESHAs.

Sensitive resources include streams and wetlands, but also some upland areas such as oak woodlands coastal sage scrub and certain desert habitat. The Coastal Act protects SEAs, streams and wetlands. The term "sensitive resource areas" include these areas. The coastal act defines an ESHA as an area in which the habitat is rare or especially valuable.

Retail Gasoline Outlets

At present, most retail gasoline outlets are operated as fueling facilities only. Automotive repair activities are no longer conducted on these sites. Consistent with this trend, the BMP requirements for retail gasoline outlet with fueling services only have been limited to guidelines in, *Best Management Practices Guide: Retail Gasoline Outlets*, California Stormwater Quality Task Force (1997). Where a retail gasoline outlet provides fueling services and operates a service bay for automotive repair, BMP requirements to reduce storm water pollution from vehicle repair/ maintenance activities would also apply.

Conflicts with Local Practices

Language has been included to allow changes to provisions in the SUSMP if there is conflict with established local codes, if the modification would not otherwise defeat or circumvent the intent of the SUSMP requirements. This provision of the SUSMP enables municipalities to make changes to the SUSMP to be consistent with local codes and practices without prior approval of the Regional Board Executive Officer where the change has little bearing on SUSMP requirements to reduce storm water pollution.

Provision of Waiver

A waiver provision has been included in the SUSMP to enable municipalities to afford developers and builders the option of in lieu fees where "Impracticability" of storm water treatment can be established. Recognized situations of "Impracticability" include, (i) extreme limitations of space for treatment; (ii) unfavorable or unstable soil conditions for infiltration; and (iii) presumptive risk of groundwater contamination because an underground drinking water source or potential drinking water source is less than ten feet from soil surface.

As proposed, a waiver granted by a municipality for any project is revocable by the Regional Board Executive Officer for cause and with proper notice upon petition. Along with the waiver option is a requirement that the municipality, in turn, require that the cost savings of not implementing SUSMPs be transferred to a storm water mitigation fund, designated by the municipality, to be used to promote regional or alternative solutions for storm water pollution control. A public agency or a non-profit entity must operate the storm water pollution control project. Any other generic basis of 'Impracticability", other than the three listed above, must be submitted by the Co-Permittee to the Regional Board and approved by the Executive Officer before it can take effect. The purpose of the waiver is to provide an alternative for individual projects where storm water treatment is infeasible, while ensuring that storm water pollution control efforts are not obviated by the grant of waiver.

Groundwater Resource Protection

The SUSMP explicitly recognizes that in some circumstances, infiltration BMPs, may not be appropriate because of the risk of contamination of groundwater resources. It identifies the factors that determine potential for groundwater contamination. These are, (i) pollutant mobility; (ii) pollutant abundance in storm water, and (iii) soluble fraction of pollutant. A reference for further information on how to evaluate limitations and potential risk is provided, *Potential Groundwater Contamination from Intentional and Non-Intentional Stormwater Infiltration, Report No. EPA/600/R-94/051, USEPA (1994).*

Alternative Certification Option

The SUSMP includes a provision that authorizes municipalities, in lieu of conducting a detailed plan review, to accept a signed certification by a registered engineer or a licensed architect that the urban storm water mitigation plan submitted by the project proponent meets BMP criteria described in the SUSMP. As initially proposed in the December 7th SUSMP document, the registered engineer or licensed architect was to provide evidence that the certifying person has undergone training on designing BMPs to meet the numerical mitigation criteria and other conditions in the SUSMP not more than two years prior to the signature date on the plan. The training on SUSMP and BMP design criteria may be conducted by any institution with the relevant expertise. Some such institutions are universities, the American Society of Civil Engineers (ASCE), the American Public Works Association (APWA), the American Society of Landscape Architects (ASLA), and the California Water Environment Association (CWEA). The purpose of the provision was to provide an option for municipalities to limit resource demands on planning departments, without reducing storm water quality protection objective of the SUSMP. While the concept remains desirable, staff will propose a modification that encourages, rather than require, Co-Permittees who elect to accept certifications from registered professional engineers and licensed architects, to verify that the certifying person has been trained, by an institution with expertise, on design of BMPs for water quality.

7.0 SAMPLE APPLICATION OF THE NUMERICAL MITIGATION MEASURE

After the Regional Board Executive Officer approves the SUSMP, municipalities will be expected to implement an urban storm water mitigation plan approval program. The municipality must require that projects that meet the criteria established in the permit and SUSMP prepare and submit an Urban Storm Water Mitigation Plan for approval. Project proponents must identify in the Plan post-construction treatment control BMPs for implementation. The treatment control BMP(s) must be sized or designed to treat the volume/ flow of storm water produced by rainfall events up to and including the design storm (numerical design criteria).

The project proponent will select source control and treatment control BMP(s) from the list approved by the Regional Board in Board Resolution No. 99-03, and included in the SUSMP. For example, for a 100+ home sub-division project, these may include swales (for the parkway); infiltration basin at the end of swale; biofilters (around parking lots); green belts (between rear yards); detention basin (as a lake); and catch-basin basket inserts (for trash). In combination, these treatment control BMPs must be sufficiently sized, i.e., designed and constructed, to treat, infiltrate, or filter the first 0.75 inch of storm water runoff from a storm or a storm event. The urban storm water mitigation plan will specify the treatment control BMPs and other source control BMPs that will be built into the project.

The municipality could then review the Urban Storm Water Mitigation Plan to make sure that it meets the requirements of the SUSMP for the project type. If the SUSMP requirements are met, the municipality may approve the project to proceed. As an alternative, the municipality, may in lieu of detailed plan checking, accept signed certification by a registered engineer or a licensed architect. The municipality may require that the certifying person provide evidence of undergoing training for BMP water quality sizing and other plan requirements. For example, training conducted by institutions with BMP water quality design expertise, within two years of the plan signature date, may be considered qualifying.

Alternatively, if the project proponent can demonstrate that construction of treatment control BMPs are impracticable the municipality may authorize the project proponent to transfer equivalent funds to alternative BMP projects to control storm water pollution managed by a public or non-profit agency. Some examples of recognized situations of impracticability are unstable soil conditions, shallow groundwater, or extreme limitations of space.

8.0 LEGAL AND REGULATORY BASIS FOR ACTION[30]

Regional Board Authority to Adopt the Proposed SUSMP.

The Regional Board has the authority to adopt the proposed SUSMP and numerical mitigation standards for new development and significant redevelopment. Regional Board Order No. 96-054 ("Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges Within the County of Los Angeles") requires that each of the Permittees develop an Urban Storm Water Mitigation Plan following the model approved by the Executive Officer.[31]The proposed action would adopt the model, or Standard Storm Water Mitigation Plan for the Co-Permittees to follow.

Although Order No. 96-054 provides that the Regional Board Executive Officer has authority to approve the model program, as proposed, the current proposal is being submitted to the Board itself for review and endorsement at an upcoming meeting. Following consideration by the Board, the Executive Officer would proceed to approve the SUSMP for Los Angeles County Co-Permittees. In addition, the proposal would make the SUSMP applicable to the City of Long Beach. This is required because the City of Long Beach has a storm water permit (Order No. 99-060 separate from the one applicable to other cities in the County.

The proposed SUSMP would require, *inter alia,* that (a) post-construction treatment control BMPs be required for nine categories of development and (b) the BMPs be designed to mitigate (treat or infiltrate) the runoff from all storms up to 0.75 inch of rainfall for 24-hour period or equivalent runoff volume. These requirements are based upon application of provisions of the Clean Water Act (CWA), section 402(p) and the 1987 Amendments to the CWA. The federal provisions require that a storm water program:

> "* * *
>
> (ii) Shall include a requirement to effectively prohibit non-storm water discharges into storm sewers; and

[30] Section 8.0 was prepared by the Regional Board's Legal Counsel, Mr. Jorge Leon

[31] Los Angeles Municipal Permit, (Part III.A., at Page 31.)

(iii) Shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." [Section 402(p)(3)(B), USC Section 1342(p)(3)(B), emphasis added.]

The proposal is an effort to meet the CWA requirements. In a 1992 decision, the U.S. Court of Appeals for the Ninth Circuit (NRDC *v.* U.S. U.S. EPA, 966 F.2d 1292) interpreted the above language as providing the Administrator or the State with a substantial amount of discretion:

> "[t]he language in (iii), above, requires the Administrator or the State to design controls. Congress did not mandate a minimum standards approach or specify that U.S. EPA develop minimal performance requirements...we must defer to U.S. EPA on matters such as this, where U.S. EPA has supplied a reasoned explanation of its choices."

The decision, sometimes referred to as "NRDC II," stands for the proposition that the U.S. EPA and the States are authorized to require implementation of storm water control activities that, upon "reasoned explanation," accomplish the goals of Section 402(p).

In a very recent decision, the Ninth circuit Court of Appeals reinforced the U.S. EPA's and the State's authority in this area. In Defenders of Wildlife *v.* Browner (1999) Case No. 98-71080, the Ninth Circuit Court of Appeals reviewed an action of the U.S. U.S. EPA to adopt a Storm Water Management Program in the State of Arizona. That program included best management practices such as storm water detention basins, retention basins, and infiltration ponds. The question was whether the U.S. EPA may require numeric limitations to ensure strict compliance with the state water-quality standards. The Court concluded that the CWA does not require strict compliance; however, citing the language of (iii), above, it stated: "[t]hat provision gives the U.S. EPA discretion to determine what pollution controls are appropriate. As this court stated in NRDC II, 'Congress gave the administrator discretion to determine what controls are necessary...[cites omitted] (at page 11687).

The SUSMP proposal is an effort to meet the CWA Section 402(p) requirements and the staff has provided a "reasoned explanation of its choices" in the SUSMP proposal, the staff report, and the accompanying materials. Accordingly, the proposed SUSMP requirements are well within the Regional Board's authority and discretion.

Process under Order 96-054.

The Executive Advisory Committee of the Storm Water Program for Los Angeles County has suggested that the present process, by which the Regional Board will consider endorsement of a storm water program, violates the model program adoption process as set out in Order 96-054.

The argument relies heavily on a premise that the Permit process provides significant notice, review and meet-and-confer protections that will benefit the Co-Permittees. The comment accurately sets forth the storm water program submittal, review, and approval provisions as set forth in Order No. 96-054. However, those provisions must be considered in their full context, including, significantly, the deadline set forth in the permit for implementation. That deadline (July 30, 1999) has come and gone. Because of the lapse of the deadline, the lack of

countywide implementation of an effective SUSMP, and the impending expiration of Order No. 96-054 itself, the process prescribed in the permit is now obsolete.

The process now proposed by the Executive Officer would expedite implementation of an effective SUSMP while still effectively providing the protections to the Co-Permittees provided under the Order's scheme. That is, while the proposed process differs from that set forth in Order No. 96-054, it creates no actual prejudice to the Co-Permittees. None is described in the Executive Advisory Committee's (EAC) comment letter of December 22, 1999. To the contrary, in order to provide for program submittal, review, and meet-and-confer, the Executive Officer and staff have held numerous discussions with the Co-Permittees, the County and the EAC regarding the SUSMP proposal, including a workshop held August 10, 1999 and the discussion before the Regional Board itself of September 16, 1999. During these discussions, several proposals have been exchanged between the staff and the interested parties and the record in this matter now contains a substantial number of comments and responses.

Significantly, the Executive Officer's proposal has the endorsement of the U.S. EPA.[32] Moveover, as a further consideration, the U.S. EPA's October, 1999 "NPDES Program Implementation Review" for this region was critical of the process set forth in Order 96-054 for model program approval.[33]

The unfortunate effect of adopting the EAC's argument to adhere at this time to the scheme laid out in Order 96-054 would be to further seriously delay implementation of the SUSMP without providing any real additional procedural protections to the Co-Permittees. It would also expose the Regional Board to court action for failure to timely move toward program implementation.

Given the circumstances of this matter, the fact that a change of process has not deprived the Co-Permittees of any opportunity to discuss the SUSMP provisions and propose alternatives or any other protections, and the fact that the Regional Board's primary responsibility is to protect the water quality in the Region (Water Code Section 13000), the Board may, within its legal discretion, determine that the best way to do so in the municipal storm water context, is to proceed with the SUSMP proposal under the process presented by staff, rather than delay program implementation.

Compliance with the California Environmental Quality Act.

The City of Los Angeles has requested the "Regional Board's analysis of the potential multi-media environmental impacts from the proposed requirement "(i.e. the California Environmental Quality Act documentation and supporting information developed for this specific discretionary regulatory action." The proposed action is a requirement of Order No. 96-054. The issuance of the order itself, and the requirements contained in the order, is exempt from CEQA (Water Code Section 13389). Accordingly, no specific CEQA documentation has been prepared for this proposal. Nonetheless, the staff has prepared preliminary cost-benefit analyses contained in the supporting material, and these can be provided.

---

[32] See Letter of January 13, 2000 to Dennis Dickerson, Executive Officer from Alexis Strauss, Director, Water Division, U.S. EPA.

[33] See NPDES Program Implementation Review: California Regional Water Quality Control Board 4, Los Angeles Region. USEPA, Region 9, Final Report – October 1999., at page 10 of 45. The report notes at page 28 that the process was "...hindering overall progress towards achieving permit objectives".

Notice Sufficiency

A party commented that insufficient notice has been provided to the public regarding this matter. An earlier version of the SUSMP proposal was issued to the public in August 1999 and a public workshop was held on August 10, 1999. Additionally, this matter was heard before the Regional Board during a discussion at its September 16, 1999 meeting. While the only applicable legal notice requirement is 10 days (Govt. Code Section 11125), the Regional Board staff has provided 30 days public notice of the revised version that is currently scheduled to be heard by the Board at its January 26, 2000 meeting. This constitutes adequate legal notice.

Implementation Date.

Order No. 96-054 contemplates that implementation of the SUSMP requirements commence no later that July 30, 1999. Since that date has passed, a new implementation date must be determined following approval of the SUSMP by the Executive Officer. There is no legal standard upon which to base a new implementation date. The Executive Officer is free to establish a revised implementation schedule. Inasmuch as the municipalities will likely be required to adopt or amend existing ordinances to require compliance with the SUSMPS, a new implementation date should take that need into account. I recommendation that the Co-Prmittees be requested to submit comments on this issue and that the Board consider alternatives proposed.

Unfunded Mandate.

The requirements of the proposed SUSMP are not within the definition of "Unfunded Mandates" that would require reimbursement of costs under the California Constitution. This is because the requirements of the SUSMP are derived from the federal Clean Water Act, not from State Law. Inasmuch as the Regional Board staff's proposal would implement a federal requirement, rather than a state requirement, the SUSMP are not unfunded mandates.

Compliance With the Administrative Procedure Act.

The EAC argues that the proposed SUSMP constitutes rulemaking, in violation of the California Administrative Procedure Act, Government Code Section 11340 et.seq. The EAC's objection to the model program adoption process comes approximately three and a half years beyond the legal statute of limitations (Water Code Section 13320 provides 30 days for an aggrieved person to petition for review of a Regional Board action). The model programs provision, contained in Order No. The Regional Board adopted Order No. 96-054, on July 15, 1996. The argument is not only grossly untimely, it is also incorrect. The APA requirements apply only to rulemaking activities. Contrary to the EAC's assertion, the proposed action is not "rulemaking" in nature. Rather, it is the identification of further requirements set forth in permit Order No. 96-054. Under the APA itself, the issuance of such permits is not subject to the rulemaking requirements of the APA (Government Code Section 11352(b).

9.0 RECOMMENDATION

Staff has reviewed the state of current technical practice and the regulatory authority vested with the Regional Board to direct implementation of actions to reduce pollutants in storm water. The municipal storm water program for Los Angeles County and cities is in its ninth year of implementation. The municipal storm water program has been widely criticized as being

ineffective and there have been delays in achieving implementation of all facets of the 1996 permit requirements.[34] Some cities have adopted programs embracing many of the elements of the SUSMP program as proposed, including the numerical design criteria, and the County is using the 0.75 inch design standard (as a result of its own determination of the appropriateness of that value in reaching an accord regarding litigation settlement).

In view of 1) the legal authority of the Regional Board; 2) the practice already in place in a substantial portion of the County; and 3) the need to address the contribution of pollutants from storm water runoff; it is appropriate for the Regional Board to establish numerical design criteria for treatment BMPs for priority development projects. While the staff proposal cites a 0.75 inch standard, the specific design standard to be adopted and a schedule for its implementation remain matters which are within the discretion of the Regional Board.

Staff further recommends that the Regional Board adopt the numerical BMP design standard in the SUSMP as the minimum standard of review for post-construction BMPs, in the Los Angeles Region, for projects subject to coverage under the state general permit for storm water discharges associated with construction activity.

Regional Board staff recommends that the Regional Board endorse the December 7, 1999 staff proposal for SUSMPs with appropriate changes as included in the Change Sheet to be available at the Board meeting, and/or as modified and directed by the Regional Board. Comments are being received as this staff report is being developed and the Change Sheet to be submitted to the Board will likely include revisions based on comments received after the date of this Report.

FROM: Dennis A. Dickerson
Executive Officer

DATE: December 7, 1999

SUBJECT: Proposed Standard Urban Storm Water Mitigation Plan and Supporting Regional Board Resolution

On September 16th, at the Regional Board meeting, I advised the Regional Board that additional time to develop a revised Standard Urban Storm Water Mitigation Plan proposal would be in the best interest to ensure that the proposal were more fully documented and supported by the record. At that time, I indicated that Regional Board staff would develop a revised proposal at the earliest opportunity but probably not less than 90 days later. This proposal has been developed and is being noticed through this memorandum to Permittees and Interested Parties. The proposal is also being mailed and placed on the Regional Board's Internet website.

The proposed Standard Urban Storm Water Mitigation Plan is designed to ensure that storm water pollution is addressed in one of the most effective ways possible, i.e., by incorporating Best Management Practices (BMPs) in the design phase of new development and redevelopment. The proposal also provides for numerical design standards to ensure that storm water runoff is managed for water quality concerns in addition to flood protection and that pollutants carried by storm water are retained and not delivered to waterways.

The proposed Standard Urban Storm Water Mitigation Plan adds two additional categories for controls, parking lots and environmentally sensitive areas. The proposal also attempts to respond to various concerns by incorporating provisions that allow for flexibility thereby recognizing that a single numerical standard may not be appropriate in every case. Also, the proposed Standard Urban Storm Water Mitigation Plan has taken the original language offered by the Principal Permittee and eliminates much of the duplication allowing for a more concise and understandable document.

A Tentative Resolution is also being offered to the Regional Board for their consideration at the January 6, 2000 Board Meeting. This Tentative resolution acknowledges the structure of both the Los Angeles and Long Beach Municipal Storm Water Permits by allowing the Standard Urban Storm Water Mitigation Plan approval to be accomplished by the Executive Officer for the Los Angeles permit while the Regional Board itself would approve the Standard Urban Storm Water Mitigation Plan pursuant to the City of Long Beach permit. If adopted by the Regional Board, the Tentative resolution would approve the Long Beach Standard Urban Storm Water Mitigation Plan while encouraging the Executive Officer to approve the Los Angeles Standard Urban Storm Water Mitigation Plan. In addition, the Regional Board is being asked to adopt the numerical design standards as the minimum standards for

post-construction BMPs required by the statewide general permit for construction activity for construction projects in the Los Angeles Region.

The September 16, 1999 public hearing was lengthy with many commentors. It is understood that many interested parties will again wish to speak before the Regional Board. In an effort to ensure that the Regional Board is provided with a comprehensive understanding of the concerns associated with this proposal, special arrangements for the presentation of comments are being considered. Specific details on the presentation arrangements for the January 6th Board meeting will be provided in the regular agenda notice. Interested parties are encouraged to contact the Executive Officer to suggest consolidation of comments from many parties into a more comprehensive presentation with an extended time limit.

If you represent a Permittee or other interested party, it would be helpful that by December 20, 1999 you would coordinate with other co-interested individuals and notify this office of (1) lead designated speaker; (2) amount of time needed by the lead speaker; and (3) your request for time for additional speakers and the identity of such additional speakers. The Board will announce the amount of time available for the submission of oral comments in this matter and for discussion among the Board members in the formal notice of the Board's agenda. Upon receipt of the above information, the staff will recommend an allotment of time for all interested parties, based upon the information received. Parties who have not submitted the requested information will be provided any remaining time following allotment.

CC: Regional Board Members

STANDARD URBAN STORM WATER MITIGATION PLAN

FOR LOS ANGELES COUNTY AND CITIES IN LOS ANGELES COUNTY

STANDARD URBAN STORM WATER MITIGATION PLAN

BACKGROUND

The municipal storm water National Pollutant Discharge Elimination System (NPDES) permit (Permit) issued to Los Angeles County and 85 cities (Permittees) by the Los Angeles Regional Water Quality Control Board (Regional Board) on July 15, 1996, requires the development and implementation of a program addressing storm water pollution issues in development planning for private projects. The same requirements are applicable to the City of Long Beach under its separate municipal storm water permit, which was issued on June 30, 1999.

The requirement to implement a program for development planning is based on, federal and state statutes including: Section 402 (p) of the Clean Water Act, Section 6217 of the Coastal Zone Act Reauthorization Amendments of 1990 ("CZARA"), and the California Water Code. The Clean Water Act amendments of 1987 established a framework for regulating storm water discharges from municipal, industrial, and construction activities under the NPDES program. The primary objectives of the municipal storm water program requirements are to:

- Effectively prohibit non-storm water discharges, and
- Reduce the discharge of pollutants from storm water conveyance systems to the Maximum Extent Practicable.

The Standard Urban Storm Water Mitigation Plan (SUSMP) was developed as part of the municipal storm water program to address storm water pollution from new Development and Redevelopment by the private sector. This SUSMP contains a list of the minimum required Best Management Practices (BMPs) that must be used for a designated project. Additional BMPs may be required by ordinance or code adopted by the Permittee and applied generally or on a case by case basis. This SUSMP applies to projects that are Priority Projects (Discretionary Projects) as defined by the NPDES Permit. The Permittees are required to use this SUSMP to develop their own citywide SUSMP. Developers must incorporate appropriate SUSMP requirements into their project plans. Each Permittee will approve an Urban Storm Water Mitigation Plan as part of the development process and prior to issuing building and grading permits for the projects covered by the SUSMP requirements.

Discretionary projects, that fall into one of seven categories are identified in the NPDES Permit

as requiring SUSMPs. These categories are:

Single-Family Hillside Residences
100,000 Square Foot Commercial Developments
Automotive Repair Shops
Retail Gasoline Outlets
Restaurants
Home Subdivisions with >10 housing units*

* (Note: this category is two separate categories in the NPDES Permit)

The Regional Board Executive Officer has designated two additional categories subject to SUSMP requirements. These categories are:

Location adjacent to or discharging to an environmentally sensitive area, and
Parking lot 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff*

DEFINITIONS

"Greater than (>) 9 unit home subdivision" means any subdivision being developed for 10 or more 10 single-family or multi-family dwelling units.

"100,000 Square Foot Commercial Development" means Developments based on total impermeable area, including parking areas, as opposed to lot size or building footprint.

"Retail Gasoline Outlet" means a facility primarily engaged in selling gasoline and lubricating oils. These establishments frequently sell other merchandise, such as tires, batteries, and automobile parts. Frequently, these establishments also perform minor automotive repair work. Gasoline stations combined with other activities, such as grocery stores, convenience stores, or car wash facilities, are classified according to the primary activity.

"Hillside" means property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope and where grading contemplates cut or fill slopes .

"Automotive Repair Shop" means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. Exceptions do apply for SIC codes 5013, 5014, and 5541. For SIC code 5013, if the business has no outside storage of any recycled oil or other hazardous substances, it is not included. For SIC code 5014, if the business does not engage in any repair work, it is not included. For SIC code 5541, if the business does not engage in any onsite repair work, it is not included.

"Restaurant" means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption. (SIC code 5812)

"Parking Lot" means land area or facility for the parking of commercial or business or private motor vehicles.

"Environmentally Sensitive Area" means an area designated as an Area of Special Biological Significance by the State Water Resources Control Board or an area designated as a Significant Natural Area by the California Resources Agency or an area designated as an area of Ecological Significance by the County of Los Angeles.

"Best Management Practice (BMP)" means any program, technology, process, siting criteria, operational methods or measures, or engineered systems, which when implemented prevent, control, remove, or reduce pollution.

"Source Control BMP" means any schedules of activities, prohibitions of practices, maintenance procedures,, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

"Treatment Control BMP" means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media adsorption or any other physical, biological, or chemical process.

"Structural BMP" means any structural facility designed and constructed to mitigate the adverse impacts of storm water and urban runoff pollution (e.g. canopy, structural enclosure). The category may include both treatment control BMPs and source control BMPs.

"Treatment" means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to, filtration, gravity settling, media adsorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

"Infiltration" means the downward entry of water into the surface of the soil.

"Directly Connected Impervious Area (DCIA)" means the area covered by pavement, building and other impervious surfaces which drain directly into the storm drain without first flowing across pervious areas (e.g. lawns).

"New Development" means land disturbing activities; structural development, including construction or installation of a building or structure, creation of impervious surfaces; and land subdivision.

Redevelopment" means, on an already developed site, the creation or addition of impervious surfaces; the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/ or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; land disturbing activities related with structural or impervious surfaces .

Treatment / Structural -

"Discretionary Project" means a project which requires the exercise of judgement or deliberation when the public agency or public body decides to approve or disapprove a particular activity, as distinguished from situations where the public agency or body merely has to determine whether there has been conformity with applicable statutes, ordinances, or regulations.

CONFLICTS WITH LOCAL PRACTICES

Where provisions of the SUSMP requirements conflict with established local codes , (e.g., specific language of signage used on storm drain stenciling), the Permittee may continue the local practice and modify the SUSMPs contained herein to be consistent with the code, except where those practices would defeat or circumvent the intent of the SUSMP requirements.

SUSMP PROVISIONS APPLICABLE TO ALL CATEGORIES

REQUIREMENTS

1. PEAK STORM WATER RUNOFF DISCHARGE RATES

Post-development peak storm water runoff discharge rates shall not exceed estimated pre-development levels for developments where an increased peak storm water discharge rate may result in a foreseeable increased potential for downstream erosion.

2. CONSERVE NATURAL AREAS

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Every effort shall be made to concentrate or cluster development on portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and or drought tolerant plants. Wherever practical, promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

3. MINIMIZE STORM WATER POLLUTANTS OF CONCERN

Storm water runoff from a site has the potential to contribute oil and grease, suspended solids, metals, gasoline, pesticides, and pathogens to the stormwater conveyance system. The development must be designed so as to minimize, to the maximum extent practicable , the introduction of pollutants of concern that may result in significant impacts, generated from site runoff of directly connected impervious areas (DCIA), to the storm water conveyance system as

approved by the building official. Pollutants of concern, as defined by the Permit, consist of any pollutants that exhibit one or more of the following characteristics: current loadings or historic deposits of the pollutant are impacting the beneficial uses of a receiving water, elevated levels of the pollutant are found in sediments of a receiving water and/or have the potential to bioaccumulate in organisms therein, or the detectable inputs of the pollutant are at a level high enough to be considered potentially toxic to humans and/or flora and fauna.

In meeting this specific requirement, "minimization of the pollutants of concern" will require the incorporation of a BMP or combination of BMPs best suited to maximize the reduction of pollutant loadings in that runoff to the Maximum Extent Practicable. Those BMPs best suited for that purpose are those listed in the *California Storm Water Best Management Practices Handbooks*; *Caltrans Storm Water Quality Handbook: Planning and Design Staff Guide*; *Manual for Storm Water Management in Washington State*; *The Maryland Stormwater Design Manual*; *Florida Development Manual: A Guide to Sound Land and Water Management*; and *Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters* , USEPA Report No. EPA-840-B-92-002, as "likely to have significant impact" beneficial to water quality for targeted pollutants that are of concern at the site in question..

Examples of BMPs that can be used for minimizing the introduction of pollutants of concern generated from site runoff are identified in Table 2. Any BMP not specifically approved by the Regional Board in Resolution No. 99-03, "Approving Best Management Practices for Municipal Storm Water and Urban Runoff Programs in Los Angeles County", for development planning may be used if they have been recommended in one of the above references.

4. PROTECT SLOPES AND CHANNELS

If applicable, project plans must include BMPs consistent with local codes and ordinances to decrease the potential of slopes and/or channels from eroding and impacting storm water runoff:

- Convey runoff safely from the tops of slopes and stabilize disturbed slopes.
- Stabilize permanent channel crossings.
- Vegetate slopes with native or drought tolerant vegetation.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion, with the approval of all agencies with jurisdiction, e.g., the U.S. Army Corps of Engineers and the California Department of Fish and Game

5. PROVIDE STORM DRAIN SYSTEM STENCILING AND SIGNAGE

Storm drain stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets. The stencil contains a brief statement that prohibits the dumping of improper materials into the stormwater conveyance system. Graphical icons, either illustrating anti-dumping symbols or images of receiving water fauna, are effective supplements to the anti-dumping message.

- All storm drain inlets and catch basins within the project area must be stenciled with prohibitive language (such as: "NO DUMPING – DRAINS TO OCEAN") and or graphical icons to discourage illegal dumping.
- Signs and prohibitive language and or graphical icons ~~discouraging~~ illegal dumping must be posted at public access points along channels and creeks within the project area. prohibiting
- Legibility of stencils and signs must be maintained.

6. PROPERLY DESIGN OUTDOOR MATERIAL STORAGE AREAS

Outdoor material storage areas refer to storage areas or storage facilities solely for the storage of materials.

Improper storage of materials outdoors may provide an opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the stormwater conveyance system. Where proposed project plans include outdoor areas for storage of materials that may contribute pollutants to the stormwater conveyance system, the following *structural* BMPs are required:

- Areas where materials are to be stored must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar structure that prevents contact with runoff or spillage to the storm water conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.
- The storage area must be paved and sufficiently impervious to contain leaks and spills.
- Where feasible, the storage area should have a roof or awning to minimize collection of stormwater within the secondary containment area. delete per CoE

7. PROPERLY DESIGN TRASH STORAGE AREAS

A trash storage area refers to an area where a trash receptacle or receptacles are located for use as a repository for solid wastes.

Loose trash and debris can be easily transported by the forces of water or wind into nearby storm drain inlets, channels, and/or creeks. All trash container areas must meet the following *structural BMP* requirements:

- Trash container areas must have drainage from adjoining roofs and pavement diverted around the area(s).
- Trash container areas must be screened or walled to prevent off-site transport of trash.

8. PROVIDE PROOF OF ONGOING BMP MAINTENANCE

Improper maintenance is one of the most common reasons why water quality controls will not function as designed or which may cause the system to fail entirely. It is important to consider who will be responsible for maintenance of a permanent BMP, and what equipment is required to perform the maintenance properly. As part of project review, if a project applicant has included, or is required to include, treatment control BMPs in project plans, the Permittee shall require that the applicant provide verification of maintenance provisions through such means as may be appropriate, including, but not limited to legal agreements, covenants, CEQA mitigation requirements and/or Conditional Use Permits.

For all properties, this verification will include the developer's signed statement, as part of its project application, accepting responsibility for all structural BMP maintenance until the time the property is transferred and, where applicable, a signed agreement from the public entity assuming responsibility for structural BMP maintenance. This transfer of property must have conditions requiring the recipient to assume responsibility for maintenance of any treatment control BMPs to be included in the sales or lease agreement for that property, and will be the owner's responsibility. For residential properties where the treatment control BMPs are located within a common area which will be maintained by a homeowner's association, language regarding the responsibility for maintenance must be included in the projects conditions, covenants and restrictions (CC&R's). Printed educational materials will be required to accompany the first deed transfer to highlight the existence of the requirement and to provide information on what stormwater management facilities are present, signs that maintenance is needed, how the necessary maintenance can be performed, and assistance that the Permittee can provide. It will also encourage the transfer of this information with subsequent sale of the property.

If treatment control BMPs are located within a public area proposed for transfer, they will be the responsibility of the developer until they are accepted for transfer by the County or other appropriate public agency. Treatment control BMPs proposed for transfer must meet design standards adopted by the public entity for the BMP installed and should be approved by the County or other appropriate public agency prior to its installation.

9. DESIGN STANDARDS FOR TREATMENT CONTROL BMPS

Treatment control BMPs selected for use at any project covered by this SUSMP shall meet the design standards of this Section unless specifically exempted.

Post-construction Treatment Control BMPs shall be designed to:

A. mitigate (infiltrate or treat) storm water runoff from either:

1. each runoff event up to and including the 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, (1998)*, or

2. the volume of annual runoff based on unit basin storage water quality volume, to achieve 85 percent or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial*, (1993), or

3. the volume of runoff produced from each and every storm event up to and including 0.75 inch of rainfall, prior to its discharge to a storm water conveyance system, or

4. the volume of runoff produced from each and every storm event up to and including a historical-record based reference 24-hour rainfall criterion for "treatment" (0.75 inch average for the Los Angeles County area) that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event.

AND

B. control peak flow discharge to provide stream channel and over bank flood protection, based on flow design criteria selected by the local agency.

The area of roofing surfaces may be excluded from the total area for calculation of rainfall or runoff volume to be treated provided:

a. the roofing materials will not be a source of pollutants of concern in storm water, and

b. storm water from the roofing surfaces is diverted directly to a storm water conveyance system, and

c. roof based exhaust systems, vents, filters, and air pollution control devices will not present a significant source of pollutants of concern in storm water, and

d. the storm water conveyance system does not directly or indirectly discharge to a natural stream or unlined channel or channel segment scheduled for restoration.

Exclusions

Restaurants, where the land area for development or redevelopment is less than 5,000 square feet, are excluded from the requirements of this Section.

10. PROVISIONS APPLICABLE TO INDIVIDUAL PRIORITY PROJECT CATEGORIES

A. 100,000 SQUARE FOOT COMMERCIAL DEVELOPMENTS

1. PROPERLY DESIGN LOADING/UNLOADING DOCK AREAS

Loading/unloading dock areas have the potential for material spills to be quickly transported to the storm water conveyance system. To minimize this potential, the following design criteria are required:

- Cover loading dock areas or design drainage to minimize run-on and runoff of storm water.
- Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

2. PROPERLY DESIGN REPAIR/MAINTENANCE BAYS

Oil and grease, solvents, car battery acid, coolant and gasoline from the repair maintenance bays can negatively impact storm water if allowed to come into contact with storm water runoff. Therefore, design plans for repair bays must include the following:

- Repair maintenance bays must be indoors or designed in such a way that doesn't allow storm water runon or contact with storm water runoff.
- Design a repair maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

3. PROPERLY DESIGN VEHICLE/EQUIPMENT WASH AREAS

Vehicle equipment washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to the storm water conveyance system. To alleviate this problem, consider including in the project plans an area for washing/steam cleaning of vehicles and equipment. If such an area is included in the site design, it must meet the following:

- This area must be self-contained, covered, equipped with a clarifier, or other pretreatment facility, and properly connected to a sanitary sewer.

B. RESTAURANTS

1. PROPERLY DESIGN EQUIPMENT/ACCESSORY WASH AREAS

Outdoor equipment accessory washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to the storm water conveyance system. To alleviate this problem, include in the project plans an area for the washing/steam cleaning of equipment and accessories. This area must meet the following:

- This area must be self-contained, equipped with a grease trap, and properly connected to a sanitary sewer.
- If this wash area is to be located outdoors, it must be covered, paved, have secondary containment, and be connected to the sanitary sewer.

C. RETAIL GASOLINE OUTLETS

1. PROPERLY DESIGN FUELING AREA

Fueling areas have the potential to contribute oil and grease, solvents, car battery acid, coolant and gasoline to the storm water conveyance system. The project plans must include the

following BMPs:

- Fuel dispensing areas should be covered with an overhanging roof structure or canopy. The canopy's minimum dimensions must be equal to or greater than the area within the grade break. The canopy must not drain onto the fuel dispensing area, and the canopy downspouts must be routed to prevent drainage across the fueling area.
- Fuel dispensing areas must be paved with portland cement concrete (or equivalent smooth impervious surface), and the use of asphalt concrete shall be prohibited.
- The fuel dispensing area must have a 2% to 4% slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of storm water to the extent practicable.
- At a minimum, the concrete fuel dispensing area must extend 6.5 feet (2.0 meters) from the corner of each fuel dispenser, or the length at which the hose and nozzle assembly may be operated plus 1 foot (0.3 meter), whichever is less.

D. AUTOMOTIVE REPAIR SHOPS

1. PROPERLY DESIGN FUELING AREA

Fueling areas have the potential to contribute oil and grease, solvents, car battery acid, coolant and gasoline to the storm water conveyance system. Therefore, design plans, which include fueling areas, must contain the following:

- Fuel dispensing areas should be covered with an overhanging roof structure or canopy. The cover's minimum dimensions must be equal to or greater than the area within the grade break. The cover must not drain onto the fuel dispensing area and the downspouts must be routed to prevent drainage across the fueling area.
- Fuel dispensing areas must be paved with portland cement concrete (or equivalent smooth impervious surface), and the use of asphalt concrete shall be prohibited.
- The fuel dispensing area must have a 2% to 4% slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of storm water.
- At a minimum, the concrete fuel dispensing area must extend 6.5 feet (2.0 meters) from the corner of each fuel dispenser, or the length at which the hose and nozzle assembly may be operated plus 1 foot (0.3 meter), whichever is less.

2. PROPERLY DESIGN REPAIR/MAINTENANCE BAYS

Oil and grease, solvents, car battery acid, coolant and gasoline from the repair/maintenance bays can negatively impact storm water if allowed to come into contact with storm water runoff. Therefore, design plans for repair bays must include the following:

- Repair maintenance bays must be indoors or designed in such a way that doesn't allow storm water run-on or contact with storm water runoff.
- Design a repair/maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

3. PROPERLY DESIGN VEHICLE/EQUIPMENT WASH AREAS

Vehicle/equipment washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to the storm water conveyance system. To alleviate this problem, consider including in the project plans an area for washing/steam cleaning of vehicles and equipment. If such an area is included in the site design, it must meet the following:

- This area must be self-contained, covered, equipped with a clarifier, or other pretreatment facility, and properly connected to a sanitary sewer or to a permitted disposal facility.

4. PROPERLY DESIGN LOADING/UNLOADING DOCK AREAS

Loading/unloading dock areas have the potential for material spills to be quickly transported to the storm water conveyance system. To minimize this potential, the following design criteria are required:

- Cover loading dock areas or design drainage to minimize run-on and runoff of storm water.
- Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

E. PARKING LOTS

1. PROPERLY DESIGN PARKING AREA

Parking lots contain pollutants such as heavy metals, oil and grease, and polycyclic aromatic hydrocarbons that deposit on these surfaces from motor vehicle traffic. These pollutants are directly transported to surface waters.

- Reduce impervious land coverage of parking areas
- Infiltrate runoff before it reaches storm drain system.
- Treat runoff before it reaches storm drain system

2. PROPERLY DESIGN TO LIMIT OIL AND PERFORM MAINTENANCE

Parking lots may accumulate oil, grease, and water insoluble hydrocarbons from vehicle drippings and engine system leaks.

- Treat to remove oil and petroleum hydrocarbons at parking lots that are heavily used (e.g. fast food outlets, lots with 25 or more parking spaces , sports event parking lots, shopping malls, grocery stores, discount warehouse stores)
- Ensure adequate operation and maintenance of treatment systems particularly sludge and oil removal, and system fouling and plugging prevention control

11. WAIVER

A Permittee may, through adoption of an ordinance or code inc incorporating the treatment requirements of the SUSMP, provide for a waiver from the requirement if impracticability for a specific property can be established. Recognized situations of impracticability include (i) extreme limitations of space for treatment on a redevelopment project, (ii) unfavorable or unstable soil conditions at a site to attempt infiltration, and (iii) risk of ground water contamination because an underground source of drinking water is less than 10 feet from the soil surface. Any other justification for impracticability must be separately approved by the Regional Board Executive Officer before it becomes recognized and effective. A waiver granted to any development or redevelopment project may be revoked by the Regional Board ~~Executive Officer~~ for cause and with proper notice upon petition.

If a waiver is granted for impracticability, the Permittee must require the project proponent to transfer the savings in cost, as determined by the Permittee, to a storm water mitigation fund to be used to promote regional or alternative solutions for storm water pollution in the storm watershed and operated by a public agency or a non-profit entity.

12. LIMITATION ON USE OF INFILTRATION BMPS

Three factors significantly influence the potential for storm water to contaminate ground water. They are (i) pollutant mobility, (ii) pollutant abundance in storm water, (iii) and soluble fraction of pollutant. The risk of contamination of groundwater may be reduced by pretreatment of storm water. A discussion of limitations and guidance for infiltration practices is contained in, *Potential Groundwater Contamination from Intentional and Non-Intentional Stormwater Infiltration, Report No. EPA 600 R-94/051, USEPA (1994).*

In addition, the distance of the groundwater table from the infiltration BMP may also be a factor determining the risk of contamination. A water table distance separation of ten feet depth in California presumptively poses negligible risk for storm water not associated with industrial activity or high vehicular traffic.

Infiltration BMPs are not recommended for areas of industrial activity or areas subject to high vehicular traffic (25,000 or greater average daily traffic (ADT) on main roadway or 15,000 or more ADT on any intersecting roadway) unless appropriate pretreatment is provided to ensure groundwater is protected and the infiltration BMP is not rendered ineffective by overload.

13. ALTERNATIVE CERTIFICATION FOR STORM WATER TREATMENT MITIGATION

A Permittee may elect to accept a signed certification that the plan meets the criteria established herein and that the plan preparer has undergone training on designing BMPs to meet the numerical mitigation criteria, in lieu of conducting detailed BMP review to verify treatment control BMP adequacy. The training must have been conducted by an organization with storm

water BMP design expertise (e.g., a University, American Society of Civil Engineers, American Society of Landscape Architects, or the California Water Environment Association) with the training and curriculum accepted by the Regional Board Executive Officer. For the certification to be valid, training must have been received not more than two years prior to the signature date on the plan.

TABLE 2: Example Best Management Practices (BMPs)

The following are examples of BMPs that can be used for minimizing the introduction of pollutants of concern that may result in significant impacts, generated from site runoff to the storm water conveyance system. (See Table 1: Suggested Resources for additional sources of information):

- Provide reduced width sidewalks and incorporate landscaped buffer areas between sidewalks and streets. However, sidewalk widths must still comply with regulations for the Americans with Disabilities Act and other life safety requirements.
- Design residential streets for the minimum required pavement widths needed to comply with all zoning and applicable ordinances to support travel lanes; on-street parking; emergency, maintenance, and service vehicle access; sidewalks; and vegetated open channels.
- Comply with all zoning and applicable ordinances to minimize the number of residential street cul-de-sacs and incorporate landscaped areas to reduce their impervious cover. The radius of cul-de-sacs should be the minimum required to accommodate emergency and maintenance vehicles. Alternative turnarounds should be considered.
- Use permeable materials for private sidewalks, driveways, parking lots, or interior roadway surfaces (examples: hybrid lots, parking groves, permeable overflow parking, etc.).
- Use open space development that incorporates smaller lot sizes.
- Reduce building density.
- Comply with all zoning and applicable ordinances to reduce overall lot imperviousness by promoting alternative driveway surfaces and shared driveways that connect two or more homes together.
- Comply with all zoning and applicable ordinances to reduce the overall imperviousness associated with parking lots by providing compact car spaces, minimizing stall dimensions, incorporating efficient parking lanes, and using pervious materials in spillover parking areas.
- Direct rooftop runoff to pervious areas such as yards, open channels, or vegetated areas, and avoid routing rooftop runoff to the roadway or the storm water conveyance system.
- Vegetated swales and strips
- Extended dry detention basins
- Infiltration basin
- Infiltration trenches
- Wet ponds
- Constructed wetlands
- Oil Water separators
- Catch basin inserts
- Continuous flow deflection separation systems
- Storm drain inserts
- Media filtration
- Bioretention facility
- Dry-wells
- Cisterns
- Foundation planting
- Catch basin screens
- Normal flow storage separation systems
- Clarifiers
- Filtration systems
- Primary waste water treatment systems

STANDARD URBAN STORM WATER MITIGATION PLANS

SUMMARY OF COMMENTS RECEIVED AND RESPONSE

The comments received on the Standard Urban Storm Water Mitigation Plans (SUSMPs) and Regional Board staff response is divided into two sections. The first sections lists main issues and staff response in detail. The second section summarizes all significant comments received by the Board on SUSMP before December 6, 1999, and the staff response including any actions taken to address the comment.

A. MAIN ISSUES AND RESPONSE

1. **Comment**: The Regional Board lacks regulatory discretion to establish a numerical mitigation measure for storm water treatment.

Response: The municipal storm water permit for Los Angeles County and Cities requires that SUSMPs achieve specific objectives which include to (i) minimize adverse impacts to natural communities; (ii) maximize infiltration to the extent practicable; (iii) minimize parking lot pollution; (iv) provide for appropriate controls to reduce storm water pollutant loads.[1] Staff interprets this provision of the permit, underlying federal law, and the statutory standard of Maximum Extent Practicable (MEP) as requiring SUSMPs to incorporate numerical mitigation measures for development planning projects in order to achieve compliance with water quality standards. Without a numerical mitigation measure, developers will select no treatment BMPs because there will be no BMP sizing guideline. Board Resolution No. 99-03 which states that "The Permittees shall select and require implementation of the most effective BMPs,...." will then be without effect.[2]

The 1987 Clean Water Act amendments give USEPA and States considerable discretion on establishing provisions for implementation in storm water programs.[3] Further, interim USEPA policy guidelines on BMPs for storm water programs explains that the permitting authority can require more specific conditions or limitations to meet water quality

---

[1] Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges within the County of Los Angeles (Board Order No. 96-054; NPDES No. CAS614001). Part 2. III.A.2)

[2] The Regional Board adopted Resolution No. 99-03 approving BMPs for Development Planning and Development Construction on April 22, 1999.

[3] 33 U.S.C. Section 1342(p)(B)(iii). "require controls to reduce the discharge of pollutants to the maximim extent practicable, including management practices, control techniques and systems, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of pollutants."

standards where adequate information exists.[4] In addition, courts accord administrative agencies a high degree of deference in the areas of law they regulate.[5]

2. **Comment:** Anti-degradation policy prohibits new construction when water quality is already impaired.

Response: The municipal storm water permit in agreement with federal storm water regulations requires controls on new development to reduce storm water pollution. There is no prohibition on new construction.

3. **Comment**: The numerical mitigation criteria mandates the capture of storm water which will require expensive land acquisition cost.

Response: The numerical mitigation measure defines the definite volume of storm water that must be treated for water quality benefits. Treatment is the application of any physical, biological, or chemical method that can be used to remove pollutants in storm water. Providing storage volume for the runoff or capture is one form of treatment. It is not mandatory and other options may be considered such as reducing impervious cover and promoting infiltration.

4. **Comment**: The proposed numerical mitigation measure is not based on science and is an arbitrarily agreed to number in settlement of a lawsuit.

Response: The proposed numerical measures are technically defensible. The measures are based on the principle that most rainfall events are in the smaller range and higher rainfall runoff producing events are less frequent. Designing storm water treatment controls for the smaller events will reduce storm water pollutant loads significantly while optimizing BMP costs. The primary numerical method to determine BMP design criteria is the maximized water quality treatment volume method recommended by the American Society of Civil Engineers (ASCE). The 0.75-inch rainfall event method happens to be also the one that was agreed to in a lawsuit settlement agreement between the NRDC and the County of Los Angeles. The four methods proposed as choices are equivalent variants and in a technical comparison were in agreement to within 10% of one another. It is highly probable that parties that settle a litigation select a numerical criterion that is reasonable and factual.

5. **Comment**: The numerical mitigation measure will require implementation of BMPs that have not been proven to be effective in the region.

Response: The proposed numerical mitigation measure defines the quantity of storm water (volume) that has to be treated to remove pollutants. This criterion does not in anyway describe the effectiveness of BMPs to be used. The effectiveness of any particular BMP is dependent on design parameters and the range for its applications. Physical geography has little influence on the effectiveness of BMPs while proper

---

[4] 61 Fed. Register 43761. "The interim permitting approach uses best management practices in first-round strom water permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards. In cases where adequate information exists to develop more specific conditions or limitations to meet water quality standards, these conditions or limitations are to be incorporated into storm water permits, as necessary and appropriate."

[5] See, e.g., Chevron U.S.A. v. Natural Res. Def. Council, (1984) 467 U.S. 837

maintenance is a big factor. Information on BMP effectiveness can be found in research reports and national BMP databases. The numerical mitigation measure in combination with the effectiveness of a BMP determines the overall annual load of pollutant that can be removed.

6. **Comment**: The post-construction treatment BMPs will require costly maintenance

Response: Treatment BMPs do require proper maintenance and maintenance costs are BMP specific. Poor or non-existent maintenance will result in an ineffective BMP. Information on BMP maintenance costs can be obtained from national databases and reports. See references in the Record of Decision. A cursory review indicates that maintenance costs are reasonable.

7. **Comment**: The Regional Board did not perform an economic analysis required by State and Federal law.

Response: The implementation of a federal regulation does not require separate economic analysis. A relative quantitative comparison performed with similar criteria for storm water management or flood control, sediment removal from construction, combined animal feedlot operations, and State of Washington water quality criteria indicated that the numerical mitigation criteria would cost about three to ten times less. In addition, staff performed BMP cost calculations for an actual site in Los Angeles in the process of development and determined that the mitigation criteria cost is less than 0.5 percent of the project cost.

8. **Comment**: The Regional Board did not provide adequate public notices to interested parties.

Response: Regional Board action was not contemplated at the September Regional Board meeting and thus no public notice was necessary. Nevertheless, Board staff provided a 30-day public notice and mailed a copy to all parties on file. Staff was unable to verify the claim by some that they did not receive copies of the public notice or provide an explanation. Staff will again provide 30 day-notice of the proposed action on the SUSMPs scheduled by the Regional Board for January 6, 2000.

B. SUMMARY OF ALL SIGNIFICANT COMMENTS AND RESPONSE

COMMENTER	COMMENT	RESPONSE	ACTION
General City of Los Angeles, Western States Petroleum Association	1. Conduct first a quantitative review of the basis of designation of selected categories as priority-planning projects.	The categories are designated in the permit and were selected based on risk sources data compiled in the first term of permit implementation.	No action necessary
Los Cerritos Channel Task Force	2. Provide level playing field for unincorporated and incorporated cities within LA County	Four methods of determining the mitigation measure are provided to ensure some flexibility. The methods are equivalent. See ROD	Four equivalent methods included as mitigation criteria in SUSMP

COMMENTER	COMMENT	RESPONSE	ACTION
Bellflower, Claremont, Commerce, Covina, Diamond Bar, Downey, Huntington Park, Industry, Irwindale, Lakewood, La Mirada, Lomita, Lynwood, Maywood, Montebello, Paramount, Norwalk, Rancho Palos Verdes, Santa Fe Springs, Whittier	3. No other MS 4 permits in California require numerical criteria for runoff mitigation	All MS4 permits are required to have controls on new development and redevelopment that will reduce pollutants to the MEP. The USEPA has identified the lack of specific criteria as a deficiency in its Report to Congress ON Phase II (1999)	No action necessary
SCAG	4. Provide the opportunity for the development of regional BMPs instead of site by site requirements	May be considered by Board in a Resolution	Will suggest interest to Regional Board
SCAG	5. Make the numerical mitigation measure voluntary pilot program for the first two years.	Federal laws and regulations require that controls on new development and redevelopment be enforceable	No action necessary
Santa Monica	6. More studies not necessary to establish mitigation criteria and evaluate BMPs	We agree that there exists sufficient information to establisn numerical mitigation criteria and to design BMP for optimum performance and effectiveness.	No action necessary
Bellflower, Claremont, Commerce, Covina, Diamond Bar, Downey, Huntington Park, Industry, Irwindale, Lakewood, La Mirada, Lomita, Lynwood, Maywood, Montebello, Paramount, Norwalk, Rancho Palos Verdes, Santa Fe Springs, Whittier	7. Numerical mitigation measure is an unfunded mandate	Implementation of a federal permit program is not an unfunded mandate as described in the State constitution. See memo from legal counsel.	No action necessary
Bellflower, Claremeont, Commerce, Covina, Diamond Bar, Downey, Huntington Park, Industry, Irwindale, Lakewood, La Mirada, Lomita, Long Beach, Los Angeles, Lynwood, Maywood, Montebello, Paramount, Norwalk, Rancho Palos Verdes, Santa Clarita, Santa Fe Springs, Vernon, Whittier, BIA, EAC, New Hall Land and Farming, Long Beach Chamber of Commerce	8. Numerical mitigation measure is not based on sound science	Disagree. Our review of local data and implementation programs in states such as WA, FL, and MD indicates that the approach to establishing numerical mitigation measure is scientific and reasonable. The methods have also been endorsed by national science and engineering associations.	References to important documents provided in the SUSMP. A bibliography of references reviewed for the action is included in the ROD
Bellflower, Cerritos, Claremont, Commerce, Covina, Diamond Bar, Downey, Huntington Park, Industry, Irwindale, Lakewood, La Mirada, Lomita, Long Beach, Lynwood, Maywood, Montebello, Paramount, Norwalk, Rancho Palos Verdes, Santa Fe Springs, Whittier	9. Treatment controls will be required irrespective of siting factors limiting application.	Site conditions will determine what BMPs are appropriate. A provision for waiver is provided where mitigation may be infeasible. Mitigation banking may be an alternative.	Waiver provision has been included in the SUSMP where impracticability is established
Covina, Irwindale, La Mirada, Lomita, Norwalk, Whittier	10. Provide sufficient time for Council of Governments to review and comment	Staff will mail and e-mail copies to SCAG for distribution to COGs.	Staff will mail public notice of proposed action to SCAG and COGs
Cerritos, Diamond Bar	11. Developers will move to build in counties without numerical mitigation measures.	The mitigation measure requirement for new development is based on federal law. Other Regional Boards are likely to develop and evaluate compliance using similar criteria. The USEPA considers the absence of numerical storm water BMP design criteria for new development a deficiency. See USEPA Phase II Final Rule	No action necessary

COMMENTER	COMMENT	RESPONSE	ACTION
Bellflower, Cerritos, Claremont, Commerce, Covina, Diamond Bar, Downey, Huntington Park, Industry, Irwindale, Lakewood, La Mirada, Lomita, Long Beach, Lynwood, Maywood, Montebello, Paramount, Glendora, Norwalk, Rancho Palos Verdes, Santa Fe Springs, Whittier, Truxaw and Associates, Long Beach Chamber of Commerce	12. BMPs will require costly maintenance	Maintenance of BMPs is essential and strategies to support maintenance activities are discussed in USEPA's Phase II Final Rule	No action necessary
Azusa, Claremont, EAC	13. Perform cost benefit analysis	The implementation of federal law does not require a separate cost benefit analysis. Relative cost comparisons and BMP cost calculations performed indicate that the cost of the mitigation measure is reasonable for the water quality benefits it will bring	No action necessary
Centex Homes, Desert Partners, Bill Ehrlich, FORMA, Engineering Contractors Association, Greystone Homes, John Laing Homes, Mid-cities Escrow, JTL, New Hall Land and Farming, New Urban West, Pace Engineering, Pacific bay Homes, Pacific Soils Engineering, David Placek, Psomas, Ramseyer, Rasmussen, Shea Homes, Sikand, Southern California Contractors, Southern California Ready Mix Concrete Assoc., South Place Corp., SunCal Co., Taylsor Woodrow, Tetra Tech, Van Tilburg and Associates, Warmington Homes, Western Pacific Housing, LA County Supervisor Knabe	14. SUSMP is stringent enough without the numerical mitigation measure	Without the numerical mitigation measure the SUSMP does not provide adequate guidance on design criteria for BMPs. Thus no treatment BMPs or BMPs inadequately sized may be selected with no benefit to water quality. The USEPA in the preamble to Phase II Final Rule makes the same observation.	No action necessary
Technical Heal the Bay, American Oceans Campaign, Friends of the LA River, NRDC, Kuso and Daniels, Fusion Films, Santa Monica BayKeeper, Ballona Wetlands Foundation, AHHA, H & K Interiors, Kinsella & Associates, AKERS Entertainment, Ballesteros, Stenstrom-UCLA, Chatten Broan & Assoc., South Bay SurfRider (13 members), Shatz	15. Establish for all municipalities in LA County the 0.75-inch mitigation measure or similar criteria for development planning currently in effect for the unincorporated areas.	The proposed criteria provide for the treatment of 0.75 inch or equivalent volume of runoff from new development for all areas of LA County within the jurisdiction of the Regional Board.	Criteria is made applicable to all MS4 permittees in LA county
Heal the Bay, American Oceans Campaign, Friends of the LA River,	16. Require SUSMPs for development in environmentally sensitive areas	The requirement is included for the City of Long Beach but was not one of the priority categories specifically identified in the LA County MS4 permit.	This category has been added to the SUSMP.
Heal the Bay, American Oceans Campaign, Friends of the LA River,	17. Require mitigation of runoff from parking lots separately in each SUSMP	This is not one of the priority categories specifically identified in the LA County MS4 permit. Commercial categories specifically included have indicated that they are no different than parking lots. In addition, the Coastal Commission has often consulted the Board for appropriate BMPs and criteria	This category has been added to the SUSMP.

COMMENTER	COMMENT	RESPONSE	ACTION
NRDC	19. App., SUSMP requirement broadly rather than limit it to seven categories	A BMP checklist is already required for other priority projects. Expanding the SUSMP requirement may be appropriate once TMDLs have been allocated and other significant sources need to be controlled.	Two categories have been added locations in environmentally sensitive areas, and parking lots
County of Ventura and cities	19. Include an alternative method based on volumetric and flow which uses capture of annual runoff and peak flow rate control	An equivalent volumetric method is provided based on annual volume capture. Flow rate controls are left to the judgement of the local agency.	Eight five percent treatment of annual runoff volume is provided as an equivalent mitigation criteria
Heal the Bay, American Oceans Campaign, Friends of the LA River	20. Define hillside development and not defer definition to the local municipality	Will provide a general definition.	Defined in SUSMP.
Heal the Bay, American Oceans Campaign, Friends of the LA River	21. Apply requirements for retail gasoline outlets to any facility with a fueling dispenser	This is not one of the priority categories specifically identified in the LA County MS4 permit. Expansion of the applicability may be appropriate once TMDLs have been allocated and other significant sources need to be controlled	No action necessary
USEPA, San Gabriel Basin Water Quality Authority	22. Requirement for infiltration will promote pathways for groundwater and soil contamination	Risks for ground water contamination exist under certain situations. These are identified in a report by the USEPA (1993). Pre-treatment of storm water will reduce such risks. The soil acts as a natural filter and self regenerates.	A section is included in the SUSMP describing the limitations of infiltration BMPs
Truxaw and Associates	23. Promote non structural BMPs	SUSMPs already require source control BMPs in addition to structural BMPs and treatment control BMPs	No action necessary
Land Tech Engineering	24. Provide design specifications for BMPs based on criteria	Expect that BMP design specification will be developed by the municipalities based on the numerical mitigation measure. Interim BMP design information may be obtained from manuals developed by other states.	No action necessary
Centex Homes, Engineering Contractors Assoc., John Laing Homes, Land Tech Engineering, Pace Engineering, Pacific Soils Engineering, David Placek, Ramseyer Rasmusen, Sikand, Southern California Contractors, Southern California Ready Mix Concrete Assoc., Tetra Tech, South Place Corp., Taylor Woodrow, Western Pacific Housing, LA New Car Dealers Ass.	25. Staff proposal requires capture which is not the same as infiltration or treatment	Storm water capture is not mandatory. The proposal only requires that a certain quantity of storm water be treated with BMPs to remove pollutants in one of several ways.	No action necessary
Vernon, Los Angeles	26. Require similar criteria for USEPA Phase I industrial facilities	The requirements are for new development in selected categories. Expansion to other categories may be considered for the next permit term. Will recommend application to construction permits in the LA Region covered by the State General Storm Water permit for construction activity.	Will propose to the Board to consider in its Resolution that the same
Brash.	27. Filter media is not an effective BMP	Disagree. Filter media are effective BMPs if properly configured. See letter to Brash from RB Executive Officer date Oct. 19, 1999	No action necessary

COMMENTER	COMMENT	RESPONSE	ACTION
Santa Clarita	28. Provide criteria for flow based controls in addition to volumetric based controls	Flow based controls which are essential to maintain BMP effectiveness, reduce flow velocities, minimize downstream erosion potential, and prevent over bank flooding are left to the judgement of the local agency.	A statement has been included in the SUSMP that flow design criteria be determined by the local agency
Santa Clarita	29. Limit application of criteria to impervious surfaces	The criterion is applied to the whole area. Credit for the pervious areas is automatically considered through the runoff coefficient. Roofing areas have been excluded for commercial facilities.	No action necessary
Santa Clarita, EAC	30. Provide greater flexibility in application of the mitigation criteria	The four methods of selecting the numerical mitigatio through criteria and waiver procedures offer sufficient flexibility in application.	Provide in the SUSMP four equivalent methods of determining the numerical mitigation measure.
Los Angeles	31. The numerical mitigation measure should be a guidelines and not a requirement for land development	Federal laws and regulations require that controls on new development and redevelopment be enforceable.	No action necessary
Legal Los Angeles	32. Setting a numerical mitigation measure is a discretionary action. Provide cost estimates of impacts and benefits and release documentation for public comment and review under CEQA.	The requirements under an NPDES permit are exempt from review under CEQA. Preliminary costing estimates indicate that they are reasonable.	No action necessary
Los Angeles	33. Identify the regulatory authority, which authorizes the Regional Board to establish the numerical mitigation measure.	Regulatory requirement is found at 40 CFR 122.26 (d)(2)(iv)(A) (2). Statutory authority is at 33 USC 342(p)(B)(iii). See also court s opinion in Defenders of Wildlife v. Browner (No. 98-71080) (9th Cir. 1999) and in NRDC v. USEPA 966 F2d. 1292 (9th Cir. 1992)	No action necessary
Los Angeles	34. Setting a numerical mitigation measure is a discretionary action. Provide cost estimates of impacts and benefits and release documentation for public comment and review under CEQA.	The requirements under an NPDES permit are exempt from review under CEQA. Preliminary costing estimates indicate that they are reasonable.	No action necessary
Western States Petroleum Association (WSPA)	35. Postpone consideration because of inadequate notice.	A thirty-day notice on this action has been provided. A thirty-day notice on the September 1999 Board meeting was provided even though it was not required for a Regional Board Information item.	No action necessary
Apartment Association, BIA	36. There is no regulatory requirement that there be a numerical measure	Disagree. See detailed explanation under main issues and response.	No action necessary.
NRDC	37. Receiving water limits and anti-degradation policies apply independently from mitigation criteria.	Agree that mitigation standards are separate from the numerical mitigation measure. The Office of Chief Counsel confirms that MS4 programs must meet water quality standards in a memo dated October 14, 1999	No action necessary
Burke, Williams & Sorenson	38. Provide broad legal authority for the SUSMP requirement	We will include legal citations that are relevant to the jurisdiction of the Regional Board	Relevant laws are cited in the SUSMP to provide legal justification
Burke, Williams & Sorenson	39. Delay SUSMP requirements in light of PL 106-74 requiring USEPA to submit reports to Congress.	The USEPA has already submitted the reports to Congress and thus no delay is warranted.	No action necessary

COMMENTER	COMMENT	RESPONSE	ACTION
Santa Monica BayKeeper	40. New development can be prohibited under the Federal Anti-degradation policy if it degrades or adds pollutants to local waters	Disagree. See detailed explanation under main issues and response.	No action necessary
EAC, Downey, Lakewood	41. Provide authority in the Clean Water Act to regulate flow to address water quality.	The U.S. Supreme Court has held that regulation of flow to protect beneficial uses is within the authority of the Clean Water Act PUD No. 1 v. WA Dept. of Ecology, 511 U.S. 700 (1994)	No action necessary

TENTATIVE

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION

Resolution No. xx-xx

APPROVING THE RECORD FOR
STANDARD URBAN STORM WATER MITIGATION PLAN
FOR
MUNICIPAL STORM WATER AND URBAN RUNOFF MANAGEMENT PROGRAMS
IN LOS ANGELES COUNTY

WHEREAS, THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION FINDS:

1. On July 15, 1996, a municipal storm water permit was issued to the County of Los Angeles and 85 incorporated cities to control and minimize the discharge of pollutants associated with storm water and urban runoff. This permit became Regional Board Order No. 96-054, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges within the County of Los Angeles.

2. On June 30, 1999, a municipal storm water permit was issued to the City of Long Beach which removed the City of Long Beach from Board Order No. 96-054, giving the City of Long Beach its own distinct Municipal Storm Water and Urban Runoff NPDES permit, Regional Board Order No. 99-060, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges within the City of Long Beach.

3. On August 19, 1999, a statewide general storm water permit for construction activity was adopted by the State Water Resources Control Board (State Board). This permit became State Board Order No. 99-08-DWQ, and applies to construction projects that disturbs five acres or more or is part of a larger common plan of sale in the Los Angeles region.

4. Many of the rivers and streams in Los Angeles County are formally designated as impaired, pursuant to Section 303 (d) of the federal Water Pollution Control Act, for specific pollutants that are commonly found in storm water and urban runoff.

5. Storm water runoff carries with it many pollutants in varying concentrations that are suspended in, and or dissolved, in the runoff. The sources of these pollutants include nearly all properties that have been developed since the pollutants originate through the many diverse activities of habitation and land use. Pollutants generated from individual property developments vary greatly in the concentration or loading of each pollutant. Generally, the relative contribution of the pollutant from runoff from any individual property development will represent only a small portion of the entire loading of a water body given the many square miles of land upon which storm water runoff is generated. When the individual contributions from tens of thousands of discrete property units are aggregated, the pollutant loading becomes significant. The resultant pollutant loads results in the impairment of that water body and the conveyance of pollutants, including sediments, metals, complex organic compounds, oil and grease, nutrients, and pesticides to the ocean and harbors within Los Angeles County. The loading of pollutants generated in the Los Angeles area are being measured through the monitoring program being conducted by the Los Angeles County Department of Public Works in conformance with its obligations as the Principal Permittee under the Los Angeles County Municipal Storm Water and Urban Runoff NPDES permit.

6. The nature of property use is related to the types and quantities of pollutants that are transported from that property during a rainfall event.

7. As property is developed or redeveloped, the utilization of Best Management Practices provide an opportunity to reduce the loading of pollutants to water bodies. This is accomplished by various techniques and can be passive (source reduction) or active (treatment). As property is developed from undisturbed lands, the project can be designed to incorporate structural BMPs that would normally not be available or practical to use on property that has been in urban use.

8. BMPs are effective means of reducing pollutants and treatment control BMPs can be "designed-into" a project in a cost effective way and in a manner that is either transparent to or which enhances the use to which the property has been placed. Some BMPs encourage the setting aside of areas as a greenbelt to allow storm water runoff to flow over areas which are permeable, thereby allowing all or a portion of the runoff to infiltrate. Other BMPs can be designed and built into structures such as catch basins that incorporate replaceable filters to absorb oily wastes or by installing screens to prevent litter from passing through the system and into the water body.

9. Arrays of treatment control BMPs are available to developers of both new and redevelopment properties. The use of BMPs is already required by the terms of the Los Angeles County and Long Beach Municipal Storm Water and Urban Runoff NPDES permits.

10. The ability of any BMP to be effective is limited by the volume of water that the BMP is exposed to in any discrete period of time. A BMP that can only be effective for a small volume of storm water runoff is inherently less effective than one sized to accommodate a larger volume of water.

11. Storm water runoff will normally convey a disproportionate loading of pollutants in the initial period runoff is generated during a storm event. Storm events generating up to 0.75 inches of precipitation, measured over a 24-hour period, constitute 85 percent of the total amount of runoff that can be expected during an average wet season. Designing a BMP to be able to accommodate this amount of runoff will result in the application of a BMP intervention to all but 15% of the total runoff during a year, and usually all of the critical runoff that occurs in the early phase of the precipitation event, commonly referred to as the "first Flush."

12. Both the Los Angeles County (Part III.A.1.c) and the Long Beach Municipal Storm Water and Urban Runoff permits contain provisions related to the adoption of Standard Urban Storm Water Mitigation Plans (SUSMPs) requiring their development and implementation.

13. Standard Urban Storm Water Mitigation Plans are required for a specified set of discretionary "Priority Projects" and the permit specifically identifies seven distinct categories for which SUSMPs are required to be prepared. The permit specifically states that the seven categories of "Priority Projects" are the minimum categories requiring SUSMPs.

14. Standard Urban Storm Water Mitigation Plans are also required for development or redevelopment of Parking Lots 5,000 square feet or greater and Locations in Environmentally Sensitive Areas. These categories have been added to advance efforts to control storm water pollution beyond the minimum in Los Angeles County.

15. Standard Urban Storm Water Mitigation Plans are required to be approved by the Regional Board Executive Officer following which they are to be implemented by the Permittees and used by the Permittees as the minimum criteria for the approval of project specific Urban Storm Water Mitigation Plans and the issuance of grading or building permits to project applicants.

16. The statewide general storm water permit for construction activity requires that Storm Water Pollution Prevention Plans (State SWPPPs) contain post-construction BMPs that will be implemented after construction is complete.

17. Section 402 (p) of the Clean Water Act requires the Administrator of the United States Environmental Protection Agency or her designated agent, in this instance, the Regional Board, to require as part of the storm water program "controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." [USC Section 1342 (p)(3)(B)].

18. A recent decision of the United States 9th Circuit Court of Appeals, Defenders of Wildlife v. Browner (1999) Case No. 98-71080, provides additional support and clarification of the authority of the Administrator and the Regional Board to impose additional controls on storm water pollution. The Court in Defenders of Wildlife v. Browner said that the USEPA and the States have discretion under the law to determine what pollution controls are appropriate to achieve compliance.

19. Pursuant to the requirements of Regional Board Order No. 96-054, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges within the County of Los Angeles, the Regional Board Executive Officer received a proposal for Standard Urban Storm Water Mitigation Plans submitted by the Principal Permittee.

20. Upon the review of the Regional Board Executive Officer, the Standard Urban Storm Water Mitigation Plan submitted for the seven applicable categories was deemed inadequate. A revised SUSMP proposal was developed subsequent to a discussion of the proposal's conceptual foundation at a public workshop held on August 10, 1999. This workshop was well attended with over 80 municipal representatives and interested parties participating.

21. On August 16, 1999, a public notice was issued indicating that the Standard Urban Storm Water Mitigation Plans proposed by the Principal Permittee would be augmented by the addition of criteria related to specifying numerical design criteria for BMP construction. The matter was noticed for the Regional Board's September meeting to allow the issue to be discussed before the Board although no formal action of the Regional Board itself is required for SUSMP approval.

22. On September 16, 1999, the Regional Board conducted a public hearing on the Standard Urban Storm Water Mitigation Plan proposal as amended by the Executive Officer. At that hearing, the Regional Board Executive Officer suggested additional time would be necessary to develop a more comprehensive proposal incorporating the comments received at the public hearing.

23. Between September 16 and December 3, 1999, the Regional Board Executive Officer met with interested parties to discuss comments and concerns from interested parties.

24. The Southern California Council of Governments (SCAG) has indicated its interest in obtaining funding to prepare a regional plan(s) to address storm water pollution and identify regional treatment solutions for implementation.

25. On December 7, 1999, the Regional Board Executive Officer released a revised Standard Urban Storm Water Mitigation Plan document to interested parties.

THEREFORE BE IT RESOLVED THAT:

1. The Regional Board endorses the Standard Urban Storm Water Mitigation Plan prepared by the Regional Board Executive Officer and noticed to the public on December 7, 1999 and the concepts therein relating to numerical storm water mitigation standards for Best Management Practices; and

2. The Regional Board encourages the Regional Board Executive Officer to approve the Standard Urban Storm Water Mitigation Plan at the earliest opportunity incorporating any specific changes recommended and formally approved by the Regional Board at the January 6, 1999 Board Hearing;

3. The Regional Board adopts the approved requirements as provisions applicable to the SUSMP requirements for the City of Long Beach.

4. The Regional Board adopts the numerical mitigation standards for storm water, endorsed herein, as the minimum design criteria for review of post-construction BMPs in the Los Angeles Region for construction projects subject to coverage under the state storm water general permit for construction activity.

5. The Regional Board encourages the Permittees and all interested parties to work together in a spirit of cooperation to effect the implementation of the Standard Urban Storm Water Mitigation Plan at the earliest possible date, and

6. The Regional Board encourages the efforts by the Southern California Council of Governments and area Council of Governments (COGs) to develop regional plans and identify regional solutions to address storm water pollution from new development and redevelopment.

I, Dennis Dickerson, Executive officer, do hereby certify that the foregoing is a full, true and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on January 6, 2000.

DENNIS A. DICKERSON
Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

LOS ANGELES REGION

320 W. 4th Street, Suite 200
Los Angeles, California 90013
Tel No. (213) 576-6600; Fax No.: (213) 576-6660

Public Notice No. 99-047

NPDES No. CAS0061654

NOTICE OF PUBLIC HEARING

CONSIDERATION OF STANDARD URBAN STORM WATER MITIGATION PLANS

SUBMITTED FOR APPROVAL TO THE EXECUTIVE OFFICER

UNDER

THE LOS ANGELES COUNTY MUNICIPAL STORM WATER PERMIT

This Regional Board will hold a hearing to consider standard urban storm water mitigation plans submitted for approval to the Executive Officer under the municipal storm water permit for Los Angeles County and Cities.

HEARING DATE AND LOCATION:

DATE: Thursday, September 16, 1999
TIME: 9:00 a.m.
PLACE: Metropolitan Water District of Southern California
700 N. Alameda Street (next door to Union Station), Main Board Room
Los Angeles

AVAILABILITY OF DOCUMENTS

The Standard Urban Storm Water Mitigation Plans, and other related documents and information are on file, and may be inspected, at the Regional Board office, 320 W. 4th Street, Suite 200, Los Angeles, California, 90013, between the hours of 8:00 a.m. and 5:00 p.m. Arrangements for file review and/ or obtaining copies of documents may be made by contacting Vilma Correa at (213) 576-6617. The Standard Storm Water Mitigation Plans may also be viewed on-line at the Los Angeles County Department of Public Works website address, http://dpw.co.la.ca.us/epd/mitigation/

Questions regarding the documents or the hearing should be directed to Dr. Xavier Swamikannu at (213) 576-6654.

BACKGROUND

Los Angeles County and Cities (except the City of Long Beach) implement a municipal storm water program to reduce storm water and urban runoff pollution under the requirements of Board Order No. 96-054. The City of Long Beach implements a separate municipal storm water program to reduce storm water and urban runoff pollution under Board Order No. 99-060.

The Regional Board at its April 22, 1999, Hearing approved a List of Best Management Practices for Permittees to select from and require implementation of the most effective BMPs in their Development Planning and Development Construction programs (Board Resolution No. 99-03). The Regional Board at that time also requested that the Standard Urban Storm Water Mitigation Plans (SUSMPs) for Priority Planning Project categories, which incorporate the BMPs, be brought to it for discussion. The municipal storm water permit for the City of Long Beach, adopted by the Regional Board on June 30, 1999, includes requirements that make SUSMP provisions adopted by the Regional Board or approved by the Regional Board Executive Officer to be applicable to its program.

Los Angeles County Department of Public Works (LACDPW), on behalf of Permittees, submitted SUSMPs for Executive Officer approval on July 22, 1999. These SUSMPs were revised and resubmitted on August 12, 1999, after a joint SUSMP workshop held on August 10, 1999, to clarify some text. SUSMPs have been submitted for: (i) 100+ home subdivision; (ii) 10-99 home subdivision; (iii) 100+ square-foot commercial development; (iv) automotive repair facilities; (v) retail gasoline outlets; (vi) restaurants; (vii) hillside located single-family dwelling. Prior to submittal to the Regional Board, draft versions of the SUSMPs were distributed to environmental groups, contractors, developers, consultants and trade industry groups for review and comment.

The SUSMPs for: (i) 100+ home subdivision; (ii) 10-99 home subdivision; (iii) 100+ square-foot commercial development include requirements that storm water runoff mitigation with "treatment control" BMPs be considered, in addition to structural control BMPs and source control BMPs. The SUSMPs for (iv) automotive repair facilities; (v) retail gasoline outlets; (vi) restaurants; (vii) hillside located single-family dwelling require only structural control BMPs and source control BMPs. The SUSMPs do not provide a numerical mitigation measure for storm water to facilitate the development of BMP design criteria.

For discussion before the Regional Board is staff recommendation that the Regional Board Executive Officer approve the SUSMPs with the following changes:

A. The SUSMPs for categories: (iv) automotive repair facilities; (v) retail gasoline outlets; (vi) restaurants; and (vii) hillside located single-family dwelling, require consideration of "treatment control" BMPs; and include the BMPs in "SUSMP Section 3. Minimize Storm Water Pollutants of Concern" as Example BMPs.

B. Incorporate in, "SUSMP Section 3. Minimize Storm Water Pollutants of Concern", numerical mitigation measures for BMP design criteria based on the "mitigation" of smaller storms to capture a large percentage of runoff events, runoff volume and pollutant loads. This mitigation measure may be derived from:

   1. the 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area (*Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, 1998*), or

2. a historical-record based reference 24-hour rainfall criterion (0.75 inch for the Los Angeles County area) that achieves the same or greater reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event.

COMMENTS AND QUESTIONS

Persons wishing to comment on the SUSMPs are invited to submit them in writing at the above address to the attention of Dr. Xavier Swamikannu. In order to be evaluated by Board staff and included in the Board's agenda folder, written comments or testimony on the tentative permit must be received at the Regional Board's office by September 2, 1999. Comments received after that date will be provided, *ex agenda*, to the Board for their consideration.

HEARING PROCEDURE

The Board meeting, in which the hearing will be part of, will start at 9:00 am. Interested persons are invited to attend. Oral statements will be heard; however, for the accuracy of the record, all important testimony should be in writing. Oral testimony may be limited to 5 minutes or less for each speaker, depending on the number wishing to be heard. Parties with similar concerns or opinions are encouraged to choose one representative to speak.

Date: August 16, 1999

IN REPLY PLEASE REFER TO FILE EP-3

Mr. Dennis Dickerson, Executive Officer
California Regional Water Quality
Control Board - Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013-1105

Dear Mr. Dickerson:

STANDARD URBAN STORMWATER MITIGATION PLANS

I am writing to clarify the intended meaning of some wording in the Standard Urban Stormwater Mitigation Plans (SUSMPs) submitted to you on July 21, 1999.

At the workshop held on August 10, 1999, regarding SUSMPs, you indicated that the following statement in the SUSMPs would be interpreted to mean that all runoff would need to be mitigated:

> "The development must be designed so as to mitigate (infiltrate and/or treat) the site runoff generated from impervious directly connected areas that may contribute pollutants of concern to the stormwater conveyance system".

The actual intent of that statement was to omit a numerical standard from the SUSMPs. Enclosed is a revised version of the SUSMPs to clarify the intended meaning.

If you have any questions, please call me at (626) 458-5948, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

HARRY W. STONE
Director of Public Works

Consideration shall be given to the type of development and the potential for storm water pollution when determining the applicability of BMPs. Cost effectiveness, ease of maintenance, and consistency with other environmental mandates may also be considered.

For developments where increased storm water discharge rates will result in an increase in downstream erosion potential, the list of recommended BMPs shall include those BMPs which can be used to maintain peak runoff rates at pre-development levels to the maximum extent feasible.

The list of recommended BMPs shall be submitted to the Regional Board for approval.

c. Standard Urban Storm Water Mitigation Plans (SUSMPs) and guidelines for their preparation not later than six months after Regional Board approval of the BMPs in Part 2.III.A.1.b. The SUSMPs shall incorporate the appropriate elements of the recommended BMPs list. At the minimum, SUSMPs and guidelines shall be prepared for the following development categories:

i. a 100+ home subdivision;
ii. a 10-home subdivision;
iii. a 100,000+ square-foot commercial development;
iv. an automotive repair shop;
v. a retail gasoline outlet;
vi. a restaurant; and
vii. a hillside-located single-family dwelling.

2. Planning Control Measures

Each Permittee shall develop a program on planning control measures for priority projects (Part 2.III.A.1.a) consistent with the programs developed under Part 2.III.A.1.b. & c.. Each Permittee shall initiate implementation of its program not later than six months after commencement of its next fiscal year following approval of the model Standard Urban Storm Water Mitigation Plans by the Executive Officer, provided, however, that such approval is issued not later than 90 days prior to the commencement of the Permittee's fiscal year. If such approval is given within 90 days of the commencement of a Permittee's fiscal year, such program shall be implemented in the second fiscal year following approval but in no event shall implementation be initiated later than July 30, 1999. Each Permittee shall require that the project applicant submit an Urban Storm Water

Mitigation Plan appropriate and applicable to the project, and that the Permittee approve the Plan prior to the issuance of any grading or building permit. The Urban Storm Water Mitigation Plan shall incorporate by detail or reference appropriate post-construction BMPs to:

a. Implement, to the maximum extent practicable, requirements established by appropriate governmental agencies under CEQA, Section 404 of the Clean Water Act, local ordinances and other legal authorities intended to minimize impacts from storm water runoff on the biological integrity of natural drainage systems and water bodies;

b. Maximize, to the maximum extent practicable, the percentage of permeable surfaces to allow more percolation of storm water into the ground;

c. Minimize, to the maximum extent practicable, the amount of storm water directed to impermeable areas and to the MS4;

d. Minimize, to the maximum extent practicable, parking lot pollution through the use of appropriate BMPs such as retention, infiltration, and good housekeeping;

e. Establish reasonable limits on the clearing of vegetation from the project site including, but not limited to, regulation of the length of time during which soil may be exposed and, in certain sensitive cases, the prohibition of bare soil; and

f. Provide for appropriate permanent controls to reduce storm water pollutant load produced by the development site to the maximum extent practicable.

The Permittee may refer applicants to the *'California Storm Water Best Management Practice Handbooks,* California Storm Water Quality Task Force, Sacramento, CA (1992)' and its revisions; the Countywide Storm Water Management Plan; *'USEPA Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters, Issued under the Authority of Section 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990,* Document No. EPA 840 B 92-002 (1993),'; and similar manuals for specific guidance on selecting post-construction BMPs for reducing pollutants in storm water discharges.

3. Planning Process

In order to integrate storm water management considerations into

discretionary development projects at the time that they are first proposed to jurisdictions, and to support other provisions of this Order:

a. The Principal Permittee, in consultation with the Permittees, shall develop storm water management guidelines for use in preparing/reviewing CEQA documents, and in linking storm water quality mitigation conditions to local discretionary project approvals not later than January 30, 1998.

The guidelines shall address the preservation of areas that provide water quality benefits such as riparian corridors and wetlands and shall promote protection of the biological integrity of drainage systems and water bodies.

Each Permittee shall review the guidelines for the purpose of making appropriate modifications in their internal procedures not later than six months after commencement of its next fiscal year following approval of the program by the Executive Officer, provided, however, that such approval is issued not later than 90 days prior to the commencement of the Permittee's fiscal year. If such approval is given within 90 days of the commencement of a Permittee's fiscal year, such program shall be implemented in the second fiscal year following approval but in no event shall implementation be later than July 30, 1999.

b. Each Permittee shall include watershed and storm water management considerations in the appropriate elements of the Permittee's General Plan, whenever said elements are significantly rewritten. Appropriate elements may include the following:

i. Conservation; and/or
ii. Open space; and/or
iii. Land-use; and/or
iv. Public utilities; and/or
v. Infrastructure; and/or
vi. Other appropriate elements.

4. Developer Information Program

The Principal Permittee, in consultation with the Permittees, shall develop a model program not later than January 30, 1998, to inform developers seeking discretionary approvals about:

a. Development and construction storm water management;

b. Maximization of pervious areas and storm water infiltration (where geology and topography permit); and

c. Cost effective storm water pollution control measures.

The program shall provide specific guidance on selecting BMPs to reduce pollutants in storm water discharges from urbanized areas, and include appropriate BMPs, educational materials, and handbooks and guidelines described in Part 2. III.A.3.

Each Permittee shall implement a developer information program consistent with the model program not later than six months after commencement of its next fiscal year following approval of the model by the Executive Officer, provided, however, that such approval is issued not later than 90 days prior to the commencement of the Permittee's fiscal year. If such approval is given within 90 days of the commencement of a Permittee's fiscal year, such program shall be implemented in the second fiscal year following approval but in no event shall implementation be later than July 30, 1999. Each Permittee's program shall include information about its legal authorities. Permittees are encouraged to engage in joint efforts in implementing the program.

B. Development Construction

Standard Urban Stormwater Mitigation Plans (SUSMPs)
Statement of Dennis Dickerson
Executive Officer
January 26, 2000

City of LA
Resolution

Mr. Chairman, members of the Board, it is perhaps fitting that Agenda Item 11 Standard Urban Stormwater Mitigation Plans is on the agenda for today, our 50th Anniversary as a Regional Board. At the very least, what the Board does today will serve as a key point of reference in our quest to meet the mission of this Regional Board, "to protect and restore the water quality of the Region."

Before I begin my formal presentation I would like to take a moment to thank Dr. Xavier Swamikannu for his tireless efforts to manage this permit. This is one of the most significant stormwater permits in the nation and one of the greatest water quality challenges we face as a Board and YET **we have only a fraction of one person funded to manage this permit. I would also like to thank the members of my staff who over the past few weeks and days have been drawn into this maelstrom of activity, especially Robyn Goodman and Ronji Harris who have responded to** MY **urgent cry for help with good nature and dedication. Jorge Leon has also been instrumental in developing a legal basis for**

this action which you have in the staff report. My sincere appreciation to each of them.

The notion of Standard Urban Stormwater Mitigation Plans (SUSMPs) is rooted in the Municipal Stormwater and Urban Runoff permit issued to the County of Los Angeles and its 85 municipalities in 1996. The permit requires that SUSMPs be developed for, at a minimum, several development categories. These include home subdivisions, commercial developments of at least 100,000 square feet in size, automotive repair shops, retail gasoline outlets, restaurants, and single family homes on hillsides. Once adopted, the SUSMP would be a set of standards or criteria that developers and architects could use to design their projects in ways that would result in those properties contributing inherently less pollution when it rains. Cities would use the SUSMPs to adopt their own enforceable ordinances and then apply them in their review and approval of project plans.

SUSMP standards only apply to new development or substantial redevelopment projects in the applicable SUSMP categories. As a consequence, the applicability of SUSMPs is limited and their

consequent effect on storm water quality in our streams will, at first, be relatively small. As years pass, and more and more property is redeveloped, a greater percentage of urban land will be retrofitted with SUSMPs. Eventually, much of the LA Basin will gain the benefit of some enhanced level of stormwater management. It must be remembered, however, that SUSMPs are only a small part of the 1996 stormwater permit requirements. Many other aspects of that permit address other issues and current problems. SUSMPs are simply one long-term approach to address the ubiquitous problem of pollution from stormwater runoff and to address that problem for new development to prevent the problem we have from getting worse.

That problem is pervasive and growing. Stormwater is the vehicle by which pollution that is deposited on our highways and roads, our curbs and gutters, our yards and alleys, is conveyed to our streams and the ocean. When it rains, the runoff carries amazingly large amounts of pollutants that reach the ocean, it adds to toxic levels of sediments in estuaries, which contribute to the deterioration of our aesthetic environment and the degradation of the aquatic environment. The amounts of these pollutants that reach our streams every year are not

measured in ounces but in thousands of pounds and in ~~some cases~~ the case of waterborne litter hundreds of tons. The problem is real and the contribution of these pollutants contributes to many of our streams being listed on the federal 303 (d) listing of impaired waters. These are impairments for which Total Maximum Daily Loads or TMDLs are required and their requisite load allocations and implementation plans to remove those impairments.

Briefly, we are here today to consider what are the appropriate SUSMPs to apply to the categories of developments in the staff's SUSMP proposal. We began this process with the formal submittal of SUSMPs to the Regional Board by the Principal Permittee of the 1996 permit, that is, the County of Los Angeles. In reviewing that submittal, staff determined that additional requirements were needed to enhance the SUSMP submittal. After a public workshop last August, staff proposed the addition of a numerical design standard to establish the size of Best Management Practices, which are simple and commonsense techniques that reduce the amount of pollution in stormwater runoff. Under the terms of the 1996 permit, the Executive Officer is vested with the authority to approve the SUSMPs. However, by proposing a

significant modification of the SUSMP by including a numerical design standard, I sought Regional Board concurrence with that recommendation. A hearing was held on September 16th before the Regional Board. The outcome of that hearing was your agreement with my recommendation that a better record was needed and possibly some modifications to the SUSMP proposal were necessary. The result was a series of discussions with interested parties that led to our publishing a December 7th proposal which is now before you in your binder as pages 11-1 through 11-19. A formal staff report has been developed which is dated January 18th and was submitted to you separately. Additionally, a Change Sheet has been issued, and is being augmented today.

The SUSMP proposal before you, while an extensive document, is really quite simple and much of the language of the proposal is also non-controversial and carries over from the text of the SUSMP submitted to the Regional Board last August. Since the September 16th Board hearing, some changes have been made to the proposal in an effort to create flexibility and to recognize the problems associated with the implementation of any substantive permit requirements. Some of these

have become the focus of additional controversy, adding to the numerical design standard that was the principal point of controversy last September.

The proposal itself is partitioned into several main segments. These are:

Definitions

Requirements applicable to all SUSMP categories including:

Peak Stormwater Runoff Rates

Conservation of Natural Areas

Minimization of stormwater pollution though use of BMPs

Protection of Slopes and Channels

Providing storm drain identification

Proper design of outside storage areas

Proper design of trash storage areas

Establishing proof of long-term BMP maintenance, and

Design standards for treatment controls

Specific Requirements applicable to certain categories

Most of these provisions provide additional BMPs for certain types of development where those are believed necessary to provide additional controls to reduce stormwater pollution.

Two additional categories of SUSMPs have been added, Parking Lots and Environmentally Sensitive Areas, which result in additional requirements.

A waiver provision has been included to allow for flexibility under carefully limited circumstances.

Infiltration BMPs may pose a risk to groundwater quality under certain circumstances so a waiver can be applied in that circumstance

There may not be adequate space available to use BMPs so a waiver option is allowed,

Finally, soil conditions may not be suitable for infiltration BMPs, therefore allowing a waiver seems appropriate.

The final element is provision for the county and cities to use a professional certification to represent the adequacy of a project plan as meeting SUSMP requirements rather than having to review and approve those documents resulting in additional work by city plan review staff.

Those are the fundamental elements of the SUSMP proposal. As you move to consider this matter, I would request that you think of it as two distinct proposals. First, the "basic SUSMP" and second, the issue of the numerical design standard. The former is a lot less controversial than the latter. Also, keeping them separate will allow you, at the end of the day, to perhaps provide greater clarity in your direction to staff.

As you know, we have developed a change sheet—

So ~~Is~~ what ~~is~~ was wrong with the proposal as offered that required changes by staff? Let's talk about the Basic SUSMP first.

To begin, we needed to better state some of our definitions:

Hillsides were not adequately defined. In response to comments, we have now added additional clarity to state that hillsides are property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope that is twenty-five percent or greater.

While we added a definition for parking lots we did not make it clear that we were talking about commercial stand alone parking lots between 25 and 200 spaces in size, not all parking areas for commercial facilities under 100,000 square feet in size.

We also were unclear on setting a threshold for when a redevelopment project would have SUSMPs be applied. We now have added a threshold of fifty percent of impervious surface addition or the making of improvements to fifty percent or more of the existing structure as the threshold for SUSMP conditions to apply.

The term environmentally sensitive area means different things to different people and agencies. We have limited our definition to the one adopted by the Board for the City of Long Beach storm water permit. This definition limits the areas to those identified by the County of Los Angeles, the State Water Resources Control Board, and the California Resource Agency. Reference documents have been included.

We have made a number of less significant changes in the document that are identified in the Change Sheet and I will address them only if you wish clarification.

As noted above, we have a waiver provision that has sparked opposition. The intention was to add flexibility and a creative mechanism for funding regional projects with the funds that would be saved by not installing BMPs at a given site. However, the waiver is controversial because it does provide an out. Ultimately, you will need to provide guidance on its propriety.

Now lets turn to the numerical Design Standards, which has been and remains the principal focus of comments. The fundamental notion is that if you install a BMP as part of a new development it ought to be of an adequate size that it can be effective. Last April you approved a resolution adopting a set of BMPs that should be used in those instances. You also said they should be the most effective BMPs. Effectiveness is largely determined by size and degree of maintenance. If a BMP is large enough it could manage all the runoff generated from the largest measured storm event. If it is too small, it will be less effective and perhaps ineffective for all but the smallest rain events. We do not specify the degree to which a BMP should remove pollutants. Rather, we have proposed an amount of rainfall that a BMP should be able to manage thereby resulting in the removal of a reasonable amount of pollutants.

The 0.75 inch standard is proposed since it will provide coverage by a BMP for 100% of the volume of 85% of the storm events. It will rain more than 0.75 inches and our proposal will not address the volume of rain over 0.75 inches. But we do not belief it necessary to do so to effect a considerable reduction in polluted runoff. Most pollution is picked up

in the earliest phase of a rain event. By addressing the first part of runoff, and most of the runoff, most of the time, through BMPs sized to that standard we will make a significant difference in runoff water quality. As I noted earlier, we are talking about a relatively small amount of land for the early years. While the overall impact will be difficult to notice early on, the payoff is really for the next generation who will have a much more intrinsically cleaner environment. Think of it as a milestone that the Regional Board in 50 years will mark as the highlight of millennial foresight.

The proposal has included two exemptions that we believe are reasonable. First is the rooftop runoff exemption. The concept here is simple. Runoff from rooftops is less polluting than runoff that traverses streets picking up oil or passing through lawns picking up what people didn't. If you don't need to run this cleaner water through a BMP, that BMP can be smaller and cheaper to build and maintain. This rooftop exemption may not work in all cases. Where the roof itself is shown to be inherently polluting, it is excluded, where the rooftop has vents or air pollution control systems that may result in a residue on the roof that can then be washed off during a rain, it is excluded. If the runoff from

the roof is not channeled away from the ground surface so it can pick up pollutants, no exemption. Finally, if the rooftop runoff is diverted to a stream that is natural, there is no exemption. These criteria seem to make sense. NRDC in their comment letter challenges the rooftop exemption but then cannot cite a study to show that the rooftop runoff would pose a water quality problem saying the studies are underway. It would be inappropriate to require BMPs for rooftop runoff without a clear showing that the runoff from rooftops is a substantial portion of the stormwater pollution problem. Right now, we don't know and the proposal is flexible to allow the numerical standard to apply once a showing is made that there is indeed a problem to be addressed.

The other exemption from the 0.75 inch standard is for restaurants that are less than 5,000 sq. ft. in size. The intent is to preclude applicability of the numerical design criteria to many restaurants that are small businesses in urbanized areas while still applying the "basic" SUSMP package. Larger stand alone restaurants or those located in a commercial complex will generally be covered by exceeding the 5,000 sq. ft. criteria or by their placement in a commercial complex that is larger than 100,000 sq. ft. in size.

While we have proposed a 0.75 inch standard applicable to all the SUSMP development categories, the Board may wish to consider some alternative to what staff has proposed. Between the 0.75 standard and no standard there are many options.

First, the Board could impose a more stringent number than 0.75 inches. One inch or more could be imposed.

Alternatively, a lesser number could be chosen. For example 0.5 inches or 1/3 of an inch.

No numerical standard could be adopted leaving the "most effective BMP standard" a judgement call rather than a measurable, quantifiable, and ultimately verifiable standard.

A standard could be required immediately or phased in over time.

The standard could be applied to only a few categories now and applied to more on the basis of more information at a later time. Perhaps tied in with the consideration of the next permit renewal in July 2001.

The County of Los Angeles has adopted a 0.75 inch standard as a result of litigation with NRDC. In their letter of January 11th, at page 11-90 in your comment binder, the County argues caution in moving too fast with a SUSMP proposal given their own difficulty in implementation. The County's cautionary comments suggest that the Board should carefully consider their problems with implementation.

Another issue that we have not yet addressed, is that of a cost trigger. By that, I mean is there an upper limit as to how much of a project's total cost that should be spent on BMPs. These costs vary substantially based on the BMP selection. But it may be worthwhile for the Board to consider some value beyond which SUSMPs would not be required based on some cost factor expressed, perhaps, as a percentage of the project's total cost.

With this proposal, we have tried to advance the cause of stormwater pollution control. I am confident that whatever the Board's action today, we have already sent a strong message that the time for a concerted effort to address stormwater pollution is now. We have

already seen substantial progress by cities to informally apply the 0.75 inch numerical standard and in other instances to establish stormwater management programs that go beyond the basics. We are on the right track with this proposal although I believe there is ample room to fine tune the proposal to make it either more comprehensive or to instill greater flexibility. Either way, the goal of improving stormwater quality will be achieved.

- City of LA Resolution PY 11-153-A-6+7
- City of West Hollywood 11-153 A-8

Now, Dr. Xavier Swamikannu will comment briefly on several issues including BMP costs and a bit more detail on how the 0.75 inch numerical design standard is applied. He will be followed by Jorge Leon who will address a few legal issues.

Then acknowledge late comment letters

CEA CALIFORNIA ENVIRONMENTAL ASSOCIATES

January 14, 2000

Xavier Swamikannu
Storm Water Program
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Re: California Restaurant Association comments on the proposed Standard Urban Storm Water Mitigation Plan Rule

Dear Mr. Swamikannu,

California Environmental Associates (CEA) represents the California Restaurant Association (CRA) and Burger King Corporation (BKC). On behalf of CRA members in Los Angeles County, we submit the following comments on the proposed Standard Urban Storm Water Mitigation Plan for Los Angeles County (SUSMP) to the Los Angeles Regional Water Quality Control Board (Board).

GENERAL

CRA has reviewed the proposed SUSMP rule (December 7, 1999) and has developed comments requesting reconsideration of the numeric treatment standards and offering clarification on specific issues elsewhere in the rule.

CRA is interested in working with the Board, Los Angeles County, the co-permitees (municipalities), and other stakeholders to establish a fair and effective SUSMP rule. The CRA and their member organizations believe that, with the Board's consideration of the changes and clarifications discussed in this letter, the SUSMP rule will accomplish the goals and requirements of the Los Angeles County National Pollution Discharge Elimination System (NPDES) Permit.

CRA's comments address the proposed "SUSMP Provisions Applicable to All Categories" and the specific provisions applicable to priority project categories for "Restaurants" and "Parking Lots".

R0068094

NUMERIC TREATMENT STANDARDS

The Los Angeles County Department of Public Works currently requires, as part of their Storm Water Program[1], monitoring and inspection of existing "food establishments" (including restaurants) for proper implementation and maintenance of various physical and management storm water BMPs. These BMPs are designed to address the following elements of a storm water program at restaurants:

- Spill prevention, control, and cleanup
- Outdoor equipment operations and maintenance
- Outdoor materials storage and handling
- Waste disposal and handling
- Equipment washing and cleaning
- Building and grounds maintenance
- Employee training

When these BMPs are applied, they provide an effective means of preventing the discharge of pollutants to the storm drain system from restaurant operations without the need for numeric treatment standards.

CRA believes that there is a lack of data demonstrating that the required numeric treatment standards are cost effective[2] or that they provide a net benefit to the beneficial uses of receiving waters through their use. Also, while the NPDES Permit calls for mitigation of pollutants from storm water runoff to the "maximum extent practical" it does not go so far as to mandate the use of numerical treatment standards - nor are numerical treatment standards necessary to enforce the implementation of the minimum BMP requirements laid out in the SUSMP rule. CRA requests that the Board defer including the numeric treatment standard in the final SUSMP rule until such time as the Board can demonstrate that implementation of such a standard is feasible, cost effective, and will lead to further reduction of pollutants of concern than already occurs under the current program.

Furthermore, CRA concurs with the position and recommendations of the Southern California Association of Governments (SCAG) outlined in their SUSMP Policy that was approved by the SCAG Regional Council on January 6, 2000, including[3]:

- Not adopt SUSMP numeric standards until such time as the Board can validate the feasible, technical and scientific bases for numeric standards.
- Monitor pilot programs similar to those underway in Los Angeles County.
- Ask SCAG to manage a legal authorities initiative in which all of the 85 cities in the Los Angeles Basin would work to develop model language which would then be available for municipal implementation throughout the Basin.

[1] A program of the Los Angeles County Department of Public Works (LACDPW), Environmental Programs Division.

[2] The implementation of treatment BMPs will be potentially costly, exceeding the estimated 0.5% of total project costs as estimated by the Board, particularly when retrofitting existing parking lots is considered as part of a "redevelopment" project.

[3] Recommendations cited from the January 6, 2000, SCAG document, *SUSMP Policy Approved by the Regional Council of the Southern California Association of Governments.*

CLARIFICATION

CRA offers the following clarifying comments to the Board for consideration and incorporation into the final SUSMP rule.

Issue 1: Redevelopment
The definition of redevelopment in the proposed SUSMP rule is too vague.

First, CRA requests that the definition of redevelopment clarify the word "remodeling". CRA members are concerned that changes to the interior or décor could trigger the application of this rule. At a minimum, the rule should not be triggered if you don't change the footprint of the building.

Second, CRA requests that a minimum alteration standard of 50% of the size of an existing project be considered for inclusion into the rule. A minimum alteration standard will effectively restrict the requirements of the SUSMP rule redevelopment standard to those projects that are effectively changing the original use and purpose of a facility and substantially increasing the potential for source pollutants of concern being discharged into the storm drain system.

Also, the SUSMP rule defines as one form of redevelopment "replacement of impervious surface that is not part of routine maintenance activity". For parking lots particularly, it is unclear how the distinction between maintenance and "redevelopment" projects will be defined. For instance, will periodic blacktop application of a parking lot be considered "maintenance" or "redevelopment"?

CRA recommends that the Board adopt the interpretation of "maintenance" exclusions defined in the State Construction Permit[4] Fact Sheet. This definition states: "Construction activity does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of the facility, nor does it include emergency construction activities required to protect public health and safety" (Page 2, State Construction Permit Fact Sheet).

Issue 2: Project Should be Assessed Independently
Restaurant redevelopment projects and parking lot redevelopment projects must be assessed independently.

It is CRA's understanding that redevelopment of an existing restaurant will not trigger the application of the proposed SUSMP rule to an adjacent parking lot, unless the parking lot is "redeveloped" in accordance with the definition provided in the rule. Consequently, the redevelopment of an existing parking lot will not trigger the application of the proposed SUSMP rule to an adjacent restaurant, unless the restaurant is "redeveloped" in accordance with the definition provided in the rule. Please insert language that will clarify that "redevelopment" of a discretionary project will not affect adjacent discretionary projects.

[4] State Water Resources Control Board Water Quality Order 99-08-DWQ, *National Pollutant Discharge Elimination System General Permit No. CAS000002, Waste Discharge Requirements for Discharges of Stormwater Runoff Associated with Construction Activity.*

Issue 3: Maintenance
The SUSMP rule is vague on the issue of BMP maintenance requirements. It is also unclear how these BMP maintenance requirements will be enforced consistently across Los Angeles County. The rule, as currently written, requires property owners to "provide verification of maintenance provisions through such means as may be appropriate, including, but not limited to legal agreements, covenants, CEQA mitigation requirements, and/or Conditional Use Permits" (Requirements, Section 8). However, most BMPs simply have generally accepted standard (e.g., vendor recommended) maintenance requirements, while common sense dictates other maintenance schedules (e.g., cleaning catch basin grates at least once before wet season).

While it is clear that the SUSMP rule will allow developers and property owners to evaluate and determine the proper maintenance requirements in an agreement with municipalities, please provide additional clarification and guidance (e.g., guidance documents) for how municipalities will effectively and consistently approve, monitor and enforce these maintenance requirements.

Issue 4: Trash Storage Areas
The proposed SUSMP rule requires that all trash storage areas adequately prevent "offsite transport" of trash and "divert" drainage from adjoining roofs, etc. around trash areas.

The current restaurant industry practice of using self contained, self-enclosed dumpsters meets these requirements. The SUSMP rule should explicitly identify this as an acceptable BMP option for trash storage areas.

Issue 5: Parking Lots
In the Definitions section of the proposed SUSMP rule "parking lot" is defined as "land area or facility for the parking of commercial or business or private motor vehicles". In section 10 of the proposed SUSMP rule, Provisions Applicable to Individual Priority Project Categories, the proposed rule states that parking lots must be properly designed to "treat to remove oil and petroleum hydrocarbons at parking lots that are heavily used (e.g., fast food outlets, lots with 25 or more parking spaces, sports event parking lots, shopping malls, grocery stores, discount warehouse stores)". It is unclear which threshold criteria (size, # spaces, type) is to be used to determine applicability of the SUSMP policy to a particular parking lot. It appears that a parking lot with only 10 spaces could fall under the definition of parking lot for the purposes of this rule, irrespective of other factors (e.g., use) limiting applicability.

CRA requests that the definition of a parking lot consider the relative level of "use" and be limited to lots with 25 or more spaces (i.e., lots with 25 spaces or less should be excluded form the rule and lots with 25 or more spaces should be evaluated for their inclusion based on relative level of use).

Issue 6: Additional Permit Requirements
It is unclear whether the SUSMP rule will require developers and property owners to obtain additional permits as a result of implementing the required treatment BMPs. For instance, will design and implementation of SUSMP treatment control BMPs for parking lot runoff require a property owner to obtain a treatment permit under DTSC Permit-by-Rule program? This poses potential operation and compliance, as well as cost, burdens that need to be considered when evaluating the cost effectiveness of the numeric treatment standards.

Please provide an assessment and impact analysis of the potential for additional permitting requirements due to implementation of the SUSMP rule.

CONCLUSION

CRA trusts that these comments will help the Board to develop a fair, effective, and consistent SUSMP rule while considering the concerns of the restaurant industry in Los Angeles County. Please feel free to contact me at any time should you have any questions or comments.

Subject: PROPOSED STANDARD URBAN STORMWATER MITIGATION PLAN

Dear Mr. Dickerson:

The purpose of this letter is to provide comments to the Regional Water Quality Control Board (RWQCB) regarding the December 7, 1999 proposed Standard Urban Stormwater Mitigation Plan (SUSMP). The City of Santa Clarita is opposed to the imposition of numeric limits and the addition of the two new design priority categories that have been added to the SUSMP at this time. The RWQCB has received many letters from cities and other interested parties regarding potential problems with the SUSMP that has been proposed by your staff. In an effort to save you from reading a lengthy dissertation about the shortcomings and insurmountable challenges presented by the proposed SUSMP, the following highlights are provided for your consideration:

- Costs and benefits should be carefully considered.
  Santa Clarita is one of the fastest growing community in California and one of the more desirable and affordable places for young families to live. Environmental quality is critical to the community's sustainability. Higher housing costs hurt young families and the community's ability to achieve a strong economy. The overall impact of regulatory costs should be carefully considered prior to implementation.

- Requirements should apply to all.
  Narrowness of application (new v existing development) of the new standards place developing areas at a distinct disadvantage compared to developed areas, simply because it costs more to build, start a business or build a home and potentially minimizes the beneficial impacts.

- Real data should support treatment requirement.
  Design standards in other communities have been developed over a period of time using real data about the specific area and/or watershed

in question. Stakeholders were also involved in the process of development. Data is needed to support the legality of the imposition of land development requirements and to help cities explain and defend the effectiveness of their programs.

- Details in SUSMP.
  - Exclude individual single family residences from the requirements for design of outdoor material storage and trash storage.
  - Hillside definition should be changed to include only disturbance of any natural slope that is 25 percent or greater.
  - Redevelopment should be defined as "the addition, to an already developed site of 50 percent or more impervious area or improvements to 50 percent or more of the existing improvements on the site."
  - Numeric standard for treatment requirement should be eliminated.

- Flexibility needed for implementation.
  Local government implementation will vary among jurisdictions. Time and flexibility is needed in the process and documents to allow for customizing the requirements to each jurisdiction's needs.

- Creating and perpetuating an unfunded mandate.
  The NPDES program creates additional expense for the jurisdictions subject to it. Local government resources are limited. Maintenance of treatment control devices requires ongoing funding.

The City of Santa Clarita remains committed to working with the RWQCB and the environmental community in continuing to achieve improved water quality.

Thank you for your consideration. If you have any questions or would like to discuss any of the issues raised above, please contact me at (661) 255-4963.

Sincerely,

Anthony J. Nisich

January 26, 2000

Mr. Dennis Dickerson
Executive Officer
California Regional Water Quality Control Board
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson

I am writing to you in again in support of a proposal to require new development to meet stricter stormwater standards by requiring the first 0.75 inches of rain fall to either be treated or captured for infiltration. This letter is in addition to my letter of September 15, 1999.

I have read Heal-the-Bay's January 14 letter and I support its recommendations. I want to emphasize that the provisions to exempt roof areas are counterproductive to the purposes of the proposal

Capturing runoff from impervious areas, including roofs, is the most important aspect of the proposal. If we allow roofs to be exempted, we will largely negate the potential environmental benefits of the proposal. I believe you should eliminate the exception for roofs. If it remains in the proposal, we will have accomplished very little. I believe that it would be better to abandon the existing proposal than to have it pass with such a large "loop hole"

As I said in my earlier letter, the application of this proposal will not be without cost. However, there are new technologies being tested to help new developments comply with the proposed changes. The proposal, if passed without the exception for roofs, will provide significant and much needed improvements for Santa Monica Bay and other receiving waters.

Very truly yours,
Michael K. Stenstrom, Ph.D., P.E.

January 25, 2000

Chairman H. David Nahai
and Members of the Board
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, California 90013

Dear Chairman Nahai and Members of the Board:

On behalf of the Building Industry Association of Southern California (BIA/SC), I must express strong concern with the way the SUSMP issue has been handled by Board Staff. The lack of a set process for addressing this very important issue, coupled with last minute and seemingly arbitrary changes in the facts involved with this hearing, concern our industry greatly and leave us with a sense of "foul play." What is most disturbing is that the handling of this issue to date has most certainly limited informed public access to the decision making process.

Specific Concerns

As you will recall, at your September 16th Hearing on SUSMP several individuals noted for the Board their concerns over a lack of proper notification and other problems with how the issue had been handled. Also, our industry and others raised specific concerns over, what appeared to be, favorable treatment to the environmental community as to the rules governing their testimony and presentation to the Board.

Since the September hearing things have not gotten better and in fact have gotten even worse. Several specific actions by Board Staff continue to concern us. First of all, the meeting location for the hearing was changed late Friday afternoon, long after we (and other organizations) had already sent out numerous notices asking our members to attend and giving them the original meeting location.

Second, in a memo from Xavier Swamikannu of Board Staff dated December 17, 1999, we were told to coordinate all of the individuals speaking on behalf of our industry into one comprehensive presentation on SUSMPs. We were specifically asked to give Board staff a list of the individuals that would be speaking and the amount of time required. After complying with this request and believing that this is how the hearing would be handled, we were told just last Friday afternoon (only 3 business days before the hearing) that the hearing would be handled in a completely different fashion. We now learn that we will have only three minutes per individual and no opportunity for a comprehensive presentation from our

industry. We are concerned, not only over the late nature of this change in plans, but also over the fact that the procedure the Board is now planning to use is in no way sufficient to cohesively convey our industry's concerns, especially considering the highly technical nature of some of our issues.

Third, we are concerned that we were given a December Draft of the SUSMP proposal to comment on. Then in the January 18th staff report we were told that a "Change Sheet" would be issued later which would make changes to the Draft SUSMP document. After regular business hours last Friday, a very hard to follow list of changes (Change Sheet) was sent out from the Board Staff. Most people did not even receive this document until Monday morning, just two days before the hearing. Even after reviewing the Change Sheet it is difficult to understand what is the exact language being proposed in the revised SUSMP that will be before the Board on Wednesday.

To give Board Staff insight into our industry's position and to gain clarification on a number of issues within the Change Sheet, we met with your Executive Officer, Dennis Dickerson yesterday. While we appreciate Mr. Dickerson's time, there were several questions that he could not answer regarding what the final language submitted to the Board would include. He referred us to Xavier Swamikannu of the Board Staff as the person writing the final language and the individual that could answer our questions. We asked to talk with Mr. Swamikannu yesterday but he was in San Diego at a meeting. This morning (Tuesday) we finally did reach Mr. Swamikannu at the Board Office and after reviewing with him the questions which Mr. Dickerson could not answer, we were still unable to confirm what would be in the specific language in the final SUSMP proposal before the Board. He further informed us that an additional Change Sheet would be issued later today or tomorrow morning before the hearing.

Our concern here is that once again the Board Staff has engaged in last minute changes that will make it difficult for our industry and all other concerned parties to provide truly informed testimony during tomorrow's hearing. The "ever-changing" nature of the staff's proposal has limited informed public access to the process and has created an environment that is not conducive to the formation of sound public policy.

Finally, after meeting with Mr. Dickerson yesterday we asked Board Staff for a copy of the full comment binder that was sent to you as Board Members. Staff was kind enough to provide us a copy, however, after we went through the binder we could not locate the January 12, 2000 request letter or the January 14, 2000 comment letter submitted to the Board by BIA/SC. Also missing from the binder was a January 14, 2000 comment letter from one of our BIA members. When we pressed Board Staff for a reason why these letter were not included we were told that Mr. Dickerson had chosen which letters went into the binder and which did not. Board Staff assured us that all letters, even those not included in the binder, were eventually sent out to the

Board Members through supplemental packages. When we asked if they had copies of the supplemental letters that had been sent or if they could just verify for us that our letters were indeed sent to the Board Members, they could not. They also could not locate the file which contains all of the original comment letters received by the Board on the SUSMP issue because Mr. Swamikannu had taken the file with him to San Diego. (This struck us as a risky policy for original documents which are part of the public record.) Since Board Staff could not confirm that our January 14, 2000 comment letter ever got to you, the voting Board Members, they did agree to send it out in yesterday's supplemental package.

This incident causes us great concern, both because we wonder what other information may not have made it to Board Members and also because of the arbitrary approach that Board Staff has used in determining what was included in your binder. For example, your binder included two old letters from our association, but not the most relevant one, our January 14th comment letter. Also, while our letter somehow didn't make the comment binder, Board Staff took the time to send all Board Members an additional binder completely dedicated to the NRDC position paper and support material. Lacking a consistent process, the staff's actions appear arbitrary and unfair.

Summary of Concerns

Taken together – and within three business days before the hearing – the Board has changed meeting locations, changed the way we will be allowed to address the Board during the hearing, and (up to the last minute) has changed the actual language of the policy being considered at the Hearing. This is hardly a professional way to do business. Further, it is hard to argue that these activities invite informed participation from the public and concerned organizations.

Please also consider that those of us wishing to address you, the Board Members, are not allowed to do so independently because of your ex parte communication policy. This means that our only opportunity to address you directly on this important issue will occur during Wednesday's hearing. This makes these proceedings extremely important to us. Yet, we are forced to try to communicate our numerous concerns on complex and technical issues in the context of a three-minute presentation to the Board. If that weren't hard enough, please consider that we have had less than three business days to prepare for this restrictive format and that we have still not even seen the final SUSMP language that will be before the Board. Add to this that we are now forced to question whether you, the Board Members, are receiving all of the valuable information that we and other interested parties are sending to you in advance on this critically important SUSMP issue.

Because of these concerns, our industry strongly objects to the way the SUSMP issue has been handled to date. We are happy to participate in a fair process, but the one that we have been subjected to is not such a process. Further, we believe that you, as Board Members,

need to know that your staff has created an environment that is not conducive to the creation of sound public policy.

Request for Time

One means by which the Board could rectify some of the concerns we have raised is by allowing for an additional half-hour presentation during tomorrow's hearing. The process you have outlined for the hearing includes two 30-minute segments of time, one segment in support of and one segment in opposition to the SUSMP proposal. The Board's memo describing this process states that, "The Board will accept, at the beginning of the meeting, a list of 10 speakers from those in favor and a list of 10 speakers from those in opposition who will use this time." While this sounds fair and impartial, the fact is that Board Staff has allowed David Beckman from NRDC to coordinate the 10 speakers (30 minutes) in support and Desi Alvarez from EAC to coordinate the 10 speakers (30 minutes) in opposition. This means that the Board will hear a 30-minute presentation from the environmental community in support of the SUSMP proposal and a 30-minute presentation from the municipalities (permitees) in opposition to the SUSMP proposal. (It should be noted that the environmental community does not completely support, nor do the municipalities completely oppose what has been presented in the SUSMP proposal.)

What is missing from this plan is a presentation from another very important group – the regulated community. Board Members should have the benefit of hearing a comprehensive presentation from those who will ultimately be asked to implement and comply with the SUSMP proposal. Failure to include the regulated community in the initial presentations is tantamount to receiving only part of the story.

With this in mind, the Building Industry Association of Southern California requests that the Board amend the procedure for public comment to include a third 30-minute presentation from the regulated community. We hope that your desire for an informative and inclusive public hearing on the SUSMP proposal will justify this request

Thank you for your attention in this important matter and for your consideration of our request.

Sincerely,

Richard J. Lambros
Executive Vice President

cc: Dennis Dickerson, Executive Officer

CITY HALL
LOS ANGELES, CALIFORNIA 90012

January 26, 2000

Dennis Dickerson
Executive Officer
California Regional Water quality Control Board
Los Angeles Region
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson:

The City of Los Angeles appreciates the opportunity to comment on the Regional Water Quality Control Board's (RWQCB) proposed revisions to the Standard Urban Stormwater Mitigation Plan (SUSMP) submitted by Los Angeles County for your consideration. The City Council of the City of Los Angeles acted today to support the expeditious implementation of programs and policies to reduce water pollution associated with urban-runoff. The City supports, in concept, the proposed requirement to retain or treat approximately the volume of run-off produced from a 3/4 inch of rainfall in a 24 hour period (85% retention/treatment) included in the proposed revisions to the SUSMP as a minimum acceptable standard for new development planning. However, there are several implementation issues that must be addressed to ensure that the proposed program is successful. The City therefore requests that the RWQCB Governing Board provide a 30-day extension to provide the City with the opportunity to work with RWQCB staff and other stakeholders to resolve implementation issues. The request for additional time to ensure development of a successfully implementable program is intended to minimize delay in the overall implementation of the program, and in no manner is intended to delay the water quality benefits we all seek and support.

Given the relatively large size of the City of Los Angeles and various environmental, public health and safety, and other concerns and mandates of municipalities, program flexibility will be essential to ensuring successful program implementation and integration into the existing City administrative infrastructure. The need for flexibility is also essential to being able to accommodate the different circumstances and abilities of cities of varying sizes, terrains, and resources. Flexibility is also essential to accommodating modifications to the program as additional data and experience is gained. This flexibility must include a firm commitment from the RWQCB Governing Board and

staff to re-evaluate the 85% retention/treatment standard as experience with the retention/treatment requirement is obtained and as the new Municipal Stormwater Permit is negotiated in July, 2001.

The requirements included in the proposed revised SUSMP are anticipated to be implemented by the City through ordinances. The process to draft and approve ordinances can be lengthy and provides several important opportunities for public participation. Therefore, the time frame provided for implementation of the program needs to also be flexible, providing municipalities the full opportunity to engage in their existing public processes and to address concerns expressed as appropriate.

The attached Motion adopted by City Council on January 25, 2000, and comments detail the implementation issues of greatest concern to the City. In addition, technical comments on the SUSMP language are provided.

The City appreciates and supports the substantial efforts of the RWQCB in moving programs to address urban run-off pollution forward. We do respectfully request however that the adoption of the SUSMP be delayed for approximately 30-days to provide adequate time to address the very important and essential implementation issues of the program. You consideration of the City's comments and requests is appreciated.

Very truly yours,

Ronald F. Deaton
Chief Legislative Analyst

4-4A

SUBSTITUTE MOTION

On a daily basis, massive amounts of pesticides, metal residue, oily waste and solid garbage flow into the ocean, polluting our coastal waters. Human viruses and bacteria sicken surfers, swimmers and young children at play in the Santa Monica Bay. The source of this pollution is urban runoff from our lawns, parking lots and streets. In fact, urban runoff is the leading cause of water pollution in our region.

Los Angeles County has the worst urban runoff problem in the nation. While significant efforts have been made in recent years to address the problem, too little progress has been made. The condition of Santa Monica Bay, the Long Beach Harbor, and the Los Angeles River is a disgrace.

We can change that.

On January 26, 2000, the California Regional Water Quality Control Board (RWQCB), Los Angeles Region, is expected to discuss a proposed Standard Urban Stormwater Mitigation Plan (SUSMP). The new standards are far-reaching and promise to increase significantly efforts to reduce the insidious effects of urban runoff.

Under the proposed new standards, cities would have to ensure that new developments capture either 85 percent of the runoff from a storm in a 24-hour period or the first three-fourths of an inch of rain. The standard would apply to new commercial projects of more than 100,000 square feet and all new gas stations, auto repair garages, restaurants and subdivisions of 10 or more houses.

Developers and city planners would have a range of options for compliance. They could leave grassy swales and other open space so runoff could seep into the ground instead of flowing into stormdrains. Developers could also seek other options, such as building detention ponds, using permeable pavement or installing filters in curbside drains. Experts contend that the proposed limits could be achieved with relatively simple and inexpensive design changes.

The proposed new standards make sense. Retaining stormwater on site, allowing it to percolate into the land, not only protects the ocean from pollution, but it also replenishes the groundwater supply, a major source of our drinking water.

During previous meetings of the RWQCB, the office of the Chief Legislative Analyst raised questions about details of the board's proposal. These comments were perceived by many as an official objection by the City of Los Angeles to a sound policy to protect the environment and public health and safety. An editorial in the Los Angeles Times (Oct. 6, 1999) excoriated the City for its position.

Granted, given the enormous size and varied terrain of the City of Los Angeles there are several questions and concerns the city should raise about the proposal. Those are: whether Best Management Practices (BMPs) are effective for parking lots, auto repair garages, restaurants, residences and gas stations; whether the RWQCB will pursue public education programs to reduce emissions from motor vehicles to streets and parking lots; whether the RWQCB will provide a variance process for unusual situations and circumstances, such as areas with high ground water or high liquefaction potential; whether the RWQCB will collect regional ambient water quality data to confirm the effectiveness of the 85th percentile-0.75 inch provision and refine their rules accordingly; and whether the RWQCB will allow for a flexible process for establishing runoff requirements through the planning process for unusual situations.

However, these concerns should not be interpreted as an objection to or opposition of the proposed 85 percent retention/treatment standard. Nor should those concerns be considered reason to unnecessarily delay or obstruct implementation of the board proposal. They should be seen, rather, as a request for additional information, data and analyses on the proposed standard and control measures to be implemented to achieve the standard. The City should assist the Board in obtaining the information necessary to support and implement a retention/treatment standard. The City should encourage the RWQCB to consider and address the City's concerns during its deliberations, but move quickly toward implementation of a policy that protects the environment and public health.

I THEREFORE MOVE that City Council adopt as City policy a position that endorses, in concept, the proposed Standard Urban Stormwater Mitigation Plan currently before the Regional Water Quality Control Board, including the 85th percentile/0.75-inch proposal as the minimal acceptable standard for development planning.

I FURTHER MOVE that the Council encourage Regional Water Quality Control Board to address the City's aforementioned concerns, and develop and implement as quickly as possible a policies that are flexible enough to consider the different circumstances and abilities of cities of varying sizes, terrains and resources, are supported by scientific data, and are subjected to meaningful public review and comment.

I FURTHER MOVE that the Chief Legislative Analyst report back on the status of the board's deliberations to the City Council's Committee on Environmental Quality and Waste Management.

Presented by 
RUTH GALANTER
Councilmember, Sixth District

Seconded by 
Tuesday, January 25, 2000

CITY OF LOS ANGELES
TECHNICAL COMMENTS ON THE PROPOSED REVISIONS TO THE STANDARD URBAN STORMWATER MITIGATION PLANS (SUSMP)

GENERAL COMMENTS

Public Process

Development of proposed water quality requirements and regulations need to provide for a full and meaningful public participation process. Such a process needs to include the opportunity for the public and stakeholders to review the various documents and studies considered and evaluated by the RWQCB staff in development of regulatory proposals.

The RWQCB released a staff report in August 1999 regarding the proposed RWQCB revisions to the SUSMP. The report did not provide water quality or cost information, but rather cited several reports as justification for the proposal. However, when City staff visited the RWQCB offices in August, the reports were not available for public review. The City subsequently submitted a written request for a 30-day public review period for the data. The data was not made readily available for public review and comment prior to the September RWQCB Governing Board meeting where the proposed RWQCB revisions were discussed and the item continued.

The RWQCB subsequently released a revised SUSMP proposal on December 7, 1999. However, the City learned early in January 2000 that the RWQCB would not release the staff report with supporting information and data until January 14, 2000. The City immediately submitted a written request asking that 30-days be provided to review and comment on the staff report and associated data. The staff report was released January 18, 2000. The Governing Board of the RWQCB is scheduled to consider the proposed revisions to the SUSMP January 26, 2000.

Implementation Issues of Concern

There is uncertainty as to how the proposed requirement to retain or treat approximately the volume of run-off produced from a 3/4 inch of rainfall in a 24 hour period (85% retention/treatment) would be achieved in practice and what structural best management practices would be appropriate. Effective Best Management Practices that achieve the 85 retention/treatment must be identified for each of the proposed land-use categories.

The RWQCB staff report released on January 18, 2000, does not present any information regarding pollution reduction or control cost associated with the RWQCB's proposal. Rather the staff report cites various studies as a method of supporting and justifying the proposed revisions. Although the City has not had adequate time to fully review the various studies cited in the January 18, 2000, RWQCB staff report, those we have reviewed clearly indicate that more information is needed.

The RWQCB staff report cites the City's Consent Decree -Strip Filter report dated March 16, 1999. The City's Bureau of Sanitation, Stormwater Management Division conducted a pilot program to test strip filters as a method of reducing pollution from parking lot run-off. The report concluded that "the strip-filter should be kept at an experimental stage. Maintenance frequency appears to be on a storm-to-storm level which is impractical." The report further indicates that the City continues to experiment to find an alternative design to assist in extending the useful performance of the structure. However, "at this stage of stormwater management research, the sand filter is not recommended for further implementation."

The RWQCB also cites the study "Results of a Retail Gasoline Outlet and Commercial Parking Lot Stormwater Runoff" (Western States Petroleum Association (WSPA) and American Petroleum Institute (1994). Apparently the study concludes that fueling activities at normally operated and maintained retail gasoline stations do not contribute additional significant concentrations of measured constituents to stormwater run-off. In addition, the fuel related constituents from pump islands were either not detected or below the applicable maximum contaminant levels.

Regarding the concern of which controls are most appropriate for retail gasoline outlets, there is some recent work done by Pat Ashley, a student of the California State University, Fullerton Environmental Studies program not discussed in the RWQCB staff report. Although the study is preliminary in nature, it appears to indicate that fuel island canopies may be as effective at reducing pollutants from gas stations as structural "treatment" controls. The results of the study further indicate that "there was no measurable difference in petroleum hydrocarbons for stormwater entering and existing station clarifiers." This clearly needs additional investigation, as it indicates the structural BMP has limited water quality benefit for those pollutants. It may however have benefits of reducing other pollutants of concern not tested for as part of the study.

It has been the City's experience that "one size does not fit all." Variances from City, air quality management district, and other regulatory agency requirements have always been accommodated. Therefore, there needs to be flexibility to accommodate variances from the retention/treatment requirement as appropriate. It has been discussed that in areas of high groundwater or high liquefaction potential certain controls may not be appropriate. In addition, it may be determined that due to construction constraints a lower level of retention, such as 50%, may be appropriate. Finally, since the benefits of the water pollution/treatment are currently uncertain, if controls become too expensive, it may be appropriate to allow less expensive control options. It is recommended that developers be allowed to appeal to the implementing municipality, in the City of the Los Angeles to Bureau of Sanitation, Stormwater Management Division, for re-evaluation if the 85% retention/treatment requirement exceeds 0.5% of the total project costs during the pilot study period. There may be other cases, as the requirement is implemented, where it is determined appropriate for variance allowances.

The City of Long Beach Municipal Stormwater Permit adopted recently includes a requirement to complete a parking lot study due to the controversy over parking lots. The study is scheduled for completion July, 2000. Therefore, including parking lots could appear to be premature without the

study results. Also, as discussed above, the best technology for use to address parking lot run-off is still being researched.

The 85-cities included parking lots of 200 spaces or greater within the Model Development Program, a separate program required under the Permit, to address potential stormwater impacts associated with such projects. Therefore, large parking lot projects are not neglected, but handled through a separate review process, as determined appropriate by the 85 co-permittee cities. The appropriateness of this process in conjunction with the proposed vehicle source control programs (see comments below) should be re-evaluated by the RWQCB.

Although the City supports the proposed 85% retention/treatment control in concept, flexibility to accommodate the technical and cross-media impact uncertainties need to be provided to municipalities to ensure successful implementation of the program, protect against potential litigation, and protect against unintended impacts.

Potential Cross-Media Impacts

Also of concern is that there has been no documented evaluation of the potential environmental impacts associated with the proposed retention/treatment requirement. Concern has been expressed regarding the potential for proposed retention-infiltration best management practices (BMP) to negatively impact groundwater. In addition, in some cases, such as treatment through grassy swales where suspended solid pollutants are reduced, there may be a potential to increase dissolved pollutants associated with herbicides and pesticides. Although these impacts are not currently envisioned as being insurmountable, clearly they warrant evaluation to ensure that BMPs are designed and engineered to address these issues. The BMP design and implementation requirements must be thoughtful to prevent new environmental problems, such as has been experienced with MTBE.

Controlling Pollution at its Source Versus Land-Use Retention /Treatment Requirements

Controlling run-off from parking lots would serve to address a very small portion of vehicle related water quality problems. A much more comprehensive approach to address vehicle pollution would seem appropriate and would likely be more cost-effective and require less oversight by all regulatory agencies, thereby minimizing administrative and enforcement costs. The most effective method of water pollution control is to control pollutants at their source. Such control prevents pollutants from ever entering the environment. Source control requires regulation of the source itself, such as consumer products and on- and off-road vehicles, which is generally best accomplished at the national or state level. National and state regulation of such sources creates a market large enough to sustain the substantial costs associated with research and development necessary to achieve pollutant free or reduced pollutant product reformulation. Regulation of sources on a local or state level cannot create such a market, making such controls too expensive for implementation.

The U.S. EPA and the State of California have successfully worked with engine and car manufactures to reduce vehicle air emissions. There may be opportunities to minimize vehicle/equipment leaks through vehicle modifications. This program could perhaps be supplemented through a public education program implemented in those areas that must comply with smog-check provisions of the Clean Air Act. Since vehicles are called in on a regular basis for emission testing, inspecting cars for leaks, and informing and educating vehicle operators as to the impacts of such leaks would result in minimal additional costs to the state program, while potentially resulting in substantial benefits to water quality. Such a source control approach is more practical and cost-efficient that trying to catch and treat urban run-off contaminated though contact with pollution on streets, highways, parking lots, and homes. The City therefore urges the RWQCB to work with the EPA and the State to undertake similar actions to address liquid leaks from cars, as a potential alternative to implementing parking lot treatment controls through the SUSMP at this time.

Administrative Implementation Issues

If the proposed RWQCB revisions to the SUSMP are passed by the RWQCB, the RWQCB is not responsible for implementing and enforcing the requirements on developers, rather cities are. The City anticipates adopting ordinances to implement the RWQCB proposed SUSMP requirements. This would require significant City resources, a California Environmental Quality Act (CEQA) evaluation, a public participation process, and Council action approving the ordinance. The process to draft and approve ordinances can be lengthy and provides several important opportunities for public participation. Therefore, the time frame provided for implementation of the program needs to also be flexible, providing municipalities the full opportunity to engage in their existing public processes, to address concerns expressed as appropriate, and comply with all administrative and legal requirements/procedures.

Data Gathering

To ensure that the information collected and water quality testing methodology is consistent among agencies, it is recommended that the RWQCB establish a regional workgroup consisting of local governments, regulated industry, environmental groups, and other stakeholders as appropriate to establish recommended best management practice water quality monitoring protocols and methodologies. Recommended protocols should be released for a minimum of a 30-day public review prior to Board consideration.

Without development of such basic data collection protocols and methodologies, the basic science of the stormwater program will always be at question, serving to delay needed water quality improvements with each proposed new requirement. Therefore, early development of such procedures and collection of baseline data is essential to the stormwater program.

It is further recommended that the RWQCB establish a regional ambient water quality monitoring program. This network should be similar to the ambient air quality network administered by the

South Coast Air Quality Management District, which measures air quality at representative locations throughout the air basin. Such baseline data would assist in measuring benefits of the stormwater program overall. It is anticipated, that as with the air quality program, as water quality improvements are documented the regulatory program will increase in credibility and gain more public support. The ambient monitoring will also assist in providing baseline scientific data for the upcoming total maximum daily load regulatory processes.

SPECIFIC COMMENTS

Background (Page 2 of 17)

The third paragraph, second sentence reads "This SUSMP contains a list of the minimum required Best Management Practices (BMPs) that must be used for a designated project." This implies that all the BMPs must be used in a project, which is inaccurate. The City requests that the sentence be revised to read: "This SUSMP contains a list of BMPs approved by the LARWQCB that are to be considered in Priority Projects."

In the following sentences, it's redundant to mention "Discretionary Projects" after Priority Projects. The term "Discretionary Projects" should be deleted. As provided in the Permit, SUSMP requirements can be implemented through the CEQA review process. It is recommended that this be reiterated in the SUSMP by adding the following language at the end of the sentence: "and may be implemented through the CEQA review process".

The last sentence of the third paragraph states that "Each Permittee will approve an Urban Stormwater Mitigation Plan ....." This is not consistent with the Model Development Planning Program (Model) which clearly states that the Urban Stormwater Mitigation Plans will be required for specific projects when SUSMPs are not appropriate and/or not adequate for the specific project in review. For clarity and consistency purposes we therefore recommend deleting the last sentence.

SUSMP Categories (Page 3 of 17)

As listed in the proposal, the category for home subdivisions means projects larger than 10 units. The Permit actually includes projects with 10 units and larger. For consistency purposes, the category should be the same as in the Permit and be stated as follows: "Home Subdivisions with 10 or more housing units".

The location of a project "adjacent" to an ESA would not automatically result in negative impacts to the ESA, unless the project were actually discharging pollutants into the ESA. Therefore, merely being adjacent to an ESA should not trigger the site as a "priority project" unless it can be demonstrated that a discharge will occur. To recognize this distinction, we recommend that the word "adjacent" be replaced with adjoining.

Definitions (Page 3 of 17)

Once the home subdivision category is listed consistent with the Permit (see above), there is no need to define "Greater than (>9) unit home subdivision". This definition should therefore be deleted.

Hillside: This definition will render almost all project sites to be in "hillside" under the broad definition given in the proposal. We recommend changing the definition to read as follows: "Hillside means property located in an area with known erosive soil conditions, where the development contemplates permitted grading on any natural slope that is 25% or greater."

Redevelopment: The given definition is too expansive and may be interpreted to include almost any project requiring any modification. The definition should be made more precise by including a minimum threshold value for considering a redevelopment as a Priority project. We recommend that redevelopment be defined as "the addition of or improvements to 50% or more of the existing site or any modification that alters the value of the existing development by 50%".

Conflict with Local Practices (Page 5 of 17)

The last part of the sentence will lead to misinterpretation and make the provision impossible to comply with. In addition, it is inappropriate to assume that the SUSMP requirements should overrride all City ordinances and policies, even those established for other public health and safety and environmental reasons. The City recommends deleting the following portion of the sentence "except where those practices would defeat or circumvent the intent of the SUSMP requirements." However, to keep RWQCB informed of these conflicts, we recommend the addition of the following statement: "Each Permittee will notify the Executive Officer of the LARWQCB of any conflict with their municipal codes that are encountered during implementation of the SUSMP." This once again highlights the flexibility required by municipalities to successfully implement the SUSMP program.

Provide Proof of On-Going BMP Maintenance (Page 7 of 17)

We agree that on-going maintenance of structural BMPs is highly important for their successful performance. It may appear that implementing the requirements of this provision is simple, however, ensuring that owners/operators perform the routine maintenance of BMPs year around is certainly difficult, and would place a tremendous administrative burden on municipal stormwater programs, and diverting limited resources away from more important programs. We do not have the necessary administrative procedures and inspection staff to ensure compliance, at this time. The City should not be held responsible in case of non-compliance by individual project owners/operators. Such is not the case for the RWQCB for Phase I facilities that it is responsible for overseeing.

We recommend that this requirement be clarified by adding the following sentence at the end of the first paragraph: "It's the responsibility of the project owners/operators to make sure that the routine maintenance of BMPs are carried out throughout the life of the project.

Design Standards for Treatment Control BMPs (Page 9 of 17)

Section 9 part B of the design criteria should be eliminated because the goal of an efficient BMP is improving quality of the runoff not controlling it. Although we concur with the concept, the permit does not include requirements for flood control, nor is flood control within the jurisdiction of the RWQCB. All standard design criteria given in scientific references for BMPs already include provisions for overflow capacity.

We agree with your decision to exempt some roofing surfaces for total area calculation. However, the fourth condition (part "d") will disallow almost all projects from qualifying for this exemption. The condition should be revised to read as follows: "the storm water conveyance system does not directly discharge to a natural stream or unlined channel or channel segment scheduled for restoration".

Waiver (Page 13 of 17)

We concur with the three recognized situations of impracticability. However, it should be also recognized that the list can not be limited to these three only because there may be numerous other very reasonable justifications that may arise in the future, for example, when public safety or human health is at risk. The last two sentences of the first paragraph create a cumbersome process of requesting approval from RWQCB Executive Officer every time such a situation arises. We recommend that the sentences be deleted and replaced with the following: "Any other justification for impracticability may be granted for cause by the municipality. All waivers granted by municipality will be reported to the Executive Officer of the LARWQCB on an annual basis.

Local governments must retain the sole authority to establish mitigation fees or fees of any kind. It is inappropriate for the RWQCB to mandate that municipalities implement fee programs. There are several issues which must be considered by local governments in establishing fee programs. It is therefore requested that the last paragraph of this section be revised as follows: replace "must" with "may"; replace "storm water mitigation" with "municipal".

Alternative Certification for Stormwater Treatment Mitigation (Page 13 of 17)

We agree with the concept of this section of the SUSMP, however, we recommend that the certification be required to be signed by a Civil Engineer or Architect registered in the State of California. This would provide assurance that the design of the BMPs was conducted with technical expertise and also an opportunity for recourse for negligent designs.

Other Issues

Establishing BMP monitoring requirements through property deeds or similar mechanisms is unworkable and should not be included in the SUSMP.

Exhibit F

OVERALL PROGRAM SCOPE IS UNNECESSARILY AND COUNTER-PRODUCTIVELY LIMITED

1. **"Discretionary Project" Limitation Should Be Dropped**

2. **Failure to Adopt Los Angeles County List**

3. **Nine project types are Ostensibly Covered But Restrictive Definitions Profoundly Limit the Meaningfulness of Coverage**

   - **"Retail Gasoline Outlet" should include all pumping stations**
   - **Hillside**
   - **"Restaurants"**

     All restaurants should meet the same standards. The 5,000 foot limitation should be eliminated.

   - **"Commercial Stand-Alone Parking Lots"**
   - **"Redevelopment"**
   - **Outdoor Material Storage Area BMP**

Hillside Definition: Hillside means property located in an area that has any of the following characteristics, or where the planned development has any of the following characteristics:

location in an area known to have erosive soil conditions as identified in the Los Angeles County Dept. of Public Works Hydrology/Sedimentation Manual; **OR**

Grading will occur on any natural slope where the natural slope is **15%** or greater; **OR**

Plans include cut or fill slopes that are 30 feet high or greater.

R0068118

The Proposed Design Standard is Cost-Effective

A. BMPs Can Be Very Inexpensive

B. BMPs Have Been Proven to be Highly Effective if Sized Appropriately

C. The Proposed Design Standard is One of the Most Cost-Effective Ways to Reduce Urban Runoff

D. Implementation of the Proposed Design Standard, and Even More Environmentally Protective Standards, Has Not Impeded Development

Program Scope Is Fatally Hindered by a Host of Exceptions that Render the Current Proposal Virtually Meaningless

A. Across-the-Board Exceptions Restrict the Program's Application Unduly, Rendering Certain Aspects Almost Meaningless

1. Rooftop Exemption

2. Waiver Provision

3. Self-Certification

4. Conflicts with Local Practices

Exceptions - one major loophole after another to get out of the numeric DESIGN standard requirement. The August Draft contains no exemption

Focus -

Rooftop - Background FACA UNW EPA - every controversial issue you can think of was discussed. No one mentioned a Rooftop exemption

- Florida
  - 2 ½ years to develop design standard
  - "hundreds" of meetings
  - 29 drafts
  - wide involvement of stakeholders

- Maryland
  - 5-6 years to develop design manual
  - statewide involvement by stakeholders
  - currently undergoing public review
  - [two counties have proceeded with early implementation based on draft documents due to local concerns or significant stream bank de-stabilization—a hydraulic/hydrologic concern more than a water quality concern.]

- Denver Area
  - Development of criteria took over one-year
  - Criteria were developed only as guidance with the MS4 permittees making their own determination a to how and to what extent the criteria would be implemented

  City of Denver has required use of criteria by ordinance, but acknowledge that the actual application of criteria is somewhat subjective.

- Seattle
  - Intitiated development of design standards in 1988
  - Final adopted in June 1992
  - Process incuded wide involvement of stakeholders
  - Two rounds of drafts for public review over a 2 year period
  - Several workshops/meetings – lots of communication

Summary – Those responsible for developing design standards recognized the significance and impact of these requirements.

- In each case development of design standards
  - Reflected the unique climate, geography and environmental needs of the area
  - took 2 years or longer
  - required broad stakeholder involvement
  - recognized that without local buy-in and support, at best, implementation would be inconsistent, and at worst, would lead to litigation.

- In no case did:
  - a regulatory body attempt to unilaterally impose a design standard
  - a program adopt a standard developed by another jurisdiction.
  - any program blindly impose a design standard strictly based on recommendations in the ASCE or WEF manual

Exhibit H

Part 2.I.G and 2.I.H.

G. Administrative Review

The administrative review process formalizes the procedure for review and acceptance of reports and documents submitted to the Regional Board under this Order. In addition, it provides a method to resolve any differences in compliance expectations between the Regional Board and Permittees, prior to initiating enforcement action.

1. Storm water program documents, including progress reports, guidelines checklists, BMPs, databases, program summaries, and implementation and compliance schedules, developed by the Principal Permittee or a Permittee under the provisions of this Order, shall be submitted to the Executive Officer or the Regional Board, where required for approval. The process is as follows:

   a. For documents that require Executive Officer's approval, the Executive Officer will notify the Principal Permittee and/or Permittee of the results of the review and approval or disapproval within 120 days. If the Executive Officer has not responded within 120 days following submittal, the Permittee shall notify the Regional Board of its intent to implement the program components as submitted. If after 10 days the Executive Officer has not responded, the Permittee will implement the submitted program and the Executive Officer may not make modifications; and,

   b. Documents that require formal Regional Board approval will undergo public review and comment before Board consideration at a public meeting.

2. If the Executive Officer determines that a Permittee's storm water program is insufficient to meet the provisions of this Order, the Executive Officer shall send a "Notice of Intent to Meet and Confer (NIMC)" to the Permittee, with specific information in support of the determination. The NIMC shall include a time frame by which the Permittee must meet with Regional Board staff. The processes are as follows:

   a. The Permittee, upon receipt of a NIMC, shall meet and confer with Regional Board staff to demonstrate that the Permittee's program is sufficient to meet the requirements of this Order; and, if not, seek clarification on the steps to be taken to completely meet the provisions of this Order. The meet and confer period will conclude with either a notice of program sufficiency to the Permittee, or the

submittal to and acceptance by the Executive Officer of a written "Storm Water Program Compliance Amendment (SPCA)" which shall include implementation deadlines. The Executive Officer may terminate the meet and confer period after a reasonable period due to a lack of progress on issues and may order submittal of the SPCA by a specified date. Failure to submit an acceptable SPCA by the specified date shall constitute a violation of this Order;

b. The Executive Officer will approve or reject the submitted SPCA or an amended SPCA within 120 days. Rejection of an SPCA by the Executive Officer shall state the reasons for the failure to approve the SPCA. A Permittee that receives a rejection of an SPCA shall have sixty (60) days to remedy the specified deficiency and resubmit the SPCA. If the Executive Officer has not responded within 120 days following submittal of an SPCA, the Permittee shall notify the Executive Officer of its intent to implement the SPCA as submitted. If after 10 days the Executive Officer has not responded, the Permittee will implement the submitted SPCA and the Executive Officer may not make modifications;

c. The Permittee shall comply with the terms of the SPCA. The Permittee shall submit reports to the Executive Officer on progress made under the SPCA. The frequency of progress report submittal shall be quarterly unless otherwise prescribed by the Executive Officer. Failure to comply with the terms and conditions of the SPCA shall constitute a violation of this Order and shall be cause for enforcement action by the Regional Board; and,

d. The Executive Officer shall not take enforcement action against a Permittee until the Executive Officer has notified the Permittee in writing that the Administrative Review Process has been exhausted and that the Executive Officer has determined that a violation exists warranting enforcement.

H. Public Review

1. The Principal Permittee shall maintain a current mailing list of interested parties, organized by WMAs, for distribution of documents that require the Executive Officer's approval. The Executive Officer will provide the Principal Permittee with the initial list of interested parties.

2. The Principal Permittee shall distribute for public comment the initial CSWMP, WMAPs, and other storm water program requirements that are submitted to the Executive Officer or the Regional Board for approval.

1. Countywide Development Planning Guidance

The Principal Permittee, in consultation with the Permittees, shall develop the following development planning guidance materials for use during planning and permitting of all development projects requiring discretionary approval:

a. A model documented system, such as a checklist, for determining priority projects as well as a list of specifically exempt projects not later that January 30, 1998. Priority and exempt projects are defined as follows:

   i. Priority Projects are development and redevelopment projects requiring discretionary approval which the Building Official (or equivalent municipal authority) determines may have a potential significant effect on storm water quality.

   ii. Exempt Projects are development and redevelopment projects which the Building Official (or equivalent municipal authority) determines will not have a potential significant impact on storm water quality.

   The documented system shall consider location of the project with respect to designated environmentally sensitive areas and the slope and erosion potential of the site and surrounding areas.

   Each Permittee shall incorporate a substantially similar system into its procedures not later than six months after commencement of its next fiscal year following approval of the of the documented system by the Executive Officer, provided, however, that such approval is issued not later than 90 days prior to the commencement of the Permittee's fiscal year. If such approval is given within 90 days of the commencement of a Permittee's fiscal year, such program shall be implemented in the second fiscal year following approval but in no event shall implementation be later than July 30, 1999.

b. A list of recommended BMPs not later than January 30, 1998. The list of BMPs shall include:

   i. Site planning practices;
   ii. Post-construction best management practices; and
   iii. Redevelopment and infill practices.

Consideration shall be given to the type of development and the potential for storm water pollution when determining the applicability of BMPs. Cost effectiveness, ease of maintenance, and consistency with other environmental mandates may also be considered.

For developments where increased storm water discharge rates will result in an increase in downstream erosion potential, the list of recommended BMPs shall include those BMPs which can be used to maintain peak runoff rates at pre-development levels to the maximum extent feasible.

The list of recommended BMPs shall be submitted to the Regional Board for approval.

c. Standard Urban Storm Water Mitigation Plans (SUSMPs) and guidelines for their preparation not later than six months after Regional Board approval of the BMPs in Part 2.III.A.1.b. The SUSMPs shall incorporate the appropriate elements of the recommended BMPs list. At the minimum, SUSMPs and guidelines shall be prepared for the following development categories:

i. a 100+ home subdivision;
ii. a 10-home subdivision;
iii. a 100,000+ square-foot commercial development;
iv. an automotive repair shop;
v. a retail gasoline outlet;
vi. a restaurant; and
vii. a hillside-located single-family dwelling.

2. Planning Control Measures

Each Permittee shall develop a program on planning control measures for priority projects (Part 2.III.A.1.a) consistent with the programs developed under Part 2.III.A.1.b. & c.. Each Permittee shall initiate implementation of its program not later than six months after commencement of its next fiscal year following approval of the model Standard Urban Storm Water Mitigation Plans by the Executive Officer, provided, however, that such approval is issued not later than 90 days prior to the commencement of the Permittee's fiscal year. If such approval is given within 90 days of the commencement of a Permittee's fiscal year, such program shall be implemented in the second fiscal year following approval but in no event shall implementation be initiated later than July 30, 1999. Each Permittee shall require that the project applicant submit an Urban Storm Water

Mitigation Plan appropriate and applicable to the project, and that the Permittee approve the Plan prior to the issuance of any grading or building permit. The Urban Storm Water Mitigation Plan shall incorporate by detail or reference appropriate post-construction BMPs to:

a. Implement, to the maximum extent practicable, requirements established by appropriate governmental agencies under CEQA, Section 404 of the Clean Water Act, local ordinances and other legal authorities intended to minimize impacts from storm water runoff on the biological integrity of natural drainage systems and water bodies;

b. Maximize, to the maximum extent practicable, the percentage of permeable surfaces to allow more percolation of storm water into the ground;

c. Minimize, to the maximum extent practicable, the amount of storm water directed to impermeable areas and to the MS4;

d. Minimize, to the maximum extent practicable, parking lot pollution through the use of appropriate BMPs such as retention, infiltration, and good housekeeping;

e. Establish reasonable limits on the clearing of vegetation from the project site including, but not limited to, regulation of the length of time during which soil may be exposed and, in certain sensitive cases, the prohibition of bare soil; and

f. Provide for appropriate permanent controls to reduce storm water pollutant load produced by the development site to the maximum extent practicable.

The Permittee may refer applicants to the *'California Storm Water Best Management Practice Handbooks,* California Storm Water Quality Task Force, Sacramento, CA (1992)' and its revisions; the Countywide Storm Water Management Plan; *'USEPA Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters, Issued under the Authority of Section 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990,* Document No. EPA 840 B 92-002 (1993),'; and similar manuals for specific guidance on selecting post-construction BMPs for reducing pollutants in storm water discharges.

3. Planning Process

In order to integrate storm water management considerations into

C. Program Evaluation Report

1. The Principal Permittee, shall, not later than July 31, 2000, mplete an analysis of the general success of the Five-Year Storm ter Public Education Strategy and identify its accomplishments. Thi eport shall serve as the basis for the next Five-year Storm Water Public Education Strategy that will be part of the ROWD.

2. The Principal Permittee shall, not later than July 31, 2000, and in consultation with the Permittees, prepare and submit a report on the assessment of the effectiveness of the CSWMP components (except that identified in C.1.).

3. The Principal Permittee shall, not later than February 1, 2001, submit a report on the identification of CSWMP components for which performance standards will be developed and implemented during the next term of the permit. The report shall include a schedule of development of performance standards. The performance standards will indicate the level of implementation necessary to demonstrate that efforts are being made to reduce the discharge of pollutants in storm water to the maximum extent practicable. This report will be an integral part of the ROWD.

D. Integrated Receiving Water Impacts Report

The Principal Permittee shall not later than July 31, 2000, prepare and submit an Integrated Receiving Water Impacts Report. The report shall include, but not be limited to a comprehensive analysis of the results of the different monitoring data (land use, mass emissions, critical source, load assessment, receiving waters, and other pertinent studies available), and feasible environmental indicators. It should also include recommendations on future monitoring requirements, e.g., integration of storm water receiving water monitoring with regional receiving water monitoring, if applicable. This report will be an integral part of the ROWD.

Council Meeting: January 25, 2000 Santa Monica, California

TO: Mayor and City Council

FROM: City Staff

SUBJECT: Recommendation to Adopt a Resolution to Support the Efforts of the Los Angeles Regional Water Quality Control Board to Establish a Numerical Standard for Stormwater Runoff Reductions in the Standard Urban Stormwater Mitigation Plan.

Introduction

This report recommends that the City Council adopt a resolution in support of the Los Angeles Regional Water Quality Control Board's effort to establish a numerical standard for reducing stormwater runoff from a parcel during each storm event.

Background

Approximately 50 percent of rainfall in the greater Los Angeles area becomes urban runoff, carrying a mixture of heavy metals, organic chemicals, pathogens, nutrients and sediments from parking lots, streets, sidewalks, rooftops and yards into the Santa Monica Bay. Urban runoff, according to the U.S. Environmental Protection Agency, is the single greatest source of water pollution in the ocean, contributing 50-60 percent of the pollutant load. Visitation rates to Santa Monica beaches have dropped dramatically during the past 15 years in large part due to more frequent and larger incidents of beach and ocean contamination. Recent studies have concluded that people who swim near flowing storm drains are more susceptible to contracting certain illnesses.

In 1993, Santa Monica adopted one of the nation's first urban runoff pollution control

R0068143

6E

JAN 25 2000

3b

ordinances to reduce ocean pollution from both new construction and existing parcels. The Santa Monica ordinance requires a minimum 20% reduction in urban runoff from all newly developed parcels in addition to specific runoff reduction requirements for surface parking lots and also specifies guidelines for existing properties and new construction sites.

The Executive Officer of the Los Angeles Regional Water Quality Control Board has recommended a numerical standard for onsite rainfall retention to capture a larger percentage of runoff events, that is, runoff volume and pollutant loads. The current recommendation to the Board includes a numerical standard of 0.75 inches per 24-hour period of rainfall – the first three-quarters inch of a rain falling in 24 hours must be retained on site for percolation. By requiring a numerical standard for new development, such as that found in the City's Urban Runoff Pollution Ordinance, less urban runoff finds its way to the Bay, thereby reducing the overall amount of ocean pollution.

Discussion

Many of the co-permittees and regional building associations oppose a numerical standard for stormwater reduction, citing the potential for excessive costs to be imposed on cities and private construction projects, concern that BMPs are not effective in removing specific pollutants, and inadequate information on whether certain pollutants are a problem in the Bay and need to be controlled in the first place. They support, instead, a regulation that would require retention to the "*maximum extent practicable*".

Supporters of the proposed requirements include many individual citizens and major

3b

environmental groups including Heal the Bay, NRDC, BayKeeper and TreePeople. The environmental groups called for a 100% retention standard originally, but support the highest possible standard. Many of the interested environmental groups fear that without a specific numerical standard municipalities will not aggressively require urban runoff retention since interpretation of *maximum extent practicable* will be inevitably ambiguous.

The City is the only co-permittee city where staff has publicly expressed support for the Board's efforts to approve a numerical standard. The City of Calabasas has a municipal ordinance similar to Santa Monica's and has expressed at various meetings its support of strategies to put more storm runoff back into the ground, but has not publicly commented on the proposed requirements. The City of Los Angeles opposes a numerical standard. Los Angeles County has already adopted the same numerical standard for unincorporated Los Angeles County areas. The current proposal before the Regional Board pertains to incorporated cities within Los Angeles County.

In their proposal for a numerical standard, Board staff has provided examples of successful BMP implementation in projects throughout the United States, including the San Francisco Bay area. Board staff has received authoritative presentations on engineering and hydrology standards and principles from the Water Environment Federation and the American Society of Civil Engineers to calculate the optimal rainfall retention amount, and has drawn from professional publications on proper BMP design and successful practices, including a national BMP database.

The guiding premise of Santa Monica's ordinance, and the proposed Regional Board requirements, is to focus on the reduction of runoff quantity, which will in turn result in concomitant pollutant reductions in the storm drain system. In terms of BMP effectiveness, much empirical data is available to aid in the design and maintenance of systems that maximize storm harvesting and infiltration. Reducing stormwater pollution through the intelligent planning and design of new construction, which is the objective of the City's ordinance, is the most cost-effective approach to reducing runoff and associated pollutants. Incorporating BMP systems into future development prevents the existing problem from getting worse by reducing future runoff and preventing increases in future costs to remediate the problem.

Budget/Financial Impact

No specific financial impact to the City is anticipated as a result of the City Council's support of a numerical standard for the SUSMPs.

Recommendation

Staff recommends that the City Council adopt the attached Resolution in support of the Los Angeles Regional Water Quality Control Board's effort to establish a numerical standard for stormwater runoff reductions from a parcel during a storm event.

Attachment: Resolution of the City Council of the City of Santa Monica in support of the LA Regional Water Quality Board efforts to establish a numerical standard

Prepared by: Craig Perkins, Director of Environmental & Public Works Management
Neal Shapiro, Urban Runoff Management Programs Coordinator

R0068146

EPWM:CP:NS:f/EPWM/ADMIN/Staffrpt/1-25-00/SUSMPS.doc
City Council Meeting 1-25-00

Resolution Number _____ (CCS)
(City Council Series)
Resolution of the City Council of the City of Santa Monica in Support of the Los Angeles Regional Water Quality Control Board to Establish a Numerical Standard for Stormwater Runoff Reduction in the Standard Urban Stormwater Mitigation Plan

WHEREAS, the City of Santa Monica has a Sustainable City program and a General Plan Conservation Element that promote long-term efficiency and environmental-responsibility in the use of all water resources, including urban runoff; and

WHEREAS, the City supports and encourages efforts to maximize the amount of rainfall and urban runoff put back into the ground and to minimize the runoff pollution that enters the ocean; and

WHEREAS, the City's Urban Runoff Pollution Control Ordinance requires a 20 percent reduction of total runoff for new development as well as significant reduction of total runoff from new parking lots and is working to reduce total runoff and pollutants entering the Santa Monica Bay; and

WHEREAS, numerous studies, design documents and a national database demonstrate BMP effectiveness and successes, including significant reductions in pollutants of concern; and

WHEREAS, a numerical standard, which includes all portions of a new development site including all roof areas and surface parking lots, is necessary in the Standard Urban Stormwater Mitigation Plans (SUSMPs) to ensure that a minimum baseline amount of runoff is captured for percolation, based on sound and widely accepted principles of hydrology; and

WHEREAS, the up-front amount spent on BMPs is a small percentage of total construction costs with region-wide benefits, and site-specific BMPs are more cost-effective than "end-of-the-pipe" mitigation and treatment; and

WHEREAS, each new development project must become part of the urban runoff solution and not continue to be part of the growing problem;

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF SANTA MONICA DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. The City of Santa Monica is committed to restoring and preserving the health of the Santa Monica Bay, which is vital to the health of both residents and visitors.

SECTION 2. As an expression of this commitment, the City of Santa Monica hereby formally supports the Los Angeles Regional Water Quality Control Board efforts to establish a numerical standard for stormwater runoff reduction in the Standard Urban

Storm Water Mitigation Plan.

SECTION 3. The City of Santa Monica hereby formally supports the December 7, 1999, SUSMP Draft prepared by the Regional Board Executive Officer. The City opposes proposed amendments which would considerably weaken the requirements through the exclusion from the numerical standard of roof runoff and most surface parking lot runoff as well as delay full implementation of the requirements, all of which would dramatically compromise the goal of maximizing the amount of stormwater runoff diverted into the ground.

SECTION 4. The City Clerk shall certify to the adoption of this Resolution, and henceforth and thereafter the same shall be in full force and effect.

APPROVED AS TO FORM:

MARSHA JONES MOUTRIE
City Attorney

Exhibit K

LEGAL COMMENTS OF THE WESTERN STATES PETROLEUM ASSOCIATION REGARDING THE PROPOSED STANDARD URBAN STORM WATER MITIGATION PLAN

Submitted January 26, 2000

The Western States Petroleum Association (WSPA) commends the Regional Board staff's recommendation to delete the proposed numerical design standards from application to retail gasoline outlets and to apply only the Best Management Practices contained in the California Stormwater Quality Task Force's 1997 Best Management Practices Guide. See Staff Report, p. 12. If the Board disagrees with that recommendation or nonetheless elects to apply numerical design standards to retail gasoline outlets, however, the Western States Petroleum Association has a number of concerns regarding the legal basis for such action, which are outlined below:

1. Applying Numerical Design Standards To Retail Gasoline Outlets Is Arbitrary, Capricious and Contrary to Law.

The Staff Report correctly recognizes that only implementation of economically achievable management practices are required by the Clean Water Act. See Staff Report, p. 3. Indeed, the Board must consider "economic considerations" when establishing waste discharge requirements and water quality standards. Water Code Sections 13241(d) and 13263(a). No analysis has been performed to determine whether any of the proposed four different numerical design standards would be economically achievable or reasonable if applied to retail gasoline outlets. Without such economic analysis, the Board cannot know whether the numerical design standards are practicable and any application of such requirements to retail gasoline outlets would be arbitrary, capricious and without authority.

2. The Lack of Adequate Time For Public Review of the Proposal Violates Due Process And The Requirements of Order 96-054.

The 19-page Staff Report and Record of Decision supporting the proposal was only released on January 18, 2000. In addition, a Change Sheet containing significant substantive modifications to the proposal was released on Friday, January 21, 2000 and the revised version of the proposal has not been made available to the public before the Board hearing. By delaying the release of the Staff Report and changes to the proposal, the Board violated due process principles by depriving affected members of the public of an adequate opportunity to review and comment on this proposal.

Moreover, the short time period allowed for public review of these critical documents is contrary to the public review requirements contained in this Board's prior Order No. 96-054. That order required a 45-day period for interested parties to submit comments and provided the

Executive Officer with a 120-day period to consider the proposal and comments before reaching its decision. Due to the late release of key documents, the staff has prevented the requirements of Order No. 96-054 from being fulfilled and the public has been deprived of the opportunity to meaningfully participate in the agency's process.

3. The Board Has Not Satisfied CEQA Requirements.

The Staff Report incorrectly suggests that the proposed numerical design standard is required based on the application of Section 402(p) of the Clean Water Act. In fact, the Clean Water Act does not require municipal stormwater discharges to comply with numeric limitations -- any such requirements are discretionary. Defenders of Wildlife v. Browner, 191 F.3d 1159, 1166-67 (9th Cir. 1999). Therefore, if the Board adopts numerical design standards, it does so through its State authority.

The Staff Report asserts that the proposed regulation is exempt from CEQA through Water Code Section 13389. Contrary to the Staff Report's contention, however, Water Code Section 13389 only exempts the adoption of federally mandated waste discharge requirements and permits. See Water Code § 13372; Committee for a Progressive Gilroy v. State Water Resources Control Bd., 192 Cal. App. 3d 847 (1987). As noted, numeric design standards are not federally mandated. Furthermore, it is clear that the proposal would have a significant impact on the environment because it would require many new construction projects to submit an Urban Storm Water Mitigation Plan for approval and implement specific post-construction controls,which, in the case of retail gasoline outlets at least, could have very significant adverse effects on groundwater. Since the proposed numerical design standards are not federally required and they will significantly affect the environment, the Board must follow CEQA requirements if it wishes to adopt such standards.

4. The Board Has Not Complied with the Administrative Procedure Act.

The Board has not fulfilled the requirements of the Administrative Procedure Act (APA) since the proposed numeric design standards are a standard of general application which meets the APA definition of a regulation. See Government Code Section 11342. Contrary to the Staff Report's assertion, Government Code Section 11352(b) does not exempt the proposal from the APA because this provision only exempts required "waste discharge requirements and permits" and, as described above, federal law does not require numeric design standards to be included in permits. Therefore, Board adoption of the proposed numeric design standards would be a quasi-legislative action and the APA will apply. Moreover, the Staff Report's assertion that any challenge to the Board's action would be untimely is ludicrous. The current proposal far exceeds what was contemplated by Order No. 96-054 because the proposed numerical design standards were only recently added. Until the Board has satisfied APA requirements, the proposed numeric design standards cannot be adopted.

5. The Numeric Design Standards Are An Unfunded Mandate.

Similarly, the proposed numeric design standards would constitute an unfunded mandate prohibited by the California Constitution. Since the proposed numeric design standards would be implemented at the option of the Board, the limits are not "costs mandated by the federal government." Government Code Section 17513. Therefore, the Board must consider how the proposed numeric design standards would be funded.

Exhibit L

RESOLUTION NO. 2000-1

A RESOLUTION OF THE GATEWAY CITIES COUNCIL OF GOVERNMENTS ADVISING THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION, OF ITS INTENTION TO PETITION THE STATE WATER RESOURCES CONTROL BOARD FOR RELIEF FROM UNREASONABLE RUNOFF POLLUTION CONTROLS FOR NEW DEVELOPMENTS.

WHEREAS, the Gateway Cities Council of Governments (hereinafter "Gateway Cities COG"), is a sub-region consisting of 27 member cities of Southeast Los Angeles County.

WHEREAS, on September 8, 1999, the Gateway Cities COG adopted "A RESOLUTION OF THE GATEWAY CITIES COUNCIL OF GOVERNMENTS URGING THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION TO DEFER DISCUSSION OF NUMERIC STANDARDS FOR TREATING OR RETAINING STORM WATER RUNOFF FROM NEW DEVELOPMENTS PURSUANT TO THE LOS ANGELES COUNTY MUNICIPAL NPDES PERMIT (HEREINAFTER "NPDES permit");

WHEREAS, on September 16, 1999, the California Regional Water Quality Control Board, Los Angeles Region (hereinafter "regional board") convened a public hearing to discuss requiring cities in Los Angeles County to impose stringent numeric storm water retention/treatment requirements (hereinafter "numeric requirements") on certain categories of new developments, through so-called Standard Urban Storm Water Management Plans (hereinafter "SUSMPs") -- a requirement of the development planning program component of the NPDES permit;

WHEREAS, such numeric limits were intended to retain or treat about 80-85% of runoff from the subject new developments, which include 10-99 home sub-divisions, 100-plus home sub-divisions, and 100,000 square foot commercial developments;

WHEREAS, during aforementioned public hearing, 50 cities expressed opposition to the proposed numeric storm water retention/treatment requirements because of the following:

i. They were inflexible to the extent cities would have been required to meet he numeric standard, even if it were difficult or possible to do so because of economy, practicality, or the new risk of creating another environmental problem;
ii. They were largely based on a settlement agreement between the County of Los Angeles and the Natural Resources Defense Council;
iii. They were targeted at reducing oil, grease, and unspecified metals without specifying the purpose of such a stringent requirement, such as protecting a beneficial use of a particular receiving water (e.g., ground-water recharge areas of the Los Angeles and San Gabriel Rivers);
iv. They would have been the most stringent new development runoff pollution control requirement in the State; and

v. They are not authorized either under the NPDES permit or the development planning program, which calls for SUSMPs.

WHEREAS on September 16, 1999, the Executive Officer of the regional board recommended to continue discussion of this issue to another time;

WHEREAS, on December 7, 1999, the Executive Officer issued a revised SUSMP and proposed its adoption through a tentative RESOLUTION APPROVING THE RECORD FOR STANDARD URBAN STORM WATER MITIGATION PLAN FOR MUNICIPAL STORM WATER AND URBAN RUNOFF MANAGEMENT PROGRAMS IN LOS ANGELES COUNTY;

WHEREAS, although the revised SUSMP addresses several of the concerns expressed in the Gateway Cities COG resolution, it made the SUSMP more stringent by requiring a numeric-based design standard for retaining or treating runoff from ANY PARKING LOT WITH 25 OR MORE SPACES OR GREATER THAN 5000 SQUARE FEET -- instead of requiring a numeric standard just for housing sub-divisions and 100,000 square feet commercial developments as initially called proposed;

NOW THEREFORE, the Gateway Cities COG does hereby resolve as follows:

Section 1. Advise regional board members of its opposition to the regional board's proposed tentative resolution;

Section 2. Recommend that the regional board approve the Standard Urban Storm Water Mitigation Plan, which does not include broad numeric limits, as proposed by the Executive Advisory Committee on August 1, 1999;

Section 3. Notify the regional board that if it or its Executive Officer adopts any requirement calling for a numeric standard to treat or retain storm water runoff from any development project, or controlling runoff from a surface area of any new development, without the consent of the Gateway Cities COG, that this COG may, within 30 days of the action, prepare a petition with the State Water Resources Control Board enabling its members to challenge such action.

PASSED, APPROVED, AND ADOPTED THIS 5th DAY OF JANUARY 2000.

ATTEST: Richard Powers, Executive Director

I, Richard Powers, Executive Director to the Board of Directors of the Gateway Cities Council of Governments hereby certify that the foregoing Resolution was duly adopted by the Executive Committee of the Board of Directors of the Gateway Cities Council of Governments at a regular meeting thereof, held on January 5, 2000, by the following vote:

AYES: ALL MEMBERS PRESENT

IN REPLY PLEASE
REFER TO FILE: EP-3

Mr. Dennis A. Dickerson
California Regional Water Quality
Control Board - Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013-1105

Dear Mr. Dickerson:

STANDARD URBAN STORMWATER MITIGATION PLANS

We have reviewed your "Comments Received and Response - Supplement" and your "Change Sheet" both dated January 21, 2000, as well as the "Change Sheet" dated January 25, 2000. Although the majority of our comments from our December 28, 1999, letter have been addressed, we still have serious concerns with some of our comments that were not addressed and some of the new changes that you have made to the Standard Urban Stormwater Mitigation Plan (SUSMP). The following are our comments that we would like you to consider.

Comments From Our December 28, 1999, Letter Not Addressed:

SUSMP Categories

Although you have clarified the definitions of parking lots and projects discharging into environmentally sensitive areas, the two additional categories are nearly identical to project characteristics that are already identified as priority projects in the Development Planning Program. The priority project categories identified in Part B of the checklist includes project locations adjoining, bisected by, or directly discharging to a designated environmentally sensitive area, riparian corridor or wetland and parking lots with greater than 200 parking spaces for any office, commercial, or industrial use. The mention of these categories in a different manner in multiple components of the Development Planning program documents will lead to confusion.

Definitions

Hillside: The definition of hillside was revised to only partially address our concern. We still recommend changing the definition to read, "Property located in an area with known erosive soil conditions, where the development contemplates regulated grading on any natural slope that is 25 percent or greater." The municipalities only have the authority to implement the program on regulated grading.

Environmentally Sensitive Area: You have simply added references here for Areas of Special Biological Significance and Area of Ecological Significance. Your proposed definition of "Environmentally Sensitive Area" would still be very difficult to implement and enforce. We still recommend that these areas be defined as those adjoining, bisecting, or directly discharging to a Significant Ecological Area, identified by Los Angeles County or other environmentally sensitive areas identified by the local jurisdiction. This definition would provide clarity and be more consistent with that given in the Model Program. It would also be enforceable and have a reasonable basis.

Sections 6 and 7 of the General Requirements

Though you have exempted individual, single-family residential developments from the requirements of (Section 7) covering trash storage areas; you did not exempt the same from the requirements of (Section 6) covering outdoor material storage areas. An exemption, in that case, is appropriate as well.

Roofing Surface Exclusion

The wording of Part D was revised to read, "The storm water conveyance system does not directly discharge to a natural stream or a channel segment scheduled for restoration." We still recommend adding "to a natural stream" following restoration. This will help clarify what is meant by restoration. Also, you have added a statement at the beginning of the Roofing Surface Exclusion that reads, "A proportional area of roofing surface may be excluded..." This statement is vague and needs clarification.

Parking Lots

To address our earlier concern, you have now revised this section to require all the listed Best Management Practices (BMPs). As we stated earlier, these should be recommendations because it will not be possible, and is probably not necessary, to meet all these requirements on any one parking lot. For example, requiring the reduction of impervious land coverage **and** infiltration of runoff **and** treatment of runoff for parking lots seems to be excessive. Also, this section is redundant to the runoff mitigation requirements shown earlier in the SUSMP for the new parking lot category. This redundancy and overlap will make implementation of the SUSMP for this type of project confusing.

Concerns With the New Comments That Have Been Added:

Section 2 (Conserve Natural Areas) of the General Requirements

You have removed the "Every effort shall be made to" from the first requirement of this section. This eliminates the flexibility for situations where it is not feasible to concentrate or cluster development on portions of a site while leaving the remaining land in a natural undisturbed condition. This statement should be left at the beginning of the first requirement of this section.

Section 3 (Minimize Storm Water Pollutants of Concern) of the General Requirements

You have changed a portion of the definition of Pollutants of Concern by replacing "at a level high enough to be" with "concentrations or loads." The original definition of Pollutants of Concern was taken verbatim from our Stormwater Permit and therefore would create a conflict between the Permit and the SUSMP. We recommend leaving the definition as stated in the Permit.

Section 4 (Protect Slopes and Channels) of the General Requirements

You have added text that reads, "Utilize natural drainage systems to the maximum extent practicable." It is unclear what utilization means in this instance.

Section 8 (Provide Proof of Ongoing BMP Maintenance) of the General Requirements

You changed text regarding transfer of property to apply to a private or public owner. It is unclear as to why this addition is needed. The owner will always be a private or public owner. Therefore, this added text is not needed.

If you have any questions, please call me at (626) 458-5948, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

BRASH INDUSTRIES

COMMENTS TO THE LARWB SUSMP PROGRAM

JANUARY 26, 2000 MEETING

Marvin H. Sachse, P.E.

BRASH INDUSTRIES

My name is Marvin Sachse. I am a State Licensed Professional Engineer, with Master's Degrees in Environmental and Industrial Engineering. I am the Program Manager for a State approved Storm Water Group serving 300 Southern California Automobile Recyclers and their trade associations.

As a group we wish to place before the board our concerns that the well intentioned SUSMP program will be compromised by the use of numeric limits.

1) TECHNICAL FEASIBILITY:

SUSMP program BMPs were derived from East coast studies with very few actual installations and less hard data.

The litigious nature of the CWA exposes all SUSMP installations to possible law suits over the term, "maximum extent practicable." Clearly defined effluent limits will eliminate the potential for unending litigations from this vague and inexact term. TMDLs will establish clearly defined effluent limits.

R0068159

P.O. BOX 957 ■ VENICE, CALIFORNIA 90294-0957
TELEPHONE: (310) 305-8637 ■ FAX: (310) 574-0875 ■ brashind@aol.com

The Sacramento Stormwater Management Program published a November 1999 Final Report. This report's data showed that under some conditions Total Suspended Solids and Zinc, are discharged from grassy swales and sand filters, increasing pollution loading in storm water treated by these BMPs. Of 14 BMPs evaluated 13 were rated "Not Acceptable," and 1 was, "Conditionally Acceptable."

2) COST: The Sacramento Report estimated the installed unit costs to range between $20,000 and $500,000. Operation and maintenance cost range between $400 and $4,500 per year. No cost benefit data has been provided by the RWB or in its recommended list of BMPs.

3) REGIONAL CONSIDERATIONS:

Los Angeles is a desert. BMP effectiveness data has not been presented for cities with similar weather patterns, soil conditions, rainfall, and topography.

4) AERIAL DEPOSITION

Aerial deposition sampling studies and City of Los Angeles sidewalk washing studies indicate that the amount of non-point source pollution in storm water exceeds US EPA Multi sector permit benchmarks. Zinc and lead are pollutants of concern but will not be impacted significantly by the SUSMP numeric limits because of their pervasiveness in the background and that they are not produced by SUSMP targeted operations.

5) POLLUTANT LOADING

Porter Cologne requires the Water board to evaluate beneficial uses of waterways and determine what pollutant loading will not impact the beneficial uses of the water way. This issue is not addressed in the SUSMPs, or its numeric limits, but is required as part of the TMDL Process.

CONCLUSION:

The SUSMP program numeric limits were developed without a scientific basis as to receiving water capacities, pollution from non point sources, and determination of BMP effectiveness.

It is our recommendation that the LARWB considers expedited development of TMDL Program instead of implementing a parallel, albeit less well developed SUSMP Program. The TMDL program provides the necessary scientific tools for the implementation of a storm water NPDES program that affords better protection for the environment, water shed residents, and businesses, than the numerical limits of the SUSMP program.

Exhibit D
192

Testimony of Richard Watson
before the
California Regional Water Quality Control Board, Los Angeles Region
26 January 2000

My name is Richard Watson. I have been active in the building industry since 1978 and I have been working on storm water issues since 1990. My clients include both builders and the public sector. I served on committees of the California Stormwater Quality Task Force that assisted the State Water Resources Control Board with preparation of the original General Construction Permit and the re-issued General Permit adopted last year.

I am here today to both support and oppose. We in the building industry support the general objectives of the SUSMPs and the use of appropriate best management practices. We could have supported the September 16, 1999 SUSMPs without the proposed numerical mitigation measures. We could even support the SUSMPs before you today with a couple of policy changes and the elimination of the numerical mitigation measures.

We have specific concerns in the broad areas of definitions, implementation, numerical mitigation measures, and relationship to the General Construction Permit.

Definitions

The latest change sheet appears to answer most of our concerns with the staff's December changes to the definitions of Hillsides and Parking Lots. The definition of Environmentally Sensitive Areas remains overly broad and unworkable. The proposed environmentally sensitive area language is an excellent example of policy that has not been well thought out. It includes an overly vague definition that could be interpreted as meaning that virtually any development discharges to an environmentally sensitive area.

Implementation

The building industry is also concerned with the details of implementation. When will the proposed requirements become effective? More importantly, at what stage of the planning process will vulnerability to change cease? Ideally, SUSMP issues should be addressed during the tentative map process when spatial relationships are considered. Once tentative maps are approved, plans should not be subject to further SUSMP related changes.

Numerical Mitigation Measures

The imposition of the proposed numerical mitigation measure and the associated costs in the absence of sufficient information is poor public policy. It is not clear how the proposed requirement is going to help maintain and/or improve the beneficial uses in the receiving waters. What specific benefits will the proposed numeric mitigation measure requirements achieve? The proposed numerical mitigation policy has all the appearances of a ready, fire, aim policy.

There is no legislative or regulatory requirement to revise the SUSMPs to include numerical mitigation measures based on capture of a percentage of rainfall events at this time. Considering the questionable technical basis for the proposed numerical mitigation measure requirement and its potential economic impact upon business, it would seem prudent to move cautiously when considering new and far reaching requirements.

Relationship to the General Construction Permit

Another serious policy flaw is the staff recommendation that the Regional Board adopt the numerical BMP design standard in the SUSMP as the minimum standard of review for post-construction BMPs for projects subject to coverage under the state general construction permit. This proposal is an intrusion into the prerogatives of the State Board and is contrary to the Porter-Cologne Act. The Regional Board is charged with enforcing the General Permit – not embellishing it. The State Board set certain performance standards, but in conformance with section 13360 of Porter-Cologne did not specify design parameters. The staff recommendations must be rejected.

Conclusion

The members of the building industry are willing to do our share. We want equitable treatment based on good science. We do not want to waste money attacking the wrong problems with the wrong tools just because we get caught up in the "we've got to do something" syndrome.

I request that the Board direct the Executive Officer to make necessary changes in the SUSMPs and defer the addition of any numerical mitigation measures to the Standard Urban Storm Water Mitigation Plans and to instead move forward with the process identified in the Clean Water Initiative. This initiative outlines a process supported by SCAG and the municipalities which would involve all of the stakeholders in a review of the critical issues underlying the achievement of clean water. Together, we can establish workable performance standards for achieving clean water in the region.

Exhibit O
292

THE CLEAN WATER INITIATIVE

The following is an alternative approach to SUSMP implementation which is supported by a variety of organizations, companies and individuals. Those supporting this initiative favor enhanced water quality and improved storm water management.

The centerpiece of this initiative is a strong commitment to clean water through actual and measurable pollutant reduction. This is achieved through an inclusive process driven approach based on sound science (water quality and waste load analysis) and proven techniques (applied and tested BMPs). This is far better than simply relying on a volumetric approach (numeric standards) which is based solely on the "quantity" of water captured rather than the "quality" of the water released.

Commitments

The organizations, companies and individuals supporting this initiative make the following commitments toward clean water and stormwater mitigation in Southern California:

- We commit to clean water
- We commit to implementing quality Best Management Practices (BMPs)
- We commit to doing demonstration projects and pilot programs on specific BMPs
- We commit to developing watershed management plans for each watershed in the Basin
- We commit to work cooperatively with **all** of the other stakeholders in this issue (the regulated community, the environmental community and the municipalities) to enhance water quality and improve stormwater management

Expectations

While we as organizations, companies and individuals are willing to make important commitments towards clean water and stormwater mitigation, we also expect the Los Angeles Regional Water Quality Control Board (LARWQCB) to live up to its legal responsibilities regarding this issue. It is our belief that the LARWQCB can best do this by committing to support only those policies based on sound science, quality research and proven techniques. To do this it is our expectation that the LARWQCB will do the following analysis to verify the value of their policy initiatives:

- Water Quality Analysis
- Waste Load Analysis
- Cost Effectiveness Analysis

Process

We believe that a thoughtful "process driven" approach should be employed for the development of appropriate public policy regarding stormwater mitigation in Southern California. Further, we believe that the SUSMP Policy approved on January 6, 2000 by the Regional Council of the Southern California Association of Governments (SCAG) offers a quality process driven approach to SUSMPs. We support this policy, as outlined below, and would seek its inclusion in the final SUSMP resolution adopted by the LARWQCB.

The Southern California Association of Governments recommends that:

- *the Los Angeles Regional Water Quality Control Board not adopt SUSMP numeric standards until such time as the Board can validate the feasible, technical and scientific bases for numeric standards.*
- *the Board monitor pilot programs similar to those underway in Los Angeles County.*
- *the Board work closely with cities such as Calabasas, Santa Clarita and Santa Monica to assess the effectiveness of local initiatives aimed at managing runoff water flows and quality.*
- *the Board develop a Memorandum of Understanding with SCAG in which SCAG would incorporate a Best Management Practices for Preventing Storm Water Runoff Pollution in the Los Angeles Basin project in its Environmental Programs and Livable Communities work elements.*
- *the Board ask SCAG to manage a legal authorities initiative in which all of the 85 cities in the Los Angeles Basin would work to develop model language which would then be available for municipal implementation throughout the Basin.*
- *the Board invite SCAG to contribute its Section 208 authorities to a collaboration with other key organizations/stakeholders in scoping out plans for a watershed management initiative program in each watershed of the Basin.*
- *the Board evaluate the operating results of watershed (regional) mitigation programs prior to its consideration of any general retrofit mandates on existing land uses.*
- *the Board and SCAG cooperate with other stakeholders in putting best efforts into raising the new financial resources needed for planning and implementing these water quality commitments.*
- *the Board's staff be encouraged to meet with those SCAG sub-regional councils affected by the SUSMP program prior to any Board action on these matters.*

Support for the Clean Water Initiative

Attached to this document is a list of some of the leading organizations and companies supporting the Clean Water Initiative as a better approach to SUSMP implementation. Those supporting this initiative favor enhanced water quality and improved storm water management through actual and measurable pollutant reduction.

VENTURA AFFORDABLE HOMES, INC.

208 East Main Street
Ventura CA 93001
(805) 643-8269

January 26, 2000

Mr. Dennis Dickerson
Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th St., Suite 200
Los Angeles, Ca. 90013
HAND DELIVERED

Dear Mr. Dickerson:

As President of the Building Industry Association of Greater Los Angeles/Ventura, and President of Ventura Affordable Homes, Inc., a provider of entry level housing to our local families, I applaud your efforts to improve our quality of life by reducing water pollution. However, another important component of quality of life, safe, decent affordable housing, may suffer as a result of some of the components of the revised SUSMP.

I urge you and the Board to support the "Clean Water Initiative", which I have provided you a copy of with my letter of January 20,2000. This Initiative provides a process which will achieve the Board's goals of reducing pollution at the same time it allows for collaboration of all affected parties in a cost-effective and scientific approach.

Using up our land, another precious resource, to reduce pollution without exploring other proven techniques merely pits one limited resource against another. We must use our limited resources efficiently to accomodate our diverse community interests.

Our quality of life includes decent housing, job opportunities, access to education, recreation, clean air and clean water. Comprehensive, collaborative planning with everyone at the table, as contained in the "Clean Water Initiative" is key to maintaining and improving the quality of life that California residents deserve.

People as well as buildings are part of our environment along with our State's natural resources. All of us must work together to protect our entire environment. Thank you for considering the "Clean Water Initiative", which provides the opportunity to improve California's environment.

Sincerely,

Lynn L. Jacobs
President
cc: Mr. Hamid Nahai, Chair

To: ~~CA~~ Regional Water Control Board, LA Region Exhibit Q
Re: Standard Urban Storm Water Mitigation Plans.
From: Conner Everts, executive director, Southern California Watershed Alliance

Thank you for this opportunity, members of the Regional Water Control Board. I am Conner Everts, executive director of the Southern California Watershed Alliance, which includes all of the watersheds within your jurisdiction. I also am past president of the Ojai Basin Groundwater Management Agency. In that capacity, I faced reaction to our attempts to monitor our basin. I encourage you to stand strong on these guidelines and not fall to exemptions. Rather than the discussion of exemptions we should be thinking of incentives to reduce pollutants in the water.

We in Southern California have more pressure on our rivers, wetlands and coast than any other area. This, with the extremes of the climate change we are experiencing and our steep hydrology, demands solutions. While the many watershed organizations, environmental groups and proactive agencies & municipalities are moving forward with innovative programs strong guidelines will only help forge alliances & collaboration to positively impact all of our waterways through out the region. This will allow the maximization of local resources, and eventually restore water quality to the level of safety for current & future generations.

R0068168

Lastly, the 3rd hat I wear is as vice-convenor of the California Urban Water Conservation Council, overseer of the 14 BMPs M.O.U that Cities, Water Agencies, Businesses, and public interest groups have signed on to. Our collaboration is an example of how these standards can be implemented.

This is a regional solution and you are the regional agency to set the standard. As Mark Twain said, I like progress, it's >

change I have a problem with. Let make the changes for this ~~century~~ to make progress on the impacts of the last century. ← THE END

We are in a drought cycle in S. C., which points out the need for making use of what clean runoff we can. "Un Do pave LA." The one issue that all people ask me about is what about that wasted water.

Exhibit R

OVERVIEW OF LEGAL DEFICIENCIES OF PROPOSED REGIONAL BOARD ACTION

- **The proposed action is inconsistent with the Clean Water Act, the Porter Cologne Act, and the terms and conditions of the Permit, Order No. 96-054.**
- **Order No. 96-054 requires that the Regional Board follow an Administrative Review Process in reviewing proposed storm water programs submitted by the Permittees. The action proposed by the Regional Board fails to comply with the Administrative Review Process and is in violation of the Permit.**
- **The Executive Officer is prohibited from taking enforcement action against any of the Permittees, (i.e., asserting that the Permittees are in violation of the Clean Water Act), until the Executive Officer has notified the Permittees in writing that the Administrative Review Process has been exhausted.**
- **The proposed action constitutes an illegal amendment by the Executive Officer to the Permit in violation of the Clean Water Act, and Water Code Section 13360 of the Porter Cologne Act.**
- **The proposed action will result in the imposition of millions of dollars of unfunded mandates in violation of the California Constitution.**
- **The proposed action violates the Administrative Procedures Act under California law.**

ORDER NO. 96-054

ADMINISTRATIVE REVIEW PROCESS

PURPOSE

"The administrative review process formalizes the procedure for review and acceptance of reports and documents submitted to the Regional Board under this order. In addition, it provides a method to resolve any difference in compliance expectations between the regional board and Permittees, prior to initiating enforcement action."

ADMINISTRATIVE REVIEW PROCESS

PROCEDURE

- **The Executive Officer is to notify the Permittees of the results of his review and approval or disapproval within 120 days of submittal.**

- **If Executive Officer determines a storm water program is insufficient to meet the provisions of the order, Executive Officer is to send a "Notice of Intent to Meet and Confer ("NIMC") with specific information in support of the determination.**

- **The meet and confer process is to conclude with either a notice of program sufficiency to the Permittee, or the submittal to and acceptance by the Executive Officer of a written "Storm Water Program Compliance Amendment ("SPCA").**

- **The Executive Officer is to approve or reject the submitted SPCA or an amended SPCA within 120 days of submittal. Rejection of an SPCA by the Executive Officer shall state the reasons for the failure to approve the SPCA.**

- **A Permittee that receives a rejection of an SPCA shall have 60 days to remedy the specified deficiency and resubmit the SPCA.**

- **If the Executive Officer has not responded within 120 days following submittal of the SPCA, the Permittee shall notify the Executive Officer of its intent to implement the SPCA as submitted and if after ten days thereafter the Executive Officer has not responded, the Permittee will implement the submitted SPCA.**

ADMINISTRATIVE REVIEW PROCESS EXHAUSTION REQUIREMENT

"THE EXECUTIVE OFFICER SHALL NOT TAKE ENFORCEMENT ACTION AGAINST A PERMITTEE UNTIL THE EXECUTIVE OFFICER HAS NOTIFIED THE PERMITTEE IN WRITING THAT THE ADMINISTRATIVE REVIEW PROCESS HAS BEEN EXHAUSTED AND THAT THE EXECUTIVE OFFICER HAS DETERMINED THAT A VIOLATION EXISTS WARRANTING ENFORCEMENT."

CONCLUSION OF LEGAL ISSUES

- **The proposed action of the Regional Board violates the Clean Water Act, the California Constitution, the Porter Cologne Act, and the terms of the Permit.**

- **The proposed action of the Regional Board is legally irrelevant, and regardless of the action taken by the Regional Board, the Executive Officer is required to comply with the Administrative Review Process under the Permit before taking any enforcement action.**

ISSUES OF CONCERN

- Definition of "Hillsides"

Richard Watson

- Definition of "Parking Lots"
- Definition of "Environmentally Sensitive Areas"
- Implementation
- Numerical Mitigation Measures
- Relationship to the General Construction Permit

AFFORDABLE HOUSING

- Only 43 % of LA Area Families Earning the Median Income can Afford the Median-Priced Home – 20 Points Below the National Average

- Numeric Standard Will Unnecessarily Increase Costs to Those Who can Least Afford it

- Numeric Standard Will Deny Housing to Low and Middle Income Californians Without Reducing Water Pollution

- Lack of Affordable Housing is Considered a Primary Impediment to Sustained Economic Prosperity in the LA Area

General Description of Analysis

- **Purpose:** To quantify potential costs associated with proposed SUSMP
- **Scope:** Develop preliminary designs and cost estimates based on draft SUSMP for typical sites
- **Analyses:**
  - 100,000-square-foot industrial/commercial
  - 7-acre multi-family attached residential
  - 500-acre residential

PSOMAS

COMMENTS ON PROPOSED STANDARD URBAN STORM WATER MITIGATION PLANS (SUSMPs)

Los Angeles Regional Water Quality Control Board

January 26, 2000

Presented by

Steve Fleischli,
Santa Monica BayKeeper

The Program is Legally Justified

A. The Permit and the CWA Require Pollution Reduction to the

1. EPA agrees with [illegible] standard
2. So Do Many Others
3. The Record is Massive

B. SW Programs should also be designed to ensure the Protection and Enhancement of beneficial uses

C. This is a
    1. Serves to Allow Engineers
        to size BMPs properly
    2. Provides Uniformity

D. This is a Numeric Effluent Limit,
    even though such a req't would:
    1. Be Legally Justified and
    2. Guarantee Protection of Beneficial Uses

E. Opportunity to Leave a Legacy, But the Exemptions Provide Only More Excuses.

F. Even without the Exemptions, This is Not the Complete Solution to our Problems. But it is Toward Achieving Goals of the CWA.

The Proposed Design Standard is Cost-Effective

A. BMPs Can Be Very Inexpensive

B. BMPs Have Been Proven to be Highly Effective if Sized Appropriately

C. The Proposed Design Standard is One of the Most Cost-Effective Ways to Reduce Urban Runoff

D. Implementation of the Proposed Design Standard, and Even More Environmentally Protective Standards, Has Not Impeded Development

Program Scope Is Fatally Hindered by a Host of Exceptions that Render the Current Proposal Virtually Meaningless

A. Across-the-Board Exceptions Restrict the Program's Application Unduly, Rendering Certain Aspects Almost Meaningless

1. Rooftop Exemption

2. Waiver Provision

3. Self-Certification

4. Conflicts with Local Practices

Hillside Definition: Hillside means property located in an area that has any of the following characteristics, or where the planned development has any of the following characteristics:

location in an area known to have erosive soil conditions as identified in the Los Angeles County Dept. of Public Works Hydrology/Sedimentation Manual; **OR**

Grading will occur on any natural slope where the natural slope is 15% or greater; **OR**

Plans include cut or fill slopes that are 30 feet high or greater.

OVERALL PROGRAM SCOPE IS UNNECESSARILY AND COUNTER-PRODUCTIVELY LIMITED

1. "Discretionary Project" Limitation Should Be Dropped

2. Failure to Adopt Los Angeles County List

3. Nine project types are Ostensibly Covered But Restrictive Definitions Profoundly Limit the Meaningfulness of Coverage

   - "Retail Gasoline Outlet" should include all pumping stations

   - Hillside

   - "Restaurants"

     All restaurants should meet the same standards. The 5,000 foot limitation should be eliminated.

   - "Commercial Stand-Alone Parking Lots"

   - "Redevelopment"

   - Outdoor Material Storage Area BMP

CONCLUSION OF LEGAL ISSUES

- **The proposed action of the Regional Board violates the Clean Water Act, the California Constitution, the Porter Cologne Act, and the terms of the Permit.**

- **The proposed action of the Regional Board is legally irrelevant, and regardless of the action taken by the Regional Board, the Executive Officer is required to comply with the Administrative Review Process under the Permit before taking any enforcement action.**

ADMINISTRATIVE REVIEW PROCESS
EXHAUSTION REQUIREMENT

"THE EXECUTIVE OFFICER SHALL NOT TAKE ENFORCEMENT ACTION AGAINST A PERMITTEE UNTIL THE EXECUTIVE OFFICER HAS NOTIFIED THE PERMITTEE IN WRITING THAT THE ADMINISTRATIVE REVIEW PROCESS HAS BEEN EXHAUSTED AND THAT THE EXECUTIVE OFFICER HAS DETERMINED THAT A VIOLATION EXISTS WARRANTING ENFORCEMENT."

ADMINISTRATIVE REVIEW PROCESS

PROCEDURE

- The Executive Officer is to notify the Permittees of the results of his review and approval or disapproval within 120 days of submittal.

- If Executive Officer determines a storm water program is insufficient to meet the provisions of the order, Executive Officer is to send a "Notice of Intent to Meet and Confer ("NIMC") with specific information in support of the determination.

- The meet and confer process is to conclude with either a notice of program sufficiency to the Permittee, or the submittal to and acceptance by the Executive Officer of a written "Storm Water Program Compliance Amendment ("SPCA").

- The Executive Officer is to approve or reject the submitted SPCA or an amended SPCA within 120 days of submittal. Rejection of an SPCA by the Executive Officer shall state the reasons for the failure to approve the SPCA.

- A Permittee that receives a rejection of an SPCA shall have 60 days to remedy the specified deficiency and resubmit the SPCA.

- If the Executive Officer has not responded within 120 days following submittal of the SPCA, the Permittee shall notify the Executive Officer of its intent to implement the SPCA as submitted and if after ten days thereafter the Executive Officer has not responded, the Permittee will implement the submitted SPCA.

ORDER NO. 96-054

ADMINISTRATIVE REVIEW PROCESS

PURPOSE

"The administrative review process formalizes the procedure for review and acceptance of reports and documents submitted to the Regional Board under this order. In addition, it provides a method to resolve any difference in compliance expectations between the regional board and Permittees, prior to initiating enforcement action."

OVERVIEW OF LEGAL DEFICIENCIES OF PROPOSED REGIONAL BOARD ACTION

- The proposed action is inconsistent with the Clean Water Act, the Porter Cologne Act, and the terms and conditions of the Permit, Order No. 96-054.
- Order No. 96-054 requires that the Regional Board follow an Administrative Review Process in reviewing proposed storm water programs submitted by the Permittees. The action proposed by the Regional Board fails to comply with the Administrative Review Process and is in violation of the Permit.
- The Executive Officer is prohibited from taking enforcement action against any of the Permittees, (i.e., asserting that the Permittees are in violation of the Clean Water Act), until the Executive Officer has notified the Permittees in writing that the Administrative Review Process has been exhausted.
- The proposed action constitutes an illegal amendment by the Executive Officer to the Permit in violation of the Clean Water Act, and Water Code Section 13360 of the Porter Cologne Act.
- The proposed action will result in the imposition of millions of dollars of unfunded mandates in violation of the California Constitution.
- The proposed action violates the Administrative Procedures Act under California law.

WHO IS BIA/SC?

- 1850 Member Companies
- Collectively Build Over 70% of the New Homes in our Region
- Employ Over 200,000 Individuals in the Construction Trades

Example 1

- Site Description: 100,000-square-foot Industrial/Commercial (3 acres assumed)
- Design Criteria:
  - 1st 0.75 inch (Capital Flood)
  - no roof reduction
- Facility Description:
  - One 600-foot-long, 5-foot-wide vegetated swale
- Estimated Costs:
  - Capital costs excluding land (capital/budget): $10,000
  - Unit cost: $3,300/acre
  - Long term--maintenance required: approximately $800/year
  - Land area required: 3,000 square feet at ($?/acre)

R0068196

PSOMAS

Example 2

- Site Description: 7-acre multi-family residential
- Design Criteria:
  - 1st 0.75 inch (Capital Flood)
  - no roof reduction
- Facility Description:
  - 0.3 ac-ft detention basin
- Estimated Costs:
  - Capital costs excluding land (capital/budget): $60,000
  - Unit cost: $8,600/acre
  - Long term--maintenance required: approximately $2,500/year
  - Land area required: 18,500 square feet at ($?/acre)

Example 3

- Site Description: 500-acre residential
- Design Criteria:
  - 1st 0.75 inch (Capital Flood)
  - no roof reduction
- Facility Description:
  - 8.3 acre-foot Detention/Filtration Basin
  - Passes 47 acre-feet of water
- Estimated Costs:
  - Capital costs excluding land (capital/budget): $1,120,000
  - Unit cost: $2,500/acre
  - Long term--maintenance required (mowing, cleaning, replacing): approximately $48,000/year
  - Land area required: 3 acres at ($?/acre)

ORDER NO. 96-054

ADMINISTRATIVE REVIEW PROCESS

PURPOSE

"The administrative review process formalizes the procedure for review and acceptance of reports and documents submitted to the Regional Board under this order. In addition, it provides a method to resolve any difference in compliance expectations between the regional board and Permittees, prior to initiating enforcement action."

ADMINISTRATIVE REVIEW PROCESS

PROCEDURE

- The Executive Officer is to notify the Permittees of the results of his review and approval or disapproval within 120 days of submittal.

- If Executive Officer determines a storm water program is insufficient to meet the provisions of the order, Executive Officer is to send a "Notice of Intent to Meet and Confer ("NIMC") with specific information in support of the determination.

- The meet and confer process is to conclude with either a notice of program sufficiency to the Permittee, or the submittal to and acceptance by the Executive Officer of a written "Storm Water Program Compliance Amendment ("SPCA").

- The Executive Officer is to approve or reject the submitted SPCA or an amended SPCA within 120 days of submittal. Rejection of an SPCA by the Executive Officer shall state the reasons for the failure to approve the SPCA.

- A Permittee that receives a rejection of an SPCA shall have 60 days to remedy the specified deficiency and resubmit the SPCA.

- If the Executive Officer has not responded within 120 days following submittal of the SPCA, the Permittee shall notify the Executive Officer of its intent to implement the SPCA as submitted and if after ten days thereafter the Executive Officer has not responded, the Permittee will implement the submitted SPCA.

ADMINISTRATIVE REVIEW PROCESS EXHAUSTION REQUIREMENT

"THE EXECUTIVE OFFICER SHALL NOT TAKE ENFORCEMENT ACTION AGAINST A PERMITTEE UNTIL THE EXECUTIVE OFFICER HAS NOTIFIED THE PERMITTEE IN WRITING THAT THE ADMINISTRATIVE REVIEW PROCESS HAS BEEN EXHAUSTED AND THAT THE EXECUTIVE OFFICER HAS DETERMINED THAT A VIOLATION EXISTS WARRANTING ENFORCEMENT."

CONCLUSION OF LEGAL ISSUES

- **The proposed action of the Regional Board violates the Clean Water Act, the California Constitution, the Porter Cologne Act, and the terms of the Permit.**

- **The proposed action of the Regional Board is legally irrelevant, and regardless of the action taken by the Regional Board, the Executive Officer is required to comply with the Administrative Review Process under the Permit before taking any enforcement action.**

OVERALL PROGRAM SCOPE IS UNNECESSARILY AND COUNTER-PRODUCTIVELY LIMITED

1. **"Discretionary Project" Limitation Should Be Dropped**

2. **Failure to Adopt Los Angeles County List**

3. **Nine project types are Ostensibly Covered <u>But Restrictive Definitions Profoundly Limit the Meaningfulness of Coverage</u>**

   - **"Retail Gasoline Outlet" should include all pumping stations**
   - **Hillside**
   - **"Restaurants"**

     <u>All</u> restaurants should meet the same standards. The 5,000 foot limitation should be eliminated.

   - **"<u>Commercial Stand-Alone</u> Parking Lots"**
   - **"Redevelopment"**
   - **Outdoor Material Storage Area BMP**

Hillside Definition: Hillside means property located in an area that has any of the following characteristics, or where the planned development has any of the following characteristics:

location in an area known to have erosive soil conditions as identified in the Los Angeles County Dept. of Public Works Hydrology/Sedimentation Manual; **OR**

Grading will occur on any natural slope where the natural slope is **15%** or greater; **OR**

Plans include cut or fill slopes that are 30 feet high or greater.

Program Scope Is Fatally Hindered by a Host of Exceptions that Render the Current Proposal Virtually Meaningless

A. Across-the-Board Exceptions Restrict the Program's Application Unduly, Rendering Certain Aspects Almost Meaningless

1. ***Rooftop Exemption***

2. ***Waiver Provision***

3. ***Self-Certification***

4. ***Conflicts with Local Practices***

COMMENTS ON PROPOSED STANDARD URBAN STORM WATER MITIGATION PLANS (SUSMPs)

Los Angeles Regional Water Quality Control Board
January 26, 2000

Presented by:

Steve Fleischli,

TREEPEOPLE

Cisterns

Retention
Grading

The Program is Legally Justified

A. The Permit and the CWA Require Pollution Reduction to the MEP

1. EPA agrees with 0.75" standard
2. So Do Many Others
3. The Record is Massive

B. SW Programs should also be designed to ensure the Protection and Enhancement of beneficial uses.

The Program is Legally Justified

A. The Permit and the CWA Require Pollution Reduction to the MEP

1. EPA agrees with 0.75" standard
2. So Do Many Others
3. The Record is Massive and Uncontroverted

B. SW Programs should also be designed to ensure the Protection and Enhancement of beneficial uses.

C. This is a Design Standard

1. Serves to Allow Engineers to size BMPs properly
2. Provides Uniformity

D. This is NOT a Numeric Effluent Limit, even though such a req't would:

1. Be Legally Justified and
2. Guarantee Protection of Beneficial Uses

C. This is a Design Standard
   1. Serves to Allow Engineers to size BMPs properly
   2. Provides Uniformity

D. This is NOT a Numeric Effluent Limit, even though such a req't would:
   1. Be Legally Justified and
   2. Guarantee Protection of Beneficial Uses

E. Opportunity to Leave a Legacy, But the Exemptions Provide Only More Excuses.

F. Even without the Exemptions, This is Not the Complete Solution to our Problems. But it is Reasonable Further Progress Toward Achieving Goals of the CWA.

E. Opportunity to Leave a Legacy, But the Exemptions Provide Only More Excuses.

F. Even without the Exemptions, This is Not the Complete Solution to our Problems. But it is Reasonable Further Progress Toward Achieving Goals of the CWA.

The Proposed Design Standard is Cost-Effective

A. BMPs Can Be Very Inexpensive

B. BMPs Have Been Proven to be Highly Effective if Sized Appropriately

C. The Proposed Design Standard is One of the Most Cost-Effective Ways to Reduce Urban Runoff

D. Implementation of the Proposed Design Standard, and Even More Environmentally Protective Standards, Has Not Impeded Development

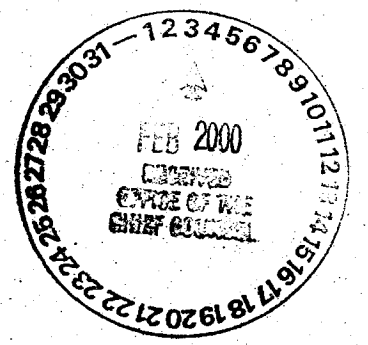
on a separate data sheet together with the concentration and replicate numbers to which they correspond. Identify this sheet with the date, test organism, test number, laboratory, and investigator's name, and safely store it away until after the larvae have been examined at the end of the test. **Note:** Loss of this randomization sheet would invalidate the test by making it impossible to correctly analyze the data afterwards. Take care to follow the numbering system exactly while filling containers with the test solutions.

Arrange the test containers by random number in the water bath or controlled temperature room.

6.0 Physical/Chemical Measurements of Test Solutions

Prior to testing, consult the container randomization sheet (Section 5.1) to compile a list of containers to be sampled for measurement. One randomly chosen replicate from each test concentration should be measured as follows: measure salinity, pH, and dissolved oxygen concentration at the beginning and end of the test; measure test solution temperature daily; and monitor water bath or environmental chamber temperature continuously. See Quality Assurance Section 5.0 for specifications and instrumentation for physical/chemical measurements.

NATURAL RESOURCES DEFENSE COUNCIL



January 27, 2000

Dear Jorge:

Per your request, attached are some of the overheads used by the environmental groups at the January 26, 2000 hearing.

Others will be sending theirs separately.

Alex Helperin

Adoption of Staff's Proposal *WITHOUT EXEMPTIONS* Would Be One of the Most Important Steps Toward Clean Water Ever Taken in the 50 Year History of the RWQCB

Los Angeles Has Among the Worst Storm Water Problems in the Nation

-- EPA Says so . . .

-- Storm Water Pollution Has Increased Between 200% & 700% During the Last 20 Years

-- LA is Home to 50% of the Polluted Waters in California

THE ROLE OF NEW AND REDEVELOPMENT IN CREATING THE PROBLEM

- Storm water pollution = volume and velocity of surface runoff + concentration of pollutants in runoff

- By creating impervious surface, development has dramatic effects on increasing the quantity and quality of storm water runoff:

COMPARE...

A 1-inch rainstorm on a 1-acre natural meadow typically produces:

218 cubic feet of runoff (enough to fill a standard office to a depth of 2 feet)

The same storm on a 1-acre paved parking lot produces:

3,450 cubic feet of runoff, nearly sixteen times the meadow (and enough to fill three offices completely)

An Effective Development Planning Program Requires:

1. *Description of Scope*

2. List of BMPs to Select

3. *A Numerical Standard to size BMPs*

Who Supports?

City of LA
EPA
Coastal Commission
Leading Experts
S.M. Mountains Conservancy
Many Cities

The Proposed Numeric Standard is Well-Supported by Both Science and Experience

- Hundreds of Municipalities Across the Country Have Stronger Standards
- Los Angeles County Implements a More Stringent Program
- Many Local Municipalities Support the Standard
- Scientific and Technical Data Support the Standard
- The Foremost Stormwater Experts In the Country Support It
- EPA Supports the Standard

Los Angeles County's Program is More Stringent

- Broader Scope
    - Over 20 Project Types Covered
    - Not Limited to Discretionary Projects
- No Exceptions

Many Local Municipalities Support the Standard

- **Some Already Implement Similar Programs:**
  - ✓-- Santa Monica
  - -- West Hollywood
  - -- Calabasas

- **Others Have Communicated Their Support:**
  - -- Los Angeles
  - -- Southgate
  - -- El Monte
  - -- La Ciñada/Flintridge
  - -- Pasadena
  - -- Rancho Palos Verdes

- The Foremost Stormwater Experts In The Country Support The Use of This Standard

Dr. Michael Stenstrom -- Los Angeles, California (UCLA)

Dr. Richard Horner -- Seattle, Washington (Univ. of Wash.)

Dr. Thomas Schueler -- Washington, D.C.
(Center for Watershed Protection)

Dr. Robert Pitt -- Birmingham, Alabama (Univ. of Ala.)

Program Scope Is Fatally Hindered by a Host of Exceptions that Render the Current Proposal Virtually Meaningless

A. Across-the-Board Exceptions Restrict the Program's Application Unduly, Rendering Certain Aspects Almost Meaningless

1. Rooftop Exemption

2. Waiver Provision

3. Self-Certification

4. Conflicts with Local Practices

The Proposed Design Standard is Cost-Effective

A. BMPs Can Be Very Inexpensive

B. BMPs Have Been Proven to be Highly Effective if Sized Appropriately

C. The Proposed Design Standard is One of the Most Cost-Effective Ways to Reduce Urban Runoff

D. Implementation of the Proposed Design Standard, and Even More Environmentally Protective Standards, Has Not Impeded Development

Program Scope Is Fatally Hindered by a Host of Exceptions that Render the Current Proposal Virtually Meaningless

A. Overall Scope is Unnecessarily and Counterproductively Limited

1. ***"Discretionary Project" Limitation***
2. ***Failure to Adopt the County's List***
3. ***Nine Project Types <u>Are</u> Ostensibly Covered, but Restrictive Definitions Profoundly Limit the Meaningfulness of Coverage:***

B. Limiting Definitions

1. ***Automotive Repair Shop***
2. ***Retail Gasoline Outlet***
3. ***Restaurants***
4. ***Hillside***

STANDARD URBAN STORM WATER MITIGATION PLAN

DEVELOPMENT PLANNING

CHANGE SHEET (Revised)

Summary

The Change Sheet lists proposed changes to the Final Tentative - Standard Urban Storm Water Mitigation Plan, (December 7, 1999). In general, the proposed changes respond to commenters' suggestions on improving clarity, format, and implementability of the Standard Urban Storm Water Mitigation Plan.

Noteworthy changes include, the addition of a definition for 'storm event' and the requirement of professional registration for certifying persons under the "Alternative Certification' option. Two new references have been added to augment implementation guidance. These are, (i) National Stormwater Best Management Practices (BMP) Database, Version 1.0, and (ii) Denver *Urban Storm Drainage Criteria Manual, Volume 3 – Best Management Practices.*

In the Change Sheet, cross-reference to pages and paragraphs are for the 'Clean Version' dated December 7, 2000. New text added to a sentence is indicated by underline.

Background

1. Page 2 paragraph three, Clarify that a City has to adopt same requirements for the Citywide SUSMP

   Sentence changed to read, "The Permittees are required to adopt the requirements set herein in their own SUSMP."

2. Page 2 paragraph 3, Delete reference to Urban Storm Water Mitigation to avoid confusion

   Sentence changed to read, "Each Permittee will approve the project plan as part of the development plan approval process....

3. Page 3 paragraph 2, Clarify the environmentally sensitive area category.

   Sentence changed to read, "Location within or directly adjacent to or discharging directly to an environmentally sensitive area.

4. Page 3 paragraph 2, Make requirement applicable to stand-alone parking lots only

   Sentence changed to read, "Commercial stand-alone parking lots 5,000 square feet or more.....

Definitions

5. Order definitions alphabetically

   Definitions reordered alpha-numerically

6. Page 3, Modify definition of hillsides to add specificity.

   Definition changed to read, "property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope that is twenty-five percent or greater."

7. Page 3, Delete exceptions in the definition of Automotive Repair Shop

   Exceptions deleted, now reads, "Automotive Repair Shop" means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539."

8. Page 3, Modify definition of 100,000 square foot commercial development for simplicity.

   Definition changed to read, "any commercial development that creates at least 100,000 square feet of impermeable area, including parking areas".

9. Page 4 , Add references for definition of environmentally sensitive areas

   References added for Areas of Special Biological Significance and Area of Ecological Significance.

10. Page 4, , Change definition to include a threshold trigger for requirements to apply to Redevelopment

    Definition changed to read, "Redevelopment" means, on an already developed site, the creation or addition of fifty percent or more of impervious surfaces or the making of improvements to fifty percent or more of the existing structure. Redevelopment includes.....

11. Page 5, , Change definition for Retail gasoline outlets to clarify 'primarily engaged'.

    Definition changed to read, ""Retail Gasoline Outlet" means a facility engaged in selling gasoline and lubricating oils, which derives more than fifty percent of its annual gross receipts from the sale of gasoline, lubricating oils tires, batteries, automobile parts and other automotive services.

12. New Definition, Define a storm event

    Defined storm event to mean, "a rainfall event that produces more than 0.1 inch of precipitation and that, which is separated from the previous storm event by at least 72 hours of dry weather."

SUSMP Provisions Applicable to All Categories

13. Page 5, paragraph 3, Change sentence for clarity

    Sentence changed to read, "....shall not exceed the estimated pre-development rate for developments where it is reasonably foreseeable that the increased peak storm water discharge rate will result in increased potential for downstream erosion."

14. Page 5, paragraph 4, Delete text that makes act dependent on effort

Sentence changed to read, "Concentrate or cluster Development on portions of a site while leaving the remaining land in a natural undisturbed condition."

15. Page 6, paragraph 1, Change sentence for clarity

    Sentence changed to read, "...or the detectable inputs of the pollutant are at a concentrations or loads considered potentially toxic to humans and/or flora and fauna."

16. Page 6, paragraph 2, Add reference

    Added reference, "Denver *Urban Storm Drainage Criteria Manual, Volume 3 – Best Management Practices*"

28. Page 9, paragraph 2, Change text to offer partial credit for roofing surfaces diversion

    Sentence changed to read, "A proportional area of roofing surface may be excluded..."

29. Page 9, paragraph 2, Change text for clarity.

    Sentence changed to read, "storm water conveyance system does not directly discharge to a natural stream or channel segment scheduled for restoration".

30. Page 9, paragraph 3, Change text to clarify exemption from numerical standard only.

    Sentence changed to read, "Restaurants, where the land area for development or redevelopment is less than 5,000 square feet, are excluded from the numerical BMP design standard requirement.

Provisions Applicable to Individual Priority Projects

31. Page 10, paragraph 2, and Page 12, paragraph 1, Change text to eliminate mandatory cover.

    Sentence change to read, "...area must be self-contained and/or covered, equipped with a clarifier,..."

32. Page 12, paragraph 3, Change text for clarity.

    Text modified to read, "....hydrocarbons that are deposited on parking lot surfaces by motor vehicles"

33. Page 12, paragraph 3, Add introductory text.

    Sentence added to read, "To minimize the offsite transport of pollutants, the following design criteria are required".

Waiver

34. Page 13, paragraph 1, Add text for clarity

    Text added to read, "....because an existing or potential underground source of drinking water..."

35. Page 13, paragraph 1, Change text to clarify that Permittee is petitioner.

    Sentence modified to read, "Any other justification for impracticability must be separately petitioned by the Permittee and approved...."

Alternative Certification

36. Page 13, paragraph 1, Change sentences to require professional registration and recommend training verification.

    Sentences added to read "...accept a signed certification from a Civil Engineer or a Licensed Architect registered in the State of California, that the plan meets the criteria." And, "The Permittee is encouraged to verify that certifying person(s) have been trained on BMP design for water quality, not more than two years prior to the signature date."

Suggested Resources

37. Page 15, Add reference BMP database and on-line Texas Non-point Source Book

    Reference added, "National Stormwater Best Management Practices (BMP) Database, Version 1.0" ; and "Texas Non-Point Source Book".

17. Page 6, paragraph 3, Add text to enable BMP combination alternative

    Added text to read, "However, it is possible that a combination of BMPs not so designated, may in a particular circumstance, be better suited to maximize the reduction of the pollutants".

18. Page 6, paragraph 4, Delete text that is tentative

    Text deleted to read, "Project plans must include BMPs consistent....."

19. Page 6, paragraph 4, Add text to promote use of natural drainage systems

    Add text to read, "Utilize natural drainage systems to the maximum extent practicable"

19. Page 6, paragraph 4, Add text to minimize flow to natural drainage systems

    Text added to read, "Control or reduce or eliminate flow to natural drainage systems to the maximum extent practicable"

20. Page 7, paragraph 2, Change sentence for clarity

    Sentence changed to read, "Materials with the potential to contaminate storm water must be: (1) placed in an enclosure..."

21. Page 7, paragraph 3, Add text to exclude single family residences

    Sentence added to read, " Individual single family residences are exempt from these requirements"

22. Page 8, paragraph 1, Change text for clarity

    Text changed to read, "The transfer of property to a private or public owner must have conditions..."

23. Page 8, paragraph 1, Add text to require maintenance inspection and record.

    Sentence added to read, "The condition of transfer may include a provision that the property owner conduct maintenance inspection of all treatment control BMPs at least once a year and retain proof of inspection."

24. Page 8, paragraph 3, Delete text for clarity

    Text deleted, "~~each runoff event up to and including~~", Now reads, "the 85th percentile 24-hour runoff event...."

25. Page 8, paragraph 3, Correct based on revised chart treatment volume from 85 percent to 80 percent.

    Text changed to read, "to achieve 80 percent or more volume treatment....."

26. Page 8, paragraph 3, Change text for clarity

    Sentence changed to read, "....runoff produced from a 0.75 inch storm event, prior..."

27. Page 8, paragraph 3, Change text for clarity

    Sentence changed to read, "....volume of runoff produced from a historical-record based reference 24-hour rainfall criterion...."

STANDARD URBAN STORM WATER MITIGATION PLAN

DEVELOPMENT PLANNING

CHANGE SHEET

Summary

The Change Sheet lists proposed changes to the Final Tentative - Standard Urban Storm Water Mitigation Plan, (December 7, 1999). In general, the proposed changes respond to commenters' suggestions on improving clarity, format, and implementability of the Standard Urban Storm Water Mitigation Plan.

Noteworthy changes include, the addition of a definition for 'storm event' and the requirement of professional registration for certifying persons under the "Alternative Certification' option. Two new references have been added to augment implementation guidance. These are, (i) National Stormwater Best Management Practices (BMP) Database, Version 1.0, and (ii) Denver *Urban Storm Drainage Criteria Manual, Volume 3 – Best Management Practices.*

In the Change Sheet, cross-reference to pages and paragraphs are for the 'Marked-up Version' dated January 21, 2000. New text added to a sentence is indicated by underline.

Background

1. Page 2 paragraph three, Clarify that a City has to adopt same requirements for the Citywide SUSMP

   Sentence changed to read, "The Permittees are required to adopt the requirements set herein in their own SUSMP."

2. Page 2 paragraph 3, Delete reference to Urban Storm Water Mitigation to avoid confusion

   Sentence changed to read, "Each Permittee will approve the project plan as part of the development plan approval process....

3. Page 3 paragraph 2, Clarify the environmentally sensitive area category.

   Sentence changed to read, "Location within or directly adjacent to or discharging directly to an environmentally sensitive area.

4. Page 3 paragraph 2, Make requirement applicable to stand-alone parking lots only

   Sentence changed to read, "Commercial stand-alone parking lots 5,000 square feet or more.....

Definitions

5. Order definitions alphabetically

   Definitions reordered alpha-numerically

6. Page 3, Delete exceptions in the definition of Automotive Repair Shop

   Exceptions deleted, now reads, "Automotive Repair Shop" means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539."

7. Page 3, paragraph 3, Modify definition of 100,000 square foot commercial development for simplicity.

   Definition changed to read, "any commercial development that creates at least 100,000 square feet of impermeable area, including parking areas".

8. Page 4 paragraph, 2, Add references for environmentally sensitive areas

   References added for Areas of Special Biological Significance and Area of Ecological Significance.

9. Page 4, paragraph 8, Change definition to include a threshold trigger for requirements to apply to redevelopment

   Definition changed to read, "Redevelopment" means, on an already developed site, the creation or addition of fifty percent or more of impervious surfaces or the making of improvements to fifty percent or more of the existing structure. Redevelopment includes.....

10. Page 5, paragraph 1, Change definition to clarify 'primarily engaged'.

    Definition changed to read, ""Retail Gasoline Outlet" means a facility engaged in selling gasoline and lubricating oils, which derives more than fifty percent of its annual gross receipts from the sale of gasoline, lubricating oils tires, batteries, automobile parts and other automotive services.

11. Page 5, Define a storm event

    Defined storm event to mean, "a rainfall event that produces more than 0.1 inch of precipitation and that, which is separated from the previous storm event by at least 72 hours of dry weather."

SUSMP Provisions Applicable to All Categories

12. Page 7, paragraph 2, Change sentence for clarity

    Sentence changed to read, "....shall not exceed the estimated pre-development rate for developments where it is reasonably foreseeable that the increased peak storm water discharge rate will result in increased potential for downstream erosion."

13. Page 7, paragraph 3, Delete text that makes act dependent on effort

    Sentence changed to read, "Concentrate or cluster Development on portions of a site while leaving the remaining land in a natural undisturbed condition."

14. Page 7, paragraph 4, Change sentence for clarity

    Sentence changed to read, "...or the detectable inputs of the pollutant are at a concentrations or loads considered potentially toxic to humans and/or flora and fauna."

15. Page 8, paragraph 1, Add reference

    Added reference, "Denver *Urban Storm Drainage Criteria Manual, Volume 3 – Best Management Practices*"

16. Page 8, paragraph 1, Add text to enable BMP combination alternative

    Added text to read, "However, it is possible that a combination of BMPs not so designated, may in a particular circumstance, be better suited to maximize the reduction of the pollutants".

Alternative Certification

34. Page 16, paragraph 1, Change sentences to require professional registration and recommend training verification.

    Sentences added to read "...accept a signed certification from a Civil Engineer or a Licensed Architect registered in the State of California, that the plan meets the criteria." And, "The Permittee is encouraged to verify that certifying person(s) have been trained on BMP design for water quality, not more than two years prior to the signature date."

    Reference added, "National Stormwater Best Management Practices (BMP) Database, Version 1.0"

STANDARD URBAN STORM WATER MITIGATION PLANS

SUMMARY OF COMMENTS RECEIVED (SINCE DECEMBER 6, 1999) AND RESPONSE - SUPPLEMENT

COMMENTER	COMMENT	RESPONSE	ACTION
General Claremont, West Covina, CRA, EAC, New Hall Land	1. Postpone issuance of SUSMP until SUSMP recirculated for further study and comment.	SUSMP was public noticed to provide a 30 day review period	No action recommended
Diamond Bar West Covina, EAC, New Hall Land.	2. Should not enlarge scope of SUSMPs to include two new categories: parking lots & environmentally sensitive areas. Defer to for consideration in next permit.	Categories are already included in Long Beach permit. RB Executive Officer has discretionary authority to designate additional sources of pollutants for management.	No action recommended
City of Long Beach: Attorney	3. Revise findings in Tentative Resolution to reflect two separate permits are affected by this resolution.	Changes to the Tentative Resolution will be considered.	Will amend resolution
Diamond Bar, EAC	4. No notice to meet has been issued for the SUSMP deficiency.	RB Executive Officer has met with parties repeatedly.	No action recommended
Heal the Bay, NRDC	5. Change "Retail Gasoline Outlet" definitions to include all facilities with gas pumps.	Definition has been changed to clarify primary activity, which is the more than 50 percent sale of automotive related products.	Amended definition
West Covina, EAC, CEA, , County of LA Dept. of Public Works, Heal the Bay, State of California Santa Monica Mountains Conservancy	6. Make definitions unambiguous (Hillside, Environmentally Sensitive Areas, Redevelopment)	Will revise definitions based on comments	Amended definitions
Heal the Bay, NRDC	7. Change the "Hillside" definition- grading with occur naturally where slope is 15% or greater & plans include cut or fill slopes 30 feet high or greater.	Definition has been changed to 25 percent natural slope.	Amended definitions
Public Works Agency County of Ventura	8. Require protection of unconfined groundwater basins	Protection of unconfined may be an appropriate consideration	No action recommended at this time.
City of Rancho Palos Verdes, EAC	9. Include numerical standard trigger for hillside SUSMP to 1 acre or more.	Hillside has been defined on 25 percent slope. No basis for acreage threshold.	Amended definitions
South Gate, EAC	8. Available guidelines to "conserve natural areas" are too vague for implementation	Disagree. Guidelines are sufficiently clear without being prescriptive.	No action recommended
County of LA Dept. of Public Works,	10. Delete the statement, " "each Permittee will approve an USMP" because it is not consistent with the Model Program.	The sentence has been changed to delete the USMP reference.	Amended sentence

COMMENTER	COMMENT	RESPONSE	ACTION
State of California Santa Monica Mountains Conservancy	11. Require that funds be available to provide for BMP Maintenance.	BMP maintenance is a necessary component of SUSMP implementation. Permittees are best able to identify source of funds.	No action recommended
California Coastal Commission	12. SUSMP requirements as is will improve water quality	Requirements are intended to minimize water quality impacts of development.	No action recommended
Technical AbTech Industries, Air Liquide, AKERS Entertainment Marketing, California Coastal Commission, CALPIRG, CDS Technologies Inc., La Canada Flintridge, Pasadena: Public Works & Transportation Department, South Gate, Cruz/Kravetz: IDEAS, JBI Process Equipment, Ballona Wetlands Foundation, Center for Marine Conservation, Center for Watershed Protection, 13 Citizen Comment Letters, Community Coalition for Change, County of LA Dept. of Public Works, Defend the Bay, Earth Communications Office, Environmental Defense Center, Friends of the LA River, Heal the Bay, Malibu Bay Company, NRDC, Public Works Agency Ventura County, Santa Monica Baykeeper, Sierra Club, South Bay Surfrider Chapter, Stainless Industrial Companies, University of Alabama, University of Georgia	13. Support the "3/4-inch" criteria because it is a Design Standard not a "Numerical Limit". The standard is reasonable for storm water runoff and makes economic sense for the greater Los Angeles area.	The design is statistically based and reasonable.	No change recommended
Ventura County Flood Control District	14. Peak Flow Rate control condition for BMP design indicates confusion between requirements for peak flow rate control versus a standard that allows the use of low flow-based water quality treatment control BMPs.	The peak flow rate condition is intended to limit down-stream erosion and over-bank flooding. Criteria for flow-sensitive BMPs will need to be developed in the future. Suggest BMP use consistent with manufacturer specs for now.	No action recommended at this time.
Ventura County Flood Control District	15. SUSMP design options are not technically equivalent- request a review of backup calculations and modifications of the percent capture to reflect equivalent standards.	Reviewed calculations and corrected percent capture to 80 percent.	Design standard for percent capture amended.
San Gabriel Valley Council of Gov'ts, South Bay Cities Council of Gov'ts	16. Defer inclusion of numeric standards until an evaluation of effectiveness treatment control BMPs for the pollutants of concern .	The numeric design standard has no bearing on effectiveness. BMP effectiveness data is available from national databases.	No action recommended.

COMMENTER	COMMENT	RESPONSE	ACTION
San Gabriel Valley Council of Govts, South Bay Cities Council of Govts	17. Defer inclusion of numeric standards into SUSMPs until an "out clause" has been established in the event a numeric standard can't be met for reasons of economy or feasibility.	The SUSMP already includes a waiver for recognized conditions when implementation of the design standard is impracticable.	No action recommended.
ASCE-Los Angeles Section, BIA, CEA, City of Long Beach: Office of City Attorney, EAC, New Hall Land, San Gabriel Valley Council of Govts, South Bay Cities Council of Govts	18. Empirical data on the efficacy of numerical design standards as a minimum are unavailable. There is also lack of data proving the numerical standards are cost effective.	Disagree. See discussion in Staff Report.	No action recommended.
SCAG	19. The use of "numeric standards" should be used as a "backup" policy, not a "front-end" policy, when identified priority pollution problems are not mitigated.	Federal regulations require that pollutants in storm water be reduced to the maximum extent practicable. A design standard is proper.	No action recommended.
West Covina, County of LA Dept. of Public Works, EAC	20. SUSMP should not apply to storm water runoff which does not flow across a source of pollutants.	SUSMP applies to the total project. Treatment mitigation credit is allowed for directly connected roof surface area.	No action recommended.
West Covina	21. Include a parking lot credit for use of vegetation on parking lot islands.	Parking lot requirements promote infiltration. Separate credit is not required for island areas.	No action recommended.
Heal the Bay, NRDC, Malibu Bay Company, USEPA, Ventura County Flood Control District	22. Remove the roofing exclusion in order not to encourage increase in impervious areas	Roofing exclusion credit is limited to situations where water quality impact is minimal.	No action recommended.
Heal the Bay, NRDC	23. Remove small restaurant exemption- no correlation between the size of a restaurant and amount of pollution it produces.	Small restaurant exemption applies only for BMP design standard criteria. All other requirements remain the same.	No action recommended.
Legal West Covina, Heal the Bay	24. State legal basis for Permittee City to take remedial action against a private party.	Legal basis will be applicable provisions in the federal Clean Water Act, the State Water Code, the MS4 permit, and local codes and ordinances	No action recommended.
Calf. SWQTF	25. Requirements intrude into local government responsibility and have more than regional significance.	Requirements are proposed consistent with federal storm water regulations. See Staff Report, Section 8: Legal and Regulatory Basis	No action recommended.
State of California Santa Monica Mountains Conservancy	26. The SUSMP Waiver section provides loopholes for developers to use.	Waiver provision provides relief if impracticability is established.	No action recommended.
USEPA	27. The requirements of the proposed SUSMP are consistent with the requirements of the CWA, applicable NPDES regulation, and EPA guidance.	Agree that requirements are consistent with state and federal law.	No action recommended.
NRDC	28. Eliminate the Self-Certification option for SUSMP review.	The third party certification option is intended to limit resource demands on municipalities. Will discourage use of the option for significant projects.	No action recommended.

Standard Urban Storm Water Mitigation Plans (SUSMPs)

Presentation to
the Regional Board
January 26, 2000

Xavier Swamikannu
California Regional Water Quality Control Board,
Los Angeles Region

Numerical Storm Water Mitigation Standard

Four different and equivalent methods to determine BMP sizing criteria

- Maximized volume capture (WEF Method)
- Percent volume treatment (CA Handbook)
- All events up to 0.75 inch 24-hr precipitation
- Historical record 85th percentile rainfall event

No Flow Sensitive Standard At This Time

WEF Design Standard

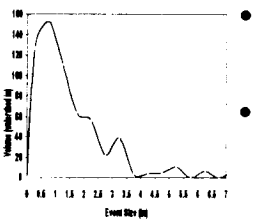
The Design Storm

$$P_o = a.C.P_A$$

P_o - Maximized water quality "treatment" volume
a - "Treatment" volume coefficient
C - Area runoff coefficient
P_A - Mean storm precipitation volume

Range in coastal CA for 85% annual runoff "treatment"
- 0.12 inch - 0.86 inch

Principle



- Largest volumes of runoff are produced by smaller storms
- Criteria promotes BMP application to smaller more frequent storms

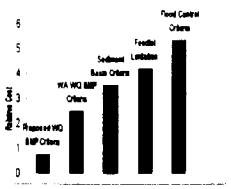
Translation

- Criterion is averaged for local communities
- Further increase in value results in fewer and fewer rainfall events being captured. ("point of diminishing returns")
- Eight-five percent of rainfall events are equal to or less than the criterion
- "First flush" pollutant concentration peaks will be treated
- Approximately eight-five percent of long term pollutant load can be reduced.

Bases

- Technically defensible
- Based on local data and nationally accepted methods
- Criteria in use by other communities range from 0.5 to 2 inches (TX, FL, WA, MD, CO)
- Similar criteria in use by Santa Monica, Calabasas, Ventura County, and unincorporated LA County

Relative Cost Comparison



- Relative cost much less than similar storm water criteria.
- Comparable criteria for wet regions, e.g., Pacific Northwest is higher.

BMP Cost

- Five Acre Commercial Development
  - Project Cost is $6.5 million
  - Detention Basin BMP (Example 1)
    - Excavation and Haul away = $12,870
    - Land Cost = $28,800
    - Maintenance (1 / year cleanout) = $33
    - Total Cost = About $42,000
  - Mitigation Percent Cost = 0.6 %

BMP Cost

- Infiltration Trench and Vegetated Swale BMPs (Example 2)
  - Trench with Gravel = $13,500
  - Land Cost = Minimal
  - Maintenance (5 yr replacement) = $1350 per yr
  - Swale = $4050
  - Land Cost / Maintenance = Within Landscaping
  - Combined Cost = About $19,000
- Mitigation Percent Cost = 0.3 %

Generalizations

- Numerical standard provides flexibility in choice of BMPs
- Mitigation cost not likely to exceed environmental mitigation reasonable cost threshold (about 5 percent)
- BMP choice must be made on BMP effectiveness
- BMP choice may consider ease of maintenance

The Los Angeles County Municipal Stormwater Permit and Standard Urban Storm Water Mitigation Plans (SUSMPs)

A comprehensive municipal stormwater permit

- **Municipal Stormwater Permits required by Clean Water Act Amendments - 1987**
  - » **Los Angeles County MS4 Permit Issued - 1990**
  - » ***Reissued - LA County 1996***
  - » **Long Beach individual permit -1999**
- **Standard Urban Stormwater Mitigation Plans (SUSMPs) required**

Standard Urban Storm Water Mitigation Plans

- SUSMP categories:
  - » 10 or more home sub-division projects
  - » 100,000 sq. ft. commercial developments
  - » gas stations
  - » restaurants
  - » automotive repair facilities
  - » single family hillside dwellings
- **Applies to new developments and substantial redevelopment**

Los Angeles Permit Elements

- Discharge Prohibitions
- Receiving Water Limitations
- Continuation of 1990 Permit Requirements
- Stormwater Management Program
  - » 5 distinct program elements

Stormwater Management Program

- Five Elements
  - » Illicit Connections and Illicit Discharges
  - » Development Planning and Construction
  - » Public Agency Activities
  - » Public Information
  - » Monitoring

Scope of the Problem...

- LA River (1997-98 season)
  - » 2,670 lbs/season of dissolved Cadmium, 56,000 lbs of copper, 103,000 lbs of lead, 336,000 lbs of zinc (total loading is much higher)
- San Gabriel River (1997-98 season)
  - » 1,120 lbs of copper, 901 lbs of lead, 8,840 lbs of zinc, 2,230 lbs of cyanide

Scope of the Problem...

- Ballona Creek (1997-98 season)
  - » 1,510 lb/season of dissolved copper, 967 lbs of lead, 7,710 lbs of zinc (total loading is much higher)
- Not including other parameters such as oil and grease, hundreds of tons of trash and debris, bacteria loadings

Our Waters are Impaired

- Rivers and harbors are listed on the federal 303 (d) list of impaired waters
- Listing requires that Total Maximum Daily Loads (TMDLs) be established
- A 13 year process for the Regional Board (pursuant to a federal consent decree)

Water Quality Impairments have Consequences

- Huntington Beach closure last summer
- Additional loadings of toxic pollutants
- Strong regulatory responses if improvements in water quality don't occur

Proposal History

- **Based on 1996 Permit Requirements**
- **August 10, 1999 Public Workshop**
  - » **Initial proposal a consensus document prepared by Co-Permittees (LA County and municipalities)**
  - » **SUSMPs Submitted for Executive Officer approval**
- **September 16, 1999 Public Hearing**
  - » **Additional time for development of record and proposal revision**
- **December 7, 1999 Formal Proposal**

December 7th SUSMP Proposal

- **Requirements applicable to all SUSMP categories include:**
  - » **Peak Stormwater Runoff Rates**
  - » **Conservation of Natural Areas**
  - » **Minimization of stormwater pollution though use of BMPs**
  - » **Protection of Slopes and Channels**
  - » **Providing storm drain identification**
  - » **Proper design of outside storage areas**
  - » **Proper design of trash storage areas**
  - » **Establishing proof of long-term BMP maintenance, and**
  - » **Design standards for treatment controls**

December 7th SUSMP Proposal

- New categories
  - » Parking Lots
  - » Environmentally Sensitive Areas
- Flexibility Features
  - » Waiver Provision
    - – risk to groundwater
    - – inadequate space
    - – poor soil conditions

December 7th SUSMP Proposal

- Alternative certification
  - » allows co-permittees to rely on certified professionals to verify project plans conform to SUSMP requirements

The SUSMP Proposal

- Think of the proposal as being two separate proposals
  - » "Basic Package"
    - – Everything but the design standard
  - » "Numerical Design Standard"

Changes to the Proposal

- Change Sheet
  - » Hillside definition
  - » Parking lots
  - » Redevelopment threshold
  - » Environmentally Sensitive Areas

Controversies

- Waiver Provision
  - » intended to provide flexibility
- Numerical Design Standards
  - » determines BMP size
  - » no performance standard for BMPs
  - » a long-term solution
  - » exempts restaurants <5,000 sq ft

Controversies

- Rooftop Runoff Exemption
  - » no current definitive information to justify including this large volume of water
  - » exemption allows for BMPs to be smaller and less costly
  - » strict applicability provides that the exemption will not be abused

Controversies

- Rooftop Runoff Exemption Applicability Criteria
  - » **applies if drainage is diverted to storm drain system**
    - – **allows cleaner runoff to not co-mingle with polluted runoff**
  - » **roofing materials are inherently polluting**
  - » **presence of pollutants through vents or pollution controls**
  - » **cannot divert runoff to a natural stream**
    - – **addresses the volume concern**

Options for Board Action

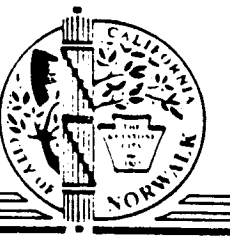
- Numerical Standard
  - » Require a large runoff number (>0.75 in)
  - » Require the 0.75 inch standard
  - » Require a smaller runoff number (<0.75 in)
  - » Reject the concept of a numerical standard

Options for Board Action

- If recommended, apply the numerical standard
  - » as soon as possible
  - » phased in over time
  - » applicable at a future date certain
  - » concurrent with the next permit (July 2001)

Options for Board Action

- If recommended, apply the numerical standard
  - » to all categories
  - » only some categories
  - » contingent upon some additional evidentiary showings



City of NORWALK

12700 NORWALK BLVD., P.O. BOX 1030, NORWALK, CA 90651-1030 • PHONE: 562/929-5700 • FACSIMILE: 562/929-5773

October 7, 1999

Mr. Dennis Dickerson
Executive Officer
California Regional Water Quality
Control Board
320 West Fourth Street, Suite 200
Los Angeles, California 90013-1105

Dear Mr. Dickerson:

Subject: Resolution No. 99-42

At its meeting of September 21, 1999, the City Council adopted Resolution No. 99-42, A Resolution of the City Council of the City of Norwalk urging the Los Angeles Regional Water Quality Control Board, to direct staff not to impose numeric limits on the treatment and/or retention of storm water runoff from new developments pursuant to the Los Angeles County Municipal NPDES Permit.

If you have any questions regarding this matter, please call Jerry Stock, Acting City Engineer, at (562) 929-5727.

Sincerely,

Gail A. Vasquez
City Clerk

11-64

R0068274

RESOLUTION NO. 99-42

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF NORWALK URGING THE LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD TO DIRECT STAFF NOT TO IMPOSE NUMERIC LIMITS ON THE TREATMENT AND/OR RETENTION OF STORM WATER RUNOFF FROM NEW DEVELOPMENTS PURSUANT TO THE LOS ANGELES COUNTY MUNICIPAL NPDES PERMIT

THE CITY COUNCIL OF THE CITY OF NORWALK DOES RESOLVE AS FOLLOWS:

WHEREAS, the Executive Officer of the Los Angeles Regional Water Quality Control Board is considering the incorporation of numeric limits into the Standard Urban Storm Water Runoff Mitigation Plans, a component of the Development Planning Model Program, as required by the current National Pollutant Discharge Elimination System (NPDES);

WHEREAS, such numeric limits are intended to specify the volume of stormwater runoff that must be retained and/or treated from seven categories of new development projects: gas stations, restaurants, auto repair facilities, 10 to 99 home sub-divisions, 100 plus home sub-divisions, single-family hillside homes, and commercial developments greater than 100,000 square feet in size;

WHEREAS, achieving the goals of the proposed numeric limits would necessitate the imposition of structural controls on specified new developments, such controls include but are not limited to detention or infiltration basins, wet ponds, storm drain-connected oil/grit separators, catch basin inserts, grassy swells, and other such facilities that achieve the desired retention or treatment requirements;

WHEREAS, such structural controls are being recommended without region specific studies detailing their effectiveness, without detailed cost-benefit analysis, and without a proven link between construction of structural controls and improvement of our receiving waters;

WHEREAS, without such studies and justification, imposing such requirements on developers and property would negatively effect economic development by adding unjustified construction, operation and maintenance costs to subject projects, costs that a developer would not be required to pay in other Counties of the State;

WHEREAS, such structural controls, if not properly designed or maintained, could themselves become greater sources of pollution than the original problem they are intended to mitigate;

WHEREAS, retention and/or treatment of stormwater based on numeric limits are not specifically mandated in the current municipal NPDES permit and may constitute an unfunded state mandate as currently proposed;

NOW, THEREFORE, be it further determined and resolved by the City Council of the City of Norwalk as follows:

SECTION 1. The City Council advise the Los Angeles Regional Water Quality Control Board of its opposition to the incorporation of numeric limits into the Standard Urban Stormwater Runoff Mitigation Plans without first obtaining regional specific data as to their effectiveness, detailed cost-benefit analysis, and provide evidence of a direct link between construction of structural controls and improvement of our receiving waters.

SECTION 2. The City Council recommend the Regional Board approve the Standard Urban Storm Water Mitigation Plan as original submitted by the Los Angeles County on behalf of all permittees that did not contain the numeric limit language.

SECTION 3. Direct staff to present this Resolution to the Los Angeles Regional Water Quality Control Board.

SECTION 4. The City Clerk shall certify to the adoption of this resolution and the same shall be effective on the date of adoption.

PASSED, APPROVED AND ADOPTED THIS 21st DAY OF September 1999.

/s/
MICHAEL MENDEZ
MAYOR

ATTEST:

I, **Bonnie Hernandez-Strait**, Deputy City Clerk of the City of Norwalk, California **DO HEREBY CERTIFY** that the foregoing Resolution, being **Resolution No. 99-42** has been duly signed by the Mayor and attested by the Deputy City Clerk, all at a regular meeting of the Norwalk City Council, held September 21, 1999 and that the same was approved and adopted by the following vote to wit:

AYES: **COUNCILMEMBERS LUERA, STEFENHAGEN, VICE MAYOR KELLEY AND MAYOR MENDEZ**
NOES: **NONE**
ABSENT: **COUNCILMEMBER BERMÚDEZ**

/s/

Re: Standard Urban Storm Water Mitigation Plans

Dear Mr. Dickerson:

Please accept my apologies for the delay in submitting this set of informal comments on the proposed Draft Standard Urban Storm Water Mitigation Plans ("SUSMPs"). These comments are submitted on behalf of the Cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance.

Here are some of the items in the SUSMPs which, in my view, raise serious legal issues:

1. In the "**BACKGROUND**" section of each SUSMP, in the second paragraph, the sole legal basis given is the 1987 amendments to the Clean Water Act. If a City were to attempt to defend its reliance on the Storm Water Permit, (and it may, if a developer says "you can't require me do to that...") the City should have all possible legal authority at its disposal. The SUSMPs' reliance on only one source, the '87 CWA amendments, is not, in my view, a good legal move. It would put a city in the position of betting the outcome of the lawsuit on one, but only one, source of authority. The corrective action: I'd cite the federal and California Constitutions, Porter-Cologne, the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), the Resource Conservation and Recovery Act (RCRA), and the Health & Safety codes, too.

2. In the "**BACKGROUND**" section of each SUSMP, in the third paragraph, the third sentence is directive in nature: "This SUSMP outlines ***the necessary*** Best Management Practices (BMPs) which ***must*** be incorporated into design plans for [name of SUSMP] projects." Please note that the sentence does not say "some of which" or "Cities may select the appropriate measures from among..." This language, unless modified, it could be argued, leaves a **City with no discretion at all:** a City would have to require that **all measures in a SUSMP** must be incorporated into all design plans for that type of development. Yes, that may not be what was intended. But it could be argued to be the plain meaning of what is in the SUSMPs, and that is how a judge might construe it. The fix: Make it clear that the SUSMPs contain BMPs which, as **appropriate**, are among those which a City may require of a developer. Add a variance procedure, to deal with the inevitable situation when none of the BMPs will work.

3. In Section 3 ("PROVIDE STORM DRAIN SYSTEM STENCILING AND SIGNAGE") (a requirement in every SUSMP), in the second bullet point: no hint is given that anything less than placement of signs along ***every*** channel and ***every*** creek, both upstream and downstream, ***from the mountains all the way to the sea***, is what is required. Am I making this up? No. (Remember, in 2, above, the language is directive: "...***the necessary*** Best Management Practices (BMPs) which ***must*** be incorporated...") Just how a developer is to gain access to a stream bank owned by a third party, to place those signs, is also not explained. The "takings issues" (of private riverfront property for the public use of erecting the signs, without just compensation) and First Amendment problems (forcing, somehow, property owners of property adjacent to streams to be unwilling hosts of forced speech, i.e., the anti-dumping signs) raise possibly insurmountable Constitutional issues. The correction: Make it clear that the sign requirement is among those which may be appropriate, but that it is limited to those streams and storm drains adjacent to the project in question.

4. The design requirements of the SUSMPs should be reviewed by Building Officials and Fire Departments for consistency with UBC, UFC, etc..

5. As to "BMP MAINTENANCE" requirements, the requirement to have the developer "sign a statement declaring responsibility for all structural BMP maintenance until the time the property is transferred" is a nice concept, but enforcement would be difficult or impossible. If the "statement" is not a contract, it could be argued that the City has no standing to enforce the "statement." As to maintenance after the transfer of property, the notion that the City, through the use of the "statement," could require the seller to impose conditions on a buyer, which

are not part of any CUP, contract or ordinance could be viewed as an unconstitutional restraint on alienation, and could subject the City to a "takings" claim under the federal and state constitutions. Enforcing this "condition" against the buyer, or worse yet, the third or fourth buyer down the chain of title, without benefit of a CUP, CEQA mitigation requirement or ordinance, could be difficult at best. Suggestion: Recall that these SUSMPs are to apply only to discretionary projects, triggering, one assumes, CEQA. If so, make these conditions CEQA mitigation requirements. And make them part of any CUP, if a CUP is required. In addition, and of great concern, is that the SUSMPs do not provide for any sort of funding mechanism for the new roles thrust upon the Cities in the area of enforcement of SUSMP maintenance enforcement.

In summary, some problems may be encountered with the present methodology. Some of the language is, I think, overbroad. (The wrong saddle on the right horse.) There are other ways to accomplish the goals. I hope these initial comments are helpful. I have also taken the liberty of preparing a revised sample SUSMP It is enclosed

The Cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance wish to make clear that the submission of these comments on their behalf should not be construed as a waiver of further comments, or at to the right to raise any further objections to the Draft SUSMPs.

Very truly yours,

RUFUS C. YOUNG, JR.
of BURKE, WILLIAMS & SORENSEN, LLP

RESTAURANT

STANDARD URBAN STORM WATER MITIGATION PLAN

DEFINITION

A restaurant is a facility that sells prepared foods and drinks for consumption. The term "restaurant" includes, but is not limited to ~~including~~ stationary lunch counters and refreshment stands ~~selling~~ where prepared foods and drinks are sold for immediate consumption. (All facilities within SIC code 5812 are included in the term "Restaurant.")

BACKGROUND

The municipal storm water National Pollutant Discharge Elimination System (NPDES) permit (Permit) (NPDES No. CAS614001) issued to Los Angeles County and 85 cities (Permittees) by the Los Angeles Regional Water Quality Control Board (Regional Board) on July 15, 1996, ~~required~~ requires the development and implementation of a program addressing ~~stormwater~~storm water pollution issues in development planning for private projects.

The requirement to implement a program addressing development planning is based on, among other things, ~~the primary objectives of~~ Section 402(p) of the Clean Water Act, the Coastal Zone Act Reauthorizations Amendments of 1990 ("CZARA"), the California Water Code, the Comprehensive ~~Enviromental~~Environmental Response, Compensation and ~~Libility~~Liability Act ("CERCLA"), 42 U.S.C. §§ 9601, et seq., and the Resource Conservation and Recovery Act, 42 U.S.C. §§ 6901, et seq. The 1987 amendments to the Clean Water Act ~~that~~ established a framework for regulating ~~stormwater~~storm water discharges from municipal, industrial, and construction activities under the NPDES. The primary objectives of the Municipal Storm Water requirements are to:

- Effectively prohibit non-storm water discharges, and
- Reduce the discharge of pollutants from ~~stormwater~~storm water conveyance systems to the Maximum Extent Practicable.

This Standard Urban ~~Stormwater~~Storm water Mitigation Plan (SUSMP) was developed as part of the program to addressing Development ~~Planning for~~ by the private sector. The Permittees are to~~will~~ use ~~this~~ SUSMPs as guides for development into ~~develop~~ their ~~own~~ respective ~~city~~ jurisdiction-wide SUSMPs. The SUSMPs apply only to Discretionary projects (as defined by CEQA), that fall into one of the seven categories: (10-99 Home Subdivision, 100+ Home Subdivision, Single-Family Hillside Residence, 100,000 Square Foot Commercial Development, Automotive Repair Shop, Retail Gasoline Outlet, and Restaurant). Permitees are to require project proponents~~will need~~ to implement, to the extent practicable, ~~the appropriate~~ appropriate SUSMP requirements into ~~their~~ project plans. This SUSMP outlines ~~the necessary~~ Best

Management Practices (BMPs) which must be considered for possible ~~incorporated~~ incorporation, to the extent practicable, into design plans for Restaurant projects. Should any SUSMP provision conflict ~~be discovered~~ with ~~the new guidelines and~~ any pre-existing regulation or ordinance, such as, for example, a Building Code requirement, the pre-existing regulation ~~will~~ shall control. ~~prevail.~~

For development projects where the cost of new improvements exceeds a ~~pre-determined~~ threshold determined by the Permitee, the new and the existing improvements shall comply with this SUSMP. When the cost of new improvements is less than the ~~pre-determined~~ threshold determined by the Permitee, only the new improvements need to comply with this SUSMP. The pre-determined threshold shall be consistent with the local jurisdiction's policy for application of other building codes to new improvements.

REQUIREMENTS

1. PEAK STORM WATER RUNOFF DISCHARGE RATES

Peak storm water runoff discharge rates shall not exceed estimated pre-development levels for developments where an increased peak storm water discharge rate ~~may~~ foreseeable will cause ~~result in~~ ~~an~~ increased ~~potential for~~ downstream erosion.

2. PROTECT SLOPES AND CHANNELS

If applicable, ~~the~~ project plans must include those BMPs which are practicable to implement and which are consistent with ~~local~~ the Permitee's codes and ordinances, to decrease the potential of slopes and/or channels from eroding and impacting ~~stormwater~~ storm water runoff:

- Convey runoff safely from the tops of slopes and stabilize disturbed slopes.
- Stabilize permanent channel crossings.
- Vegetate slopes with native or drought tolerant vegetation.
- With approval of all agencies with jurisdiction, e.g., the Army Corps of Engineers and the California Department of Fish & Game, ~~Install~~ install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels

that enter unlined channels in accordance with applicable specifications to minimize erosion.

3. PROPERLY DESIGN EQUIPMENT/ACCESSORY WASH AREAS

Equipment/accessory washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to ~~the~~ a ~~stormwater~~storm water conveyance system. To alleviate this problem, include in the project plans an area for the washing/steam cleaning of equipment and accessories. This area must meet the following requirements, consistent with building codes:

- This area must be self-contained, equipped with a grease trap, ~~and~~ properly connected to a sanitary sewer or retention tank.
- If this wash area is to be located outdoors, it must be covered, paved, have secondary containment, and be connected to the sanitary sewer or retention tank.

4. PROVIDE STORM DRAIN SYSTEM STENCILING AND SIGNAGE

Storm drain stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets. The stencil contains a brief statement that prohibits the dumping of improper materials into the ~~stormwater~~storm water conveyance system. Graphical icons, either illustrating anti-dumping symbols or images of receiving water fauna, are effective supplements to the anti-dumping message.

- All new storm drain inlets and catch basins constructed as part of the project not already ~~steneilled~~stenciled, must be stenciled with prohibitive language (such as: "NO DUMPING - DRAINS TO OCEAN") and/or graphical icons to discourage illegal dumping.

- Signs and prohibitive language and/or graphical icons discouraging illegal dumping must be posted along the portion of channels and creeks, if any, which are adjacent to the project, if it is ~~preacticable~~practicable to obtain legal approval from the property owner.

- Legibility of stencils and signs must be maintained.

5. PROPERLY DESIGN OUTDOOR MATERIAL STORAGE AREAS

Improper storage of materials outdoors ~~can~~ could allow ~~toxic compounds, oil and grease, heavy metals, nutrients, and suspended solids~~ pollutants to enter the ~~stormwater~~storm water conveyance system. Where proposed project plans or activities ~~may result in~~ include outdoor areas for storage or uses ~~of materials~~ that may contribute pollutants to the ~~stormwater~~storm water conveyance system, the following structural BMPs are required:

- Areas where materials are to be stored must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar structure that prevents contact with runoff or spillage to the storm water conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

- The storage area must be paved and sufficiently impervious to contain leaks and spills.

- Where feasible, the storage area should have a roof or awning to minimize collection of storm water within the secondary containment area.

6. PROPERLY DESIGN TRASH STORAGE AREAS

Loose trash and debris can be easily transported by the forces of water or wind into nearby storm drain inlets, channels, and/or creeks. All trash container areas on projects subject to this SUSMP must meet the following requirements:

- ~~Trash container areas must have drainage~~Drainage from ~~adjoining~~ roofs and pavement shall be diverted around trash container areas~~the area(s)~~.
- Trash container areas must be screened or walled to prevent unintended off-site transport of trash.

7. PROVIDE PROOF OF ONGOING BMP MAINTENANCE

Improper maintenance is one of the most common reasons for water quality controls to not function as designed or to fail entirely. It is important to consider who will be responsible for maintenance of a permanent BMP, and what equipment is required to perform the maintenance properly. As part of project review, if a project applicant has included (or will be required to include) structural BMPs in project plans, Permittees ~~staff~~ will require that the applicant provide verification of maintenance provisions through such means as may be appropriate, including, but not limited to structural ~~dseign~~design, legal agreements, covenants, CEQA mitigation requirements and/or Conditional Use Permits.

~~For all properties, this verification will consist of having the developer sign a statement declaring responsibility for all structural BMP maintenance until the time the property is transferred. This transfer of property must have conditions requiring the recipient to assume responsibility for maintenance of any structural BMPs to be included in the sales or lease agreement for that property, and will be the owner's responsibility.~~

If structural BMPs are located within a public area proposed for transfer of title to a public agency, they will be the responsibility of the developer until they are accepted for transfer by the County or other appropriate public agency. ~~The structural BMP proposed for transfer will need prior approval from the County or other appropriate public agency and will be considered on a case by case basis.~~

320 West 4th Street, Suite 200
Los Angeles, California 90013-1105

Re: Standard Urban Storm Water Mitigation Plans; Request for Delay in Issuance in Light of Phase I Storm Water Efficiency Reports Required by Recent Legislation

Dear Mr. Dickerson:

This letter requests that you delay issuance of the proposed Standard Urban Storm Water Mitigation Plans ("SUSMPs"). As you may already be aware, § 431 of PL 106-74, which the President signed on October 20, requires the Administrator of the U.S. EPA to make two reports to Congress. Within 120 days after PL 106-74's enactment, EPA must report on its "Phase I" storm water regulations to the Senate Committee on Environment and Public Works and to the House Committee on Transportation and Infrastructure. EPA must also report to these committees before publishing its "Phase II" storm water regulations. The agency must publish both reports in the Federal Register for public comment.

The report on the "Phase I" storm water regulations must ***explain in detail*** what improvement, if any, they have caused in national water quality. This report must describe specific measures which have or have not been successful.

The "Phase II" storm water report must contain four elements. First, it must analyze the likely effect of the regulations on urban, suburban, and rural local governments. In particular, EPA must estimate the costs of compliance with six "minimum control measures" in these storm water regulations; and of reducing the construction threshold from five acres to one. Second, EPA must explain why it reduced this threshold, stating what qualitative information it used to determine it. The agency must also explain, "in light of recent court decisions," why it was less arbitrary to choose one acre as its measure, instead of five. (This apparently is a reference to

American Trucking Ass'ns v. United States Environmental Protection Agency, 175 F.3d 1027 (D.C. Cir., 1999).[1] Third, EPA must demonstrate that storm water runoff is generally a problem in cities with populations between 50,000 100,000. In particular, the Administrator must explain why the population of a place, and not its water quality, determines whether it is regulated. Fourth, the report must contain information to support EPA's determination that it should administer the "Phase Two" storm water regulations as part of the NPDES.

Much of what the Congress is requiring of the Administrator quite clearly calls the SUSMPs now under your consideration into question. On behalf of the cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance, I ask you to report to the Regional Board that the Congress has passed legislation requiring the Administrator of the U.S. EPA to prepare "efficiency reports" on the Phase I storm water regulations and on aspects of the Phase II storm water regulations which have provisions parallel to the SUSMPs now under consideration. I further request that you delay, or seek the Board's approval to delay, issuance of the SUSMPs until the EPA Administrator's report is published and can be evaluated. For your convenience, a copy of § 431 of Public Law 106-74 is enclosed.

Very truly yours,

RUFUS C. YOUNG, JR.
of BURKE, WILLIAMS & SORENSEN, LLP

RCY

cc: City Managers/Administrators, Public Works Directors, Planning Directors and City Attorneys of the Cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance

[1] In the *American Trucking* case, the U.S. Court of Appeals for the District of Columbia Circuit held that the EPA's issuance of certain regulations under the Clean Air Act was based on an interpretation which constituted an unconstitutional delegation of the legislative authority of Congress. The court also held that EPA's selection of PM_{10} rather than some other size of soot as the threshold for regulation, was arbitrary and capricious).

Sec. 431. Promulgation of Stormwater Regulations.

(a) Stormwater Regulations.--The Administrator of the Environmental Protection Agency shall not promulgate the Phase II stormwater regulations until the Administrator submits to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report containing-- (1) an in-depth impact analysis on the effect the final regulations will have on urban, suburban, and rural local governments subject to the regulations, including an estimate of-- (A) the costs of complying with the six minimum control measures described in the regulations; and (B) the costs resulting from the lowering of the construction threshold from 5 acres to 1 acre; (2) an explanation of the rationale of the Administrator for lowering the construction site threshold from 5 acres to 1 acre, including-- (A) an explanation, in light of recent court decisions, of why a 1-acre measure is any less arbitrarily determined than a 5-acre measure; and (B) all qualitative information used in determining an acre threshold for a construction site; (3) documentation demonstrating that stormwater runoff is generally a problem in communities with populations of 50,000 to 100,000 (including an explanation of why the coverage of the regulation is based on a census-determined population instead of a water quality threshold); and (4) information that supports the position of the Administrator that the Phase II stormwater program should be administered as part of the National Pollutant Discharge Elimination System under section 402 of the Federal Water Pollution Control Act (33 U.S.C. 1342).

(b) Phase I Regulations.--No later than 120 days after the enactment of this Act, the Environmental Protection Agency shall submit to the Environment and Public Works Committee of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report containing a detailed explanation of the impact, if any, that the Phase I program has had in improving water quality in the United States (including [[Page 113 STAT. 1097]] a description of specific measures that have been successful and those that have been unsuccessful).

(c) Federal Register.--The reports described in subsections (a) and (b) shall be published in the Federal Register for public comment.

Proposed Standard Urban Storm Water Mitigation Plans (SUSMP's)

Dear Mr. Dickerson:

I am writing to address my understanding of the controversial ¾-inch figure you are proposing to include in the Los Angeles County SUSMP's. Several people have called this figure a "numerical limit". If this figure were a "numerical limit" I would join the battle against it.

A "numerical limit" is an enforcement target, which establishes the maximum quantity of a pollutant that may be present in storm runoff to be in compliance with a regulatory permit. The ¾-inch figure does not impose that burden on permittee's. If samples of storm water runoff are taken from a drainage system in Los Angeles County the testing agency cannot determine if any pollutants were caused by the ¾-inch of runoff from sites upstream. The storm runoff cannot be tested in that way.

I believe that the figure is in fact a "design standard" to be used by designers and cities alike to establish the amount of runoff that must be "treated" by priority projects, as defined in the Los Angeles County NPDES permit. The use of a design standard will allow all applicants to obtain uniform and fair treatment in every City that they approach. Currently, several cities are known to be strong proponents of Clean Water and enforce stringent rules on new development. Most cities comply with the permit requirements, but do not have well established design standards to reference. Thus, differing levels of compliance are obtained on the same issue. This unequal enforcement is not a problem as long as the minimum level of enforcement complies with relevant standards.

11-81

1327 Foothill Boulevard • La Cañada Flintridge • California 91011-2137 • (818) 790-8880 • FAX (818) 790-7536

A "design standard" is a tool to be used by designers and cities alike. As a design tool engineer and other design professionals can use their professional judgement to assure that the "design standard" is applied in a fair manner. The design professional identifying a problem with the standard as it would apply to his project can present facts to the City for consideration. If the City is convinced of the logic of an argument it can grant approval for an alternative design.

This flexibility is the key difference between a "numerical limit" and a "design standard". Professional judgement cannot be applied to a "numerical limit". I would encourage the Board to recognize ¾-inch rainfall as a design standard to be used to design facilities.

I will not be able to attend the Boards hearing on January 26, 2000, but I feel strongly that the reaction to the ¾-inch figure as a "numerical limit" is wrong.

Sincerely

IN REPLY PLEASE REFER TO FILE EP-3

Mr. Dennis A. Dickerson
California Regional Water Quality
Control Board - Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013-1105

Dear Mr. Dickerson:

STANDARD URBAN STORMWATER MITIGATION PLANS

The Los Angeles County Department of Public Works appreciates the challenge that the California Regional Water Quality Control Board, Los Angeles Region, has in trying to address the numerous and varied comments submitted on the Standard Urban Stormwater Mitigation Plans (SUSMPs). However, we have a serious concern that some of the recent changes either conflict with the already approved Model Program or are a major departure from the Development Planning Program that was negotiated and envisioned for the current National Pollutant Discharge Elimination System (NPDES) permit. The following are our comments that we would like you to consider before the January hearing.

SUSMP Categories

The two additional categories, parking lots and projects discharging into an "environmentally sensitive" area, are project characteristics that are already identified as priority projects in the Development Planning Program. The priority project categories identified in Part B of the checklist includes project locations adjoining, bisected by, or directly discharging to a designated environmentally sensitive area, riparian corridor or wetland and parking lots with greater than 200 parking spaces for any office, commercial or industrial use.

Also, the proposed SUSMP indicates that "each Permittee will approve an Urban Storm Water Mitigation Plan as part of the development process and prior to issuing building and grading permits for the projects covered by the SUSMP requirements." This is not consistent with the Model Program. The Model Program clearly states that the Urban Storm Water Mitigation Plans will be required for specific projects when SUSMPs are not appropriate and/or not adequate for the specific project in review. "For a Planning Priority Project, the respective SUSMP or the site-specific Urban Storm Water Mitigation Plan will be incorporated into the project design prior to the issuance of any grading or building permits." The statement in the SUSMP should be revised to be consistent with the wording in the Model Program.

Definitions

Hillside: The definition of hillside would include all development. Only the extremely rare case of a dead flat lot would not be defined as "hillside." We recommend changing the definition to read "property located in an area with known erosive soil conditions, where the development contemplates regulated grading on any natural slope that is 25 percent or greater." This is the minimum grade used by most jurisdictions to define "hillside."

Environmentally Sensitive Area: Your proposed definition of "Environmentally Sensitive Area" would be very difficult to implement and enforce. We recommend that these areas be defined as those adjoining, bisecting, or directly discharging to a Significant Ecological Area, identified by Los Angeles County or other environmentally sensitive areas identified by the local jurisdiction. This definition would provide clarity and be more consistent with that given in the Model Program. It would also be enforceable and have a reasonable basis.

Redevelopment: Your proposed definition of redevelopment would require extremely minor projects to have the entire site come into compliance with stormwater regulations. This would place an unreasonable financial burden on small businesses, as well as the municipalities. It is common practice for regulations to contain thresholds to determine when new requirements are to be imposed on existing improvements. We recommend defining redevelopment as "the addition, to an already developed site of 50 percent or more impervious area or improvements to 50 percent or more of the existing improvements on the site."

Section 3 of the General Requirements

You deleted a line that recognized the possibility that other Best Management Practices (BMPs) not mentioned in the listed documents may meet the goal of the program. We recommend that this line remain in the SUSMP. We should not close the doors to new ideas. The real solutions are ahead of us, not behind.

Sections 6 and 7 of the General Requirements

Section 6 covers the proper design of outdoor material storage areas and Section 7 covers the proper design of trash storage areas. Both of these sections are written as requirements that apply to all SUSMP categories. We recommend that individual, single-family residential developments be exempted from these requirements.

Section 9 of the General Requirements

The phrases "each runoff event" and "each and every storm event" are creating confusion for those trying to design BMPs for that purpose. When one considers that storms may occur over several consecutive days, this statement would lead to a BMP that is over designed for water quality purposes, especially when you take ground saturation into consideration. If the standard is to remain in the SUSMP, that wording should be clarified to state that the BMP should capture runoff events smaller than or equal to the given standard.

Roofing Surface Exclusion

Part D does not allow excluding the area of the roofing surface from the total area for calculation of rainfall or runoff volume to be treated if the stormwater conveyance system directly or indirectly discharges to a natural stream or unlined channel or channel segment scheduled for restoration. An exclusion for roofing surfaces is a good idea. However, the terms "indirectly discharge" and "unlined channel" in Part D of this section could be interpreted to prevent almost all projects from meeting the exclusion criteria. The wording of Part D should be revised to read, "the storm water conveyance system does not directly discharge to a natural stream or a channel segment scheduled for restoration to a natural stream."

Parking Lots

This section is not clear as to whether or not the listed BMPs are required or recommended. We would assume that the BMPs are recommended because it may not be possible to implement each of these BMPs at all parking areas. Wording to that effect should be added to the SUSMP.

Waiver

This section should define "an underground source of drinking water" and whether or not that includes potential sources.

Alternative Certification for Storm Water Treatment Mitigation

We agree with your approach to include this section in the SUSMP, but we feel that the certification should be required to be signed by a Civil Engineer or Architect registered in the State of California. This would provide assurance that the selection and design of the BMPs was conducted with technical expertise and provide an opportunity for recourse for negligent designs.

TABLE 2

This table should be consistent with the list of BMPs approved by the Regional Board for the Development Planning Program.

If you have any questions, please call me at (626) 458-5948, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

HARRY W. STONE
Director of Public Works

RANCHO PALOS VERDES

January 4, 2000

Dennis Dickerson, Executive Officer
California Regional Water Quality Control Board
320 West 4th Street, Suite 200
Los Angeles, California 90013

Dear Mr. Dickerson:

Proposed Standard Urban Stormwater Plans (SUSMP)

As a coastal community, the City of Rancho Palos Verdes appreciates the Regional Board's ongoing effort to improve the quality of stormwater runoff. In the City's continuing effort to do its part, the Planning Department has received training in and developed an extensive interim SUSMP program. This program, which closely parallels your proposed program, went into effect in early 1999. Upon the anticipated approval of your program, we will make the few changes needed to standardize our program.

As with any regulatory program, a small segment of the public will always look for exceptions to or ways of challenging requirements. As a city with a very large proportion of hillside areas compared to other cities, we expect many questions regarding the definition of "Hillside". The proposed definition:

> *"Property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope and where grading contemplates cut or fill slopes"*

is somewhat open to interpretation and is likely to necessitate a lengthy review for projects on an individual basis. This could be a considerable undertaking for our City's small staff. In the interest of avoiding lengthy evaluations, we ask that consideration be given to the inclusion of a numerical criteria for triggering the hillside SUSMP process for projects of 1 acre or less. This will make implementation smoother and avoid challenges to the SUSMP requirements by contractors and developers. Projects over 1 acre are large enough that a case by case evaluation can be made.

R0068298

11-88

30940 Hawthorne Boulevard / Rancho Palos Verdes, CA 90275-5391 / (310) 377-0360 / FAX (310) 377-9868

With the deadline for comments less than two weeks away, the preparation and submittal of a detailed proposal for your review is not feasible. However, we will prepare recommendations for your staff's review upon your acknowledgment that a numerical criteria may be acceptable. In the interim, we will continue to implement the SUSMP program with the enthusiasm of a city concerned with creating the best possible environment for our citizens.

Sincerely,

Dean Allison, P.E.
Director of Public Works

Mr. Dennis A. Dickerson, Executive Officer
California Regional Water Quality
Control Board - Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013-1105

2000 JAN 13 P 1:36

Dear Mr. Dickerson:

MUNICIPAL STORMWATER PERMIT NO. CAS614001 - ORDER NO. 96-054
STANDARD URBAN STORM WATER MITIGATION PLANS (SUSMPs)

In response to your request at our meeting on December 30, 1999, we are providing the following information regarding our early experiences with the implementation of the 0.75-inch rainfall standard (standard) contained in the County of Los Angeles Development Planning Implementation Manual. To date, our experience is limited to the preliminary approval of projects. However, we have already identified several issues and concerns that need our attention at this early stage to ensure successful implementation of this new program.

In order to develop the standard, we reviewed and evaluated the new development stormwater pollution prevention programs of several other municipalities in California and throughout the country. Because we were negotiating our program under a Settlement Agreement with the Natural Resources Defense Council, we also considered information provided by them in this process. Lastly, we referenced the California Best Management Practices (BMPs) Handbook and the Urban Runoff Quality Management Manual (WEF Manual of Practice No. 23 and ASCE Manual and Report on Engineering Practice No. 87)

The Manual suggests that capturing and treating runoff from "smaller" storms will result in capture and treatment of a large percentage of the runoff volume from the urban landscape. A water quality BMP capable of capturing these smaller storms would also capture and treat the "first flush" portion of the larger, infrequently occurring runoff events. The Manual indicates that the 80th percentile runoff event is considered by municipalities in the semiarid region of the United States to be cost effective for stormwater quality management and is viewed as the design event that achieves the Maximum Extent Practicable definition under the Clean Water Act.

We found much variation in the standards adopted by municipalities for new development and the desired goals of their programs. For example, the standard was described in various terms such as, rainfall, runoff, or one to five-year frequency storms. Some programs focused on restoring the population of a particular endangered species while others sought to prevent major erosion problems. Municipalities adopted standards both lower and higher than the 80th percentile.

In order to establish an appropriate standard for treatment in Los Angeles County, we evaluated 119 years of rainfall data from our downtown Los Angeles area, Rain Gage No. 716. Using this data, we were able to create a rainfall probability graph. This rainfall probability graph showed that 85 percent of our storm events are less than or equal to 0.75-inches. Therefore, based on our research, we determined 0.75-inches of rainfall to be a reasonable standard for the mitigation of stormwater runoff.

0.75-Inch Volume and Flow Rate Calculations

Our most notable obstacle, thus far, has been the correct or proper calculation of runoff volume at a specific site. There are various methods to determine the appropriate volume and flow rate for structural Best Management Practices (BMPs), but no two methods give identical results. It has been a challenge to determine the most appropriate Countywide method. This challenge arises from trying to determine design volumes and flow rates when the only hydrology data analysis available is for a 10, 25, and 50-year peak flow design storm. Without design volumes and flow rates for the standard, we have limited confidence in the design of the stormwater BMPs. Therefore, we are challenged to refocus our hydrology expertise to change our previous design analysis from large peak-flow storm events to smaller more frequent events.

Knowledge of BMPs

Many of the proposed structural BMPs have been inadequate for their respective project. Some of the proposed BMPs are not properly situated and others would not adequately treat the stormwater runoff. Though we have been commenting on the proposals and discussing them with the proponents, we are unsure if these inadequate proposals are due to a lack of economically viable solutions or a lack of knowledge on the development community's part.

Infiltration BMPs

Fortunately, a number of the projects are located in areas of the County where infiltration rates are higher and proposed infiltration BMPs should be able to meet the standard.

However, we do not have verification of these high infiltration rates, and we are requiring a soils test for those projects proposing infiltration BMPs. We believe these more porous soils are unique to undeveloped County unincorporated areas and may not be representative of much of Los Angeles County.

Two home subdivision projects are proposing the infiltration of stormwater on individual residential lots. Though the anticipated soil infiltration rate is reported to be approximately three-inches per hour and well able to meet the standard, it is possible that individual homeowners in the future could modify their property to render the proposed BMPs ineffective. On another project the developer proposed to use designed infiltration basins, as well as the porous natural unlined channel, to mitigate the runoff from streets, driveways, and other impervious surfaces. We do not view the channel as meeting the criteria of an infiltration BMP. A third project, a 100+ home subdivision and golf course, is proposing to infiltrate a majority of its runoff throughout a golf course, but the ability of the golf course to infiltrate the runoff is yet to be determined.

BMP Maintenance Task Force

For all projects, we have not determined how maintenance of the proposed BMPs will be provided, though one project plan stated that the BMPs will be maintained by a home owner's association. Now that we know more about the type of BMPs developers are likely to propose, we are concerned about the ability of private property owners to provide continued and proper maintenance either individually or through a homeowner's association. Without proper maintenance, we believe many of the BMPs could fail to function properly and become public nuisances.

Consequently, the County has created a Task Force comprised of a few permittee cities, County staff, and residential tract developers. This Task Force will research and identify structural BMPs that the County can maintain to target the appropriate pollutants of concern, provide consistency and meet the standard. The Task Force will also consider methods of funding continual maintenance, such as the establishment of a "Storm Water Quality Maintenance District."

In summary, our brief experience has demonstrated that many issues surrounding the 0.75-inch rainfall standard need to be resolved before the program is fully effective and easily implemented. We are committed to find workable solutions in a timely manner and will be prepared to share the knowledge gained from our experiences with the other Permittees should they implement similar programs.

If you have any questions, please contact Terri Grant at (626) 458-4014, Monday through Thursday, 7:00 a.m. to 5:00 p.m.

Very truly yours,

HARRY W. STONE

Re: Standard Urban Storm Water Mitigation Plan

Dear Mr. Dickerson:

For the record, please make the SUSMP comment letter submitted by this firm for the Cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance, dated January 5, 2000, in its entirety, part of the administrative record in this matter, as comments filed by ***each*** of the foregoing cities. In addition, when you respond to comments, please indicate that the comments in that letter were the comments of those cities, and each of them, and not those of my law firm, which simply represents those cities.

Very truly yours,

RUFUS C. YOUNG, JR.

Re: Standard Urban Storm Water Mitigation Plan; Comments and Request for Recirculation

Dear Mr. Dickerson:

This letter offers comments on the proposed Standard Urban Storm Water Mitigation Plan ("SUSMP") as revised and dated December 7, 1999. This letter is submitted on behalf of the Cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance. We congratulate you and your staff on the considerable improvements in the revised SUSMP, but believe that a great deal more remains to be done. In view of the number and complexity of our comments and those of others, and the costs of implementation of the SUSMP, we urge you to defer adoption of the SUSMP until it can be recirculated for comment following incorporation of suggested revisions. With that said, the following comments are offered for your consideration.

General Comments

1. Action on the two new categories added in the December 7, 1999, revision of the SUSMP, i.e., "Location adjacent to or discharging to an Environmentally Sensitive Area" and "Parking Lot for 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff" should be deferred to permit considered and thoughtful analysis. As I trust you understand, the revised SUSMP did not reach the hands of a number of staff persons in a number of cities until the December holidays were upon us. Thus time has been limited for the sort of analysis which a document of this importance merits.

2. General Comment: The SUSMP should not, as a matter of law, apply to storm water runoff which flows directly from the roofs of structures into the storm water system, without flowing across a source of pollutants, such as a parking lot, because no pollutants are implicated in such runoff. It is for this reason that the US EPA has exempted such runoff. See, e.g., the exemption of office buildings and associated parking lots separate from industrial activities from the US EPA's definition of *Storm water discharge associated with industrial activity*, found in 40 C.F.R. § 122.26(b)(14).

3. General Comment: The definitions should appear in alphabetical order.

4. General Comment: Where a defined term is drawn from another source, the specific source, such as a particular section of the CEQA Guidelines, should be cited. This would permit those who will implement, and judges who may be called upon to construe, the SUSMP to appreciate the context and the intended meaning.

5. General Comment: The SUSMP should be consistent in the use of the term "storm water" (two words), as used by US EPA, and not "stormwater."

Comments on Specific SUSMP Requirements

6. The new parking lot category should include a credit (against the threshold size of 5,000 square feet) for use of vegetation and planted parking lot islands. As the SUSMP is drafted, there would be a negative incentive for installing a vegetated parking lot if the island (oasis?) would cause the parking lot to exceed 5,000 square feet.

7. Requirement 1 uses the terms "rates" and "levels" interchangeably, but these are not interchangeable terms. Moreover, "foreseeable" is one thing, "reasonable foreseeability" is yet another. **Please revise the requirement to state "Post-development peak storm water runoff discharge rates shall not exceed the estimated pre-development *rate* for developments where it is *reasonably* foreseeable that the increased peak storm water discharge rate *will* result in increased downstream erosion.**

8. In Requirement 2, "CONSERVE NATURAL AREAS" on page 5 of 17, in the first bullet, "Every effort shall be made to concentrate or cluster development..." should be changed to "When feasible, development should be concentrated or clustered..." Reason: the term "Every effort..." is absolute and it could give rise to arguments that it means maximum effort, regardless of cost or aesthetics, and permits no flexibility. An attempt to impose such an absolute requirement might invite claims that such a restriction on land use constitutes a taking of private property for public use. Recall that what is at issue here is the imposition of governmental requirements, for public use, on private property, i.e., a "taking.".

9. In Requirement 6, on page 7 of 17, in the interest of clarity, the first bullet should be revised to read "Materials which would contribute pollutants to the storm water system shall be placed...."

10. In Requirement 8, beginning on page 7 of 17, no legal authority is cited in the SUSMP, nor are we aware of any legal mechanism for a local government Permittee to enforce the requirement that "This transfer of property must have conditions requiring the recipient to assume responsibility for maintenance of any treatment control BMPs to be included in the sales or lease agreement for that property and will be the owner's responsibility." Moreover, the just-quoted sentence is ambiguous. To which transfer does the term "This transfer" refer? The "all properties" transfer in the first part of the preceding sentence? Or does "This transfer" refer to the transfer to the public entity? What if the sales or lease agreement *does not* include those BMP maintenance terms? Please explain, and the SUSMP should make clear just what authority the Board contemplates would serve as a legal basis for a Permittee City to take remedial action against a private party. Against a public entity which is a state agency? What standing, in what forum, would a Permittee City have?

11. In E.1, on page 12 of 17, in the interest of clarity, please revise the last part of the first sentence to read "...that are deposited on parking lots by motor vehicles." Please also revise the first bullet to read: "Minimize, to the extent consistent with other laws (e.g., those requiring handicapped parking) the impervious coverage of parking lots, while allowing credit for the installation of vegetation strips and parking lot islands planted with trees and other vegetation."

12. The definition of "Redevelopment" should be revised to expressly exempt *de minimis* increases.[1] For example, adding a flat, vertical sign to the side of a building, which sign increases the square footage by 24 square inches should not trigger the applicability of the Redevelopment SUSMP. Consider revising the SUSMP to expressly state, as we believe that, as a matter of law it must, that it would apply only in cases in which the redevelopment adds more than a given *de minimis* percent of impervious surface.

Comments on Definitions

In many respects, the definitions are the heart of the SUSMP, as it is the definitions which will establish just what must be done and the instances in which it must be done. For that reason, the definitions must be as free from ambiguity as possible. With that in mind, the following comments are offered.

---

[1] Please be aware that the Supreme Court of the United States stated in *Wisconsin Department of Revenue v. William Wrigley, Jr., Co.*, 505 U.S. 214, 231, (1992), "de minimis . . . is part of the established background of legal principles against which all enactments are adopted, and . . . which all enactments are deemed to accept."

13. The definition of "**100,000 Square Foot Commercial Development**" is less than clear, because the current wording seems to say neither lot size nor building footprint is the right way to measure the 100,000 square feet. If "total impermeable area" is to be the measure, the definition should say so directly. **Consider revising the definition to state "100,000 Square Foot Commercial Development" means any commercial development which makes at least 100,000 square feet of land, including land covered by structures, impermeable to infiltration where storm water flows may come into contact with pollutants before flowing into a storm drain, or without first flowing across a per*meable* land area (*e.g.* a lawn).**

14. The inclusion of the undefined term "primarily engaged" in the definition of "Retail Gasoline Outlet" is somewhat vague. Consider revising the definition to read "**Retail Gasoline Outlet" means any retail business which derives *more than 50% of its average annual gross receipts* from the combined sales of gasoline, lubricating oils, tires, batteries, other automobile parts, and automotive services.**

15. As drafted, the definition of "**Parking Lot**" would include unpaved overflow parking areas, which don't create significant, if any, runoff. It would also include areas used even occasionally for parking. It would also seem to include parking buildings with roofs, the runoff from which is, or should be, generally exempt, as no pollutants are implicated. We suggest that the definition be revised to state: "**Parking Lot" means *any area of land made impermeable to infiltration* the primary purpose of which is the temporary parking or storage of motor vehicles used personally, in business, or in commerce.**

16. The definition of "Best Management Practice (BMP)" imposes too heavy a burden of proof of effectiveness of BMPs, the effectiveness of which is open to debate. As drafted, the definition requires that BMPs, "...when implemented prevent, control, remove or reduce pollution." Worthy objectives to be sure. Considering how hard it is to measure non-point source water pollution and to determine the causes of the pollution, it is unfair, and probably a denial of due process, to require cities to adopt BMPs which they must be prepared to prove, in defending a suit under the Clean Water Act, were effective. It should be enough that a city has a reasonable belief that its BMPs are as likely as any others to reduce this pollution. The definition of "Source Control BMP" recognizes this point by requiring only that practices "***aim to***" prevent stormwater pollution by reducing the "***potential***" for it. It is recommended that the definition of **"Best Management Practice (BMP)" be revised to state that it means the use of methods, programs, processes, technologies, engineered systems, or siting criteria which *are reasonably believed and intended to* prevent, control, remove, or reduce pollution.**

17. The definition of "**Directly Connected Impervious Area**" should be revised, for the reasons stated in comment 2, above. If the storm water runoff flows directly into the storm water system without first coming into contact with sources of pollutants, such as petroleum drippings from incontinent motor vehicles sometimes found on parking lots, the storm water flow should be

11-99

exempt. Consider revising the definition to state "**Directly Connected Impermeable** Area" means *land* covered by *impermeable* pavement, *or* other imper*meable* surfaces where storm water flows may come into contact with pollutants before flowing into a storm drain, or without first flowing across a per*meable* land area (*e.g.* a lawn).

18. The definition of "New Development" should be revised. Consider revising the definition to read "New Development" means the process of subdividing land and then disturbing it substantially, either by making it impermeable to infiltration, by building structures where storm water flows may come into contact with pollutants before flowing into a storm drain, without first flowing across a per*meable* land area (*e.g.* a lawn).

19. The definition of "Redevelopment" is flawed, as it would seem to apply to remodeling and maintenance activities which have no impact on storm water runoff. Consider revising the definition to state "Redevelopment" means an enlargement of the area of imper*meable horizontal* surfaces, on an already developed site, such as by building new structures or substantially enlarging existing ones, *which is neither de minimis nor the result of routine maintenance,* where storm water does not drain directly into a storm drain but where the storm water flow comes into contact with pollutants and then flows into a storm drain, without first flowing across a per*meable* land area (*e.g.* a lawn).

The cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita and Torrance commend your considerable efforts. More remains, and we ask you to give thoughtful consideration to the foregoing comments.

Very truly yours,

RUFUS C. YOUNG, JR.

RE: STANDARD UBAN STORM WATER MITIGATION PLAN

Dear Mr. Dickerson:

We have reviewed the proposed Standard Urban Storm Water Mitigation Plan as revised and dated December 7, 1999 and have comments on the plan. Rather than provide you with a separate compilation of comments, we refer you to the attached letter, which was sent to you on January 5, 2000 from Rufus C. Young, Jr. of Burke, Williams & Sorensen, LLP. Our comments generally conform to those contained in that letter.

If you have any questions on this matter, please contact me at (626) 814-8422.

Sincerely,

Jeffrey W. Collier
Public Services Director

Dear Mr. Dickerson:

Request for Delay in Issuance of SUSMP

We have reviewed Mr. Rufus Young's letter of January 5, 2000 (copy enclosed) sent on behalf of the cities of Alhambra, Compton, El Segundo, Hawthorne, Industry, Lomita, Santa Clarita, and Torrance regarding the proposed Standard Urban Storm Water Mitigation Plan (SUSMP), and asking that the adoption of the SUSMP be deferred.

We have also reviewed the December 22, 1999 letter from Desi Alvarez, Chairman of the Executive Advisory Committee of the Los Angeles County Permittees (copy enclosed) which requests that a revised SUSMP be distributed to the Permittees for comments.

The City of Claremont shares the concerns expressed, and we also urge you to postpone issuance of the SUSMP until the SUSMP can be recirculated for comment following review and incorporation of the suggested revisions.

Sincerely,

Karen M. Rosenthal
Mayor

Re: Opposition to Proposed Adoption of Numerical Mitigation Measures for the Standard Urban Storm Water Mitigation Plan

Dear Mr. Dickerson:

Pursuant to your correspondence of December 7, 1999, the City of Diamond Bar (City) would like to express its ***opposition*** to the proposed adoption of numerical design standards as the minimum standards for post-construction BMPs to be required under the Standard Urban Storm Water Mitigation Plan (SUSMP). Rather than simply reiterate our previously stated positions, we have identified other concerns with the process of how the numeric standards have been considered and proposed, and how SUSMP comments from the public were addressed in the accompanying "Summary of Comments Received and Response."

First, we do approve of specific changes made to the SUSMP, which indicate that the Regional Board has been in part responsive to concerns of the permittee cities. Among the positive changes since the initial draft, include 1) eliminating numeric standards as an across the board requirement for subject new developments which would seem to indicate, for instance, that treating and retaining runoff from rooftops has been eliminated, 2) additional format changes such as condensing SUSMPs into one section, rather than redundant sections addressing each development type separately, and 3) provision of a waiver process (albeit even one that may unfairly penalize some projects) that recognizes the need for an "out clause" in the event that installing controls are infeasible.

Nonetheless, the changes do not, in any way, lessen our objections to the imposition of the numeric standards, especially proposed so late in the existing permit without adequate scientific study, economic analysis, and public comment. We understand the desire of the Regional Board to respond to intense lobbyist

11-103

pressure and negative media publicity regarding beach pollution. However, to institute a stringent policy and requirements without adequate local scientific study is not justified.

This represents the second part of our objection to the proposed inclusion of numeric standards into the SUSMPs. A cursory review of the "Summary of Comments Received and Response" shows that virtually all comments provided by the cities were summarily rejected without adequate reason, while opposition arguments were often incorporated. One instance of this is the enlargement of the scope of SUSMPs from the existing seven development types to include two new categories, parking lots and environmentally sensitive areas. Both of these types were raised as developments for regulation by the environmental lobby; and while the Board indicated at the time, according to the record, that it wouldn't enlarge the scope at this time, it apparently had decided to do so. This would clearly seem to warrant the re-opening of the permit. We wonder if the Board has purposely done so with the intent of forcing re-permitting issues well in advance of the readiness of the permittees to address.

Another concern of the process is the timing of this document and the resolution. In September, the Regional Board indicated that the January meeting would be a workshop. By proposing adoption of the resolution and the incorporated numeric standards, the Board seems to be reneging on its promise to properly consider the cities' concerns. We understand that the date for adoption has been pushed back to January 26, 2000. However, we still have some concerns that by proposing adoption in January, the Board is effectively precluding any reasoned response by the regulated communities. Most, if not all permittees' offices are closed during the holidays, making it extremely difficult to meet, to plan, and to organize for the meeting. We simply do not understand why the Board wants to pressure the regulated community with a short deadline and a forced decision on such an important issue?

The City is extremely upset about the process as well as the attempt to revise the existing permit without following specified procedures that have been approved by the Board. Section G.1, Administrative Review, appears to stipulate the need for the Board to issue a Notice to Meet and Confer (NTMC) in the event that a storm water program is insufficient to meet permit requirements. Imposition of numeric standards this late in the permit would argue, as the environmental lobby has so succinctly put it that the existing permit is inadequate and needs to be upgraded. Since no NIMC has been issued, we believe that inadequate grounds exist for the Board to impose both numeric standards and additional development types.

Finally, we request that the Board formally consider our comments, and that the Executive Director consider making a request at the January 26th meeting to postpone any vote on the SUSMP until an adequate local study is performed concerning economic and technical

feasibility. Should you have any questions regarding Diamond Bar's position, please contact Mr. David G. Liu, Deputy Director of Public Works, 909/396-5671, or Mr. J. Michael Huls, Integrated Environmental Services Coordinator, 626/969-7816.

Sincerely,

Deborah H O'Connor

Proposed Standard Urban Stormwater Plans (SUSMP)

Dear Mr. Dickerson:

The City of South Gate has been requiring SUSMP Best Management Practices for "Planning Priority Projects" since early last year. South Gate's review process and requirement have been essentially identical to most of those contained with your proposed standards (see attached booklet-"Improving Stormwater Quality by Design"). As part of the City's program, developers have been allowed the choice of capturing the first 0.75 inch or rain or installing inserts in catch basins and area drains. Your clarification that mitigation includes either infiltration or treatment confirms that the City's NPDES program is proceeding on the correct path. Already having implemented this program, South Gate supports the Board's efforts to standardize and improve the SUSMP process.

As with any program of this magnitude, unanticipated problems may arise in the future and we trust that the Board's Executive Officer will continue to have the flexibility to work with municipalities to solve problems unique to individual cities. Examples of potential future difficulties include:

> The requirement to "Conserve Natural Areas." What constitutes adequate compliance will depend on whether your perspective is from the environmental or the building community. The available standards in references are too vague for effective implementation. Specific standards with clear, strong definitions are needed to aid in the implementation of this BMP. Without sufficient standards, this will be difficult to enforce on a consistent basis.
>
> From our experience, your section on Waivers which requires Board approval for individual projects with unique characteristics requesting exemptions may result in an overwhelming workload for Board staff.

11-106

This should be rewritten so that the Executive Officer can also authorize BMP modifications for an individual project or class of projects at the City level.

Currently the South Gate is requiring BMPs only for the specific area being modified at redevelopment projects unless the project valuation is over the pre-existing Public Works threshold of $30,000 in which case additional BMPs may be required for the entire site. This is consistent with the previous iteration of the SUSMP guidelines allowing cities to establish threshold criteria. There is no clear threshold mechanism in the proposed SUSMPs. We do not believe it is the Board's intent or even feasible to require a 10 acre site to undergo a full BMP retrofit if only a few square feet are being modified. A specific reasonable threshold should be established to trigger BMP retrofits (either a 50% valuation change or exceedance of an existing value-based threshold).

The City appreciates how difficult task of developing a workable program can be and will continue to work with the Board to overcome difficulties as we work together to reduce pollution in stormwater runoff..

Sincerely,

James A. Biery
Director of Public Works/City Engineer

SUBJECT: STANDARD URBAN STORMWATER MITIGATION PLAN (SUSMP)

Dear Mr. Dickerson:

The City of El Monte has been implementing it's SUSMP program for some time now and appreciates the challenges that the Regional Board has encountered during their development of a single, comprehensive program for all of the cities of the Los Angeles Region. The City is currently and has been for some time, requiring treatment controls for major projects prior to permit issuance. The City is continuously updating and reviewing its policies to ensure the community's quality of life as well as the protection of its natural resources. The City supports the Board in its effort to develop a practical, efficient and feasible process. We believe the overall goal of SUSMP requirements for new development and redevelopment must be to effectively reduce pollution in stormwater and urban runoff.

While El Monte supports the Board and its staff in establishing realistic baseline SUSMP standards, it is important that the Board also allow the use of alternative mitigation methods so long at the goal remains the achievement of cleaner stormwater runoff. This approach would effectively meet the goals of the SUSMP program in an effective and reasonable manner. The City's SUSMP program continues to be a very

dynamic and progressive procedure that will only improve with time and experience.

The City of El Monte believes that it is a partner with the Regional Board in the protection of the Region's environment and looks forward to the development of SUSMP standards which meet the mutual goals of our two agencies. Should you have any questions related to this matter, or if you desire any information related to the City's stormwater/urban runoff program, please feel free to contact me at (626) 580-2056.

Sincerely,

Kev Tcharkhoutian, P.E.
City Engineer

Arroyo Verdugo Cities

Burbank - Glendale - La Canada Flintridge

January 13, 2000

Mr. Dennis Dickerson
Executive Officer
Los Angeles Regional Water Quality
Control Board
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Dear ~~Mr. Dickerson~~, Dennis

A Chairman of the Arroyo Verdugo Steering Committee, I wish to share my written opposition to the proposed numeric storm water retention/treatment requirements presented by the California Regional Water Quality Control Board, Los Angeles Region. I understand the revised SUSMP addresses some of the recently expressed concerns, but I believe the changes have made the SUSMP more stringent encouraging the cost of development.

The Arroyo Verdugo Steering Committee has met several times to discuss this issue and has worked to state their opposition in the attached draft resolution. The action to adopt the resolution was placed on our January agenda, but due to lack of quorum the Committee was unable to make the vote official. The Committee is looking to meet again prior to your January 26 Regional Board meeting, and if the resolution is adopted, an Arroyo Verdugo Cities staff member will present the document at your meeting.

Please accept my gratitude for taking the time to consider these comments. It is my intent to help develop effective standards without compromising water quality.

Sincerely,

Bill Wiggins
Chairman, Arroyo Verdugo Cities
Vice-Mayor, City of Burbank

DRAFT

RESOLUTION NO. ____

A RESOLUTION OF THE ARROYO VERDUGO CITIES COUNCIL OF GOVERNMENTS ADVISING THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION, OF ITS INTENTION TO PETITION THE STATE WATER RESOURCES CONTROL BOARD FOR RELIEF FROM UNREASONABLE RUNOFF POLLUTION CONTROLS FOR NEW DEVELOPMENTS

Whereas, the Arroyo Verdugo Cities Council of Governments (hereinafter "Arroyo Verdugo COG"), is a sub-region of the Southern California Association of Governments, consisting of the cities of Burbank, Glendale and La Canada Flintridge;

Whereas, on September 16, 1999, the California Regional Water Quality Control Board, Los Angeles Region (hereinafter "regional board") convened a public hearing to discuss requiring cities in Los Angeles County to impose stringent numeric storm water retention/treatment requirements (hereinafter "numeric requirements") on certain categories of new developments, through so-called Standard Urban Storm Water Management Plans (hereinafter "SUSMPs") – a requirement of the development planning program component of the NPDES permit;

Whereas, such numeric limits were intended to retain or treat about 80-85% of runoff from the subject new developments, which include 10-99 home sub-divisions, 100-plus home sub-divisions, and 100,000 square foot commercial developments;

Whereas during aforementioned public hearing, 50 cities expressed opposition to the proposed numeric storm water retention/treatment requirements because of the following:

i. they were inflexible to the extent cities that cities would have been required to meet the numeric standard, even if it were difficult or possible to do so because of economy, practicality, or the new risk of creating another environmental problem;

ii. they were largely based on a settlement agreement between County of Los Angeles and the Natural Resources Defense Council;

iii. they were targeted at reducing oil, grease, and unspecified metals without specifying the purpose of such a stringent requirement, such as protecting a beneficial use of particular a receiving water (e.g., ground-water recharge areas of the Los Angeles and San Gabriel Rivers);

iv. they would have been the most stringent new development runoff pollution control requirement in the State; and

v. they are not authorized either under the NPDES permit or the development planning program, which calls for SUSMPs.

Whereas on September 16, 1999, the Executive Officer of the regional board recommended to continue discussion of this issue to another time, now set for January 26, 2000;

Whereas, on December 7, 1999, the Executive Officer issued a revised SUSMP and proposed its adoption through a tentative RESOLUTION APPROVING THE RECORD FOR STANDARD URBAN STORM WATER MITIGATION PLAN FOR MUNICIPAL STORM WATER AND URBAN RUNOFF MANAGEMENT PROGRAMS IN LOS ANGELES COUNTY;

Whereas, although the revised SUSMP addresses several of the concerns expressed in the Arroyo Verdugo Cities COG resolution, it made the SUSMP more stringent by requiring a numeric-based design standard for retaining or treating runoff from ANY PARKING LOT WITH 25 OR MORE SPACES OR GREATER THAN 5000 SQUARE FEET – instead of requiring a numeric standard just for housing sub-divisions and 100,000 square feet commercial developments as initially called proposed;

Whereas, if approved, the revised SUSMP would increase the cost of development to a higher level than was initially considered by the regional board, notwithstanding the absence of any scientific evidence demonstrating that the more stringent requirements would result in a tangible improvement of water quality for any receiving water;

NOW, THEREFORE, the Arroyo Verdugo Cities COG does hereby resolve as follows:

Section 1. Advise regional board members of its opposition to the regional board's proposed tentative resolution;

Section 2. Recommend that the regional board approve the Standard Urban Storm Water Mitigation Plan, which does not include broad numeric limits, as proposed by the Executive Advisory Committee on August 11, 1999;

Section 3. Notify the regional board that if it or its Executive Officer adopts any requirement calling for a numeric standard to treat or retain storm water runoff from any development project, or controlling runoff from a surface area of any new development, without the consent of the Arroyo Verdugo Cities COG, that this COG shall, within 30 days of the action, prepare a petition with the State Water Resources Control Board enabling its members to challenge such action.

PUBLIC WORKS AND TRANSPORTATION DEPARTMENT

January 13, 2000

Mr. Dennis Dickerson, Executive Director
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, California 90013

Dear Mr. Dickerson:

SUSMPs and Numerical Limits

The City of Pasadena would like to acknowledge the challenge that the Board has encountered in developing requirements for the cities in Los Angeles County in regards to the Planning and Development procedures. As a regulatory agency, the City itself has been involved with various policy-making issues, which are often controversial or difficult to implement because of various social and economic reasons.

The City engages in many events, which create a more transient situation in the City. As the result of these activities, the City has no option other than implementing a very active maintenance program as well as continuously updating and reviewing its policies to insure both the quality of its urbanization and the restoration of its natural resources. This makes the City conscious of the environmental and urban runoff issues.

The City supports the Board in reference to the Standard Urban Stormwater Mitigation Plans or SUSMPs with the understanding that details such as design requirements may have to be worked out in the future. The numerical limit guidelines must be practical, efficient, and implementable. SUSMPs and their requirements may work in some areas or projects and not in all in others. The SUSMPs' requirements will have to be flexible, yet efficient, with the notion that "one size may not fit all".

The City hopes that the Board's staff recognizes that problems may occur in the future, which may act as obstacles towards implementing the subject requirements. The goal of imposing such requirements on development/redevelopment will be to reduce or mitigate potential pollution runoff from urbanized areas. This will be a very dynamic and progressive procedure that will only improve with time and practice.

11-113

100 North Garfield Avenue · P.O. Box 7115 · Pasadena, CA 91109-7215
(626) 744-4191

City of Pasadena will work in a cooperative spirit with everyone involved. We hope this letter serves as an appreciation of all your efforts. Please feel free to contact Mr. Jim Valentine of this office at (626) 744-4265 regarding our storm water/urban runoff program.

Sincerely,

DANIEL A. RIX
City Engineer

RE: Request for Clarification of items in your letter dated December 7, 1999 and in the Tentative Resolution document

Dear Mr. Dickerson,

Two critical areas of ambiguity have arisen in connection with your letter of December 7, 1999 and the Tentative Resolution document as it pertains to the City of Long Beach. This letter reflects the clarifications, provided under your direction, by Dr. Xavier Swamikannu to Rose Collins, Clean Water Program Manager, for the City of Long Beach in a telephone conference on December 10,1999, and seeks confirmation of these clarifications. This letter is not intended to constitute the City's comments pursuant to your invitation for public comment on the Tentative Resolution.

The first area of ambiguity concerns the statement contained in the Tentative Resolution, page 2 of 17, which states:"This SUSMP applies to projects that are Priority Projects (Discretionary Projects) as defined by the NPDES permit." Our understanding is that, as to Long Beach, the only project categories to which the Standard Urban Mitigation Plan (SUSMP) will apply are:

a. 10-99 home subdivisions
b. 100 or more home subdivisions
c. 100,000 or more square foot commercial developments, and
d. environmentally sensitive areas.

11-115

ENGINEERING BUREAU
333 West Ocean Boulevard, 9th Floor • Long Beach, CA 90802
(562) 570-6383 • FAX (562) 570-6012

Consistent with the terms of the Long Beach permit, the additional project categories listed in the Tentative Resolution do not apply to the City of Long Beach. This understanding has been confirmed in an internet e-mail on December 13,1999, by Dr.Swamikannu.

Second, on the first page of your December 7th letter, you state:

> If adopted by the Regional Board, the Tentative Resolution would approve the City of Long Beach Standard Urban Stormwater Mitigation Plan (SUSMP) while encouraging the Executive Officer to approve the Los Angeles Standard Urban Mitigation Plan.

During negotiations, all parties agreed that the City's SUSMP would not take effect prior to the effective date of the SUSMPs for the Countywide permit. This issue arose at the hearing of the City's permit as well, where it was again agreed that the City should not be placed at an economic disadvantage by having its SUSMP effective prior to that which affected the majority of the County. Dr. Swamikannu also confirmed, in a telephone conversation on December 10,1999, that the City of Long Beach SUSMP will become effective concurrently with the SUSMPs for the Countywide permit.

Please confirm that you agree with the clarifications herein by signing where indicated below and returning a copy to this office. Your courtesy and cooperation are appreciated.

Sincerely,

Edward T. Putz

EDWARD T. PUTZ
CITY ENGINEER

I confirm the clarifications contained in this letter.

Monterey Park, CA 91754-2156

Dear Mr. Dickerson:

The City of Vernon has reviewed the Final Tentative Draft of the Standard Urban Storm Water Mitigation Plan (SUSMP) dated December 17, 1999. As you are aware the City of Vernon is one of eighty-five co-permittees involved in the Municipal Stormwater and Urban Runoff Permit issued under Board No. 96-054(NPDES No. CAS614001). The following are the City's comments to the SUSMP.

The Regional Water Quality Control Board is seeking to approve the SUSMP and incorporate the 0.75" numerical mitigation measure at its next meeting. The plan as drafted will require that millions of dollars be spent in order to implement the strategies outlined in the Mitigation Plan. The City of Vernon is concerned that sound technical studies have not been conducted prior to implementing Best Management Practices (BMPs). The BMPs have not been proven to effectively prevent further impairment of the beneficial uses of the receiving waters. Thus, the approval would be based upon inadequate evidence in the record.

The City of Vernon believes that a receiving water study should be performed to more effectively understand urban stormwater and anthropogenic impacts to the receiving water. The study would identify appropriate monitoring designs to assess stormwater discharges, receiving water impacts, and effectiveness of BMPs. Further, the study would identify which pollutants significantly impair the beneficial uses of the receiving waters. Until such studies are conducted it would be premature to implement BMPs that are targeted to remove pollutants without knowledge of their effect to the receiving waters. The City believes that millions of dollars should not be spent on BMPs that remove pollutants that may not impair the beneficial uses of the receiving waters. Finally, the study must include a baseline against which to measure the effectiveness of stormwater pollution mitigation programs.

The City of Vernon believes it is poor public policy to implement strategies without first determining that the requirements will have the intended results. The SUSMP outlines several BMPs to minimize the introduction of pollutants of concern to the storm water conveyance system. A recently released document from the Southern California Coastal Water Research Project reiterates this fact by stating in part "..Best Management Practices (BMPs) have been and still are, being applied without regard to whether the change in stormwater quality will have any meaningful impact on beneficial use protection. Stormwater managers need to know which BMPs are effective at reducing loads and concentrations for individual constituents. Next, managers need to assess what the most efficient use of BMPs within their watersheds will be whereby the greatest improvement in stormwater quality is achieved at the most reasonable cost. Finally, there will need to be an evaluation if these expenditures on BMPs and improvement in stormwater quality will promote beneficial use protection.."

Until a thorough study is completed on the effectiveness of the BMPs, implementation of them could cost developers millions of dollars on controls that do not protect the beneficial uses of the receiving waters.

Additionally Section 3 of the SUSMP requires that a development must be designed so as to minimize, to maximum extent practicable, the introduction of pollutants of concern that may result in significant impacts generated from site runoff. The Board has defined pollutants of concern. However a determination has not been made as to what concentrations of pollutants produce a significant impact to beneficial uses, or what the

maximum extent practical means. Without a comprehensive study to define these items the permittee has no guideline to determine if the proposed BMP is adequate or cost effective.

The Clean Water Act and the Porter Cologn Water Quality Act are designed to protect the beneficial uses of the receiving water. Nevertheless, the imposition of mandatory treatment, regardless of pollutant loadings, is inconsistent with these acts. Vernon also believes that these Acts require that a cost benefit analysis be conducted prior to imposing mandatory requirements.

It appears that the SUSMP was revised to incorporate mainly comments from the environmental community. On the other hand, the comments of public agencies, such as the City of Vernon, were, for the most part, disregarded.

The SUSMP has been amended to include two additional categories into the discretionary projects. The SUSMP now includes parking lots of 5,000 square feet or more. The addition of small parking lots virtually requires the SUSMP to be applied to all development projects which require discretionary approval. The cost for the implementation of BMPs for such small parcels may make such parcels non-developable. The requirement of legal agreements or covenants will also bring the streamlined permit process that most cities strive for to a standstill.

The City of Vernon, like most cities in Los Angeles County, is virtually built out. Most new developments that are constructed within Vernon are infill projects or redevelopment of existing sites. The infrastructure is virtually complete. The hydrology and hydraulic calculations that were performed for the design of the storm drain pipeline systems were based on a certain time of concentration. Any changes to this time of concentration could potentially cause flooding. Additionally, certain BMPs require direct connections into the storm drain pipeline system. The vast majority of sites do not have storm drain pipes within their street frontage. These pipeline systems, in most cases, cannot be extended, making these BMPs impractical. In such cases, if a numerical mitigation measure of 0.75" is incorporated into the SUSMP, there may not be enough space available to implement BMPs that will meet SUSMP criteria.

The SUSMP also contains a section on alternative certification for storm water treatment mitigation. In order to sign a certification that the plan meets criteria established in the SUSMP, the professional signing the plan must attend training

Mr. Dennis Dickerson
January 14, 2000
Page 4

on the design of BMPs. The training must be approved by the Regional Board Executive Officer. The City agrees that training is appropriate. However, we are concerned that it may take many years before appropriate curriculum is developed and the required number of professionals are trained in order to meet the construction industry demand. This will only serve to slow development within our community and could have a potentially detrimental effect on the regional economy.

Finally, the City disagrees with the methodology used to determine the amount of rainfall to be treated. No scientific study has been produced that accurately depicts the pollutant runoff from a site. How was it determined that the 85th percentile of a runoff event contains a concentration of a pollutant of concern that will significantly impact the environment and not the 86th percentile? Until such a comprehensive study is conducted the design of BMPs are flawed and not supported by substantial evidence in the record. Again, BMPs as proposed by the Board may not produce the appropriate cost benefit ratio to warrant such a requirement.

The City of Vernon has previously submitted comments on the proposed SUSMP. Many of those comments are still applicable. In order to avoid repetition, and in order to assure that Vernon does not unintentionally waive any issue previously raised, all comments previously raised by Vernon are hereby incorporated by reference.

The City of Vernon appreciates the opportunity to comment on the SUSWMP. We are committed to working with your staff to reduce pollutants in storm water. However, we must emphasize that sound scientific studies should be completed prior to implementing the SUSMP.

Very truly yours,

Samuel Kevin Wilson, P.E.
Director of Community Services & Water

Re: **Standard Urban Stormwater Mitigation Plans (SUSMPs) for the City of Long Beach**

Dear Mr. Dickerson:

Please provide copies of this letter to the members of the Board and include it in the administrative record of the hearing on the above subject.

The City of Long Beach thanks the Regional Board and its staff for its efforts on behalf of stormwater runoff pollution mitigation. As part of its own continuing efforts in this regard, the City of Long Beach requests that the following comments be considered and addressed in the adoption of SUSMPs for the City of Long Beach as part of its separate permit. The primary issues, which will be elaborated upon in the body of this letter, are:

1. The findings contained in the Tentative Resolution should be revised to remove confusing references to "the permit" when two permits, Regional Board Order No. 96-054 (the "Countywide Permit") and Regional Board Order No. 99-060 (the "City of Long Beach Permit")are affected.

2. Pursuant to prior agreement, the implementation dates for those SUSMPs applicable to the City of Long Beach must be concurrent with those for the cities subject to the Countywide permit to avoid putting the City at an economic disadvantage.

3. The inclusion of numerical design standards as minimum design criteria should be deferred until such time as empirical data on the efficacy of such standards, obtained in this region or another region with a similar climate, is available.

R0068331

11-121

The Findings

The findings in the Tentative Resolution should be revised to reflect that two separate permits are affected by this resolution. These two permits were reached through two very different processes, and contain different procedures for modification and implementation. Finding 21 should be revised to reflect this. Similarly, Finding 13 should separately identify "Priority Projects" for each permit. Finding 5 should be revised to include references to the City of Long Beach, its receiving waters, its monitoring program, and its permit.

Implementation of SUSMP Requirements for the City of Long Beach

During negotiations for the settlement of the litigation between the City of Long Beach and the Regional Board, it was agreed that SUSMP requirements for the City would not take effect prior to the effective date for SUSMPs under the Countywide Permit. This issue arose during the hearing which resulted on the City of Long Beach's proposed permit, at which time it was agreed that the City should not be placed at an economic disadvantage by having its SUSMP effective prior to the requirements affecting the majority of the County. Members of the Regional Board staff have confirmed this sequence of events, which should be reflected in the Board's resolution. The Tentative Resolution is silent as to the implementation schedule for the SUSMP for the City of Long Beach.

The Countywide Permit anticipated that SUSMPs would be implemented 90 days following the next fiscal year following their adoption but no later than July 1999. While the City acknowledges that this date has past, a similar schedule of implementation is needed to avoid anticipated "taking" or related challenges from affected parties who have already initiated the planning review process with the City, development requirements should be scheduled to be implemented no sooner than 90 days following the start of the next fiscal year, but no sooner than the implementation date adopted under the Countywide Permit.

Numerical Design Standards

The adoption of numerical design standards as minimum design criteria is not supported by relevant empirical data or by any cost-benefit analysis. For these reasons, it fails to comport with either State or Federal law. Inclusion of numerical design standards as a voluntary standard or as part of an incentive program would assist in the collection of data relevant to this region and provide cities with a legal basis on which to defend the requirement.

Comments Submitted by the Executive Advisory Committee

As you are aware, the City of Long Beach has been an active participant in the development of the SUSMPs through the Executive Advisory Committee. To the extent that they apply to the four priority project categories contained in the City of Long Beach Permit, we join in the concerns expressed by the Executive Advisory Committee and its counsel.

We appreciate the opportunity to submit these comments as part of the administrative record for the January 26th hearing and hope you will give them thoughtful consideration. The City of Long Beach reserves the right to submit further comments at the hearing. Thank you for your efforts.

Very truly yours,

ROBERT E. SHANNON, City Attorney

SUBJECT: STANDARD URBAN STORMWATER MITIGATION PLAN (SUSMP)

Dear Mr. Dickerson:

The City of Baldwin Park appreciates the challenges that the Regional Board has encountered during the development of the Planning and Development guidelines for the cities of the Los Angeles Region. The City is also continuously faced with many policy-making issues which are often controversial or difficult to implement due to various social or economic reasons. Through this process, the City is continuously updating and reviewing its policies to ensure the community's quality of life as well as the protection of its natural resources. It is from this point of reference that we believe the overall goal of imposing SUSMP requirements on new development and redevelopment must be practical, efficient and feasible to effectively mitigate pollution in stormwater and urban runoff.

As an environmentally-concerned community, we wish to support the Board and its staff in establishing basic and realistic SUSMP standards, which also allow the use of alternative mitigation methods that achieve the same result, if found to be necessary or appropriate due to site specific limitations. Such an approach, we believe, would effectively meet the goals of the SUSMP program in an effective and reasonable manner. The City is continuing to implement its current SUSMP requirements and will progressively assess their outcomes. This will continue to be a very dynamic and progressive procedure that will only improve with time and experience.

RE: Request for Clarification of items in your letter dated December 7, 1999 and in the Tentative Resolution document

Dear Mr. Dickerson,

Two critical areas of ambiguity have arisen in connection with your letter of December 7, 1999 and the Tentative Resolution document as it pertains to the City of Long Beach. This letter reflects the clarifications, provided under your direction, by Dr. Xavier Swamikannu to Rose Collins, Clean Water Program Manager, for the City of Long Beach in a telephone conference on December 10,1999, and seeks confirmation of these clarifications. This letter is not intended to constitute the City's comments pursuant to your invitation for public comment on the Tentative Resolution.

The first area of ambiguity concerns the statement contained in the Tentative Resolution, page 2 of 17, which states:"This SUSMP applies to projects that are Priority Projects (Discretionary Projects) as defined by the NPDES permit." Our understanding is that, as to Long Beach, the only project categories to which the Standard Urban Mitigation Plan (SUSMP) will apply are:

a. 10-99 home subdivisions
b. 100 or more home subdivisions
c. 100,000 or more square foot commercial developments, and
d. environmentally sensitive areas.

January 25, 2000

Dennis Dickerson, Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 w. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson:

I am writing to urge the board's approval of the proposed revisions to the Standard Urban Stormwater Mitigation Plan (SUSMP) submitted to you by Los Angeles County for your consideration. As you know, today I won unanimous approval of the Los Angeles City Council for a motion endorsing of a policy with an 85%/0.75 inch provision as the minimal acceptable standard for development planning.

I laud the work you and your staff have done to help make the goals of the Clean Water Act a reality. While the City of Los Angeles has concerns about certain aspects of the Board's proposal, I trust that the Board can resolve those concerns with City representatives and quickly implement a policy that reduces the insidious effects of stormwater runoff.

While I am proud that my colleagues joined me in calling for approval of your proposal, my feelings are even stronger than the City's consensus statement. I echo the call of several environmental groups and urge you to remove from the proposal the so-called "roofing exclusion."

Section 9 of the current proposal would allow developers to divert runoff from rooftops directly to stormdrains and to take credit for that volume of runoff as it if were being treated. I find this provision disturbing and feel it would allow treatment of less runoff and would actively encourage developers to increase the amount of impervious surface. I strongly urge you to reconsider the inclusion of this provision.

It is of urgent concern that swift and decisive action be taken to protect the environment and safeguard public health. With that modification, approval of your proposal will accomplish that.

Thank you for your time and consideration.

Sincerely,

RUTH GALANTER
President Pro Tempore
Councilmember, Sixth District

44A

SUBSTITUTE MOTION

On a daily basis, massive amounts of pesticides, metal residue, oily waste and solid garbage flow into the ocean, polluting our coastal waters. Human viruses and bacteria sicken surfers, swimmers and young children at play in the Santa Monica Bay. The source of this pollution is urban runoff from our lawns, parking lots and streets. In fact, urban runoff is the leading cause of water pollution in our region.

Los Angeles County has the worst urban runoff problem in the nation. While significant efforts have been made in recent years to address the problem, too little progress has been made. The condition of Santa Monica Bay, the Long Beach Harbor, and the Los Angeles River is a disgrace.

We can change that.

On January 26, 2000, the California Regional Water Quality Control Board (RWQCB), Los Angeles Region, is expected to discuss a proposed Standard Urban Stormwater Mitigation Plan (SUSMP). The new standards are far-reaching and promise to increase significantly efforts to reduce the insidious effects of urban runoff.

Under the proposed new standards, cities would have to ensure that new developments capture either 85 percent of the runoff from a storm in a 24-hour period or the first three-fourths of an inch of rain. The standard would apply to new commercial projects of more than 100,000 square feet and all new gas stations, auto repair garages, restaurants and subdivisions of 10 or more houses.

Developers and city planners would have a range of options for compliance. They could leave grassy swales and other open space so runoff could seep into the ground instead of flowing into stormdrains. Developers could also seek other options, such as building detention ponds, using permeable pavement or installing filters in curbside drains. Experts contend that the proposed limits could be achieved with relatively simple and inexpensive design changes.

The proposed new standards make sense. Retaining stormwater on site, allowing it to percolate into the land, not only protects the ocean from pollution, but it also replenishes the groundwater supply, a major source of our drinking water.

During previous meetings of the RWQCB, the office of the Chief Legislative Analyst raised questions about details of the board's proposal. These comments were perceived by many as an official objection by the City of Los Angeles to a sound policy to protect the environment and public health and safety. An editorial in the Los Angeles Times (Oct. 6, 1999) excoriated the City for its position.

Granted, given the enormous size and varied terrain of the City of Los Angeles there are several questions and concerns the city should raise about the proposal. Those are: whether Best Management Practices (BMPs) are effective for parking lots, auto repair garages, restaurants, residences and gas stations; whether the RWQCB will pursue public education programs to reduce emissions from motor vehicles to streets and parking lots; whether the RWQCB will provide a variance process for unusual situations and circumstances, such as areas with high ground water or high liquefaction potential; whether the RWQCB will collect regional ambient water quality data to confirm the effectiveness of the 85th percentile-0.75 inch provision and refine their rules accordingly; and whether the RWQCB will allow for a flexible process for establishing runoff requirements through the planning process for unusual situations.

11-123-A-6

However, these concerns should not be interpreted as an objection to or opposition of the proposed 85 percent retention/treatment standard. Nor should those concerns be considered reason to unnecessarily delay or obstruct implementation of the board proposal. They should be seen, rather, as a request for additional information, data and analyses on the proposed standard and control measures to be implemented to achieve the standard. The City should assist the Board in obtaining the information necessary to support and implement a retention/treatment standard. The City should encourage the RWQCB to consider and address the City's concerns during its deliberations, but move quickly toward implementation of a policy that protects the environment and public health.

I THEREFORE MOVE that City Council adopt as City policy a position that endorses, in concept, the proposed Standard Urban Stormwater Mitigation Plan currently before the Regional Water Quality Control Board, including the 85th percent/0.75-inch proposal as the minimal acceptable standard for development planning.

I FURTHER MOVE that the Council encourage Regional Water Quality Control Board to address the City's aforementioned concerns, and develop and implement as quickly as possible a policies that are flexible enough to consider the different circumstances and abilities of cities of varying sizes, terrains and resources, are supported by scientific data, and are subjected to meaningful public review and comment.

I FURTHER MOVE that the Chief Legislative Analyst report back on the status of the board's deliberations to the City Council's Committee on Environmental Quality and Waste Management.

Dennis Dickerson, Executive Director
Regional Water Quality Control Board
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson:

I am proud to share with you the news that the City Council of the City of West Hollywood recently passed a resolution I authored that supports design standards that reduce runoff from new and redevelopment sites and city property in the City of West Hollywood.

The City of West Hollywood has always been at the forefront of protecting the environment. The adopted standards require water quality treatment or infiltration onsite of 100% of the runoff generated by the first three-quarters of an inch of rain to prevent polluted runoff from traveling to the ocean. These standards were developed with help and support from Heal the Bay, an environmental organization dedicated to making Southern California's coastal waters safe for people and marine life.

I encourage all Southern California cities to adopt these environmentally sound standards. Our City has taken the lead in the battle to reduce urban runoff. It is now time for the incorporated portions of Los Angeles County to adopt these standards so that all cities in the county will conform to the standards that significantly reduce urban runoff.

If you have any questions please feel free to contact my deputy Scott Svonkin at (323) 848-6315.

Sincerely,

Paul Koretz
Councilmember

Dear Mr. Dickerson: This is submitted on behalf of the Cities of Alhambra, Compton, El Segundo, Lomita, Hawthorne, Torrance, Industry and Santa Clarita. Those Cities appreciate what appears on initial review of the January 18, 2000, Staff Report and Record of Decision to be continued improvements and refinements. However, please note the language "what appears on initial review...." This language was used to make the point that time has permitted only a most preliminary review. There has been insufficient time for Cities, to say nothing of those who will be affected by the SUSMP, to make any kind of detailed analysis, much less to prepare comments for the Board's consideration and your staff's evaluation. Of course there has been no opportunity to evaluate the "Change Sheet" and the impact of "clarifications" in that document which, to my knowledge, is not yet available for public review. It is for these reasons, as a matter of procedural due process, that I am constrained to now ask you and the Board to delay this item until March, 2000, at the earliest. Recitals of the notice provided for earlier versions of the SUSMP are interesting, but they are no substitute for adequate notice of the latest changes. We must make the point that the adequacy of notice is not determined by averaging the notice given to all prior versions of the SUSMP, it depends on how much notice was provided as to the version which is to be adopted, with all modifications, including those in the January 18, 2000, Staff Report and Record of Decision and the yet-to-be promulgated Change Sheet. Please print this email and include it, in its entirety (and not just as a summary), in the administrative record of this matter as comments by the Cities of Alhambra, Compton, El Segundo, Lomita, Hawthorne, Torrance, Industry and Santa Clarita, and each of them. In addition, the Cities of Alhambra, Compton, El Segundo, Lomita, Hawthorne, Torrance, Industry and Santa Clarita, and each of them, reserve the right to address the Board at the Meeting and Hearing on January 26, 2000, or any adjourned or continued meeting and hearing.

Executive Advisory Committee
Stormwater Program - Los Angeles County

December 22, 1999

Mr. Dennis A. Dickerson
California Regional Water Quality
Control Board - Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013-1105

Dear Mr. Dickerson:

STANDARD URBAN STORMWATER MITIGATION PLANS

On behalf of the Los Angeles County Permittees, the Executive Advisory Committee (EAC) has reviewed the proposed Standard Urban Stormwater Mitigation Plan (SUSMP) prepared by the California Regional Water Quality Control Board (Regional Board) to be incorporated in the Los Angeles County Municipal Stormwater and Urban Runoff National Pollutant Discharge Elimination System (NPDES) permit (The Permit). In accordance with the conditions of the Permit, the Permittees submitted model SUSMPs for your review and approval. In the event our submittal does not meet with your approval, the Permit requires that you ask for a resubmittal. Your unilateral rewriting of the SUSMPs is very surprising. We disagree that you have the legal authority under the Permit to unilaterally require the implementation of an alternative SUSMP.

Given that there are substantial differences between the Model SUSMP submitted by the Permittees and what the Regional Board desires, we appreciate your efforts to draft an alternative SUSMP. In reviewing your proposal, we believe that many of your suggestions are acceptable and could be incorporated in a SUSMP that the Permittees would be willing to resubmit for Board approval. To assist in developing a SUSMP that is acceptable to all parties, we are offering comments to your proposed SUSMP. Our suggested changes are consistent with the Regional Board's desires and serve to clarify and facilitate implementation of the SUSMP consistent with the Permit requirements. The following is a discussion of our suggested changes:

SUSMP Categories

We agree with your approach to combine the two (10-99 and 100+ home) subdivision categories, but we do not agree with adding the two additional categories of environmentally sensitive areas and parking lots to the SUSMPs. These two categories are project characteristics and not project types. The seven priority project types are specifically mentioned in the NPDES Permit as requiring SUSMPs and were, therefore, included in the Development Planning Model Program (Model Program) in Part A of the Model Planning Priority/Exempt Checklist (Checklist).

Part B of the Checklist identifies characteristics that also determine a priority project. Part B includes, but is not limited to, project locations adjoining, bisected by, or directly discharging to a designated environmentally sensitive area, riparian corridor or wetland and parking lots with greater than 200 parking spaces for any office, commercial or industrial use. Since these two categories are already required in the Model Program to incorporate appropriate BMPs, we recommend the removal of the two additional categories from the SUSMP. Also, adding these categories would encompass a lot more project types for which the originally prepared SUSMPs were not intended to address and may not be appropriate.

Definitions

Hillside: We agree that the previous definition of hillside did not provide a consistent understanding throughout the County, but the current definition of hillside would render almost all development as being on a hillside which was not the intent of the program. We recommend changing the definition to read "property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope that is 25 percent or greater."

Environmentally Sensitive Area: The definition of "Environmentally Sensitive Area" is overly broad, to the point that stormwater discharges from virtually any development in Los Angeles County could be construed as discharging to an environmentally sensitive area. This is inconsistent with the intent to provide special protection for areas of special biological significance. Alternatively, we propose that for the purpose of identifying priority projects, "Environmentally Sensitive Areas" be defined as those that "adjoin, bisect, or directly discharge to the Significant Ecological Areas identified by Los Angeles County and any other areas of environmental significance as defined by the municipalities."

Redevelopment: Your proposed definition of redevelopment would require extremely minor projects, such as a hillside residence adding a room, to have the entire site come into compliance with stormwater regulations. This would not only place a financial burden on private citizens, but would require additional resources from the Permittees to implement this requirement. All other Federal and local regulations, such as the American Disabilities Act, contain thresholds before requiring full compliance. We recommend defining redevelopment as "the addition, to an already developed site, of 50 percent or more impervious area or improvements to 50 percent or more of the existing improvements on the site." We also recommend excluding hillside single family residences from this definition.

Sections 6 and 7 of the General Requirements

Section 6 covers the proper design of outdoor material storage areas and Section 7 covers the proper design of trash storage areas. Both of these sections are written as requirements that apply to all SUSMP categories. We recommend that individual single-family residences be exempt from this requirement.

Section 9 of the General Requirements

Section 9 covers design standards for Treatment Control BMPs. We contend that there are too many questions that need to be answered before a legally, economically, and technically feasible standard can be imposed on every Permittee's development planning programs. These questions involve the following: 1) how to implement the standard without having hydrologic data corresponding to the types of storms that are being

targeted, 2) what are the pollutants of concern for different types of development, and which BMPs are effective for these pollutants of concern, 3) if regional BMPs would be more effective than site specific BMPs, and 4) can we effectively influence routine maintenance of these BMPs. In order to develop answers to these questions, we support a voluntary standard in the SUSMPs. Los Angeles County and the Cities of Santa Monica and Calabasas are already implementing similar standards. We should assess these programs over the next two years and use the information to develop requirements for the next Municipal NPDES Permit. These requirements will then include technically defensible, economically feasible alternatives to provide water quality improvements that address pollutants of concern from new development and redevelopment in Los Angeles County.

Roofing Surface Exclusion

Part D disallows excluding the area of the roofing surface from the total area for calculation of rainfall or runoff volume to be treated if the storm water conveyance system directly or indirectly discharges to a natural stream or unlined channel or channel segment scheduled for restoration. We agree with your approach to include an exclusion for roofing surfaces. However, the terms "indirectly discharge" and "unlined channel" in Part D of this section could be interpreted to prevent almost all projects from meeting the exclusion criteria. We suggest changing the wording of Part D to read, "the storm water conveyance system does not directly discharge to a natural stream or channel segment scheduled for restoration."

Alternative Certification for Storm Water Treatment Mitigation

We agree with your approach to include this section in the SUSMP, but we feel that the certification should be required to be signed by a Civil Engineer or Architect registered in the State of California. This would provide assurance that the selection and design of the BMPs was conducted with technical expertise (State law precludes an Architect or Engineer from working outside their area of expertise). This would also provide recourse for negligent designs. Your wording would seem to allow an individual whose only "expertise" was taking a recognized class or seminar to design BMPs. This would, in many cases, violate State registration requirements and conversely, usurp the State Registration Board's authority over the practice of Architecture and Engineering.

We trust that you will find these suggestions satisfactory. If you believe that additional discussions are warranted, please let us know. We are prepared to meet and discuss these further. We look forward to working with you in developing a SUSMP the Permittees can resubmit to the Regional Board which will meet with the Board's approval.

Very truiy yours,

Desi Alvarez
Chairman
Executive Advisory Committee

Los Angeles, CA 90013

Re: **Objections to Proposed Regional Board Action regarding Standard Urban Storm Water Mitigation Plans (SUSMPs) - Order No. 96-054**

Dear Mr. Dickerson:

This letter is being forwarded to you on behalf of the Executive Advisory Committee of the Storm Water Program for Los Angeles County, Los Angeles County Municipal NPDES Permit (No. CAS614001), Waste Discharge Requirements, Order No. 96-054, ("Permit/WDRs" or "Order") and the Permittees thereunder, in connection with the upcoming hearing before the Regional Board scheduled for January 26, 2000. Please have these comments entered into the Administrative Record for this item before the Regional Board.

The proposed action recommended to be taken by the Regional Board on January 26, 2000, cannot legally be taken as: (1) the Regional Board's proposed action ignores the "Administrative Review Process" mandated by the Permit/WDRs; (2) the Regional Board cannot ***legally*** require that numerical mitigation measures be incorporated into the existing Permit/WDRs without formally amending the Permit/WDRs; (3) pursuant to the Permit/WDRs and state law, only cost effective storm water pollution control measures can be recommended; (4) the proposed mandated SUSMP Program would result in the imposition of unfunded mandates in violation of the California Constitution; and (5) the imposition of the mandated SUSMP by the Regional Board would result in a violation of the Administrative Procedures Act under California law. For these reasons and others, as further explained below, the Regional Board has no legal authority to take the action that is recommended for the January 26, 2000 hearing.

A. **BACKGROUND.**

On July 27, 1999, the Los Angeles County Department of Public Works submitted to you, on behalf of the Permittees under the subject Permit/WDRs, a Standard Urban Storm Water Mitigation Plan ("SUSMP") for your review and approval as the Executive Officer of the Regional Board. The SUSMP was then resubmitted on August 12, 1999, by the County, in order to clarify portions of the text. Pursuant to your recommendation, on September 16, 1999, the Regional Board considered making a recommendation back to you, that you approve the SUSMPs, with certain ***mandated*** modifications The Regional Board, however, took no formal action at that time, and determined to continue the matter for approximately 90 days with a new hearing to be renoticed. That hearing has now been noticed for January 26, 2000.

The County's proposed SUSMP was submitted to you as the Executive Officer, in accordance with the Permit/WDRs for your review and approval. Pursuant to Section 2.III.A of the Order, the Principal Permittee, in consultation with the other Permittees, was to develop the SUSMP and guidelines for their preparation, for use during planning and permitting of all development projects requiring "discretionary approval." Under the terms of the Order, the SUSMP is to incorporate the appropriate elements of the recommended list of BMPs, a list which has already been submitted to the Regional Board and approved by Resolution No. 99-03, dated April 22, 1999.

Under Resolution No. 99-03, the Regional Board specifically found that the approved BMPs ***"when implemented at development projects, in combination, will reduce pollutants in storm water discharges to the 'maximum extent practicable'."*** Thus, the Board has already determined that the proposed and approved BMPs when implemented, meet the Permittees requirements under the Clean Water Act. (Section 33 USC § 1342(p)(3)(B).)

The Permit/WDRs requires each Permittee to "develop a program on planning control measures" ("Planning Program") for priority projects (discretionary projects which may have a potential significant effect on storm water quality) ***"consistent with the programs developed under Part 2.III.A.1.b & c"*** (i.e., the approved list of BMPs and the SUSMP). The Planning Program is to be implemented within six months after commencement of the next fiscal year following approval of the Model SUSMP by the Executive Officer, provided that such approval was issued not later than 90 days prior to commencement of the Permittee's fiscal year. Where the approval is given within 90 days of the commencement of the fiscal year, the program is to be implemented in the second fiscal year following approval, but in no event is implementation to be initiated later than July 30, 1999.[1]

[1] Unfortunately, because of delays in the review process of a number of model programs by Regional Board staff, the July 30, 1999 deadline has not been complied with. Nevertheless, the

RUTAN & TUCKER

B. THE REGIONAL BOARD'S PROPOSED ACTION IGNORES THE "ADMINISTRATIVE REVIEW PROCESS" MANDATED BY ORDER 96-054.

The Permit/WDRs contains various provisions outlining the Administrative Review Process required to be followed by the Regional Board and the Executive Officer in reviewing storm water programs to be developed under the Order. Unfortunately, the process that is being proposed for the SUSMP, i.e., a referral to the Regional Board, and thereafter a recommendation and/or an approval of a storm water program with ***mandated*** changes, is ***not*** a procedure that is contained anywhere in the Order. To the contrary, Section 2.I.G. of the Permit/WDRs identifies the Administrative Review Procedure that must be followed "for review and acceptance of reports and documents submitted to the Regional Board under this Order." It further provides for a method ***"to resolve any differences in compliance expectations between the Regional Board and Permittees, prior to initiating enforcement action."*** (Order No. 96-054, §2.I.G.)

Section 2.I.G.2 provides that if the Executive Officer determines the Permittees' Storm Water Program is insufficient to meet the requirements of the Order, the Executive Officer is to send a "Notice of Intent to Meet and Confer" ("NIMC") to the Permittees, with specific information to support the determination. The NIMC is to include a time frame by which the Permittee must meet with the Regional Board staff in order for the Permittee to demonstrate that ***its program*** is sufficient to meet the requirement of the Order, and if not, to seek clarification of the steps to be taken to comply with the provisions of the Order. Please recognize that under the plain language of the Order, it is the ***Permittees' program*** that must be sufficient to comply with the Order, ***not the Regional Board's program***, or anyone else's.

Under Subsection 2.I.G.2, the NIMC is to conclude with either a Notice of Program Sufficiency to the Permittee, or the submittal of an acceptance by the Executive Officer of a written "Storm Water Program Compliance Agreement" ("SPCA") which is to include implementation deadlines.

You, as the Executive Officer, are empowered to terminate the meet and confer process after a reasonable period of time, due to a lack of progress on issues, and you may further order submittal of the SPCA by a specified date. You must then either approve or reject the submitted SPCA within 120 days of its submittal. If you reject the SPCA, you are required by the

---

Permit/WDRs presumes a minimum of six (6) months lead time after commencement of the next fiscal year, before implementation of the approved SUSMP, given the need to incorporate the SUSMP into the various Permittees planning processes, including allowing the Permittees sufficient time to develop storm water management guidelines for use in preparing and reviewing CEQA documentation. Thus, any approval of the SUSMP, and acceptance of the same by the Permittees, should not require implementation until six (6) months after commencement of the following fiscal year.

RUTAN & TUCKER

Permit/WDRs to state the reasons for your failure to approve the SPCA. If an SPCA has been rejected, the Permittees have 60 days in which to remedy the specified deficiency and resubmit the SPCA. If the SPCA has been approved, the Permittees are to comply with the terms of the SPCA.

Finally, as the Executive Officer, you are not to take any enforcement action against the Permittees until the Permittees have been notified in writing that the ***"Administrative Review Process has been exhausted, and that the Executive Officer has determined that a violation exists warranting enforcement."*** (Order No. 96-054, §2.I.G.2.d).

Please recognize that under the Administrative Review Process, it is the ***"Permittees' program"*** that is to be reviewed, and the standard of review is ***not*** whether the Regional Board recommended program is sufficient, but rather whether the ***"Permittees' program"*** is sufficient. Thus, the Regional Board's focus then and now should not and cannot be on whether ***its*** proposed program which contains numerical mitigation measures is consistent with the Clean Water Act. Rather, the focus, by law, must be on whether the SUSMP submitted by the Permittees is sufficient.

As discussed above, the SUSMP was resubmitted to your office for review and approval on August 12, 1999. Under the Administrative Review Process, the Executive Officer is to notify the Permittees of "the results of the review and approval or disapproval within 120 days." (Order No. 96-054, 2.I.G.1.a) If you determine that the submitted SUSMP is unacceptable, you must issue a Notice of Disapproval and thereafter comply with the NLMC procedures set forth above to resolve the alleged deficiencies.

Please recognize that there is no procedure under the Permit/WDRs for the Executive Officer or the Regional Board to unilaterally modify the proposed storm water program. Nor is there any procedure for the Regional Board to recommend to the Executive Officer that the Executive Officer approve someone else's program, in place of and instead of the Permittees' program. Rather, the existing Permit/WDRs provides a very specific procedure to be followed in the event you cannot approve the program submitted.

At this time, the Executive Advisory Committee requests that you follow the Administrative Review Procedures set forth under the Order issued by the Board. The procedure plainly applies to any deficiency alleged with respect to the Permittees' SUSMP and must be complied with.

In the event the Regional Board chooses to ignore the Administrative Review Procedure ***required*** by the Permit/WDRs, and the submitted SUSMP is not simply approved or disapproved by your office, such action will be interpreted by the Permittees as being a disapproval of the Permittees' SUSMP program. At that point, in accordance with the Order, we presume your

RUTAN & TUCKER, LLP

office will then proceed and issue a Notice of Intent to Meet and Confer with the Permittees and that you will simultaneously provide the required specific information called for under the Permit/WDRs to support such a determination, i.e., you will identify how the ***Permittees' program*** is deficient.

Once the NLMC is submitted and the members of the Executive Advisory Committee have had an opportunity to review the "specific information in support" of your determination, it will then comply with the procedures set forth under Order No. 96-054 "to resolve any differences in compliance expectations between the Regional Board and Permittees . . . ." (Order No. 96-054, 2.I.G.) It is the Permittees' expectation that your office and the Regional Board will follow the requirements of the Order in attempting to resolve any differences in compliance expectations. (Id.)

C. NUMERICAL MITIGATION MEASURES, EVEN IF JUSTIFIED, CANNOT BE MANDATED UNDER THE PRESENT ORDER.

In response to comments requesting the authority for imposing numerical mitigation measures on the Permittees, Regional Board staff cited the federal regulations, specifically Part 40 CFR Section 122.26(b)(2)(iv)(A)(2) as its justification for imposing such mitigation measures ***at this time***. A review of Section 122.26(b), shows in very clear terms that this Section concerns proposed programs to be considered by the Director, ***"when developing permit conditions"*** to reduce pollutants and discharges to the maximum extent practicable. See 40 CFR 122.26(d)(2). This Section, entitled "Proposed Management Program," reads in pertinent part as follows:

> "A Proposed Management Program covers the duration of the Permit . . . . Proposed Programs will be considered by the Director ***when developing permit conditions*** to reduce pollutants and discharges to the maximum extent practicable. (40 CFR 122.26(b)(2)) (vi.)

Thus, the authority specifically relied upon by Regional Board staff as the basis for its legal authority to impose numerical mitigation measures, in and of itself, shows that numerical mitigation measures can only be imposed ***"when developing permit conditions."*** Because the proposed numerical mitigation measures are not "permit conditions," but rather would only be conditions imposed on the approval of a program, under the Permit/WDRs, they can only appropriately be reviewed and imposed by the Regional Board pursuant to the issuance or reissuance of an MS4 NPDES Permit.

Further evidence of this fact is supported by the case so heavily relied upon by Regional Board staff in its response to comments, i.e., Defenders of Wildlife, et al. v. Browner, 1999 Daily Journal, DAR 12369 (Case No. 98-71080, filed September 15, 1999). In Defenders of Wildlife

RUTAN & TUCKER

v. Browner, the imposition of ***numerical*** limitations was being considered in the context of the appropriateness of the issuance of "***final*** NPDES Permits" to the Cities of Tempe, Tucson, Mesa and Phoenix, Arizona and Pima County. The "discretion" of the EPA Administrator in that action concerned the issuance of numerical limitations only in the course of the issuance of the ***final*** Permit/WDRs

In short, there is absolutely no support in state or federal law for the Regional Board or the Executive Officer to ***mandate*** a program on the Permittees at this juncture without it first being included in the NPDES Permit/WDRs issued in July of 1996. Thus, any attempt to do so by the Regional Board is subject to legal challenge. Since the requirements in question are nowhere to be found in the Permit/WDRs, ***they cannot be mandated*** on the Permittees under the Order, and just as the Permittees are forced to comply with the requirements of the Permit/WDRs as issued by this Regional Board in July of 1996, so to must the Regional Board.

Further, as discussed above, the Regional Board, through Resolution No. 99-03, has already found that the approved BMPs when implemented "will reduce pollutants in storm water to the maximum extent practicable," i.e., ***the Regional Board has already found that the previous approved list of BMPs complies with the Clean Water Act.*** Any attempt to impose additional conditions under the Order, would be inconsistent with the Clean Water Act and the regulations thereunder, and would be directly contrary to findings already made by your Board.

D. ONLY "COST-EFFECTIVE" STORM WATER POLLUTION CONTROL MEASURES SHOULD BE RECOMMENDED.

In addition, Section 2.III.A.4. of the Permit/WDRs, provides that the Principal Permittee in consultation with the Permittees, is to develop a model program to inform developers seeking "discretionary approvals" (such as the approvals needed where Urban Storm Water Mitigation Plans are to be incorporated in the development process), of, among other things: (1) "Development and construction of storm water management;" (2) "Maximization of pervious areas and storm water infiltration (where geology and topography permit);" and (3) ***"cost effective storm water pollution control measures."*** The informational program to be developed must also include specific guidance on selecting BMPs to reduce pollutants in storm water discharges from urbanized areas, and to include appropriate BMPs, educational materials, and handbooks and guidelines as described in the Permit/WDRs. This informational program was developed and incorporated into the Development Planning Model Program submitted to you in January of 1998, and as discussed above, the Development BMPs were ***approved*** by the Board under Resolution No. 99-03.

The Development Planning Model Program incorporates the requisite BMPs, but neither the approved BMPs, nor the Development Planning Model Program, requires numerical mitigation measures. Furthermore, numerical mitigation measures are not mentioned anywhere

in the Permit/WDRs. Accordingly, the approved model program, which is required to include information to developers on ***"cost effective storm water pollution control measures"*** does not include any information on numerical mitigation measures. The Permit/WDRs requirement for Developers to be informed of ***"cost effective storm water pollution control meusures"*** is evidence of the Permit's/WDRs' requirement that any "storm water pollution control measures" to be implemented must be "cost effective" before being imposed on Developers.

In the present case with respect to the proposed numerical mitigation measures, as evidenced from responses to comments issued by Regional Board staff, the Regional Board has performed very little analysis on the ***cost effectiveness*** of the proposed numerical mitigation measures. Without such an analysis, the recommended numerical mitigation measures should not even be considered, let alone recommended.

The required cost/benefit analysis is, moreover, mandated by state law. Specifically, California Water Code Section 13225 allows the Regional Board to require as necessary "any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water; ***provided that the burden, including costs, of such reports shall bear a reasonable relationship to the need for the reports and the benefits to be obtained therefrom.***" (Cal. Water Code § 13225(c).)

Given that the Permit/WDRs is not only a permit issued pursuant to the Clean Water Act, but also pursuant to the Porter-Cologne Act, (as evidenced by its caption "Waste Discharge Requirements)" state law and the Order itself mandate a costs benefit analysis before requiring such a costly program

E. THE PROPOSED MANDATED PROGRAM WOULD RESULT IN THE IMPOSITION OF AN UNFUNDED MANDATE IN VIOLATION OF THE CALIFORNIA CONSTITUTION.

In response to comments, Regional Board staff has contended that the imposition of a numerical mitigation measures is not an unfunded mandate because it involves the implementation of a federal permit. Yet, in the Ninth Circuit's decision of Defenders of Wildlife v. Browner, again a case heavily relied upon by Regional Board staff in its comments, the Ninth Circuit found that the imposition of numerical limits in the course of the issuance of a final NPDES Permit/WDRs was a "discretionary" decision of the Administrator. Similarly, Regional Board staff claims that it has the "discretion" to impose numerical mitigation measures.

Under the California Constitution, specifically Article XIII B, Section 6, a state agency is prohibited from shifting the financial responsibility of carrying out governmental functions to local entities, unless it also includes a provision reimbursing local governments for the cost of such programs. Here, with respect to the proposed mandated program by the Regional Board,

the Regional Board has provided no funding mechanism to local governments to implement the proposed program.

The prohibition on unfunded mandates applies even where federal law is involved, unless the state "has no true choice" in the manner of implementing the federal program. (See Hayes v. Commission on State Mandates (1992) 11 Cal.App.4th 1564, 1593). In fact, in Hayes, the Court made it clear that the *state* had to fund its requirements/mandates when the manner of implementing the federal program was left to the "discretion" of the state. (Id. at 1593.)

In the present case, Regional Board staff has claimed the Board has the "discretion" to impose numerical mitigation measures and thus, because it is not mandated to do so, the imposition of such a program on local agencies is an unfunded mandate in violation of the California Constitution.

F. THE IMPOSITION OF THE REGIONAL BOARD'S SUSMP PROGRAM ON THE PERMITTEES IS A VIOLATION OF THE ADMINISTRATIVE PROCEDURES ACT.

The California Administrative Procedures Act, Government Code Sections 11340 et. seq. ("APA") was enacted to establish basic minimum procedural requirements for the adoption, amendment or repeal of administrative regulations promulgated by the state's many administrative agencies. (Grier v. Kizer (1990) 219 Cal.App.3rd 422, 431; also see, Gov. Code § 11346.) Although California law does not require administrative agencies to comply with the APA when simply issuing or amending permits, including the issuance of waste discharge requirements, where the permit or amendment in question rises to a level of an ***order***, a regulation or a ***standard of general application***, the APA clearly applies. (Gov. Code §11342(g).)

In the instant case, the proposed action by the Regional Board, if carried out by the Executive Officer and forced on the Permittees under the present Permit/WDRs, constitutes an ***order and a standard of general application*** that is being imposed on all Permittees, i.e., all eighty-five (85) cities in the County and the County itself, to require the imposition of numerical mitigation measurers on significant development and redevelopment in the County. As such, if it determines to move forward with the imposition of such a mandated standard of general application, the Regional Board is required to comply with the APA.

In State Water Resources Control Bd. v. Office of Admin. Law (1993) 12 Cal.App.4th 697, the court analyzed various amendments to a Water Quality Control Plan and found that such amendments constituted "regulations" required to be adopted in compliance with the APA. The court found that where a regulation "looks like a regulation, reads like a regulation, and acts like a regulation, it will be treated as a regulation whether or not the agency in question so labeled it."

RUTAN & TUCKER, LLP
ATTORNEYS AT LAW

(Id. at 702.) The court went on to find that in light of this strong legislative mandate, regulatory agency directives, such as amendments to the Water Quality Control Plan, must be deemed to be regulations. (Id.)

In the instant case, a mandated SUSMP, where the Permit/WDRs in question does not allow for the compulsion of such a program or the compulsion of ***any*** program, is plainly a "regulation" for purposes of the APA. Since the requirements of the APA have not been complied with, any such mandated program would have no legal force or effect.

G. CONCLUSION.

In sum, the Executive Advisory Committee respectfully requests that the Regional Board recognize that it has already issued an NPDES Permit/WDRs which allows the Permittees to discharge both storm water and non-storm water into their MS4 systems. Moreover, the existing Permit/WDRs does not require or condition its terms on the imposition of numerical mitigation measures. Nor does the existing Order allow the Executive Officer to unilaterally impose new conditions on the Permittees. Such action, if taken, would be taken in violation of the existing Order.

At this time, the only action the Executive Officer is permitted to take in accordance with the terms of the Order, is to review the Permittees' proposed SUSMP, provide an explanation as to why that program is insufficient, and to thereafter comply with the Administrative Review Process under the Order. Any action taken by the Executive Officer to approve a program not submitted by the Permittees, will have no legal force or effect. We respectfully request that you comply with the terms of the Order issued by your own Regional Board in reviewing and approving the SUSMP submitted by the Permittees.

Thank you for your attention to this matter and your consideration of these issues.

Sincerely,

Richard Montevideo

Dennis Dickerson
Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, California 90013

Dear Mr. Dickerson:

The Santa Monica Mountains Conservancy (Conservancy) is the principal state agency charged with planning and conservation within the Santa Monica Mountains Zone pursuant to Division 23 of the Public Resources Code. The Conservancy has reviewed the *Standard Urban Storm Water Mitigation Plan for Los Angeles County and Cities in Los Angeles County* (SUSMP) proposed by the Los Angeles Regional Water Quality Control Board (LARWQCB) and has the following comments.

The LARWQCB is to be congratulated for taking this major step forward in protecting water quality within the Los Angeles region. We applaud the LARWQCB for their proactive approach to the issues of storm water runoff. In implementing this plan, LARWQCB should adopt the strongest water quality protection available.

The Conservancy is concerned about water quality issues since much Conservancy open space is adjacent to or bisected by streams that contain stormwater runoff. The Conservancy is also a stakeholder in the planning process for management plans for six of the watersheds under the LARWQCB's jurisdiction. The additional runoff resulting from new developments can be catastrophic, increasing water velocity, erosion, sediment load, and pollutants, and decreasing water quality. These changes can be disastrous for resources dependent on these streams.

The Conservancy has several specific technical comments relating to the details of the plan.

11-138

- The Conservancy is pleased that the LARWQCB has extended protection to environmentally sensitive areas by requiring SUSMPs for "locations adjacent to or discharging" into these areas. However, we would ask that the definition for "Environmentally Sensitive Area" be expanded to include open space areas owned or operated by federal, state, or local agencies. Open space land is under tremendous pressure for development. Any open space, and the resources it protects, is environmentally sensitive.

- The section, Conflicts with Local Practices, seems to nullify the SUSMP requirements. Your Response to Comments state several times that "Federal laws and regulations require that controls on new development and redevelopment be enforceable." The final sentence in the Conflicts with Local Practices section states, "The Permittee may continue the local practices and modify the SUSMPs contained herein to be consistent with the code, except where those practices would defeat or circumvent the intent of the SUSMP requirements." This language seems vague and not enforceable. Resource agencies normally require whatever standards are more protective or more stringent, and enforceable.

- The document makes a good argument for the proper maintenance of treatment control Best Management Practices (BMP) in Section 8, Provide Proof of Ongoing BMP Maintenance. We agree that the developer must accept responsibility for the maintenance until the time the property is transferred to public entities. However, a mandatory source of funds for ongoing monitoring and maintenance of treatment control BMPs transferred to public entities should be specifically stated. The loss of permeable surfaces and its associated water quality values to development is permanent. It is necessary to maintain the required treatment control BMPs in perpetuity in order to compensate for the permanent effects of development. It follows then that the developer or any successor must be responsible for the permanent maintenance of the structural BMP in a manner, which fully mitigates the development impacts to water resources (surface and groundwater). As such, permanent maintenance of the structural BMP should be required as a condition of the granting of any permits, which might be required for project construction. To assure the ongoing cost of management and maintenance of BMPs in perpetuity, a non-eroding endowment fund must be established so the public agency assuming maintenance responsibility can pay for all the necessary activities to maintain and monitor the structural BMP site. No taxpayer except the developer and any

successors should shoulder these costs. These maintenance costs are simply the price of doing business.

- Section 9 excluded the area of roofing as part of the calculation for total area rainfall or runoff volume. This exclusion requires explanation. Roofs are impervious surfaces that divert water into stormwater drains and reduce percolation to groundwater reservoirs. Due to the air quality in Los Angeles County, the pH of roof stormwater can be quite low, especially first flushes. In addition, the volume of water shed from roofs accounts for a high percentage of the impervious surface area associated with development. This calculation minus the roof area guarantees undersized treatment control BMPs and inadequate control of first flushes through treatment structures. Inadequately designed treatment structures leads to complaints about the program itself. These failures and resultant complaints could be avoided with adequately sized structures designed from the initial calculation that incorporates all impervious surfaces.

- Within Section 11, Waiver, the SUSMP provides authority for local jurisdictions to incorporate 'impracticability waivers' for specific properties. Three recognized situations are listed. These waivers provide large loopholes for any developer to use.
  - (i) *Extreme limitations of space for treatment on a redevelopment project.* The number of BMP offered in Table 2 as well as BMPs from the bibliographic references offered from California and other states suggests a wide range of routine ideas that can be incorporated into any redevelopment plan regardless of the space limitations.
  - (ii) *Unfavorable or unstable soil conditions at site to attempt filtration.* If the site has unfavorable or unstable soil conditions, the area probably should not be developed. In recent years, we have seen a number of development homes literally torn apart by unstable soil conditions (e.g. Laguna Beach and Calabasas). Unstable soil conditions should not even be considered. If the area cannot handle infiltration, it cannot handle development.
  - (iii) *Risk of groundwater contamination because underground source of drinking water is less than ten feet from the soil surface.* This condition sounds reasonable as the basis for a waiver except that again there is such a wide array of options available for BMPs, the argument is invalid. In addition, the LARWQCB in its Response to Comments states that "pretreatment of storm water will reduce such risks. The soil acts as a natural filter and self regenerates." Your own statements argue against this waiver condition.

The Waiver Section also states that any "other justification for impracticality must be approved by the LARWQCB Board's Executive Officer before it becomes recognized and effective." The stringency of these justifications should be discussed otherwise the arguments could be as flawed as those stated above.

We appreciate the opportunity to submit these comments for consideration. Please direct any questions and documents to Kathleen Bullard, Director of the Los Angeles River Center and Gardens, at (323) 221-8900 extension 101, or Ellen Mackey, Staff Ecologist, at (818) 504-2196.

Sincerely,

Elizabeth A. Cheadle

Subject: COG Resolution Opposing Numeric Standards on New Developments

Dear Mr. Hahai:

The San Gabriel Valley Council of Governments (SGVCOG), a joint powers agency representing the 1.9 million Los Angeles County residents living in our 30 cities and unincorporated communities, is opposed to the proposed numeric standards for new development in our cities. To meet these numeric standards for storm water treatment/retention, developers will be required to install costly structural controls thereby increasing the costs of construction in the Valley. In addition, our cities will have to expand their already resource constrained enforcement programs.

As set forth in the attached resolution, we strongly oppose this expansion of your regulatory efforts and ask that you engage in a constructive dialog with our organization in seeking resolution to this issue.

Sincerely,

Nicholas T. Conway
Executive Director

11-142

R0068361

RESOLUTION NO. 99-07

A RESOLUTION OF THE SAN GABRIEL VALLEY COUNCIL OF GOVERNMENTS URGING THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION TO DEFER DISCUSSION OF NUMERIC STANDARDS FOR TREATING OR RETAINING STORM WATER RUNOFF FROM NEW DEVELOPMENTS PURSUANT TO THE LOS ANGELES COUNTY MUNICIPAL NPDES PERMIT

Whereas, the San Gabriel Valley Council of Governments (hereinafter "San Gabriel Valley COG") is a joint powers agency representing more than 1.9 million Los Angeles County residents living in 30 cities and unincorporated communities;

Whereas, the California Regional Water Quality Control Board, Los Angeles Region (hereinafter "regional board"), is further considering the incorporation of numeric standards into the Standard Urban Storm Water Runoff Mitigation Plan (hereinafter SUSMP), a component of the model development planning program and a requirement of the Los Angeles County Municipal NPDES permit (hereinafter, "municipal NPDES permit");

Whereas, such numeric standards are intended to retain and/or treat storm water runoff volume (approximately 20,000 gallons per acre) from 3 categories of new development projects: 10-99 home sub-divisions, 100-plus home sub-divisions; and 100,000 square foot commercial developments;

Whereas, meeting the proposed numeric standards would necessitate the use of specific structural controls, including but not limited to extended detention basins, wet ponds, infiltration basins/ponds (which reduce the amount of developable space), storm drain-connected oil/grit separators, catch basin inserts, grassy swales, and other devices;

Whereas, the numeric standards are intended to treat/retain runoff from hard surfaces, including roof-tops, albeit there is no compelling data available indicating that pollutants from such surfaces are toxic or have an impairing affect on a beneficial use of a receiving water;

Whereas, such structural controls would require post-construction operation and maintenance, for which cities would be responsible;

Whereas, such controls, if not properly designed or maintained, could become sources of pollution rather than pollution mitigants;

Whereas, the numeric standards proposed by the regional board are not mandated in the municipal NPDES permit, nor are they required of other municipal NPDES permits in the State of California;

Whereas, neither the regional board nor any other interested party has demonstrated that storm water retention/treatment numeric standards would result in the improvement or protection of a beneficial use of a receiving water (ground water recharge, shellfish harvesting, wetland habitat protection, etc.);

Whereas, imposing such unproven and questionable numeric standards on cities constitutes an unfunded state mandate, one that has not been evaluated in cost-effective terms, as required by state law;

11-143

R0068362

Whereas, the Executive Advisory Committee hereinafter ("EAC") is a body representing cities from the Ballona Creek, Los Angeles River, San Gabriel River, Dominguez Channel, Malibu Creek, and Santa Clara Rivers;

Whereas, on August 11, 1999, the EAC elected to remove any reference to numeric standards from the SUSMP and recommended the adoption of non-numeric SUSMPs;

Whereas, if the numeric standard is adopted, developers and cities would have a difficult time implementing because of the:

1. lack of experience with the structural controls required to meet the numeric standard; and

2. absence of adequate guidelines (e.g., a guidance document containing information regarding the cost, pollutant effectiveness, and pollutant applicability of structural controls that would be needed to meet the numeric standard; and the constraints limiting their use such as soil conditions and siting considerations);

Whereas, during a regional board public hearing held on September 16, 1999, approximately 50 cities expressed opposition to the proposed numeric standards, resulting in the continuation of the matter to another public hearing scheduled for January 6, 2000.

NOW, THEREFORE, the San Gabriel Valley COG does hereby resolve as follows:

Section 1. Call upon the regional board to defer inclusion of numeric standards into SUSMPs until such time the following has been established:

i. an identification of the type of and quantity of pollutants generated from each of the subject new developments;

ii. the type and quantity of pollutants identified pose a threat to a beneficial use of those receiving waters into which San Gabriel Valley cities discharge;

iii. an evaluation of those structural controls required to meet numeric standards in terms of (a) appropriateness to each of the pollutants of concern and (b) pollutant removal capacity; and

iv. an "out clause" in the event a numeric standard cannot be met for reasons of economy or feasibility.

Section 2. Recommend that the regional board approve the SUSMP, as proposed by the Executive Advisory Committee on August 11, 1999, which does not include numeric standards.

Section 3. Advise the regional board that if it adopts the numeric standards without meeting the conditions specified under Section 1, the San Gabriel Valley COG shall prepare a petition for submittal to the State Water Resources Control Board appealing the regional board's action.

11-144

PASSED, APPROVED, AND ADOPTED this 16 day of December 1999.

SAN GABRIEL VALLEY COUNCIL OF GOVERNMENTS

RESOLUTION NO. 99-3

A RESOLUTION OF THE SOUTH BAY COUNCIL OF GOVERNMENTS URGING THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION, TO DEFER DISCUSSION OF NUMERIC STANDARDS FOR TREATING OR RETAINING STORM WATER RUNOFF FROM NEW DEVELOPMENTS PURSUANT TO THE LOS ANGELES COUNTY MUNICIPAL NPDES PERMIT

WHEREAS, the South Bay Council of Governments (hereinafter "South Bay COG"), is a sub-region of the Southern California Association of Governments, consisting of 16 member cities;

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region (hereinafter "regional board"), is further considering the incorporation of numeric standards into the Standard Urban Storm Water Runoff Mitigation Plan (hereinafter SUSMP), a component of the model development planning program and a requirement of the Los Angeles County Municipal NPDES permit (hereinafter, "municipal NPDES permit");

WHEREAS, such numeric standards are intended to retain and/or treat storm water runoff volume (approximately 20,000 gallons per acre) from 3 categories of new development projects: 10-99 home sub-divisions, 100-plus home sub-divisions; and 100,000 square foot commercial developments;

WHEREAS, meeting the proposed numeric standards would necessitate the use of specific structural controls, including but not limited to extended detention basins, wet ponds, infiltration basins/ponds (which reduce the amount of developable space), storm drain connected oil/grit separators, catch basin inserts, grassy swales, and other devices;

WHEREAS, the numeric standards are intended to treat/retain runoff from hard surfaces, including roof-tops, albeit there is no compelling data available indicating that pollutants from such surfaces are toxic or have an impairing effect on a beneficial use of a receiving water;

WHEREAS, such structural controls would require post-construction operation and maintenance, for which cities would be responsible;

WHEREAS, such controls, if not properly designed or maintained, could become sources of pollution rather than pollution mitigants;

WHEREAS, the numeric standards proposed by the regional board are not mandated in the municipal NPDES permit and are not required of other municipal NPDES permits in the State of California;

WHEREAS, neither the regional board nor any other interested party has demonstrated that storm water retention/treatment numeric standards would result in the improvement of protection of a beneficial use of a receiving water (ground water recharge, shellfish harvesting, wetland habitat protection, etc.):

WHEREAS, imposing such unproven and questionable numeric standards on cities constitutes an unfounded state mandate, one that has not been evaluated in cost-effective terms, as required by state law;

WHEREAS, the Executive Advisory Committee hereinafter ("EAC") is a body representing cities from the Ballona Creek, Los Angeles River, San Gabriel River, Dominguez Channel, Malibu Creek, and Santa Clara Rivers;

WHEREAS, on August 11, 1999, the EAC elected to remove any reference to numeric standards from the SUSMP and recommended the adoption of non-numeric SUSMPs;

WHEREAS, if the numeric standard is adopted, developers and cities would have a difficult time implementing because of the:

1. lack of experience with the structural controls required to meet the numeric standard; and

2. absence of adequate guidelines (e.g., a guidance document containing information regarding the cost, pollutant effectiveness, and pollutant applicability of structural controls that would be needed to meet the numeric standard; and the constraints limiting their use such as soil conditions and siting considerations);

WHEREAS, during a regional board public hearing held on September 16, 1999, approximately 50 cities expressed opposition to the proposed numeric standards, resulting in the continuation of the matter to another public hearing scheduled for January 6, 2000.

NOW, THEREFORE, the South Bay Cities COG does hereby resolve as follows:

Section 1.

Call upon the regional board to defer inclusion of numeric standards into SUSMPs until such time the following has been established:

i. an identification of the type and quantity of pollutants generated from each of the subject new developments;

ii. the type and quantity of pollutants identified pose a threat to a beneficial use of those receiving waters into which South Bay cities discharge;

iii. an evaluation of those structural controls required to meet numeric standards in terms of (a) appropriateness to each of the pollutants of concern and (b) pollutant removal capacity; and

iv. an "out clause" in the event a numeric standard cannot be met for reasons of economy or feasibility.

Section 2.

Recommend that the regional board approve the SUSMP, as proposed by the Executive Advisory Committee on August 11, 1999, which does not include numeric standards.

Section 3.

Advise the regional board that if it adopts the numeric standards without meeting the conditions specified under Section 1, the South Bay Cities COG shall prepare a petition to the State Water Resources Control Board appealing the regional board's action.

SUSMP Policy Approved by the Regional Council

of the Southern California Association of Governments

(January 6, 2000)

The Southern California Association of Governments recommends that:

- *the Los Angeles Regional Water Quality Control Board not adopt SUSMP numeric standards until such time as the Board can validate the feasible, technical and scientific bases for numeric standards.*
- *the Board monitor pilot programs similar to those underway in Los Angeles County.*
- *the Board work closely with cities such as Calabasas, Santa Clarita and Santa Monica to assess the effectiveness of local initiatives aimed at managing runoff water flows and quality.*
- *the Board develop a Memorandum of Understanding with SCAG in which SCAG would incorporate a Best Management Practices for Preventing Storm Water Runoff Pollution in the Los Angeles Basin project in its Environmental Programs and Livable Communities work elements.*
- *the Board ask SCAG to manage a legal authorities initiative in which all of the 85 cities in the Los Angeles Basin would work to develop model language which would then be available for municipal implementation throughout the Basin.*
- *the Board invite SCAG to contribute its Section 208 authorities to a collaboration with other key organizations/stakeholders in scoping out plans for a watershed management initiative program in each watershed of the Basin.*
- *the Board evaluate the operating results of watershed (regional) mitigation programs prior to its consideration of any general retrofit mandates on existing land uses.*
- *the Board and SCAG cooperate with other stakeholders in putting best efforts into raising the new financial resources needed for planning and implementing these water quality commitments.*
- *the Board's staff be encouraged to meet with those SCAG sub-regional councils affected by the SUSMP program prior to any Board action on these matters.*

The Regional Council calls for the participation of the various sub-regional councils, POTWs and other necessary entities in the development of watershed initiatives needed for reducing and managing storm water runoff pollution in the region.

Los Angeles, CA 90013

Subject: Proposed Standard Urban Stormwater Mitigation Plan

Dear Mr. Dickerson: Dennis ~

The California Coastal Commission staff has reviewed the proposed Standard Urban Stormwater Mitigation Plan (the Plan) for Los Angeles County and Cities in Los Angeles County, dated December 7, 1999. The Standard Urban Stormwater Plan includes many detailed, innovative policies that will, if the Plan is approved, improve the quality of California's coastal waters. Thus, we urge the Regional Board's adoption of the Plan.

We recognize that polluted runoff is the number one cause of pollution in coastal waters. We believe the implementation of the proposed Plan will improve water quality. The Plan will be effective because it defines stormwater requirements for nine project categories, specifies numerical design standards for post-construction treatment control best management practices (BMPs), and provides developers and land use professionals with specific information regarding feasible on-the-ground improvements. The approach that your staff recommends requires incorporation of BMPs into the design phase of development and redevelopment. This approach will improve the quality of runoff from each project. In time, this may lessen the need for after-the-fact treatment measures. We believe that this program can serve as a model statewide.

Therefore we urge the Regional Board to approve the proposed Plan, and adopt the accompanying numerical mitigation standards, as the minimum design criteria for review of post-construction BMPs in the Los Angeles Region for construction projects subject to coverage under the state stormwater general permit for construction activity.

Thank you for the opportunity to express our support.

Sincerely,

JAN 13 2000

Dennis Dickerson
Executive Officer
California Regional Water Quality Control
Board, Los Angeles Region
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson:

The purpose of this letter is to urge the Los Angeles Regional Board to adopt the proposed Standard Urban Storm Water Mitigation Plan (SUSMP) dated December 7, 1999 which was developed for post-construction storm water pollution control for specified new developments in Los Angeles County and Cities within the County. The SUSMP was developed pursuant to the requirements of NPDES permit No. CAS614001 for storm water discharges from the municipal separate storm sewer system (MS4) serving the County and its Cities.

We have reviewed the requirements of the proposed SUSMP and we believe they are consistent with the requirements of the CWA, applicable NPDES regulations, and EPA guidance on this matter. We understand that concerns have been expressed in particular regarding item #9 in the SUSMP which requires treatment (for the specified developments) for the runoff from the first 0.75" of rain. However, contrary to some of the comments received by the Regional Board, we believe this proposed requirement is fully within the authority of the Regional Board. NPDES regulations at 40 CFR 122.26(d)(2)(iv)(A)(2) specifically require that MS4 permittees include requirements in their storm water management programs for post-construction control measures to reduce storm water pollution from new developments after construction has been completed. EPA's guidance manual for Part 2 MS4 permit applications (EPA 833-B-92-002) indicates that "design criteria and performance standards" may be used to comply with this requirement. We believe that the Regional Board's proposal is fully consistent with this guidance.

The Regional Board's proposal would not be the first time that such numeric criteria have been used for new developments in California. The Regional Board's criteria already went into effect about 6 months ago in unincorporated areas of Los Angeles County via the recent NRDC settlement agreement. We understand from Regional Board staff that no evidence has surfaced thus far that the criteria are proving to be an excessive burden on developers. In addition, similar requirements are already in place in other parts of the country including the State of Florida (since 1982), and the Puget Sound area in Washington (since 1992); similar criteria have also been

proposed for the State of Maryland, and are already in effect in Prince George's County in Maryland. We understand that Regional Board staff have contacted these other States and again found that compliance with the standards is being widely achieved without an excessive burden on developers. As another example, the City of Phoenix requires retention facilities for the 100-year, 2-hour storm for new developments. The 100-year, 2-hour storm in the City of Phoenix is about 2.5" and substantially exceeds the storm which would need to be treated under the Regional Board's proposal. Nevertheless, compliance with the City of Phoenix requirement has also been achieved without an undue burden on the developers.

By specifying numeric criteria for post-construction storm water controls (as opposed to relying to a considerable degree on developers to include appropriate controls on their own), we believe that the proposal will better ensure that effective storm water pollution controls are included in the design of new developments. Thus, the proposal should lead to improved control of storm water pollution which the proposal cites as a significant factor currently contributing to the impairment of numerous rivers and streams in the Los Angeles area.

We are also concerned, however, that the Regional Board's proposal would exclude roofed surface areas in certain circumstances in the calculation of rainfall runoff. We believe that this provision could prove overly broad and may hinder implementation. As such, we would recommend that it be removed.

Thank you for the opportunity to review and comment on the proposed SUSMP. If you have any questions regarding this matter, please refer your staff to Eugene Bromley of the CWA Standards and Permits Office at (415) 744-1906.

Sincerely,

Alexis Strauss

Re: Proposed Standard Urban Storm Water Mitigation Plan

Dear Dennis:

I am writing to express a great deal of concern among our member cities with the announced schedule for consideration of your newly proposed SUSMP on January 6, 2000. January 6 is the regularly scheduled meeting day when all of our Policy Committees and our Governing Board convene throughout that day. This means that many of our officials cannot participate in your meeting.

Because of the significance of the proposed SUSMP policy we request that you reschedule this matter for the Board's consideration and decision for a later meeting in January or February.

Many of our locally-elected officials are very interested in addressing the Board and offering suggestions at a later meeting. We also believe that the Board would be better served by providing ample time to interested members of the public in which they may consider your proposal and its new directions without the distractions or travel of the holidays.

Thank you for your interest and consideration.

Sincerely,

Mark Pisano

Subject: **PROPOSED STANDARD STORM WATER MITIGATION PLAN**

Dear Ms. Smith:

This letter comments on the groundwater aspects of the subject plan that will be before your board on January 26, 2000.

Ventura County Water Resources fully supports your plan and suggests additional protection for unconfined basins where groundwater has a very high potential of being contaminated. The suggestions noted are presently being implemented in Ventura County through CEQA conditions. Specifically, the following additions are suggested:

Page 9 Item 2., page 10 Item C1, page 11 Item D1, D2, D3.
Add a requirement to protect unconfined groundwater basins. **"Projects located over unconfined groundwater basins shall incorporate an impervious liner beneath the concrete. The liner shall be constructed with 80 mil. HDPE, all seams shall be lapped and sealed and sides shall be turned upwards to prevent lateral movement of contaminants except towards a collection sump which shall be designed to collect contaminants for proper treatment and/or disposal."**

The reason we are interested in this extra protection for concrete areas is that our experience has shown that areas beneath concrete slabs of refueling and industrial areas are invariably highly contaminated due to permeability induced by edges, cracks or expansion joints. LARWQCB records of contamination beneath old refueling station slabs and industrial shop floors will confirm our experience.

R0068374

Page 13, Item 12.
Add: **"Infiltration BMPs shall not be used to mitigate pollutants of concern when the project is located over an unconfined groundwater basin regardless of the separation to the water table."**

11-153-A-2

As you know, Ventura County has both confined and unconfined basins representing millions of acre-feet of groundwater. The aquifers in these basins are recharged through unconfined areas such as the Oxnard Forebay Basin, the Fillmore Basin, the Piru Basin and parts of other basins.

Page 4. Definitions
Add definition of sanitary sewer. **(Any definition that plainly states that a sanitary sewer is not a septic tank).**

We believe that these requirements apply to Los Angeles County, and we are especially interested in incorporation of these comments into any plan that will apply to Ventura County.

Should you desire further information, please call me at 805 648-9204.

Very truly yours,

Lowell Preston, Ph.D.

Re: **Standard Urban Stormwater Mitigation Plans (SUSMPs) for the City of Long Beach**

Dear Mr. Dickerson:

Please provide copies of this letter to the members of the Board and include it in the administrative record of the hearing on the above subject.

The City of Long Beach thanks the Regional Board and its staff for its efforts on behalf of stormwater runoff pollution mitigation. As part of its own continuing efforts in this regard, the City of Long Beach requests that the following comments be considered and addressed in the adoption of SUSMPs for the City of Long Beach as part of its separate permit. The primary issues, which will be elaborated upon in the body of this letter, are:

1. The findings contained in the Tentative Resolution should be revised to remove confusing references to "the permit" when two permits, Regional Board Order No. 96-054 (the "Countywide Permit") and Regional Board Order No. 99-060 (the "City of Long Beach Permit")are affected.

2. Pursuant to prior agreement, the implementation dates for those SUSMPs applicable to the City of Long Beach must be concurrent with those for the cities subject to the Countywide permit to avoid putting the City at an economic disadvantage.

3. The inclusion of numerical design standards as minimum design criteria should be deferred until such time as empirical data on the efficacy of such standards, obtained in this region or another region with a similar climate, is available.

R0068376

11-153-A-3

City Hall 333 West Ocean Boulevard, Eleventh Floor, Long Beach, California 90802-4664 (562) 570-2200 Fax (562) 436-1579
Workers' Compensation Eighth Floor (562) 570-2245 Fax (562) 570-2220

The Findings

The findings in the Tentative Resolution should be revised to reflect that two separate permits are affected by this resolution. These two permits were reached through two very different processes, and contain different procedures for modification and implementation. Finding 21 should be revised to reflect this. Similarly, Finding 13 should separately identify "Priority Projects" for each permit. Finding 5 should be revised to include references to the City of Long Beach, its receiving waters, its monitoring program, and its permit.

Implementation of SUSMP Requirements for the City of Long Beach

During negotiations for the settlement of the litigation between the City of Long Beach and the Regional Board, it was agreed that SUSMP requirements for the City would not take effect prior to the effective date for SUSMPs under the Countywide Permit. This issue arose during the hearing which resulted on the City of Long Beach's proposed permit, at which time it was agreed that the City should not be placed at an economic disadvantage by having its SUSMP effective prior to the requirements affecting the majority of the County. Members of the Regional Board staff have confirmed this sequence of events, which should be reflected in the Board's resolution. The Tentative Resolution is silent as to the implementation schedule for the SUSMP for the City of Long Beach.

The Countywide Permit anticipated that SUSMPs would be implemented 90 days following the next fiscal year following their adoption but no later than July 1999. While the City acknowledges that this date has past, a similar schedule of implementation is needed to avoid anticipated "taking" or related challenges from affected parties who have already initiated the planning review process with the City. development requirements should be scheduled to be implemented no sooner than 90 days following the start of the next fiscal year, but no sooner than the implementation date adopted under the Countywide Permit.

Numerical Design Standards

The adoption of numerical design standards as minimum design criteria is not supported by relevant empirical data or by any cost-benefit analysis. For these reasons, it fails to comport with either State or Federal law. Inclusion of numerical design standards as a voluntary standard or as part of an incentive program would assist in the collection of data relevant to this region and provide cities with a legal basis on which to defend the requirement.

Comments Submitted by the Executive Advisory Committee

As you are aware, the City of Long Beach has been an active participant in the development of the SUSMPs through the Executive Advisory Committee. To the extent that they apply to the four priority project categories contained in the City of Long Beach Permit, we join in the concerns expressed by the Executive Advisory Committee and its counsel.

We appreciate the opportunity to submit these comments as part of the administrative record for the January 26th hearing and hope you will give them thoughtful consideration. The City of Long Beach reserves the right to submit further comments at the hearing. Thank you for your efforts.

Very truly yours,

ROBERT E. SHANNON, City Attorney

CITY COUNCIL
NEW BUSINESS

January 18, 2000

SUBJECT: THE WEST HOLLYWOOD WATER CONSERVATION AND ENVIRONMENTAL WATER RUN-OFF ACT OF 2000

INITIATED BY: COUNCILMEMBER PAUL KORETZ
(Council Deputy, Scott J. Svonkin / Council Intern, Vickie Nuse)

STATEMENT ON SUBJECT:

This item asks the City Council to direct the City Attorney, Community Development Department and the Landscape and Building Maintenance Manager to research and develop a plan for implementing the goals outlined in the attached document.

RECOMMENDATION:

1) Direct Landscape and Building and Maintenance Manager to research the attached design standards and develop a plan to implement the goals of the attached document for city facilities prepare and present a report for the City Council.

2) Direct the City Attorney and the Community Development Department to research and develop a plan for implementing the goals outlined in the attached document

BACKGROUND ANALYSIS:

This item was developed with the help and support of Heal The Bay, working with City staff and the Cities consultant on water issues. Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and few measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming; creeks and streams with water that is unsafe to drink; and inland and coastal waters that pose health risks to aquatic life.

By adopting the proposed design standard the City of West Hollywood would take the lead among all the Los Angeles County cities in preventing urban runoff, the number one source of pollution to our coastal and inland waters.

The design standard was supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The design standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) – and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of the proposed standard will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a cleaner environment, the City of West Hollywood should adopt the proposed standard to mitigate the effects of urban runoff from city property and new and redevelopment sites.

OFFICE OF PRIMARY RESPONSIBILITY:

Landscape Building and Maintenance

Community Development Department

FISCAL IMPACT:

Monies have been budgeted as a part of the existing contract with the city's consulting firm.

Staff will report back to Council with a cost analysis based on assessment of existing city properties.

By adopting the proposed design standard the City of West Hollywood would take the lead among all the Los Angeles County cities in preventing urban runoff, the number one source of pollution to our coastal and inland waters.

Mr. Dennis Dickerson, Executive Officer
Los Angeles Regional Water Quality Control Board
320 W. Fourth Street, Suite 200
Los Angeles, CA 90013-1105

SUBJECT: Standard Urban Stormwater Mitigation Plan (SUSMP)

Dear Mr. Dickerson:

Attached is the SUSMP policy statement adopted by our Regional Council on January 6, 2000. This statement reflects a policy process by which our Water Policy Task Force and our Energy and Environment Committee considered extensive testimony on this issue last year. You are already aware of the resolutions adopted by three of the subregional councils of governments in Los Angeles County.

During the Regional Council's deliberation comments were made that gave emphasis to varying environmental, economic and developmental concerns. All of these comments underscored the need for improved water quality in our region. Your Board should know that the Council voted unanimously to support this policy for environmental protection.

This action recommends that the Board pursue an alternative to the proposal developed by your staff. We believe that a much greater pollutant reduction can be achieved with a TMDL-driven numeric process than with a volume-driven numeric process. It should be significant to the Board that the approach we are recommending will accelerate a TMDL process that now is suffering from limited resources and staffing, not to mention needed participation. Where a volume-driven numeric approach is described as requiring between 50-100 years to bring desired water quality, a TMDL-driven numeric approach is likely to bring success much more quickly. This owes to its focus on, among other things, pollutants of concern, watershed-scale mitigation strategies and a larger public/private community through which raising financial and organizational resources can succeed.

With scarce resources at our disposal we must work for water quality in ways that best utilize these resources. For this reason, SCAG stands ready to work with you and the Board to develop the implementation schedules and program budgets needed for storm water pollution reduction in each of the County's six watersheds. Efforts underway such as those in the Malibu Creek Watershed offer an example of what needs to be started in other places of the Basin. We await word of the Board's interest in this accelerated approach to pollution reduction.

In the interests of sharing this vision with your Board, please assist us by earmarking 10 minutes for us to give our comments at the January 26th meeting.

Sincerely,

Mark Pisano

Mark Pisano,
Executive Director

R0068382

SUSMP Policy Approved by the Regional Council of the

SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

(January 6, 2000)

The Southern California Association of Governments recommends that:

- ***the Los Angeles Regional Water Quality Control Board not adopt SUSMP numeric standards until such time as the Board can validate the feasible, technical and scientific bases for numeric standards.***
- ***the Board monitor pilot programs similar to those underway in Los Angeles County.***
- ***the Board work closely with cities such as Calabasas, Santa Clarita and Santa Monica to assess the effectiveness of local initiatives aimed at managing runoff water flows and quality.***
- ***the Board develop a Memorandum of Understanding with SCAG in which SCAG would incorporate a Best Management Practices for Preventing Storm Water Runoff Pollution in the Los Angeles Basin project in its Environmental Programs and Livable Communities work elements.***
- ***the Board ask SCAG to manage a legal authorities initiative in which all of the 85 cities in the Los Angeles Basin would work to develop model language which would then be available for municipal implementation throughout the Basin.***
- ***the Board invite SCAG to contribute its Section 208 authorities to a collaboration with other key organizations/stakeholders in scoping out plans for a watershed management initiative program in each watershed of the Basin.***
- ***the Board evaluate the operating results of watershed (regional) mitigation programs prior to its consideration of any general retrofit mandates on existing land uses.***
- ***the Board and SCAG cooperate with other stakeholders in putting best efforts into raising the new financial resources needed for planning and implementing these water quality commitments.***
- ***the Board's staff be encouraged to meet with those SCAG sub-regional councils affected by the SUSMP program prior to any Board action on these matters.***

The Regional Council calls for the participation of the various sub-regional councils, POTWs and other necessary entities in the development of watershed initiatives needed for reducing and managing storm water runoff pollution in the region.

Subject: Proposed Standard Urban Stormwater Mitigation Plan

Dear Mr. Dickerson:

In light of your consideration of the proposed Standard Urban Stormwater Mitigation Plan for Los Angeles County and Cities in Los Angeles County, dated December 7, 1999, I wanted you to know that the California Coastal Commission has adopted, as guidance in carrying out its Coastal Act responsibilities, a *Plan for Controlling Polluted Runoff* (Coastal CPR Plan). The Coastal CPR Plan outlines the Commission's authorities to address polluted runoff and identifies actions, with timelines and milestones, to achieve the Commission's objective to reduce polluted runoff.

The Coastal CPR Plan addresses, among other issues, one raised in the proposed Standard Urban Stormwater Mitigation Plan. As adopted by the Commission on January 11, 1999, the Coastal CPR Plan includes language on capturing, infiltrating or treating urban runoff up to and including the 85th percentile storm, or 10% of the fifty-year storm. This language serves as guidance for the case-by-case review of projects pursuant to the Commission's regulatory and planning responsibilities under the Coastal Act.

Accordingly, we want to express support for the language in Section 9 (Design Standards for Treatment Control BMPs (page 8 of 17, Final Tentative, December 7, 1999)) of the Standard Urban Stormwater Mitigation Plan that states:

Post-construction Treatment Control BMPs shall be designed to:

A. mitigate (infiltrate or treat) storm water runoff from either:

1. each runoff event up to and including the 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87* (1998) or
2. the volume of annual runoff based on unit basin storage water quality volume, to achieve 85 percent or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook-Industrial/Commercial* (1993), or ....

Thank you for your consideration of our comments. Please feel free to call me (415/904-5265) if you have any questions.

Sincerely,

Jaime C. Kooser, Ph.D.
Deputy Director,
Energy, Ocean Resources, and Water Quality

Los Angeles, CA 90013-1105

Subject: Standard Urban Stormwater Mitigation Plan for Los Angeles County and Cities in Los Angeles County (SUSMP)

Dear Mr. Dickerson:

The Ventura County Flood Control District (NPDES Permit CAS063339) offers the following comments on the SUSMP proposed by the Regional Board for the stormwater programs in Los Angeles County. Our comments are provided given that approval of the numerical mitigation standard in the SUSMP has the potential to have a significant effect on the Ventura Countywide Stormwater Quality Management Program (Program) as well as other programs throughout the state.

Numerous treatment control Best Management Practices (BMPs) have been designed and built in Ventura County utilizing Program guidelines that deal with new development projects. The experience that we have gained has allowed us to take a practical look at design criteria. We feel strongly that when design standards are imposed, they should be written in a manner that is appropriate and technically sound. The proposed SUSMP, as presently written, will be extremely confusing to public agencies and engineers charged with designing facilities that comply with the specified criteria. The comments below are limited to technical issues that we feel need to be addressed and corrected prior to approval of the SUSMP document. Other details such as opportunities for regional facilities and credits for total design policies should be dealt with in a comprehensive stormwater quality mitigation plan.

1. SUSMP Design Standards

On September 13, 1999 in a letter to Dr. Xavier Swamikannu, we requested that the approach for the design of both volumetric and flow-based treatment control BMPs that has been successfully utilized in the design of BMPs on new development projects, i.e., *Unit basin storage volume design based on 70% capture of annual runoff and flow based design criteria based on 10% of the peak 50-year flow rate from impervious areas calculated using standard flood hydrology,* be considered as an option in the SUSMP. We subsequently provided back up documentation to show the equivalence of our 70% capture of annual runoff to the 0.75" rainfall capture criteria presented in the

L #1600, 800 South Victoria Avenue, Ventura, CA 93009
(805) 654-2002 FAX (805) 654-2424

R0068385

11-153-A-12

original SUSMP. The "SUSMP Summary of Comments Received and Response" (Response to Comments) misinterprets Ventura County's comment by indicating that we requested inclusion of peak flow rate control. In addition, the Response to Comments includes an action to add "eighty five percent treatment of annual runoff volume as an equivalent mitigation criteria".

Inclusion of Peak Flow Rate Control as a Treatment BMP Design Criteria

It appears that the added condition B under Section 9 is an attempt to address Ventura County's request for the inclusion of a flow-based design criteria. This added language, as well as the language in the attached tentative resolution and the Response to Comments, indicates a confusion in the difference between requirements for peak flow rate control versus a standard that allows the use of low flow-based water quality treatment control BMPs. The current language in the SUSMP sets design standards for treatment control BMPs based upon a combination of four volume-based design options AND the "control of peak flow discharge" with no consideration of a design standard for BMPs that require a flow-based design. The language in the proposed SUSMP gives the designer an apparent flexibility in their choice of BMPs. This choice is important due to the wide ranges of land development types, pollutants, sensitive groundwater basin locations and BMP treatment control effectiveness. However, the present language limits the choices to those with volume-based design criteria, i.e. detention basins, infiltration basins. With the present language an engineer wanting to utilize any flow-based BMP, i.e., swales, filters, treatment devices, would need to make assumptions on technical items such as duration, frequency, and/or flow rate, leading to variable outcomes that could not assure compliance with the criteria as written.

When we asked questions on the above issue, your staff referred us to the State of Maryland's Stormwater Design Manual (Maryland Manual). This document is comprehensive and presents an approach for sizing stormwater facilities "to meet pollutant removal goals, maintain groundwater recharge, reduce channel erosion, prevent overbank flooding and pass extreme floods". It is clear when they are dealing with the reduction of peak stormwater flow for flood control and when they are dealing with low flow pollutant removal sizing criteria. The design sizing criteria for water quality is volume-based when the options given require a volume-based design. Examples are included. Redevelopment is encouraged in order to reduce urban sprawl and although redevelopment projects are encouraged to implement BMPs, they are not required to meet the design standards and performance criteria established. This appears to allow flexibility for the use of other BMPs, including those requiring a flow-based design, on redevelopment projects. A careful review of documents like this one, that appear to be based on years of experience, may be helpful in development of appropriate criteria.

SUSMP Design Standard Options Are Not Technically Equivalent

While the most recent SUSMP does present Ventura County's volumetric methodology as an option, it sets the runoff volume standard for Los Angeles at 85% capture. We are pleased that the SUSMP now includes our methodology, but request review of the back up calculations and modification of the percent capture to reflect equivalent standards. The document, "Calculations to Determine Equivalent Percent

Volume Capture Criterion", Swamikannu 12/12/99 appears to be inadvertently based on the rainfall curves for Bishop, CA. These curves are found one page before the page in the California Stormwater Best Management Practices Handbook (State Handbook) that contains the Los Angeles Airport curves. We request that the back up documentation be reviewed and the standards be set in an equivalent manner. Reducing the percent of runoff volume captured to a number is consistent with the proposed 0.75" rainfall criteria will have minimal effect on pollutant removal.

2. The SUSMP Encourages Directly Connected Impervious Areas (DCIA)

A basic and effective site design principle for stormwater management is to minimize the amount of DCIA. In some cases, even directly connected "clean" run-off can decrease treatment efficiency as well as increase flood and erosion potential. However, the proposed SUSMP language encourages the direct connection of roof drains by allowing the exclusion of their area from the area for calculation of rainfall or runoff volume to be treated provided they connected directly to the storm drain system. This may not be appropriate in many cases and appears to be contrary to other parts of the document that encourage projects to mimic predeveloped site conditions. In the Maryland Manual, stormwater credits are allowed for innovative site planning practices, one of which is "the disconnection of rooftop runoff".

The content of the SUSMP appears to have the potential to have far-reaching effects on many communities. We urge you to take the time to work with our county and others with experience in the design, construction and maintenance of treatment control BMPs as well as all other interested parties to discuss development of appropriate standards. We look forward to working with you on this issue.

If you have any questions please call me at (805) 654-5051.

Very truly yours,

V. Musgrove

Los Angeles, CA 90027

Mr. Dennis Dickerson
Executive Director
L.A. Regional Water Quality Control Board
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson:

I am writing to urge you to enact the mandate that would require all cities in Los Angeles County to ensure that new developments capture either 85% of the runoff from a storm in a 24-hour period or the first three-fourths of an inch of rain.

I am aware that you are being pressured by the approximately 50 cities in the county to refrain from enacting this mandate, and that they are citing the cost as a primary reason for their objection. However, I feel that we cannot afford to continue polluting our oceans at the rate we currently are. Just last month Huntington Beach had to remain closed for weeks because of pollution. Sadly, business owners and city officials were more concerned with losing tourist dollars than they were with the damage that is being done to our oceans. I don't believe that cities have the right to save a few dollars in profit at the expense of our oceans.

Our beaches are one of earth's most precious resources. If we continue polluting the ocean unchecked, it is likely that generations to come may not enjoy them in the same way as we all take for granted. You are in a unique position to protect this invaluable resource. Please do not give in to the cities that are more concerned with the short term monies that will have to be spent to save the oceans. I fear that in the long term, my six month old son may not be able to take his children to visit our beautiful oceans.

I cannot compete with the pressure that so many cities are putting on you. I am only one very concerned citizen who feels passionately about preserving the oceans for generations to come. But I can tell you that you are in a position to do a very courageous thing, one that will have such positive ramifications for so many years to come. I urge you, please, enact the mandate that will require L.A. County cities to do their part to keep our oceans clean.

Sincerely,

VICTORIA R. BALLESTEROS

DOROTHY GREEN
801 HOLMBY AVENUE, LOS ANGELES, CA, 90024
310-270-4151 FAX: 310-270-4152

December 17, 1999

Dennis Dickerson, Executive Director
Los Angeles Regional Water Quality Control Board
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Dickerson:

I, among many others, are concerned about the proposed storm water rule that will require the retention of water on site as a major way of alleviating some of our water quality problems.

As you know, the Los Angeles area is considered among the most polluted in the country, the landscape has been paved over, dramatically increasing both the amount of runoff, and the amount of pollution contained in that runoff. As the city is rebuilt, and most of it will be within the next 50 years, it is incumbent on all of us to do whatever we can to alleviate this problem and the public health issues which come as a direct result.

There are other benefits that can come from retaining storm water on site. Principal among them is augmenting our drinking water supply. About a third of our water supply comes from local ground water resources. As the city has been paved over, much less water is able to infiltrate into the ground. Only 5% of one inch storms historically ran off. Now about 50% of small storms are directed into our storm drain systems, and run off. This water should be captured so that we can lessen our need to import water from so far away.

For these and many other reasons, I am asking that you approve your staff's recommendations to require the retention of all ¾ inch storms on site for new construction. This is the least we can do to ensure healthy beaches, and coastal waters, cleaner rivers and streams.

Thank you for your kind consideration.

Sincerely,

Dorothy Green

Dennis Dickerson, Executive Director
Los Angeles Regional Water Quality Control Board
320 W. 4th Street, Suite 200
Los Angeles, California 90013

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

Los Angeles stands at a critical juncture in its environmental history. On January 6, 2000, we urge you to adopt the reasonable proposal set forth by your own staff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

We have been brought to this crossroads by extensive development that completely disregards the quality and quantity of runoff generated. The Los Angeles Region already suffers from some of the worst water quality in the nation. Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) – and with billions of dollars at stake, the health of our entire regional economy is impacted.

11-156

R0068392

In a region that is constantly being built and rebuilt, adoption of your staff's proposal will soon have a transformative impact on the amount of polluted runoff that invades our

streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please support your staff's proposal to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,

Kim Lewand

The Chamber
Long Beach Area Chamber of Commerce

October 14, 1999

Mr. Dennis Dickerson
Executive Officer
Los Angeles Regional Water Quality Control Board
320 West 4th Street, Suite 200
Los Angeles, CA 90013

RE: Standard Urban Storm Water Mitigation Plans (SUSMPs) Submitted For Approval To The Executive Officer Under The Los Angeles County Municipal Storm Water Permit (Public Notice No. 99-047)

Dear Mr. Dickerson:

The Long Beach Area Chamber of Commerce (The Chamber) has reviewed the Regional Water Quality Control Board's proposal to incorporate numeric mitigation measures (the first 0.75 inches of rainfall within a 24-hour storm event) into the SUSMPs. While The Chamber fully supports stormwater pollution reduction programs, we must express our concern with the numeric mitigation measures and offer some alternatives prior to the adoption of the SUSMPs.

On June 30, 1999 the California Water Quality Control Board unanimously adopted Order No. 99-060 making the City of Long Beach the first City in Los Angeles County to administer and implement its own Municipal Stormwater Permit. The Permit already incorporates many BMPs (Best Management Policies) and site specific SUSMP requirements. For example, at a minimum, peak runoff rates cannot exceed predevelopment levels, for developments where the potential for increased storm water discharge rates can result in an increase in downstream erosion potential and 25 percent of required landscape areas for new developments must be vegetated with xeriscape. Therefore, The Chamber is fully committed to the development of citywide SUSMPs, for the specific development categories detailed in our Permit, and requests the Board to consider the following prior to adoption:

- Studies to determine the "Pollutants of Concern" from storm drains in local/regional receiving waters and their true impact on beneficial uses. Is the 0.75" runoff mitigation appropriate and effective?

- Site specific studies to determine the impacts of runoff mitigation on water tables, soils and other environmental concerns unique to certain areas/cities.

- Studies to determine the 0.75" runoff mitigation's economic impact on new development and on Cities' economies implementing SUSMPs containing these numeric limits.

- Cost Analysis for the implementation and ongoing maintenance of Treatment Control BMPS.

One World Trade Center, Suite 206, Long Beach, CA 90831-0206
(562) 436-1251 ■ FAX (562) 436-7099 ■ http://www.lbchamber.com

11-158

- Cost benefit and effectiveness analysis of the 0.75" retention/treatment within the 24-hour period on the pollutants of concern on the receiving waters and impact on beneficial uses.

- Local/regional water studies and multi-year region specific monitoring and related data collection.

The Chamber supports the cities of Long Beach, Los Angeles and Lakewood and the Executive Advisory Committee in their opposition to the prescriptive measures and respectfully requests the Board give cities the opportunity to study and select programs that will result in real water quality improvements without significant unnecessary expenditures.

Sincerely,

Daymond W. Rice
Vice President Government Affairs

By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the Los Angeles Times in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings." and a "good start in dealing with a tough problem."

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) - and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of your staff's proposal will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please support your staff's proposal to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,

Elizabeth Schuster

RE: Storm water runoff standards

Dear LARWQCB:

I am writing to encourage you to set storm water runoff standards as soon as possible.

Storm water runoff is a huge source of pollution for our recreational waters and clearly degrades our oceans and bays to the point where they are not suitable for human contact for days after a significant storm event.

This does not have to be the case. The technology exists to reduce pollutants, but the business community will not be interested in installing retention basins, etc, until the RWQCB mandates their installation.

There is no reason to delay the implementation of runoff standards. The Los Angeles region has made huge strides in setting these standards, with significant input from the stakeholders. It is time to put these standards into effect now.

Thank you,

Bob Caustin

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

I am writing on behalf of the California Public Interest Research Group (CALPIRG) to urge you to take action in January, 2000 to significantly reduce urban runoff, the *number one source of pollution to our coastal and inland waters*. Specifically, we urge you to adopt the reasonable proposal set forth by your own staff to ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to and including a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) – and with billions of dollars at stake, the health of our entire regional economy is impacted.

Dennis Dickerson, Executive Director
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, California 90013

Dear Dennis,

As a representative of Burger King Corporation, California Environmental Associates (CEA) has been monitoring and participating in the storm water policy efforts of the Regional Water Quality Control Board (Board). We have received the revised Standard Urban Storm Water Mitigation Plan (SUSMP) rule packet and have concerns about the deadline for submitting comments.

We are familiar with the revised SUSMP rule and are currently working with our contractors, architects, and franchisees to assess the impacts of the requirements and develop comments for submittal to your office by December 20, 1999 in preparation for the January 6, 2000 Special Board Meeting. We have also discussed the revised SUSMP rule with the California Restaurant Association and are working with them to notify their members of the proposed rule. Given the short turn-around time and the impending holidays, Burger King, and the industry as a whole, does not have adequate time to fully review, analyze and develop comments to meet these deadlines. Therefore, we request that you extend the review and comment period and move the Special Board Meeting to a date no earlier than January 26, 2000.

While Burger King is interested in working with Los Angeles County and the Board on the development and adoption of a successful SUSMP program, we are concerned about the significant impacts to restaurant development and operations in Los Angeles County and providing an opportunity for all stakeholders in the industry to respond. Our ability to provide your office with accurate and valuable comments requires that we be afforded additional time to see that this takes place.

Regards,

John D. Claussen
on behalf of Burger King Corporation

STORM WATER REPORT:

LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD PROPOSES DRACONIAN REGULATION OF COMMERCIAL AND RESIDENTIAL DEVELOPMENT[1]

ISSUE 2

December 7, 1999, Dennis Dickerson, Executive Director of the Los Angeles Regional Water Quality Control Board (Board) issued the Proposed Standard Urban Storm Water Mitigation Plan (Plan). The Plan will impose significant new regulation on almost all new and existing residential developments, businesses and real estate developers generally. These regulations threaten to terminate all development and redevelopment in Los Angeles County. This report summarizes the Plan and analyses its practical and legal implications. Finally, this report recommends further action by potentially affected parties to bring balance and clarity to the Plan.

WHO IS REGULATED?

The Plan imposes significant new regulations on eight non-industrial categories as follows:

1. Single-family hillside residences;
2. Hundred thousand square foot commercial developments;
3. Automotive repair shops;
4. Retail gasoline outlets;
5. Restaurants;
6. Subdivisions with ten or more housing units;
7. Parking lots, 5,000 square feet or more; and
8. All development adjacent or discharging to an "an area of Special Biological Significance designated by the State Water Resources Control Board, or designated as a

[1] "The Storm Water Report is a newsletter by S. Wayne Rosenbaum, Esq. and Charles V. Berwanger, Esq. It is intended for the use of our clients and associates. You may receive the Storm Water Report by e-mail. In order to minimize costs, and impact on the environment, we request that those readers who use e-mail provide our office with their address. The Storm Water Litigation Report is an information service only. The Report is not intended to provide legal advice. Before taking any action based upon the contents, you should consult legal counsel. In addition, this Report does not necessarily reflect the opinions or views of Higgs, Fletcher and Mack, LLP. We appreciate and reserve the right to publish comments and contributions by our readers. Please E-mail us at rosen@higgslaw.com.

Significant Natural Area by the California Resources Agency or designated as an area of Ecological Significance by the county of Los Angeles."[2]

The Plan captures both new development and redevelopment. The regulation defines new development as:

Land disturbing activities;

1. Structural development, including construction or installation of a building or structure;

2. Creation of impervious surfaces; and

3. Land subdivision.

Redevelopment is defined thusly:

1. The creation or addition of impervious surfaces;

2. The expansion of a building footprint or addition to or replacement of a structure;

3. Structural development including an increase in the gross floor area or exterior structural remodeling;

4. Replacement of an impervious surface that is not part of a routine maintenance activity; and

5. Land disturbing activities related to structural or impervious surfaces on or adjacent to an already developed site.

Thus, the Plan impacts literally all development or redevelopment in Los Angeles County.

WHAT ARE THE NEW REQUIREMENTS?

The Plan imposes eight general storm water control requirements on all the development or redevelopment categories listed above. It further imposes additional specific requirements for each of the eight categories.

General Requirements

The general requirements imposed on all development and redevelopment projects are as follows:

[2] In some watersheds this requirement may affect all development and redevelopment projects.

1. Post-development peak storm water runoff discharge rates may not exceed predevelopment rates.

2. Subdivision designs must:

(a) Concentrate or cluster development on the development site for the purpose of leaving the maximum amount of land in natural, undisturbed condition;

(b) Minimize clearing and grading of native vegetation;

(c) Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants; and

(d) Preserve riparian areas and wetlands.

3. Regulated development and redevelopment projects must be designed to minimize "to the maximum extent practicable" the introduction of pollutants of concern that may result in significant impacts, generated from runoff.[3] Pollutants of concern are defined to consist of any pollutant that exhibits one or more of the following characteristics:

(a) Current loadings or historic deposits impacting one or more beneficial uses of the receiving water;

(b) Elevated level of a pollutant are found in sediments of the receiving water or has the potential to bio-accumulate in organisms in the receiving water; or

(c) The detectable inputs of the pollutant are at a level high enough to be considered potentially toxic to humans, flora or fauna.[4]

4. Development and redevelopment projects generally must include best management practices to decrease the potential of slope or channel erosion. Those best management practices include:

(a) Capture and convey runoff safely from tops of slopes and stabilize disturbed slopes;

(b) Stabilize permanent channel crossings;

(c) Vegetate slopes with native or drought tolerant plants;

[3] The Plan does not define "maximum extent practicable." Does it include a cost/benefit analysis? Does it contemplate the Board may require changes in the development's density, intensity or type? The Plan is not clear on these issues.

[4] This requirement could result in an absolute discharge prohibition for projects whose storm water would normally drain either directly or indirectly to a 303(d) impacted water body or toxic hot spot. If the project can not be operated without such discharge, does the Board have the power to kill the project? The Plan does not expressly deal with this issue.

(d) Install energy dissipaters at the outlets of new storm drains, culverts, conduits or channels.

5. "Stencil" storm drains to discourage illegal dumping.[5]

6. Where proposed projects include outdoor areas for storage of any materials[6] the following structural best management practices are required:

(a) Areas where materials must be stored include:

(i) In enclosures such as cabinets and sheds to prevent contact of "materials" with runoff or spillage to storm water conveyance systems; or

(ii) A secondary containment structure such as berms dikes or curbs.

(b) The storage area must be paved and sufficiently impervious to contain leaks and spills; and

(c) Where feasible, the storage area should have a roof or awning to minimize collection of storm water in the secondary containment area.

7. All trash container areas must meet the following structural best management practices:

(a) Drainage from adjoining roofs and pavements must be diverted around trash container areas; and

(b) Trash container areas must be screened or walled to prevent off site transport of trash.

8. Municipalities regulated by the Board shall require developers or applicants for construction permits subject to any of the eight regulated categories to provide verification of maintenance and repair provisions and funding for such provisions of the best management practices through such means as may be appropriate, including but not limited to:

(a) Legal agreements:

(b) Covenants; or

(c) Conditional use permits.

[5] In the finest traditions of verbing nouns and bureaucrat speak, the Plan uses the noun "stencil" as a verb.

[6] The plan does not define "materials."

For all properties, such provisions shall include the developer's written commitment to accept responsibility for the maintenance of all structural best management practices until the property is transferred.

9. Best management practices shall infiltrate or treat all potential runoff produced from each and every storm up to and including .75 inches of rainfall prior to its discharge to a storm water conveyance system.[7] Further, best management practices must control peak flow discharge to provide stream, channel or bank flood protection based on flow criteria selected by the local agency.

In calculating the volume of water to be captured for infiltration or treatment, roofs may be excluded provided:

(a) The roof will not be a source of pollutants of concern[8]:

(b) Storm water from the roof is diverted directly to a storm water conveyance system:

(c) Roof mounted exhaust vents, filters and air pollution control devices will not contribute pollutants of concern into the storm water: and

(d) The storm water conveyance system does not directly or indirectly discharge to a natural stream or unlined channel or channel segment scheduled for restoration.[9]

Provisions Applicable to Specific Development Categories

In addition to the nine requirements listed above, each of the eight project categories has additional specific requirements. They include the following:

Hundred Square Foot Commercial Developments

1. Loading docks must be covered and designed to minimize run-on and run-off of storm water. Further, direct connections to storm drains from depressed loading dock drains are prohibited.

2. Repair and maintenance bays must be indoors or designed in such a way that does not allow storm water run-on or run-off. Repair and maintenance bays must be designed to

[7] While the proposed Plan provides for alternative measures of storm water capacity, the resulting volume to be captured and treated will not vary significantly from the .75 inch criteria.

[8] It is unclear whether prohibition includes aerial deposition that has been shown to be a significant contributor to pollutants of concern in storm water.

[9] What does "scheduled for restoration" mean? By whom? When? The Plan provides no guidance on these issues.

capture all wash water, leaks and spills. Direct connection of repair and maintenance bays to the storm drain system is prohibited. In some jurisdictions this may require operators to obtain an industrial waste discharge permit.

3. Vehicle and equipment washing areas must be self-contained, covered, equipped with a clarifier or other pretreatment facility and properly connected to the sanitary sewer.

Restaurants

An area must be supplied for the washing and cleaning of equipment. This area must be self-contained, equipped with a grease trap and properly connected to a sanitary sewer. If this wash area is outdoors, it must be covered, paved, have secondary containment and be properly connected to the sanitary sewer.

Retail Gasoline Outlets

Fuel dispensing areas must be covered with an overhang structure or canopy which prevents storm water from draining onto such areas. The overhang structure or canopy down spouts must be routed to prevent drainage across fueling areas. Fuel dispensing areas must be paved with Portland Concrete. The fuel dispensing areas must have a two to four percent slope to prevent ponding and must be separated from the rest of the site by a grade break that prevents run-on of storm water to the extent practicable. At a minimum, concrete fuel dispensing areas must extend two meters from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus one foot whichever is less.

Automotive Repair Shops

1. Fuel dispensing areas are regulated as described above for retail gasoline stations. In addition, repair and maintenance bays must be indoors or designed to prevent storm water run-on and run-off.

2. Repair and maintenance bays must be designed to capture all wash water, leaks and spills. Direct connection of repair and maintenance bays to the storm drain system is prohibited. Further, an industrial waste discharge permit may be required.

3. Vehicle washing areas must be self-contained, covered and equipped with a clarifier or other pre-treatment facility and properly connected to a sanitary sewer or other permitted disposal facility.

4. Loading docks must be covered and designed to minimize run-on and run-off of storm water. Direct connection to the storm drains from depressed loading docks is prohibited.

Parking Lots

Parking lots are required to treat or infiltrate runoff before it reaches the storm drain system.

ANALYSIS

This Plan raises at least three issues for every property owner, developer, business person and home owner in Los Angeles County, and possibly the entire State of California. Those issues include the scope of coverage; the ability to achieve and the cost of satisfying the Plan's requirements; and the scope of liability.

Scope of Coverage

As written, this Plan will likely impact every commercial and residential development or redevelopment project in Los Angeles County requiring a building permit. First, the Plan lays out seven defined categories that capture most, if not all, commercial and residential construction. Then it adds a catch-all category related to areas adjacent to or discharging to environmentally sensitive areas. This catch-all provision captures all construction, regardless of type, upstream of an environmentally sensitive area. Thus, this Plan would, for example, apply to the entire watershed draining into a lagoon, inlet, enclosed bay or estuary classified as environmentally sensitive.

The Plan's definition of redevelopment is startling in its breadth. It appears to cover any redevelopment activity imaginable, with the possible exception of an exclusively interior remodeling project. There is no minimum size or value threshold specified.

Finally, based on our analysis of the Plan and discussions with other Regional Water Quality Control Board staff and directors, this Plan – or any variant of it – will upon its adoption by the Board, be adopted wholesale by the other regional boards. Thus, it is vital that industry, property owners and real estate developers mobilize to clarify and scale back the Plan prior to January 6, 2000.

Feasibility

The Plan imposes new design criteria on residential development. No one knows whether developers can achieve these requirements and build affordable housing. Is this a no growth initiative disguised as a Clean Water Act regulation? If that is not intended, that could, nonetheless, be the consequence.

Unless the developer or redeveloper obtains a waiver, the Plan further requires that affected projects must either infiltrate or treat the first 0.75 inches of every rain event. Moreover, the Plan requires the treatment of storm water from roof surfaces in the event of any pollutants of concern from aerial deposition or roof vents or any downstream stream segments scheduled for restoration. Finally, the Plan absolutely bans the discharge of storm water from some types of commercial

facilities.[10]

Infiltration

Infiltration – in bureaucratize – is defined as "a downward entry of water into the surface of soil." Infiltration is not an option for many projects. The Plan requires ten-foot separation between the infiltration system and ground water. Further, infiltration is discouraged for areas of industrial activity or areas subject to high vehicular traffic without pretreatment.

Infiltration implies an engineering design capable of capturing and retaining massive quantities of water and then discharging that water slowly to leach fields capable of handling those flows during the wettest season of the year. Engineers would describe it as a massive septic system. If .75 inches of rain falls on a 100,000 square foot commercial property in one hour, the infiltration system must process 47,000 gallons of water. The Plan lacks any definition of "rain event." Thus, it is unclear how the system would infiltrate the first 47,000 gallons and then handle the next rain event. However, even assuming the most optimistic soil percolation characteristics and rain event definitions it is probable – even, inevitable - the infiltration design must include a capture and storage system prior to pumping or gravity feeding the storm water to the leach field.

In addition to the engineering issues and expense required by the infiltration option, there will be significant environmental issues. Can the soils absorb massive quantities of processed water without causing subsidence or slippage? Without these storm water flows, will sensitive environmental areas such as wet lands simply dry up? And the issues continue.

Pollutants and Treatment

The Plan defines treatment as "the application of engineered systems that use physical, chemical, or biological processes to remove pollutants." However, the Plan is vague as to "pollutants." For the purposes of this analysis the authors assume that pollutant means "pollutant of concern."

It is unclear whether the Plan requires the removal of all pollutants of concern or whether the Plan only requires that the pollutant be removed to the "maximum extent practicable." Two examples illustrate the need to clarify the points.

Assume a storm water discharge from a housing development to a stream segment listed as impacted for pathogens under section 303(d) of the Clean Water Act due to high levels of fecal coliform. Because fecal coliform is present in the waste of animals, the developer must prevent not only human waste in storm water, but also waste of birds, dogs, cats, squirrels, etc. Alternatively, the developer could design the development to capture and treat all storm water in the same manner

[10] The Plan requires shipping and receiving areas, repair bays, restaurants and car washes to discharge some, or all, of their storm water to the sanitary sewer. The authors do not know whether, or under what conditions local sewer authorities will agree to accept these discharges. Further if local sewer authorities require pretreatment, the Department of Toxic Substances Control may regulate the pretreatment facilities, creating additional expense and liability for many small businesses and property owners.

currently used for sanitary sewage. The cost – monumental!

The Plan does not define "maximum extent practicable." What does the Board intend? Is technical practicable determinative regardless of cost? Is cost relevant? The Plan is silent, and industry must speak!

A second example: Consider a proposed commercial development of a large shopping center whose storm water will (eventually) discharge to an estuary where "elevated levels of [copper] is found in the sediments and has the potential to bio-accumulate in organisms." Copper is a main constituent of brake dust and, thus, likely will be present in concentrations exceeding Plan allowed run-off. Infiltration is not an option.

Removing copper is theoretically feasible but is expensive beyond belief.

Waivers

The Plan allows waivers for developers and redevelopers if impracticability for a specific property can be established. Impracticability – using the wording of the Plan – includes:

1. Extreme limitations of space for treatment on a redevelopment project;

2. Unfavorable or unstable soil conditions at a site preventing infiltration;

3. Risk of ground water contamination because an underground source of drinking water is less than ten feet from the soil surface; or

4. Any other justification for impracticability approved by the Regional Board Executive Director.

There's a financial cost to a waiver. If a waiver is granted for impracticability, the project proponent must transfer the savings in cost to a storm water mitigation fund to be used to promote regional or alternative solutions for storm water pollution in the watershed. [11]

Thus, a project may buy its way out of its obligations under the Plan. However, the price may well be extraordinary and subject to second-guessing by public agencies and private environmental groups.

Liability

The Board developed the Plan as part of the municipal storm water program. That Board regulates the Plan through Los Angeles County's urban runoff and storm water NPDES permit. The Clean Water Act citizen suit provisions permit any citizen to sue to enforce the terms of a NPDES permit. Thus, this Plan is enforceable by the U.S. EPA, the county or municipality in

[11] The Plan does not make clear weather this means capital cost, operating cost, or both. The Plan further leaves the amount to the discretion of the municipality granting the waiver.

which the development exists or a county or municipality in which the development causes an alleged exceedence of a water quality objective, and, finally by any citizen or environmental group.

At least one regional board executive director has declared that his staff planned to enforce the provisions of the municipal storm water permit, of which the Plan is a part against both nonconforming developers and municipalities permitting such nonconforming developments. Thus, developers should expect diligent enforcement by municipalities as well as regional board staff.

Because of the current vagaries in the Plan, litigation is likely whenever the proposed project fails to gain unanimous support from the community and all the downstream communities. The Plan's vagaries will also mean that litigation will be exceeding costly. The vagaries include ambiguities that abound including the meaning of "maximum extent practicable" and "pollutants." Litigation will require technical experts and attorneys trained in all the nuances of the Clean Water Act and its progeny. Finally, litigation, or threatened litigation could postpone – or kill - development.

It bears emphasis remedies available under the Clean Water Act include injunctive relief; civil fines of $27,500 per day per violation; and reimbursement of plaintiff's legal fees and costs. Once again, because of the vagaries of the Plan, plaintiffs will be abundant. Further, the history of citizen suit litigation under the Clean Water Act, and the enormous legal fees paid to environmental citizen suit plaintiff's by settling defendants, have created an aggressive plaintiff's bar willing to take these cases on a contingency fee basis.

OPPORTUNITIES TO CHANGE THE FUTURE

The Plan, if adopted wholesale, will create draconian cost increases for construction and post-construction operation of any new development or redevelopment projects in Los Angeles County. It is likely that this Plan will infect all of California.

This Plan may or may not improve water quality. It is clear, however, the Plan will transfer huge sums of money from developers, homeowners associations, and commercial enterprise to environmental extremists and no growth advocates.

Interested parties have one last chance to be heard on January 6, 2000. This opportunity is critical. Any later legal test of the Plan will be limited to the Board's administrative record.

The Board has requested that representatives of municipalities or other interested parties contact the Board by December 20, 1999 to coordinate presentations to the Board on January 6, 2000. Please contact this office at your earliest convenience if you wish us to represent you at that hearing.

Los Angeles, California 90013

RE: Standard Urban Storm Water Mitigation Plan and Related Materials

Dear Mr. Dickerson:

On behalf of the Building Industry Association of Southern California (BIA/SC), we want to thank you for changing the Standard Urban Storm Water Mitigation Plan (SUSMP) hearing from January 6, 2000 to January 26, 2000. The earlier date did not allow for proper review and comment given holiday and vacation schedules during this season of the year. Now, we will have a chance to more fully consult our members and prepare for the hearing. We will ask our members to support group presentations in order to help you structure the hearing to provide your Board members with information necessary to make an informed decision.

In reviewing the response to comments from the September 16, 1999 Regional Board Hearing, I have noted two items that we would like to review as soon as possible. One is the preliminary costing estimates cited in your response to comment number 34. The response claims that preliminary costing estimates indicate that the costs related to the numerical mitigation measure "are reasonable." We request that you provide us with all of your costing estimates so that we may understand the basis of your claim.

The second item is the Record of Decision (ROD) referenced in the Summary of Comments Received and Response. We are directed to the Record of Decision and to references in the ROD. However, the document was not provided with the material you distributed on December 7, 1999. We need to review this document in order to understand the responses to comments.

[redacted]

11-189

R0068426

We need to review the costing estimates and the Record of Decision as soon as possible so that we may be prepared to answer questions from our members. Therefore, we would appreciate receiving the documents early next week. If necessary, we can have them picked up at your office. Please call me to confirm when we may expect the documents.

Once again, thank you for your assistance on this matter.

Sincerely,

Charles Gale

Los Angeles, CA 90013

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

Los Angeles stands at a critical juncture in its environmental history. On January 6, 2000 I urge you to adopt reasonable proposal set forth by your own staff: Ensure that specified new and redevelopment capture, treat, infiltrate 100% of the runoff generated by up to and including a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

We have been brought to this crossroads by extensive development that completely disregards the quality and quantity of runoff generated. The Los Angeles Region already suffers from some of the worst water quality in the nation. Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) – and with billions of dollars at stake, the health of our entire regional economy is impacted. I walk on the beach often and on occasion find it embarrassing to observe so much trash and pollution on the beach and in the surf. It should be unacceptable for such a great city to allow this to occur at one of its prized natural resources.

In a region that is constantly being built and rebuilt, adoption of your staff's proposal will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers, and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please support your staff's proposal to mitigate the effects of urban runoff from new and redevelopment.

Imagine having relatives or friends visit and then going to the beach for the day only to find posted signs warning persons to stay out of the water and trash and debris littering the beach. For me, this is what is riding on this proposal.

Sincerely,

Karl Bruskotter
Santa Monica, CA

11-191

Dear Mr. Dickerson,

You have the opportunity to significantly reduce urban runoff, the number one source of pollution to our costal and inland waters. On January 26, 2000, I urge you to adopt the reasonable proposal set forth by your own staff to curb urban runoff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to and including a three-quarter-inch storm. Thank you.

Sincerely,

Joe Weichman
959 Princeton St.
Santa Monica, CA 90403

SUBJECT: Revisions to Standard Urban Stormwater Mitigation Plans (SUSMPs)

Dear Mr. Dickerson:

The Los Angeles Section of the Urban Planning and Development Group of the American Society of Civil Engineers is a group of professional engineers which focuses on current issues and projects within the Los Angeles area. We are extremely concerned with several of the recent proposed modifications of the model programs as they are not based on sound engineering judgement, and have been improperly extracted from sources which were not prepared for the purposes they are being used.

NUMERICAL LIMITS

We have been contacted by several groups regarding their concerns with the basis for and the application of numerical limits. In particular, we are concerned with the validity of using a volumetric standard for the design of Best Management Practices (BMPs) which are based on treating a certain flow rate. The ASCE/WEF manual has been used as a standard for this design, but this method is for a combination of detention and treatment, not for the sizing of individual BMPs.

Most of the structural BMPs which are currently in use are sized by using a flow rate. The volume could theoretically occur over a 24-hour period, or a much shorter period similar to a storm used for hydraulic sizing of drainage conveyance devices. The inverse ratio of the design flow rates calculated by these two methods would be identical to the length of the design storms. For example, a typical design storm used for drainage conveyance sizing could be around twelve (12) minutes for a site of this size. The ratio between the design flow rate the 24-hour storm versus this shorter storm would be 1440/12 = 120. This means that the ratio of the flow rates would also be a factor of 120.

Also, the County of Los Angeles has prepared a hydrology manual which is the standard for engineers within the County to determine flow rates for sizing storm drainage

structures. The hydrology of different areas of Los Angeles County varies significantly, and can be seen in the Hydrologic Maps in the County manual. The County maps indicate the 50-year maximum 24-hour rainfall with contours superimposed on USGS maps. The values range from 5 inches within a 24-hour period to 18 inches within a 24-hour period. In fact, the rainfall varies up to 7 inches within a 24-hour period with 3 miles (Palos Verdes Figure C1.14).

There is insufficient information regarding levels of relevant pollutants in receiving waters to justify the Treatment Control BMPs dictated by the numerical standards. There are no studies that indicate which pollutants of concern are above acceptable levels in the receiving waters.

There is insufficient stormwater monitoring data available to demonstrate that the types of activities regulated by the numerical standards are actually causing a negative impact to the receiving water. We may incorrectly be placing BMPs in locations where they will have no impact on storm runoff or on the reduction of target pollutants.

An in-depth analysis has not been performed regarding the effectiveness of the approved BMPs that provide criteria for the selection of BMPs to achieve the numerical standards being recommended. If we are required to treat a certain amount of water flowing from the site, we need to choose BMPs which effectively treat the flow rate due to the design storm. There needs to be criteria for calculating contact time, settling rates, and other deisgn parameters that are not known at this time.

ENVIRONMENTALLY SENSITIVE AREAS

One additional category added to the SUSMPs is Environmentally Sensitive Areas (ESAs). meaning that projects located adjacent to or discharging to an environmentally sensitive area would need to conform to a SUSMP. One of the definitions of an ESA is an area designated as a Significant Natural Area by the California Resources Agency. The California Department of Fish and Game (DFG) is the agency in charge of locating the SNAs.

We have investigated the theory behind and the current limits of the SNAs. The theory behind the SNAs was to identify natural areas to promote local educational awareness. The areas are very general, and were not created for any type of regulatory application. A radius of up to one mile was created around locations where natural vegetation or wildlife is located and identified in the Natural Diversity Database. The use of the SNAs to identify projects needing SUSMPs is not a misapplication of the DFG's information.

We have also investigated the limits of and the implications of using the SNAs as an ESA. The SNAs cover much of Los Angeles County, including the outlets of Malibu Creek, Ballona Creek, and the San Gabriel River. We feel that this is not the intent of the SUSMPs, and subjects virtually all projects draining to any of these channels to the SUSMPs.

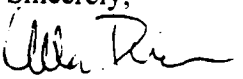
HILLSIDE DEFINITION

The modification of the definition of a hillside to any project in which there is any grading. We suggest that the original definition be used, which is a project where the existing ground is over a 25% slope.

CONCLUSION

We strongly suggest that these proposed revisions to the SUSMPs be eliminated to reflect the approach originally put forth by the local cities and the County of Los Angeles. If revisions are still needed, they should be based on proper engineering design, and not to simply satisfy the concerns of environmental groups. We would be happy to be a part of any effort to reach a sound solution.

Sincerely,



Allan Rigg, P.E.

Dear Mr. Dickerson:

This urges your and the Board's support in the proposed rules & require new and re-developments to trap rainwater up to 0.75 inches/24 hr. Good for groundwater recharge, good for beach & ocean pollution, rivers & streams.

Thank You

David Baxter

DEAR EXEC DIRECTOR DICKERSON, JAN. 1, 2000

I SUPPORT THE PROPOSED REQUIREMENT FOR RETAINING STORMWATER ON-SITE AT NEW DEVELOPMENT & REDEVELOPMENT PROJECTS IN L.A. COUNTY. YOUR STAFF RECOMMENDS SUCH PROJECTS BE DESIGNED TO RETAIN RAINFALL OF UP TO 0.75 INCHES DAILY. THIS IS A GOOD IDEA. H_2O COULD PERCOLATE INTO GROUND OR BE TREATED & DRAINED. THIS WILL REDUCE POLLUTED RUN-OFF.

RE: Support for Three Quarter-Inch Standard to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

You have the opportunity to significantly reduce urban runoff, the number one source of pollution to our coastal and inland waters. On January 26, 2000, we urge you to adopt reasonable design standards for sizing treatment control Best Management Practices at specified new and redevelopments. Ensure that these developments mitigate, through treatment or infiltration, 100% of the runoff generated by up to and including a three quarter-inch storm, with no exceptions. By adopting this standard, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming; creeks and streams with water that is unsafe to drink; and inland and coastal waters that pose health risks to aquatic life.

The three quarter-inch standard was supported by the Los Angeles Times in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The three quarter-inch standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) - and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of the three quarter-inch standard will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who

visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please adopt the three quarter-inch standard, with no exceptions, to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,

Brent Cromar

Dennis Dickerson
Executive Director
Los Angeles Regional Water Quality Control Board
320 W. 4th St. #200
Los Angeles, CA 90013

Dear Mr. Dickerson,

Our current managment of urban runoff contributes greatly to coastal and ocean pollution, and encourages both flooding and the channelization of our streams as we attempt to prevent flooding. I strongly urge that we institute massive changes to our ineffective approach.

The recommendation by the Water Board's staff to require new development and redevelopment projects to be designed to retain rainfall of up to .75 inches daily would be a huge step in the right direction. Adoption of the recommendation would bring areas in incorporated cities up to the same standards already in place in unincorporated areas of the county. This proposal would be good for the health of local aquatic life, for the health of the 60 million people who visit L.A. County beaches each year, and for a more livable healthy region.

I urge you to adopt this important proposal.

Sincerely,

Dr. Mha Atma Singh Khalsa

Los Angeles, California 90013

RE: Support for Runoff Controls on New and Redevelopment

Dear Mr. Dickerson and Members of the Board:

I urge you to adopt on January 26, 2000, a reasonable standard to address polluted runoff from development projects in the Los Angeles metropolitan area. In a region that is constantly being built and rebuilt, these types of controls are necessary to reduce the amount of polluted runoff that invades our streams, rivers and coastal waters.

At a minimum, please ensure that specified new and redevelopments capture, treat, or infiltrate the runoff generated by a 0.75 inch storm. Many other areas of the country have already adopted similar or more stringent standards. By adopting this proposal, you and the Regional Board can take a significant step in water quality protection.

Sincerely,

11-205

DEAR DENNIS DICKERSON,

I URGE YOU TO REQUIRE NEW DEVELOPMENT AND REDEVELOPMENT PROJECTS BE DESIGNED TO RETAIN RAINFALL. WATER COULD EITHER PERCOLATE INTO THE GROUND OR BE TREATED AND THEN DRAINED. ADOPTION OF THESE RECOMMENDATIONS WOULD BRING AREAS IN INCORPORATED CITIES UP TO THE SAME STANDARDS ALREADY IN PLACE IN UNINCORPORATED AREAS OF THE COUNTY. PLEASE SUPPORT THE PASSAGE OF THIS CHANGE ON JAN 26TH.

SINCERELY

RE: Support for Three Quarter - Inch Standard to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

You have the opportunity to significantly reduce urban runoff, the number one source of pollution to our coastal and inland waters. On January 26, 2000, I urge you to adopt a Standard Urban Stormwater Mitigation Plan for the Cities in Los Angeles County that requires mitigation, by specified new and redevelopments, through treatment or infiltration, of 100% of the runoff generated by the first three-quarters of an inch (3/4") of rain, with no exceptions. By adopting this standard, the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that becomes more toxic as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and few measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming; creeks and streams with water that is unsafe to drink; and inland and coastal waters that pose health risks to aquatic life.

The Los Angeles Times supported the three-quarters inch standard in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

K:\USERS\KAE\HTB.LTR

11-213

The three-quarter inch standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff hurts our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars ($2,000,000,000) annually, but these businesses largely depend on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business. With billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of the three quarter-inch standard will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please adopt the three quarter-inch standard, with no exceptions, to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,

KENNETH A. EHRLICH

RE: RUNOFF STANDARDS FOR NEW DEVELOPMENT AND REDEVELOPMENT

Dear Mr. Dickerson:

The Environmental Defense Center (EDC) is a non-profit environmental law firm working to protect and restore watersheds and water quality on the Central California Coast.

We are writing to remind you that you have the opportunity to significantly reduce urban runoff, the number one source of pollution in our coastal and inland waters. As we are grappling with the same runoff issues to your north, we look to your Board to set a precedent for water pollution control. Therefore, please adopt reasonable design standards for sizing treatment control Best Management Practices at specific new developments and redevelopment projects. Additionally, please make sure that these developments mitigate, through treatment or infiltration, 100% of the runoff generated by up to and including a three quarter-inch storm, with no exceptions. Another standard for development projects is to require bio-filtration basins (a.k.a. constructed wetlands) for urban stormwater runoff in project designs. Reduce reliance on storm drains, and incorporate vegetated swales and basins in project designs. By adopting these standards, the Regional Water Quality Control Board has the opportunity to reverse the trend of watershed and water quality degradation, and to set a precedent for improvements in other areas.

In urban environments, rainfall is converted into runoff that collects pollutants as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled in stormdrains and culverts and directed untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, southern California has countless beaches that are frequently unsafe for swimming. Creeks have water that is unsafe to touch, and inland and coastal waters that pose health risks to aquatic life.

The three quarter-inch standard was supported by the Los Angeles Times in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

11-215

Re: Support for Runoff Controls on
New and Redevelopment Projects

Dear Mr. Dickerson and Members of the Board:

On January 26, 2000, I urge you to adopt a reasonable standard to address polluted runoff from development projects in the Los Angeles metropolitan area. In a region that is constantly being built and rebuilt, these types of controls are necessary to reduce the amount of polluted runoff that invades our streams, rivers and coastal waters.

At a minimum, please ensure that specified new and redevelopments capture, treat or infiltrate the runoff generated by a 0.75 inch storm. Many other areas of the country have already adopted similar or more stringent standards. By adopting this proposal, you and the Regional Board can take a significant step in water quality protection.

Sincerely,

Gilbert N. Segel
President

11-217

Dear Mr. Dickerson,

I am writing in support of the proposed requirement for retaining stormwater on-site at new development and redevelopment projects in L.A. county.

This proposal could have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters.

Please help protect L.A. county's aquatic life and all of us who enjoy and love its beaches.

Sincerely,

Clea Wright

RE: Support for Three Quarter-Inch Standard to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

You have the opportunity to significantly reduce urban runoff, *the number one source of pollution to our coastal and inland waters.* On January 26,200, we urge you to adopt a Standard Urban Stormwater Mitigation Plan for the Cities in Los Angeles County that requires mitigation, by specified new and redevelopments, through treatment or infiltration, of 100% of the runoff generated by the first three quarters of an inch of rain, with no exceptions. By adopting this standard, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today, approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and few measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming; creeks and streams with water that is unsafe to drink; and inland and coastal waters that pose health risks to aquatic life.

The three quarter-inch standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) - and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of the three quarter-inch standard will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers, and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please adopt the three quarter-inch standard, with no exception, to mitigate the effects of urban runoff from new and redevelopment.

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

Los Angeles stands at a critical juncture in its environmental history. Brought to this point by extensive development with a complete disregard for the quality and quantity of runoff generated, today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

On January 6, 2000, you and the Board have the opportunity to change our course toward worsening water pollution by adopting the reasonable proposal set forth by your own staff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to a three quarter-inch storm. The Los Angeles Region already suffers from some of the worst water quality in the nation. Your staff's proposal is supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

Subject: Another Option Worth Considering

On 1-13-00, LACODPW transmitted a revised SUSMP, reflecting several corrections made at the 1-12-00 EAC meeting. It does not, however, deal with the 2 options
dealing with numeric limits. There is a need for a third option that is not arbitary and is fair and objective. Please take a good look at it (it's in word and word perfect formats) and let me know what you think. If you have any questions, please call me (626) 396-9424.

Thanks,

Ray Tahir

Option #3: An Imperfect But Sane Alternative

Basis for Another Option

This option is offered because of the unacceptable disadvantages associated with options 1 and 2 as mentioned in the most recent draft SUSMP. **Option 1** is unacceptable because it still includes mandatory controls for a subject development, without any factual demonstration that the pollutants discharged from such developments are **POLLUTANTS OF OF CONCERN**. To require such developments to install mandatory retention/treatment controls designed according to 1 of the 4 numeric standards is arbitrary at best. It also establishes a dangerous precedent because it is based on the assumption that all pollutants in runoff have an impairing impact on a beneficial use of a receiving water. **Option 2**, is even more undesirable than **Option 1** because it merely defers implementation of mandatory retention/treatment controls for all of the subject development categories to July 1, 2001 – under the next permit, presumably.

Option 3 requires mandatory retention/treatment controls under 3 justifiable, non-arbitrary scenarios: (1) any development project, sited anywhere, requiring coverage by a General Industrial Activity Storm Water-type NPDES permit (GIASWP); (2) 100,000 square feet commercial developments with 200-plus parking spaces SITED WITH ¼ OF A MILE WITHIN ENVIRONMENTALLY SENSITIVE AREAS; and (3) any subject development project that discharges pollutants of concern in storm water runoff as determined by existing authoritative documents or future receiving water studies – as the permit intended.

Elements of Option 3

Upon approval of the SUSMP, permittees, at the minimum, would prescribe appropriate retention/treatment controls (infiltration-type devices, oil/water separators, CDS units, catch basin inserts) for the following:

Industrial Facilities

Any industrial facility -- including manufacturing facilities – irrespective of siting location, that requires a GIASWP (issued by the State Water Resources Control Board and enforced by the regional board). The retention/treatment controls would apply to outdoor surface areas, excluding roof-tops (a requirement which is dealt with elsewhere) that are exposed to storm water. The retention/treatment controls would be sized according to any of the 4 design standard alternatives referenced in the most recent SUSMP draft. (Note: Although these facilities, also known as Phase I facilities, are required under specific provisions of the Clean Water Act to obtain a GIASWP, they are ONLY REQUIRED TO INSTALL RETENTION/TREATMENT CONTROLS IF RUNOFF SAMPLING ANALYSIS WARRANTS THEM).

Responsibility for insuring that retention/treatment controls are properly operated/maintained shall be that of the regional board and with the appropriate industrial waste permitting agency (if any of the selected controls require industrial waste discharge permits).

Development Projects Sited in ESAs

Any development project that is designed to include 200 or more parking spaces that is sited within ¼ of a mile of an environmentally sensitive area (ESA). The definition of ESA is taken from CEQA (wetlands, rare and endangered species habitats, etc.) and can be enlarged by a permittee to accommodate local environmental concerns.

The retention/treatment controls would be sized in accordance with any of the 4 design standards referenced in the most recent SUSMP draft. However, if necessary, design standards may exceed the minimum requirements (capturing or treating 100% runoff).

Subject Projects Generating Pollutants of Concern

Any of the subject development projects specified in the Los Angeles County Municipal NPDES permit that discharge pollutants of concern shall be required to install retention/treatment controls in accordance with any of the 4 design standards referenced in the most recent SUSMP draft. Pollutants of concern, as defined in the permit,

"...consist of any pollutants that exhibit one or more of the following characteristics: current loadings or historic deposits of the pollutant are impacting the beneficial uses of a receiving water, elevated levels of the pollutant are found in sediments of a receiving water and/or have the potential to bioaccumulate in organisms therein, or the detectable inputs of the pollutant are at a level high enough to be considered potentially toxic to humans and/or flora and fauna."

Identification of pollutant of concerns can be determined using authoritative documents include the basin plan, ocean plan, California Toxics Rule, the 3039(d) list (part of the regional board's water assessment program) monitoring data collected by the principal permittee or other permittees.

In addition, permittees would be willing to perform receiving water studies, as a requirement under the next municipal NPDES permit, similar to the one conducted for Santa Monica Bay (pursuant to the Los Angeles County Municipal NPDES permit requirement). The results of the receiving water studies will be used to identify pollutants of concern, by a specified time (e.g., third or fourth year of the next permit). This is offered because it is recognized

11-335

that the aforementioned authoritative documents may not be accurate or comprehensive enough to identify actual pollutants of concern.

11-236

Subject: Re: January 6 Public Hearing

Ray, thanks. We have sent out a notice cancelling the Jan 6th mtg. Let me know if you do not get the notice.

Good comments, thanks.

>>> "R. Tahir" <tecsenv@yahoo.com> 12/17/99 06:26PM >>>
Hi Dennis:

Can I get 10-15 minutes of time at the January 6th public hearing. I plan to present concerns about the over-estimated catch basin inserts and other issues.

Also, I think Eileen and/or Margaret want to say something on behalf of SCAGs/EEC.

FYI, South Bay Cities COG adopted a resolution a couple of weeks ago calling for the regional board not to make
storm water numeric standards mandatory -- under any guise, including design standards for parking lot ollution reduction controls. The reso also authorizes the COG prepare a petition to the state water resources control board in the event the regional board ingores its plea. The SGVCOG the same action last night and the
Gateways Cities COG is expected to follow suit at its January 6th monthly meeting.

I think, however, that if you can get the environmental community and/or the board to buy-off on the following changes such action can be averted: (1) increase the threshold for triggering mandatory parking lot pollution reduction controls from 25 spaces/5k sf to 200 spaces/40k sf; (2) relax the waiver requirements to
allow cities base the cost savings that areto be transfered to some sort of storm water fund on the least costly control (viz., catch basin inserts; (3) clearly allow cities to prohibit the use of infiltration systems where the water table is lower the 10 feet, with good reason of course; (4) re-define some of the terms (e.g., slopes); (5) allow cities to base the definition of an ESA on CEQA, exclusive of any other interpretive defintion (e.g., fish and game);
and (6) use the development planning model program -- not the SUSMP as the place where ESAs and parking lots should be addressed (create a checklist "C").

Further, tell Mark that the issue more stringent parking lot controls could be dealt with under the next permit, but must be justified ON THE PROTECTION OF WATER QUALITY STANDARDS (using the basin plan, ocean plan, or authoritative monitoring data).

I'll call you on Monday Dennis. Good luck with the Alameda Corridor issue. We know that you're getting beat up unfairly -- again.

Ray

Re: Runoff Standard for new and redevelopments. AbTech Ultra-Urban™ Filter – Effectiveness of Storm drain inserts.

Dear Mr. Dickerson

You have the opportunity to significantly reduce urban runoff, the number one source of pollution to our coastal and inland waters. On January 26, 2000, we urge you to adopt reasonable design standards for sizing treatment control Best Management Practices at specified new and redevelopments: Ensure that these developments mitigate, through treatment or infiltration, 100% of the runoff generated by up to and including a three quarter-inch storm, with no exceptions. By adopting this standard, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming; creeks and streams with water that is unsafe to drink; and inland and coastal waters that pose health risks to aquatic life.

The three quarter-inch standard was supported by the Los Angeles Times in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The three quarter-inch standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) - and with billions of dollars at stake, the health of our entire regional economy is impacted.

AbTech is a corporation that manufactures Ultra Urban Filters which contain the OARS Smart Sponge technology. This stormdrain insert is designed to absorb, adsorb and chemically bond hydrocarbons in the typical stormwater runoff as it runs through the filter. The design of the Ultra Urban Filter is such that the box itself also collects trash, debris, sediment and other solid waste (which carry with it various other contaminants such as heavy metals) that would otherwise enter the storm system. This passive system, installed at the curb inlets, is a low cost effective solution to the problem. Costs range from $500-$1500 per storm drain, and the effectiveness has ranged from 70% to 99% in tests for hydrocarbon removal. We at AbTech firmly believe that the benefits of this rulemaking far outweigh the costs.

In a region that is constantly being built and rebuilt, adoption of the three quarter-inch standard will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please adopt the three quarter-inch standard, with no exceptions, to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,
AbTech Industries Inc.

Re: Proposed Model Standard Urban Storm Water Mitigation Plans (SUSMPs)
Los Angeles County Municipal Stormwater Permit (NPDES No. CAS0061654)

Dear Mr. Dickerson and Members of the Board:

The Natural Resources Defense Council ("NRDC") is a national environmental organization with over 400,000 members, approximately 35,000 of whom live within the Los Angeles region. NRDC has reviewed the "Proposed Standard Urban Storm Water Mitigation Plan" (the "Proposal") issued on December 7, 1999 as a proposed "model program" of the Los Angeles County Municipal Storm Water Permit (the "Los Angeles Permit"), and as the remaining unfinished element of the Long Beach Municipal Storm Water Permit (the "Long Beach Permit"). We submit the following comments[1] on behalf of NRDC, Heal the Bay, the Santa Monica BayKeeper, and their respective members (collectively, "NRDC").

Introduction

NRDC Position

While NRDC strongly supports the Regional Board Staff's retention of the 0.75-inch numerical standard initially embraced in its August, 1999 proposal, we are extremely disappointed that Staff has included a host of exceptions, exemptions, and general limitations on the scope of the program that, collectively, render that numerical standard virtually meaningless. Taken as a whole, these limitations so severely undermine the impact of the numerical standard that it is genuinely questionable whether that standard will ever actually be effectuated. It appears that the Regional Board Staff ("Staff") has maintained the numerical standard only as a token concession to the requirements of the Clean Water Act, while essentially capitulating to the cries of those municipalities who are reflexively opposed to the idea of having to implement such a standard.

R0068468

[1] In addition, NRDC joins in the comments submitted by Heal the Bay, in its letter of January 14, 2000, and those submitted by the Santa Monica Mountains Conservancy, in its letter of December 16, 1999. We also hereby incorporate our previous comments, submitted with our letter of September 9, 1999 ("September Letter"), attached hereto (without exhibits) as Exhibit A, which, in turn, incorporated the comments submitted by the Santa Monica BayKeeper on the same date, and those submitted by Heal the Bay on September 7, 1999.

11-231

The SUSMP should function like any other type of building code, with its requirements applying equally to ministerial development projects and to discretionary ones. It should simply become a part of the set of requirements that apply automatically to any new development.

Request: Los Angeles County removed the limitation to "discretionary" projects from its program, and we strongly encourage the Regional Board to do the same.

Problem 3: The Proposal is Rife with Exemptions, Exceptions and Overly-Restrictive Definitions

(a) Remove the Roofing Exclusion

The significance of the numerical standard is greatly diluted by the insertion of a "rooftop exclusion" that was introduced directly by the Executive Officer without any technical support or precedent. Section 9 of the current Proposal would allow developers to divert runoff from roof tops directly to the storm drains and to take credit for that volume of runoff as if it were being treated. Such an exception would be directly contrary to the purpose of the SUSMPs. Not only would it allow treatment of less runoff, but it would actively encourage developers to increase the amount of impervious surface (in the form of roof tops) built into the development process. That is because every additional inch of roof top would enable developers to build smaller BMPs and direct more runoff straight to the stormdrains. We are aware of no similar exclusion in any program anywhere in country. **The provision is nonsensical. It would function as an affirmative attack on environmental protection and must be removed.**

Staff appears to believe that roof-top runoff will not be contaminated, thus making it appropriate to send this runoff directly into the stormdrain and reduce the volume of runoff treated on-site. The Proposal does include a few provisions to ensure that some of the most obvious contaminating influences on roof tops are not present, such as roof-based exhaust systems and air pollution control devices; however, these protections are inadequate, and, more significantly, they do nothing to address the larger issue that this exemption creates incentives directly contrary to the purpose of a stormwater management system. The following paragraphs explain each of these points in more detail.

First, the only safeguard against pollution in the rooftop runoff is the limitation of the exclusion to cases in which: (1) "roofing materials will not be a source of pollutants of concern;" and (2) "roof based exhaust systems, vents, filters, and air pollution control devices will not present a significant source of pollution." Proposal at 9. The Proposal neither explains who will make these determinations, nor how they will be made. There is no explanation of what it means for roofing materials to be a source of pollutants of concern; there is no definition of "significant source of pollution" or guidance for assessing whether the structures at issue would act as such a source. Because of the vagueness of this exclusion, it provides essentially no protection against polluted roof-top runoff flowing freely into the storm system, exempt from all the otherwise-applicable treatment requirements.

11-039

Second, the Proposal makes no provision for public notice or comment on these decisions. Thus, it opens the door for decision-making that could significantly undermine the effect of the numerical standard, and that would do so without the ability for any public review or accountability. This violates Clean Water Act public participation requirements. See 40 C.F.R §§ 25.3, 25.4, 124.5(c), 122.62, and Part 124; see also Hampson v. Superior Court, 67 Cal. App. 3d 472, 484 (1977) (granting of discretionary exemption requires regional board review).

Third, there is no protection against, or even recognition of, the potential polluting effects of aerial deposition. Studies are underway to assess the significance of this source of pollution, but the Proposal effectively prejudges the results of these studies and encourages developers to increase the area of roofing, thus increasing the amount of runoff sent directly to the stormdrains laden with any pollutants that have settled on those roofs. The aggregate amount of pollution from these roof tops may well be a significant contributor to the pollution in our receiving waters and may prevent municipal governments from meeting their responsibilities to reduce the pollution entering the receiving waters from the ends of their storm drains. It will undoubtedly make meeting those requirements more difficult. Still, the proposal completely discounts, or ignores, this source of stormwater pollution, and thus is arbitrary and capricious and without any support in the record.

Fourth, even if the water could be proved to be pristine, this provision encourages additional flow problems and a further deviation from the natural water cycle. A stormwater management program must take into account both water quality *and* water quantity concerns. A comprehensive management plan considers the entire hydrologic cycle, including infiltration and evaporation, and does not simply focus on getting rid of the water as quickly as possible. See "Storm Water: Asset or Liability," S. Dallman and T. Piechota (Dec., 1999), attached hereto as Exhibit D, see, also, "Stormwater Infiltration," B. Ferguson, 1998, presented at Urban Storm Water Management in the Southwest Conference sponsored by U.S.E.P.A., Long Beach, Califomia, attached hereto as Exhibit E. In 1928, only five percent of the rainfall in the Los Angeles area translated into runoff in the Los Angeles River. In the 1990s, that ratio has reached fifty percent. "Storm Water: Asset or Liability" at 8. If we continue to increase the amount of rainfall that we convert to runoff, at the same time development continues to increase, we will not only exacerbate our existing water quality problem, but we will also create a flood control threat that is beyond the capacity of our current flood control system to handle.

In sum, this exclusion is riddled with problems. It will reduce, if may totally eliminate, the pollution-control benefit that the numerical standard would otherwise provide. It will encourage environmentally destructive design practices. It will subvert public accountability. And it will exacerbate our flood control problem. **This exclusion must be removed.**

(b) Modify "Retail Gasoline Outlet" definition, as specified below

The Proposal states that gas stations with associated convenience stores are to be classified based on their "primary" activity. Proposal at 3. A huge percentage of gas stations today have convenience stores associated with them. These gas stations have just as much potential to generate stormwater pollution as gas stations without associated convenience stores, and there is no reason why a gas station should be able to avoid compliance with stormwater regulations by adding in a convenience store.

Furthermore, like the roofing exclusion, this provision provides no guidance on how to determine a facility's "primary activity." Without any limitations on that phrase, this exemption could quickly become an avenue to relieve most gas stations from the requirements of the SUSMP. **Any pumping station, regardless of whether it has an associated convenience store, should have to meet the requirements of this SUSMP.**

Finally, we note that definitional limitations such as this one and the ones discussed in the following two sections are particularly troubling because they do not simply relieve the excluded facilities from the requirements of the numerical design standard; they seem to remove those facilities from *any* of the facility-specific requirements enumerated in section 10, see Proposal at 9-12. Consequently, even the most basic design requirements of that section, such as the requirement to cover fueling areas, would not apply. There is no excuse for removing such basic requirements.

(c) Change the "Hillside" definition, as specified below

The Proposal establishes three criteria, all of which must be satisfied, for an area to qualify as a "hillside." The definition is both overly restrictive and dangerously vague. Los Angeles County's stormwater management program lists three similar criteria, but meeting *any one* of these three criteria suffices to qualify as a "hillside." Furthermore, criteria such as "erosive soil conditions" are defined in the Los Angeles County program, whereas the current Proposal provides absolutely no guidance for determining whether soil conditions are erosive, nor does it specify who would make such a determination.

Request: This definition should be modified to read as follows: "'Hillside' means property located in an area that has any of the following characteristics, or where the planned development has any of the following characteristics:

"location in an area known to have erosive soil conditions as identified in the *Los Angeles County Department of Public Works Hydrology/Sedimentation Manual*;

"grading will occur on any natural slope where the natural slope is 15% or greater; or

"plans include cut or fill slopes that are 30 feet high or greater."

(d) Modify "Automotive Repair Shop" definition, as specified below

The Proposal defines automotive repair shops based on standard industrial classifications (SIC codes). Proposal at 3. In so doing, it provides exceptions for SIC codes 5013 (essentially wholesale parts suppliers), 5014 (wholesale tire suppliers), and 5541 (retail gas stations) that are unnecessarily and unacceptably broad, as well as being vague in many cases. For example, facilities providing supplies and new parts (code 5013) are exempted as long as they do not store hazardous substances or recycled oil outside; however, the definition does not define "hazardous substances," a term that has different meanings in different contexts even within the area of water quality law. The phrase should be defined to include any substance designated in 40 C.F.R. part 116, pursuant to section 311 of the Clean Water Act, which is how it is defined for the NPDES program generally. See 40 C.F.R § 122.2.

Moreover, there are many types of automotive-related supplies that may not qualify as hazardous substance, but that may nevertheless contribute pollutants of concern to the receiving waters if left outside to come in contact with runoff. Any outside storage of automotive supplies should suffice to impose the requirements related to automotive repair shops on this category of facility.

Similarly, tire and tube suppliers (SIC code 5014) are excluded from categorization as "automotive repair shops" as long as they do not engage in repair work. This should be clarified to include tire and tube installation and should include the outside storage of other automotive supplies or hazardous materials as well.

Finally, the Proposal excludes retail gasoline stations (SIC code 5541) as long as they do not perform any onsite repair work. They should only be excluded if they meet all of the prior criteria, meaning they not only do they perform no onsite repair work, but they do no installation of new parts or upgrades, and they do not store any hazardous substances (properly defined) or other automotive supplies outside.

Request: Modify the exceptions provided for facilities with SIC codes 5013, 5014, and 5541 so that they are excepted *only* if they perform none of the pollution-producing activities described above.

(e) Remove the small restaurant exemption

Section 9 of the Proposal concludes by completely excluding small restaurants (those of less than 5,000 square feet) from the BMP sizing requirements. However, there is no necessary correlation between the size of a restaurant and the amount of pollution it produces. A small restaurant can produce much greater storm water pollution than a large one, depending on the materials they use and their source control practices. All restaurants should be required to meet the same standards with respect to the runoff generated by their sites. Because smaller sites generate less runoff, the burden on them will automatically be proportionately smaller.

Second, the failure to provide a means for public review and comment violates federal regulations applicable to state NPDES programs. Federal law requires that any change to an NPDES permit that does not meet one of the criteria for a "minor modification" must go through public notice and comment proceedings. 40 C.F.R. § 122.62 and 122.63. The granting of an exemption for other than purely factual reasons can constitute a permit modification. Cf. Hampson v. Superior Court, 67 Cal. App. 3d 472, 483-84 (1977).

Third, the delegation of such authority to the Executive Officer, without any provision for Regional Board review, violates the limitations on the Regional Board's ability to delegate its duties. See Cal Water Code § 13223. This statute prohibits the Regional Board from delegating its power to modify waste discharge requirements ("WDRs"). The SUSMP is a provision of an NPDES permit and of a WDR. Furthermore, in a similar situation, Hampson specifically held that, although a regional board resolution could authorize the board's executive officer to make a *preliminary* determination regarding one's eligibility for an exemption, the regional board still had the power *and duty* to review that determination if it would constitute a modification of the waste discharge requirement. Id.

In sum, this waiver provision, which could exempt an unlimited number of developments, is illogical, unwise, and, as written, illegal. **The provision must be significantly modified, if not removed.**

Request: Modify this provision to allow dischargers to seek variances for a showing of impracticability made to, and approved by, the Regional Board.

Problem '5: The SUSMP Should not Allow Self-Certification of Compliance

Section 13 allows developers to certify that they have complied with the requirements of this SUSMP, thus avoiding any municipal or Regional Board review of their development plans. Proposal at 13. Such a provision would be an abdication of the Regional Board's responsibilities under the stormwater program, and **this provision should be removed.** In no other area does the Regional Board allow the regulated community to completely remove itself from regulatory oversight. At a minimum, there must be a mandatory spot checking system so that municipalities retain some sort of oversight over these otherwise-completely unregulated developments.

This section also states that the Executive Officer will decide on the acceptable training and curriculum. This, too, exceeds the Regional Board's authority to delegate duties to the Executive Officer. Just as model programs under the Los Angeles Permit had to come back before the Regional Board for approval, any training program proposed by the Executive Officer as an element of this permit's requirements must be approved by the Regional Board before it is effective.

Problem '6: The Section on Conflicts with Local Practices Vitiates the Proposal

Finally, page 5 of the Proposal allows local practices to override the requirements of the SUSMP as long as the local practices would not "defeat or circumvent the intent of the SUSMP requirements." This vague standard is, once again, an invitation for abuse. Since the cover letter describes the purpose of the SUSMP as being "to ensure that storm water pollution is addressed . . by incorporating [BMPs] in the design phase of new development and redevelopment," one could interpret this exemption as allowing local practices to trump the requirements of the SUSMP as long as they require the incorporation of *some* BMPs in the design phase. Since this is already required under the general development planning program adopted by the Regional Board in January of 1999, this may vitiate the entire SUSMP.

The SUSMP requirements should be implemented like any other program. There is no reason why inconsistent existing practices should trump the SUSMP. **This provision must be eliminated.**

Conclusion

In sum, Staff has proposed a host of alternatives, exemptions, and limitations that, as a whole, threaten to completely negate all of the benefits that the numerical design standard would otherwise produce. There is no justification for retreating from that design standard or providing a series of "back doors" through which developers can avoid it. The proposed standard is entirely reasonable. Indeed, as the following section demonstrates, it is far less restrictive than the standards being adopted by hundreds of other municipalities all over the country. If anything, it should be stronger.

The Proposed Numerical Standard is Necessary and Entirely Reasonable

This is the second time that Staff has recommended the inclusion of a numerical standard within the SUSMP to guide BMP-design and ensure adequate mitigation of stormwater pollution in development planning. Furthermore, Staff both times proposed that the numerical standard to be included should be based on the 85th percentile 24-hour runoff event and on the maximized capture storm water volume for the area, or, in the alternative, a 0.75-inch storm size standard. See Proposal § 9.A, at page 8, and Public Notice No. 99-047 (Aug. 16, 1999) at 2-3. This is the minimum acceptable standard for development planning in the Los Angeles area,[3] and it provides a good starting point for the implementation of this aspect of the Los Angeles and Long Beach Permits.

NRDC also recognizes that the current Proposal provides two additional methods for calculating the exact standard to be applied to any given development. See Section 9.A. Thus, Staff has provided maximum flexibility to developers and municipalities while still ensuring a minimally-adequate level of mitigation of stormwater pollution. **NRDC supports the use of this numerical standard and its formulation in the current Proposal.**

The first section below provides a sense of just how reasonable the proposed numerical standard is in comparison to other programs being implemented across the country. It also relays the results of a survey of similarly-structured programs that are being implemented in thirty-two different geographical areas around the country.

The other two sections address concerns that were raised by several municipalities at the September 16, 1999 hearing regarding the technical effectiveness, and the *cost*-effectiveness, of the BMPs in the program. Their complaints generally took the form of alleging – without any evidence – that there was a lack of data to support the use of these BMPs. As we demonstrate below, this claim is completely fallacious, as there is, and has been for years, an incredible wealth of data supporting both the effectiveness, and the cost-effectiveness, of these BMPs.

In responding to these municipalities' concerns, it bears repeating that the selection of BMPs is **not even at issue** in this proceeding, as the Regional Board has already adopted a list of BMPs for the development planning program under the Los Angeles Permit. See Regional Board Resolution No. 99-03, April 22, 1999, attached as Exhibit F. Thus, the Regional Board has already determined that the BMPs in this program are both cost-effective and appropriate. We nevertheless review the wealth of data regarding the effectiveness and cost-effectiveness of the structural BMPs approved by the Regional Board last April, in response to these concerns.

---

[3] As indicated in the September Letter, NRDC believes that the threshold should actually be higher. We believe that new development projects should be designed to mitigate all the runoff generated by storms of up to either 1.0-inch or the size of a one-year, 24-hour storm, whichever is greater. Many areas around the country use a 1.0-inch standard, many others use the six-month or one-year, 24-hour storm standard; and still others require BMPs in new and redevelopment to be designed with sufficient capacity to ensure that they capture 90% of the stormwater generated. See, e.g., Table 1, on page 13. Given the hydrology of the Los Angeles area, any of these standards would translate to at least a 1.0-inch storm.

Hundreds of Municipalities Across the Country Use Similar or Stronger Standards

At the September 16, 1999, hearing at which the Regional Board heard testimony on this issue, representatives of several municipalities, as well as the building industry, decried the alleged difficulties of implementing the proposed numerical standard and the alleged hardships that would befall them and (in the case of the municipalities) their constituents, if this standard were to be adopted. None of the speakers presented any evidence in support of their "parade of horrors" scare tactics. Instead, they simply – and incorrectly – implied that there was no basis for the standard that Staff had recommended.

As we showed in great detail in our September Letter, not only was there a basis, but a technically-sound, environmentally-critical basis for adopting a standard at least as stringent as the one proposed by Staff. Furthermore, there are literally hundreds of municipalities across the country already employing such standards.

Many municipalities have structured their standards in ways that make them difficult to compare. However, one of the nation's leading experts in stormwater management engineering, Dr. Richard Horner, has noted that, although there are myriad ways of articulating a standard for BMP design, in his professional judgment, "the majority of municipalities that have a numerical standard [such as the one listed in the current Proposal] have **a more stringent one than Los Angeles County's**." See Supplemental Declaration of Richard R. Horner ("Horner Suppl. Decl.") ¶ 7, attached hereto as Exhibit G (emphasis added). And in fact, **three of the Nation's leading stormwater experts have all submitted affidavits or letters supporting the use of this standard**. See Exhibit H.

Moreover, the legal standard for municipal stormwater pollution management requires that this Development Planning program be structured so as to reduce pollutants in stormwater to the "maximum extent practicable." 33 U.S.C. § 1342(p)(3)(B)(3); Los Angeles Permit, Part II, at page 12. Given this standard, the fact that other municipalities are implementing more stringent standards, **in and of itself**, should suffice to show that this is a practicable option and therefore **must** be implemented.

Presented below, in Table 1, is a partial listing of several hundred municipalities around the country that employ more stringent standards than the one currently proposed by Staff. Table 2 lists additional municipalities that employ equally stringent or more stringent standards, depending on the situation. This list is by no means comprehensive – it comes from an academic survey of 32 city, county, regional, and state programs[4] – however, it serves as an indication of how common the proposed approach is.

[4] Institutional Aspects of Urban Runoff Management: A Guide for Program Development and Implementation, Watershed Management Institute, Inc. (1997).

Table 1 – Standards Exceeding the Los Angeles County Standard of Runoff from the First 0.75 Inches of Rain:

Municipality or Municipalities	Design Standard for Treatment Control BMPs	Equivalency to Standard Proposed for Los Angeles
All municipalities in the "Puget Sound Basin," which encompasses a 12-county region, and well over 100 individual municipalities.	Runoff from 6-month, 24-hour rainfall.	**1.2 inches** for the Seattle area; a similar amount in most other highly urbanized areas (A few smaller urban areas have either heavier or lighter rainfall, but all have a standard exceeding Los Angeles County's.)
Clark County, Washington	Runoff from 6-month, 24-hour rainfall.	Approximately **1.2 inches**.
State of New Jersey (all municipalities)	Runoff from first 1.25 inch of rainfall occurring in 2 hours, or runoff from 1-year, 24-hour rainfall event, whichever is greater.	**1.25 inches or greater**
State of Delaware (all municipalities)	First 1 inch of runoff	**Greater than 1.0 inch**
State of Maryland (proposed new standard for all municipalities)	Runoff from 90% of average annual rainfall	Approximately **1 inch** of rain in most places in the state.
Northeast Illinois Planning Commission (Metropolitan Chicago)	Runoff from first 2 inches of rainfall (except runoff from 6-month [unstated duration] rainfall event for swales)	**2.0 inches**, except for swales, which could be more or less.
Austin, TX	First 0.5 inch of runoff + 0.1 inch of runoff for every 10% of impervious area above 20%	**1.3 inches or greater**.

Orlando, FL	First 0.5 inch of runoff, or runoff from first 1 inch of rainfall, whichever is greater.	1 inch or greater.
Winter Park, FL	First 1 inch of runoff	Greater than 1 inch.

Table 2

Standards Exceeding the Los Angeles County Standard (Runoff from First 0.75 Inches of Rainfall) Under All or Most Circumstances:

Municipality or Municipalities	Design Standard for Treatment Control BMPs	Equivalency to Standard Proposed for Los Angeles
Florida (Water Management Districts and municipalities that have not adopted their own standard)	First 0.5-1.5 inch of runoff, depending on BMP, receiving water, and impervious fraction.	Greater than 0.5, almost always greater than .75, and often above 2.0.
South Florida Water Management District (Miami-West Palm Beach metropolitan areas)	Runoff from first 1.0-2.5 inches of rainfall (depending on impervious fraction) multiplied by impervious fraction.	Almost always greater than 0.75
Suwanee River Water Management District, FL	First 0.5-2 inches of runoff, depending on BMP, receiving water, and impervious fraction	Usually greater than 0.75
State of Virginia	Basic treatment volume is first 0.5 inch of runoff, but wet pond is to have wet pool volume = 3 times basic treatment volume	Usually greater than 0.75, and always greater than 0.75 for wet pools.

11-241

The Relevant BMPs Have Repeatedly Been Shown to be Highly Effective

Another concern raised by several municipalities at the September 16, 1999 hearing, was over the effectiveness of the BMPs. There is no doubt that structural BMPs are a highly effective means of controlling stormwater pollution, and any uncertainty regarding the effectiveness of individual or specific BMPs has been substantially reduced by the myriad technical studies that have been performed on this subject. Indeed, contrary to the claims of several municipal representatives at the September 16, 1999 hearing, EPA has recently noted that "[t]here has been a great deal of published data documenting the efficiency of BMPs in removing pollutants from storm water." Preliminary Data Summary of Urban Storm Water Best Management Practices, EPA (Aug., 1999) ("EPA Study") at 5-50. In fact, there have been "[s]everal nationwide monitoring programs . . . to evaluate the performance of storm water BMPs," as well as data in the professional literature and "a large amount of data . . . collected by various cities and municipalities as part of the storm water permitting program." Id. at 5-46 – 5-48. Indeed, some of the data recounted below has been known for over 15 years, making the municipalities' claims perplexing. See, e.g., U.S. EPA, *Results of the Nationwide Urban Runoff Program (Volume 1-Final Report)*, December, 1983, at 6-1 – 6-64.

In addition, two separate groups have developed databases on the issue of BMP effectiveness. "The Center for Watershed Protection . . . has prepared a database containing BMP performance data for 123 structural BMPs," id. at 5-47, and the American Society of Civil Engineers ("ASCE") has developed what EPA refers to as "a comprehensive database on BMP performance." www.epa.gov/OST/stormwater, visited on Dec. 10, 1999. The Center concluded that "there is enough data to select specific BMP groups on the basis of their comparative ability to remove specific pollutants." "Comparative Pollutant Removal Capability of Urban BMPs: A Reanalysis," Watershed Protection Techniques; Vol. 2, No. 4, June 1997, Technical Notes – Stormwater BMPs; Technical Note 95 at 520.

Although a complete literature review and summary is beyond the scope of this letter, the attached excerpt from Fundamentals of Urban Runoff Management: Technical and Institutional Issues, R. Horner, J. Skupien, E. Livingston, and H. Shaver (Aug., 1994), see Exhibit I, reports the results of several in-depth studies on BMP effectiveness. The information is provided as exemplary of the sort of data that has been generated regarding the effectiveness of BMPs. It is by no means the only source of information on the subject. It is but one example of the sort of detailed information that has been developed to characterize the effectiveness of structural BMPs. Some of the conclusions of the report are summarized below. Additionally, Table 5-7 from the EPA Study, attached hereto as Exhibit J, reports similar pollutant removal levels for total suspended solids, nitrogen, phosphorus, pathogens, and metals, for 10 types of BMPs.

All of the BMPs listed below are on the Regional Board's list of approved BMPs for use in the Development Planning Program under the Los Angeles Permit. See Regional Board Resolution No. 99-03, attached as Exhibit F. Thus, the following data directly reflects the effectiveness of the existing program.

A. Wet ponds

EPA's Nationwide Urban Runoff Program ("NURP") performed a comprehensive investigation of pond design and performance. Performance was found to relate best to volume ratio (the ratio of pool storage volume to mean storm volume). Total suspended solids ("TSS") reductions were found to reach 100% with sufficient volume ratio. Similarly, lead reductions could be greater than 90%, phosphorus reductions greater than 60%, and copper and zinc reductions as high as 50%. Seattle's water quality design storm is equivalent to a volume ratio of approximately 2.5, which yields reductions in TSS of 75%, lead of over 70%, phosphorus of 50%, and copper and zinc of 40%. Fundamentals of Urban Runoff Management, R. Horner et al., Exhibit I, at 120-21.

B. Extended-Detention Dry Ponds

A 1990 study by Stahre and Urbonas analyzed several studies of long-term efficiencies for various pollutants and a 40-hour detention time. The researchers concluded that dry ponds under such conditions could remove 50-70% of TSS, 75-90% of lead, 50-90% of bacteria, 50-70% of hydrocarbons, 30-60% of zinc, 20-40% of chemical oxygen demand, and 10-20% of total phosphorus and total nitrogen. Id. at 122.

C. Vegetative Practices

A 1992 performance investigation in the Puget Sound area of Washington found grass swales can be effective in capturing solids, oils, and the least soluble metals. Over a six-storm period, the swale, with an average hydraulic residence time of nine minutes, removed an average of 83% of the TSS, 75% of oil and grease/TPH, 72% of iron, over 60% of the lead, turbidity, and T-Zn/T-Al, and even removed 30% of the *dissolved* zinc. Id. at 124.

D. Constructed Wetlands

Another 1992 study, by Strecker, considered more than 140 papers and reports and assembled detailed information on 18 locations within the United States. The study found median pollutant removals of 80.5% for TSS, 44.5% for ammonia-nitrogen (NH_3-N), 58% for total phosphorus, 83% for lead, and 42% for zinc. Id. at 128-29.

E. Sand Filters

Monitoring sand filters in Austin, Texas, Shaver reported expected pollutant removal efficiencies of 75-87% for TSS, 71-88% for lead, 49-82% for zinc, 19-61% for total phosphorus, and 36-37% for fecal coliform, among other pollutant parameters. Id. at 138.

F. Leaf Compost Filters

A leaf compost filter developed and tested by W and H Pacific (1992) showed influent event mean concentrations to be reduced, on average, by 95% in TSS, 84% in turbidity, 67%

chemical oxygen demand, 41% phosphorus, 88% zinc, and 87% total petroleum hydrocarbons, among other results. Id. at 139.

G. Catch Basin Filters

Before independent testing, "MacPherson reported concentration reductions of 90 percent for total suspended solids, 87 percent for lead, 77 percent for zinc, and 86 percent for copper." Id. at 139. Dr. Michael Stenstrom has also reported removal efficiencies of 50 to 90 percent for petroleum hydrocarbons, and up to 99 percent for sediments and trash. See Santa Monica Bay Restoration Project Catch Basin Study, 1998 (Michael Stenstrom, Ph.D., primary author).

H. Continuous Deflective Systems

Robin Allison, of the University of Melbourne, in Victoria, Australia, found continuous deflective systems, or CDS, to remove 70 to 85 percent of trash, vegetation *and* TSS. R. Allison, B.E., Ph.D., "Effectiveness of Two Stormwater Trash Trapping Systems" (1998). See Exhibit K.

I. Conclusion

There is an enormous body of detailed technical information regarding the efficiency of the various structural BMPs listed above. Because the BMPs listed above are part of the existing Development Planning program, see Regional Board Resolution No. 99-03, attached as Exhibit F, this data is directly on-point and completely supportive of the Board's decision to require that these BMPs be sized to work most effectively.

The data presented herein is also highly relevant because the pollutant parameters for which these structural BMPs have been tested – and for which they have proven to be the most effective – are the same pollutants for which the vast majority of the waters of this region are listed as impaired. The Los Angeles River, for example, is presently listed as being impaired by ammonia, coliform, lead, oil, and nutrients such as nitrogen and phosphorus, among other things, see 1998 California 303(d) List and TMDL Priority Schedule, approved by EPA, May 12, 1999 ("303(d) list") at 79-81, all of which can be effectively managed by the BMPS listed above. Even a casual review of the 303(d) list reveals that most of the contaminants listed above, including copper, lead, zinc, TSS, coliform, and nutrients, are ubiquitous problems in the Los Angeles area. Indeed, with the impending development of TMDLs for these impairments, the implementation above the above BMPS may actually soon be *mandated*.

There is Ample Data Regarding the Reasonable Costs of Structural BMPs

A. The Municipalities' Demands Regarding the Consideration of Costs Show a Fundamental Misunderstanding for the Structure of the Clean Water Act.

Several of the municipal representatives who spoke at the Regional Board's September 16, 1999, hearing on this issue complained that there was insufficient data on the costs of the

various BMPs to assess whether they should be required. If effectiveness is viewed as a measure of the benefit of a BMP, they argued that, even if we knew how effective the BMPs were, and therefore what the benefits are, the absence of cost data nevertheless meant that there was not enough data to justify the BMPs on a cost-benefit basis.

As an initial matter, it should be noted that a cost-benefit analysis is not required at this stage in the implementation of the Clean Water Act's stormwater management program. Costs, to the extent they are relevant at all, have been factored into the equation in designating the beneficial uses for the receiving waters. Once uses are designated for those water bodies, the Clean Water Act requires that sufficient controls be implemented on all sources of pollution to *assure* that those standards are attained. See, e.g., 33 U.S.C. § 1313(d)(1)(C); see, also, id. at § 1312(a). Also, once again, the BMPs at issue were selected and/or approved by the Regional Board nine months ago, see Exhibit F at 16-31, so their propriety is not in issue in this action. The only question before the Board is the appropriate sizing of the pre-approved list of BMPs that the municipalities must require of new and redevelopment regardless of how the Board acts on the instant issue.

Further, although the municipalities' objections do not relate to the propriety of adopting a numerical sizing standard, it is worth noting that this element – the development of SUSMPs with meaningful standards – is *mandated* by the Los Angeles Permit. The permit *requires* that SUSMPs and guidelines for their preparation be developed. Los Angeles Permit § III.A.1.c. It also states that, in order to implement a program for planning measures consistent with the SUSMPs, permittees "shall require that the project applicant submit an [USMP] appropriate and applicable to the project." Id. at § III.A.2. Thus, the permit requires the adoption of SUSMPs and envisions that the Regional Board will develop standards, such as the numerical standard at issue, to assessing the adequacy of the specific USMPs submitted by developers.

Finally, the statute itself, as well as the permit, requires that the Development Planning program be structured to reduce pollutants in stormwater to the maximum extent practicable. 33 U.S.C. § 1342(p)(3); Los Angeles Permit, Part II, at 12. Given the number of municipalities that are implementing more stringent sizing standards than this Regional Board is considering, see section above entitled "Hundreds of Municipalities Across the Country Use Similar or Stronger Standards," there can be no doubt that the standard before the Board is not impracticable.

B. The Economic Data is Plentiful

Even if a cost-benefit assessment were required at this stage, the municipalities' claim that there is some general dearth of economic data on the cost of BMPs is simply false. EPA's Preliminary Data Summary of Urban Storm Water Best Management Practices, supra at page 15, discusses the costs (and benefits) of stormwater BMPs, in chapter 6. Table 6-1, attached hereto as Exhibit L, lists typical base capital costs, in dollars per cubic foot of treated water volume. Using that table, and even assuming 100% imperviousness, a one-half acre development would be required to spend between approximately $675 and $8,000 to construct and install a

sufficiently-sized structural stormwater BMP(s).[5] Similarly, a 10-acre complex could be required to spend as little as $13,500 or, using the most expensive BMPs, as much as $161,000.[6]

EPA goes on to note that, in part because of economies of scale, the costs of many BMPs will vary from these numbers as the sizes increase, making it useful to assess the total cost of typical applications of each BMP. Table 6-2, attached as Exhibit M, shows the costs for the same eight BMPs for 5- and 50-acre sites.[7] These amounts are likely to be only a small fraction of the overall costs to develop lots of this size. The Center for Watershed Protection concluded that "about a third of every dollar spent on stormwater pond construction was devoted to water quality control, with the remainder spend on flood control storage." "The Economics of Stormwater BMPs: An Update," Watershed Protection Techniques: Vol. 2, No. 4, June 1997; Technical Notes – Economics; Technical Note 90 at 496. Furthermore, the Regional Board Staff itself performed "BMP cost calculations for an actual site in Los Angeles in the process of development and determined that the mitigation criteria cost is **less than 0.5 percent of the project cost.**" Staff's "Summary of Comments Received and Response," Dec. 7, 1999, at 3.

In any event, the wealth of data regarding the costs of BMPs should put to rest the notion that such data is unavailable.

---

[5] 0.75 inches of rain on a 100% impervious surface would generate 0.75 inches (or 0.0625 feet) of runoff. One-half acre is 21,500 square feet. 0.0625 feet of water over 21,500 square feet yields 1,344 cubic feet of water, which, when multiplied by .5 to 6 (the approximate range of costs reported in Table 6-1) yields costs of between $672 and $8,064.

[6] Again assuming 100% imperviousness, since ten acres is 430,000 square feet, the site would yield 26,875 cubic feet of water. Multiplied by .5 and 6, that volume yields costs of $13,437 and $161,250.

[7] As EPA's data ranges from two to nine years old, these numbers should be adjusted for inflation, in addition to a further adjustment for regional factors.

Recommended Changes

The following is a proposed resolution for the Regional Board's adoption. Adoption of this resolution would affirm the well-supported numerical standard proposed by Staff while eliminating the exemptions and scope limitations that will undoubtedly hamper the effectiveness of this program.

The Regional Board hereby adopts the current Proposal from Staff with the following modifications:

1. Remove the roofing exclusion from section 9, on page 9.

2. Remove the final paragraph within section 9, which excludes small restaurants (those of less than 5,000 square feet) from the requirements established in that section.

3. Modify Section 11, on Waivers, to allow dischargers to seek variances only upon a showing of impracticability made to, and approved by, the Regional Board, following adequate public notice and opportunity for public comment.

4. Remove section 13, allowing self-certification of compliance.

5. Remove the section on page 5 entitled "Conflicts with Local Practices."

6. Expand the scope of the program to include all the project and activity types covered by Los Angeles County's program, including removal of the limitation to discretionary projects, by doing the following: (a) change the sentence in the last full paragraph on page 2 of the Proposal from:

"This SUSMP applies to projects that are Priority Projects (Discretionary Projects) as defined by the NPDES Permit;" to read:

"This SUSMP applies to all project and activity types described in attachment 1;" and

attach the list from the Los Angeles County Stormwater Management Manual, see Exhibit C, as attachment 1.

(b) Remove the word "discretionary" from the beginning of the last line on page 2 of the Proposal.

(c) Remove the top paragraph from page 5, defining "Discretionary Project."

7. Modify the definition of "Retail Gasoline Outlet" on page 3 of the Proposal to say that any commercial facility that includes a pumping station qualifies as a retail gasoline outlet subject to the requirements applicable to such entities. If other facilities, such as convenience stores, are associated with the pumping station, the requirements for gas stations only apply to the area around the pumping station, which will be the greater of the area 50 feet outward from the outer-most pumping stations or half way to the associated facilities.

8. Modify the definition of "Hillside" on page 3 so that it reads as follows: "'Hillside' means property located in an area that has any of the following characteristics, or where the planned development has any of the following characteristics:

"location in an area known to have erosive soil conditions as identified in the *Los Angeles County Department of Public Works Hydrology/Sedimentation Manual*;

"grading will occur on any natural slope where the natural slope is 15% or greater; or

"plans include cut or fill slopes that are 30 feet high or greater."

9. Modify the definition of "automotive repair shop" as follows:

(a) Facilities with SIC code 5013 are exempted only if they do not store hazardous substances (meaning any substance designated in 40 C.F.R. part 116, pursuant to section 311 of the Clean Water Act), recycled oil, or automotive-related supplies, outside.

(b) Facilities with SIC code 5014 are excluded only if they do not engage in repair work or tire and tube installation and do not store automotive supplies or hazardous materials (defined as any substance designated in 40 C.F.R. part 116, pursuant to section 311 of the Clean Water Act) outside.

(c) Facilities with SIC code 5144 are excluded only if they meet all of the prior criteria, meaning they not only do they perform no onsite repair work, but they do no installation of new parts or upgrades, and they do not store any hazardous substances (as any substance designated in 40 C.F.R. part 116, pursuant to section 311 of the Clean Water Act) or other automotive supplies, outside.

* * *

Thank you for the opportunity to comment on the Regional Board Staff's proposed SUSMP for the Los Angeles and Long Beach Permits. If you have any questions regarding any of the above, feel free to contact Alex Helperin at (323) 934-6900.

RE: Standard Urban Storm Water Mitigation Plans

Dear Mr. Dickerson:

Heal the Bay has reviewed the proposed *Standard Urban Storm Water Mitigation Plan for Los Angeles County and Cities in Los Angeles County* submitted by the Los Angeles Regional Water Quality Control Board Staff on December 7, 1999 (the "December 7th Proposal") for approval by the Executive Officer under the Municipal Storm Water Permit for Los Angeles County and Cities. We hereby join in the comments of the Natural Resources Defense Council (NRDC) and submit the following comments on behalf of Heal the Bay and its members. We also hereby incorporate Heal the Bay's comments submitted on September 7, 1999 concerning the preceding version of the Proposal issued by the Regional Board staff on August 11, 1999 (the August 11th Proposal).

General Comments

Although Heal the Bay found ample room for improvement of the August 11th Proposal (see our comments submitted September 7, 1999), we were so strongly supportive of the numerical mitigation measure proposed therein that we called upon our membership and other citizens and organizations to voice their support for the August 11th proposal as an important step toward cleaner coastal and inland waters. Consequently, we were alarmed to discover that the December 7th Proposal, modified in an apparent effort to placate disgruntled municipalities, takes numerous dramatic steps backwards from achieving enforceable and effective regulation of storm water and from realizing the goals of the Clean Water Act.

Exemptions are the Rule

The December 7th Proposal sets forth the promise of a new era of reduced urban runoff, when priority new and redevelopment sites must apply appropriately designed BMPs to capture, infiltrate or treat runoff generated by the 85th % storm or the 0.75 inch – 24-hour storm. But the promise of this new era of runoff-reduction from new and redevelopment vanishes as exemptions prove to swallow the rule. The following is a list of exemptions to the numerical mitigation standard that serve to vitiate it:

Dennis Dickerson
January 14, 2000

The Rooftop Exclusion

The exclusion of roofing surfaces from the total area for calculation of rainfall or runoff volume to be treated guarantees undersizing of BMPs to accomplish the stated goal of capturing 85% of the total runoff from the sites. Worse yet, the roofing exclusion encourages building from lot line to lot line, and discourages landscaping on site. Thanks to this exclusion, the bigger the rooftop, the less storm water to treat or infiltrate, as storm water from roofing surfaces may be diverted directly to a storm water conveyance system. Thus, rooftop runoff bypasses the mitigation measure and goes straight into street gutters and stormdrains, carrying pollutants to receiving waters. This is exactly what the SUSMP provision and the Stormwater NPDES permit authors were trying avoid.

Rooftop runoff contributes both significant volume and pollutant loadings to the total urban runoff problem. It is a complete travesty that rooftops have been excluded when they serve as the deposition site for so much aerial pollution and provide such a large percentage of the total impermeable surface in this region. The Center for Watershed Protection has demonstrated a strong correlation between the percentage of impermeable surface and the health of receiving waters and habitat.

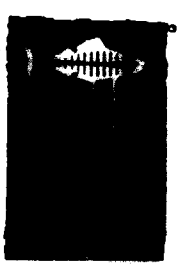
Finally, the rooftop exclusion has not been used anywhere in the nation and has absolutely no substantiation in the record. Staff developed the exclusion just to appease opponents of the 0.75 inch and 85th % standards. This exclusion has no sensible justification in terms of achieving water quality standards, and can only be seen for what it is, a sell-out to the vocal opposition of the proposed numerical mitigation measure.

Small Restaurants

The exclusion of restaurants less than 5,000 square feet is nonsensical. The size of a restaurant may have little to do with the amount and quality of runoff it produces (they all have kitchens, garbage bins and parking lots), and this exclusion would cover the majority of restaurants.

Local Practices Prevail

Your response to comments states that "federal laws and regulations require that controls on new and redevelopment be enforceable." Yet the December 7th Proposal allows permittees to continue with local practices that conflict with the SUSMP requirements except where those practices would "defeat or circumvent the intent of the SUSMP requirements." This begs the question: How will the Board enforce a standard that can be replaced by any other so long as it doesn't defeat the intent of the standard? The SUSMP should provide definitive standards that are clear to the regulated community and the public in whose interest these standards are adopted.



2701 Ocean Park Blvd., Suite 150
Santa Monica CA 90405

11-251

Impracticability Waivers

Permittees can provide for a waiver of the SUSMP requirements if "impracticablity" for a specific property can be established. "Recognized situations of impracticability include: (I) extreme limitations of space for treatment on a redevelopment project, (ii) unfavorable or unstable soil conditions at a site to attempt infiltration, and (iii) risk of ground water contamination because an underground source of drinking water is less than 10 feet from the soil surface."

Since the December 7th proposal calls for treatment OR infiltration, the listed "recognized situations of impracticability" is perplexing. For example, if infiltration is impracticable because of unstable soil conditions or the risk of groundwater contamination, treatment may be practicable.

One can envision an extremely rare situation at a redevelopment site where there is insufficient room for infiltration or treatment. We are intrigued by the idea of in-lieu fees set forth in the December 7th proposal whereby the project proponent in these cases could contribute to a fund used to reduce the overall amount of storm water pollution in the watershed. However, we question the workability of having the "savings in cost" determined by the project proponent. How will this sum be determined? Infiltration could cost next to nothing, so this storm water abatement fund could add up to a big nothing.

The December 7th proposal should be amended to reflect that certification of groundwater contamination risk or geologic hazards must be provided by a California Registered Geologist.

Finally, the provision that the Executive Director may approve any other justification for impracticability is troublesome. What are the standards? Where is the public in this decision making process? Too much reliance on the Executive Officer's discretion for approval has already led to tremendous delays and spotty implementation of the current Los Angeles County Stormwater NPDES permit.

Clarification of Exemptions not provided

The Regional Water Quality Control Board needs to clarify that the SUSMP requirements apply to all categories of priority development. As stated previously we oppose all exemptions. RWQCB staff has not differentiated between exemptions from the 85th % standard and other SUSMP requirements. Please clarify that exemptions only apply to the 85th% standards, not certain types of gas stations, small restaurants, etc.

Alternative Certification for Storm Water Treatment Mitigation

The provision that allows for permittees to accept a signed "certification" stating that a developer's plan meets the criteria established in the SUSMP, and that the plan preparer has undergone training on designing BMPs to meet the numerical mitigation criteria. This "certification" is in lieu of the permittee actually verifying BMP adequacy.

11-252

Dennis Dickerson
January 14, 2000

Heal the Bay is opposed to the proposed self-certification of compliance with no requirements set forth for plan preparers. This system will only work if plan preparers undergo legitimate training and certification as occurs in the fields of lead and asbestos abatement.

Guidance to Cities

The December 7th Proposal states in the "Background" section that "The permittees are required to use this SUSMP to develop their own citywide SUSMP." This guidance is not sufficient. The SUSMP needs introductory language clarifying that the permittees shall adopt the standards set forth therein in their own citywide SUSMPs.

Environmentally Sensitive Areas

Heal the Bay is pleased to see the additional SUSMP for development that may impact Environmentally Sensitive Areas. An Environmentally Sensitive Area (as defined in the Long Beach Storm Water Permit) is (a) an area of special biological significance as designated by the SWRCB, (b) an area designated as a significant natural area by the California Resources Agency, (c) or an area designated as an Area of Ecological Significance by the County of Los Angeles. Clearly these areas require the special protection of a SUSMP for all new and redevelopment, including single family homes. The impacts of single family home development in the Santa Monica Mountains has proven to be nothing less than devastating to some riparian habitats in the mountains. An additional BMP for development in these areas should be a buffer zone of at least 100 feet between any development and an Environmentally Sensitive Area.

However, Heal the Bay finds the category description "located adjacent to or discharging to an environmentally sensitive area" to be too ambiguous. In keeping with the intent of the provision, we propose the following revision: "located *within or directly* adjacent to or discharging *directly* into an environmentally sensitive area."

Parking Lots

Heal the Bay is also pleased to see the additional category for "parking lots 5,000 feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff." However, Heal the Bay suggests, in addition, that mitigation of runoff from parking lots should be a separate requirement in every SUSMP category (with the exception of single hillside residence). This requirement should emphasize that parking lots are a significant source of pollutants in runoff and should include a list of BMPs and good housekeeping requirements applicable to all parking lots. In addition, this section should incorporate the numerical mitigation measure that applies to every SUSMP. The City of Santa Monica has successfully required mitigation of a 1-inch, 24-hour storm at parking lots since 1992.

11-253

Dennis Dickerson
January 14, 2000

Definition of Redevelopment

Heal the Bay was concerned that the trigger for application of the SUSMPs to redevelopment in the August 11th Proposal ("where the cost of new improvements exceeds a predetermined threshold [that] shall be consistent with the local jurisdiction's policy for application of other building codes to new improvements") made for an uneven playing field and decreased the applicability of the SUSMPs in less environmentally-progressive municipalities. We believe that the December 7th Proposal solves this problem with a more general definition for redevelopment.

SUSMP Provisions Applicable to All Categories

As stated in our previous comments, the following requirements should be applicable to all categories:

a) Minimize the amount of storm water directed to impermeable areas;
b) Maximize the percentage of permeable surface; and
c) Reduce storm water pollutant loads to the maximum extent practicable.

We are troubled by the limiting definitions contained within the December 7th Proposal provision entitled "Minimize Storm Water Pollutants of Concern." The definition of "pollutants of concern" limits the applicability of the SUSMP standards unduly, especially when this term is modified by the phrase "that may result in significant impacts." There is no definition provided for "significant impacts." Heal the Bay recommends, in the alternative, "reduce storm water pollutant loads to the maximum extent practicable." This language is derived from the Clean Water Act amendments of 1987 and the Municipal Storm Water Permit for Los Angeles County and Cities (Board Order No. 96-054; NPDES No. CAS614001) Part 2 IIII.A.2).

Discretionary Projects

Heal the Bay objects to the limitation of the December 7th Proposal to "discretionary" projects. Los Angeles County does not limit its program to discretionary projects, and there is no justification for this severe limitation. The SUSMP requirements should apply equally to ministerial and discretionary development projects, just like any other building code requirements. Clearly, a parking lot or commercial development covered by ministerial provisions still is a significant pollutant source that needs appropriately sized and designed BMPs.

Xeriscape

As stated in previous comments by Heal the Bay, please add to all SUSMPs that 25% of required landscaped areas must be vegetated with xeriscape.

Outdoor Material Storage Areas

As stated in previous comments by Heal the Bay, within the SUSMP provision "Properly Design Common Outdoor Material Storage Areas," please address the issue of storm water accumulation

11-254

in secondary containment areas not covered with a roof. Please state that storm water that accumulates in the containment area must be treated or infiltrated, not directly discharged into the storm drain system. Also, please provide guidance on what period storm the secondary containment should store without discharge to the MS-4.

Also, properly designed common storage areas should contain trash containers with lids. This is the most cost-effective BMP to prevent polluted runoff, trash and debris problems.

Wildlife Corridors

As stated in previous comments by Heal the Bay, "Conservation of Natural Areas" in the SUSMPs should include state or locally designated wildlife corridors.

Protect Slopes and Channels

As stated in previous comments by Heal the Bay, 'Protect Slopes and Channels" should not be modified by the phrase "if applicable." All project plans must include BMPs consistent with local code and ordinance to decrease the potential of slopes an/or channels from eroding and impacting storm water runoff. This section should also define "slope". In addition, this section should include two additional bullet points, as follow:

* Utilize natural drainage systems when possible, and avoid the activity of replacing natural systems with concrete channels and pipes.

* Where possible, eliminate or reduce runoff flow to unlined channels to the maximum extent practicable.

As stated in previous comments, please include within the "Protect Slopes and Channels" SUSMP provision that riprap or other structural energy dissipaters should never impinge on existing habitats.

Unacceptable Connections to the MS-4

The model program fails to prohibit some unacceptable connections to the MS-4. For example: no connections to the MS-4 should come from wash-down areas, restaurants, fueling, and vehicle maintenance areas contained in new and redevelopment.

Proof of Ongoing BMP Maintenance and Control

We are pleased by the inclusion of BMP maintenance guidelines in order to insure that BMPs get maintained after installation. However we suggest the additional requirement that all structural BMPs should be inspected by the property owner on at least a quarterly basis with proof of inspection (a standard form) to be provided to the municipality.

11-255

Dennis Dickerson
January 14, 2000

Comments for Specific Plans

Single Family Hillside Residence

Heal the Bay objected to the definition of "hillside" contained in the August 11th Proposal because the definition was left to the local jurisdiction making for an uneven playing field and decreasing the applicability of the SUSMPs in less environmentally-progressive municipalities. As stated in previous comments by Heal the Bay, we argue that in order to be effective, the SUSMP must include minimum standards for natural slopes and height of cut or fill slopes. However, the definition of "hillside" within the December 7th Proposal, including "any natural slope", is too broad. We suggest a review of local ordinances to develop these minimum standards, or adoption of the current definitions in the County Public Works Hydrology/ Sedimentation Manual:
1) grading will occur on any natural slope where the natural slope is 15% or greater, and 2) plans include cut or fill slopes that are 30 feet high or greater.

Retail Gasoline Outlets

As stated in previous comments by Heal the Bay, the requirements for gasoline outlets should apply to any retail operation that includes a fueling dispenser regardless of the development's primary activity classification. For example, fueling stations at car washes pose the same risk of storm water contamination as fueling stations at a gas station. We strongly recommend the applicability of this SUSMP be widened to include any retail development that will include a fuel dispenser, including marina fueling stations that don't even have pumps with automatic shut-off valves.

Conclusion

BMPs must be sized correctly to be effective, and numerical mitigation standards are the only guarantee of proper sizing. Heal the Bay remains committed to the three quarter-inch or 85th %, 24-hour storm standards as both a necessary and reasonable step toward clean coastal and inland waters.

The three quarter-inch and 85th %, 24-hour storm standard are accepted by Los Angeles County. On January 11, 1999 the Coastal commission adopted the 85th % standard (or 10% of the 50 year storm) in their Coastal Polluted Runoff Plan. From now on, all Coastal Development Permits, new Local Coastal Plans and Local Coastal Plan amendments must contain these standards. This will apply to **all** new development in the coastal zone. Also, the California Coastal Commission has adopted an 85th % standard for the town plan portion of the Gualala LCP. Similar or more stringent standards have been adopted in jurisdictions across the country. The standard is economically efficient as it is built into the development phase of projects, and the standard prevents costly cleanup away from the source. After a summer of beach closings and the associated economic hardship, the opposition from municipalities to this standard perplexes us.

11-256

Dennis Dickerson
January 14, 2000

The support for this standard is significant, ranging from respected storm water experts Professor Mike Stenstrom from UCLA and Tom Schueler, Director of the Center for Watershed Protection, and a broad base of environmental groups, to the Los Angeles Times and business people who support a more livable Los Angeles.

However, this decision should not be a popularity contest. With over 150 impaired water bodies in the Los Angeles region and increasing development pressures, we must be guided the desperate state of our water quality and the legal mandate to reduce storm water pollution to the maximum extent practicable.

Unfortunately, the December 7th proposal nearly nullifies the numerical mitigation standard with a host of troubling exceptions. We encourage you to eliminate the rooftop; small restaurant, local practices and impracticability exceptions so that the numerical mitigation standard will provide the tremendous water quality benefits it can bestow upon this region.

Thank you for the opportunity to comment on the December 7th draft of the Proposed Standard Urban Storm Water Mitigation Plan. Please call Lisa Boyle at extension 142 if you have any questions about our comments.

Sincerely,

Mark Gold

Subject: Standard Urban Stormwater Mitigation Plans (SUSMPs)

Dear Mr. Dickerson;

The development and implementation of the SUSMP program has evolved into one of the most contentious issues of the entire NPDES Stormwater Program. Only now, when the deadline has arrived, are many agencies realizing the total breath and scope of the program and the commitment to reducing stormwater pollution that is required. Many farsighted cities have taken up the challenge of developing a workable SUSMP program, some as early as 1998. These cities include:

Arcadia	Hermosa Beach	Sierra Madre
Baldwin Park	Pasadena	South El Monte
Cudahy	Rancho Palos Verdes	South Gate
Culver City	Redondo Beach	Temple City
El Monte	San Fernando	West Hollywood

13310
FIRESTONE BLVD. A-2
SANTA FE SPRINGS
CALIFORNIA
90670
(562) 802-7880
FAX (562) 802-2297

GENERAL
ENGINEERING
LICENSE
A-582340

HAZARDOUS
SUBSTANCE
REMEDIATION
LIC. 3382

As with any program of this magnitude, the status varies between individual cities. Some cities already meet essentially all of the major tasks required of the SUSMPs. Others are waiting for the formal approval before finalizing their programs. Adjustments to the cities' programs to meet the final guidelines are not anticipated to require a major effort. These Cities have always supported the Regional Board's reasonable efforts to reduce stormwater pollution.

This program is very complex and highly technical. The Board's staff should be commended for their effort thusfar to simplify and streamline the requirements as much as possible. Having been in the forefront, these cities have overcome many of the technical difficulties associated with a program still in its infancy.

11-258

To improve the program further we offer the following recommendations to the December 7th draft SUSMP program:

Item 2 - Conserve Natural Areas: This requirement contains phrases such as:

"Every effort shall be made",
"Maximize,
"Wherever practical", and
"Preserve"

These are very vague and offer little guidance on what constitutes adequate compliance with the SUSMP program. Reference materials are equally vague. In lieu of specific standards, Cities are left only with their best judgment, which often may not be defensible. At this time, cities should have broad discretion of what constitutes compliance with this item.

3 - Minimize Stormwater Pollutants of Concern: This section refers to many guidance documents for selection of many types of Best Management Practices for many differing situations. There are often several different BMPs any one of which would adequately reduce stormwater pollution. It is not clear if the cities have the discretion to (1) approve a single BMP, (2) a combination of several or (3) are all applicable BMPs required in every situation?

Clearly, requiring every BMP in every situation is not feasible. It must be clear in the SUSMP guidelines that cities have the authority to determine which BMPs are appropriate (see comment item 11).

6 & 7 Outdoor storage and trash areas: Our interpretation thusfar is that these items do not apply to single family dwellings. To eliminate future difficulties, items single family dwellings should be specifically exempted from these requirements.

9 - Design standards: Establishing the design standard as a volume (¾ inches) is pertinent for the capture of rainfall, but not for treatment since treatment equipment is generally rated in gallons per hour. Typical rainfall intensity varies from one location to another (¾ inch per 48 minutes in some areas, ¾ inch per 55 minutes in others, etc.). The criteria for treatment should be a simple easy to remember number throughout the County. We suggest using ¾ inches of rainfall per hour.

Also, the Executive Office, after consultation with the permittees, should have the authority to revise the standards based upon the results of any future credible studies.

General Comment for section 10 A - E: These sections contain many specific requirements. Experience has shown that not all will be feasible in every case. In fact, in most cases an appeal will be made by the builder or developer to waive or modify one or

more requirement for cost, location, space, aesthetic or planning reasons. There is no provision for the waiver or substitution of other BMPs of equal or greater value except to appeal to the Regional Board's staff on a case by case basis. (see next comment)

11-Waiver: This section as worded will result in the Board's staff quickly being inundated by appeals that will far outpace staffs ability to review cases. This could ultimately result in a near halt of many priority projects, clearly not the intent of the SUSMP program. As an alternative, Cities with effective programs should be allowed to approve substitutions (or waivers if appropriate) that are equal to or better than those specified in the SUSMP guidelines.

We recommend that two paragraphs be inserted into section 11:

> *Upon review and approval of the Board's Executive Officer, a Permittee's SUSMP review program may be authorized to either: Provide a for (1) a substitution of a BMP of equal or greater effectiveness in reducing pollutants in storm water runoff or (2) a waiver from any specified BMP requirement if the impracticability of the BMP for the individual property can be established. Recognized situations of impracticability in addition to those listed above, are: (iv) Cost of installing BMPs in redevelopment projects as compared with the overall cost of the redevelopment project, (v) if the requisite BMPs would necessitate extensive construction of areas outside of the proposed project's area, (vi) conflict with existing planning and city code requirements, or (vii) conflict with health and safety requirements. This authorization is subject to the same revocation procedure as above.*
>
> *To be eligible for this authorization, a permittee's principle plan reviewer must either meet the requirements of Section 13 or be (i) a California Registered Professional Engineer, and (ii) a Registered Environmental Assessor and (iii) have a minimum of 10 years of experience in reviewing stormwater runoff systems. The Executive Officer can modify this criteria as necessary to accomplish the goals of the SUSMP program.*

Definitions

Hillside: The proposed definition of a hillside could result in many small projects being subject to the entire SUSMP program requirements. Projects of less than 1,000 square feet should be exempted from the Hillside SUSMP requirement.

In addition, the steepness of the site should be taken into consideration as well. The 25% slope suggested by Los Angles County should be incorporated into the definition. Permittees should also be given the option of modifying the slope to conform with city characteristics if justified.

Environmentally Sensitive Areas: It is realized that any list of these areas will change over time. But in order to move forward as rapidly as possible with effective implementation of the program, the Board should provide the lists as they exist within 30 days of SUSMP approval. The criteria of what constitutes discharging into an ESA should be:

Discharging directly into a listed environmentally sensitive area without having crossed through another jurisdictional boundary.

Redevelopment: This definition while technically accurate does not focus on stormwater concerns. A second sentence should be added:

The SUSMP need only address those areas being redeveloped unless the project exceeds the lesser of either 50% of the value of the site's existing improvements or other related threshold as established by the Permittee.

--- ---

Finally, forward thinking cities have continually made an effort to implement as many facets of the Planning Model Program as soon as reasonably possible as it has evolved over the last three years. As a result, city forms, outreach materials and policies have had to change with every new iteration. As an example, in the last few months, each cities' program was revised when the "0.75 capture" criteria was first espoused. Now, just a few months later, two new categories of SUSMPs are proposed, requiring a re-revision. Program modifications and fine-tuning are a normal course of any new program, but the constant major changes that this program has undergone have added to the challenge of implementing this program. Cities that have demonstrated the willingness to work towards the goal of achieving cleaner stormwater runoff should be granted the authority to work under the best guidelines available when the program was initiated and to augment the program when reasonably feasible.

We look forward to working with the Board in the continued implementation of the SUSMP portion of the overall NPDES Stormwater program. Please call this office if you have any questions.

Sincerely,

John L. Hunter, P.E.
President

Sheila Kennedy

Dennis Dickerson, Executive Director
Los Angeles Regional Water Quality Control Board
320 W. 4th Street, Suite 200
Los Angeles, California 90013

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

Los Angeles stands at a critical juncture in its environmental history. On January 6, 2000, we urge you to adopt the reasonable proposal set forth by your own staff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to and including a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

We have been brought to this crossroads by extensive development that completely disregards the quality and quantity of runoff generated. The Los Angeles Region already suffers from some of the worst water quality in the nation. Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) – and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of your staff's proposal will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please support your staff's proposal to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,

LAWRENCE EASON 11/15/99

RE: Proposed Standard Storm Water Mitigation Plan (SUSMP).

Dear Chairman Nahai and Members of the Board,

The 0.75 inch 24 hour storm numerical standard retention design must remain undiluted by any exceptions, exemptions or exclusions. As well as waivers not brought before you for discussion and public scrutiny.

The rooftop exemption (Requirement 9) has no technical basis, is ridiculous and must be removed. This only exacerbates the continued water quantity problems and adds to the need for flood control projects. This exemption does not seek to retain runoff onsite for later reuse for irrigation purposes or home heating or cooling purposes as some of the new architecture designs for homes are promoting. This goes contrary to the philosophy for the need for water conservation and reuse as well as the reduction of unnecessary runoff which acts as a conveyor for pollutants.

At the turn of the century homes in Los Angeles captured rainfall for later use as drinking and bathing water source in rooftop cisterns. In the letter from the Los Cerritos Wetlands Task Force, dated Thursday, September 9th, 1999 (Attachment A), local Los Angeles examples are given of rooftop rainfall and other stormwater retention management. The examples are included on pages 12 and 13 of The Los Angeles and San Gabriel Rivers Watershed Council's first white paper, draft, dated April 30, 1999: "Storm Water: Asset or Liability" (Attachment B). These examples include rainfall capture and underground cisterns storage at new and remolded facilities of the Los Angeles Unified School System.

Alternatives to a conventional $42 million concrete flood control channel in the Sun Valley watershed now includes funding for individual home retrofit to capture rainfall from rooftop runoff. A rooftop rainfall capture designs for single family homes and referenced field test by the Transagency Resources for Environmental and Economic Sustainability (TREES) project of the TreePeople. This project created in 1997 has..."the goal of demonstrating the economic, environmental and social benefits gained by cooperative approaches to designing our urban landscapes as functioning mini-watersheds."

Friends of the San Gabriel River wishes to provide support to the incorporation of the Recommended Changes, listed on pages 23 and 24, provided by the Natural Resources Defense Council in their letter to you of January 15, 2000. The urban watershed of the San Gabriel River will not be able to meet water quality standards or Total Maximum Daily Loads without incorporation of the proposed 0.75" numeric standard and the "Recommended Changes" identified for you by the Natural Resources Defense Council.

The arguments provided by Cities, other influences and decision makers to incorporate exceptions, exemptions, exclusions and waivers are arbitrary and capricious. These exceptions, exemptions, exclusions and waivers are not in step with the wealth of available literature. There are many examples of this information applied as designs and methods and many monitored for effectiveness and retrofited if necessary in many parts of the country including Arizona with a similar climate and hydrologic cycle as in the Los Angeles area and southern California as a whole.

It is time to "bite the bullet", as you mentioned to the Cities on September 16th. Chairman Nahai, and for us to take a steady and firm step forward. Otherwise water quality will continue to suffer.

Sincerely,

Jacqueline Lambrichts
Founder

TASK FORCE
5710 EAST SEVENTH ST. SUITE 168
LONG BEACH, CA 90803 • 562-630-1491

Thursday, September 9th, 1999

Members of the Board
California Regional Water Quality Control Board
320 West 4th Street, Suite 200
Los Angeles, CA 90013

RE: Standard Storm Water Mitigation Plans (SUSMPs) on stormwater runoff controls for development projects at: 1)100+ home subdivision; 2)10-99 home subdivision; 3)100+ square-foot commercial development; 4)automobile repair facilities; 5)retail gasoline outlets; 6)restaurants; 7)hillside located single-family dwelling.

Dear Members of the Board,

We wish to provide strong support for the recommended changes the Executive Officer, Mr. Dennis Dickerson, proposes to include in the Standard Storm Water Mitigation Plans (SUSMPs). In addition, we wish to support Heal the Bay's concern for the need to provide a one hundred foot physical buffer width as well as separate language for the special considerations involving Environmentally Sensitive Areas.

The President and members of this Task Force have been directly involved in developing and providing support to the Sustainable Cities program for the City of Long Beach. The establishment of a Sustainable Cities program is evolving through the new Environmental Task Force of the Strategic Plan convened with representation appointed by the Mayor and Council of the City of Long Beach to review the Open Space Element of the City of Long Beach's General Plan. Many design elements and structural controls such as rainfall capture cisterns are incorporated into this Sustainable Cities program.

There must be an even playing field in development standards between Los Angeles County unincorporated areas and the Cities within the County. This even playing field reference appeal was made to you on this issue by the City of Long Beach during the hearing of the Cities' stormwater permit on June 30th. There is no question that the playing field must be even and everyone adhere to a minimum standard as suggested by the Executive Officer to reduce and retain onsite stormwater runoff which in itself will reduce downstream water quality impacts.

One of the focus areas of the Los Angeles and San Gabriel Rivers Watershed

Council is to explore alternative land use patterns and management for storm water. For your reference is the draft copy of the Watershed Council's first white paper: " Storm Water: Asset or Liability". On page two, the graph illustrates the ratio of runoff to precipitation over time. What is interesting is that prior to the mid 1960's runoff was 20 percent and infiltration and evaporation amounted to 80 percent. Since the mid 1960's infiltration and evaporation has been reduced to only 50 percent and declining further with the ever increasing impermeable construction. To assist in rethinking the traditional approaches to stormwater management local examples are described in pages 12 and 13 and techniques described in pages 6 though 12. Examples of locally developed ordinances are included as appendices to this paper as guidance for other municipalities.

It is critical that the Executive Officer's recommended changes be included in the SUSMPs. Especially, when the fate of the last remaining open spaces in Los Angeles County for new and redevelopment are debated in the Los Angeles Times as recently as the attached article of Tuesday September 7th, 1999.

The Los Cerritos Wetlands Task Force mission is *to preserve, protect, enhance and restore the wetlands of the San Gabriel Estuary.*

Please contact me to further discuss at (626) 794-0487.

Sincerely,

Jacqueline Lambrichts
Water Quality Regulatory

DRAFT

however, and the prevalence of expansive clay soils in the area limits the use of infiltration inducing measures in some situations.

Los Angeles County, as a National Pollutant Discharge Elimination System (NPDES) permit holder, is required to manage municipal stormwater discharges. The County's **Department of Public Works** has developed a program to implement the requirements of the permit, and to serve as a model for the cities that are co-permitees. The program establishes guidelines for minimum standards, monitoring compliance, education and public outreach. For new or redevelopment, the program establishes Standard Urban Storm Water Mitigation Plans, designed to minimize runoff pollutants and reduce overall runoff volume by increasing on-site retention and infiltration. Some of the suggested techniques include porous paving and other alternatives to concrete, vegetated swales and buffer strips, and extended detention basins.

Non-traditional Approaches in Action

Projects in the Los Angeles area

The **Los Angeles Unified School District** recently began implementing infrastructure improvements for its 400 schools, including playground pavement repaving. With the help of TreePeople and others, LAUSD is developing a plan to reduce paved areas by 30% throughout the schools. A number of Best Management Practices are under consideration which will provide a greener, more sustainable environment, capture runoff, and reduce air and water pollutants. A pilot project has been proposed for the Osage Elementary School in Westchester which will utilize porous pavement, additional landscaping, and facilities to capture runoff on-site for reuse as irrigation water.

- compost absorbs 8x6 of its own water.

Long Beach Organic, a non-profit community service organization, has been facilitating community gardening and green waste recycling on vacant lots in the greater Long Beach area since 1994[18]. They are currently securing funding for a proposed plan to divert 15,000 tons of green waste destined for landfills in Los Angeles County, to use as mulch for weed abatement, water retention, bio-filtration, and creation of compost for soil amendment. The project will cover about 27 acres of vacant property in Long Beach and Signal Hill.

One of the primary goals of the project is to measure the effects of mulch and compost on runoff and soil infiltration. Mulch cover provides insulation to retain soil moisture, reducing evaporation and soil erosion. Compost can hold up to eight times its weight in water, which would not only reduce runoff but provide increased infiltration time. This project is scheduled to start as soon as funding is finalized, and will continue monitoring into 2001.

Sun Valley Watershed, a 2,681-acre watershed located north of downtown Los Angeles between Tujunga Wash and the Burbank Airport, experiences problems with flooding during heavy rains. The existing drainage system within the watershed is inadequate, but the cost of constructing a traditional storm drain to alleviate the flooding has been estimated to be $42 million. **Los Angeles County** is considering the possibility of alternative solutions in the watershed that would address the flooding problem while providing additional benefits to the community such as increased recreation, reduced flows and pollutant loads entering the Los Angeles River, increased water and energy conservation, and enhanced wildlife habitat.

Any alternative project must be able to provide the same level of flood protection without adversely impacting groundwater quality in the region. Among the solutions under consideration are retrofitting existing developments and requiring new development to capture runoff onsite, use of permeable paving where feasible, and creating detention and/or retention basins to capture runoff and provide habitat and recreation during dry periods. Support for this project is high, and a stakeholder group was formed late in 1998 to evaluate the feasibility of various alternatives. It is hoped that this project will serve as a model for flood control design in other parts of Southern California.

The Transagency Resources for Environmental and Economic Sustainability (**TREES**) project was founded by **TreePeople** in 1997 with the goal of demonstrating "the economic, environmental and social benefits gained by cooperative approaches to designing our urban landscapes as functioning mini-watersheds." The implementation of more sustainable design and management measures would result in significant reductions in imported water use, in the volume and velocity of urban runoff generated, and in the amount of pollutants carried by runoff to the ocean. The initial design session brought together engineers, landscape architects and other experts to develop sustainable landscape designs for commercial, industrial, multiple and single family residential, and public sites. A design "planbook" was produced which includes prototype designs for retrofitting these different types of development. Each design includes a variety of suggestions for accomplishing a more sustainable local environment[19].

As a demonstration of some of these ideas, a home in south Los Angeles was retrofitted with drainage, runoff storage and landscaping techniques capable of capturing rainfall from a 10-inch, one-day storm. In addition, TreePeople has developed cost-benefit modeling software which allows different design scenarios to be more easily evaluated prior to implementing solutions. The final component of the TREES project is an implementation plan which will identify investment strategies for financing retrofitting on a large scale, and encourage property owners to make their sites more sustainable. TreePeople has also been a great resource in helping to design solutions for several of the other projects discussed here.

Venice Off-Street Parking Lot projects are currently in progress by the city of Los Angeles' Architectural Division, incorporating several methods of Storm Water Management Best Practices. One of these projects is the lot used for the Venice Farmer's Market, at the corner of Venice Boulevard and Venice Way. It was recently redesigned to capture and filter runoff onsite. Strip filters surrounding the lot collect runoff for bio-filtration and groundwater recharge. The lot was landscaped to collect additional runoff and reduce the amount of "hardscape" area. The city is also installing porous paving and filtration devices in very creative ways on other sites.

Where Do We Go From Here?

This small sampling of projects illustrates the diversity of design strategies being implemented to manage stormwater runoff and reduce the need for more regional disposal facilities. There are many other examples of sustainable practices in use or in the planning stages throughout the county. This demonstrates the change of thinking that is taking place --

January 14, 2000

Mr. Dennis A. Dickerson
California Regional Water Quality Control Board,
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013-1105

Dear Mr. Dickerson:

Proposed Standard Urban Stormwater Mitigation Plan

The California Stormwater Quality Task Force was formed to provide guidance to the State Water Resources Control Board on the development of NPDES permit and regulatory guidelines for stormwater discharges. The Task Force is officially recognized by the state in this role through Administrative Procedures Update 90-004, which states our common goals of developing feasible control programs which provide significant environmental benefits and protect designated beneficial uses, promote the advancement of stormwater management technology, and effect compliance with state and federal law. The Task Force is composed of stormwater quality management personnel from cities, counties, and special districts, and other interested professionals.

The Task Force strongly urges the LA Regional Board to consider the comments, concerns, and recommended revisions submitted by the Task force, local agencies, and stormwater professionals concerning the proposed stormwater mitigation plan.

The Task Force's primary interest in the Regional Board's proposed requirements lies in protecting the locally-driven process of determining, adopting, and enforcing: 1) appropriate stormwater quality controls as envisioned by the federal NPDES municipal stormwater permit regulations and in compliance with Porter-Cologne, 2) land use controls and development standards, and 3) regional, cost-efficient storm drainage master plans where appropriate. The Task Force believes the Regional Board's proposed requirements create an intrusion into this area of local government responsibility and therefore have more than regional significance. The Task Force also believes the proposed standard requirements will have environmental effects (e.g., land use densities) which have not been evaluated in a public forum.

The permits subject to the proposed stormwater mitigation plan provide appropriately for local creation of development standards, and provides the Regional Board Executive Officer opportunity to review and approve or disapprove such plans. Specific requirements beyond those enumerated in adopted permits should not be added to permits without a proper reopening process.

Rather than the Regional Board dictating specific local urban design standards, the Board should provide a process through which local communities select–with public stakeholder discussion–those design strategies and standards which address the permit objectives. This assures development of workable programs which are legally defensible and publically supported. By contrast, reviews of the proposed standards by engineering and stormwater professionals conclude they are difficult to verify and ambiguously worded.

Local agency boards and councils have the legal duty and must be given the opportunity by means of Regional Board policy to exercise jurisdiction over land use and development standards. These agencies have the duty to determine, implement, and enforce local land use policies to meet permit objectives. The Board is strongly urged to ensure a process consistent with this duty of local government.

The Task Force recommends the following more appropriate approach to mitigating stormwater impacts resulting from development:

1) The Regional Board's proposed stormwater mitigation plan should be returned to the local agencies required in LA Region NPDES permits to develop such plans. The agencies should be provided the opportunity to revise the plan, target specific problems, work with local constituencies, develop site-specific and regional control strategies, and secure the direction and involvement of their decision-making bodies. This process should also ensure review pursuant to the California Environmental Quality Act.

2) The Regional Board should maintain its oversight role by establishing processes within permits for review and approval (or denial) of stormwater quality control programs submitted by local agencies. If circumstances require additional controls, the Regional Board should provide appropriate means to reopen the affected permit, ensuring due process and public and agency participation.

3) There needs to be an inclusive process, working with the Regional Boards, to develop guidelines, provide evaluations of practices found to be cost-effective, and provide for the analysis of hydrology and land use, considering site-specific and regional approaches and infrastructure resources. The Task Force will work actively and collaboratively with the boards on any advisory panels they would convene for that task.

4) The policies produced by this effort should be subject to evaluation of economic and technical feasibility in compliance with the Porter-Cologne Act and review pursuant to CEQA.

The Task Force supports the requests of affected municipal stormwater management agencies to reconsider and revise the proposed standard requirements, allowing for adaptation to and coordination with land use authorities. We further urge the LA Regional Board to work with those agencies to resolve these matters.

If you have any questions or would like to discuss this matter further, please call me at (559) 456-3292.

Respectfully,

Melinda S. Marks
Chair, Stormwater Quality Task Force

RE: Standard Urban Stormwater Permit

Dear Mr Dickerson:

As a project manager for a local industrial development, I believe it to be important to inform you of certain successes that have been achieved relative to on-site storm water management.

The involved project is known as Los Angeles Media Tech Center. This project is approved for 750,000 square feet in 12, two-story, concrete tilt up buildings. The site contains 49.32 gross acres and was formerly a portion of the Union Pacific Railroad's Taylor Classification Yard at San Fernando Road and the Glendale Freeway. Phase 1, involving 396,000 square feet in 7 buildings, is now under construction and to be completed in Spring, 2000. Phase 2 will be underway shortly thereafter.

During our entitlement processing, certain preferred environmental mitigation measures were identified by local conservation groups, primarily represented by Friends of the Los Angeles River. After appropriate negotiation, an agreement was reached, the language of which was included in our conditions of approval. Essentially, the agreement provides that the project shall, among other things, retain on site a ½ inch rain event, without discharge from the site. This rain event was chosen by identifying the savings from on-site storm drains and applying this amount toward the design and construction of an infiltrator system. The number of infiltrators that could be purchased through the storm drain off-set resulted in the ½ inch retention. As we were the first industrial project to take on this task, there were design and engineering costs in excess of the amount budgeted for the storm drains, and timing for approvals were understandably protracted; however, future efforts will likely not face similar difficulties.

Los Angeles County promptly approved our storm drain connection permits (for those events over ½ inch per 24-hour period) as the impact to the existing flow was determined to be negligible. The City of Los Angeles just recently approved our infiltrator system. Installation is due to begin shortly. It is my belief that future efforts to utilize infiltrators as a retention devise should now be somewhat easier in the city of Los Angeles.

While this method of storm water management may not be suitable for every site (percolation rates have a bearing), it should certainly be part of any prudent review. If you should require further information on the process, the system or the installation, please fell free to call me at (949) 261-9871 ext. 136.

I hope you have found this information to be helpful.

Best regards,

RE: Time Extension for Special Board Meeting on Standard Urban Storm Water Mitigation Plan

Dear Mr. Dickerson:

The Building Industry Association of Southern California (BIA/SC) has received the revised Standard Urban Storm Water Mitigation Plan (SUSMP) and Supporting Regional Board Resolution. We have several concerns relating to the revised SUSMP and proposed January 6, 2000 Special Board Meeting.

As you know, the revised SUSMP was released to the public on December 7, 1999. You requested in your public notice that we respond to your office by December 20, 1999 on the amount of time needed for our industry to comment and to identify our lead speaker. Our members are very concerned, however, that there is not enough time before the upcoming holidays to fully review, analyze, and comment on the proposed revisions to the SUSMP in order to meet your deadline. Therefore, we are requesting that you extend the comment period and move the Special Board Meeting on the adoption of the SUSMP to no earlier than January 26, 2000.

Lastly, we would like to meet with you and your staff on the revisions to the SUSMP. Of particular concern are the revised definition for Hillside Development and the new definition for environmentally sensitive areas.

Once again, our members are very concerned about the revised SUSMP and their impacts on our industry. We look forward to hearing from you in the near future.

Sincerely,

Charles H. Gale
Director of Government Affairs

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

You have the opportunity to significantly reduce urban runoff, the *number one source of pollution to our coastal and inland waters*. In January 2000, I urge you to adopt the reasonable proposal set forth by your own staff to curb urban runoff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to and including a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any

RE: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

You have the opportunity to significantly reduce urban runoff, the *number one source of pollution to our coastal and inland waters*. In January 2000, I urge you to adopt the reasonable proposal set forth by your own staff to curb urban runoff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to and including a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and coastal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the *Los Angeles Times* in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely

11-279

dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) - and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of your staff's proposal will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please support your staff's proposal to mitigate the effects of urban runoff from new and redevelopment.

Very truly yours,

William E. Lloyd, Jr.

SIERRA CLUB
FOUNDED 1892

Angeles Chapter

December 8, 1999

Dennis Dickerson, Executive Director
Los Angeles Regional Water Quality Control Board
320 W. 4th Street, # 200
Los Angeles CA 90013

RE: Support for Staff Recommendation for Standard Urban Stormwater Mitigation Plans

Dear Mr. Dickerson:

Sierra Club urges you to adopt the staff recommendation for the inclusion of numeric standards into the Standard Urban Stormwater Mitigation Plan. By requiring new development and redevelopment projects to capture and treat the runoff from a .75-inch rainfall, the RWQCB will start to improve the serious, chronic problems associated with urban runoff.

Without such standards in the past, not only have our coast and inland waters been polluted by runoff but also our rivers have been channelized and habitat degraded in attempts to deal with the excessive quantity of runoff.

Instituting this clear and necessary requirement will ensure future opportunities to improve water quality, to protect the coast and to revitalize our waterways throughout our region. By requiring these minimum standards in the design and construction of new development and redevelopment projects, RWQCB takes important action in a cost-effective way.

Sincerely,

Martin Schlageter
Conservation Coordinator

Re: Runoff Standards

Dear Mr. Dickerson:

This letter is written to express our strong support for adoption of numeric performance standards to control pollution from commercial runoff.

We live in a coastal community and have a small child, therefore we have numerous occasions to witness the impact of run-off on the ocean water quality after heavy rains. It has become clear beyond peradventure that unless we, as a society, don't take strong measures to control the amount of pollutants that are swept into the bay from storm-water run-off, we will continue to experience a degraded, disease-ridden bathing quality at the beaches near urban centers. California cannot turn a blind eye to the evidence. It requires courage and fortitude to insist on measures that are surely unpopular in the eyes of commercial developers who insist they will be hampered and burdened by more and more regulation. Nevertheless, as a society we have voted to use tax dollars to establish an agency called the "Regional Water Quality Control Board" and we as taxpayers must now insist that our money be used exactly for that purpose - to "CONTROL" the water quality by imposing standards that can be quantified. Only with enforceable standards can we expect to have meaningful, measurable improvement. The alternative - increasing degradation and disease - is completely unacceptable.

We are consumers. We expect to be customers and buyers of the commercial goods and services provided by urban development. As such, we acknowledge that imposing enforceable standards may lead to higher costs for developers and that these costs will be passed on to us as consumers.

We taxpayers have already ACCEPTED this reality by creating an agency called the Regional Water Quality Control Board, which we know leads to higher costs for business which we patronize. This is obviously the cost of cleaning up our environment. We are willing to pay our taxes and to pay your salaries, and we are willing to pay the higher costs we face as a result of regulation.

11-284

We are **NOT** willing to pay our taxes for your salary if you fail to do that for which you have been hired. We are angry that the Board has postponed this matter from September to January, and we request that positive, aggressive action be taken with all deliberate speed and rectitude.

Thank you for your attention. We would welcome your views in reply.

Very truly yours,

John & Lynn Murdock

Los Angeles CA 90013

Dear Mr. Dickerson:

Treating or infiltrating urban stormwater can significantly reduce pollution in rivers and bays. You have the opportunity to do so with the proposal before you for development and redevelopment to treat or infiltrate the runoff generated by storms 0.75 inch and smaller.

Along the range of storms that designers around the country are accustomed to designing for, the 0.75 inch storm is small. It is very feasible, even easy, for development and redevelopment to design for a storm of this size. But according to my calculations, designing for this level of rainfall will effectively treat or eliminate the runoff from more than half of all the rain that falls in Los Angeles in an average year. Most of the runoff and almost all the pollution are in the small, frequent storms and in the first runoff from larger storms. So the 0.75 inch proposal identifies an approach that is at once both highly feasible and highly effective.

Any urban region like yours is constantly being built and rebuilt. One of the few things we can confidently predict about the future is that times will continue to change, as they have always changed in the past. Acting through the ongoing and inevitable economic process of development and redevelopment, an approach such as that of the 0.75 inch storm can transform the quality of the rivers, bays and beaches that receive the effects of urban runoff.

Design experience in your region and elsewhere have shown that it is entirely possible, and even desirable, to integrate the provisions of stormwater treatment and infiltration with urban land use, economic activity, and quality of life. Integration of these things produces not a "cost", but a more completely designed city.

Surely the rivers, bays and beaches that are loved by the people of your region and of all the world are reason enough to be protective of runoff quality.

Yours,

Subject: Proposed Standard Urban Storm Water Mitigation Plans and Supporting Regional Board Resolution

Dear Dennis:

We are in receipt of your notice dated December 7, 1999, announcing that the Regional Board will be asked to adopt a set of newly revised Standard Urban Storm Water Mitigation Plans (SUSWMP's) at the upcoming Regional Board Meeting of January 6, 2000.

We are extremely concerned that you have made the decision to act on a matter of such magnitude to our industry in such haste. We were originally advised that The Board would not be taking action on this issue until the end of January. We were also totally unprepared for the extensive changes which have been made to the SUSWMP's that were originally discussed at the September 16, 1999 Public Hearing.

During the many discussions we have had with you and your staff since the original SUSWMP's were proposed, we advised you of the serious nature of our concerns regarding the proposed guidelines and the negative impact that they would have on the development industry, we had no indication that our concerns would be totally ignored, nor that the revisions to the SUSWMP's you would recommend to your Board would be even more restrictive than the previous versions. The revised SUSWMP's are totally unacceptable to us.

THE NEWHALL LAND AND FARMING COMPANY, 23823 VALENCIA BOULEVARD, VALENCIA, CA 91355-2094
TEL 661.255.4000 FAX 661.255.3960 WEBSITE www.newhall.com

11-389

In light of the extensive changes which you are recommending to the proposed SUSWMP plans, the introduction of two completely new categories, and the upcoming Holidays, we must have additional time to respond. As I am sure you realize, these newly revised guidelines were not made available to us until December 7, 1999, via the Internet. You have requested our comments by December 20, 1999, which is nine working days from the date we were provided with the revised guidelines. You then have requested that we make a joint presentation to the Board at the January 6, 2000 meeting, which is right after the Christmas Holiday, not allowing us adequate time to study the changes, understand the impacts, and make a formal presentation to your Board.

Due to the critical importance of this matter, and the far reaching negative impacts these new guidelines will have, not only on The Newhall Land and Farming Company, but the development and building industry throughout the Los Angeles Region, we ask that you grant this extension of time, and that you not request action by the Board on this matter until the end of January, as we were originally promised.

Sincerely,

Ross Pistone
Vice-President of Operations

Re: Support for Staff Proposal to Reduce Runoff from New and Redevelopment

Dear Mr. Dickerson:

Los Angeles stands at a critical juncture in its environmental history. On January 6, 2000, we urge you to adopt the reasonable proposal set forth by your own staff: Ensure that specified new and redevelopments capture, treat or infiltrate 100% of the runoff generated by up to and including a three quarter-inch storm. By adopting this proposal, you and the Regional Board have the opportunity to alter our current course towards worsening water pollution.

We have been brought to this crossroads by extensive development that completely disregards the quality and quantity of runoff generated. The Los Angeles Region already suffers from some of the worst water quality in the nation. Today approximately 50% of our rainfall is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and little measurable requirements in the municipal storm water permits, we have countless beaches that are frequently unsafe for swimming, creeks and streams with water that is unsafe to drink, and inland and costal waters that pose health risks to aquatic life.

Your staff's proposal is supported by the Los Angeles Times in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closing," and a "good start in dealing with a tough problem."

11-991

The proposed standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to solve the runoff problem. Second, urban runoff is bad for our regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, but these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does business (just ask any businessperson near Huntington Beach) - and with billions of dollars at stake, the health of our entire regional economy is impacted.

In a region that is constantly being built and rebuilt, adoption of your staff's proposal will soon have a transformative impact on the amount of polluted runoff that invades our streams, rivers and costal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, please support your staff's proposal to mitigate the effects of urban runoff from new and redevelopment.

Sincerely,

Chris Polk

RE: Standard Urban Stormwater Mitigation Permit

Dear Mr. Dickerson:

Friends of the Los Angeles River (FoLAR) fully concur with the comments submitted by NRDC on Friday, January 14, 2000.

In addition we would like to submit comments relating to our own experiences with development standards in Los Angeles.

In November of 1998, FoLAR entered into a mitigation agreement with Legacy Partners Commercial, Inc. for the development of a business park on 49 acres at the Taylor Yards. This agreement was included in the final Mitigated Negative Declaration for the property. The Taylor Yards are a riverfront property which had never been previously developed or paved. FoLAR's concerns were related to the inherent increase in runoff that standard development practices would necessarily cause to contribute to this soft bottom section of the river. Legacy's president, Bill Shubin, being an avid surfer, shared our concerns.

FoLAR's consultants worked jointly with Legacy's engineering experts to develop a drainage design plan, which would retain and detain surface water runoff and would implement surface water quality measures. The plan was designed so as not to increase peak flows of surface water runoff in a 100-year storm event.

Facilities were designed to prevent or otherwise minimize surface water runoff from the developed parcel. Efforts resulted in a parking lot and landscaping design which direct surface water runoff to bio-swales, allowing for natural percolation of rainwater to the groundwater via an 18" perforated pipe subdrain system. The final design accomplished a system that can immediately accommodate a 1/2" rain event every 24 hours. Additionally, storm drain improvements were designed to drain surface water runoff on-site during the peak period of a 100-year storm event. This latter is accommodated through detention, which then over time allows gradual percolation through the bioswales.

The innovative design has the positive result of accommodating a capital event (and detaining the additional peak flows) while eliminating the need for certain on-site storm drain improvements. Storm drain cost savings were re-allocated to construct a system for retention and percolation.

Much of the resistance within the building industry seems to stem from a fear that approvals will be too difficult to obtain or that these new standards will send development costs skyrocketing

Our experience with Legacy shows that costs are not necessarily increased, but shifted. And while initial meetings with building and safety and other agencies were challenging, a spirit of cooperation prevailed and these innovative concepts were readily approved. Moreover, it will be easier and easier with each new project. Change is possible and in this instance, necessary.

We agree with Legacy Partners' Michael Conway, project manager who says he "can point to this project as evidencing successful cooperation between private industry and public interest." And we would encourage other developers to follow their lead.

Re: January 26, 2000 Board Meeting, Agenda Item # 11: Support for Three Quarter - Inch Standard to Reduce Runoff from New Development and Redevelopment

Dear Mr. Dickerson:

On behalf of our 15,000 California members, the Center for Marine Conservation welcomes this opportunity to comment on the proposed Standard Urban Stormwater Mitigation Plans (SUSMPs) submitted to the Executive Officer pursuant to the requirements of the Los Angeles County Municipal Stormwater Permit, Order No. 96-054. CMC urges you to adopt a Standard Urban Stormwater Mitigation Plan for the Los Angeles County municipalities that requires mitigation by specified new and redevelopment projects of 100% of the runoff generated by the first three quarters of an inch of rain, with no exceptions. By adopting this standard, the Regional Board will have the opportunity to alter significantly our current course towards worsening water pollution.

The majority of rainfall in the area is converted into runoff that builds in toxicity as it crosses parking lots, building sites, industrial sites, automotive repair garages, and gas stations before it is channeled and runs untreated into the ocean. With the most infamous urban runoff problem in the nation, and few measurable requirements in the municipal storm water permits, Los Angeles County's beaches are frequently unsafe for swimming; and its creeks and streams pose health risks to aquatic life.

The three quarter-inch standard was supported by the Los Angeles Times in its October 6th editorial as a "promising new approach . . . [that] could well keep ocean pollution from worsening and help prevent beach closings," and a "good start in dealing with a tough problem."

The three quarter-inch standard also makes economic sense. First, reducing storm water pollution in the planning phase of construction is the most cost-effective way to begin to solve the runoff problem. Second, controlling urban runoff benefits the regional economy. Los Angeles County coastal tourism and recreation businesses generate over two billion dollars annually, and these businesses are largely dependent on the health of the coastal resources to attract their customers. As the health of the coastline declines, so does the tourist business. With billions of dollars at stake, the health of our entire regional economy is impacted. The standard

also will help the $10 billion statewide coastal tourism economy in that it will serve as a model to be adopted by other coastal Regional Boards.

In a region that is constantly being built and rebuilt, adoption of the three quarter-inch standard can make a major difference in the amount of polluted runoff that invades our streams, rivers and coastal waters. For the health of local aquatic life, for the health of the 60 million people who visit Los Angeles County beaches annually, for the health of our regional economy, and for a more livable Los Angeles, we urge you to adopt the three quarter-inch standard, with no exceptions, to mitigate the effects of urban runoff from new development and redevelopment.

Sincerely,

Linda Sheehan

Re: Support for the 3/4 inch standard to reduce runoff from new and redevelopment

Dear Mr. Dickerson:

I recently have had the chance to review the standard urban stormwater mitigation plan for Los Angeles County and Cities in Los Angeles County. Treatment of the stormwater quality is an essential element for protecting local watersheds, and is widely used by many municipalities around the country. I strongly support the three-quarter inch runoff treatment standard based on past scientific research on the performance of stormwater best management practices. I have also enclosed a recent article on stormwater strategies for arid and semi-arid watersheds that may be helpful in adapting effective stormwater practices for your region.

Thank you for the opportunity to comment on the proposed stormwater mitigation plan. Adoption of the three quarter inch standard will help to protect the creeks and coastlines of Los Angeles from the impacts of stormwater pollutants, and represents a fair, equitable and achievable threshold for stormwater treatment.

Sincerely,

Thomas R. Schueler

II. Stormwater Strategies for Arid and Semi-Arid Watersheds

Water supply and flood control have traditionally dominated watershed planning in arid and semi-arid climates. Until recent years, stormwater quality has simply not been much of a priority for water resource managers in the west. This situation is changing rapidly, as fast growing communities are responding to both emerging water quality problems and new federal regulations. In particular, larger cities in the west have gradually been dealing with stormwater quality to meet the requirements of the first phase of EPA's municipal stormwater NPDES program. Soon, thousands more smaller communities will need to develop stormwater quality programs when the second phase of this national stormwater regulatory program is rolled out later this year.

At first glance, it seems ludicrous to consider managing the quality of stormwater in arid regions where storms are such a rare and generally welcome event—sort of like selling combs at a bald convention. The urban water resources of the southwest, however, are strongly influenced by stormwater runoff and by the watershed development that increases it. Indeed, the flow of many urban streams in the southwest is generated almost entirely by human activity: by urban storm flow, irrigation return flow and wastewater effluent. Thus, the quality of both surface water and groundwater in urbanizing areas of arid and semi-arid regions of the southwest is strongly shaped by urbanization.

For purposes of this article, arid watersheds are defined as those that receive less than 15 inches of rain each year. Semi-arid watersheds get between 15 and 35 inches of rainfall, and have a distinct dry season where evaporation greatly exceeds rainfall. In contrast, humid watersheds are defined as those that get at least 35 inches of rain each year, and often much more. There are many arid and semi-arid watersheds, most of which are located in fast growing regions of the western United States (Figure 1). Low annual rainfall, extensive droughts, high intensity storms and high evaporation rates are characteristic of these watersheds, and present many challenges to the stormwater manager. [Note: in some arid and semi-arid watersheds, most precipitation falls as snow and evaporation rates are much lower. These watersheds are found in portions of Alaska and at higher elevations of the Rocky Mountains and Sierra Nevada. Guidance on stormwater strategies for these dry but cold watersheds can be found in Caraco (1997)].

This article reviews strategies for managing stormwater in regions of scarce water based on an extensive survey of 30 stormwater managers from arid and semi-arid regions. Next, the article explores how source control, better site design and stormwater practices can be adapted to meet the demanding conditions posed by arid and semi-arid climates. It begins by examining the environmental factors that make stormwater management in arid and semi-arid watersheds so unique and challenging. As a consequence, stormwater strategies for the west are often fundamentally different from those originally developed for more humid regions. Some of the fundamental differences are outlined in Table 1 and are described in detail in the following text.

Soon, thousands more smaller communities will need to develop stormwater quality programs.

Figure 1. Regions of the Continental United States With Less Than 15" of Precipitation Annually

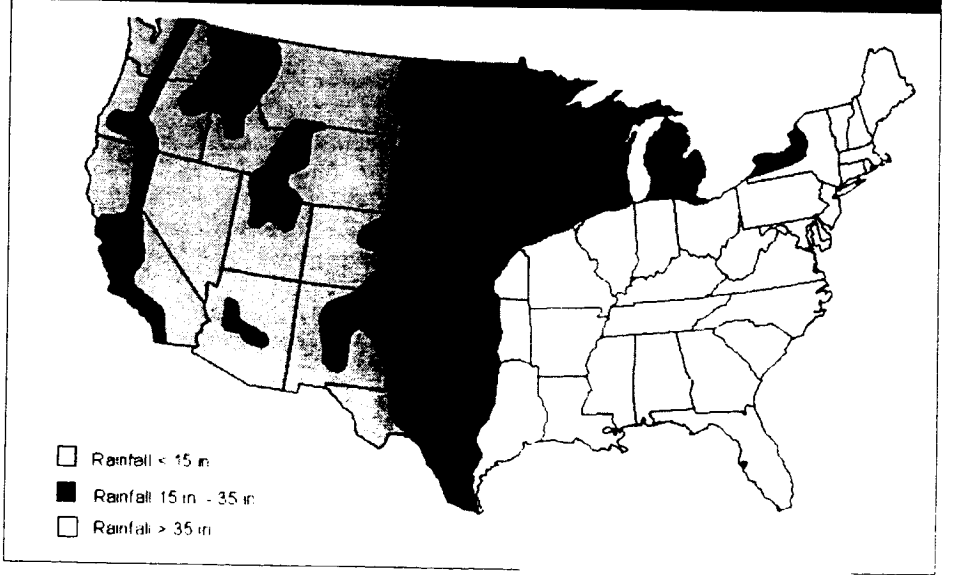

Table 1 The West Is Different: Key Considerations in Arid and Semi-Arid Watersheds
Aquatic resources and management objectives are fundamentally different
Rainfall depths are much lower
Evaporation rates are much higher
Pollutant concentrations in stormwater are much greater
Vegetative cover is sparse in the watershed
Sediment movement is great
Dry weather flow is rare, unless return flows are present

Aquatic resources and management objectives are fundamentally different

The rivers of arid regions are dramatically different from their humid counterparts. Some idea of these differences can be seen by comparing the dynamics of an arid river to a humid one (see Box 1). The differences are even more profound for the smaller urban streams in arid watersheds. In fact, it is probably appropriate to refer to them as gullies or arroyos rather than streams, since they rarely have a perennial flow of water. Many of the physical, chemical and biological indicators used to define stream quality in humid watersheds simply do not apply to the ephemeral washes and arroyos that comprise the bulk of the drainage network of arid watersheds. Without such indicators, it is difficult to define the qualities that merit protection in ephemeral streams. Clearly, the goals and purposes of stream protection need to be reinterpreted for ephemeral stream channels, and cannot be imported from humid regions.

In humid watersheds, the first objective of stormwater management is the protection of perennial streams, with goals such as maintaining pre-development flow rates, habitat conditions, water quality and biological diversity. In contrast, the objectives for stormwater management in most arid watersheds are ultimately driven either by flood control or the quality of a distant receiving water, such as a reservoir, estuary, ocean, or an underground aquifer. Witness some of the recent water quality problems in arid and semi-arid watersheds for which stormwater is suspected to be primarily responsible: beach closures along the Southern California coast, trash and floatables washed into marinas in Santa Monica, nutrient enrichment in recreational reservoirs like Cherry Creek Reservoir in Denver and Town Lake in Austin, trace metals violations in the estuarine waters of San Francisco Bay, or concerns about the quality and quantity of groundwater recharge in aquifers of San Antonio and Austin. Usually, the only local concern is preventing the loss of capacity of irrigation channels or storage reservoirs caused by sedimentation.

Groundwater is a particularly valued water resource in arid and semi-arid watersheds. Many fast-growing western communities are highly reliant on

Box 1 **An Arid River Runs Through It**

Consider, for a moment, the characteristics of the South Platte River as it runs through Denver, Colorado, as chronicled by Harris et al (1996). Flow in the South Platte river is extremely variable with a few thunderstorms and the spring snow melt causing a half dozen dramatic peaks in discharge. Normally, however, river flows quite low, falling below the average daily flow level some 354 days a year. Much of the flow in the South Platte has been spoken for: it has been estimated that river water is used and returned back to the river from three to seven times before it leaves the state (primarily due to upstream water appropriations for irrigation). Most of the time, the river's flow is sustained by municipal wastewater effluent flows, which contribute about 90% of the river's daily flow during most of the year. Indeed, without wastewater and irrigation flows, the river would frequently run dry (as it had prior to settlement). The river continues to strongly interact with groundwater, and much of the flow moves underground. The South Platte is very warm, with summer surface water temperatures exceeding 30 degrees Celsius (and fluctuating by as much as 15 degrees each day).

From a water quality standpoint, the South Platte frequently suffers from oxygen depletion, and has high concentrations of dissolved salts and nitrogen. Prior to settlement, the South Platte River was not believed to have riparian forest corridors, but in recent years, introduced species have become well established along many parts of the river. The quality of river habitat is generally regarded as poor, due to low flows, sandy, shifting substrates, and a lack of channel structure and woody debris. The river's channel continually changes in response to extreme variations in both flow and sediment supply. These extremely variable conditions are not conducive to a diverse aquatic habitat for aquatic insects or fish. For example, fewer than a dozen fish species inhabit the South Platte River, as compared to 30 or more that might be found in a humid region.

Table 2. Rainfall Statistics for Eight U.S. Cities (all units in inches)
Sources: NOAA, 1997; US DOC, 1975, CWP 1999

City	Rainfall Statistics					
	Annual Rainfall	Days of Rain per Year	90% Rainfall Event	Annual Evaporation Rate	Two Year, 24 Hour Storm	Ten Year, 24 Hour Storm
Washington, DC	38	67	1.2	48	3.2	5.2
Dallas, TX	35	32	1.1	66	4.0	6.5
Austin, TX	33	49	1.4	80	4.1	7.5

Phoenix, AZ	7.7	29	0.8	82	1.4	2.4
Las Vegas, NV	4	10	0.7	120	1.0	2.0

groundwater resources, and it is becoming a limiting factor for some. On a national basis, groundwater provides 39% of the public water supply. In the arid and semi-arid southwest, however, groundwater sources comprise 55% of the water supply (Maddock and Hines, 1995). Consequently, these communities have strong interest in both the recharge and protection of groundwater on which they depend.

Rainfall Depths Are Much Smaller

Table 2 compares a series of rainfall statistics for eight arid, semi-arid and humid cities and documents that it rarely rains in arid watersheds. For example, in the fast growing Las Vegas, Nevada region, rainfalls greater than a tenth of an inch occur, on average, less than ten days a year. Not only does rain seldom fall, not much falls when it does. For example, 90% of all rainfall events in a given year are usually less than 0.50 to 0.80 inches in arid watersheds, compared to 1.0 to 1.5 inches in humid watersheds. If a "90% rule" was used in many arid regions, the water quality storm would be roughly half that of most semi-arid and humid watersheds, which would greatly reduce the size, land consumption and cost of structural practices that need to be built. In many cases, the entire water quality storm could be disposed of on-site through better site design, without the need for structural practices. It should be noted that there are some significant exceptions to this rule. Los Angeles, for example, experiences higher rainfall depths due to intense coastal storms in the winter, especially in el Nino years.

While intense storms cause the flash flooding that is so characteristic of the west, it is also important to keep in mind that the depth of rainfall in these storms is smaller than that of semi-arid and humid watersheds (Table 2). For example, the rainfall depth associated with the two-year 24-hour storm in most arid watersheds ranges from 1.0 to 1.4 inches, which is roughly equal to the typical water quality storm for a humid watershed. Similarly, the rainfall depth for the ten-year 24-hour storm in most arid watersheds ranges from two to three inches, which is roughly equivalent to the depth of a two-year storm in a semi-arid or humid watershed. Consequently, stormwater managers in arid regions can fully treat the quality and quantity of stormwater with about a third to a half of the storage needed in humid or semi-arid watersheds, with all other factors being equal.

Even though the rainfall depths in arid watersheds are lower, watershed development can greatly increase peak discharge rates during rare flood events. For example, Guay (1996) examined how development had changed the frequency of floods in arid watersheds around Riverside, California. Over two decades, impervious cover increased from 9% to 22% in these fast-growing watersheds. As a direct result, Guay determined that peak flow rate at gauged stations for the two-year storm event had climbed by more than 100%, and that the average annual stormwater runoff volume had climbed by 115% to 130% over the same time span.

Watershed development can greatly increase peak discharge rates during rare flood events.

Evaporation Rates are Greater

High evaporation rates are a great challenge in arid and semi-arid watersheds. Low rainfall combined

with high evaporation usually means that stored water will be lost water. In Las Vegas, for example, annual rainfall is a scant four inches, while pan evaporation exceeds ten feet (See Table 2). Consequently, it is virtually impossible to maintain a pond or wetland in an arid watershed without a supplemental source of water (see Saunders and Gilroy, 1997; *Technical Note* 111). Evaporation also greatly exceeds rainfall for many months of the year in semi-arid watersheds, and requires special pond design techniques.

As streams urbanize, dry weather flow can actually increase.

Pollutant Concentrations in Stormwater Are Often Higher

The pollutant concentration of stormwater runoff from arid watersheds tends to be higher than that of humid watersheds. This is evident in Table 3, which compares event mean concentrations (EMCs) from five arid or semi-arid cities to the national average for several common stormwater pollutants. As can be seen, the concentration of suspended sediment, phosphorus, nitrogen, carbon and trace metals in stormwater runoff from arid and semi-arid watersheds consistently exceeds the national average, which is heavily biased toward humid watersheds. In addition, bacteria levels are often an order of magnitude higher in arid regions (Chang, 1999).

The higher pollutant concentrations in arid watersheds can be explained by several factors. First, since rain events are so rare, pollutants have more time to build up on impervious surfaces compared to humid regions. Second, pervious areas produce high sediment and organic carbon concentrations because the sparse vegetative cover does little to prevent soil erosion in uplands and along channels when it does rain. The strong effect of upland and channel erosion can be detected when stormwater samples are taken from channels, but are less pronounced in stormwater outfall pipes.

Vegetative Cover is Sparse in the Watershed

Native vegetative cover is relatively sparse in arid and semi-arid watersheds, and offers little protection against soil erosion. Irrigation is required to establish dense and vigorous cover, which may not be sensible or economical given scarce water resources. In addition, high flows released from storm drains frequently accelerate downstream erosion since channels are also sparsely vegetated. Finally, many stormwater practices require dense vegetative cover to perform properly (e.g., grass swales are often not practical in arid watersheds, given the difficulty to establish and maintain turf).

Sediment Movement Is Greater

Stream channels in arid and semi-arid watersheds move a lot of sediment when they flow. For example, Trimble (1997) found that stream channel erosion supplied more than two thirds of the annual sediment yield of an urban San Diego Creek. He concluded that the higher flows due to watershed urbanization had greatly accelerated the erosion of arroyos, over and above the increases caused by grazing, climate and riparian management. Channel erosion can be particularly severe along road ditches that experience higher stormwater flows, which not only increases sediment erosion but also creates chronic ditch maintenance problems.

Dry Weather Flows Are Rare, Unless Supplemented by Return Water

Most small streams in arid watersheds are gullies or arroyos that only flow during and shortly after infrequent storm events. As streams urbanize, however, dry weather flow can actually increase. Human sources of dry weather flow include return flows from lawn and landscape watering, car washing, and surface discharges of treated wastewater. For example,

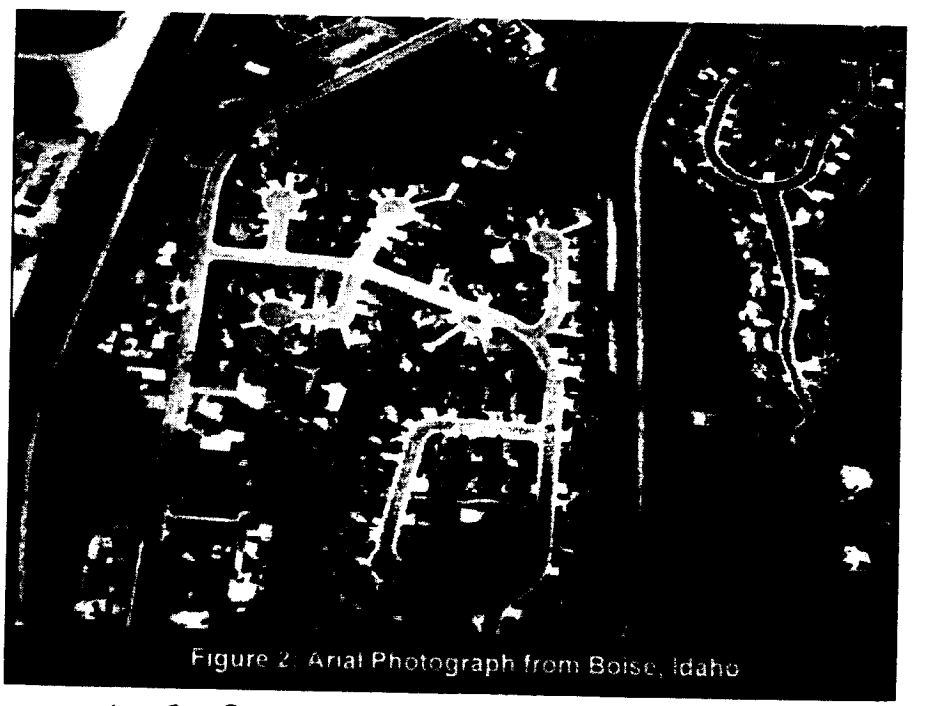

Figure 2. Arial Photograph from Boise, Idaho

Mizell and French (1995) found that excess water from residential and commercial landscape irrigation and construction site dewatering greatly increased rate and duration of dry weather flow in a Las Vegas Creek, and was sufficiently reliable to be the primary irrigation source for a downstream golf course.

Stormwater Strategies for Arid and Semi-Arid Watersheds

Watershed managers need to carefully choose stormwater practices that can meet the demanding climatic conditions and water resource objectives of arid and semi-arid watersheds. Communities can employ three broad strategies: aggressive source control, better site design, and application of "western" stormwater practices. Some of the key trends in each of these areas are described below.

Aggressive Source Control

The term "source control" encompasses a series of practices to prevent pollutants from getting into the storm drain system in the first place. The practices include pollution prevention, street sweeping, and more frequent clean outs of storm drain inlets. Each practice acts to reduce the accumulation of pollutants on impervious surfaces or within the storm drain system during dry weather, thereby reducing the supply of pollutants available for wash off when it rains.

Pollution prevention. Pollution prevention seeks to change behaviors at residential, commercial and industrial sites to reduce exposure of pollutants to rainfall. Almost all arid stormwater managers considered pollution prevention measures to be an integral element of their stormwater management program, on par with the use of structural stormwater practices (Caraco, 1997). Indeed, many western communities have pioneered innovative pollution prevention programs (see *On Watershed Education*, this issue). These programs focus on educating homeowners and businesses on how they can reduce or prevent pollutants from entering the storm drain system when it's not raining.

In recent years, western communities have been targeting their educational message to more specific groups and populations (see *On Watershed Education*, this issue). For example, Los Angeles County has identified seven priority categories for intensive employee training in industrial pollution prevention — auto scrap yards, auto repair, metal fabrication, motor freight, chemical manufacturing, car dealers, and gas stations— on the basis of their hotspot potential and their numerical dominance (Swammikannu, 1998). In the Santa Clara Valley of California, the three key priorities for intensive commercial pollution prevention training are car repair, construction, and landscaping services. Targeting is also used to reach homeowners with specific water conservation, car washing, fertilization and pesticide messages (see *On Watershed Education*).

Street sweeping. Street sweeping seeks to remove the buildup of pollutants that have been deposited along the street or curb, using vacuum assisted sweeper trucks. The pollutant removal performance of a new generation of street sweeper was recently reviewed in *Technical Note* 103. While researchers continue to debate whether street sweepers can achieve optimal performance under real-world street conditions, most concede that street sweeping should be more effective in areas that have distinct wet and dry seasons (CDM, 1993), which is a defining characteristic of arid and semi-arid watersheds.

Better site design presents a great opportunity to minimize impervious cover and stormwater impacts in the west.

Storm drain inlet clean outs. One of the last lines of defense to prevent pollutants from entering the storm drain system is to catch them in the storm drain inlet. Mineart and Singh (1994) reported that monthly or even quarterly clean outs of sediment in storm drain inlets could reduce stormwater pollutant loads to the San Francisco Bay by 5% to 10%. Currently, few communities clean out their storm drain inlets more than once a year, but a more aggressive effort by public works to clean out storm drains prior to the onset of the wet season could be a viable strategy in some communities.

Better Site Design

Better site design clearly presents great opportunities to reduce impervious cover and stormwater impacts in the west, but has not been widely implemented to date. Indeed, the "California" development style, with its wide streets, massive driveways, and huge cul-de-sacs has been copied in many western communities and arguably produces more impervious cover per home or business than any other part of the country (Figure 2). While the popularity of the California development style reflects the importance of the car in shaping communities, it is also a strong reaction against the arid and semi-arid landscape. The brown landscape is not green or pastoral, and many residents consider concrete and turf to be a more pleasing and functional land cover than the dirt and shrubs they replace.

While the techniques and benefits of better site design have been extensively profiled in the last issue of *Techniques* (3:2), it is worth discussing how these techniques can be adapted for western developments.

A key adaptation is to incorporate the concept of "stormwater harvesting" into residential and commercial development design (COT, 1996). Water harvesting is an ancient concept that involves capturing runoff from rooftops and other impervious surfaces and using it for drinking water or to irrigate plants (e.g., the cistern). In a more modern version, rooftop runoff is spread over landscaping areas or the yard, with the goal for complete disposal of runoff on the property for storm events up to the two-year storm (which ranges from one to two inches in most arid and semi-arid climates. For example, the City of Tucson recommends 55 gallons of storage per 300 to 600 square feet of rooftop for residential bioretention areas (COT, 1996). In higher density settings, it may be more practical to store water in a rain barrel or cistern for irrigation use during dry periods.

When water harvesting is aggressively pursued, stormwater runoff is produced only from the impervious surfaces that are directly connected to the roadway system. Denver has utilized a similar strategy program to disconnect impervious areas and reduce the amount of stormwater pollution (DUDFC, 1992). A useful guide on these techniques has also been produced for the San Francisco Bay area (BASMAA, 1997). Water harvesting may also prove to be a useful stormwater retrofitting strategy, particularly in regions where water conservation is also a high priority.

Better site design principles also need to be adapted for fire safety in Western communities adjacent to chaparral vegetation that are prone to periodic wildfires. In some case, vegetation setbacks must be increased in these habitats to protect developments from dangerous wildfires (CWP, 1998).

Developing Western Stormwater Practices

Given the many challenges and constraints that arid and semi-arid watersheds impose, managers need to adapt and modify stormwater practices that were originally developed in humid watersheds. In our stormwater managers survey, four recurring principles emerged on how to design "western" stormwater practices that are suited to the challenging climate and water resource problems of arid and semi-arid watersheds:

1. Carefully select and adapt stormwater practices for arid watersheds
2. Minimize irrigation needs for stormwater practices
3. Protect groundwater resources and encourage recharge

Table 3. Stormwater Pollutant Event Mean Concentrations in Arid and Semi-Arid Regions (Units: mg/l, except for metals which are in ug/l)

Pollutant	National	Phoenix, AZ	Boise, Idaho	Denver, Colorado	San Jose, California	Dallas, Texas

4. Reduce downstream channel erosion and protect from upland sediment

1. Carefully select and adapt stormwater practices for arid watersheds

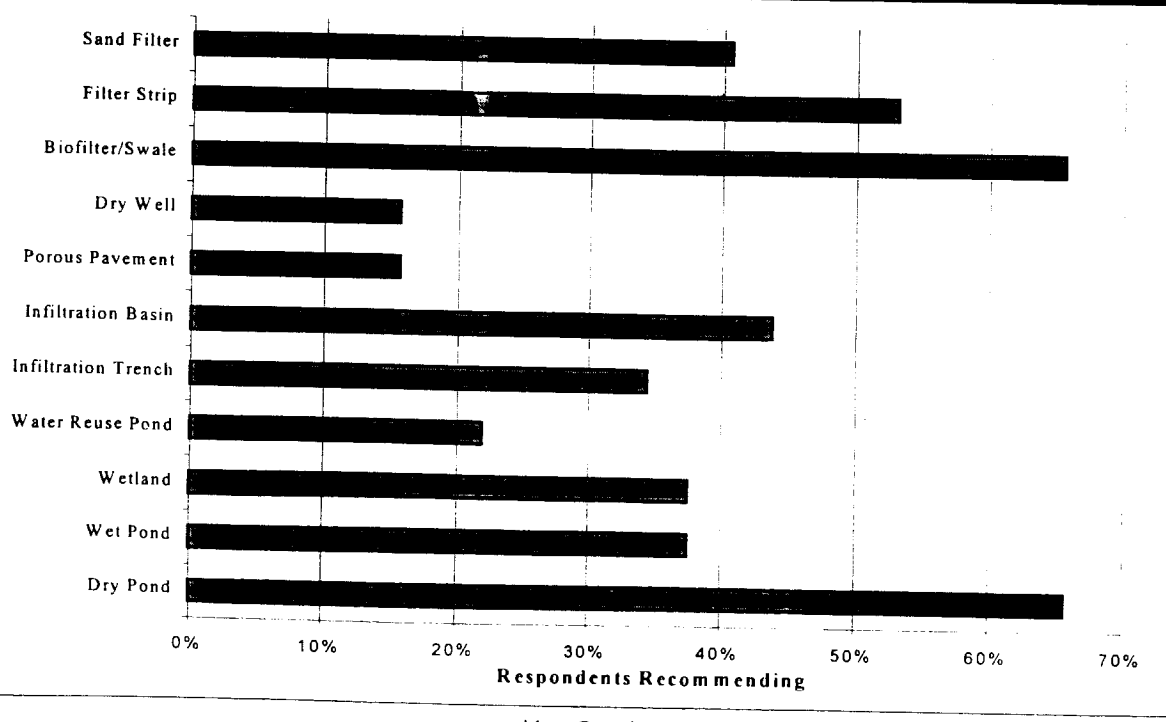
Some stormwater practices developed in humid watersheds are simply not applicable to arid watersheds, and most others require major modifications to be effective (Table 4). Even in semi-arid watersheds, design criteria for most stormwater practices need to be revised to meet performance and maintenance objectives. The following section highlights some of the major design and performance differences to consider for major stormwater practices.

Extended Detention (ED) Dry Ponds. The most widely utilized stormwater practices in arid and semi-arid watersheds were dry ponds, according to the Center's survey (Figure 3). Most were designed exclusively for flood control, but can be easily modified to provide greater treatment of stormwater quality. While dry ED ponds are not noted for their ability to remove soluble pollutants, they are reasonably effective in removing sediment and other pollutants associated with particulate matter (see *Technical Note* 95). In addition, ED ponds can play a key role in downstream channel protection, if the appropriate design storm is selected, and adequate upstream pretreatment is incorporated. Dry extended detention is the most feasible pond practice in arid watersheds, since they do not require a permanent pool of water.

Wet Ponds. Wet ponds are often impractical in arid watersheds since it is not possible to maintain a permanent pool without supplemental water, and the ponds become stagnant between storms. Wet ponds are feasible in some semi-arid watersheds, on the other hand, when carefully designed. Performance monitoring studies have demonstrated that wet ponds exhibit greater pollutant removal than other stormwater practices in Austin, Texas, at a lower cost per volume treated (COA, 1998, and *Technical Note* XX). In arid and semi-arid climates, wet ponds can require supplemental water to maintain a stable pool elevation. Saunders and Gilroy (1997) reported that 2.6 acre-feet per year of supplemental water were needed to maintain a permanent pool of only 0.29 acre-feet. Generally speaking, stormwater designers working in semi-arid watersheds should design for a variable pool level that can have as much as a three-foot draw down during the dry season. The use of wetland plants along the pond's shoreline margin can help conceal the drop in water level, but managers will need to reconcile themselves to chronic algal blooms, high densities of aquatic plants and occasional odor problems. The City of Austin has prepared useful wet pond design criteria to address these issues (COA, 1997).

Stormwater Wetlands. Few communities recommend the use of stormwater wetlands in either arid or semi-arid watersheds. Once again, the draw down rates caused by evaporation make it difficult to impossible to maintain standing water that can sustain emergent wetland plants, unless copious subsidies of supplemental water

Figure 3: BMP Preferences in Arid Climates



are supplied. One interesting exception was a gravel-based wetland that treated parking lot runoff in Phoenix, Arizona (Wass and Fox, 1995). While the wetland did require some supplemental water, evaporation was reduced by the overlying gravel bed, and the wetland achieved relatively high removal rates of oil and grease.

Sand Filters. Sand filters continue to be one of the most common practices used to treat the quality of stormwater in both arid and semi-arid watersheds. Sand filters require no supplemental water and can be used with almost any soil type. Still, the basic sand filter design continues to evolve to counter the tough design conditions found in these regions. For example, Urbonas (1997) evaluated sand filter performance in Denver, Colorado, and concluded that designs need to be modified to account for the greater sediment buildup in arid regions (*Technical Note* 100). Urbonas found that the

Table 4. Design Modifications for Stormwater Practices in Arid and Semi-Arid Watersheds

Stormwater Practice	Arid Watersheds	Semi-Arid Watersheds
ED Dry Ponds	PREFERRED multiple storm ED stable pilot channels "dry" forebay	ACCEPTABLE dry or wet forebay needed
Wet Ponds	NOT RECOMMENDED evaporation rates are too high to maintain a normal pool without extensive use of scarce water	LIMITED USE liners to prevent water loss require water balance analysis design for a variable rather than permanent normal pool use water sources such as AC condensate for pool aeration unit to prevent stagnation
Stormwater Wetlands	NOT RECOMMENDED evaporation rates too great to maintain wetland plants	LIMITED USE require supplemental water submerged gravel wetlands can help reduce water loss
Sand Filters	PREFERRED requires greater pretreatment exclude pervious areas	PREFERRED refer to COA, 1997 for design criteria
Bioretention	MAJOR MODIFICATION no irrigation better pretreatment treat no pervious area xeriscape plants or no plants replace mulch with gravel	MAJOR MODIFICATION use runoff to supplement irrigation use xeriscaping plants avoid trees replace mulch with gravel
Rooftop Infiltration	PREFERRED dry well design for recharge of residential rooftops	PREFERRED recharge rooftop runoff on-site unless the land use is a hotspot
Infiltration	MAJOR MODIFICATION no recharge for hotspot land uses treat no pervious area multiple pretreatment soil limitations	MAJOR MODIFICATION no recharge for hotspot land uses treat no pervious area multiple pretreatment
Swales	NOT RECOMMENDED not recommended for pollutant removal, but rock berms and grade control needed for open channels to prevent channel erosion	LIMITED USE limited use unless irrigated rock berms and grade control essential to prevent erosion in open channels

test sand filter quickly became clogged with sediment after just a few storms, and recommended that sand filters include a more frequent sediment clean out regime, an increase in the filter bed size, and upstream detention to provide greater sediment pretreatment. Some additional research on the performance and longevity of sand filters in the semi-arid climate of Austin, Texas can be found in *Technical Notes* 111 and 112 (this issue).

Bioretention. The use of bioretention as a stormwater treatment practice is not very common in many western communities at the present time. Clearly, this practice will require extensive modification to work in arid watersheds. This might entail xeriscape plantings, use of gravel instead of mulch as ground cover, and better pretreatment. Sprinkler irrigation of bioretention areas should be avoided.

Infiltration Practices. While a number of communities allowed the use of infiltration in arid and semi-arid watersheds, few encouraged its use. Two concerns were frequently cited as the reason for lack of enthusiasm for structural infiltration. The first concern was that infiltration practices are too susceptible to rapid clogging, given the high erosion rates that are customary in arid and semi-arid watersheds. The second concern was that untreated stormwater could potentially contaminate the aquifers that are used for groundwater recharge.

Swales. The use of grass swales for stormwater treatment was rarely reported for arid watersheds, but was much more common in semi-arid conditions. Grass swales are widely used as a stormwater practice in residential developments in Boise, Idaho, but the dense turf can only be maintained in these arid conditions through the use of sprinkler irrigation systems. The pollutant removal performance of swales in arid and semi-arid watersheds appears to be mixed (Table 5). Poor to negative pollutant removal performance was reported in a Denver swale that was not irrigated (Urbonas, 1999 -personal communication). In the semi-arid climate of Austin, Texas, Barret et al (1998) reported excellent pollutant removal in two highway swales that were vegetated but not irrigated. Similar performance was also noted in a non-irrigated swale monitored by the City of Austin (COA, 1997).

2. *Minimize irrigation needs for stormwater practices*

In arid climates, all sources of water, including stormwater runoff, need to be viewed as a resource. It seems senseless, therefore, to irrigate a practice with 50 inches of scarce water a year so that it can be ready to treat the stormwater runoff produced from 10 inches of rain a year. Still, irrigation of stormwater practices the 183 and Walnut Creek sites. In our survey of stormwater managers, 65% reported that irrigation was commonly used to establish and maintain vegetated cover for most stormwater practices.

Irrigation should be limited to practices that meet some other landscaping or recreational need in a community and would be irrigated anyway, such as landscaping islands in commercial areas and road rights of way. Irrigation may also be a useful strategy for dry ED ponds that are designed for dual use, i.e., facilities that serve as a ballfield or community park during the dry season. Even when irrigation is used, practices should be designed to "harvest" stormwater, and therefore reduce irrigation needs. Landscapers should also consider planting native drought resistant plant material to

ns = not sampled. Fecal coliform and fecal strep removals were negative at the 183 and Walnut Creek sites.

reduce water consumption.

3. Protect groundwater resources and encourage recharge

In many arid communities, protection of groundwater resources is the primary driving force behind stormwater treatment. Ironically, early efforts to use stormwater to recharge groundwater have resulted in some groundwater quality concerns. In Arizona, for example, stormwater was traditionally injected into 10 to 40 foot deep dry wells to provide for groundwater recharge. Concerns were raised that deep injection could increase the risk of localized groundwater contamination, since untreated stormwater can be a source of pollutants, particularly if the proposed land use is classified as a stormwater hotspot.

Wilson et al (1990) evaluated the risk of dry well stormwater contamination in Pima County, Arizona, and determined that dry wells had elevated pollutant concentrations in local groundwater. The build up of pollutant levels that had occurred over several decades tended to be localized, and did not exceed drinking water standards. Still, it is important to keep in mind that dry wells and other injection recharge methods should only be used to infiltrate relatively "clean" runoff, such as residential roofs. Other surface infiltration practices, such as trenches and basins, can also potentially contaminate groundwater unless they are carefully designed for runoff pretreatment, provide a significant soil separation distance to the aquifer, and are not used on "hot spot" runoff sites.

In many arid communities, protection of groundwater resources is the primary driving force behind stormwater treatment.

4. Design to reduce channel erosion

Above all, the western stormwater practice must be designed to reduce *downstream* erosion in ephemeral channels, while at the same time protecting itself from sediment deposition from *upstream* sources. This is a daunting challenge for any engineer, but the following ideas can help.

With respect to *downstream channel erosion*, designers will need to clamp down on the storm events that produce active erosion in channels. This might entail the design of ponds or basins that can provide 12 hours of extended detention for the one-year return interval storm event (which is usually no more than an inch or two in most arid and semi-arid watersheds). Local geomorphic assessment will probably be needed to set channel protection criteria, and these hydraulic studies are probably the most critical research priority in both arid and semi-arid watersheds today. Without ED channel protection, designers must rely on clumsy and localized engineering techniques to protect ditches and channels from eroding, such as grade control, rock berms, rip-rap, or even concrete lined channels. Bioengineering options to stabilize downstream channels in arid watersheds are limited, and often require erosion control blankets to retain moisture and seeds, as well as extensive irrigation.

Upstream erosion quickly reduces the capacity of any stormwater practice in an arid or semi-arid watershed, due to sparse vegetation cover and erosion from upstream gullies, ditches, or channels. Designers have several options to deal with this problem. The most effective option is to locate the practice so that it can only accept runoff from impervious areas, particularly for infiltration, sand filters and bioretention. Even then, the practice will still be subject to sediment transported by the wind.

All stormwater practices in arid and semi-arid watersheds require greater pretreatment *than in humid watersheds.* Seventy percent of the arid stormwater managers surveys reported that sediment clogging and deposition problems were a major design and maintenance problem for nearly all of their stormwater practices.

Even though not all upstream erosion can be prevented, designers can compensate for sediment buildup within the stormwater practice itself. Pretreatment and over-sizing can prevent the loss of storage or clogging associated with sediment deposition. As noted in *Technical Note* 112, rock berms or vertical gravel filters are ideally suited as a pretreatment device.

Most stormwater managers surveyed indicated that sediment cleanout regimes for stormwater practices need to be more frequent in arid and semi-arid watersheds, with removal after major storms and at a minimum, once a year. Lastly, stormwater managers consistently emphasized the need for better upland erosion control during construction. A full 65% of the managers reported that upstream erosion and sediment control was a major emphasis during their stormwater plan review.

Summary

It is clear that stormwater managers in arid and semi-arid climates cannot simply import the stormwater programs and practices that were originally developed for humid watersheds. Instead, they will need to develop stormwater solutions that combine aggressive source control, better site design and stormwater practices in a distinctly western context. Regulators, in turn, need to recognize that western climates, terrain and water resource objectives are different, and be flexible and willing to experiment with new approaches in municipal stormwater programs. Lastly, stormwater managers from arid and semi-arid watersheds must

work more closely together to share experiences about the stormwater solutions that work and fail. It is only through this dialogue that western communities can gradually engineer stormwater practices that are rugged enough to withstand the demanding challenges of the arid and semi-arid west.

Re: Proposed Standard Urban Storm Water Mitigation Plan
and Regional Board Meeting of January 26, 2000

Dear Mr. Dickerson:

We are writing this letter in response to your request for written comments in advance of your upcoming Board Meeting of January 26, 2000.

As we have previously communicated to you, we strongly oppose the numerical standards proposed in the new Standard Urban Stormwater Mitigation Plan (SUSMP) guidelines. We also object to the most recent modifications which have been made to the previously submitted SUSMP's, specifically the addition of new categories and the additional restrictions defininig "hillside development", the addition of a category for parking lots containing 25 or more spaces, and the additional category concerning projects discharging into an "environmentally sensitive" area.

The SUSMP guidelines you are proposing to adopt at the January 26, 2000, Regional Water Quality Control Board are totally unacceptable. These new SUSMP guidelines as written, will create significant cost increases for the entire development industry. This increased cost will directly affect our ability to provide affordable housing, and will have a negative impact on the profitability of commercial and industrial business as well.

We are all concerned with the environment, and we fully understand the importance of clean water, however, the development industry should not be singled out and unjustly accused of being the major cause of water pollution.

THE NEWHALL LAND AND FARMING COMPANY, 23823 VALENCIA BOULEVARD, VALENCIA, CA 91355-2196

R0068550

Forcing our industry to design expensive, possibly ineffective structures which could create a serious maintenance liability over time, in order to meet a numerical standard that will not have a beneficial effect on the water, will certainly not benefit the general public.

Our industry has made a great deal of progress towards pollution prevention in recent years. We have made great strides in implementing various design features to minimize potential pollution, and we have continued to educate the contractors who work for us about the importance of applying best management practices during the construction process. These efforts have made a significant contribution towards prevention of pollution.

We are committed to continue our pollution prevention efforts, and have already agreed to the SUSMP guidelines which were originally submitted to the Regional Water Quality Control Board. The implementation of the original SUSMP guidelines without the numerical guidelines will further minimize any impacts that our industry may have on the environment.

As you know, the County of Los Angeles recently agreed to the 0.75 numerical standard in the unincorporated areas of Los Angeles in an effort to resolve a lawsuit filed by the Natural Resource Defense Council, without the input of our industry. To date, the projects submitted to them incorporating this requirement have not been consistent in the application of their design criteria. They have each specified a different way to meet this 0.75 numerical standard, and the costs for installation, the effectiveness of each method, and the complexity and costs for maintenance are still unknown. These projects should be studied over time and evaluated.

In closing, we would like to request that any new policies which are adopted by the Board become effective only on projects which have not received Tentative Map approval from the governing agency. We hope that the Board will invest the time it will take to study some of the projects which have been submitted through the County of Los Angeles to more fully understand the .075 requirement, the various types of Best Management Practices that will be cost effective to install and maintain, and that will have the desired results before adding additional requirements which may have no benefit to the environment, at a great cost to several industries.

We hope that the Board will understand our position, and will work with us towards finding a logical, scientifically based approach to this issue.

Sincerely,

Ross Pistone

Ross Pistone
Vice-President of Operations
