Linda S. Adams
Acting Secretary for
Environmental Protection

Edmund G. Brown Jr.
Governor

TO: MS4 Permittees and Interested Persons

FROM: Renee Purdy, Section Chief *Renee A. Purdy*
Regional Programs

DATE: April 8, 2011

SUBJECT: **KICK-OFF MEETING FOR DEVELOPMENT OF UPDATED LOS ANGELES COUNTY MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMIT**

As you know, the Regional Water Quality Control Board, Los Angeles Region (Regional Board) has canceled the previously scheduled hearing on April 14, 2011 to reissue a limited term Los Angeles County MS4 Permit based on Order No. 01-182. The Regional Board received many requests to cancel the hearing and instead begin work on an updated MS4 permit. This will allow time for Permittees to engage in a dialogue with each other and Regional Board staff regarding significant technical and policy issues surrounding permit development. Regional Board staff supports this exchange of ideas about an updated Los Angeles County MS4 Permit.

To kick-off MS4 permit development in Los Angeles County, Regional Board staff invites Permittees and interested persons to a public meeting.

Wednesday, May 25, 2011
1:00 - 3:00 PM
California Regional Water Quality Control Board
First Floor Carmel Room
320 W. 4th Street
Los Angeles, CA 90013

At the meeting, Regional Board staff will:

- Discuss the preliminary schedule for permit development, including other formal and informal opportunities for input by Permittees and interested persons;
- Identify potential alternative permit structures; and
- Outline some of the major technical and policy aspects of permit development.

Permittees and interested persons will have an opportunity to ask questions of Regional Board staff, raise concerns, and provide initial feedback.

Please contact me at (213) 576-6622 or rpurdy@waterboards.ca.gov or, alternatively, Mr. Ivar Ridgeway at (213) 620-2150 or iridgeway@waterboards.ca.gov with questions.

California Environmental Protection Agency

Los Angeles MS4 Permit: Reissuance Kick-off Meeting

Los Angeles Regional Board

May 25, 2011

Outline

- Background
- Permit Structure
- Permit Requirements
 - Standard Provisions
 - Monitoring Program Considerations
 - Reporting Program Considerations
 - TMDL Provisions
- Tentative Schedule
 - Opportunities for input
- Q & A / Discussion

Background

- Last issued in 2001
- Reopened in 2006, 2007 and 2009 to incorporate TMDL provisions
- Amended in April 2011 to void and set aside 2006 provisions in response to writ of mandate
- Reissuance scheduled for 2012

Permit Structure: Background

- Single permit for 84 cities, LA County & LACFCD
 - Los Angeles County Flood Control District role (LA County Flood Control Act)
 - Highly interconnected system across jurisdictional boundaries
 - Commingled discharges to receiving waters
 - Opportunities for cooperation
 - Efficiencies gained in public outreach, monitoring & reporting

Permit Structure: Alternatives

- Single unified permit
 - Standard program requirements
 - Watershed-based (TMDL) requirements
- Watershed permits
- Other multiple-permit approaches
 - Individual permits
 - Permits based on 2006 ROWDs

Single Permit Alternative

- Continued/new opportunities for coordination
- Potential for more efficient monitoring, reporting & implementation of other requirements (TMDL, PIPP)
- Standard provisions applicable to all Permittees
- Watershed-based (TMDL) requirements in separate chapters
 - Regional Board Watershed Management Areas
 - AB 2554 watershed authority groups

Watershed Permits Alternative

- Options
 - Regional Board Watershed Management Areas
 - AB 2554 watershed authority groups
- Standard Provisions similar across permits
- Opportunities for coordination
- Potential for more efficient monitoring, reporting & implementation of other requirements (TMDL, PIPP)
- Some Permittees may be covered under multiple permits

Other Multiple Permit Alternatives

■ Individual Permits

- Fewer opportunities for coordination
- Less efficient program implementation
- Permittee retains exclusive control of permit implementation, but potentially more burdensome
 - Each Permittee solely responsible for implementation, public information, monitoring and reporting requirements

■ Other Grouped Permits

Standard Permit Provisions: Core Elements

- IC/IDE Program
- Construction Activities
- Industrial / Commercial Facilities
- Public Agency Activities
- Public Information & Participation
- New/Redevelopment

New Development/ Redevelopment Alternatives

- Ventura MS4 Requirements
- Modified current RB approach
 - Incorporation of elements of local LID ordinances
- Incorporation of other requirements
 - Other Regional Boards' LID approaches
 - Other states' approaches

New/Redevelopment: Key Areas for Discussion

- LID implementation metrics
 - Effective Impervious Area (EIA) limitation
 - Volume based on-site retention standard
- Biofiltration allowance
- Infeasibility criteria
- Offsite mitigation requirements
 - Location, mitigation ratios, project types
- Alternative post-construction regional plan
 - Substitutes for part or all of on-site post-construction BMPs
 - Possible revision of Ventura RPAMP requirements
- Existing local LID ordinances

Standard Permit Provisions: Other Key Requirements

- Discharge Prohibitions
 - Clear guidance for authorized non-stormwater discharges
 - Potential re-evaluation of some Category C exceptions
- Receiving Water Limitations
 - Standard Language from State Board Precedential Orders
- SQMP
 - Consistent With Permit Requirements
 - Continued Demonstration of Adequate Legal Authority

Monitoring Program Considerations

- Receiving water & outfall monitoring
- Watershed/subwatershed-based design
- Coordination with TMDL compliance monitoring requirements

Reporting Program Considerations

- Receiving Water Limitations compliance reporting criteria
 - Targeted, specific program revisions
 - Detailed implementation schedule
- BMP performance demonstrations
 - Collectively for outfall drainage
 - Individually
- CASQA Program Effectiveness Assessment Guidance
- USEPA MS4 program effectiveness guidance
- State Board MS4 program effectiveness guidance

TMDL Provisions: Background

- 23 TMDLs with MS4 WLAs in effect for LA County
 - 2007 & 2009 amendments
 - MDR Bacteria TMDL – Summer WLAs
 - LA River Watershed Trash TMDL WLAs
- 6 other TMDLs in approval process

TMDL Provisions: Considerations

- Provisions consistent with assumptions and requirements of WLAs
 - Focus on WLA deadlines within permit term
- Numeric water quality based effluent limitations (WQBELs) vs. BMP based requirements

TMDL Provisions: LA River Trash WLAs Example

■ BMP based requirements

- TMDL design/
performance standard
to achieve WLAs = full
capture systems
- Compliance measure =
% drainage area
addressed by full
capture systems

■ Numeric water quality based effluent limitations

- Equivalent to WLAs
- Compliance measure if
partial capture and/or
institutional strategies
are used
- Necessary absent “up-
front” demonstration
that controls will
achieve TMDL
design/performance
standard

TMDL Provisions: Considerations

- Not one-approach-fits-all
 - Stormwater vs. non-stormwater discharges
 - TMDL implementation plans
 - Other robust demonstrations that BMP performance will achieve WLAs

Tentative Schedule

- May 2011: Kick-off meeting
- Aug.-Oct.: 1-2 issue-based workshops
- Nov.-Jan.: 1-2 issue/general workshops
- Jan. 2012: Draft permit
- April 2012: Board hearing

Opportunities for Input

- Today's meeting
- Issue-based workshops
 - New / Redevelopment Provisions
 - TMDL Provisions
 - Monitoring & Reporting Program
 - Others?
- Watershed-based meetings upon request
- Individual meetings upon request

Questions?

Ivar Ridgeway, Chief
Stormwater Permitting Unit

(213) 620-2150

Draft Talking Points for Development of the MS4 Permit Strategy

(05/26/11)

These talking points have been prepared by Larry Walker Associates (LWA) for the City of Los Angeles, Watershed Protection Division (WPD). These talking points are for discussions with Sam Unger subsequent to the May 25th Regional Board meeting.

The first item (#1) bullets out what key elements are necessary for the overall permit structure. The second item (#2) is one approach in which those elements could be framed in a permit. The remaining items address core aspects of the permit approach (governance, reporting, monitoring, TMDLs).

1. Permit Structure - needs to create a structure that
 - Establishes baseline (core) stormwater management program requirements but also provides flexibility to direct resources to the relevant water quality issues of the community and watershed (e.g. direct inspections to prioritized issues/pollutants) and complements existing activities (e.g., Green Infrastructure Initiative, Low Impact Development)
 - Provides for individual permittee accountability but encourages programmatic consistency
 - Provides for coordination and efficient use of resources among municipalities (e.g. public outreach, monitoring, etc.)
 - Complements (and may substitute for) other ongoing regulatory programs and requirements (e.g. TMDLs)
 - Supports a program that addresses the critical water quality issues of the area/watershed
 - Above bullets can be achieved by a watershed based permit. This may be accomplished a number of ways from defining watershed specific requirements in the Permit (i.e. watershed specific sections) to establishing the framework in the Permit for developing a watershed program to protect water quality.
2. Watershed Based Permit¹ – needs to
 - Specify (or encourage?) development and content of a Watershed Plan (aka Water Quality Improvement Plan)
 - Support watershed specific activities (e.g., retrofit opportunities) that go beyond baseline requirements
 - Make the watershed-specific issues the driver for prioritizing program implementation efforts
 - Allow cross jurisdictional prioritization so that permittees in multiple watersheds have the flexibility to direct resources to the most important priorities
 - Allow the implementation of Watershed Plan to occur at the regional/county, watershed and/or jurisdictional levels. However, actual implementation responsibility and accountability will be at the permittee level
3. Governance – permit needs to
 - Support funding structure and implementation agreements being developed by the County Flood Control District and Copermittees in response to AB 2554.

¹ The term “watershed permit” refers to one permit (not 9 individual watershed permits). In the Permit Summary Tech Memo, reference the approach in the Michigan statewide permit for the general concepts.

- Provide for watershed leads or options for selecting leads while maintaining accountability and liability at the permittee level
4. Reporting – permit needs to provide
 - Streamlined reporting (e.g. one report per watershed per year and limited scope)
 - Based on watershed unit with defined permittee summaries
 - Full assessment provided on 5 year cycle (part of ROWD process)
 5. Monitoring
 - Oriented to watershed issues
 - Baseline monitoring program in the receiving waters for all permittees
 - Complement other mandatory monitoring efforts (e.g. TMDLs and wastewater)
 - Support stormwater management program decisions (use of action levels, southern California stormwater monitoring program guidelines)
 6. TMDLs (this really may be a function of what's in the already approved TMDLs)
 - Incorporate performance based adaptive management as the standard of compliance.
 - Allow the Watershed Plan to be equivalent to a TMDL implementation plan (existing TMDL implementation plans could be used to support Watershed Plans).

Matthew Rodriguez
Secretary for
Environmental Protection

California Regional Water Quality Control Board Los Angeles Region

320 W. 4th Street, Suite 200, Los Angeles, California 90013

Edmund G. Brown Jr.
Governor

October 28, 2011

Permittees and Interested Persons:

WORKSHOP ON THE STATUS AND DEVELOPMENT OF THE UPDATED LOS ANGELES COUNTY MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) NPDES PERMIT

The Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) will hold an informational public workshop on the current status and development of the updated Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit at its regularly scheduled board meeting on:

November 10, 2011 at 9:00 AM
The Metropolitan Water District of Southern California
700 North Alameda Street
Los Angeles, California

Los Angeles Water Board Staff will discuss: (1) its evaluation of, and recommendations regarding, permit structure; (2) preliminary recommendations regarding stormwater management program requirements; (3) the incorporation of TMDLs into the permit; and (4) other issues still under evaluation. Written materials in support of these topics are provided as attachments herein.

After the Staff presentation, Permittees and other interested persons will have the opportunity to make oral comments subject to time limits. Oral comments may be limited to 3 minutes each, at the discretion of the Chair, depending on the number of commenters wishing to be heard. Permittees and interested persons with similar comments or concerns are encouraged to choose one representative to speak on their behalf.

Permittees and interested persons may request additional time to make oral comments prior to the workshop. Requests for additional time must be sent to Ms. Ronji Moffett via e-mail at rmoffett@waterboards.ca.gov no later than Friday, November 4, 2011 by 5:00 PM to be considered by the Chair. Please indicate in the subject line "Request for Additional Time – November 10 MS4 Workshop."

Permittees and Interested Persons

- 2 -

October 28, 2011

The Los Angeles Water Board may provide general feedback to Staff on development of the permit; however, no action or voting will take place at this workshop.

For additional information, please contact Ivar Ridgeway at (213) 620-2150 or iridgeway@waterboards.ca.gov.

Sincerely,

Samuel Unger, P.E.
Executive Officer

Edmund G. Brown Jr.
Governor

Notice of Public Meeting/Hearing

Thursday, November 10, 2011

9:00 a.m.

Meeting Location:

REVISED

Location Change:

State of California Building

(First Floor Carmel Room)

320 W. 4th Street

Los Angeles, California

Agenda

The Regional Board strives to conduct an accessible, orderly, and fair meeting. During the meeting, the Chair will conduct the meeting and establish appropriate rules and time limitations for each item. The Board will only act on items designated as action items. Action items on the agenda are staff proposals, and may be modified by the Board as a result of public comment or Board member input. Additional information about Regional Board meeting procedures is included after the last agenda item.

To ensure a fair hearing and that the Regional Board Members have an opportunity to fully study and consider written material, unless stated otherwise, written materials must be provided to the Executive Officer *not later than 5:00 p.m. on October 27, 2011. Please consult the agenda description for specific items, because certain items may have an earlier deadline for written submissions. If you are considering submitting written materials, please consult the notes at the end of the agenda. Failure to follow the required procedures may result in your materials being excluded from the hearing record; however, failure to timely submit written materials does not preclude a person from testifying before the Board.*

INTRODUCTORY ITEMS

1. **Roll Call.**
2. **Order of Agenda.** The agenda items are numbered for identification purposes only and may not necessarily be considered in this order.
3. **Approval of draft meeting Minutes for the October 6, 2011 Board meeting.**
[Ronji Moffett, (213) 576-6612]
4. **Adoption of tentative 2012 Board Meeting Schedule.**
5. **Board Member Communications.**
 - 5.a. **Ex Parte Disclosure.** Board Members will identify any discussions they may have had requiring disclosure pursuant to Government Code section 11430.40.
 - 5.b. **Board Member Reports.** The Board Members may discuss communications, correspondence, or other items of general interest relating to matters within the Board's jurisdiction.

6. **Executive Officer's Report.**
[Sam Unger, (213) 576-6605]
7. **Enforcement Report** [Paula Rasmussen, (213) 576-6791]
8. **Update from State Board.** [Fran Spivy-Weber]
9. **Public Forum.** Any person may address the Board regarding any matter within the Board's jurisdiction provided the matter does not appear elsewhere on this agenda, has not been scheduled to appear on a future agenda, and is not expected to be imminently scheduled for the Board's consideration. Remarks will be limited to three (3) minutes, unless otherwise directed by the Chair. If a person intends to use a PowerPoint presentation or other visual aid, you must contact Ronji Moffett, (213) 576-6612, at the Regional Board at least 48 hours prior to the meeting to arrange for equipment use and be prepared to load any PowerPoint presentation on the computer prior to the meeting to assure the orderly conduct of the meeting.

UNCONTESTED ITEMS

(Items marked with an asterisk are expected to be routine and noncontroversial. The Board will be asked to approve these items at one time without discussion. Any Board member or person may request that an item be removed from the uncontested calendar. The Chair will determine the appropriate time to consider an item removed from the consent calendar.)

Waste Discharge Requirements that Serve as NPDES Permits

Renewal-

- *10. Lubricating Specialties Company, Pico Rivera Facility, Pico Rivera; NPDES No. CA0059013 (Comment submittal deadline was September 20, 2011) [Rebecca Christmann, (213) 576-6756]

Non-NPDES State Discharge Requirements

Renewal-

- *11. Consideration of Waste Discharge Requirements and a Cease and Desist Order (CDO) for Residential Fund 1347, LLC (Paradise Ranch Wastewater Treatment Plant), Castaic. (File No. 69-58) for discharges of domestic wastewater. (Comment submittal deadline was October 10, 2011) [Ann Chang, (213) 620-6122]

11.1 Waste Discharge Requirements

11.2 Cease and Desist Order

Revision-

- *12. United Rock Products Corporation (Pit No. 2 Inert Landfill and Mine Reclamation), Irwindale; (File No. 04-002) (Comment submittal deadline was October 14, 2011) [Wen Yang, (213) 620-2253]
- *13. Cerritos Bahia Marina (Maintenance Dredging), Long Beach; (File No. 09-164) (Comment submittal deadline was October 24, 2011) [Michael Lyons, (213) 576-6718]

ACTION ITEM

BASIN PLAN AMENDMENT

14. Consideration of a tentative Resolution amending to the Water Quality Control Plan (Basin Plan) to administratively update "Chapter 2: Beneficial Uses" by incorporating previously adopted amendments, and updated surface and groundwater maps and corresponding beneficial use tables. (Comment submittal deadline was October 3, 2011) [Dr. Ginachi Amah, (213) 576-6685; Thomas Siebels (213) 576-6671]

INFORMATION ITEM

15. Update on the State Water Board Groundwater Ambient Monitoring and Assessment (GAMA) Program, and overview of the GeoTracker GAMA groundwater information system. [John Borkovich, GAMA Program Manager (916) 341-5779]

WORKSHOP

16. Workshop on the Issuance of a new Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit. Staff will make a presentation on the status of permit development, including proposed permit structure and other key elements. Permittees and other interested persons will have the opportunity to make oral comments subject to time limits. *(The Board may provide general feedback to Staff on development of the permit; however, no action or voting will take place at this workshop.)* [Renee Purdy, (213) 576-6622; Ivar Ridgeway, (213) 620-2150]

CLOSED SESSION

17. As authorized by the Government Code section 11126, the Regional Board will be meeting in closed session. Closed session items are not open to the public. Items the Board may discuss include the following: [Jennifer Fordyce (JF) (916) 324-6682; Frances McChesney (FM) (916) 341-5174; Sarah Olinger (SO), (916) 322-4142]
- 17.1 *State Department of Finance, State Water Resources Control Board and Los Angeles Regional Water Quality Control Board v. Commission on State Mandates, Los Angeles County Superior Court Case No. BS130730. [Challenging the Commission's decision that portions of the LA MS4 permit created unfunded State mandates]. (JF)*
- 17.2 *In re Halaco Engineering Company, United States Bankruptcy Court, Central District of California, Northern Division, No. ND-02-12255 RR [Regarding a CDO and CAO at the Oxnard Property]. (JF)*
- 17.3 *In re: Los Angeles Region Water Permit- Ventura County, Commission on State Mandate Test Claim No. 11-TC-01 [Regarding a test claim filed by Ventura County Watershed Protection District and the County of Ventura alleging that portions of Order No. R4-2010-0108 created an unfunded state mandate]. (JF)*
- 17.4 *In re: Petition of City of Redondo Beach for Review of Administrative Civil Liability Order No. R4-2008-0058-M, SWRCB/OCC File A-2124 [Challenging assessment of mandatory minimum penalties for violations of Order Nos. 99-057 and R4-2005-0016]. (FM)*
- 17.5 *In re: Petition of Signal Hill, Downey, et al, for Review of Order No. R4-2009-0130, SWRCB/OCC File A-2071 [Challenging the incorporation into the MS4 Permit of the Waste Load Allocations from the Los Angeles River Watershed Trash TMDL.] (JF)*
- 17.6 *In re: Kinder Morgan, Inc., Chevron Corp., et al for Review of Revised Cleanup and Abatement Order No. R4-2008-0006, SWRCB/OCC File A-2085 [Challenging the revised cleanup goals in the order]. (FM)*
- 17.7 *In re: Petition of Heal the Bay for Review of Order No. R4-2008-0011, SWRCB/OCC File A-1927(a) [Challenging waste discharge requirements for the City of San Buenaventura, Ventura Water Reclamation Facility]. (JF)*
- 17.8 *In re: Upper Santa Clara River Chloride Total Maximum Daily Load Requirements Imposed by the Los Angeles Regional Water Quality Control Board in Resolution R4-2008-0012. Commission on State Mandates Test Claim No. 10-TC-09 [Regarding a test claim filed by the Santa Clarita Valley Sanitation District of Los Angeles County alleging that portions of Resolution R4-2008-0012 created an unfunded state mandate]. (JF)*
- 17.9 *Joan C. Lavine v. State Water Resources Control Board and Los Angeles Regional Board, Los Angeles County Superior Court Case No. BS128989 [Challenging the Basin Plan Amendment prohibiting on-site wastewater disposal systems in the Malibu Civic Center Area]. (FM)*

- 17.10 *Charles Conway et al. v. State Water Resources Control Board and Los Angeles Regional Water Quality Control Board*, Ventura County Superior Court Case No. 56-2011-00399391-CU-WM-VTA [Challenging the McGrath Lake TMDL for polychlorinated biphenyls (PCBs), pesticides, and sediment toxicity]. (SO)
- 17.11 Consultation with counsel about:
- (a) A judicial or administrative adjudicatory proceeding that has been formally initiated to which the Regional Board is a party;
 - (b) A matter that, based on existing facts and circumstances, presents significant exposure to litigation against the Regional Board;
 - (c) A matter which, based on existing facts and circumstances, the Regional Board is deciding whether to initiate litigation. (JF/FM/SO)
- 17.12 Consideration of the appointment, employment, or evaluation of performance about a public employee. (JF/FM/SO)
18. **Adjournment of Current Meeting.** The next meeting will be held on December 8, 2011 beginning at 9:00 a.m. at City of Glendale Council Chambers, 613 E. Broadway, Glendale, California.

NOTICE

Ex Parte Communications: An ex parte communication is a communication to a board member from any person, about a pending matter, that occurs in the absence of other parties and without notice and opportunity for them to respond. The California Government Code prohibits the board members from engaging in ex parte communications during permitting, enforcement, and other "quasi-adjudicatory" matters. The Regional Board discourages ex parte communications during rulemaking and other "quasi-legislative" proceedings. The ex parte rules are intended to provide fairness, and to ensure that the board's decisions are transparent, based on the evidence in the administrative record, and that evidence is used only if stakeholders have had the opportunity to hear and respond to it. Ex parte rules do not prevent anyone from providing information to the water boards or requesting that the water boards take a particular action. They simply require that the information come into the record through proper channels during a duly noticed, public meeting. A board member who has engaged or been engaged in a prohibited ex parte communication will be required to publicly disclose the communication on the record and may be disqualified from participating in the proceeding. For more information, please look at the ex parte questions and answers document found at www.waterboards.ca.gov/laws_regulations/docs/exparte.pdf

Procedures: The Regional Board follows procedures established by the State Water Resources Control Board. These procedures are established in regulations commencing with section 647 of title 23 of the California Code of Regulations. The Chair may establish specific procedures for each item, and consistent with section 648, subdivision (d) of title 23 of the California Code of Regulations may waive nonstatutory provisions of the regulations. Generally, all witnesses testifying before the Regional Board must affirm the truth of their testimony and are subject to questioning by the Board Members. The Board does not, generally, require the designation of parties, the prior identification of witnesses, or the cross examination of witnesses. Generally, speakers are allowed three minutes for comments. Any requests for an alternate hearing process, such as requesting additional time to make a presentation, should be made to the Executive Officer in advance of the meeting, and under no circumstances later than 5:00 p.m. on the Thursday preceding the Board meeting. The provisions of this paragraph shall be deemed superseded to the extent that they are contradicted by a hearing notice specific to a particular agenda item.

Written Submissions: Written materials (whether hand-delivered, mailed, e-mailed, or facsimiled) *must be received prior to the relevant deadline* established in the agenda and public notice for an item. If

the submitted material is more than 10 pages or contains foldouts, color graphics, maps, or similar items, 12 copies must be submitted prior to the relevant deadline.

Failure to comply with requirements for written submissions is grounds for the Chair to refuse to admit the proposed written comment or exhibit into evidence. (Cal. Code Regs. tit. 23, § 648.4(e).) The Chair may refuse to admit written testimony into evidence unless the proponent can demonstrate why he or she was unable to submit the material on time or that compliance with the deadline would otherwise create a hardship. If any other party demonstrates prejudice resulting from admission of the written testimony, the Chair may refuse to admit it.

Administrative Record: Material presented to the Board as part of testimony that is to be made part of the record must be left with the Board. This includes photographs, slides, charts, diagrams, etc. All Board files pertaining to the items on this Agenda are hereby made a part of the record submitted to the Regional Board by staff for its consideration prior to action on the related items.

Accessibility: Individuals requiring special accommodations or language needs should contact Dolores Renick at (213) 576-6629 or drenick@waterboards.ca.gov at least ten working days prior to the meeting. TTY/TDD/Speech -to-Speech users may dial 7-1-1 for the California Relay Service.

Availability of Complete Agenda Package: A copy of the complete agenda package is available for examination at the Regional Board Office during regular working hours (8:00 a.m. to 5:00 p.m. Monday through Friday) beginning 10 days before the Board meeting. Questions about specific items on the agenda should be directed to the staff person whose name is listed with the item.

Continuance of Items: The Board will endeavor to consider all matters listed on this agenda. However, time may not allow the Board to hear all matters listed. Matters not heard at this meeting may be carried over to the next Board meeting or to a future Board meeting. Parties will be notified in writing of the rescheduling of their item. Please contact the Regional Board staff to find out about rescheduled items.

Challenging Regional Board Actions: Pursuant to Water Code section 13320, any aggrieved person may file a petition to seek review by the State Water Resources Control Board of most actions taken by the Regional Board. A petition must be filed within 30 days of the action. Petitions must be sent to State Water Resources Control Board, Office of Chief Counsel; ATTN: Phil Wyels, Assistant Chief Counsel; 1001 "I" Street, 22nd Floor; Sacramento, CA 95814.

Electronic Information and Updates: Our web site address is www.waterboards.ca.gov/losangeles/. The site can also be accessed through the State Water Resources Control Board's web site at www.waterboards.ca.gov/, then clicking on "Regional Boards". Information available online includes the Regional Board's meeting schedule, a list of the Regional Board members, past and present Executive Officer reports, program information, a list of staff and phone numbers arranged by their work unit, and links to the Santa Monica Bay Restoration Commission's home page and other governmental agencies. Last-minute changes to the agenda, such as the continuance of an item, will be posted electronically. If you need further information, please contact Jack Price at (213) 576-6669.

Pending Water Quality Certifications: A listing of pending water quality certification applications currently on public notice pursuant to Section 401 of the Federal Clean Water Act may be obtained by calling Valerie Carrillo at (213) 576-6759.

Settlement of Enforcement Actions: A listing of settlement enforcement actions can be accessed by the following link: <http://www.waterboards.ca.gov/enforcement/index.html>

ITEM SUMMARY**WORKSHOP****LOS ANGELES COUNTY MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMIT
STATUS AND DEVELOPMENT****California Regional Water Quality Control Board
Los Angeles Region
November 10, 2011
551ST Board Meeting**

Item Number	16
Proposed Board Action	Board workshop; no formal action by the Board is required at this time.
Need for Item	<p>The Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit (“LA County MS4 Permit” or “Permit”) is one of the most important permits issued and administered by the Regional Board. The Permit regulates commingled discharges of stormwater and urban runoff from one of the nation’s largest municipal separate storm sewer systems, covering the jurisdictional areas of 86 permittees.</p> <p>Due to the large number of permittees regulated by this Permit and the significance of the discharges in terms of regional water quality impacts, the Regional Board’s practice has generally been to hold both staff level and Board workshops prior to bringing a tentative permit to the Board for consideration and adoption. The general purpose of a Board workshop is two-fold. First, it provides an opportunity for staff to inform the Board of the status of permit development and describe for the Board some of the key issues that are still under evaluation before proposing a tentative permit for Board consideration. Second, a Board workshop allows permittees and other stakeholders an opportunity to address the Board and staff with their preliminary comments.</p> <p>This Board workshop focuses on several key elements of the MS4 permit, namely permit governance structure, core stormwater management program requirements, and incorporation of TMDLs. For these elements, staff has formulated conceptual approaches that it will present to the Board for discussion and feedback. In other areas that are not the focus of this workshop, staff continues to formulate approaches that will be presented to stakeholders and the Regional Board at future meetings.</p>
Status and Development	See attached update, “Los Angeles County MS4 Permit Status and Development”.

LOS ANGELES COUNTY MS4 PERMIT STATUS AND DEVELOPMENT

The Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit (“LA County MS4 Permit” or “Permit”) is one of the most important permits issued and administered by the Regional Board. The Permit regulates commingled discharges of stormwater and urban runoff from one of the nation’s largest municipal separate storm sewer systems, covering the jurisdictional areas of 86 permittees.

The LA County MS4 Permit was last reissued in 2001. The Permit expired in 2006, but has been administratively extended pursuant to federal regulations. Permittees regulated by the 2001 LA County MS4 Permit include the Los Angeles County Flood Control District (“District”), Los Angeles County, and 84 incorporated cities within Los Angeles County.¹ The 2001 Permit was reopened by the Regional Board in 2006, 2007 and 2009 to incorporate provisions to implement three TMDLs. It was further amended in 2010 and 2011 pursuant to a peremptory writ of mandate. In accordance with the Board’s responsibility to update NPDES permits, Board staff plans to bring an updated permit for Board’s consideration in late spring 2012. Updating the LA County MS4 Permit is one of the highest priorities of the Board. Board staff in the Stormwater Permitting Unit is being assisted by staff from other programs, as well as by contractor support provided by US Environmental Protection Agency (US EPA). The updated MS4 permit will reflect technical progress in stormwater quality control best management practices (BMPs) and the evolution of stormwater management and regulation regionally and nationally over the past two decades.

This update focuses on several key elements of the MS4 permit, namely permit governance structure, core stormwater management program requirements, and incorporation of TMDLs. For these elements, staff has formulated conceptual approaches that it will present to the Board for discussion and feedback. In other areas that are not the focus of this update, staff continues to formulate approaches that will be presented to stakeholders and the Regional Board at future meetings.

This update is organized under the following topics: Status of Permit Development; Permit Structure; Stormwater Management Program (“Minimum Control Measures”); TMDL Implementation Provisions; and Additional Issues.

STATUS OF PERMIT DEVELOPMENT

Staff held a kick-off meeting on May 25, 2011 to discuss the preliminary schedule for permit development; identify potential alternative permit structures; and outline some of the major technical and policy aspects of permit development. All LA County MS4 Permittees, as well as other known interested stakeholders, were invited to attend. Ninety-five individuals attended the meeting, representing most of the permittees as well as environmental organizations. After a presentation by Board staff, Permittees and interested persons had an initial opportunity to ask questions of staff, raise concerns, and

¹ The City of Long Beach has had a separate MS4 permit since 1991.

provide feedback. Subsequent to the kick-off meeting, staff has held several individual meetings upon request to discuss specifics with permittees, consultants representing permittees, and environmental organizations.

At the May 25, 2011 kick-off meeting, Board staff requested input from the attendees on various permit structures. In order to solicit more focused input from permittees on alternative permit structures, and per suggestions at the kick-off meeting, Board staff developed and distributed an on-line survey to permittees using the on-line survey tool, SurveyMonkey®. (See Attachment A for the survey instrument.) The survey was distributed to all Los Angeles County MS4 Permittees on June 14, 2011 and responses were requested within two weeks. Fifty-two permittees responded using the on-line survey tool. The on-line survey sought input on several options for permit structure, including an individual permit for each municipality, a single permit for all permittees (i.e., the existing permit structure), and a single or multiple watershed-based permits. Survey results are discussed below under “Permit Structure.”

In addition, staff has also been conducting inspections of several program areas, including municipal oversight of construction and post-construction stormwater controls and control measures to detect and eliminate illicit discharges and illicit connections to the MS4. The results of these inspections will help inform permit development and determine areas of possible customization on a watershed or individual Permittee basis.

PERMIT STRUCTURE

The existing 2001 Permit regulates the discharges of stormwater and non-stormwater runoff from 84 cities, Los Angeles County, and the Los Angeles County Flood Control District. In the 2001 Permit, the District is also named as the “Principal Permittee” with additional requirements for monitoring, reporting and coordination on behalf of all permittees.

One of the fundamental issues for the forthcoming permit was a reconsideration of the basic permit structure. The current 2001 Permit is a single permit under which all the permittees are assigned uniform requirements with additional requirements for the Principal Permittee. The federal Clean Water Act (CWA) section 402(p) and implementing regulations at Title 40, Code of Federal Regulations (40 CFR) section 122.26(a)(1)(v) provide flexibility to the permitting authority to issue permits for MS4 discharges on a system-wide or jurisdiction-wide basis taking into consideration a variety of factors. Such factors include the location of the discharge with respect to waters of the United States, the size of the discharge, the quantity and nature of the pollutants discharged to waters of the United States, and other relevant factors. Federal regulations at 40 CFR section 122.26(a)(3)(ii) identifies a variety of possible permitting structures, including one system-wide permit covering all MS4 discharges or distinct permits for appropriate categories of MS4 discharges including, but not limited to, all discharges owned or operated by the same municipality, located within the same jurisdiction, all

discharges within a system that discharge to the same watershed, discharges within a MS4 system that are similar in nature, or for individual discharges from MS4s.

In reevaluating the structure for the new permit, Board staff considered a number of factors:

- The nature of the LA County MS4, which is a large interconnected system, controlled in large part by the Los Angeles County Flood Control District, among others, and used by multiple cities along with Los Angeles County. The discharges from these entities frequently commingle in the MS4 prior to discharge to receiving waters.
- The requirement to implement 28 largely watershed-based TMDLs in the new permit. (See Attachment B for a list of these TMDLs by Watershed Management Area (WMA), and Attachment C for a list of permittees by WMA.)
- The passage of Assembly Bill 2554 in 2010, which amended the Los Angeles County Flood Control Act. This statute allows the District to assess a parcel tax for stormwater and clean water programs. Funding is subject to voter approval in accordance with Proposition 218. Fifty percent of funding is allocated to nine “watershed authority groups” to implement collaborative water quality improvement plans. (See Attachment D for a draft list of permittees by “watershed authority group”.)
- Results of the on-line survey regarding permit structure. The results indicate that a majority of permittees support a single MS4 permit for Los Angeles County. A significant minority support multiple watershed-based permits. Overall, 85 percent of the permittees that responded to the on-line survey support either a single MS4 permit or several individual watershed-based permits. A small number of permittees support alternative groupings of adjacent municipalities instead of watershed-based groupings. Only four permittees expressed a preference for individual MS4 permits. (See Attachment E for a summary of the survey results.)
- 2006 and 2010 reports of waste discharge (ROWDs). Eight permittees submitted individual or small group ROWDs, including the cities of Signal Hill and Downey; five cities in the upper San Gabriel River watershed; and the Los Angeles County Flood Control District. The District has also requested that if the Board does not issue an individual permit to the District, that it is no longer designated as Principal Permittee and relieved of Principal Permittee responsibilities.

Staff Recommendation

Based on the considerations above, including the results of the on-line survey of Permittee preferences, Board staff plans to recommend a single permit with some sections devoted to universal requirements for all permittees and others devoted to requirements specific to each major Watershed Management Area (WMA), which would include TMDL Implementation Provisions. This structure is supported by the CWA section 402(p) and its implementing regulations at 40 CFR section 122.26, subdivisions (a)(1)(v) and (a)(3)(ii).

A single permit will ensure consistency and equitability in regulatory requirements within the county, while watershed-based sections within the single permit will provide flexibility to tailor permit provisions to address distinct watershed characteristics and water quality issues. Additionally, an internal watershed-based structure comports with the Regional Board's watershed-based TMDL requirements and the District's funding initiative passed in AB 2554. Watershed-based sections will help promote watershed-wide solutions to address water quality problems, which in many cases are the most efficient and cost-effective means to address stormwater and urban runoff pollution. Further, watershed-based sections may encourage collaboration among permittees to implement regional integrated water resources approaches such as stormwater capture and re-use to achieve multiple benefits.

Staff does not plan to recommend multiple permits or individual permits for Signal Hill, Downey, the five upper San Gabriel River cities, or the District. The information presented in the ROWDs does not reflect evolved program elements that have emerged over the past decade. Further, individually tailored permittee requirements can be provided in a single permit, where appropriate. In response to the request from the District to be relieved of its responsibilities as Principal Permittee, staff agrees with this request. Staff does not intend to recommend any permittee as Principal Permittee in the updated Permit. Staff will continue to evaluate appropriate requirements for the District in the permit.

STORMWATER MANAGEMENT PROGRAM (“MINIMUM CONTROL MEASURES”)

MS4 permits include provisions to ensure effective implementation of a Stormwater Management Program (SWMP). The required elements of a SWMP are described in 40 CFR section 122.26(d)(2)(iv). Historically, the SWMP has been the “bread and butter” of stormwater management programs. Permit provisions to implement a SWMP have been historically grouped into six categories of so-called “minimum control measures”:

- (1) programs to monitor and control pollutants in stormwater discharges from commercial areas and industrial facilities;
- (2) a program to maintain structural and non-structural best management practices (BMPs) to reduce pollutants in stormwater runoff from construction sites;
- (3) programs to detect and remove illicit discharges and improper disposal into the MS4;
- (4) public agency activities to reduce the impact of MS4 discharges to receiving waters, including impacts from residential areas;
- (5) planning procedures to reduce pollutants from areas of new development and significant redevelopment; and
- (6) a public information and participation program (PIPP) related to the above five areas.

A brief description of each of these minimum control measures is provided below, while Attachment F provides more detail on current staff recommendations regarding permit requirements in each of these areas. Staff has also identified some key issues that are being evaluated by staff during permit development. Staff is also focusing on identifying

opportunities for customized initiatives, on a watershed or individual Permittee basis, in these areas in order to develop and assist Permittees in implementing the most cost-effective measures to minimize discharge of pollutants to the receiving water.

(1) Minimum Control Measures for Commercial Areas and Industrial Facilities

Municipalities are ultimately responsible for discharges from the MS4; therefore, it is important for the municipalities to implement an inspection and enforcement program to control the contribution of pollutants from industrial/commercial facilities within a municipality to the MS4 from all potential high risk sources. This entails the implementation of structural and non-structural BMPs to reduce pollutants from selected industrial/commercial facilities (or require industry to implement them); and the inspection and monitoring of industrial facilities discharging stormwater and non-stormwater to the municipal systems to ensure these facilities are taking appropriate measures to control pollutants in their discharges.

Key Issues Being Evaluated:

- Identification of target facilities
- Identification of appropriate BMPs
- Level of Permittee effort
- Demonstration of required effort

(2) Minimum Control Measures for Construction Activities

The need for proper erosion and sediment controls is very apparent during, and immediately after, rains that occur in the Los Angeles Region. The environmental effects of erosion are well documented. Erosion can be prevented or reduced with the proper planning and implementation of appropriate BMPs. Increased sediment transport also loads some pollutants to waterbodies. The permit should require the implementation of adequately engineered and implemented structural or non-structural BMPs to minimize or eliminate detrimental environmental effects.

Key Issues Being Evaluated:

- Identification of target sites
- Identification and implementation of appropriate BMPs
- Level of Permittee effort
- Demonstration of required effort

(3) Minimum Control Measures for Illicit Connections and Illicit Discharges Elimination (Non-stormwater Discharges Oversight)

During dry weather, much of the discharges to and from the MS4 originate from non-stormwater sources. A significant amount of such discharges may be from illicit discharges and/or illicit connections. Illicit discharges can occur either through direct connections, such as deliberate or mistaken piping, or through indirect connections, such

as dumping, spillage, subsurface infiltration, and washdowns. The objective of a municipality's illicit connection/illicit discharge (IC/ID) elimination program should be to effectively prohibit non-stormwater discharges that may contain and/or convey pollutants to the receiving waters.

Key Issues Being Evaluated:

- Mechanisms for identification of the source of non-stormwater discharges
- Evaluation of categorical exceptions to prohibition on non-stormwater discharges
- Characterization of dry weather flows
- Demonstration of required effort

(4) Minimum Control Measures for Public Agency Activities

Permittees provide services that ultimately result in the enhancement of the lives of the residents. Some of these services include but are not limited to: sewage system operations; public construction activities; vehicle maintenance; material storage; street and road maintenance; landscaping; recreational facility management; parking facility management; public industrial activities; and many other activities. The objective of a municipality's public agency activities program should be to conduct all public agency activities using appropriate controls to eliminate or minimize pollutants being discharged through the MS4.

Key Issues Being Evaluated:

- Identification of target activities
- Identification and implementation of appropriate BMPs
- Demonstration of required effort

(5) Minimum Control Measures for New Development and Redevelopment

Effective BMP requirements on new development and redevelopment offer a cost-effective strategy to reduce pollutant loads to surface waters. Recent efforts have focused on the implementation of “low impact” controls that not only provide pollutant reduction/elimination but also treat water as a resource by augmenting groundwater supplies and reusing captured rainfall. The objective of the New Development/Redevelopment program should be to implement low impact site design principles and appropriate structural controls as part of a construction project to minimize or eliminate pollutants being discharged in stormwater and non-stormwater from the completed project. The American Society of Civil Engineers (ASCE) and the Water Environment Federation (WEF) have recommended a numerical BMP design standard for stormwater that is derived from a mathematical equation to maximize treatment of runoff volume for water quality based on rainfall/runoff statistics and which is economically sound. The maximized treatment volume is cut-off at the point of diminishing returns for rainfall/runoff frequency. The ASCE and WEF’s recommendation was incorporated in the water quality storm sizing for the Standard Urban Stormwater Mitigation Plan (SUSMP) in the 2001 LA County MS4 Permit. Staff also notes that the

Board approved a numeric criterion for low impact development (LID) in the 2010 Ventura County MS4 Permit.

Key Issues Being Evaluated:

- Volume capture metric for low impact development (LID) implementation
- Design storm event based on the 85th percentile, 24-hour rain event, as determined from the Los Angeles County 85th percentile precipitation isohyetal map, or 0.75 inch, *whichever is greater*.
- Hydromodification requirements
 - Matching pre- and post-development hydrographs
 - Capture of runoff generated from 95th percentile storm in natural systems (federal facility standard)
 - Demonstration of erosion potential of 1 or less
 - Identification of applicable project categories
 - Offsite mitigation requirements
 - Allowable technical infeasibility criteria

(6) Minimum Control Measures for Public Information and Participation Program (PIPP)

The purpose of the PIPP is to foster an informed and knowledgeable community by educating the public of the need to conduct everyday activities in a manner that reduces or prevents pollutants from being discharged in stormwater and non-stormwater, resulting in better compliance with the MS4 permit as a whole. The public should be educated about the personal responsibilities expected of them and others in the community, including the individual actions they can take, to protect or improve the quality of area waters where they live. Furthermore, the public can provide valuable input and assistance to a municipal stormwater management program.

Key Issues Being Evaluated:

- Target audience(s)
- Educational message(s) to be conveyed
- Level of Permittee effort
- Demonstration of required effort

TMDL IMPLEMENTATION PROVISIONS

Over the last decade, the Regional Board has adopted 28 TMDLs to remedy water quality impairments in various waterbodies within Los Angeles County. (See Attachment B for a list of TMDLs either in effect or undergoing the approval process by Watershed Management Area for Los Angeles County.) In most cases, these TMDLs identify MS4 discharges as a source of pollutants to these waterbodies and, as required, set wasteload allocations (WLAs) for MS4 discharges to reduce the amount of pollutants discharged to receiving waters. Federal regulations require that NPDES permits contain effluent limits consistent with the assumptions and requirements of all available WLAs (40 CFR

§122.44(d)(1)(vii)(B)). Therefore, as part of the update of the LA County MS4 Permit, Board staff will be developing numeric effluent limitations and other provisions to implement the TMDL WLAs assigned to permittees regulated by the LA County MS4 Permit.

The Regional Board has some flexibility when establishing permit provisions that are designed to determine compliance with the numeric effluent limitations derived from the TMDL WLAs. Broadly, this means that the Regional Board may either require a demonstration that permittees comply with the numeric effluent limitations through monitoring (such as outfall monitoring) or, alternatively, allow permittees to develop and implement control measures to achieve the numeric effluent limitations (referred to as an “action-based” compliance demonstration) where there is an adequate demonstration in the record that the selected control measures and schedule will achieve the numeric effluent limitations.

The Regional Board has previously established numeric effluent limitations when it reopened the LA County MS4 Permit in 2009 to incorporate permit provisions to implement the Los Angeles River Watershed Trash TMDL WLAs. In that case, Permittees have the option to employ three general compliance strategies to achieve the numeric effluent limitations. Depending on the strategy selected, the Permittee may demonstrate compliance either by documenting the percentage of its area addressed by full capture systems (“action-based” demonstration) or by calculating its annual trash discharge to the MS4 and comparing that to its effluent limitation. This approach allows the Permittee the flexibility to comply with the numeric effluent limitations using any lawful means, and establishes appropriate and enforceable compliance metrics depending on the method of compliance and level of assurance provided by the Permittee that the selected method will achieve the numeric effluent limitations derived from the TMDL WLAs. Staff is considering similar approaches for the 27 other TMDLs that have to be put into the permit, where appropriate.

ADDITIONAL ISSUES

Staff continues to work on the following key elements:

- Non-Stormwater Discharge Prohibition
- Receiving Water Limitations
- Water Quality Based Effluent Limitations

Non-stormwater Discharge Prohibition

As required by CWA section 402(p), the 2001 Permit, as well as all MS4 permits in California, contains a requirement for permittees to effectively prohibit discharges of non-stormwater into the MS4 and to watercourses. The 2001 Permit conditionally excepts certain types of discharges from the non-stormwater discharge prohibition, such as

natural flows, emergency firefighting flows, and flows incidental to urban activities so long as they are not a source of pollutants. However, the effect of individual and collective excepted discharges into the MS4 on the quality of non-stormwater discharged from the MS4 has not been well characterized. The 2001 Permit contains language that allows the Executive Officer to prohibit certain conditionally excepted non-stormwater discharges if they are deemed to be a source of pollutants or to comply with TMDL provisions. In addition to these conditionally excepted non-stormwater discharges to the MS4, the Regional Board has issued several general NPDES permits for site cleanup and potable water system testing, which allow discharges to the MS4. Unless the discharge meets all applicable water quality standards, these permits require treatment before discharge to the MS4.

Historically, the control measures required to achieve this effective prohibition have been those included in the illicit discharge/illicit connection elimination program of the SWMP. However, recent inspections of Permittees' IC/IDE program have indicated that while Permittees have conducted screening of their MS4 as required by the Permit, non-stormwater discharges from to the MS4 and watercourses continue, often resulting in exceedances of water quality standards. Staff continues to evaluate options to improve the effectiveness of this section of the Permit.

Receiving Water Limitations

Per 40 CFR section 122.44(d)(1), the Receiving Water Limitations section of the 2001 Permit, as well as all MS4 Permits in California, contains a requirement that prohibits discharges from the MS4 that cause or contribute to violations of Water Quality Objectives or Standards.

This section of the 2001 Permit also contains provisions that establish an "iterative process" whereby certain actions are required when exceedances of Water Quality Objectives or Standards occur. This iterative process includes submitting a Receiving Water Limitations Compliance Report; revising the SWMP and its components to include modified BMPs, an implementation schedule and additional monitoring to address the exceedances; and implementing the revised SWMP.

Many Permittees believe that if they fully comply with the iterative process in response to exceedances of Water Quality Objectives or Standards, then those Permittees should not be in violation, and thus not be subject to enforcement, of the discharge prohibitions in the Receiving Water Limitations section of the permit. The Regional Board has held that compliance with the iterative process as outlined in the 2001 Permit is not a "safe harbor" for compliance with Water Quality Standards or Objectives, and that the discharge prohibitions are independently and separately enforceable provisions of the 2001 Permit. The Regional Board's interpretation was recently upheld in July 2011 by the United States Court of Appeal for the Ninth Circuit in the *Natural Resources Defense Council (NRDC) v. County of Los Angeles* case. The Court ruled that that the discharge prohibitions are independently enforceable requirements, separate and distinct from the iterative process requirements.

In evaluating the iterative process for the updated permit, Staff have looked to see how other regional boards are dealing with this issue. Some regional boards have issued permits that contain not just receiving water monitoring, but also outfall monitoring paired with “action levels” that, if exceeded, trigger requirements to submit and implement a plan to enhance or implement additional BMPs to eliminate the exceedances of Water Quality Objectives or Standards. In the Regional Board’s deliberations on the Ventura County MS4 Permit, the Regional Board supported outfall monitoring, but rejected the use of action levels as proposed. Staff continues to evaluate options that will allow for an iterative process of SWMP and BMP implementation, while ensuring accountability for taking appropriate, timely, and effective actions toward achieving Receiving Water Limitations.

WQBELs

Water Quality Based Effluent Limitations (WQBELs) are effluent limitations established to achieve compliance with applicable water quality standards. Numeric WQBELs are derived from water quality standards, or WLAs established to achieve water quality standards. Numeric WQBELs are routinely used in NPDES permits for publicly owned treatment works (POTWs) and industrial facilities. To date, the Regional Board has only established numeric WQBELs to implement the Los Angeles River Watershed Trash TMDL WLAs. As discussed above under the TMDL Implementation Provisions section, NPDES permits must contain effluent limits consistent with the assumptions and requirements of all available WLAs. Since the WLAs are expressed numerically, numeric WQBELs in MS4 permits are appropriate. Recently, US EPA revised its guidance on this issue, recommending that, “NPDES permitting authorities use numeric effluent limitations where feasible as these types of effluent limitations create objective and accountable means for controlling stormwater discharges.” In discussions with several Permittees to date, there is no clear consensus on this issue, and staff continues to vet various options for regarding numeric WQBELs.

SUMMARY

In summary, Board staff has made meaningful progress on development of the updated Los Angeles County MS4 Permit. However, there are a number of areas in which staff has not fully identified and evaluated options for Board discussion at this workshop. With this workshop, staff intends to formally introduce key issues to the Board, and continue the dialogue among the Regional Board, Permittees and other stakeholders begun at the May 2011 kick-off meeting in order to meet a tentative schedule for Board consideration of the permit by May 2012. Additional staff level or Board workshops will be held prior to the Board’s consideration of the permit.

Attachment E – Summary on-line survey results

Attachment F – Preliminary recommendations regarding SWMP permit requirements

LA County MS4 Permit Structure

The Los Angeles Regional Water Quality Control Board (Regional Board) has begun the process of updating the Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit, which was last issued in 2001. The 2001 Permit regulates discharges of stormwater and non-stormwater from the MS4 to Waters of the State and U.S. The MS4 discharges from 84 cities, Los Angeles County, and Los Angeles County Flood Control District are regulated by the Regional Board under this single permit.

The Regional Board held a Kick-off Meeting with Permittees and stakeholders on May 25, 2011 to begin permit development. At the meeting, Regional Board staff discussed a number of alternative permit structures. (The PowerPoint presentation from the May 25th meeting can be downloaded from the Regional Board's website at http://www.waterboards.ca.gov/losangeles/water_issues/programs/stormwater/municipal/la_ms4/LAMS4PermitKickoffMeetingPresentation.pdf)

This survey is intended to solicit Permittees' preferences regarding permit structure and will be used by Regional Board staff, along with other information, in developing for Regional Board consideration the appropriate permit structure for regulating MS4 discharges within the Los Angeles County Flood Control District, Los Angeles County, and the incorporated cities therein.

Please respond to the questions below, indicating your city's preferences regarding permit structure and briefly explaining your rationale for preferring this structure.

PLEASE SUBMIT ONLY ONE RESPONSE PER PERMITTEE.

Responses are requested by June 24, 2011. For questions, please contact Mr. Ivar Ridgeway, Chief, Stormwater Permitting Unit, at (213) 620-2150.

* 1. Which permit structure does your city prefer for an updated MS4 Permit?

- Single MS4 Permit for Los Angeles County
- Six watershed-based MS4 Permits using Regional Board Watershed Management Areas
- Nine watershed-based MS4 Permits per AB 2554 Watershed Authority Groups
- Per 2006 Reports of Waste Discharge (ROWDs)
- Individual MS4 Permits for each Permittee
- Other (please specify)

2. If you selected "Other" in Q1, please provide a description of your city's preferred permit structure. If a group permit is preferred, please identify the other Permittees who would be included in the group.

3. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

LA County MS4 Permit Structure

4. If your city prefers a single permit for Los Angeles County, which of the following internal structures would you prefer for incorporating TMDL requirements?

- Watershed-based chapters per AB 2554 Watershed Authority Groups
- Watershed-based chapters per Regional Board Watershed Management Areas
- Individual permittee chapters
- Other (please specify)

5. Please select the top 3 issues that your city would like to have a workshop on during permit development.

- Incorporation of TMDL wasteload allocations into the permit
- New development/redevelopment permit provisions, including LID
- Monitoring program design
- Reporting program design
- Regulation of non-stormwater discharges to/from the MS4
- Other (please specify workshop topic(s))

*6. Please list the City's primary contact for continued communication regarding the Los Angeles County MS4 permit development.

LA County MS4 Permit Structure

Which permit structure does your city prefer for an updated MS4 Permit?

		Response Percent	Response Count
Single MS4 Permit for Los Angeles County		51.9%	27
Six watershed-based MS4 Permits using Regional Board Watershed Management Areas		13.5%	7
Nine watershed-based MS4 Permits per AB 2554 Watershed Authority Groups		9.6%	5
Per 2006 Reports of Waste Discharge (ROWDs)		5.8%	3
Individual MS4 Permits for each Permittee		7.7%	4
Other (please specify)		21.2%	11
		answered question	52
		skipped question	0

Q1. Which permit structure does your city prefer for an updated MS4 Permit?

1	If a single MS4 permit for Los Angeles County is used, the City of Rancho Palos Verdes would like to incorporate the TMDL requirements as described below in response to question #3.	Jun 30, 2011 9:03 AM
2	If the single permit is not implemented, we would like a permit which would include the four cities on the Palos Verdes Peninsula - us, RPV, RHE, and RH. We have worked very well together on TMDLs and have a unique situation in the County with our rural development and limited commercial/industrial land use.	Jun 29, 2011 8:44 AM
3	We prefer a single permit for LA County in order to minimize costs associated with administering the permit, but if multiple permits are going to be issued, then our preferred structure is a Palos Verdes Peninsula group permit for the Cities of Rolling Hills, Rolling Hills Estates, Rancho Palos Verdes and Palos Verdes	Jun 28, 2011 1:48 PM

Q1. Which permit structure does your city prefer for an updated MS4 Permit?

	Estates.	
4	Single MS4 Permit for Los Angeles County (including cities and unincorporated County areas) but excluding the Los Angeles County Flood Control District. Preference is for a single Permit only if no permittee is held responsible for another permittee's discharges. Otherwise, preference is for an individual Permit for the unincorporated County areas, such as was issued to the City of Long Beach.	Jun 27, 2011 4:57 PM
5	Individual MS4 Permit for the Los Angeles County Flood Control District (LACFCD), per its November 2010 Report of Waste Discharge. No preference for other permittees.	Jun 27, 2011 4:22 PM
6	The city of Carson prefers a sub-watershed based group permit.	Jun 27, 2011 2:54 PM
7	Watershed-based Permit	Jun 27, 2011 11:47 AM
8	Group permit to include all South Bay Council of Governments (SBCOG) member cities (15 cities)	Jun 22, 2011 3:25 PM
9	Group Permit Based on Watershed Assignment	Jun 22, 2011 1:57 PM
10	A single LA County wide MS4 Permit that is watershed-based, i.e. nine watershed-based chapters in addition to all chapters for model programs, etc.. There will be general requirements (universal terms) for all cities and specific requirements (below the line terms) for each municipality based upon their location, or WQ conditions. It also provides flexibility for model programs to prioritize them in such way to take advantage of years of data and experience that we have collected and analyzed on them.	Jun 17, 2011 6:59 AM
11	The City of Torrance requests the Dominguez and South Santa Monica Bay watersheds from the AB 2554 be combined for a South Bay watershed based permit, because 9 out of 15 cities in the South Bay have areas in both those sub-watersheds.	Jun 16, 2011 2:26 PM

LA County MS4 Permit Structure

If you selected "Other" in Q1, please provide a description of your city's preferred permit structure. If a group permit is preferred, please identify the other Permittees who would be included in the group.

Q1. If you selected "Other" in Q1, please provide a description of your city's preferred permit structure. If a group permit is preferred, please identify the other Permittees who would be included in the group.

1	N/A	Jul 11, 2011 3:30 PM
2	As a second option, the City of Rancho Palos Verdes would opt for a joint permit of the Palos Verdes Peninsula cities (Rancho Palos Verdes, Rolling Hills, Rolling Hills Estates, and Palos Verdes Estates).	Jun 30, 2011 9:03 AM
3	As stated above.	Jun 29, 2011 8:44 AM
4	As stated above, if multiple permits are going to be issued, then our preferred structure is a Palos Verdes Peninsula group permit for the Cities of Rolling Hills, Rolling Hills Estates, Rancho Palos Verdes and Palos Verdes Estates.	Jun 28, 2011 1:48 PM
5	In November 2010, the LACFCD submitted an ROWD as an application for an individual permit. This ROWD contains a description of the LACFCD's preferred permit structure.	Jun 27, 2011 4:22 PM
6	At this point in time, the cities of Inglewood, Lawndale, Lomita and Gardena have agreed to participate in a watershed/subwatershed based group permit with the city of Carson. Other cities in the subwatershed such as Hawthorne and Torrance would be welcomed participants.	Jun 27, 2011 2:54 PM
7	N/A	Jun 27, 2011 2:27 PM
8	Watershed-based Permit - WMA or WAG	Jun 27, 2011 11:47 AM
9	N/A.	Jun 24, 2011 10:08 AM
10	cities include: El Segundo, Manhattan Beach, Hermosa Beach, Redondo Beach, Torrance, Lawndale, Inglewood, Hawthorne, Gardena, Carson, Lomita, Rancho Palos Verde, Rancho Verde Estates, Rolling Hills, Rolling Hills Estates.	Jun 22, 2011 3:25 PM

Q1. If you selected "Other" in Q1, please provide a description of your city's preferred permit structure. If a group permit is preferred, please identify the other Permittees who would be included in the group.

11	Already specified above. We cannot identify the permittees at this time as they are in the process of obtaining City Council approval.	Jun 22, 2011 1:57 PM
12	NA	Jun 20, 2011 2:53 PM
13	N/A	Jun 20, 2011 2:52 PM
14	Please see above explanation.	Jun 17, 2011 6:59 AM
15	Our request is based on combining the South Santa Monica Bay and the Dominguez Channel watersheds from the AB 2554 Watershed Authority Groups. The cities include the following: El Segundo, Hawthorne, Gardena, Manhattan Beach, Hermosa Beach, portions of Los Angeles County, portions of City of Los Angeles, Redondo Beach, Torrance, Carson, Lomita, Lawndale, Palos Verdes Estates, Rolling Hills Estates, Rolling Hills and Rancho Palos Verdes	Jun 16, 2011 2:26 PM

LA County MS4 Permit Structure

Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

	44
answered question	44
skipped question	8

Q1. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

1	N/A	Jul 11, 2011 3:30 PM
2	<p>The City would be fine with an individual permit first, and a WMA based second. Individual permits would better address the individual characteristics of the permittee. Technically, when the first NPDES permits for MS4s were established in Region 4, the City of Malibu if not the entire WMA would have fallen under the Phase II criteria for combined population and total mileage of MS4, not to mention the entire area is in the range of 80% undeveloped land. As such, it is considerably different and less connected to the urban setting of the greater Los Angeles Region and would need slightly more tailored requirements for an effective implementation strategy. The City has effective relationships and collaborates well with other area permittees, but does not feel it is necessary to be linked to them. The City could still collaborate with its partners on a regional basis, but should not necessarily be required to. In light of the City's second preferred option, the subregions established by the WMAs best exemplify shared characteristics and regulatory requirements (such as TMDLs). In particular, "Malibu Creek and Rural Santa Monica Bay WMA has distinctly different topography, commercial/industrial uses levels, residential densities, and infrastructure/facilities than most of the other WMAs. Having more tailored permits may allow the Board staff to work more effectively and efficiently with permittees to achieve WQ goals and compliance.</p>	Jul 7, 2011 11:53 AM
3	<p>The City of Rancho Palos Verdes would prefer a consistent Los Angeles County permit. The City would like provisions in the permit to account for the unique geographical characteristics of the Palos Verdes Peninsula (upon which the City of Rancho Palos Verdes is located).</p>	Jun 30, 2011 9:03 AM
4	<p>The City of Rolling Hills Estates prefers a single permit for LA County, but if multiple permits are issued, then our second choice would be for a Palos Verdes Peninsula group permit for the cities of Rolling Hills Estates, Rolling Hills, Palos Verdes Estates and Rancho Palos Verdes.</p>	Jun 29, 2011 10:19 AM
5	<p>Having one permit minimizes costs for staff time and allows cities to spend our</p>	Jun 29, 2011 8:44 AM

Q1. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

	limited funding on implementation and not additional paperwork.	
6	Since the County is unwilling to be lead, the watershed approach would be most effective for Pomona.	Jun 28, 2011 3:11 PM
7	Rolling Hills is a very small strictly residential city which is, by design, a low impact development. A permit that is responsive to the unique characteristics of the City while minimizing administrative and reporting costs would allow the City to focus its limited resources in protecting water quality.	Jun 28, 2011 1:48 PM
8	A single permit with watershed "chapters" would still allow for economies of scale and uniformity of message for activities and programs that are best administered in a regional manner. For example, given economies of scale and coordination of message and effort, the public outreach component of the MS4 permit is best managed by a single entity at the regional level. Similarly, given the infrastructure and expertise of the LACFCD, monitoring should continue to be conducted by this entity to provide consistency. The LACFCD has expressed that it will continue to provide monitoring, but it may pass down costs to cities or watershed for more specific monitoring. Even under a single permit, the Regional Board envisions watershed "chapters" that contain permit components required to meet the specific needs of each watershed.	Jun 28, 2011 10:43 AM
9	The County of LA DPW/FCD has provided limited MS4P guidance, unless paid for their services. This makes a poor foundation for building a single Countywide permit as many cities will be unable to afford the needed support and there will be no mechanism to make the changes necessary to achieve water quality objectives, potentially leading to regional enforcement efforts or redistribution of resources among permittees. Like many cities, the City of Downey touches multiple watersheds and reaches within a single watershed. So watershed based permits would require the City to incorporate multiple potentially conflicting permits. Authority based permits, might be rational if funding was forthcoming. Unfortunately, we are looking at Spring of 2013, then likely litigation, then initiation of taxation, then distribution of resources, then project selection (assuming recent litigation allows regional BMPs, which is questionable). It appears questionable that the authorities will be funded during the term of this MS4 permit. In 2006 and recently, the City of Downey requested an individual permit, while cooperating/participating with fair regional monitoring efforts and studies to assess priority pollution sources and areas.	Jun 27, 2011 6:08 PM
10	Because County unincorporated areas exist in all watersheds, the County prefers a single permit over participating in multiple permits. The administration of multiple permits would impose an unreasonable and unnecessary burden on the County. If watershed-based permits or other type of multiple permits are proposed for the city permittees, the County prefers an individual permit for itself, similar to the City of Long Beach permit.	Jun 27, 2011 4:57 PM
11	To leverage limited resources, the City wishes to continue with the current Countywide/Regional permit structure, with new chapters to address subregional requirements based on the AB 2554 Watershed Groups which have been widely vetted and negotiated among permittees.	Jun 27, 2011 4:43 PM
12	The LACFCD is not a municipality but is a special district that requires its own individual and unique permit requirements. As a flood control agency, the LACFCD conveys stormwater runoff but has no land use jurisdiction over the sources of the stormwater runoff that enters its system.	Jun 27, 2011 4:22 PM

Q1. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

13	It considers choices previously made by other cities that submitted separate ROWDs but keeps the LACFCD as the principal permittee which is important in order to achieve Bacteria TMDLs. LACFCD owns and operates the major storm drains, flood control basins with large pumps as well as the low flow diversions and the way the system is operated and maintained has a significant impact on Bacteria TMDL compliance. In addition if LACFCD is going to collect and manage AB2554 storm water quality funds, it only makes sense that they be involved in the joint permit.	Jun 27, 2011 4:02 PM
14	We value LA County as the Principal Permittee and the benefits of their leadership and guidance. We understand that the County will manage the AB 2554 funds if approved by the voters. By keeping the County as Principal Permittee, we'll be able to maintain a level of consistency especially in the annual reporting process.	Jun 27, 2011 3:02 PM
15	The subwatershed based group permit provides the best opportunity to maximize coordination among a small group of cities and agencies that have the same TMDL responsibilities.	Jun 27, 2011 2:54 PM
16	Existing TMDL's have been developed on a watershed basis. Given that the permit will include provisions and incorporate TMDLs for all permittees to comply with combined with the Los Angeles County Flood Control District no longer being the principal permittee, it is best to issue watershed permits. However, provisions should be written in which an exceedance/violation of a watershed TMDL or permit requirement will not punish all permittees within that watershed, but rather the private party and/or permittee at fault (i.e., the need to compare monitoring data may be required to determine the location of the exceedance/violation).	Jun 27, 2011 2:27 PM
17	More localized management	Jun 27, 2011 11:47 AM
18	It honors the preferences of other cities who submitted separate ROWDs, and includes LACFCD as principal permittee whose participation is essential in meeting Bacteria TMDLs. The condition, maintenance and operation of major storm drains, flood control basins/sumps and low flow diversions are critical for Bacteria TMDL compliance. LACFCD participation in a joint permit is also important and logical if they will be collecting and managing AB2554 stormwater quality funds.	Jun 27, 2011 11:42 AM
19	If LACFCD is released as Principal Permittee, West Hollywood would prefer watershed-based permits. The City has a good working relationship with both the Santa Monica Bay watershed and the Ballona Creek Watershed jurisdictions and would be amenable to either group. West Hollywood would also be amenable to a Single MS4 Permit (with all agencies or per the 2006 ROWDS) if LACFCD remains principal permittee or based on an alternative lead agency arrangement.	Jun 27, 2011 11:29 AM
20	TO MINIMIZE THE CITY WORK	Jun 27, 2011 11:04 AM
21	Believe a single county-wide permit would be the most consistant and least administratively burdensome	Jun 27, 2011 8:08 AM
22	Considering our knowledge of the current permit, compared to the otehr options, we feel the Single MS4 Permit is the best format.	Jun 24, 2011 4:26 PM

Q1. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

23	The City would like to see LA County continue to function as principal permittee, particularly if their funding initiative is passed.	Jun 24, 2011 2:35 PM
24	We are the smallest city in LA County and up against the foothills, WAGs make more sense to our City, Council and residents when it comes to cleaner water.	Jun 24, 2011 11:06 AM
25	The City of Hidden Hills (City) believes the Single MS4 Permit for Los Angeles County is the best possible permit structure because it maintains existing and established structures and relationships developed over the last three permit terms. We support this structure because of the interconnected network of County storm drains and similarity of common development methods and practices. Like a number of other Los Angeles County cities, the City is located in two watersheds, the Los Angeles River Watershed and the Malibu Creek Watershed. Although less than 1% of the City is located within the Malibu Creek Watershed, the City must still develop and implement Permit required activities for both watersheds. The City is concerned that if the Single MS4 Permit is changed, the City could likely be responsible for: 1) two or more State NPDES Permit fees; 2) submittal of two or more annual reports; and 3) differing development standards for each watershed's Stormwater Quality Management Plan or "SQMP."	Jun 24, 2011 10:08 AM
26	Economy of scale and continuity of the permit that has been in effect since the 90's	Jun 24, 2011 8:43 AM
27	In Los Angeles County the large number of small Cities with limited staff make the common permit with a Principal Permittee the most efficient way to approach this effort. The large technical issues can be led by the Principal permittee with support from the cities. I understand that Los Angeles County Flood Control does not want to be the Principal Permittee and I think that their concerns can be addressed with a Permit Mandated Memorandum of Understanding that defines the Cities minimum support level for programs like Public Education, Monitoring and Annual Report coordination.	Jun 24, 2011 8:38 AM
28	Our City believes that it makes the most sense for the County to be the Principal Permittee and implementing all stormwater programs with the City possibly paying a fee to the County each year to finance the program. They have the expertise and the staff to implement such programs where many cities don't.	Jun 23, 2011 4:45 PM
29	Agencies will be focused because we have to meet the same goals and this would seem to be the best way to address TMDL issues.	Jun 23, 2011 3:44 PM
30	Implementation and resource focus has shifted towards TMDL planning and implementation which are watershed based.	Jun 23, 2011 3:33 PM
31	1. The SBCOG cities principally drain to two watersheds. Dominguez Channel and Santa Monica Bay. 2. Only small areas of two cities (Inglewood - Ballona Creek and Carson - LA River) drain to another waters. 3. Eight cities drain to both watersheds. 4. Only one city (Hermosa Beach) doesn't drain to Dominguez Channel watershed. 5. The SBCOG has an organizational and financing structure that could coordinate joint activities like PIPP and Monitoring. 6. A group permit could allow a more focused development of LID standards that meet local conditions. 7. The SBCOG cities have a history of working cooperatively together on many cross jurisdictional transportation issues which will reduce the learning curve for implementing the NPDES Permit. 8. The SBCOG provides an immediate framework for implements projects and programs that would be fund	Jun 22, 2011 3:25 PM

Q1. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

	via the LA Flood Control District Stormwater Quality Funding Initiative.	
32	To better manage TMDLs and to propose reasonable MS4 Permit requirements.	Jun 22, 2011 1:57 PM
33	The Watershed Approach may provide a more tailored permit that reflects the differences in watershed areas and the specific challenges in addressing TMDLs.	Jun 22, 2011 10:59 AM
34	Consistent with needs and requirements of our City within the Upper San Gabriel Valley Watershed and provides the ability of effective monitoring and ease of enforcement and effective management within a smaller group with similar interests.	Jun 21, 2011 4:13 PM
35	There were no issues in the previous years when there was a single permit for Los Angeles County, therefore, the City of Inglewood (City) prefers no changes to the permit structure. The City believes that the public education and outreach portion of the permit is more effective on a Countywide approach. In addition to the public education and outreach part of the permit, the City also believes the monitoring portion of the permit is more effective on a Countywide approach.	Jun 21, 2011 9:18 AM
36	We would prefer to maintain the County as the principle permit holder since the County has that role now.	Jun 20, 2011 2:53 PM
37	The City of Bell Gardens would like to see the County maintain its role as Principle Permittee for the new MS4 Permit.	Jun 20, 2011 2:52 PM
38	The nine Watershed Authority Group areas provide a permit at a local level without going all the way down to a permit per city. The Watershed Authority Groups will, hopefully, place cities together that are facing similar sources of storm water pollution and will be able to work on them from a logically based regional level.	Jun 20, 2011 2:50 PM
39	City has limited resources - a unified permit will allow permittees to collaborate on permit requirements and compliance issues.	Jun 20, 2011 12:00 PM
40	A County permit will maintain and ensure County-wide consistency in monitoring, reporting, and public education efforts, and will increase regional collaboration in BMP implementation and development.	Jun 20, 2011 10:30 AM
41	1. it is consistent with County funding initiative negotiated in AB2554. 2. it promotes watershed wide solutions (coordination, innovation, collaboration, and leveraging resources) to address WQ problems (which is badly needed). 3. It is the most cost effective manner to deal with stormwater runoff pollution. 4. It is consistent with most people sense of fairness that they are being treated equitably, because they are all under one permit with similar requirements and dissimilar provisions when warranted . 5. WQ pollution does not recognize jurisdictional boundaries, it is in the watershed and it ought to be dealt with on watershed wide basis (regional projects, local projects, and institutional measures). 6. it should also provide for model programs flexibility, we have years of data that would help guide many of these model programs the much needed priority that they deserve to improve WQ.	Jun 17, 2011 6:59 AM
42	This structure would allow the South Bay cities to utilize the South Bay Cities Council of Governments to be the AB 2554 Watershed Authority Group and the South Bay already has media outlets (Daily Breeze) and a	Jun 16, 2011 2:26 PM

Q1. Please provide an explanation of your city's reason(s) for preferring the permit structure selected in Q1 above.

southbaystormwaterprogram website to use for public outreach. Additionally, using the proposed AB 2554 watersheds would split 9 out of 15 cities.

43	Provide for cost sharing	Jun 16, 2011 1:55 PM
44	The County includes several drainage areas but collectively it is one jurisdiction. Splitting drainage areas into multiple permits may cause many problems.	Jun 16, 2011 1:50 PM

LA County MS4 Permit Structure

If your city prefers a single permit for Los Angeles County, which of the following internal structures would you prefer for incorporating TMDL requirements?

		Response Percent	Response Count
Watershed-based chapters per AB 2554 Watershed Authority Groups		36.6%	15
Watershed-based chapters per Regional Board Watershed Management Areas		34.1%	14
Individual permittee chapters		12.2%	5
Other (please specify)		29.3%	12
answered question			41
skipped question			11

Q1. If your city prefers a single permit for Los Angeles County, which of the following internal structures would you prefer for incorporating TMDL requirements?

1	The city does not prefer a unified permit, but if that is the route taken, chapters should be based on WMA not AB 2554.	Jul 7, 2011 11:53 AM
2	A Palos Verdes Peninsula wide TMDL implementation chapter with separate Low Impact Development (LID) requirements. LID requirements will support TMDL activities and the unique geographical characteristics of the area justify separate LID and TMDL requirements.	Jun 30, 2011 9:03 AM
3	Our preference would be for a single permit for LA County with a separate chapter for both TMDL and Low Impact Development requirements for the Palos Verdes Peninsula cities listed in Question 3. This approach would support our joint TMDL monitoring and implementation planning efforts and address the unique geology, topography and development characteristics of the Peninsula.	Jun 29, 2011 10:19 AM
4	A peninsula group as we have done in the past with ourselves, RHE, RPV, and RH.	Jun 29, 2011 8:44 AM
5	If a single permit is issued for LA County, we would like a separate chapter to address both TMDL and Low Impact Development requirements for the Palos	Jun 28, 2011 1:48 PM

Q1. If your city prefers a single permit for Los Angeles County, which of the following internal structures would you prefer for incorporating TMDL requirements?

	Verdes Peninsula cities listed in Question 2. This approach would support our joint TMDL monitoring and implementation planning efforts and address the unique geology, topography and development characteristics of the Peninsula.	
6	It is our understanding that the Individual permittee chapters option entails a single permit containing a set of core requirements applicable to all permittees plus TMDL chapters specific to each permittee.	Jun 27, 2011 4:57 PM
7	Individual permit chapters for TMDL Implementation PLUS Low Impact Development which is an important tool for TMDL compliance and should be tailored to characteristics of the City and TMDL objectives. This also allows agencies who have already developed an LID ordinance to work within that model rather than starting over with a one-LID-fits-all-cities approach.	Jun 27, 2011 4:02 PM
8	N/A	Jun 27, 2011 2:27 PM
9	Individual permit chapters for TMDL Implementation PLUS Low Impact Development which is an essential tool for TMDL compliance and should be tailored to the characteristics of the City as well as TMDL objectives.	Jun 27, 2011 11:42 AM
10	This issue is of great concern. The city feels further discussions and workshops are necessary before this question can be answered definitively.	Jun 24, 2011 4:26 PM
11	Chapter including neighboring agencies (to be determined) located within the upper reach of the LA River	Jun 24, 2011 2:35 PM
12	Please note that this is only preferred if the funding is passed and if the funding is not passed than something completely different would need to take place as the City would not have the resources to implement these programs. Additionally, the WAGs wouldn't make sense without the funding being passed by voters.	Jun 23, 2011 4:45 PM

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Industrial/Commercial Storm Water Sources

Primary Objectives:	<ul style="list-style-type: none"> Identify and track industrial/commercial facilities which may be critical sources of storm water pollution to the MS4. Educate and raise storm water awareness of industrial/commercial facility employees to ultimately change behaviors that will reduce pollutant discharges to the MS4. Ensure the implementation of BMPs at industrial/commercial facilities to reduce the contribution of pollutants to storm water from industrial/commercial activities and materials storage. Increase the detection of illicit discharges and connections to the MS4 from industrial/commercial facilities. Minimize the occurrence of illicit discharges and connections to the MS4 from industrial/commercial facilities.
----------------------------	---

Legal Authorities:	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)(A) and (C)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
---------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
General	Ensure implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water.	Draft April 2011 LA County and Ventura County MS4 Permits	
Track	Maintain an updated watershed-based inventory or database of all industrial and commercial facilities within the jurisdiction that are critical sources of storm water pollution. Incorporate this information into GIS.	Draft April 2011 LA County and Ventura County MS4 Permits	
Track	This permit requirement lists the specific information which must be included in the inventory or database of critical sources.	Draft April 2011 LA County and Ventura County MS4 Permits	
Track	Update the inventory or database of critical sources at least annually.	Draft April 2011 LA County and Ventura County MS4 Permits	
Inspect	Inspect all commercial facilities identified by the Permit twice during the 5-year term of the Order, with the first mandatory compliance inspection within 2 years after Order adoption date. This permit requirement includes subsections that detail inspection and BMP requirements for different types of facilities, such as, (1)	Ventura County MS4 Permit	

	restaurants, (2) automotive service facilities, (3) retail gasoline outlets and automobile dealerships, and (4) commercial nurseries and nursery centers.		
Inspect	Conduct compliance inspections at industrial facilities identified by the Permit. Initial inspection must be within 2 years after Order adoption date. Conduct follow-up inspections at 20 percent of no-exposure facilities each year after the initial inspections are complete.	Ventura County MS4 Permit	
Inspect	During each inspection, confirm that each operator has a current WDID number, has a No Exposure Certification, if applicable, and is effectively implementing BMPs for the reduction of pollutants in storm water discharges from the facility or maintaining a condition of no exposure of industrial activities to storm water, if applicable.	Ventura County MS4 Permit	
Ensure Compliance	Ensure BMP implementation of the source control BMPs identified in the <i>CASQA Industrial and Commercial BMP Handbook</i> .	Ventura County MS4 Permit	
Ensure Compliance	Ensure implementation of additional pollutant-specific controls for critical sources that discharge to MS4s that directly discharge to ESAs or to CWA § 303(d) listed impaired waterbodies.	Ventura County MS4 Permit	
Ensure Compliance	Implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period, as specified in the Permit.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	A Permittee may refer a violation(s) of its municipal storm water ordinances and California Water Code § 13260 by Industrial and Commercial facilities to the Regional Water Board provided that the Permittee has conducted and documented at least two follow-up inspections and two warning letters or notices of violation.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	For facilities in violation of municipal storm water ordinances and subject to the Industrial Activities Storm Water General Permit (IASGP), Permittees may escalate referral of such violations to the Regional Water Board (promptly via telephone or electronically) after one inspection and one written notice of violation.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	Initiate, within one business day of complaint transmittal by the Regional Water Board, investigation of complaints (other than non-storm water discharges to the MS4) from facilities.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	Provide assistance to the Regional Water Board for enforcement actions, as directed by the Regional Water Board Executive Officer.	Draft April 2011 LA County and Ventura	

		County MS4 Permits	
Interagency Coordination	Participate in an enforcement task force with the Regional Water Board and other public agencies.	Draft April 2011 LA County and Ventura County MS4 Permits	

DRAFT

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Development Construction Program

Primary Objectives:	<ul style="list-style-type: none"> • Prevent illicit construction-related discharges of pollutants into the MS4. • Ensure that structural and non-structural BMPs are implemented and maintained. • Reduce discharge of pollutants from construction sites to the MEP. • Minimize the potential for sediment discharges from construction activities to impact sensitive receiving waterbodies. • Minimize soil compaction during construction activities to preserve the highest potential for infiltration of post-construction storm water.
----------------------------	---

Legal Authority:	<ul style="list-style-type: none"> • Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)(D)) • Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
-------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
Purpose	Each Permittee shall implement a construction program that prevents illicit construction-related discharges of pollutants into the MS4, implements and maintains structural and non-structural BMPs to reduce pollutants in storm water runoff from construction sites, reduces construction site discharges of pollutants from the MS4 to the MEP, and prevents construction site discharges from the MS4 from causing or contributing to a violation of water quality standards.	Ventura County MS4 Permit	
Applicability	Applies to all activities involving soil disturbance with the exception of agricultural activities. Activities covered by this permit include but are not limited to grading, vegetation clearing, soil compaction, paving, re-paving and linear underground/overhead projects (LUPs).	Contractor, with language from the State Water Board Construction General Permit (CGP)	
Inventory/Electronic Tracking System	Each Permittee shall use an electronic system to inventory grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by the Permittee. To satisfy this	Venura County MS4 Permit SWRCB’s Draft Small MS4s General Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>requirement, the use of a database or GIS system is encouraged, but not required.</p> <p>The tracking system shall contain the following information:</p> <ul style="list-style-type: none"> (a) Relevant contact information for each project (e.g., name, address, phone, email, etc. for the owner and contractor), (b) The basic site information including location, status, size of the project and area of disturbance, (c) The proximity all water bodies, water bodies listed as impaired by sediment-related pollutants, and water bodies for which a sediment-related TMDL has been adopted and approved by USEPA, (d) Significant threat to water quality status, based on consideration of factors listed in Appendix 1 to the State Water Board’s Constructin General Permit (CGP), (e) Current construction phase. (f) The required inspection frequency, (g) The project start and anticipated completion dates, (h) Whether the project has coverage under the State Water Board’s CGP, (i) The date the Permittee approved the erosion and sediment control plan (j) Post-Construction Structural BMPs subject to Operation and Maintenance Requirements. 	<p>Contractor recommends the addition of Post-Construction BMPs to the tracking system for continuity between Construction and Post-Construction Phases.</p>	
<p>Plan Review and Approval Procedures</p>	<p>Prior to issuance of a grading or building permit, the operator shall submit the Erosion and Sediment Control Plan (ESCP)prior to the disturbance of land for the Permittee’s review and written approval. The construction site operator shall be prohibited from commencing construction activity prior to receipt of written approval.</p>	<p>SWRCB’s Draft Small MS4s General Permit</p>	
<p>Criteria for Review</p>	<p>The ESCP must include the elements of a Storm Water Pollution Prevention Plan (SWPPP). Controls must be consistent with the applicable California Stormwater Quality Association (CASQA) Best Management Practices Handbooks (or Caltrans Handbooks for public transportation related construction projects) and tailored to the risks posed by the project. Projects are ranked from Low Risk</p>	<p>Ventura County MS4 Permit</p> <p>SWRCB’s Draft Small MS4s General Permit and the CGP</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>(Risk 1) to High Risk (Risk 3). Project risks are calculated based on the potential for erosion from the site and the sensitivity of the receiving waterbody. Receiving waterbodies that are listed on the Clean Water Act (CWA)Section 303(d) list for sediment or siltation are considered high risk. Likewise, waterbodies with designated beneficial uses of SPWN, COLD, and MIGRATORY are also considered to be high risk. The combined (sediment/receiving water) site risk may be calculated using the methods provided in Attachment 1 of the StateWater Board’s CGP.</p> <p>Applicable BMP controls for projects of different sizes are referenced in Tables VI.C.10-A, B, and C of this order.</p> <p>Applicable BMPs for enhanced requirements for high-risk sites are referenced in Table VI.C.10-D. of this order.</p> <p>Applicable BMPs for paving projects are described in Table VI.C.10-E. of this order.</p>		
<p>Required Elements of the ESCP/SWPPP</p>	<p>At a minimum, the ESCP/SWPPP must address the following elements:</p> <ul style="list-style-type: none"> • Scheduling--soil disturbance activities shall be scheduled for completion during the dry weather season to the extent feasible, • Methods to minimize the footprint of the disturbed area and to prevent soil compaction outside of the disturbed area, • Methods used to protect native vegetation and trees, • Sediment/Erosion Control, • Controls to prevent tracking on and off the site, • Non-storm water controls (e.g., vehicle washing, dewatering, etc.), • Materials Management (delivery and storage), • Spill Prevention and Control • Waste Management (e.g., concrete washout/waste 	<p>Ventura County MS4 Permit</p> <p>SWRCB’s Draft Small MS4s General Permit and CGP</p> <p>Contractor recommends limitations on soil disturbance during wet weather, miminizing footprint of the disturbed area and protection of native vegetation and trees.</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	management; sanitary waste management), <ul style="list-style-type: none"> • Rain Event Action Plan (REAP) when soil disturbance activities will be conducted during the wet-weather season. 		
Rationale for Selection and Design of BMPs	The ESCP/SWPPP must include the rationale for the selection and design of the proposed BMPs including quantifying the expected soil loss from different BMPs.	Ventura County MS4 Permit and the SWRCB's Draft Small MS4s General Permit	
Certification	<p>(A) Each Permittee shall require that for projects disturbing 1 acre or more, the ESCP/SWPPP is developed and certified by a <i>Qualified SWPPP Developer (QSD)</i>.</p> <p>(B) <i>Each Permittee shall require that all structural BMPs be designed by a California licensed engineer.</i></p> <p>(C) Each Permittee shall require that for all projects, the landowner or the landowner's agent sign a statement on the Local ESCP/SWPPP to the effect:</p> <p><i>"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/or adequately implement the ESCP/ SWPPP may result in revocation of grading and/or other permits or other sanctions provided by law."</i></p>	State Water Board CGP Ventura County MS4 Permit	
Confirming Coverage under Other Permits	Prior to issuing a grading or building permit, the Permittee shall verify that the construction site operators have existing coverage under applicable permits, including, but not limited to the State Water Board's CGP, State Water Board 401 Water Quality Certification, U.S. Army Corp 404 permit, and California Department	SWRCB's Draft Small MS4s General Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	of Fish and Game 1600 Agreement.		
ESCP/SWPPP Plan Review Checklist	The Permittee shall develop a checklist to be used to conduct and document review of each ESCP/SWPPP.	SWRCB's Draft Small MS4s General Permit	
Inspection Authority	the Permittee shall use legal authority to implement procedures for inspecting public and private projects and conducting enforcement if necessary.	SWRCB's Draft Small MS4s General Permit	
Inspection Frequency	<p>The Permittee shall inspect all phases of construction as follows:</p> <p>(1) Prior to Land Disturbance: Prior to allowing an operator to commence land disturbance, the Permittee shall perform an inspection to ensure all necessary erosion and sediment structural and non-structural BMP materials and procedures are available per the erosion and sediment control plan.</p> <p>(2) Grading and Land Development: During grading and land development activities, conduct inspections in accordance with the frequencies specified in Section VI.C.10-F of this Order.</p> <p>(3) Streets and Utilities: During street and utilities activities, conduct inspections in accordance with the frequencies specified in Table VI.C.10-F of this Order.</p> <p>(4) Vertical Construction: During vertical construction activities, conduct inspections in accordance with the frequencies specified in Table VI.C.10- F of this Order.</p> <p>(5) Final Landscaping and Site Stabilization: At the conclusion of the project, the Permittee shall inspect 10% of all projects to ensure that all graded areas have reached final stabilization and that all trash, debris, and construction materials, and temporary erosion and sediment BMPs are removed.</p>	SWRCB's Draft Small MS4s General Permit	
Inspection Procedures	<p>The Permittee shall develop, implement, and revise as necessary, standard operating procedures that identify the inspection and enforcement procedures the Permittee will follow.</p> <p>Inspections of construction sites, and the standard operating procedures, shall include, but are not limited to:</p> <p>(1) Verification of active coverage under the State Water Board's CGP for projects disturbing 1 acre or more, or are part of a</p>	<p>SWRCB's Draft Small MS4s General Permit</p> <p>Contractor recommends sampling and analysis of storm</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>planned development that will disturb 1 acre or more.</p> <p>(2) Review of the applicable ESCP/SWPPP and inspection of the construction site to determine whether all BMPs have been selected, installed, implemented, and maintained according to the approved plan.</p> <p>(3) Assessment of the appropriateness of the planned BMPs and their effectiveness.</p> <p>(4) Visual observation and record keeping of non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff.</p> <p>(6) Sampling and analysis of storm water runoff discharges from the property when visual observation indicates turbidity in the storm water discharge.</p> <p>(7) Development of a written or electronic inspection report generated from an inspection checklist used in the field</p> <p>(8) Tracking of the number of inspections for the inventoried construction sites throughout the reporting period to verify that the sites are inspected at the minimum frequencies required in Table VI.C.10-F of this Order.</p>	<p>water discharge from the property when visual observation indicates turbidity.</p>	
<p>Enforcement Procedures</p>	<p>(1) Take all necessary follow-up actions (e.g., re-inspection, enforcement) to ensure compliance in accordance with the Permittee’s Legal Authority and Enforcement Response Plan. At a minimum, follow-up inspections shall be conducted within 2 weeks after for inspected sites that have not adequately implemented their ESCP/SWPPP.</p> <p>(2) The Permittee shall track and report these follow-up inspections and enforcement actions.</p> <p>(3) Each Permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.</p> <p>(4) Each Permittee can refer sites to the Regional Water Board for joint enforcement actions for violation of municipal storm water ordinances and the CGP, after conducting a minimum of 2 site inspections and issuing a minimum of two written notices to the operator regarding the violation (copied to the</p>	<p>Ventura County MS4 Permit</p>	

Category	Description of Requirement	Origin of Requirement	Notes
Certificate of Occupancy	<p>Regional Water Board).</p> <p>Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each Permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order.</p>	Ventura County MS4 Permit	
Training of Permittee Staff	<p>Task Description – The Permittee shall ensure that all staff whose primary job duties are related to implementing the construction storm water program are adequately trained.</p> <p>Implementation Level – The Permittee may conduct in-house training or contract with consultants. Training shall be provided to the following staff positions of the MS4:</p> <p>(a) Plan Reviewers and Permitting Staff - Ensure staff and consultants are trained as qualified individuals, knowledgeable in the technical review of local erosion and sediment control plans and the key objectives of the State Water Board Qualified SWPPP Developer (QSD) program. Permittees may provide internal training to staff or require staff to obtain QSD certification.</p> <p>(b) Erosion Sediment Control/Storm Water Inspectors - The Permittee shall ensure that its inspectors are knowledgeable in inspection procedures consistent with the State Water Board sponsored program <i>QSD</i> or a Qualified SWPPP Practitioner (QSP) or ensure that a designated person on staff who has been trained in the key objectives of the QSD/QSP programs supervise inspection operations . Permittees may provide internal training to staff or require staff to obtain QSD/QSP certification.</p> <p>(c) Third-Party Plan Reviewers, Permitting Staff, and Inspectors - If the Permittee utilizes outside parties to conduct inspections and/or review plans, the Permittee shall ensure these staff are trained per the requirements listed above.</p>	SWRCB’s Draft Small MS4s General Permit and collaboration between the Regional Water Board staff and the contractor.	
Education Outreach to Development Community	<p>The Permittee shall develop and distribute educational materials to construction site operators. The Permittee shall do the following:</p> <p>(a) Each year, provide information on training opportunities for</p>	SWRCB’s Draft Small MS4s General Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>construction operators on BMP selection, installation, implementation, and maintenance as well as overall program compliance</p> <p>(b) Develop or utilize existing outreach tools (i.e. brochures, posters, etc.) aimed at educating construction operators on appropriate selection, installation, implementation, and maintenance of storm water BMPs, as well as overall program compliance.</p> <p>(c) Distribute appropriate outreach materials to all construction operators who will be disturbing land within the MS4 boundary. The Permittee's contact information and website shall be included in these materials.</p> <p>(d) Update the existing website to include information on appropriate selection, installation, implementation, and maintenance of BMPs, as well as overall program compliance.</p>

Table VI.C.10-E-Minimum Required BMPs for Roadway Paving or Repair Operation (For Private or Public Projects)

1.	Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions.
2.	Install gravel bags and filter fabric or other equivalent inlet protection at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat.
3.	Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or receiving waters.
4.	Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt.
5.	Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.
6.	Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
7.	Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
8.	Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
9.	Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
10.	Minimize airborne dust by using water spray or other approved dust suppressant during grinding.
11.	Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or receiving waters.
12.	Protect stockpiles with a cover or sediment barriers during a rain.

Table IV.C.10-F. Inspection Frequencies

Site Risks	Inspection Frequency
a. All sites one (1) acre or larger that discharge to a tributary listed by the state as an impaired water for sediment or turbidity under the CWA § 303(d)	1) when two or more consecutive days with greater than 50% chance of rainfall are predicted by NOAA ¹ and 2) within 48 hours of a ½-inch rain event and at least once every two weeks
b. Other sites one (1) acre or more determined to be a significant threat to water quality.	At least monthly
c. All other construction sites with one (1) acre or more of soil disturbance not meeting the criteria above	As needed based on the evaluation of the factors that are a threat to water quality
d. Construction sites less than one (1) acre in size	As needed based on the evaluation of the factors that have not adequately implemented
A follow-up inspection shall take place within two weeks for inspected sites that have not adequately implemented the ESCP/SWPPP.	
*In evaluating the threat to water quality, the following factors shall be considered: soil erosion potential; site slope; project size and type; sensitivity of receiving water bodies; proximity to receiving water bodies; non-storm water discharges; past record of non-compliance by the operators of the construction site; and any water quality issues relevant to the particular MS4.

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Illicit Connections and Illicit Discharges Detection and Elimination Program (IC/ID)

Primary Objectives:	<ul style="list-style-type: none"> Gain an understanding of the MS4 and possible sources of pollution to the MS4 through mapping activities and to provide a tool to track or trace illicit discharges. Minimize the occurrence of illicit discharges and connections to the MS4. Increase the detection of illicit discharges and connections to the MS4 which do occur and eliminate them as needed. Document sufficient information to demonstrate the effectiveness of the IC/ID program.
----------------------------	---

Regulatory Authority:	<ul style="list-style-type: none"> Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
------------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
General	Continue to implement an IC/ID Program to detect, investigate, and eliminate IC/IDs to the storm drain system.	Draft April 2011 LA County and Ventura County MS4 Permits	
General	Ensure that the Permittee has adequate legal authority to prohibit IC/IDs to the storm drain system and enable enforcement capabilities to eliminate the source of IC/IDs.	Draft April 2011 LA County and Ventura County MS4 Permits	
General	<p>The IC/ID Program must consist of at least the following major components:</p> <ol style="list-style-type: none"> An up-to-date storm sewer system map (see Part X) Procedures for identifying priority areas within the MS4 likely to have IC/IDs, and a list of all such areas identified in the system (see Part X) Procedures for field screening to detect IC/IDs (see part X) Procedures for conducting source investigations for IC/IDs (see Part X) Procedures for eliminating the source of IC/IDs (see Part X) Spill response plan (see Part X) IC/ID education and training for Permittee staff (see Part X) 	Draft April 2011 LA County and Ventura County MS4 Permits and SWRCB’s Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
Mapping	<p>Develop and maintain an up-to-date, accurate map of the MS4. If possible, the map should be maintained in GIS. The map must include at least, the following:</p> <ol style="list-style-type: none"> (1) MS4 outfalls (2) Drainage areas contributing to those outfalls (3) The location and length of underground storm drain pipes 18 inches and greater in diameter (4) The location and length of open stormwater channels (5) Priority areas (6) Receiving waters (7) Field screening stations (8) Dry weather diversions 	Draft April 2011 LA County and Ventura County MS4 Permits and SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Priority Areas	Identify priority areas in the MS4 and include them on the MS4 map. The Permit defines specific types of areas which must be identified as priority areas and requires that at least 20 percent of the system be identified as a priority area. The list of priority areas must be evaluated yearly to determine whether areas should be added or removed from the list.	Draft April 2011 LA County and Ventura County MS4 Permits and SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Develop and implement a Dry Weather Field Screening and Analytical Monitoring Program to detect and eliminate IC/IDs.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Document how the Dry Weather Field Screening and Analytical Monitoring Program will be implemented with written procedures. Procedures must be updated to reflect current program.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Identify a minimum of [specify number] stations within the priority areas it identified in Part X at which field observations, field screening monitoring and analytical monitoring will take place. This list should be updated annually in concert with the evaluation of priority areas.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Conduct dry weather field observations and field screening	SWRCB's Draft Small	

Category	Description of Requirement	Origin of Requirement	Notes
	monitoring at each station identified above at least once per year.	MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Field Observations - Visually observe each identified station and document the observations in either hardcopy and/or electronic format.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Field Screening Monitoring Requirements - Conduct a field screening analysis for the following constituents: XX, XX, XX, XX, and XX. Samples must be collected and analyzed consistent with the procedures required by 40 CFR Part 136	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Conduct sampling of flow or ponded runoff if observed at a field screening station and there has been at least seventy-two (72) hours of dry weather prior to the observation.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Conduct an annual evaluation of the Dry Weather Field Screening and Analytical Monitoring Program to determine whether changes or updates are needed. Make changes as necessary.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Illicit Discharge Investigation & Elimination	Develop written procedures for conducting investigations to identify the source of all illicit discharges, including procedures to eliminate the discharge once the source is located.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Illicit Discharge Investigation & Elimination	Conduct an investigation(s) to identify and locate the source of any continuous or intermittent non-stormwater discharge within 48 hours of becoming aware of the illicit discharge. Part VI.C.12.e.iii specifies conditions which must be met for conducting the investigations.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Illicit Discharge Investigation & Elimination	Corrective Action to Eliminate Illicit Discharges – Once the source of the illicit discharge has been determined, the Permittee must immediately notify the responsible party of the problem, and require the responsible party to conduct all necessary corrective actions to eliminate the non-stormwater discharge within 48 hours of notification. The Permittee must formally verify and document	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
	that the illicit discharge has been eliminated.		
Illicit Connection Investigation & Elimination	Conduct screening for illicit connections to the MS4. The Permit outlines an implementation schedule for this activity.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Maintain a list containing all connections under investigation for possible illicit connection and their current status.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Upon discovery or upon receiving a report of a suspected illicit connection, complete an investigation within 21 days.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Upon confirmation of an illicit storm drain connection, ensure that the connection is eliminated within 180 days of completion of the investigation, using its formal enforcement authority, if necessary, to eliminate the illicit connection.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Formal records must be maintained for all illicit connection investigations and the formal enforcement taken to eliminate illicit connections.	Ventura County MS4 Permit	
Public Reporting	Promote, publicize, and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into	Ventura County MS4 Permit and	

Category	Description of Requirement	Origin of Requirement	Notes
	or from MS4s through a central contact point, including phone numbers and an internet site for complaints and spill reporting.	collaboration between contractor and Regional Board	
Public Reporting	Develop and maintain written procedures that document how complaint calls are received, documented, and tracked to ensure that all complaints are adequately addressed. Evaluate procedures annually and make changes as necessary.	EPA Permit Improvement Guide	
Public Reporting	Maintain documentation of the complaint calls and record the location of the reported spill or IC/ ID and the actions undertaken in response to all IC/ID complaints.	Draft April 2011 LA County and Ventura County MS4 Permits and EPA Permit Improvement Guide	
Spill Response	Develop a written spill/dumping response procedure, and a flow chart or phone tree, or similar list for internal use, that shows the procedures for responding to public notices of illicit discharges, the various responsible agencies and their contacts, and who would be involved in illicit discharge incidence response, even if it is a different entity other than the Permittee.	EPA Permit Improvement Guide	
Education & Training	Continue to implement a training program regarding the identification of IC/IDs for all municipal field staff and contractors, who, as part of their normal job responsibilities (e.g., street sweeping, storm drain maintenance, collection system maintenance, road maintenance), may come into contact with or otherwise observe an illicit discharge or illicit connection to the storm sewer system. Training program documents must be available for review by the permitting authority.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Education & Training	Training program should address, at a minimum, the following: (1) IC/ID identification, (2) investigation, (3) elimination, (4) cleanup, (5) reporting, and (6) documentation.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Education & Training	Create a list of applicable staff which require IC/ID training and ensure that training is provided at least annually. Maintain documentation of the training activities.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
Education & Training	New Permittee staff members must be provided with IC/ID training within six months of starting employment.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

DRAFT

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Public Agency Activities Program

Primary Objectives:	<ul style="list-style-type: none"> Minimize storm water pollution impacts from permittee owned or operated facilities and activities. Develop, deploy, and ensure ongoing operation and maintenance of BMPs for facilities, activities, and staff. Train public employees on the need for, use, and maintenance of BMPs.
----------------------------	---

Legal Authority:	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)) Regulations addressing structural and source control measures to reduce pollutants from runoff (40 CFR §122.26(d)(2)(i)(A)(1),(3),(5),and(6)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
-------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
General	Implement a Public Agency Activities Program to minimize storm water pollution impacts from Permittee-owned or operated facilities and activities.	Ventura County MS4 Permit	
Public Construction Activities Management	Implement and comply with the Planning and Land Development Program requirements in Part X of this Order.	Ventura County MS4 Permit	
Public Construction Activities Management	Implement and comply with the appropriate Development Construction Program requirements in Part X of this Order.	Ventura County MS4 Permit	
Public Construction Activities Management	Projects that disturb less than one acre of soil shall require the development and implementation of a Storm Water Pollution Control Plan (SWPCP).	Ventura County MS4 Permit	
Public Construction Activities Management	Obtain separate coverage under the CASGP or Small LUP General Permit for all Permittee-owned or operated construction sites that require coverage.	Ventura County MS4 Permit	
Public Facility Inventory	Maintain an updated watershed-based inventory and map of all Permittee-owned or operated facilities within its jurisdiction that are potential sources of storm water pollution. The incorporation of facility information into a Geographical Information System (GIS) is required.	SWRCB’s Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
Public Facility Inventory	Include the following minimum fields of information for each Permittee-owned or operated facility in its watershed-based inventory and map.	Ventura County MS4 Permit	
Public Facility Inventory	Update its inventory and map at least annually.	Ventura County MS4 Permit	
Public Agency Facility and Activity Management	Obtain separate coverage under the IASGP for all Permittee-owned or operated facilities where industrial activities are conducted that require coverage under the IASGP.	Ventura County MS4 Permit	
Public Agency Facility and Activity Management	Implement and maintain the general and activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities) when such activities occur at Permittee-owned or operated facilities and field activities or that have the potential to discharge pollutants in storm water.	Ventura County MS4 Permit	
Public Agency Facility and Activity Management	Any contractors hired by the Permittee to conduct Public Agency Activities (e.g., municipal maintenance) shall be contractually required to implement and maintain the general and activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities). Conduct oversight of contractor activities to ensure these BMPs are implemented and maintained.	Ventura County MS4 Permit and EPA Permit Improvement Guide (for inclusion of contractors)	
Vehicle and Equipment Washing	Implement and maintain the activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities) for all vehicle and equipment washing.	Ventura County MS4 Permit	
Vehicle and Equipment Washing	Eliminate all existing discharges of wash waters from vehicle and equipment washing.	Ventura County MS4 Permit	
Vehicle and Equipment Washing	Ensure that any municipal facilities constructed, redeveloped, or replaced shall prohibit discharges to the MS4 for all vehicle and equipment wash areas.	Ventura County MS4 Permit	
Landscape, Park, and Recreational Facilities Management	Implement and maintain the activity specific BMPs listed in Table x (BMPs for Public Agency Facilities and Activities) for all landscape, park, and recreational facilities and activities.	Ventura County MS4 Permit	
Landscape, Park, and Recreational Facilities Management	Implement Integrated Pest Management (IPM) Program.	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
Landscape, Park, and Recreational Facilities Management	Implement additional the following requirements: 1. Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ) (Vector Control) and Order No. 2004-0009-DWQ (Weed Control). 2. Consistency with the State Board’s guidelines and monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2001-12 DWQ). 3. Use a standardized protocol for the routine and non-routine application of pesticides and fertilizers. 4. Ensure there is no application of pesticides or fertilizers immediately prior to, during, or immediately after a rain event, or when water is flowing off the area where the application is to occur. 5. Ensure that no banned or unregistered pesticides are stored or applied. 6. Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category. 7. Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs 8. Store pesticides and fertilizers indoors or under cover on paved surfaces, or use secondary containment.	Ventura County MS4 Permit and Inclusion of Aquatic Pesticide Orders and Guidance	
Storm Drain Operation and Maintenance (General)	1. Implement and maintain the activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities) for storm drain operation and maintenance. 2. Ensure that all material removed from the storm drain system does not reenter the system. Solid material shall be dewatered in a contained area and liquid material shall be disposed in accordance with approved measures.	Ventura County MS4 Permit and EPA Permit Improvement Guide for Item 2	

Category	Description of Requirement	Origin of Requirement	Notes
Storm Drain Operation and Maintenance (Catch Basin Prioritization)	<p>Designate catch basin inlets within its jurisdiction as one of the following:</p> <p><u>Priority A</u>: Catch basins that are designated as consistently generating the highest volumes of trash and/or debris.</p> <p><u>Priority B</u>: Catch basins that are designated as consistently generating moderate volumes of trash and/or debris.</p> <p><u>Priority C</u>: Catch basins that are designated as generating low volumes of trash and/or debris.</p> <p>Submit a map or list of Catch Basins with their GPS coordinates and their priority designations. The map or list shall contain the rationale or data to support designations.</p>	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Catch Basin Inspection and Cleaning)	<p>In areas that are not subject to a trash TMDL, inspect catch basins according to the following schedule:</p> <p><u>Priority A</u>: A minimum of 3 times during the wet season (October 1 through April 15) and once during the dry season every year.</p> <p><u>Priority B</u>: A minimum of once during the wet season and once during the dry season every year.</p> <p><u>Priority C</u>: A minimum of once per year.</p> <p>Catch basins shall be cleaned as necessary on the basis of inspections. At a minimum, ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out. Maintain inspection and cleaning records for Regional Water Board review.</p>	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Catch Basin Inspection and Cleaning)	<p>In areas that are subject to a trash TMDL, continue to implement the requirements listed below until trash TMDL implementation measures are adopted. Thereafter, implement programs in conformance with the TMDL implementation schedule, which shall include an effective combination of measures such as street sweeping, catch basin cleaning, installation of treatment devices and trash receptacles, or other BMPs. Default requirements include:</p>	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	<ol style="list-style-type: none"> 1. Inspection and cleaning of all catch basins a minimum of 3 times during the wet season (October 1 through April 15) and once during the dry season every year; 2. For any catch basin that is found to be $\geq 40\%$ full of trash and/or debris during an inspection; the inspection and cleaning frequency shall be increased to 4 times during the wet season and once during the dry season every year; 3. Record keeping of catch basins cleaned, demonstrating that all required catch basin cleaning has been conducted; and 4. Recording of the overall quantity of catch basin waste collected. 		
Storm Drain Operation and Maintenance (Trash Management at Public Events)	<p>Require the following measures for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, including events located in areas that are subject to a trash TMDL:</p> <ol style="list-style-type: none"> 1. Proper management of trash and litter generated; <u>and</u> 2. Arrangement for temporary screens to be placed on catch basins; <u>or</u> 3. Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Trash Receptacles)	<ol style="list-style-type: none"> 1. Install trash receptacles, or equivalent trash capturing devices in areas that are subject to a trash TMDL, and all other areas subject to high trash generation within its jurisdiction. 2. Ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Catch Basin Labels)	<ol style="list-style-type: none"> 1. Inspect the legibility of the stencil or label nearest each inlet prior to the wet season every year. 2. Record all catch basins with illegible stencils and re-stencil or re-label within 15 days of inspection. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Additional Trash	Install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water in areas defined as Priority A or B. Criteria and	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
Management)	corresponding exceptions for flooding and alternatives BMPs are included.		
Storm Drain Operation and Maintenance (Storm Drain Maintenance)	Implement a program for Storm Drain Maintenance includes the following: <ol style="list-style-type: none"> 1. Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually. 2. Remove trash and debris from open channel storm drains a minimum of once per year before the wet season. 3. Eliminate the discharge of contaminants during MS4 maintenance and clean outs. 4. Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Spill Response)	Each Permittee which owns and /or operates a sanitary sewer system that requires coverage under the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (Order No. 2006-0003-DWQ), shall comply with the provisions and the monitoring requirements associated with this Order.	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Permittee Owned Treatment Control BMPs)	<ol style="list-style-type: none"> 1. Implement an inspection and maintenance program for all Permittee owned treatment control BMPs, including post-construction treatment control BMPs. 2. Ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs. 3. Implement BMPs for all residual water produced by a treatment control BMP and not being internal to the BMP performance. 	Ventura County MS4 Permit	
Streets, Roads, and Parking Facilities Maintenance (Prioritization)	Designate streets and/or street segments within its jurisdiction as one of the following: <u>Priority A:</u> Streets and/or street segments that are designated as consistently generating the highest volumes of trash and/or debris. <u>Priority B:</u> Streets and/or street segments that are designated as consistently generating moderate volumes of trash and/or debris. <u>Priority C:</u> Streets and/or street segments that are designated as	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	generating low volumes of trash and/or debris.		
Streets, Roads, and Parking Facilities Maintenance (Street Sweeping)	Perform street sweeping of curbed streets according to the following schedule: <u>Priority A</u> : Streets and/or street segments that are designated as Priority A shall be swept at least two times per month. <u>Priority B</u> : Streets and/or street segments that are designated as Priority B shall be swept at least once per month. <u>Priority C</u> : Streets and/or street segments that are designated as Priority C shall be swept as necessary but in no case less than once per year.	Ventura County MS4 Permit	
Streets, Roads, and Parking Facilities Maintenance (Road Reconstruction)	Require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the BMPs in X (BMPs for Public Agency Facilities and Activities) and as specified in Part X (Development Construction Program) be implemented for each project.	Ventura County MS4 Permit	
Streets, Roads, and Parking Facilities Maintenance (Parking Facilities Maintenance)	Permittee-owned parking lots exposed to storm water shall be kept clear of debris and excessive oil buildup and cleaned using street sweeping equipment no less than 2 times per month and/or inspected no less than 2 times per month to determine if cleaning is necessary. In no case shall a Permittee-owned parking lot be cleaned less than once a month.	Ventura County MS4 Permit	
Emergency Procedures	Each Permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order as follows: 1. Providing an explanation of the circumstances, and the measures that were implemented to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed. 2. Minor repairs of essential public service systems and infrastructure in emergency situations (that can be completed in less than one day) are not subject to the notification provisions.	Ventura County MS4 Permit	
Municipal Employee and Contractor Training	Train all of their employees and contractors in targeted positions on the requirements of the overall storm water management program	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	to: 1. Promote a clear understanding of the potential for activities to pollute storm water. 2. Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.		
Municipal Employee and Contractor Training	Annually train all of their employees and contractors who use or have the potential to use pesticides or fertilizers to address: 1. The potential for pesticide-related surface water toxicity. 2. Proper use, handling, and disposal of pesticides. 3. Least toxic methods of pest prevention and control, including IPM. 4. Reduction of pesticide use.	Ventura County MS4 Permit	

DRAFT

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Planning and Land Development Program

Primary Objectives:	<ul style="list-style-type: none"> Lessen the impacts of development and significant re-development projects on water quality and hydrology by designing projects to minimize the impervious area footprint and employing Low Impact Development (LID) design principles to mimic pre-development water balance through infiltration, evapotranspiration and re-use. Minimize pollutant loadings through the use of properly designed, technically appropriate BMPs (including source control BMPs), LID strategies, and treatment control BMPs. Minimize the adverse impacts from storm water runoff on the biological integrity of natural drainage systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100). Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, safeguarding of environmentally sensitive areas, mixing of land uses (e.g., homes, offices, and shops), transit accessibility, and better pedestrian and bicycle amenities.
----------------------------	--

Legal Authority:	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)) Regulations addressing post-construction controls for new development and significant re-development (40 CFR §122.26(d)(2)(iv)(A)(2)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B)) Regulations addressing discharges by implementing and maintaining structural and non-structural best management practices to reduce pollutants in storm water runoff (40 CFR §122.26(d)(2)(iv)(D))
-------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
Purpose	<ul style="list-style-type: none"> Lessen the impact of new development and significant re-development on pollutant loading to receiving waterbodies. Minimize the hydromodification impacts on natural drainage systems. Provide criteria to ensure the effective design, operation and maintenance of LID and hydromodification control BMPs. 	Ventura County MS4 Permit with modifications based on collaboration between the contractor, Regional Board staff and EPA.	
Applicability	Define new development and re-development projects that are subject to the requirements of Part X.	Ventura County MS4 Permit	
Performance Criteria	Except as provided for under Part X or X, new development and re-development projects must retain on-site the storm water runoff	Collaboration between the contractor,	

	<p>volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater.</p> <p>If it is not technically feasible to retain on-site the entire storm water runoff volume, the project must be designed and operated to biofiltrate 1.5 times the storm water runoff volume that cannot be retained on-site.</p> <p><u>Note:</u> The draft permit language does not restrict the percent effective impervious area (EIA). The draft permit encourages designs that minimize impervious surfaces because the storm water runoff volume is related to the amount of impervious surface.</p>	<p>Regional Board staff and EPA. The 85th percentile, 24-hour storm is the design storm used in recently-issued California MS4 permits.* A minimum requirement based on the 0.75 inch 24-hour storm is required in this permit to prevent backsliding from the previous permit.</p> <p>*The following permits include requirements to retain on-site the runoff volume from the 85th percentile design storm:</p> <ul style="list-style-type: none"> • San Bernardino County MS4 Permit (Order No. R8-2010-0036) • Riverside County in San Diego Region (Order No. R9-2010-0016). 	
<p>Performance Criteria for Infiltration</p>	<p>The Infiltration rate of soils decrease as the moisture content increases-- to the point of saturation. When calculating the infiltration rates of underlying soils, the Permittees will account for the infiltration loss considering the impact of increasing soil moisture using Horton's Equation or other means approved by the Executive Officer of the Los Angeles Regional Water Quality Control Board. Alternatively, the Permittee may assume that the soil is</p>	<p>Horton's Equation is referenced in the Energy Independence and Security Act (EISA) Technical Guidance Manual.</p> <p>The State Water</p>	

	<p>saturated and the minimum infiltration rate applies.</p>	<p>Resources Control Board developed a Post-Construction Water Balance Calculator spreadsheet for estimating the performance of LID elements. The calculator input assumes wet soil conditions and the minimum infiltration rate for the specified soil classification.</p>	
<p>Design Criteria for Biofiltration</p>	<p>Bio-filtration BMPs shall be designed to accommodate the design flow at a surface loading rate no greater than 5 inches per hour and shall have a total volume, including pore spaces and pre-filter, detention volume, no less than the runoff volume generated by the design storm depth times 0.75.</p> <p>[Note: These design criteria are under review based on more recent information.]</p>	<p>Collaboration with the contractor, Regional Board staff and EPA.</p> <p>Similar to provisions in the San Diego Regional Board MS4 Permit for South Orange County (Order No. R9-2009-002).</p>	
<p>Performance Criteria for Harvest and Re-use</p>	<p>If rainwater harvested for use in irrigation is to be credited toward the total volume of storm water runoff retained on-site, the Permittees must require that the project applicant to conduct a conservative (assuming reasonable worst-case scenarios) assessment of water demand during the wet season. This volume will be referred to as the “reliable” estimate of irrigation demand. The portion of water to be credited as retained on-site for re-use in irrigation may not exceed the reliable estimated irrigation demand during the wet season.</p>	<p>Collaboration with the contractor, Regional Board staff and EPA.</p>	
<p>Alternative Compliance for Technical Infeasibility</p>	<p>Technical site constraints may preclude the use of infiltration LID measures and limit the ability to meet the Integrated Water Quality/Flow Reduction/Resources Management Criteria in Part X.</p> <p>The Permittees may allow projects that are unable to meet the</p>	<p>Ventura County MS4 Permit</p>	

	<p>Integrated Water Quality/Flow Reduction/Resources Management Criteria in Part X to comply with this Order through the alternative compliance measures described in this section to encourage smart growth and infill development of existing urban centers where on-site compliance with post-construction requirements may be technically infeasible.</p>		
<p>Technical Infeasibility</p>	<p>Technical infeasibility may result from conditions including the following:</p> <ol style="list-style-type: none"> (1) Locations where seasonal high groundwater is within <u>5 to 10</u> feet of the surface (2) Locations within 100 feet of a groundwater well used for drinking water (3) Brownfield development sites or other locations where pollutant mobilization is a documented concern (4) Locations with potential geotechnical hazards (5) Smart growth and infill or redevelopment locations where the density and/ or nature of the project would create significant difficulty for compliance with the on-site volume retention requirement. 	<p>Ventura County MS4 Permit with modifications to be consistent with municipal LID manuals. References to a Technical Guidance Manual have been deleted. The draft permit does not require the Permittees to develop a Technical Guidance Manual.</p>	
<p>Alternative Compliance Measures</p>	<p>When a Permittee finds that the project applicant has demonstrated technical infeasibility, after confirming that the project design minimizes the impervious area to the extent allowed by local zoning regulations and the project design incorporates all applicable LID BMPs including green roofs and rainfall harvest and re-use, and considering recommended protective buffers for riparian areas and environmentally sensitive areas, the Permittee shall require the applicant to provide off-site mitigation.</p> <p>The required off-site mitigation volume will be equal to 1.5 times the storm water volume runoff that cannot be retained on-site. The project applicant must perform off-site mitigation or provide sufficient funding for public or private off-site mitigation to achieve equivalent mitigation storm water volume reduction through infiltration, reuse, and/or evapotranspiration.</p> <p>The Permittees must develop a prioritized list of off-site mitigation projects, and when feasible, the mitigation must be directed to the highest priority mitigation project within the same drainage area as,</p>	<p>Ventura County MS4 Permit and collaboration between the contractor, the Regional Board staff and EPA.</p>	

	<p>or the nearest downstream drainage from the proposed development or re-development.</p> <p>Off-site mitigation projects shall be completed as soon as possible, and at the latest, within 4 years of the certificate of occupancy for the first project that contributed funds toward the construction of the off-site mitigation project, unless a longer period is authorized by the Executive Officer of the Los Angeles Regional Water Quality Control Board.</p>		
Water Quality Mitigation Criteria	<p>Applies when the project applicant has successfully demonstrated technical infeasibility to retain on-site the required storm water runoff volume. In addition to providing off-site mitigation, the project applicant must provide for effective treatment of the runoff from the project site.</p> <p>In addition to the requirements for controlling pollutant discharges as described above, the Permittee will ensure that the new development or re-development project will not cause the Permittee to exceed applicable wasteload allocations (WLAs) or fail to comply with Total Maximum Daily Load (TMDL) implementation plan requirements.</p>	Ventura County MS4 Permit and collaboration between the contractor, the Regional Board and EPA.	
Hydromodification	<p>Applies to natural drainage systems (to be defined). The goal of the hydromodification provisions is to preserve pre-development hydrology. The draft permit will provide Interim hydromodification requirements. Final hydromodification requirements will be developed by the Permittees based on pending studies to be approved by the SWRCB.</p>	Ventura County MS4 Permit and collaboration with the contractor, Regional Board staff and EPA.	
Hydromodification Projects Disturbing Less than 50 Acres	<ul style="list-style-type: none"> The project is designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and reuse, the stormwater volume from the runoff of the 95th percentile, 24-hour storm, or The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event. 	<ul style="list-style-type: none"> Federal Energy Independence and Security Act (EISA), Technical Guidance Document¹ Other recently issued California 	

¹ U.S. Environmental Protection Agency. December 9, 2009. *Technical Guidance on Implementing the Stormwater Runoff Requirements for Federal Projects under Section 438 of the Energy Independence and Security Act* <<http://www.epa.gov/owow/NPS/lid/section438/>>. Accessed October 20, 2011.

	<p>This condition may be substantiated by simple screening models or</p> <ul style="list-style-type: none"> The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study and the equation presented in Attachment X. <p>Note: These requirements are intended to offer less expensive options than the requirements for larger projects.</p>	<p>MS4 permits. These requirements are similar to provisions in the Orange County MS4 permit (Order No. R8-2009-0030) and the Riverside County MS4 Permit (Order No. R9-2010-0016).</p> <ul style="list-style-type: none"> The Erosion Potential method is from the Ventura County MS4 Permit. 	
Hydromodification Projects Disturbing 50 Acres or More	<ul style="list-style-type: none"> The project infiltrates on-site at least the runoff from a 2-year, 24-hour storm event, or The runoff flow rate, volume, velocity, and duration for the post-development condition does not exceed the pre-development condition for the 2-year, 24-hour rainfall events. These conditions must be substantiated by hydrologic modeling acceptable to the Permittee, or The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study and the equation presented in Attachment X. 	<ul style="list-style-type: none"> Other recently issued California MS4 permits. These requirements are similar to provisions in the Orange County MS4 Permit (Order No. R8-2009-0030) and the Riverside County MS4 Permit (Order No. R9-2010-0016). The Erosion Potential method is from the Ventura County MS4 Permit. 	
Implementation	Maintenance Agreement and Transfer of Responsibility to operate and maintain post-development BMPs.	Ventura County MS4 Permit	
Maintenance Agreement	Prior to issuing approval for occupancy, the Permittee will require new development and redevelopment projects to provide a plan and financial assurance for continued operation and maintenance of LID practices, treatment control BMPs, and hydromodification control BMPs.	Ventura County MS4 Permit	

Tracking, Inspection and Enforcement of Post-Construction BMPs	Each Permittee will implement a tracking system and an inspection and enforcement program for new development and re-development post-construction storm water BMPs.	Ventura County MS4 Permit	
Alternative Post-Construction Storm Water Mitigation Programs	A Permittee or coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) for re-development within Re-development Project Areas, in consideration of exceptional site constraints that inhibit site-by-site or project-by-project implementation of post-construction requirements.	Ventura County MS4 Permit	
Developer Technical Guidelines	Note: The Draft Permit does not require the Permittees to develop a Technical Guidance Document. This section is to be used to provide general technical guidelines relating to site development, recommended riparian buffer widths, etc.	Collaboration between the contractor, the Regional Board staff and EPA.	

DRAFT

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Public Information and Participation Program (PIPP)

Primary Objectives:	<ul style="list-style-type: none"> To measurably increase the knowledge of the target audience about the MS4, the adverse impacts of storm water pollution on receiving waters and potential solutions to mitigate the impacts. To measurably change the waste disposal and storm water pollution generation behavior of target audiences by developing and encouraging the implementation of appropriate solutions. To involve and engage socio-economic groups and ethnic communities in Los Angeles County to participate in mitigating the impacts of storm water pollution.
----------------------------	---

Legal Authorities:	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)(A)(6)) Regulations addressing public information and participation programs (40 CFR §122.26(d)(2)(iv)(B)(6))
---------------------------	--

Category	Description of Requirement	Origin of Requirement	Notes
General	<p>The Permittees shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this part.</p> <p>The Permittees shall be responsible for developing and implementing the PIPP, and implementing specific PIPP requirements.</p>	Draft April 2011 LA County and Ventura County MS4 Permits	
Advisory Committee	<p>The Permittees shall consider developing an advisory committee to provide input and assistance in meeting the goals and objectives of the public education campaign.</p> <p>The advisory committee shall be consulted during the process of developing the PIPP campaign, and shall provide comments and advice during the process of preparing a Request For Proposal for a storm water public education contractor.</p> <p>The committee may participate as a part of a working group that</p>	Draft April 2011 LA County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>evaluates contractor proposals and other tasks as appropriate.</p> <p>The committee shall be comprised of representatives of the environmental community, Permittees, Regional Water Board staff, and experts in the fields of public education and marketing.</p> <p>The committee shall meet at least once a year.</p>		
<p>Residential Program – No Dumping Message</p>	<p>Each Permittee shall label all storm drain inlets that they own with a legible “no dumping” message.</p> <p>Signs with prohibitive language discouraging illegal dumping shall be posted at designated public access points to creeks, other relevant waterbodies, and channels.</p> <p>Signage and storm drain messages shall be legible and maintained as necessary during the term of the permit.</p>	<p>Draft April 2011 LA County MS4 Permit</p>	
<p>Residential Program – Countywide Hotline</p>	<p>Permittees will develop and implement, or continue to implement, a watershed-wide reporting hotline to serve as the general public reporting contact for reporting illicit discharges/dumping, faded or lack of catch basin labels, and general storm water management information. Each Permittee may establish its own hotline if preferred.</p> <p>Permittees shall include this information, updated when necessary, in public information, and the government pages of the telephone book, as they are developed or published.</p> <p>The Permittees shall compile a list of the general public reporting contacts submitted by all Permittees and make this information available on the Permittee’s websites and upon request.</p>	<p>Draft April 2011 LA County MS4 Permit</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	Each Permittee is responsible for providing current, updated information to the Principal Permittee.		
Outreach and Education	<p>The Permittees shall implement the following activities:</p> <ol style="list-style-type: none"> (1) Conduct a storm water pollution prevention advertising campaign (2) Conduct storm water pollution prevention public service announcements (3) Consider distributing storm water pollution prevention public education materials to potential pollutant contributing entities, such as automotive parts stores, home improvement centers / lumber yards / hardware stores, and pet shops / feed stores (4) Public education materials shall include the topics specified at Permit Part X (5) Consider working with existing local watershed groups or organizing watershed Citizen Advisory Groups/ Committees to develop effective methods to educate the public about storm water pollution (6) Organize events targeted to residents and population subgroups (7) Maintain the countywide storm water website (www.888CleanLA.com), which shall include educational material listed in Part X. 	Draft April 2011 LA County MS4 Permit and Ventura County MS4 Permit	
Outreach and Education	The Permittees shall develop a strategy to educate ethnic communities through culturally effective methods.	Draft April 2011 LA County MS4 Permit	
Outreach and Education	Requirement regarding quantity of storm water quality "impressions" on the general public - To be developed.	Draft April 2011 LA County MS4 Permit	
Outreach and Education	The Permittees shall provide schools within each School District in the county with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years	Draft April 2011 LA County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	on storm water pollution.		
Pollutant-specific Outreach	The Permittees shall coordinate to develop outreach programs that focus on the watershed-specific pollutants listed in Table1.	Draft April 2011 LA County MS4 Permit	
Pollutant-specific Outreach	Each Permittee shall make outreach materials available to the general public and target audiences, such as schools, community groups, contractors and developers, and at appropriate public counters and events. Outreach material shall include information on pollutants of concern, sources, and source abatement measures.	Draft April 2011 LA County MS4 Permit	
Corporate Business Outreach	The Permittees shall consider working with other regional or statewide agencies and, associations such as the California Storm Water Quality Association (CASQA), to develop and implement a Corporate Outreach program to educate and inform corporate franchise operators and/or local facility managers about storm water regulations and BMPs.	Ventura County MS4 Permit	
Corporate Business Outreach	Once developed, the program shall consider targeting Retail Gasoline Outlets (RGO) franchisers, retail automotive parts franchisers, home improvement center franchisers and restaurant franchisers.	Ventura County MS4 Permit	
Business Assistance Program	The Permittees shall consider implementing a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The Permit specifies required components of the program.	Draft April 2011 LA County and Ventura County MS4 Permits

LA County MS4 Permit: Board Workshop

Item 16

Los Angeles Water Board

November 10, 2011

Outline

- Permit Background
- Status of Permit Development
- Permit Structure Evaluation & Staff Conclusions
- Permit Requirements
 - Stormwater Management Program & Minimum Control Measures
 - TMDL Provisions
 - Other Key Topics

Background

- Last issued in 2001
- Reopened in 2006, 2007 and 2009
 - SMB Beaches Bacteria Summer Dry Weather
 - Marina Del Rey Bacteria Summer Dry Weather
 - LA River Trash
- Amended in April 2011
 - Voided and set aside 2006 provisions in response to writ of mandate
- Updated permit scheduled for 2012

Objectives for New Permit

- Increase flexibility of provisions, while ensuring consistent baseline level of implementation
- Improve SQMP requirements & minimum control measures to achieve water quality standards
- Implement TMDL WLAs
- Clarify compliance determination in a commingled system

Status & Outreach

- May-Jun.: Kick-off meeting & web-based survey
- Jun.-Sep.: Targeted program assessments
- Jun.-Nov.: As requested meetings
- Today: Board workshop

- **Nov. '11-Apr. '12: As requested meetings**
- **Dec. '11-Feb. '12: Two issue workshops**
- **Mar. '12: Draft permit**
- **May '12: Board hearing**

Permit Structure: Background

- Single permit for 84 cities, LA County & LACFCD
 - Highly interconnected system across jurisdictional boundaries
 - Commingled discharges to receiving waters
 - Opportunities for cooperation
 - Efficiencies gained in public outreach, monitoring & reporting
 - Los Angeles County Flood Control District role (LA County Flood Control Act)

Permit Structure: Alternatives

- Single unified permit
 - Watershed sections
- Watershed permits
- Other multiple-permit approaches
 - Individual permits
 - Permits based on 2006 ROWDs

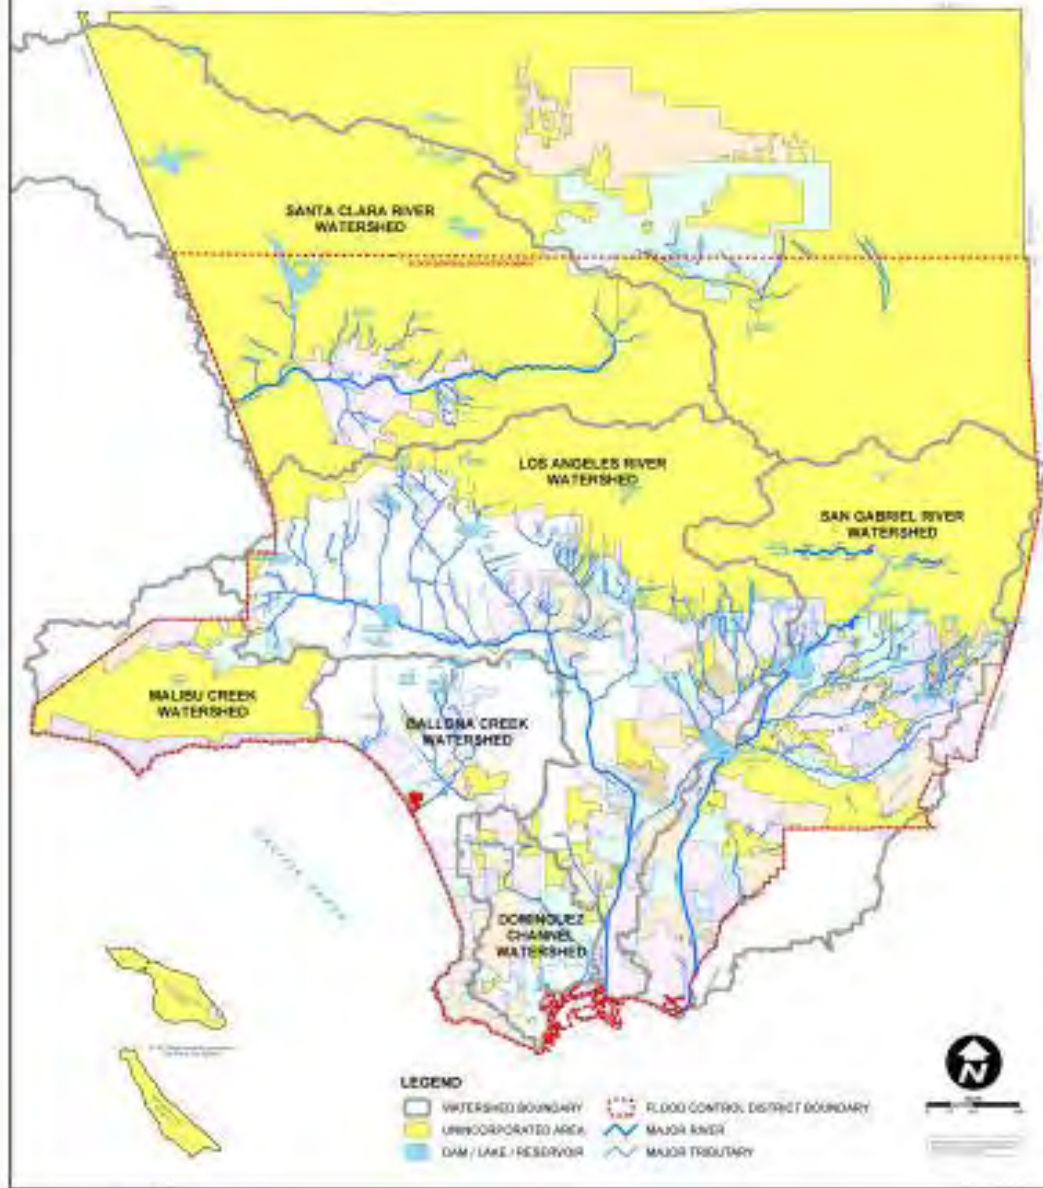

Permit Structure: Considerations

- Clean Water Act §402(p)
- Implementing regulations (40 CFR §122.26(a)(1))
- Factors considered:
 - Nature of Greater LA County MS4
 - **Permittees' input**
 - TMDLs
 - Opportunities for collaboration
 - LACFCD water quality funding initiative

Interconnected and Overlapping System

- Multiple jurisdictions discharge to MS4
- Discharges from co-permittees commingle prior to reaching receiving water
- MS4 infrastructure largely owned and/or operated by LACFCD

LOS ANGELES COUNTY FLOOD CONTROL DISTRICT

Permittees' Input

- Survey of Permittees' preferences using web-based SurveyMonkey®
 - 85 percent support single MS4 permit or watershed-based permits
 - Small number support alternative groupings
 - Four permittees expressed a preference for individual MS4 permits
- 2006/2010 ROWDs
 - Signal Hill; Downey; Upper SGR Group; LACFCD

TMDL Provisions

- 29 TMDLs adopted with WLA for LA County MS4 co-permittees
- One of most significant parts of new permit
- Watershed-based implementation
 - Allocations
 - Implementation
 - Compliance monitoring

Opportunities for Collaboration

- Regional efforts and solutions may be most cost effective
 - Combine resources for program implementation
- LACFCD water quality initiative
 - Collaborative “watershed authority groups”
 - Watershed based funding
 - Some oversight by LACFCD

Permit Structure: Our Path Forward

- Single permit
 - Watershed sections
- Flexibility in provisions
 - Direct efforts to watershed priorities
 - Individualized requirements
- No Principal Permittee
- Revised compliance monitoring provisions

Storm Water Management Program: Minimum Control Measures

40 CFR 122.26(d)(2)(iv)

- Industrial / Commercial Program
- Development Construction Program
- Illicit Connections/Illicit Discharges Elimination Program
- Public Agency Activities Program
- New Development/Redevelopment Program
- Public Information and Participation Program

Minimum Control Measure – Industrial/Commercial Sources

- **Key Objective:** Ensure the implementation of BMPs at industrial/commercial facilities to reduce the contribution of pollutants to the MS4 from industrial/commercial activities.
- **Basic Requirements**
 - Watershed-based database of all industrial and commercial facilities
 - Inspections of all designated industrial/commercial facilities
 - Ensure BMP implementation (e.g. CASQA manual)

Minimum Control Measure – Development Construction Program

- **Key Objective:** Ensure the implementation of BMPs at construction sites to reduce the contribution of pollutants to the MS4 from construction activities.
- **Basic Requirements**
 - Inventory of grading permits, encroachment permits, demolition permits, building permits, or construction permits
 - Review and written approval of a Erosion and Sediment Control Plan (ESCP)
 - BMP implementation (per CASQA or Caltrans manual)

Minimum Control Measure – Illicit Connections and Illicit Discharges Elimination (Non-stormwater Discharges Oversight)

- Key Objective: Effectively prohibit non-storm water discharges to the MS4.
- Basic Requirements
 - Develop and implement a Dry Weather Outfall Screening Program to identify priority areas.
 - Develop procedures for conducting source investigations for IC/IDs

Minimum Control Measure – Public Agency Activities Program

- Key Objective: Minimize storm water pollution impacts from permittee owned or operated facilities and activities.
- Basic Requirements
 - Maintain an inventory and map of all Permittee-owned or operated facilities.
 - Implement activity specific BMPs (such as catch basin cleaning, open channel maintenance, street sweeping, and appropriate pesticide application)
 - Training of employees and contractors.

Minimum Control Measure- New Development and Redevelopment

- Key Objective: Minimize the impacts of development and significant re-development projects on water quality and hydrology.
- Basic Requirements
 - On-site retention of the storm water runoff volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater.
 - Off-site mitigation where on-site retention is technically infeasible.

Minimum Control Measure- New Development and Redevelopment

Interim Hydromodification (Sites < 50 acres)

- Requirements
 - On-site retention of the volume of runoff from the 95th percentile, 24-hour storm, or
 - BMP implementation to ensure the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event.
 - The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study

Minimum Control Measure- New Development and Redevelopment

Interim Hydromodification (Sites > 50 acres)

■ Requirements

- On-site project infiltration of at least the runoff from a 2-year, 24-hour storm event, or
- BMP implementation to ensure the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event. These conditions must be substantiated by hydrologic modeling acceptable to the Permittee, or
- The Erosion Potential (Ep) in the receiving water channel <1.

Minimum Control Measure - Public Information and Participation Program

- Key Objective: To measurably increase the knowledge of the target audience about the adverse impacts of storm water pollution and change the waste disposal and storm water pollution generation behavior of target audiences.
- Basic Requirements
 - Watershed-wide reporting hotline
 - Storm water pollution prevention advertising campaign
 - Distribution of outreach materials

TMDL Provisions: Background

- 24 TMDLs with MS4 WLAs in effect for LA County
 - 2007 & 2009 amendments
 - MDR Bacteria TMDL – Summer WLAs
 - LA River Watershed Trash TMDL WLAs
- 5 TMDLs in state approval process

TMDL Provisions: Considerations

- Provisions consistent with assumptions and requirements of WLAs
 - Include all interim & final WLAs
- Numeric effluent limitations and **“action-based”** compliance demonstration

TMDL Provisions: LA River Trash WLAs Example

- Numeric effluent limitations
 - Equivalent to WLAs
 - Compliance measure if partial capture and/or institutional strategies are used
 - **Necessary absent “up-front” demonstration** that controls will achieve TMDL design/performance standard
- “Action-based” requirements
 - TMDL design/performance standard to achieve WLAs = full capture systems
 - Compliance measure = % drainage area addressed by full capture systems

TMDL Provisions: Considerations

- Dual Path for Compliance Demonstration
 - Numeric effluent limitations or
 - **“Action-based” with reasonable assurance**
 - TMDL implementation plans
 - Other quantitative analysis / implementation plan showing that actions will achieve WLAs
 - **“Reasonable assurance” standard and validation monitoring**

Other Key Permit Requirements

- Non-stormwater Discharge Prohibitions
- Receiving Water Limitations
- Water Quality Based Effluent Limitations (WQBELs)
- Monitoring & Reporting

Non-stormwater Prohibitions

- CWA § 402(p) - “Effectively prohibit non-stormwater discharges”
- Current tools: IC/IDE program; Public Outreach/Education; Categorical exceptions
- New directions:
 - Characterize & prioritize major outfalls based on monitoring
 - System assessment & remedial actions
 - Categorical exceptions/permitted discharges

Receiving Water Limitations (RWL)

- MS4 discharges may not cause or contribute to violations of water quality standards (Part 2.1)
- Iterative process to address exceedances of RWLs (Part 2.3)
- Considerations
 - Waterbodies subject to TMDL
 - Waterbodies not subject to TMDL

Water Quality Based Effluent Limitations (WQBELs)

- Effluent limitations established to achieve compliance with water quality standards
- Numeric WQBELs - derived from water quality standards or WLAs
- Application to
 - Waterbodies subject to TMDLs
 - Non-stormwater discharges
 - Stormwater discharges

Monitoring Program Objectives

- Establish linkage between MS4 discharges and receiving water quality
- Determine compliance with
 - TMDL provisions
 - Other numeric WQBELs
- Target implementation actions
- Validate performance / outcome expectations for “action-based” compliance

Summary of Path Forward

- Single permit with watershed sections
- Stormwater Management Program & Minimum Control Measures, incl. LID
- TMDL Provisions and Dual Path for Compliance Demonstration

MS4 Permit Renewal Key Issues

Los Angeles County Flood Control District
and County of Los Angeles

Gary Hildebrand
Assistant Deputy Director

Regional Board Informational Workshop
November 10, 2011

Key Issues for LACFCD

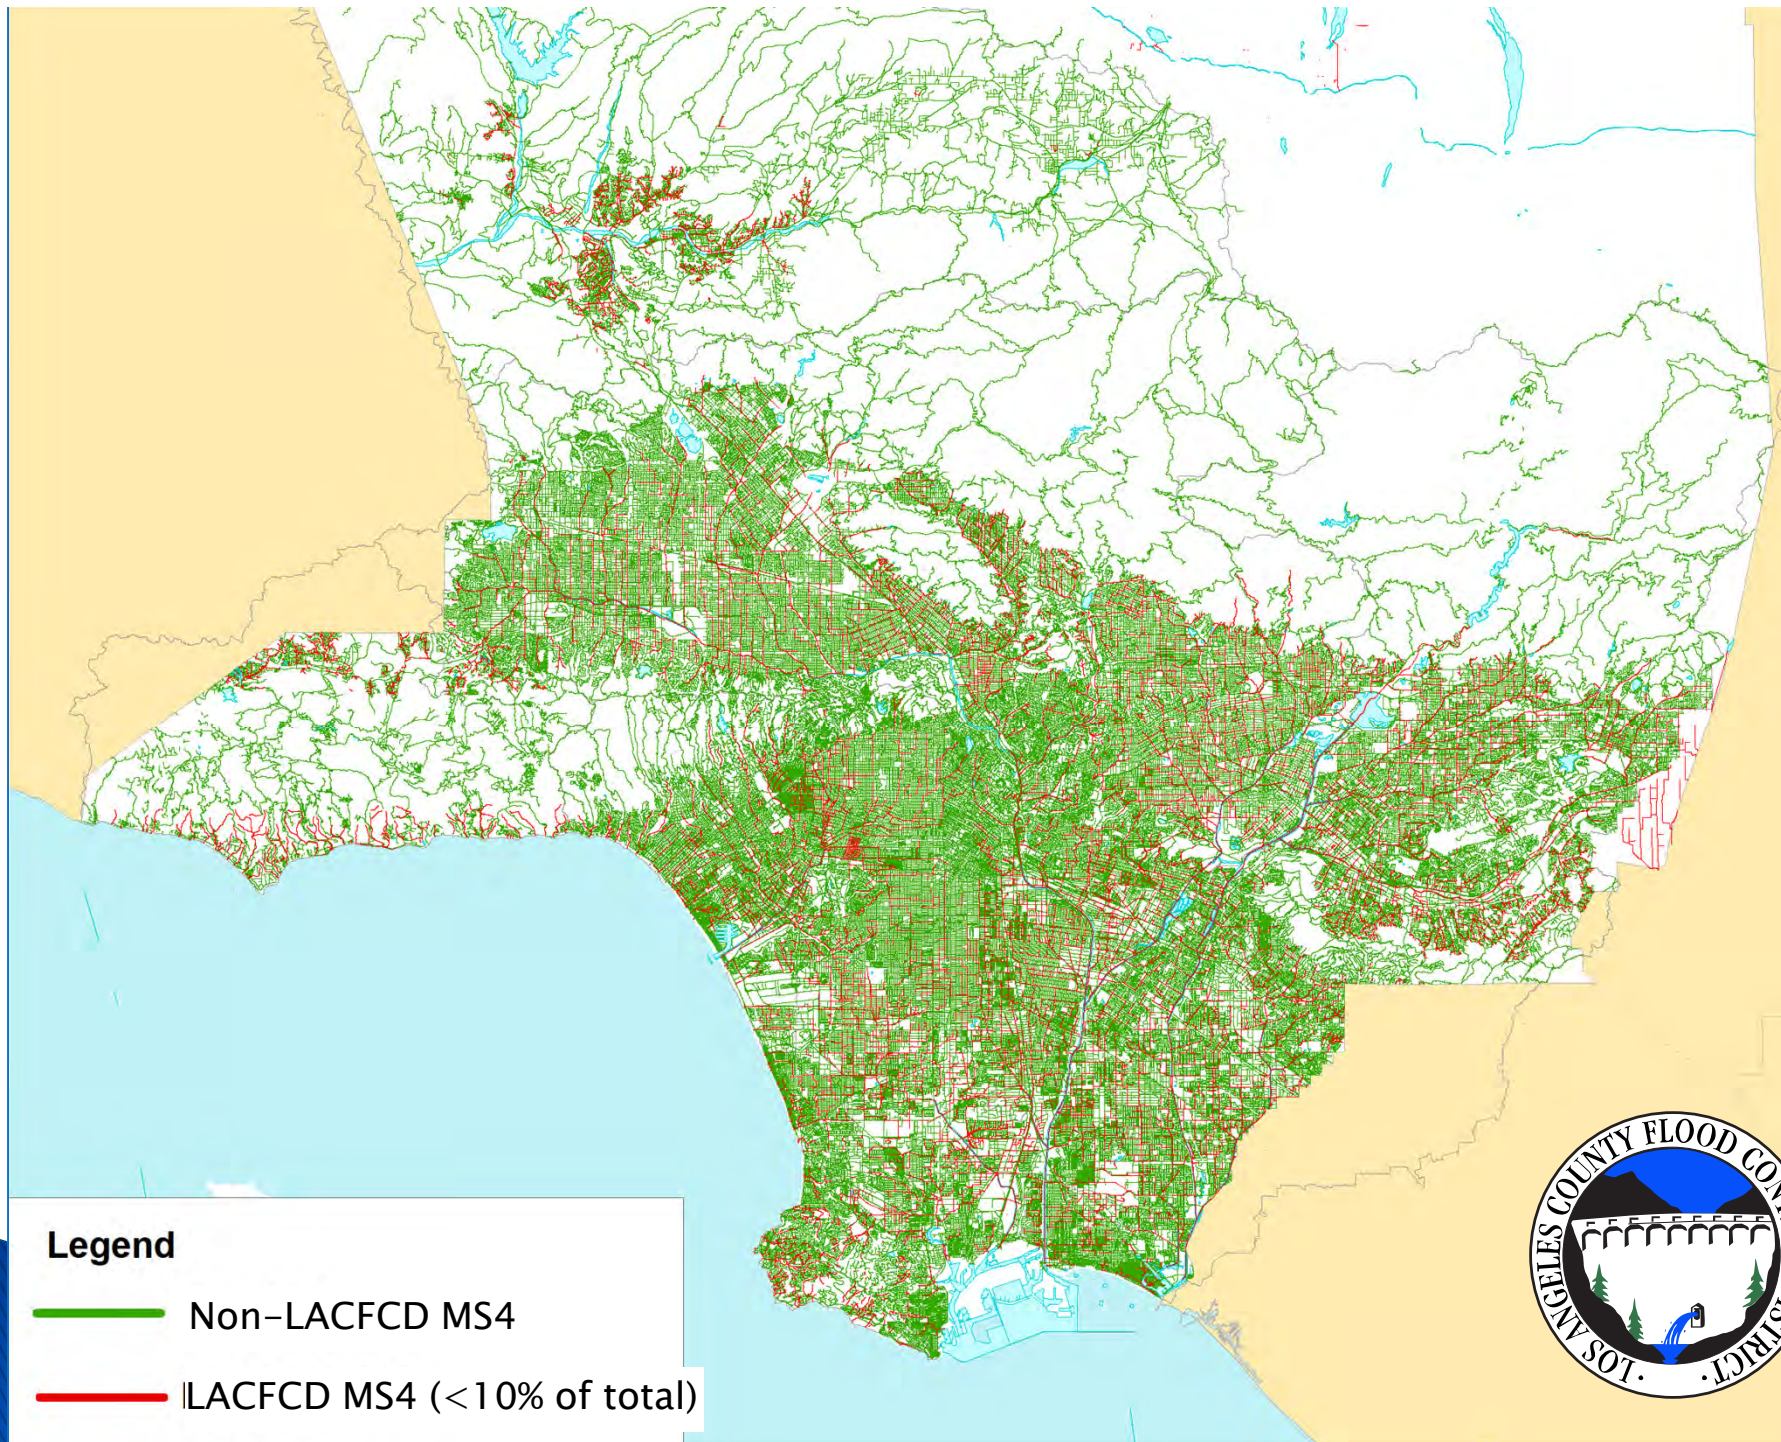

1. Permit Structure
2. Receiving Water Limitations
3. Role in TMDLs
4. Joint Liability
5. Non-stormwater Discharge Prohibitions
6. Monitoring

1. Permit Structure

- ▶ LACFCD should be issued a separate permit
- ▶ LACFCD is different from all other permittees:
 - LACFCD is not a municipality and has no land use authority
 - No control over sources of pollutants put into system
 - Must accept flood and stormwater to protect life and property without regard to constituents in water
 - Maintains backbone of system

Legend

- Non-LACFCD MS4
- IACFCD MS4 (<10% of total)

1. Permit Structure

- ▶ LACFCD Proposed Activities:
 - Continue Mass Emissions and Tributary Monitoring
 - Implement SWMP
 - Coordinate with cities
 - Participate in regional efforts where appropriate

2. Receiving Water Limitations

- ▶ Recent court decision renders compliance impossible
- ▶ Clarify RWL language so compliance is possible
- ▶ TMDLs recognize that standards cannot be met now

3. LACFCD's Role as a Responsible Party in TMDLs

- ▶ Pollutants originate within the watersheds
- ▶ Has no land use authority
- ▶ WLAs should be assigned to entities that generate pollutants or jurisdictions that regulate those entities
- ▶ Los Angeles River Trash TMDL approach

4. Joint Liability

- ▶ Some TMDLs provide that responsible parties are “jointly responsible” or “jointly liable” for meeting WLAs
- ▶ Joint liability discourages collaboration among Permittees

4. Joint Liability

Individual rather than joint liability is more effective because:

- ▶ Creates true accountability
- ▶ Places the emphasis on water quality improvement rather than liability

5. Non-stormwater Discharges

- ▶ Currently allowed into the MS4 by the Regional Board from some entities without meeting water quality standards
- ▶ MS4 Permittees should not be responsible for non-stormwater discharges that do not meet WQS but are allowed into the MS4

6. Monitoring

- ▶ Want to encourage monitoring
- ▶ Different purposes and types of monitoring:
 - Characterize pollutants
 - Identify trends
 - Identify pollutant sources
 - Measure compliance
- ▶ Purpose of regional (mass emissions) monitoring is to characterize pollutants and identify trends

6. Monitoring

- ▶ Need to clarify that regional monitoring is meant to characterize pollutants in the system and identify trends and is not for measuring compliance
- ▶ Failure to specify purpose of monitoring may inhibit willingness to monitor

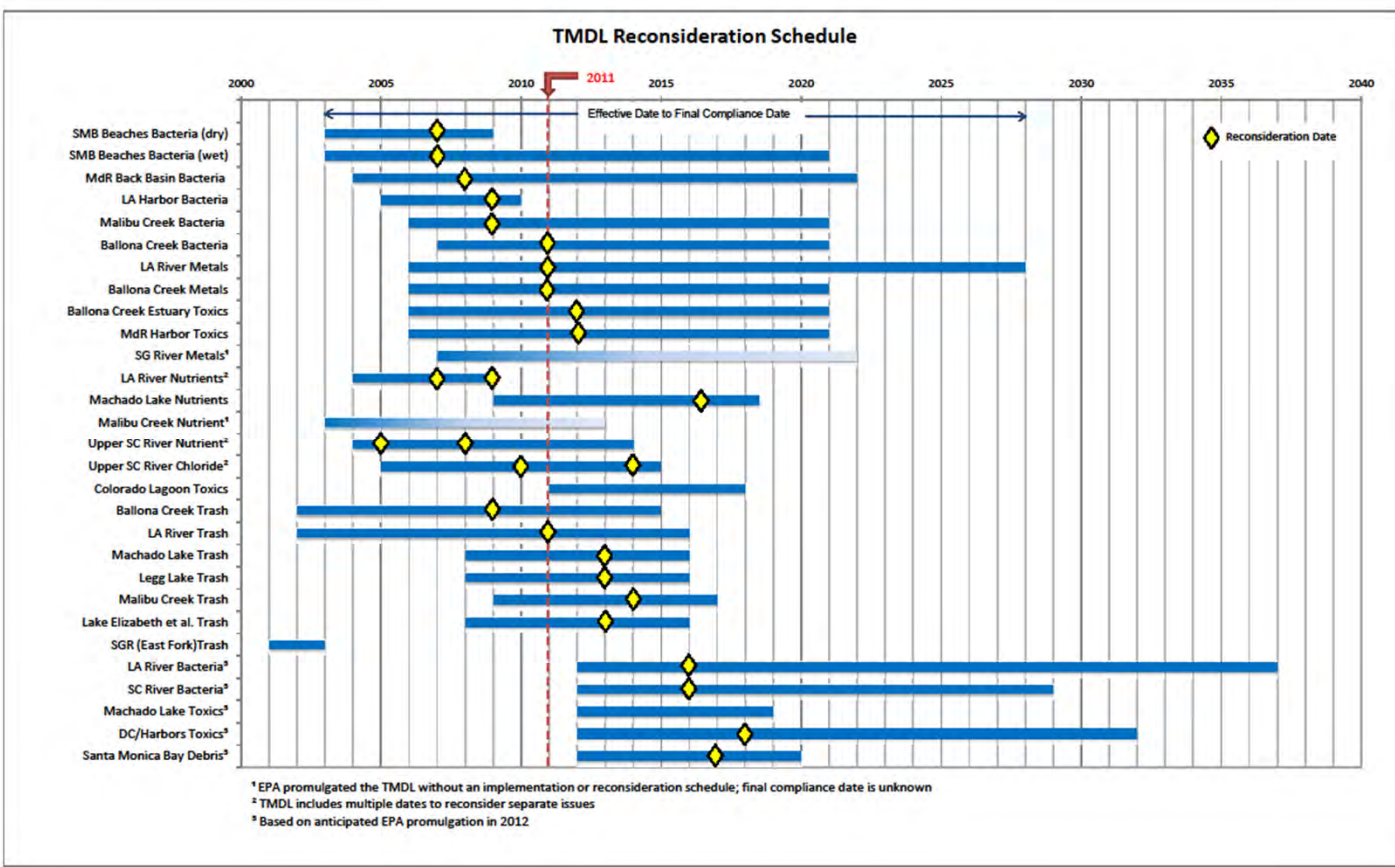

Key Issues for County of Los Angeles

1. TMDL Reconsideration
2. TMDL Incorporation
3. Low Impact Development
4. Support LACFCD positions

1. TMDL Reconsideration

2. TMDL Incorporation

- ▶ TMDL WLAs should be incorporated into the permit as narrative, non-numeric WQBELs
- ▶ NELs should not be used unless compliance can be measured by implementation of reasonable and cost-effective control measures (such as LA River Trash TMDL)

3. Low Impact Development

- ▶ Several permittees have already adopted LID ordinances
- ▶ The permit should be flexible to allow permittees to continue implementing their existing LID programs

4. Support LACFCD positions

- ▶ The County of Los Angeles supports the LACFCD's positions, especially:
 - Receiving Water Limitations
 - Joint Liability
 - Permit Adoption Schedule Concerns

Thank You

CITY OF SIGNAL HILL

2175 Cherry Avenue • Signal Hill, California 90755-3799

Statement before the Los Angeles

Regional Water Quality Control Board

NPDES Permit Workshop - November 10, 2011

By

Steve Myrter, Director of Public Works

City of Signal Hill

The U.S. EPA adopted principals for the restoration of the nation's urban water bodies in the Urban Waters Federal Partnership program in June of this year. A core guiding principle of EPA is to ***"be open and honest, and listening to the communities...recognize their values and seek to understand environmental issues through their eyes. We will work from the bottom up rather than taking a top down, one-size-fits-all approach."***

The Regional Board is being asked by your staff to only issue a system-wide MS4 permit and to deny the Los Angeles County Flood Control District, the Cities of Downey, Long Beach and Signal Hill, in other words, the agencies who filed separate ROWD's, their own applications for individual NPDES permits under the law. We urge you to reject this one-size-fits-all approach of your staff and embrace EPA's guiding principles.

Signal Hill's request for our individual permit is an opportunity for the Board to work with a small community that is taking seriously its responsibility to improve our local water quality and to address the unique circumstances confronting our community. Other cities have chosen to group together for their own reasons and we respect their decisions. We have chosen to apply for our individual MS4 permit for equally valid reasons and would hope that our decision is respected as well.

In June of 2006, Signal Hill submitted an individual ROWD/NPDES Permit application for permit coverage only for our respective jurisdiction. Our application explained how Signal Hill is located in the geographic middle and completely surrounded by the City of Long Beach on all sides. Runoff originates in the upland portions of Signal Hill and flows directly into the City of Long Beach, where our City is proposing to install water quality monitoring stations in order to characterize our runoff. It is important to note that in 1999 the Board issued an individual NPDES permit to the City of Long Beach. Your staff is now recommending issuing a second individual permit to the City of Long Beach.

In response to our June 2006 ROWD application, Regional Board staff concluded in their July 12, 2006 letter that our ROWD/Permit application was "incomplete." Nowhere in the letter did the Executive Officer ever indicate that the Regional Board would refuse to issue an individual permit to Signal Hill. Instead, the Regional Board staff indicated the opposite, that the City was "**proposing some positive changes**" to our NPDES Permit, and that the Board Staff looked "**forward to working out these details with your Staff during the MS4 Permit Reapplication Process.**" (see the July 12, 2006 letter)

The City responded in a timely manner on September 12, 2006 to each of the points raised in the Executive Officer's July 12th letter as to why Signal Hill's ROWD was consistent with the requirements of federal law and why the ROWD satisfied the requirements of federal regulations, including EPA's Interpretative Policy Memorandum. Signal Hill's letter concluded that the City looked forward to working with the Executive Officer to address all relevant issues necessary and looked forward to the issuance of the NPDES Permit for the City of Signal Hill.

Unfortunately, Signal Hill's letter was not responded to over the past five years. During this time, the City of Signal Hill has moved forward to implement new programs designed to insure compliance with our application for our individual NPDES Permit. Signal Hill has worked hard to implement our individual waste load allocation assigned by the Regional Board under the Los Angeles River Trash TMDL. We are pleased to report that our City is ahead of schedule at an 89% trash reduction rate, while the TMDL requires a 60% reduction rate this year.

Signal Hill is a small community, 2.1 square miles in size with a current population of 11,072. Oil was discovered in Signal Hill in 1924 and this discovery ushered in several decades of heavy industry, including well drilling, with oil sumps, tank farms and refining. These industries have left Signal Hill with a legacy of soil contamination and over 1,700 abandoned oil wells, including numerous leaking wells. Signal Hill formed its redevelopment agency in 1978 with the express intent of remediating these environmentally distressed properties. Since 1989, the Agency has

re-abandoned over 92 wells and invested over \$15 million into soil remediation, ground water clean-up and oil well abandonment projects. Over one million barrels of oil are pumped annually in Signal Hill, creating unique issues for our community and the need for an individually tailored storm water programs. The City's historical legacy also dictates the need for an individual MS4 permit, in order to better tailor storm water programs for Signal Hill's unique industrial history and existing industries.

This unique industrial heritage and the problems associated with the City's petroleum and other heavy industries, led Signal Hill to apply for and receive its own stand-alone County Sanitation District. Although the Los Angeles County Sanitation Districts functions as a county-wide system for 77 municipalities, Signal Hill's Sanitation District #29 is a stand-alone entity, with its own board of directors, maintenance staff, budget, permits and fee structure. The application for our individual MS4 Permit is simply another local agency responsibility that Signal Hill has determined is appropriate to address on its own at this time because of the unique runoff issues that confront our community.

Our City Council directed City staff to move ahead on a Storm Water Quality Master Plan, which will be a comprehensive plan for water quality in our community. Signal Hill has worked hard to improve water quality, including the installation of CDS units and 14 trash nets in the Hamilton Bowl. We have installed full capture devices in the majority of our 174 catch basins that drain into the Los Angeles River. We have also implemented SUSMP and LID requirements on dozens of developments, including state of the art infiltration devices on a concrete-batch-plant, which was recently studied by the National Academy of Sciences. We have moved forward implementing new programs, including additional inspections and have budgeted for the installation of two auto sampler monitoring stations this next year. The City is also designing a dry-weather diversion program in order to address dry-weather requirements for the LA River Metals and Bacteria TMDLs.

Issuing an individual permit to Signal Hill will not open up the flood gates to 88 ROWD's as suggested by your staff. Signal Hill's runoff is not co-mingled in some larger MS4 system. Issuing an individual NPDES Permit does not mean that the City of Signal Hill will halt its participation in important watershed and regional efforts to address water quality. Our City Manager has taken the lead in coordinating the 40 cities, Los Angeles County and Caltrans to complete the Special Studies on the Los Angeles River Metals TMDL. These special studies are now into their second of three planned study years, with a total investment of \$2.1 million from the 42 public agencies. We participated in the organization and administration of the coordinated monitoring plan and we participate in the County's public education program.

Signal Hill is also leading a seven member group of cities in developing the Implementation Plan for the Los Cerritos Channel Metals TMDL, a TMDL adopted by the U.S. EPA in 2010. In addition, we are participating in Jurisdictional Group One Group for the LA River Metals TMDL. Your staff is involved in all of these efforts. Your staff, as well as our neighboring cities, can attest that Signal Hill's is not only a willing participant in group planning efforts, but a leader of regional and sub-regional efforts to improve water quality.

The LAR Metals TMDL was adopted by the Regional Board in 2006 and assigned group waste load allocations to the Jurisdictional Groups. We commented to the Regional Board at the time that this requirement would have unintended consequences and would essentially make one city (or a small subset of cities) responsible for all of the cities in their Jurisdictional Group. This implementation scheme, combined with the Board's current position that the existing permit imposes "Joint and Several Liability" on the permittees, has resulted in Signal Hill concluding that it can ill afford to continue to participate in the larger system-wide permit. Adding to Signal Hill's concerns with the Regional Board's position on joint and several liability is the recent Ninth Circuit decision in the NRDC v. County of Los Angeles case. The Board stated that your position is that compliance with the 2001 Permit's Iterative process does not constitute compliance with the Receiving Water limitation requirements in the 2001 Permit.

We recognize that the Board has the authority to issue large jurisdictional group permits where these larger permits have been requested by the participating local agencies, it is clear from the federal regulations that Signal Hill cannot be forced into the large multi-jurisdictional permit against its will. The Regional Board staff has cited in the past what they believe are the relevant sections of the federal codes to argue that the Board has the discretion as the permitting authority to determine whether to issue the system-wide or jurisdiction-wide permit. This assertion is incorrect, since it is clear from a plain reading of the federal codes that cities have the express ability to submit individual applications in conjunction with other MS4 operators, or alternatively, submit a **"distinct permit application which only covers discharges from the"** individual city system in question.

40 CFR Section 122.26(a)(5) reads as follows:

(iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must:

(A) Participate in a permit application (to be a permittee or to be co-permittee) with one or more other operators of discharges from the large or medium municipal storm sewer system which covers all, or a

portion of all, discharges from the municipal separate storm sewer system; (or)

(B) Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for which the operator is responsible.

Further, the federal codes make it clear that a city has the right to apply for and obtain their own individual NPDES Permit under Sections 122.26(a)(3)(iii) and 122.33. The individual permit requested to be issued would be a ***“distinct permit application which covers the discharges from the municipal separate storm water sewers for which the operator is responsible.”*** (Section 122.26(a)(3)(iii)(B)). The federal codes are also clear that small cities, with populations of under 100,000 residents, have the right to be included in a system-wide permit, if they so choose, or they may apply for their own individual permit. (Section 122.33) In particular, for small MS4 Permittees (which would include the City of Signal Hill), the regulations are clear that such cities cannot be forced into a joint system-wide NPDES permit.

Section 122.30-122.37 of the federal regulations identify the permitting and application requirements for small MS4 dischargers. Section 122.33 is entitled ***“If I am an operator of a regulated small MS4, how do I apply for an NPDES Permit and when do I have to apply?”*** This section identifies the various permitting options available to a small city, including specifically allowing small cities to obtain their own individual permits, even if they are part of a large or medium size MS4 system.

We understand that the Regional Board intends to incorporate numeric limits from the various TMDLs into the upcoming permit. The Regional Board also intends to hold cities responsible for strictly complying with numeric water quality standards and numeric water quality based effluent limits in the upcoming MS4 permits. We believe that these policies and permit language will result in a watershed of litigation and enforcement activity in the 2012 permit.

As mentioned, the Regional Board's decision to back away from the iterative BMP process and its position on “joint and several liability” has already led to litigation in the region under the 2001 permit. For example, the NRDC and the Baykeeper are suing the County of Los Angeles for violations of water quality standards for the Los Angeles and San Gabriel Rivers based on monitoring station data. The County in turn filed government tort claims with over 50 cities in the County and has initiated litigation against the Cities of Downey and Los Angeles, who refused to sign tolling agreements with the County. Further, the tolling agreements that have been signed will only likely delay additional massive County-wide stormwater litigation until the final outcome of the NRDC litigation. The NRDC v. County litigation, and the County's decision to file

litigation against two other cities is just the beginning of the "watershed of litigation" that many predicted and largely resulting from this Board's decision to pull back from the iterative process and to insist on strict compliance with water quality standards. It is also the result of a large, multi-jurisdictional permit that appears to seek to impose joint and several liability on the permittees.

The Regional Board's policies have raised the issue of what approach should local governments follow in achieving compliance with water quality standards and permit requirements. Signal Hill does not choose to be included in the system-wide permit for a variety of reason, including its unique discharges, the prospect of being saddled with another's liability or being dragged into a massive County-wide "free for all" stormwater lawsuit as a result of the Board's policies on joint and several liability and the iterative process, the unfair grouped waste load allocations, and the proposed incorporation of strict numeric limits from the various TMDLs into the upcoming permit, enforced by the receiving waters limitations requirement.

Signal Hill believes that we must monitor and characterize our stormwater and urban runoff in order to design programs that address our particular impairments. The "top down" "one-size fits all" approach of a system-wide permit breaks apart as it cannot adequately address the individual circumstances of Signal Hill. The characteristics of water quality vary based on the mix of industrial, commercial and residential uses in our community, our history of brownfields, our proximity to major sources of airborne pollutants, the successful efforts of our city to regulate runoff and the availability of storm water infrastructure in our community to address water pollution, as well as other factors unique to Signal Hill.

Like the County of Los Angeles, which has applied to withdraw from their 2006 ROWD and now seeks an individual MS4 permit for the Los Angeles County Flood Control District, Signal Hill looks forward to working with you, the City of Long Beach and the Flood Control District in a collaborative process during the upcoming Permit renewal process and to obtaining our individual NPDES Permit.

NPDES Workshop Signal Hill's Request for an Individual MS4 Permit

By

Steve Myrter, Director of Public Works

November 10, 2011

The bottom portion of the slide features a decorative graphic of several concentric circles, resembling ripples in water, rendered in a lighter shade of blue against the dark blue background.

Presentation Outline

- I. City of Signal Hill's Case for an Individual MS4 Permit
- II. City's Unique Factors that Warrant an Individual Permit
- III. City's Actions Taken In Anticipation of Receiving an Individual Permit
- IV. Concerns with a System-wide MS4 Permit

“be open and honest, and listening to communities... recognize their values and seek to understand environmental issues through their eyes. We will work from the bottom up rather than taking a top down, one-size fits all approach.”

U.S. EPA's Adopted Principals for the Restoration of the Nation's Urban Water Bodies – June 24, 2011

Signal Hill's Individual Permit

- Opportunity for the Board to work with a small community that is taking seriously its responsibilities to improve water quality, while addressing our unique circumstances
 - Other cities have grouped together for their own reasons and we respect their decisions
 - We would hope that our decision is respected as well
- 

Signal Hill's Individual Permit

- Signal Hill submitted our ROWD application in June of 2006
- The Executive Officer replied on July 12, 2006 that Signal Hill was “***proposing some positive changes***” and that staff looked “***forward to working out these details with your Staff during the MS4 Permit Reapplication Process.***”

Signal Hill's Individual Permit

- Regional Board Staff responds five years later (July 13, 2011)
- Absent any response from the Board, Signal Hill has worked to design and implement new programs to insure compliance with our application for our individual permit
- Signal Hill is at 89% trash reduction rate, while the TMDL requires 60% this year.

City's Unique Factors

- Signal Hill is a small 2.1 square mile community, with a population of 11,072
- Discovery of oil in 1924 ushered in several decades of heavy industry, including oil well drilling, oil pumps, pipeline construction, tank farms and refineries
- Oil field covers 70% of the community
- Because of oil production and legacy of soil contamination, 1,700 abandoned wells, including numerous leaking wells
- Redevelopment Agency formed in 1978 to deal with these legacy issues
- Agency has invested \$15 million in soil remediation, ground water clean-up and 92 well re-abandonments
- Over 600 active and reserve wells - 1 million barrels of production

City's Unique Factors

- Oil Legacy creates need for individual MS4 Permit and individually tailored storm water programs
- Signal Hill applied for an individual stand alone County Sanitation District to deal with this legacy – Sanitation District 29
- Although part of a system-wide Districts, Sanitation District 29 has its own board, maintenance staff, budget, permits and fee structure
- Individual permit will be more responsive to unique issues confronting Signal Hill

City's Unique Factors

- Signal Hill is a hill that rises 300 feet above the City of Long Beach
- Signal Hill is surrounded on all sides by the City of Long Beach
- Runoff originates in the upper hill portions of the community and drains into the Los Angeles River and the Los Cerritos Channel
- Signal Hill drains through the City of Long Beach through County FCD facilities (two retention basins and pipes)
- Regional Board is planning on issuing an individual permit to the City of Long Beach

Signal's Hill Actions

(Based on Regional Board's 2006 Letter)

- City Council directed preparation of Storm Water Quality Master Plan
- Signal Hill has installed CDS units, 14 trash nets on the Hamilton Bowl, completed the installation trash capture devices on our 134 catch basins
- Implemented SUSMP and LID on dozens of developments
- National Academy of Sciences studied "state of the art" runoff requirements at recently constructed Signal Hill concrete batch plant

Signal's Hill Actions

- City has submitted monitoring plan with our ROWD
- City has initiated its own monitoring program
 - Budgeted installation of two auto-samplers
 - Additional Samplers to be installed on drains to Los Angeles River and Los Cerritos Channel
- City is designing dry-weather diversion program for LA River Metals and Bacteria TMDL

Signal Hill and Regional Efforts

- City will continue to participate in regional efforts, even with individual permit
 - Leading LA River Metals TMDL Special Studies
 - Leading Los Cerritos Channel Metals TMDL Implementation Plan
 - Participates in the LA River CMP
 - Participates in County-wide Public Outreach Effort

Major Issues With the System-Wide Permit

- LAR Metals TMDL assigns “group waste load allocations” to Jurisdictional Groups
- Board’s current position on “Joint and Several Liability” has the practical effect of making one city responsible for all cities
- Board’s position is that compliance with the “iterative process” does not constitute compliance with Receiving Waters limitations requirement in the 2001 Permit (see 9th Circuit ruling in NRDC v. Los Angeles County)

Major Concerns with the System- Wide Permit

- Board has authority to issue system-wide permits when requested by the cities
 - Federal regulations prohibit the Regional Board from forcing a system-wide permit on cities.
 - Cities are allowed to participate with one or more operators or
 - ***“Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for which the operator is responsible***
- (40 CFR Section 122.26(a)(5)(b))

Concerns with the System-Wide Permit

- Federal codes allow for ***“a distinct permit application which covers the discharges from municipal separate storm water sewers for which the operator is responsible”*** (Section 122.26(a)(3)(iii)(B))
- Cities under 100,000 in population have the right to choose to be included in a system-wide permit or to apply for an individual permit

Concerns with the System-Wide Permit

- Federal regulations identify the permit and application process for small MS4 dischargers
- Section 122.33 outlines the application process, permitting options and specifically allows small cities to obtain individual permits, even if they are part of a large or medium sized MS4 system

Numeric Limits

- Regional Board appears to be headed toward incorporating numeric limits from the TMDLs into the MS4 permits
 - Regional Board appears to be headed toward holding cities strictly responsible for compliance with water quality standards and effluent limits
- 

Joint and Several Liability

- Joint and Several Liability, Receiving Waters Limitations language in the permit and Board's lack of support of BMPs and the iterative process is the beginning of the “watershed of litigation” that many predicted
 - NRDC and Baykeeper v. County of Los Angeles
 - County filing of tort claims with 50 cities
 - County v. Cities of Downey and Los Angeles
 - Recent 9th Circuit Court Ruling

Conclusion

- Signal Hill does not choose to be included in the system-wide permit:
 - City has unique legacy issues, unique facilities, unique topography which require specific programs
 - City is proposing a robust monitoring program
 - Does not want to be dragged into massive County-wide litigation “free for all”
 - City does not want the “top down” “one-size-fits-all” system-wide permit being proposed
 - City looks forward to working the Board, the City of Long Beach and the Flood Control District in a collaborative process to obtain our individual permit

LA PERMIT GROUP

LA County MS4 Permit Development Comments

LA Permit Group Structure

LA Permit Group

*(Heather Maloney,
City of Monrovia)*

Negotiating Committee

*Heather Maloney, LA River • Heather Merenda, Santa Clara River
John Dettle, Santa Monica Bay • John Hunter, LA River
Joe Bellomo, Malibu Creek/Rural Watersheds • Patricia Elkins, Dominguez Channel
Rene Bobadilla, LA/San Gabriel River • Ray Tahir, San Gabriel River*

Technical Sub-Groups

LID/SUSMP

(Kosta Kaporis, City of Los Angeles)

Monitoring

(John Dettle, City of Torrance)

Reporting

(Lisa Bugrova, City of San Dimas)

TMDLs

(Heather Merenda, City of Santa Clarita)

Permit Development

Additional time should be allowed to develop the permit

- * Takes time to organize 80+ municipalities
- * 28 TMDLs
 - * EPA TMDLs
 - * Many are still in draft
 - * Some will not be adopted until 2013
- * City approval process
- * Funding Challenges
- * Extend permit adoption

Permit Structure

Flexibility is Key

- * Flexibility should be preserved to reflect the vast varying nature of LA County's sub-regions and TMDLs
- * Permit should be based on existing resources and sound science

Sub-Group Discussion Items

- * TMDLs
- * Development Programs
- * Monitoring
- * Reporting

TMDLs

Iterative Approach to TMDLs, WQBELs, and Waste Load Allocations

- * Want to ensure that iterative approach is retained
- * Revised receiving water limitation language to ensure retention and inclusion of the iterative process;
- * WLA attainment through best management practices;
- * Detailed, watershed based implementation plans to support and inform the iterative approach;
- * Integrated watershed monitoring will also support this approach

Development Programs

Development Programs

- * Development Programs should be based on the goal of improving stormwater quality not the specific methodologies
- * Development Programs should be tailored to the unique characteristics of LA County
 - * Development Programs should be based on a design storm
 - * Municipality should be able to prioritize BMPs based on unique characteristics and TMDLs

Monitoring

Integrated Watershed Monitoring

- * Permittees recognize benefits of having Integrated Watershed Monitoring Plans (IWMP) for all TMDLs within each Watershed
 - * 84 cities and 28 TMDLS results in too many plans and annual reports for Permittees and Board to manage
 - * IWMP eliminate redundancy and data gaps and give the Big Picture for Watershed Health
 - * The purpose of the IWMP should be to focus on problem identification and BMP selection and not trigger enforcement action

Reporting

Reporting

- * Current Permit Reporting should be streamlined
- * Online Reporting System for Annual Report Submission such as SMARTS
- * Once a milestone or requirement is documented as met, the item should be removed from report requirements
- * Questions in the Annual Report should correspond directly to language in the Permit

Conclusion

- * Extend permit development timeline
- * Economically reasonable
- * Create flexibility
- * Coordinate Monitoring
- * Provide an Iterative Process
- * Streamline reporting
- * Tailor Development Programs to the unique characteristics of LA County

Los Angeles MS4 Permit Workshop

November 10, 2011

OVERVIEW

Support Single Permit with WMA specifics

- Nature of LA County MS4
- Watershed-based TMDLs
- Storm water Pollution Abatement Fee (AB 2554)
- On-line survey

PERMIT REQUIREMENTS: CURRENT PERMIT

- Discharge Prohibitions – Part 1
- Receiving Water Limitations – Part 2
- Compliance Monitoring (Mass Emissions Stations)

PERMIT REQUIREMENTS: SUGGESTIONS

- Discharge Prohibitions/Receiving Water Limitations – Leave As Is
 - Successful provisions legally upheld over time
 - State Court
 - Federal Court
 - Required by CWA §§1313, 1342(p); 40 C.F.R. §122.44(d)(1)
 - Consistent with Regional Board's longstanding position

PERMIT REQUIREMENTS: SUGGESTIONS

- Compliance Monitoring – Improve to provide clarity
 - Retain Mass Emissions Stations/Receiving Water Monitoring
 - Requested by the dischargers
 - Successfully employed to determine compliance
 - Provides clarity on sources of pollution
 - Add End of Pipe Monitoring
 - Each discharger in each sub-watershed should provide regular end of pipe monitoring to coordinate with samples collected at MES
 - Will help provide additional clarity to permittees on the sources of pollution
 - See Ventura MS4 Permit

PERMIT REQUIREMENTS: SUGGESTIONS

- Regional Board should not implement “action levels” for WQS compliance – that approach would be inconsistent with the longstanding position that 2.1 and 2.2 are stand alone, distinct requirements
- “Action levels” may be considered for interim goals in TMDLs where consistent with the TMDL and included in the permit.

LOW IMPACT DEVELOPMENT

Consensus on the superiority of LID practices

Ocean Protection Council:

“LID is a practicable and superior approach . . . to minimize and mitigate increases in runoff and runoff pollutants.” (LID Resolution, 2008)

U.S. Environmental Protection Agency:

“Implementing integrated LID practices can result in enhanced environmental performance while at the same time reducing development costs when compared to traditional stormwater management approaches.”

(LID Cost Report, 2007)

LOW IMPACT DEVELOPMENT

Necessity for Clear Implementation of LID

Los Angeles Regional Board:

“The Implementation of LID techniques across the United States and Canada has demonstrated that . . . LID techniques results in more benefits than single purpose stormwater and flood control infrastructure . . . There is a growing acceptance by stormwater professionals and local governments to integrate LID strategies that limit impervious area, and associated onsite retention criteria into . . . MS4 permits.”
(Ventura County MS4 Permit, July 2010)

LOW IMPACT DEVELOPMENT

Necessity for Clear Implementation of LID

U.S. Environmental Protection Agency:

“EPA’s primary objective for incorporating LID into renewed MS4 permits ... is that the permit must include clear, measurable, enforceable provisions for implementation of LID.... [P]ermit[s] should [also] include a clearly defined, enforceable process for requiring off-site mitigation for projects where use of LID design elements is infeasible.”

(Letter to SF RWQCB re: MS4 Permit, April 2009)

POLLUTION REDUCTION

	Best-performing conventional BMPS	LID	Best-performing conventional BMPS	LID
Suspended solids	80.6%	99.5%	75.4%	99.3%
Copper	78.2%	98.0%	69.1%	96.7%
Zinc	84.3%	98.9%	78.1%	98.8%
Phosphorus	69.1%	98.8%	70.7%	98.6%

POLLUTION REDUCTION

Biofiltration

Full biofiltration systems are likely to attenuate only:

- 57 percent of TSS
- 80 percent of Tcu
- 62 percent of TZn
- 78 percent of TP
- 55 to 65 percent of total Kjeldahl nitrogen / 20 percent of nitrate

(Richard Horner, Assessment of the San Francisco Bay MRP, 2009; BASMAA, Draft Model Bioretention Specifications, Dec. 2010)

POLLUTION REDUCTION

Permit Concerns: Biofiltration

Draft Core Permit Requirements (Oct. 27, 2011)

“If it is not technically feasible to retain on-site the entire storm water runoff volume, the project must be designed and operated to biofiltrate 1.5 times the storm water runoff volume that cannot be retained on-site.”

Ventura MS4 Permit

“. . . shall achieve 1.5 times the . . . pollutant load reduction as would have been achieved by on-site retention.”

POLLUTION REDUCTION

Permit Concerns: Biofiltration

“ . . . the project must be designed and operated to biofiltrate 1.5 times the storm water runoff volume. . . . ”

U.S. Environmental Protection Agency:

“[P]ermit[s] should [also] include a clearly defined, enforceable process for requiring off-site mitigation. . . . ”
(Letter to SF RWQCB re MS4 Permit, April 2009)

COST OF LID

LID is fiscally and environmentally beneficial

U.S. Environmental Protection Agency:

“in the vast majority of cases, significant savings were realized due to reduced costs” as a result of LID.

(LID Costs Study, 2007)

ECONorthwest:

No staff in surveyed jurisdictions had “observed that developers were choosing to invest in greenfield projects over redevelopment projects because of [LID stormwater] standards.”

(Managing Stormwater in Redevelopment and Greenfield Report, 2011)

EXISTING BUILT ENVIRONMENT

Retrofit Programs:

BMP PERFORMANCE STANDARDS

“Each Permittee shall require that treatment control BMPs...be designed, at a minimum, to achieve the BMP performance criteria for storm water pollutants likely to be discharged as identified in Attachment ‘C’...”

- Order No. R4-2010-0108, page 37

ATTACHMENT C
Treatment BMP Performance Standards

Effluent Concentrations as Median Values

BMP Category	Total Suspended Solids mg/L	Total Nitrate-Nitrogen mg/L	Total Copper, ug/L	Total Lead, ug/L	Total Zinc, ug/L
Detention Pond	27	0.48	15.9	14.6	58.7
Wet Pond	10	0.2	5.8	3.4	21.6
Wetland Basin	13	0.13	3.3	2.5	29.2
Biofilter	18	0.36	9.6	5.4	27.9
Media Filter	11	0.66	7.6	2.6	32.2
Hydrodynamic Device	23	0.29	11.8	5	75.1

Expected BMP pollutant removal performance for effluent quality was developed from the WERF-ASCE/ U.S. EPA International BMP Database, 2007.

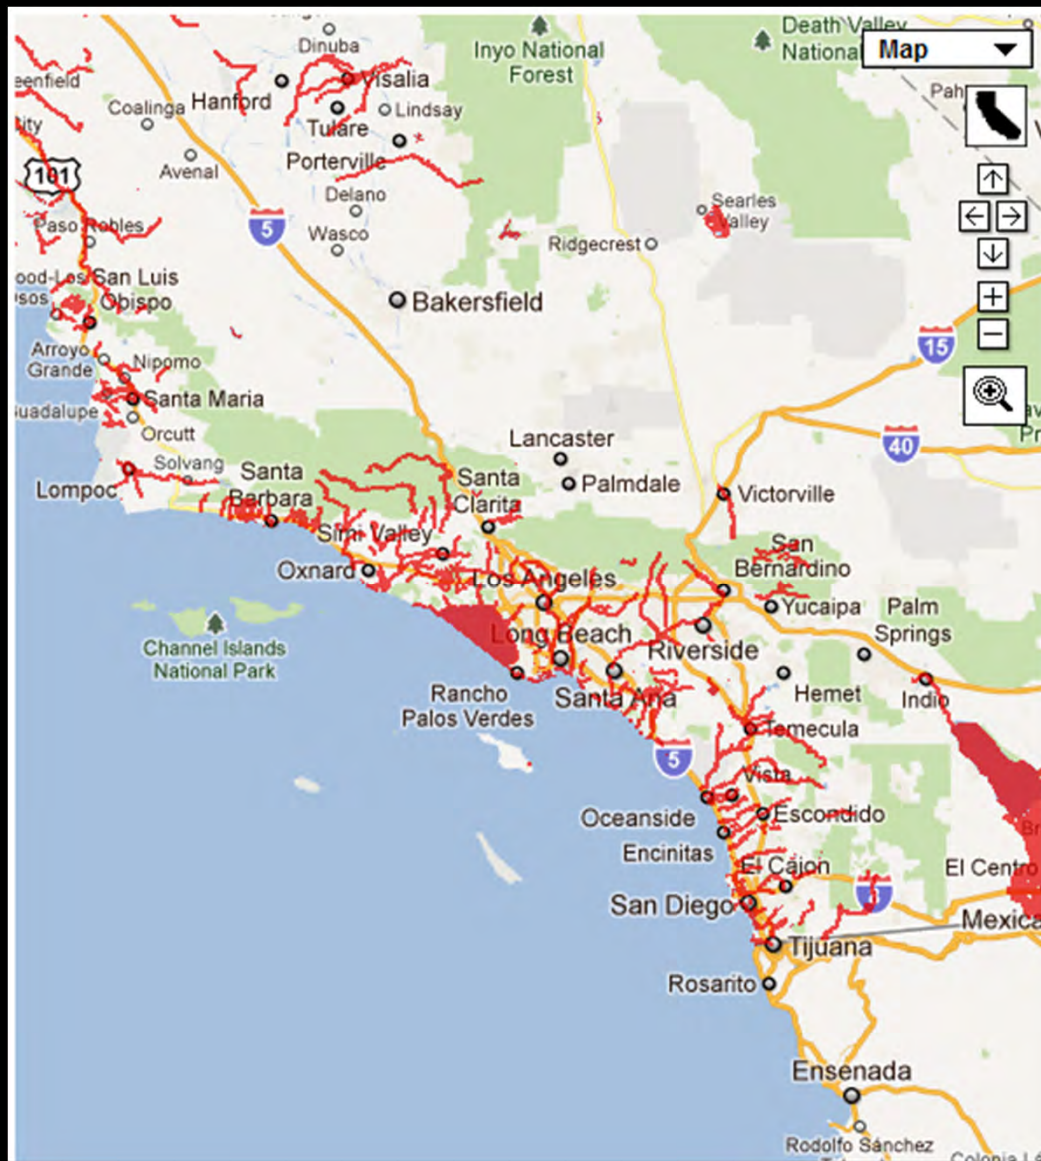

See Part 3.A.3 (Storm Water Quality Management Program Implementation- General Requirements).

- Los Angeles Area Lakes TMDLs (in development by USEPA)
- Santa Monica Bay DDT and PCBs TMDL (in development by USEPA)

WASTELOAD ALLOCATIONS (WLAs)

“Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.”

- 40 CFR § 122.44(d)(4)(vii)(B)

VENTURA COUNTY MS4

“This Order incorporates applicable WLAs that have been adopted by the Regional Water Board and have been approved by the OAL and the U.S.EPA.”

“Part 5 of this Order incorporates provisions to assure that Ventura County MS4 Permittees comply with WLAs and other requirements of TMDLs....”

“Each Permittee shall attain the stormwater WLAs incorporated into this Order....”

-Order No. R4-2010-0108, pages 14 & 88

KEY MONITORING ELEMENTS

- Outfall
- Receiving Water
 - Mass Emission
 - Other
- Bioassessment
- Toxicity
- Beach
- TMDL

BIOASSESSMENT

- Track trends from year to year
- At least one reference and six permanent sites in each watershed
- Minimum annual monitoring at each location

TOXICITY

- Outfalls and receiving waters
- Acute and Chronic
- Species sensitivity screening
- Minimum of two wet weather and two dry weather

BEACH MONITORING

- Beach bacteria monitoring on a weekly, year-round basis at AB 411 beaches
- Coordinate with other monitoring agencies to minimize costs

TMDLs

- Must include all monitoring requirements discussed in adopted TMDLs

MS4 Permit Workshop November 10, 2011

Shahram Kharaghani, PhD, P.E., BCEE
Program Manager

City of Los Angeles
Department of Public Works
Bureau of Sanitation
Watershed Protection Division

Outline

- MS4 Permit
- Los Angeles City Green Initiatives
- Proposition O
- TMDLs Implementation Plans
- Funding

MS4 Permit

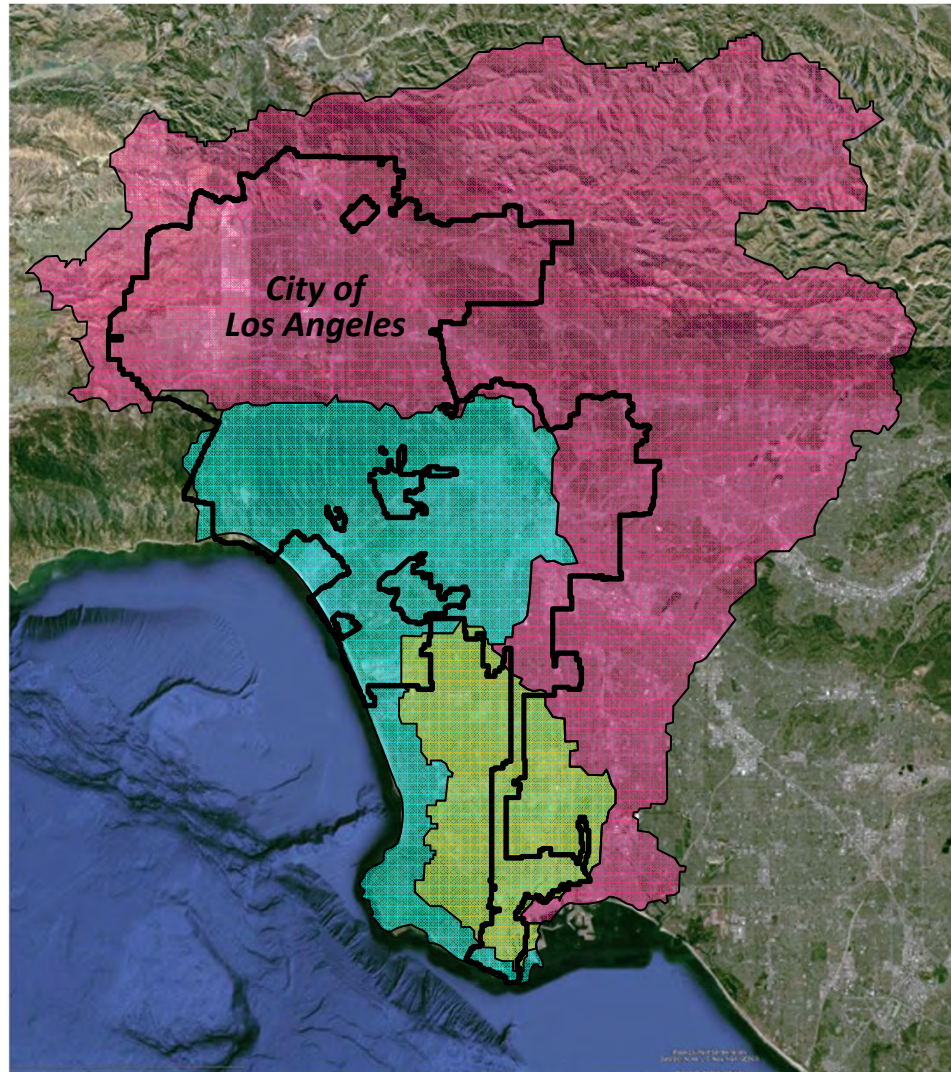

- Single Permit
- Watershed Based
- Programs Flexibility
 - Public Outreach
 - Inspection
 - Construction
 - Development (LID)
 - Monitoring and Reporting

Watersheds

The City of LA contributes to four major watersheds

- Los Angeles River
- Santa Monica Bay
- Ballona Creek
- Dominguez Channel

Public Education

- Winner 2010 NACWA E-Media Program Award
- Winner 2010 CASQA Media Award
- Twitter, e-newsletter, blog, YouTube
- LA program materials used
- www.LAstormwater.org; 250-page web site receives over 100,000 hits monthly
- Educational Materials
- Public forums, schools

Public Agency Activities

- Conduct site audits at all 202 City yards/facilities for SWPPPs
- Meet regularly with City Departments to maintain awareness of stormwater related issues
- Provide training to City Staff on new general construction permit - QSP/QSD

Green Initiatives

- **Manuals** – guidance standards
- **Green Streets** - Converting public right-of-way or parkway to open space for multi-benefit uses
- **Green Standards** – institutionalizes, applies to public and private
- **LID** – land developments and re-developments
- **Rainwater Harvesting** – capture and use
- **Water Quality Matrix** – Approved by Health Department
- **Stream Protection** – Natural cleaning

Green Streets Master List Database

Green Infrastructure Projects

No.	Project Title	Project Description	BMP1	BMP2	BMP3	BMP4	BMP5	CD	Est. Const. Cost	Funding Source/Secured \$ Amount	
Green Street											
1	6th Street Green Corridor Project	An innovative approach to greening in the heavily-impacted urban environment, the creation of a green corridor along 6th Street in the economically disadvantaged Los Angeles community of Boyle Heights will reduce air pollution, water pollution and the urban heat island effect, while simultaneously increasing pedestrian and bicycle safety for schoolchildren, enhancing the aesthetic experience of the neighborhood and improving local quality of life. The project includes the addition of 55 street trees as well as four rain gardens at crosswalk curb extensions that will capture and filter stormwater before it enters the groundwater system. Having a traffic calming effect, the curb extensions will also reduce vehicular speeds, significantly improving area safety.	Infiltration System (Swale)	Permeable Paving	Deceleration Planters	Drought Tolerant Plantings			14	\$127,500	
2	87th and Figueroa St Project	Project is located a low-income and densely populated portion in Council District 8 of City of Los Angeles. Area is a strip of City owned land that runs between Figueroa and 110 FWY on-ramp from Manchester to W. 87th St. Nearby elementary school is located about 1000 ft away from the project site. Project proposes construction of a safe and maintenance pedestrian path of travel that will enhance direct pedestrian access as well as stormwater from the adjacent areas. Proposed elements include: infiltration swales with sub-drains, permeable paving, vandal-resistant concrete bollard lighting, planting of native shrubby trees, an 11 ft wide tree well and a curble twice at parking edge.	Infiltration System (Swale)	Permeable Paving	Canopy Trees	Drought Tolerant Plantings	Tree Wells		8	\$750,000	
3	Alameda Street (Spring Street Arterial, Phase V (North Spring from Manager Street to Whittard Street))								\$1,517,000		
4	Balboa Blvd and San Fernando Road Intersection Greening Improvement	This project will provide two left turn lanes on Balboa Blvd to facilitate left turn demand onto Balboa Road, and create two right turn lanes on Balboa Road at San Fernando Road to facilitate the right turn demand. Elements could include measures such as canopy trees, infiltration swales, drought tolerant plantings, and permeable paving.	Infiltration System (Swale)	Permeable Paving	Canopy Trees	Drought Tolerant Plantings		12	\$750,000		
5	Baldosa Creek Greenway starting at Cochran Avenue	Baldosa Creek Greenway starting at Cochran Avenue will be three miles along Baldosa Creek and the BMPs will be vegetated swales with walkways, bike path, native vegetation to capture runoff from streets and small storm drains along the street crossings.	Infiltration System (Swale)	Permeable Paving	Deceleration Planters	Stormwater Detention	Drought Tolerant Plantings			BOS	
6	Burbank Blvd. between Lankershim Blvd and Class Ave	This project will transform Burbank Blvd. (between Lankershim Blvd. and Class Ave.) into a green street through the planting of green solutions for stormwater management and aesthetic improvements. Elements of the project include measures such as flowering canopy trees, planters, infiltration swales, drought tolerant plantings, and permeable paving.	Infiltration System (Swale)	Permeable Paving	Deceleration Planters	Canopy Trees	Drought Tolerant Plantings		\$8,000,000		
7	Cabrillo Paved Walkway/Bike Path Greening and Infiltration	The project, located in Palmdale City, will convert a "paper street" into a multipathway graded to direct flow into bioswales & tree wells for infiltration. Other elements include installation of mesh collector at stormwater inlets and smart irrigation system.	Bioswales	Tree Wells	Trash Collector	Smart Irrigation System		8	\$4,440,000	Prop Of \$1,337,886	

Green Street Standard Plans

In the summer of 2010, the City of Los Angeles became the first large city, and possibly the first city nationwide, to adopt Green Streets Standard Plans. These Green Street Standard Plans are City approved construction details for Green Street elements that incorporate stormwater BMPs into the pre-approved designs

Green Streets Standard Plans

Green Street Standards

- [S-480-0](#): General requirements for Green Streets
- [S-481-0](#): Parkway swale in major/secondary highways
- [S-482-0](#): Parkway swale in local/collector streets
- [S-483-0](#): Parkway swale with no street parking
- [S-484-0](#): Vegetated Stormwater Curb Extension (VSCE)
- [S-485-0](#): Interlocking pavers for vehicular alleys
- [S-486-0](#): Interlocking pavers for pedestrian alleys

*Riverdale Ave –
Vegetated Stormwater Curb Extension (VSCE)*

Hope St – Parkway Swale

Low Impact Development (LID)

- Incorporating LID Strategies and Techniques into stormwater management
- Developed an LID ordinance for development and redevelopments to capture, infiltrate and use the first $\frac{3}{4}$ of rain on site

Treats Polluted Urban Runoff:

Nearly 40% of the County's needs for cleaning polluted runoff could be met by LID projects on existing public lands.

Community Conservancy Imp. Mar '08

Increases Water Supply:

LID projects in L.A. County could save 41,000—83,000 AF/year of imported water (groundwater recharge).

NRDC, August 2008

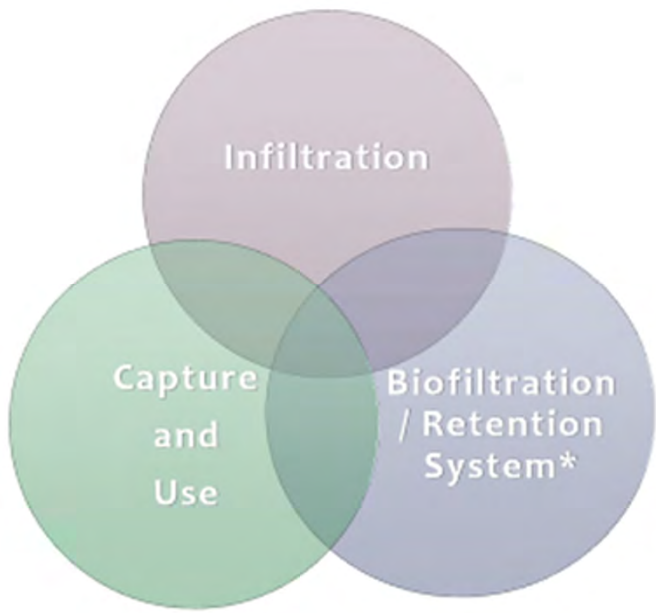

Energy Use & Climate Change:

Greater water supply instead of pumping from distant locations would save 72,000—233,500 MWH of energy per year.

NRDC, August 2008

Low Impact Development (LID)

Rain Gardens

Capture & Use with Rain Barrel

Planter Boxes

LID Ordinance

Ordinance effective
November 14, 2011
Operational April 14, 2011

Expands SUSMP to include small projects greater than 500 sf of impervious area

Handbook adopted by
BPW July 2011

Summarizes the City's permitting process, identifies stormwater mitigation measures, and references source and treatment control BMP information.

Small Scale Residential BMPs

Rainwater Harvesting Program

- This pilot program provided free rainwater harvesting installation for 600 property owners in targeted neighborhoods by Fall of 2009. The project was such a success that over 3,000 residents applied

Rainwater Harvesting

Pilot program to harvest rainwater for irrigation use on residential and commercial properties completed. Installed rain barrels, directed roof runoff to on-site pervious area, and constructed planter boxes.

Developing standards for City-wide implementation.

Rainwater Harvesting

LOWE'S (13500 Paxton)

Elmer Green Street

Capture & Use with Rain Barrel

Rain Gardens

Rainwater Harvesting, Stormwater, and Urban Runoff Standards and Uses Guidelines

- Adopted and released November 2011.
- Implementation of the standards on our stormwater capture.
- The uses are for spray irrigation, drip irrigation, car wash, dust control, water feather, etc.

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC HEALTH

Guidelines for Harvesting Rainwater, Stormwater, & Urban Runoff for
Outdoor Non-Potable Uses
September 2011

Tier I	On-site collection of rainwater in rain barrels for on-site
Requirements	Use
<ul style="list-style-type: none"> • Rain barrels must have a screened inflow opening, a spigot and/or hose bib, and an overflow pipe or equivalent. • Rain barrels shall be labeled to indicate non-potable water use only. • The system may not be connected to indoor/outdoor municipal potable plumbing, and shall not be pressurized or sprayed. 	<ul style="list-style-type: none"> Landscape irrigation Car washing

Stream Protection

- **Stream protection initiative.**
- **Establish policy to protect and restore natural conditions of streams.**
- **Promote environmental friendly building of developments.**
- **GIS Mapping of natural streams underway. Identification zones will be determined based on mapping.**

Proposition "O"

- City of Los Angeles \$500 million Clean Water Bond (2004)
 - 27 water quality, water conservation, habitat protection, and open space projects

STORMWATER BOND MEASURE

South LA Wetlands Park

Low Flow Diversions

**Improved Water Quality at Beaches
(Beach Grades have moved from F/D 's to A/B's
Increased habitat protection
Increased open space**

South Los Angeles Wetlands Park Project

- 9-acre Metropolitan Transportation Authority (MTA) property transformed into wetland and riparian habitat
- 525-acre watershed area diverted and treated in a 4-acre stormwater treatment wetland
- Multi-beneficial use
 - Educational opportunities
 - Wildlife viewing
 - Historical railway elements
 - Community multi-use center
 - Historical building reutilization

Before

After

South Los Angeles Wetlands Park Project

Echo Park Lake

- 13 acre urban lake
- Provides hydraulic relief to storm drain
- Drainage area – 365 acres
- Targeted pollutants: Nutrients, PCBs, Pesticides, Trash
- Adds improved park, green areas, habitat
- Educational signage

Major MS4 Permit Issues

Presented By
Ray Tahir

Baldwin Park, Compton, Claremont, Duarte, El Monte,
Gardena, Irwindale, Lawndale, Lomita, San Fernando,
and South El Monte

Several MS4 Permit Issues Require Resolution

1. The Target date for issuing the next round of L.A. County MS4 permits is too short
2. Need to resolve permit structure (single v. multiple permits)
3. There is the need to resolve the compliance point issue (outfall v. receiving water)
4. Need to resolve how the iterative process will operate
5. Need to revise the non-stormwater discharge prohibition to exclude water courses
6. WQBELs to attain WQs and TMDL/WLAs requires clarification
7. Need to verify information during permit discussions

Adoption Date too Soon

- The March target date for issuing the next round of MS4 Permits for L.A. County Municipalities is too soon
 - Regional Board gave Ventura County a little over two years from the time it issued a draft MS4 permit in 2007 to the time it adopted it in 2010
 - The Caltrans permit, adopted in 1999, 7 years over due for reissuance
 - The General Industrial Activity Stormwater Permit (GIASWP) was adopted in 1997 is now 9 years over due
 - L.A. Permits are more complicated and controversial
 - Will be packed with TMDLs than any permit issued in the State
 - Not clear on how USEPA adopted TMDLs will be incorporated into the next Permits
 - Impact of 9th Circuit ruling in NRDC v. LACFCD on next MS4 permits is uncertain
 - Issue of Permit Structure is not resolved (one v. several permits)
 - Bottom Line: there should be no rush
 - Let's take our time and do it right!

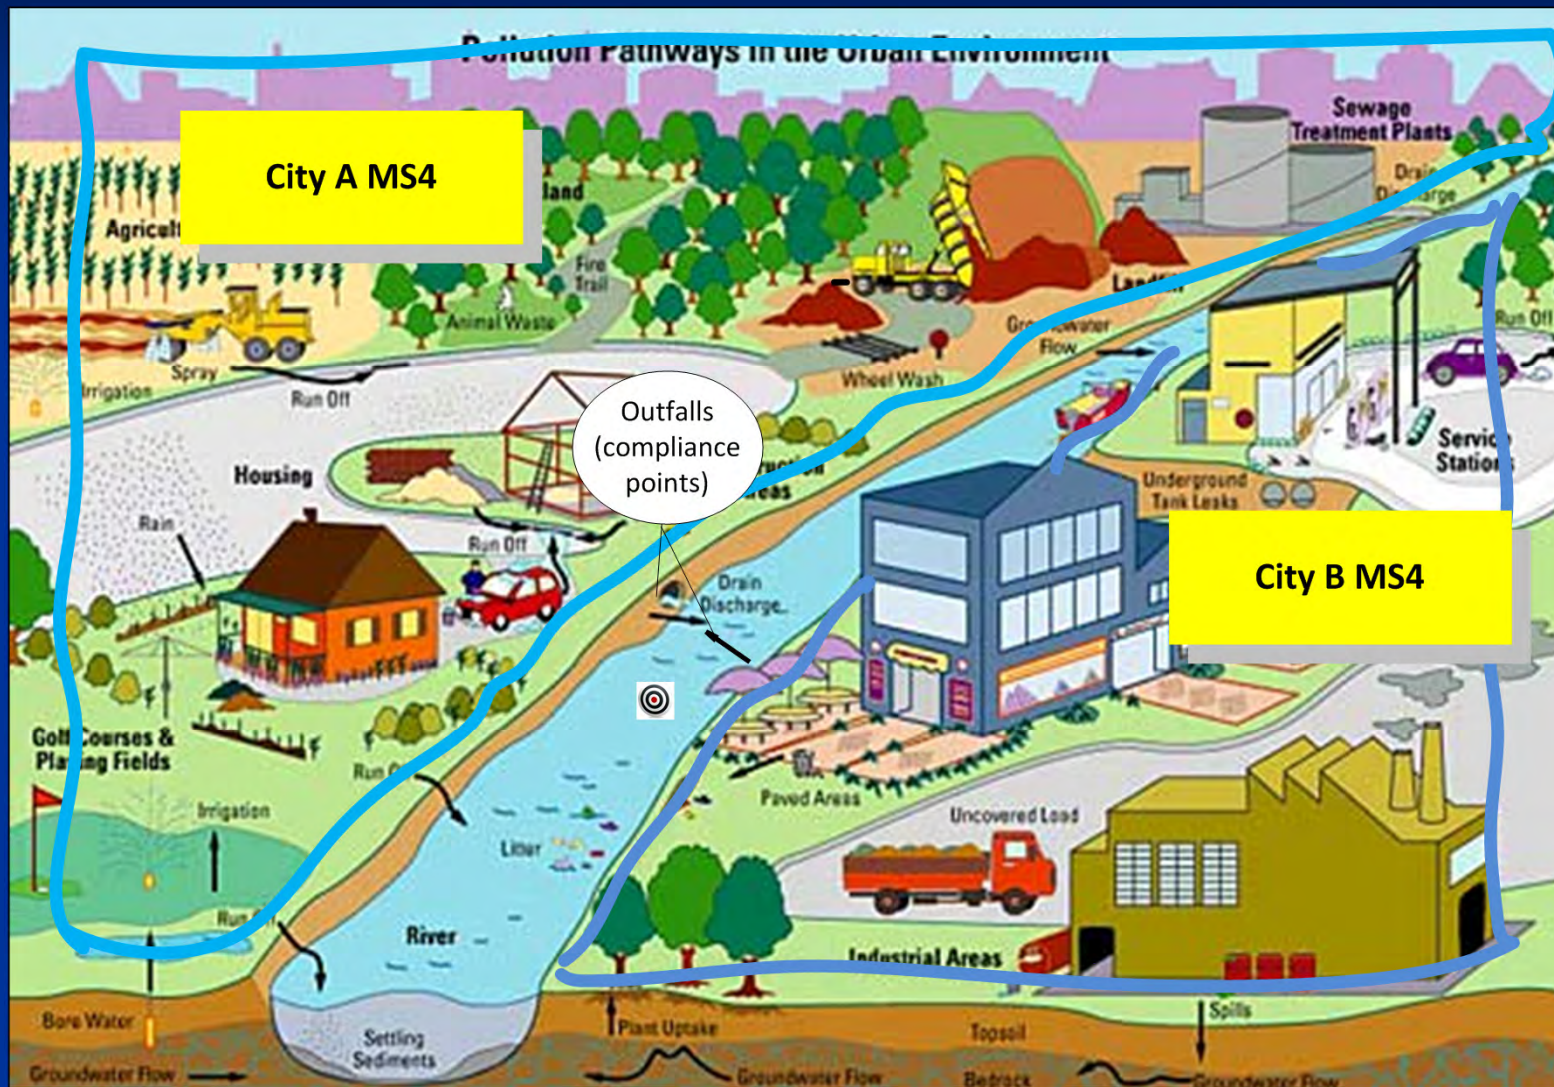

Outfall is the Compliance Point Not the Receiving Water

- All of the TMDLs (except trash) include the receiving water as the compliance point
- But the 9th Circuit Court ruled that the outfall is where compliance should be determined, not the receiving water
- Judges told NRDC that if you want evidence of exceedances sample at the outfall
 - Ruling supports federal stormwater regulation setting the outfall as the compliance point

Outfall is the Compliance Point Not the Receiving Water

- Setting the compliance point at the outfall enables better MS4 stormwater management
 - Will be able to determine to what extent an MS4 is generating pollutants that exceed water quality standards (includes TMDLs)
 - Data generated from outfall monitoring would establish a baseline (over a 5 year period) instead of relying on in-stream monitoring station data
 - BMPs could be focused on intra-MS4 pollution issues instead of issues outside of the MS4 in the receiving water (where you have commingled dischargers from multiple sources)
 - Example: if an exceedance occurs in a receiving water all dischargers would be held collectively responsible (even if an MS4 permittee did not cause the exceedance)
 - This is neither fair, in keeping with federal regulations, nor effective stormwater management

Outfall v. Receiving Water MS4 Responsibility Ends at the Outfall

Outfall is the Compliance Point Not the Receiving Water

- Conflict Between the TMDL and the Permit Needs to be Reconciled
 - If the Regional Board places the compliance point at the outfall this would conflict with the TMDLs placement of the compliance in the receiving water
 - How to resolve the conflict?
 - Put language in the to permit override what is in the TMDL or
 - Re-open each TMDL to correct the conflict
 - We recommend that the Regional Board request the State Board's Office of Chief Counsel to issue a memorandum commenting on this issue
 - Cities will also recommend appropriate language in the findings section of the new permit

Iterative Process

- Confusion as to How IP Would Operate in the Next MS4 Permits
 - In its L.A. County MS4 Permit Status and Development Paper staff says that the iterative process does not protect permittees against enforcement action -- we disagree
 - The iterative process is present in most if not all MS4 permits issued in the U.S. to serve this very purpose – if properly followed
 - The iterative process is required by the State Water Resources Control Board as mentioned in 2 precedent setting water quality orders
 - Contrary to what staff asserts, the 9th Circuit ruling in NRDC v. LACFDC did not eliminate the iterative process

Iterative Process

- Confusion as to How it Would Operate in the Next MS4 Permits (cont.)
 - Instead the court just said that there is no “textual support” for the proposition in the current MS4 permit an exceedance may be forgiven if a permittee implements BMPs in accordance with its SQMP
 - The court held that the County could not be afforded by iterative process protection under the Receiving Water Limitation provisions of the current MS4 permit because it did not follow the procedure for addressing an exceedance (viz., submitting a RWL and amending BMPs in its SQMP)
 - We recommend that the regional board request the State Board’s Office of Chief Counsel to provide an opinion memorandum on the impact of the 9th Circuit’s decision in NRDC v. LACFDC on this matter

Iterative Process

- A Clearly Defined and Reasonable Iterative Process is Needed to Prevent Regional Board Enforcement Action Third Party Litigation
 - If a weak iterative procedure is placed into the next MS4 permit permittees could be at risk for non-compliance and exposed to third party litigation
 - Includes TMDLs with 20-25 year compliance periods
 - In fact this has already happened (the 9th Circuit ruled that the County exceeded bacteria TMDL for the Los Angeles River despite the 20-25 compliance period
 - LAR Bacteria TMDL language was of no help because it is the permit that controls
- The Cities will propose a revision to receiving water limitation language with clarification in the findings section of the permit

Non-storm Water Discharge Prohibition

- Regional Board Proposes to Prohibit Non-stormwater Discharges to Watercourses in addition to the MS4
 - Staff's new permit development paper carries over the non-stormwater discharge prohibition from the current permit to include watercourses exceeds federal regulations
 - Staff concludes that CWA Section 402(p) as well as all MS4 permits in California prohibits non-stormwater discharges to the MS4 and watercourses.
 - We disagree.
 - Actually CWA 402(p)(3)(B)(ii) says that permits for discharges from municipal storm sewers "shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers"
 - There is no reference to watercourses
 - We were not able to find in any other MS4 issued in California the non-stormwater discharge prohibition extending to watercourses
 - There is not a definition of watercourses in the MS4 permit or any where in the CWA

Non-storm Water Discharge Prohibition

- Please note that the San Diego Regional Board's Office of Chief Counsel affirmed this in a memo to Chairman Wright and San Diego Regional Board Members dated November 5, 2009
- It contained no reference to watercourses as being subject to the non-stormwater discharge prohibition

Non-storm Water Discharge Prohibition

- Why is this a big deal?
 - Because including watercourses would place permittees in a state of non-compliance for dry weather discharges to receiving waters (oceans, lakes, rivers, streams, etc.) that exceed TMDL WLAs
 - This was the justification for issuing 22 notices of violations to those permittees that discharge into to Santa Monica Bay for exceeding the dry weather WLA for bacteria
 - Were it not for a procedural error made by the Regional Board, those cities – and the County – could have been open to enforcement action and possible third party litigation

- How then would receiving waters be protected from contaminated non-stormwater discharges?
 - Through a well-designed and implemented illicit discharge/connection elimination program that prohibits unauthorized discharges to the MS4 (as Congress intended)

WQBELs

- More Discussion with Staff is Needed on WQBELs
 - Generally, WQBELs translate WQSs and TMDL WLAs into BMPs
 - There are 2 types of WQBELs: numeric and non-numeric
 - Staff asserts that because TMDL WLAs are expressed numerically, numeric WQBELs in MS4 permits are appropriate
 - However that should not be the determinant
 - California Courts have held that WQBELs mean BMPs
 - California Courts have also said a WLA, which is inherently numeric, and numeric WQBELs are not the same (one is the problem and the other is a solution)
 - They are different; a numeric WQBEL is a numeric BMP
 - A numeric WLA does not require a numeric WQBEL as evidenced by the San Francisco Regional Board's use of a narrative BMP that address the WLA metric for Diazinon

WQBELs

WQBELs for Diazinon (Pesticide Toxicity)

- 🐸 WLA = TMDL numeric targets
 - » No toxicity in creeks
 - » Diazinon < 50 ng/l
- 🐸 WQBELs = Implement pesticide management plan designed to control pesticide caused toxicity
 - » Control municipal uses
 - » "Manage" uses by others

WQBELs

- Staff says that the trash TMDL as numeric WQBEL
 - There is nothing in the final trash TMDL or the amended L.A. County MS4 permit that refers to the trash TMDL as WQBEL at all (no reference to USEPA's 2002 memorandum that would have applied to the
- To clarify the definition of WQBELs the cities recommend that L.A. Regional Staff invite Tom Mumley of the San Francisco Regional Board to do a presentation on numeric and narrative WQBELs at workshop devoted to this subject (could also help with the Receiving Water Limitation language)

The Need to Verify Information

- Future Workshops Need to Evaluate Information for accuracy
 - Mentioned earlier proposed requirements need to be vetted for accuracy (e.g., watercourses being subject to non-stormwater discharges, trash TMDL as a numeric WQBEL, the iterative process not safeguarding permittees against exceedances)
 - Vetting information can reduce disagreement and produce a cleaner, sensible MS4 permit

Thanks!

1 Los Angeles, California, Thursday, November 10, 2011
2 9:15 a.m.

3
4

5 MS. DIAMOND: Good morning. Can you hear me? Good
6 morning, everybody, and welcome to the Los Angeles
7 Regional Water Quality Control Board meeting. We are
8 going to begin and I am going to ask Mr. Blois if he
9 would please lead us all in the Pledge.

10 MR. BLOIS: Ready, begin.

11 (Pledge of Allegiance)

12 MS. DIAMOND: Ms. Moffett, will you please take the
13 roll call.

14 MS. MOFFETT: Yes. Good morning.

15 Mr. Blois?

16 MR. BLOIS: Here.

17 MS. MOFFETT: Ms. Diamond?

18 MS. DIAMOND: Here.

19 MS. MOFFETT: Ms. Glickfeld?

20 MS. GLICKFELD: Here.

21 MS. MOFFETT: Ms. Lutz?

22 MS. LUTZ: Present.

23 MS. MOFFETT: Ms. Mehranian?

24 MS. MEHRANIAN: Here.

25 MS. MOFFETT: Mr. Stringer?

0008

1 MR. STRINGER: Here.

2 MS. DIAMOND: Mr. Unger, will you please go over the
3 Agenda.

4 MR. UNGER: Yes. There are two changes to the
5 Agenda. First I'd like to let you know that the meeting
6 minutes from the October 6th meeting are not quite
7 completed yet, so they will be continued to the
8 December 8th meeting; and the other is Item Number 4,
9 which is a discussion of the schedule for next year, will
10 be held after lunch.

11 MS. DIAMOND: Thank you.

12 We do have the draft meeting minutes for
13 October; is that correct? No, we do not?

14 MR. UNGER: No. I don't think they're complete. You
15 may have a partial.

16 MS. DIAMOND: Oh, we have a partial.

17 MR. UNGER: Yeah, you have a partial.

18 MS. DIAMOND: Okay. So we'll continue that.

19 MR. UNGER: Correct.

20 MS. DIAMOND: In terms of the adoption of the Board
21 meeting schedule, do you want to -- should we continue to

22 have that discussion now or did you want to wait until
23 later for the calendar of next year?

24 MR. UNGER: My recommendation is that we wait until
25 either the end of the day or certainly after lunch at
0009

1 least.

2 MS. DIAMOND: Okay. Then we'll go to Item Number 5.
3 And if anybody can't hear, please let us know. We'll
4 speak up. You can't hear? Our mikes are on, but I
5 think -- can you hear now? Okay. Everybody will need to
6 put it right up to their mouths.

7 We'll go now to Board member communications and
8 we'll start with any ex parte disclosure, Mr. Blois,
9 starting with you.

10 MR. BLOIS: I'm not sure if it requires ex parte
11 reporting, but I'm going to mention it anyway.

12 Last Wednesday, I participated in a tour
13 sponsored by the Ventura County Farm Bureau and
14 co-sponsored by the Association of Water Agencies in
15 Ventura County. Basically, the tour -- we spent all day
16 touring various water facilities throughout Ventura
17 County and it was a most informative day.

18 MS. MEHRANIAN: Nothing to report, Chair.

19 MR. ALVAREZ: At the beginning of the month, I, along
20 with vice -- with Madelyn Glickfeld attended a meeting of
21 municipalities at the request of Senator Hernandez, Ed
22 Hernandez.

23 MS. DIAMOND: Thank you.

24 Ms. Glickfeld?

25 MS. GLICKFELD: I have the same disclosure, and I'm
0010

1 just going to put it on the record that there was an
2 agenda to that meeting and there were, I don't know,
3 maybe 40 participants mainly from cities, Public Works
4 directors, some water agencies, you know, and from
5 Congressional representatives. So -- and I wanted to --
6 I thought it was a very well-run meeting.

7 Senator Hernandez was a great facilitator and I
8 just wanted to also put out that they put some questions
9 before me that they wanted me to answer. These questions
10 were too related to the MS4 permit for us to discuss, but
11 I have asked -- I have made copies of them to be
12 distributed to the Board as appropriate and I've asked
13 the Executive Officer to discuss them during the MS4
14 discussions with the cities because I think they're
15 important.

16 What I found out through these meetings is that
17 there are some real communication problems between our
18 Board and the cities. There's a lot of misunderstanding
19 and I'm hoping that our workshops are helpful and the
20 workshops that our staff is going to have with them are
21 helpful in trying to allay some of the concerns that they
22 have.

23 MS. DIAMOND: Mr. Stringer?

24 MR. STRINGER: I have nothing.

25 MS. DIAMOND: I did have a phone call. I don't

0011

1 believe it's ex parte because I have been meeting with
2 members of the community, the community at the Ujima
3 Village area, and I did have a telephone call this week
4 that I -- where I spoke with several people from Exxon,
5 along with the Executive Director. They wanted to tell
6 me what some of their plans were for helping to find a
7 new site to relocate the day care center.

8 I listened to them and told them that I would
9 like to have their thoughts in writing, and they did
10 provide a letter that was made available to the -- or is
11 being made available to the Board members today.

12 Mr. Unger will talk about it and if any members
13 of the public would like to have a copy, we can make that
14 available to you as well.

15 And that's it for that item.

16 So, Mr. Unger, would you please give us the
17 Executive Director's report.

18 MR. UNGER: Thank you, Chair Diamond.

19 I want to say on behalf of staff here we're
20 really excited that we're holding the meeting here in a
21 State facility. I think it's the first time that I know
22 of that we've held it in a State facility in 12 years and
23 so staff is very excited. Many of them in the
24 groundwater programs will be coming down to hear the
25 groundwater presentation later on this morning, so we're

0012

1 very happy you're here from a staff level and I just want
2 to just thank you for choosing this venue. If it works
3 out, we'll do it again.

4 The first thing I want to report on is the
5 Santa Susana Field Laboratory. Last month, as you all
6 know, with the exception of Board member Stringer, we
7 visited the Santa Susana Field Laboratory. I think it
8 was a very informative site visit in showing the progress
9 that has been made on the facility and also the
10 effectiveness of some of the BMPs which may have broader
11 applicability in stormwater management such as our
12 municipal or our industrial programs. And so we had
13 that.

14 And I'd like to follow up with two
15 administrative items regarding the Santa Susana Field
16 Lab. The first is the Regional Board and I have, with
17 one of the project managers at DTSC, have completed the
18 review for the cesium contaminated soil for the ISRA
19 program. I am pleased to report that the soil will be
20 disposed of in a low-level radioactive waste site
21 out-of-state and I have signed a joint letter to Boeing
22 and to NASA that approves this work plan. So hopefully
23 that will get under way in the very near future.

24 The second item I wish to discuss
25 administratively on the Santa Susana Field Lab is the

0013

1 current permit. The current permit for the Boeing
2 Santa Susana Field Laboratory, Order R4-2010-0090, was
3 adopted by the Regional Board on June 3rd, 2010 and it is
4 now scheduled to expire on April 10th, 2014. Routinely,
5 NPDES permits have a five-year term. At the end of the
6 five years, the data that's collected are reviewed and a
7 new permit issued is based on that new data. The Boeing
8 permit in the Reopener has a clause that reads:

9 "This order may be reopened and
10 modified, in accordance with the State
11 Implementation Plan Section 2.2.2.A, to
12 incorporate new limits based on future
13 reasonable potential analysis to be
14 conducted, upon completion of the collection
15 of additional data by the Discharger.
16 Notwithstanding the foregoing, in the event
17 that reasonable potential analysis indicates
18 that a pollutant has reasonable potential,
19 the Regional Water Board staff shall bring
20 an appropriate modification to the Regional
21 Board, at the next practicable Board
22 meeting."

23 I want to report today that staff have reviewed
24 the data collected at Boeing Santa Susan Field Laboratory
25 over the past year and have conducted an RP analysis. No

0014

1 new constituents demonstrated reasonable potential.
2 There are numeric effluent limits in place for discharges
3 from Outfalls 003 through 014, 018 and 019. The
4 remaining outfalls, 015 through 017, no longer discharge.
5 They are treatment -- excuse me. They were treatment --
6 on-site sewage treatment plans and they're no longer used
7 to treat the sewage because there are just very few
8 people working at the site now relative to when it was in
9 place in the '60s and '70s. These are periodically
10 pumped out and the collected sewage is transported via
11 truck to be treated at one of the L.A. County Sanitation
12 Plant facilities. Outfalls 001 and 002 are located
13 directly downstream of Outfalls 011 and 018 and do not
14 require effluent limits. Consequently, staff recommended
15 that there is no need to reopen the permit at this time
16 and we are not planning to bring this permit forward
17 until we collect more data next year and review those
18 data. If the data in the future indicate that a reopener
19 is warranted, we will inform you at that time and put it
20 on the schedule. So that's Boeing and Santa Susana.

21 Mary Ann, at the last Board meeting, you asked
22 that we provide an update on the Clearwater Program by
23 County Sanitation Districts. I am pleased to report to
24 you that the County Sanitation Districts have agreed to
25 provide an information item at our next meeting in

0015

1 December on this program.

2 Seaside Lagoon: You've received some memoranda
3 on Seaside Lagoon and we have completed our study of the
4 Total Suspended Charges discharges from the facility.
5 And just to briefly refresh your memory, this was a
6 highly contentious issue with the NPDES permit for the
7 City and the Board issued a TSO, a Time Schedule Order,
8 that provided the City with limits that are nearly
9 50 percent greater than the permit limits for a period of
10 three years. This allowed the City to conduct special
11 studies and implement the appropriate remedies, if
12 required. You may recall that the City was very
13 concerned because if a technology-based remedy was
14 necessary, the City thought it would be too costly and
15 the facility might be -- needed to be closed.

16 Regional Board staff agreed to assist the City
17 in conducting the special study, which consisted of the
18 Regional Board providing laboratory support for the
19 analysis of total suspended solids through our contract
20 with California State University at Long Beach. The City
21 collected samples of various locations and times in order
22 to ascertain if certain conditions were causing high TSS
23 readings, such as tides, turbulence, various issues such
24 as that.

25 We sent a report to you earlier this week and
0016

1 the Regional Board worked with the City to conduct
2 testing throughout last summer. The results that our
3 laboratory obtained were much lower than either the
4 permit or the TSO effluent limits. The City sent one
5 sample, a split sample, to their laboratory, which
6 confirmed the work of Cal State University at Long Beach.
7 So there doesn't appear to be an issue with TSO at the
8 present time moving forward.

9 The City has expressed thanks to our staff for
10 the work, but in a meeting with staff and one of the
11 Council members, they still expressed concerns if the
12 testing that we undertook cannot be replicated next
13 summer and they may again be out of compliance. We
14 assured the City that they could set forth benchmarks and
15 if they trip a benchmark much lower than the permit
16 limit, we would get involved in possibly reactivating Cal
17 State Long Beach and trying to further understand why the
18 two laboratories cannot corroborate results.

19 We don't think that's going to be an issue, but
20 the City also raised an issue with copper testing. And
21 as you'll recall, there it wasn't quite as contentious as
22 TSS, but one test showed copper, but there was no copper
23 limits in the TSS permit or TSO. The City requested that
24 the requirements for copper monitoring be reviewed, and
25 the staff is currently conducting that review to submit
0017

1 whether it stays on as a requirement. So that's Seaside
2 Lagoon.

3 Madelyn, for the Contaminated Sediment Task

4 Force, you directed us to reconvene a meeting of the
5 Contaminated Sediment Task Force. As you requested, we
6 held that meeting. You received a report from us on that
7 meeting and a letter from Heal the Bay.

8 I think both documents accurately assess the
9 input from the Ports of Los Angeles and Long Beach. Both
10 ports have indicated they do not have a need for a
11 regional treatment facility, as they can time their
12 dredging projects with their construction projects so
13 that the contaminated soils can be beneficially reused in
14 the ports. This essentially leaves a much lower volume
15 of material to be treated than originally thought, mostly
16 coming from dredging of Ballona Creek and private marinas
17 such as Los Alamitos.

18 The Army Corps. attended our meeting and they
19 expressed interest in continuing to study a feasibility
20 of a contaminated sediment treatment facility and was
21 looking for funding to lead such work.

22 Thank you.

23 The ports and the Army Corps. agreed to meet
24 periodically to predict the volume of material that will
25 need to be dredged over the next three to five years and

0018

1 identify likely disposal plans. At this point, we await
2 your direction before pursuing staff initiatives.

3 Thank you. I've been asked to slow down a bit.
4 There's a lot to report, though. Speak louder?

5 MS. DIAMOND: You need to put it right here
6 (indicating).

7 MR. UNGER: Right here (indicating).

8 The TMDL, I just want to let you know that the
9 Los Angeles River Bacterial TMDL was approved by State
10 Board on November 2nd by a vote of three-zero. We now
11 have three additional TMDLs scheduled for the State Board
12 on December the 6th, including the L.A. Harbor Toxics
13 TMDL, Machado Lake Toxics TMDL, and the Santa Monica Bay
14 Debris TMDL. As I'll describe right at the end of my
15 discussion here, the staff and our attorneys are quite
16 busy in preparing for the State Board hearing in
17 December.

18 I want to move on to some of the two -- the two
19 groundwater sites that we're looking at, Kast and Ujima
20 Village.

21 First, Kast: As you know, staff issued a
22 Cleanup and Abatement Order on Shell Oil to initiate
23 pilot studies to test the feasibility of cleanup methods
24 in a residential neighborhood earlier this year. Shell
25 submitted a work plan that focuses on three technologies:

0019

1 soil vapor extraction, chemical oxidation, and excavation
2 in the proximity of slab foundation residences.

3 We approved Shell's work plan and decided to
4 notice it through the CEQA process, which would allow the
5 residents to comment. We received only two comments, one

6 from a Native American Heritage Foundation and the other
7 one from DTSC. None of the residents commented, so we
8 are hoping we can initiate the work in the near future,
9 but access continues to be an issue in moving ahead with
10 the work. At this point, we understand that Shell has
11 identified one house that will allow work to be
12 conducted, so we hope to get that work under way in the
13 meantime. In the meantime, we have received preliminary
14 results from the deeper groundwater investigation and
15 staff are reviewing those results at this point.

16 Ujima: As you know, there's a lot of interest
17 recently in the former Athens Tank Farm and that former
18 Athens Tank Farm includes the former Ujima Village, the
19 Magic Johnson Regional Park, and the Ujima Housing
20 Corporation site that houses the day care facility and
21 continuing education. The interest is precipitated, we
22 believe, by the receipt of the off-site monitoring report
23 that investigated the area to the east of the site that
24 was submitted to our agency on October 28th.

25 There's two issues that I wish to discuss:

0020

1 First, the results of the recent testing and second is
2 the status of the day care facility that continues to
3 operate at the site.

4 So, Alex, can I have the slide, please. I
5 prepared a couple of slides to talk about the testing, if
6 I might.

7 Basically, the first slide which is up is really
8 a microscale depiction of contaminant that is present
9 below the groundwater. What you see are soil particles
10 and you see contaminant which is stuck on the surfaces of
11 those soil particles, and you see vapor space and
12 airspace in between, which can become filled with vapors
13 and gasses.

14 The slide shows that beneath the ground surface
15 and above the groundwater, contaminants can be present in
16 three phases: one adsorbed onto the soil particles and
17 within the airspaces either as a vapor or a liquid. Soil
18 vapor is far more mobile than adsorbed contamination and
19 it can move both vertically and laterally.

20 This slide shows that -- the next slide,
21 please -- this slide shows the concern that we are
22 having -- that we are investigating at this point. It
23 shows how people may become exposed to those levels if it
24 rises from the ground and enters the building which can
25 trap these vapors and adversely impact air quality

0021

1 indoors.

2 At the former Athens Tank Farm, as well as many
3 other sites in our region, much of our work focuses on
4 quantifying the levels of soil vapor and determining if
5 those levels can affect human health. This evaluation
6 entails measuring soil vapor in the shallow surface,
7 subsurface, and indoor and ambient air above surface to

8 see what is actually getting into the airspaces.

9 And so what I want to do is I want to show now a
10 couple data -- a couple slides of the data that we found
11 from the soil.

12 Next slide, please, Alex. This slide shows
13 essentially the soil plume; that is, the sorb phase that
14 doesn't move that readily. You see the yellow dots on
15 the site. What you see is an aerial depiction of the
16 site, the two lakes in the Magic Johnson Park, and on to
17 the right side of the green shaded area is the former
18 Ujima Village -- I think I have a pointer here.

19 Thank you, Ronji. And then if --

20 MS. LUTZ: Excuse me. Sam, can you point out which
21 parts of this? Where are the plumes exactly?

22 MR. UNGER: These are the two plumes I'm talking
23 about and really I'm just talking about these plumes to
24 give you a feel when you see the next slide about how
25 immobile soil contamination is versus how mobile soil
0022

1 vapor is.

2 MS. GLICKFELD: Would you also -- this is
3 Ms. Glickfeld. Would you also point out -- you pointed
4 out the former housing development. Where is the day
5 care center and where is the site that you are in
6 discussion with the County about relocating the site?

7 MR. UNGER: Right there (indicating).

8 MS. GLICKFELD: Right there. Okay. So it's
9 pointed -- point to that again. The day care center is
10 at that corner, and where do you want to relocate it?

11 MR. UNGER: Yes. I'll be talking about that in a
12 moment after I'm done talking about the test results.

13 So the point of this slide compared to the next
14 slide, if you can see -- fix in your mind, please, just
15 for a moment the size of those yellow spots there on the
16 map -- and our next slide, Alex -- is this is the slide
17 of the soil vapor plume. This is based on benzene and
18 you can see how small a soil plume can create a larger
19 lateral benzene plume.

20 So essentially what happens is up until the
21 recent results, all our testing was essentially at the
22 boundary of the site, but it's clear that vapor has
23 potential to migrate further east and that's what we just
24 received the report on on October 28th.

25 And the final slide, Alex, please, is these are
0023

1 the points that we've been testing off-site. We've just
2 gotten that report in. There seem to be several of the
3 sites that have levels above soil screening. However, I
4 want to say that our results at Ujima show high levels of
5 petroleum compounds in soil and soil vapor, but the data
6 show no levels above the background in indoor air.

7 So if you go back two slides for me, please,
8 Alex -- one more, please. So essentially what we're
9 saying is we're not seeing a lot of vapor that is

10 exfiltrating from the soil into the housing and you
11 can -- that's it for slides.

12 The fact that our ambient air and indoor
13 sampling is characteristic of background levels is why
14 DTSC and Water Board staff conclude that there's no
15 immediate threat to human health at the present time.
16 The scope of risk assessment done by DTSC only evaluates
17 whether occupants are at risk today or in the future.
18 The scope of the risk assessment does not involve
19 clinical health issues of the impact to occupants in the
20 past. Nonetheless, though, soil contamination exists and
21 cleanup is warranted. We have ordered ExxonMobil and the
22 County to initiate tests and cleanup technologies and
23 these tests have started already. We've already started
24 cleanup on one area of the site. We've been using --
25 ExxonMobil has been using a technology known as soil

0024

1 vapor extraction and we have a preliminary report on the
2 effectiveness of that and staff is also evaluating that
3 technology at this time as well.

4 Regarding the day care center, as I showed on
5 the map, adjacent to the former apartments is a small
6 parcel that is privately owned. It is owned by the Ujima
7 Housing Corporation. A private day care center and a
8 Los Angeles Unified School District facility operate at
9 this site. As I showed, it is also located on the
10 eastern edge of the site, in close proximity to the
11 former apartments. The County plans to begin demolition
12 of the buildings, the apartment buildings, next year.
13 Given the soil plume beneath the day care center and the
14 planned demolition, Regional Board staff initiated
15 discussions with the responsible parties, ExxonMobil and
16 the County, to relocate this facility. Initial
17 discussions focused on moving the bungalows to the west
18 end of Magic Johnson Park whereas maybe you don't find
19 high levels of contamination at all, but the County is
20 not agreeable to that option and they set forth an option
21 for a second option for consideration off-site.

22 The County and Exxon are now investigating the
23 viability of that option, and to that end, I received an
24 e-mail yesterday from Exxon and the County which I've
25 copied and you have with you right now. It lays out some

0025

1 preliminary schedules for trying to identify a different
2 site and suffice it to say, searching and screening
3 options off-site is considerably more complicated than
4 what was initially thought, or moving to on-site, but all
5 parties find that relocation of the facility is
6 necessary. And for those of you who watched the news
7 last night, you heard some statements from the County to
8 that effect as well.

9 So I think that's about what I have to say about
10 former Athens Tank Farm. I don't know if there's any
11 questions at this time or discussion, or should we just

12 wait until we're done? Your choice.

13 MS. DIAMOND: Well, I would like to say that it is
14 true that the discussion with the County, particularly
15 the meeting that I attended with Supervisor Mark
16 Ridley-Thomas and Sam Unger and other staff, the
17 discussion was brought up of moving the day care center.
18 We brought up the issue of moving the day care center to
19 the west end of the park, which is property that is owned
20 by the County and is clean and we've tested it, and to
21 the best of our ability -- and I want you to -- I guess
22 I'm asking you this question to put on the record, Sam.

23 To the best of our ability, the testing that's
24 been done at this park on the west end of Magic Johnson
25 Park we believe to be noncontaminated and would be a site
0026

1 that would be owned by the County and where, if they
2 agreed to it, the day care center could be moved there?

3 MR. UNGER: We believe that the level of
4 contamination there, if it exists at all, is considerably
5 less than what it is on the eastern part of the site.
6 And certainly in moving a day care center over there,
7 certainly if there were anything residual, it could be
8 handled by engineering control fixes such as liners,
9 ventilation systems, and possibly operating an SVE, a
10 soil vapor extraction system. So we think the west end
11 of the site would essentially meet the requirements to
12 moving it to a safer place, yes.

13 MS. DIAMOND: And is my memory serving me correct
14 that the County has suggested another site that's owned
15 by the County, but that that site is within -- is not too
16 far from a freeway? Is that correct?

17 MR. UNGER: It's close to a freeway off-ramp. I
18 think it's less than 500 feet and we're now investigating
19 siting criteria and things like that. There is another
20 school in the near vicinity of where they are, of where
21 the proposed County facility has been identified. So
22 we're still a little -- we're still researching that, but
23 it is fairly close to the on-ramp to the 105 Freeway, I
24 believe, so yeah.

25 MS. DIAMOND: And is there a way that we can find out
0027

1 what the ambient air quality is at the site that the
2 County is suggesting we move a day care center?

3 MR. UNGER: I have initiated those discussions with
4 ExxonMobil. They are -- they're in the first phase
5 called Phase I assessment to see the site history and
6 they are open to considering doing that assessment. If
7 not, we will go to the AQMD to see if we can get
8 assistance from them to conduct that.

9 MS. DIAMOND: I would definitely want to know what
10 the air quality was before we were in any way involved in
11 moving a day care center and very young children from the
12 age of newborns to a site where the air quality was
13 impacted.

14 MR. UNGER: Yes. We agree. Yeah, we will be doing
15 that.

16 MR. BLOIS: Madam Chair, I've got two quick
17 questions.

18 MS. DIAMOND: Yes.

19 MR. BLOIS: Thank you for your report, Sam.

20 I notice that Kleinfelder is the engineer that
21 did the studies that you presented on the slides.

22 MR. UNGER: Yes.

23 MR. BLOIS: First question is how would you
24 characterize the quality of their report on a scale of
25 one to five, zero being poor, five being excellent?

0028

1 MR. UNGER: I would characterize it as a four-plus.
2 We do have some comments. We were hoping that we would
3 have had a little bit more analysis of contours and
4 things like that; but at this point, we think the data
5 was collected competently. We think they sent it to a
6 State-certified laboratory and it was reported in a very
7 readable, clear format that staff could generate -- that
8 staff could review very effectively. So we consider it
9 to be at least a four.

10 MR. BLOIS: But then my other question is who's
11 paying Kleinfelder for their work?

12 MR. UNGER: My understanding is that it's ExxonMobil.

13 MR. BLOIS: Thanks.

14 MR. UNGER: I want -- a couple things about personnel
15 in the office that I'd like to report on. I reported to
16 you late last year that the task of bringing Basin Plan
17 Amendments, including TMDLs, to the State Board for
18 approval has essentially been shifted from the State
19 Board staff to the Regional Board staff.

20 For the past year we have been exempted from
21 that because we are so productive in our TMDL program and
22 then we had so many in the pipeline where State Board
23 staff greatly assisted that. That is about to come to an
24 end. As I reported, we have the first three coming up in
25 December that the Regional Board staff has to prepare the

0029

1 records and the presentation materials.

2 We believe that the underlying -- as we
3 understand, the underlying logic of this change is that
4 the Regional Board staff is more familiar with the issues
5 and the stakeholders than State Board staff and so
6 ultimately when you look at both together, it's a more
7 effective paradigm. However, despite this fact, there is
8 significant work to be accomplished, just as there is in
9 bringing a TMDL to you, as there is in bringing a TMDL to
10 State Board, and we expect that this shift will affect
11 the productivity of the basin planning in the TMDL units
12 for the next year in moving forward. I've talked to
13 other Executive Officers in the state and they've
14 confirmed that it had definite impacts, the productivity
15 of the TMDLs.

16 MS. DIAMOND: Sam, you're going to have to really put
17 this right next to your mouth. Thank you.

18 MR. UNGER: I'm sorry. Yeah. I just -- like I said,
19 I wanted to report to you that we will now be taking the
20 TMDLs and Basin Plan Amendments to the State Board rather
21 than the State Board staff, and our attorneys and our
22 staff are very busy at this time with the three that are
23 proposed one month from now, essentially.

24 Also, I want to report to you that our region is
25 implementing a paperless office system, quote, unquote.

0030

1 It's called the Electronic Content Management and soon
2 all of our correspondence, both to be received and to be
3 sent out, will be sent only in electronic format.

4 We are the fourth region to be implementing this
5 system and we've had a lot of support from State Board,
6 the I.T. unit there, and there have been a lot of staff
7 who have worked very hard to try to get the system in
8 place here at our region; and of course the big question
9 is if and when the Board members would like to receive
10 their Board packages electronically -- and we're not
11 quite ready for that, Charlie, but thank you -- we're
12 going to ask if anyone is interested in piloting the
13 electronic Board package when we're ready next year.

14 I think that we would appreciate that and we'll
15 be in touch and as soon as we think we've made enough
16 headway, where we have control of it, a lot of us will be
17 taking that next step.

18 MR. STRINGER: My shoulder will thank you, as will
19 the environment.

20 Hey, Sam, before you finish up, I just have
21 something I want to say.

22 Just for the record, as the Board and staff
23 knows, I'm -- my firm -- Boeing is a client of my firm
24 and while I understand from Water Board counsel there's
25 no real conflict just for -- just to avoid any appearance

0031

1 of conflict, I would like to know ahead of time, Sam, if
2 you're going to brief the Board related to Boeing so I
3 can just step down, just in an abundance of caution.

4 MR. UNGER: Thank you. I apologize. And hopefully
5 unless there's further direction from the Board, you
6 won't be hearing anything from me about it.

7 And finally, I'm happy to report that on
8 October 13th of this year, I attended the Seventh Annual
9 Update of the Collection System Section Agreement for the
10 City of Los Angeles, and this is a report that they've
11 put together (indicating). You're welcome to borrow my
12 copy if you'd like to take a look. But at this point I
13 would -- it was -- it was really quite an amazing meeting
14 in the sense that the City had the report at this point
15 that they have reduced their number of spills from 2003
16 by nearly 90 percent. They have completed two very large
17 sewer construction projects that essentially has

18 eliminated all capacity problems in the area from
19 downtown here to the Hyperion plant, so there's very few
20 capacity issues left, if any.

21 The City has set into place a Citywide fats,
22 oils, and grease program at all restaurants that are over
23 a certain size, I think that serve over 25 meals a day,
24 and essentially they have eliminated persistent odor
25 issues, sewer odor issues that have plagued parts of the
0032

1 city for years.

2 The Bureau of Sanitation asked their City
3 Council about a week and a half later to adopt a ten-year
4 planning and budgeting plan for the maintenance of the
5 infrastructure that they have built and the City Council
6 adopted that budget and I believe that was precedential
7 with the United States in the sense that it was the first
8 ten-year budget that was adopted for a sewage agency, and
9 it will allow them to complete their planning in a much
10 more orderly fashion than they have done.

11 So that's hopefully leaving on a high note here
12 because it was really quite an impressive feat for the
13 City of Los Angeles. When we first entered into the
14 settlement agreement, we were wondering how far they'd be
15 able to reduce it, the number of spills, and I don't
16 think anyone who was working on that settlement agreement
17 thought they would get it down to 90 percent and here
18 they are with three years left to go and they've already
19 achieved that.

20 MS. DIAMOND: Sam, I would like to suggest, 'cause I
21 remember when this was initiated and we had more than, I
22 think, two spills a day, sewage spills a day in the City
23 of Los Angeles --

24 MR. UNGER: Yes.

25 MS. DIAMOND: -- and it was happening near
0033

1 neighborhoods, parks and schools and now for them to
2 achieve this, it's truly remarkable, and I would like to
3 suggest that maybe we send a letter to them
4 congratulating them for the success that they've achieved
5 on this.

6 MR. UNGER: I'd be happy to prepare that for your
7 signature.

8 MS. DIAMOND: Okay, great.

9 MR. UNGER: Thank you. That's it for me.

10 MS. MEHRANIAN: Yes, I have a question. And it might
11 be for the answer here or later and it might be for
12 Rebecca. It's on Newhall, since I was on a tour.

13 It's in your report and since I was on a tour
14 last year and then the scale of the development is clear
15 to everybody, I just had two questions. One is how long
16 they are going to be under the provisional permit and how
17 long does it take for us for their permit; and then the
18 second question is that the permit that we issue for
19 them, is it a cumulative permit of the development

20 overall or piece by piece or both?

21 MR. UNGER: Actually, I think there's some
22 representatives from Newhall here who can actually inform
23 you, if they want to come up, but my understanding is we
24 issued a permit for essentially the first phase which I
25 think is probably on the order of about 25 percent to
0034

1 50 percent of the eventual build-out -- and please
2 correct me if I'm wrong -- but initially our
3 understanding is that they're going to be pumping the
4 sewage to the County Sanitation District, the
5 Santa Clarita Valley Sanitation District Valencia plant,
6 because the flows from the first phase of the project
7 that's actually going to be built and occupied will
8 essentially not justify a six mgd, million gallons per
9 day, sewage treatment plant. So that's -- their initial
10 plans are to use the existing Valencia capacity.

11 MS. MEHRANIAN: Yeah, that will be good for me to
12 hear that either now or if you want it later, it's fine.

13 MR. UNGER: Deb may have --

14 MS. MEHRANIAN: Not only what is coming up, but
15 what's already there and then the 25,000 added to that,
16 the cumulative impact versus, you know, piece by piece.

17 MR. UNGER: Deb, do you want to speak to this?

18 MS. SMITH: Hi. This is Deb Smith.

19 There are two aspects of the project that we'll
20 be permitting and one is for the wastewater, one is for
21 the development. I'm not sure which one you're most
22 keenly interested in.

23 But on the development side, we will need to
24 issue what's called a 401 certification in order for the
25 Corps. to finalize its 404 permit. We at staff --

0035

1 because of the scale of the project, we have decided,
2 which we often do when we have big projects, to issue the
3 404 -- the 401 nested inside of a WDR which we will bring
4 to you.

5 So we have sent a letter to the Corps. asking
6 them for a bit more time. Normally we issue within 60
7 days of having a completed application, but we can seek
8 up to one year with the Corps. We sent a letter. We
9 don't expect it to take that long, but we sent a letter
10 to them asking for that and we are busily working on ways
11 to charge requirements and working closely with Newhall
12 on that.

13 On the wastewater side, a number of years ago we
14 gave them -- you guys adopted a permit for them to build
15 their own wastewater treatment program; however, because
16 they are starting off on a smaller scale than expected,
17 they are interested in tying in to one of the County
18 San plants up there. So that issue is still unresolved.
19 We're going to try to address it, in part, through the
20 WDR process and then we may have to address it through
21 NPDES permits should we look at them going into County

22 San on a temporary basis.

23 MS. MEHRANIAN: I'd like to hear that when we're
24 further along, when you address that issue.

25 MS. SMITH: Okay, definitely.

0036

1 Well, the waste discharge requirements will come
2 to you for adoption, as will -- if we have to open up the
3 L.A. County San permits to allow more flow, that will
4 come to you, but we'd be glad to brief you or talk to you
5 further about it in the meantime.

6 MS. MEHRANIAN: Sure. And the provisional is 60 days
7 now? Is that what you said?

8 MS. SMITH: No. We've requested -- we can have up to
9 a year with the Corps. We have 60 days, but we've
10 requested that additional time because just bringing a
11 permit before the Board requires -- I mean, even a 60-day
12 notice would wipe out our 60-day time. We need time to
13 prepare it. It's more complicated than a 401 to prepare
14 complete Waste Discharge Requirements and then we need to
15 put it on the streets for at least 60 days and then bring
16 it to you, so we're looking at --

17 MS. MEHRANIAN: A year?

18 MS. SMITH: No. I'd like to do it more in a
19 six-month time frame, but we're trying to nail all that
20 down right.

21 MS. MEHRANIAN: Thank you.

22 MR. UNGER: Maria, let me add this to the Board
23 directive checklist and we will report back to you next
24 month.

25 MS. DIAMOND: Do we have a report from -- on

0037

1 enforcement today?

2 MR. UNGER: There's no oral report on enforcement
3 today. There will be one next month.

4 MS. DIAMOND: Okay. Thank you.

5 And I don't believe our State Board
6 representative is here today, Fran Spivy-Weber, so we'll
7 move on then to Public Forum.

8 This is the time for anybody who wants to
9 address us on any item that's not on the Agenda today,
10 and there is -- I have speaker cards so we're going to
11 ask -- I'll call the people up and you have up to three
12 minutes to speak, and the speakers will come right up
13 here to the podium.

14 So the first person I have is Donald Brown.

15 Mr. Brown?

16 MS. GLICKFELD: Madam Chair, while Mr. Brown is
17 coming up to the podium, I have been having trouble
18 hearing my colleagues on the other side of the table and
19 I'm concerned about whether the people in the back are
20 hearing anything at all. So is there anything that we
21 can do about our sound system? And then I would ask that
22 you remind every speaker -- see how close I am? That's
23 how close you need to be.

24 MS. DIAMOND: Put your mouth as close to it as you
25 can without swallowing it.

0038

1 MR. UNGER: We're having one of our interns check to
2 see if we can adjust it.

3 MS. DIAMOND: And would you also just state your name
4 for the record.

5 MR. BROWN: My name is Donald Brown --

6 MS. DIAMOND: Thank you.

7 MR. BROWN: -- and I live at -- I used to live in
8 Ujima Village and I have cancer, and I didn't have cancer
9 until I moved in there, and I have three daughters, an
10 18-year-old, a 21-year-old, and a 24-year-old, and a
11 grandbaby, a two-year-old. And my 21-year-old, she was
12 having problems with rashes. Now her baby has -- my
13 grandbaby has terrible rashes from her neck to her foot,
14 and a lot of the neighbors -- a lot of the kids that used
15 to play around there, I used to coach them and just work
16 with them and have them running and playing football and
17 running all in the grass. Now all of the kids are sick.
18 They have respiratory problems and, like I said, we used
19 to go over to Magic Johnson and fish. I would cook some
20 of the fish for them and they're sick.

21 And I was looking -- I had some notes to say,
22 but after looking at that survey and they had Ujima
23 Village, they had the contaminants around it. The
24 contaminants is all around the Village, but yet they were
25 drilling right in front -- 24, 25 feet from my front door

0039

1 and I ended up catching pneumonia twice and the doctors
2 would ask me, "Have you been out of the country?" And I
3 told them, "No." Three days later they'd come back to my
4 room and ask me, "Mr. Brown, are you sure you haven't
5 been out of the country?" "No, I haven't been out of the
6 country."

7 After I had cancer and I had cancer surgery I
8 think last month -- the days are just getting -- last
9 month, I think, and the cancer doctor asked, said -- he
10 told my sister for a person my age, healthy as I am, and
11 the kind of cancer that she found and where it was
12 located she said is so unusual. She had -- it's just
13 unusual. But it's just hard seeing these kids down
14 there -- they're all spreaded out -- that I used to, like
15 I say, coach them and take them fishing and all these
16 kids are sick and like I say, it's hard.

17 And I want to ask the people, Why is it taking
18 so long for people to respond to us? What happened to
19 the EPA? What happened to the sources that when
20 something happens, everybody's supposed to get involved
21 in?

22 Like if an animal or something gets trapped in a
23 water well, you have water supervisors come out, the head
24 of the fire department that comes out, County supervisor
25 comes out, and here you have people dying. A lot of

0040

1 people are sick and nobody came out to see us until word
2 started getting around, and we had a Congressperson to
3 come out, we had a State senator to come out, we had a
4 County supervisor sent a representative out, we had Parks
5 and Recreations that sent attorneys out, but nobody
6 wanted to talk to see what's going on with us. It was
7 just to protect their own interests.

8 And I wish that somebody would -- if there's a
9 hundred -- if there's just 100 of us, why would somebody
10 just make a graph or a chart and say, "Out of 100 people
11 in the Ujima Village, 85 percent of them are sick"? So
12 it's not just a coincidence or he'd contracted something
13 in Africa or one of his ancestors had something. You
14 have people who are sick and somebody needs to take a
15 survey to say, This many people has died in there from
16 cancer, this many people have cancer, this many kids have
17 respiratory problems.

18 I haven't seen of that. The Health Department
19 hasn't come out and asked us questions. They haven't
20 talked to us and the information we find out is always
21 mailbox talk, where we meet at the mailbox. Oh,
22 Ms. So-and-so around the thing, she died or Mr. So-and-so
23 died or so-and-so's kid's in the hospital sick.

24 That's how we found information out. That's how
25 we found information. And then when you ask the

0041

1 representatives, Oh, we need you guys to move because the
2 buildings are old and dilapidated and, you know, we --
3 I'm sorry.

4 I can't say any more, but thank you for giving
5 me the opportunity to express myself. And like I said,
6 I'm not worried about myself. The cancer I have is
7 terminal; but my kids, it's something that they have to
8 worry about and that's one of my biggest worries. My
9 worry's not about myself. It's about, Well, what's going
10 to happen to my kids? Like I said, I have three
11 daughters. They're hard-headed and they think they know
12 everything about the world and I need to be there to show
13 them and I might not be and I hope Mobil will do the
14 right thing and help us.

15 I hope the City government will do something to
16 help us and not just think that we're just a bunch of
17 blacks out there in this little corner of South Central
18 L.A. and that's it, because if it was Beverly Hills --
19 and I'm not being racist by no means. But if it was
20 Beverly Hills or Torrance, you'd have had everybody from
21 presidents to everybody out there. Everybody's been out
22 there. They'd have everybody out there, Let's do this,
23 Let's get this survey, Let's get this.

24 But people in South Central, we feel that at
25 Ujima Village we're just tossed aside. We was just

0042

1 tossed aside. And like I said, that many people dying,

2 that many people being sick -- and like I said, I was
3 just a fat, healthy guy around there and, like I said,
4 now I'm fighting for my life every single day now.

5 And the other day I saw the doctor, the cancer
6 doctor, was so surprised that I look the way I do and I
7 told him, "Whoa, I'm not ready to go yet" and they've
8 told me that the cancer is terminal. Only one person can
9 tell me that and that's God. So God hasn't gave me the
10 paperwork yet other than letting me wake up every
11 morning, so that's it.

12 So thank you for letting me express myself and
13 thank you.

14 MS. DIAMOND: Thank you, Mr. Brown.

15 Willie Mitchell?

16 MR. MITCHELL: Hello, how you doing? My name is
17 Willie Mitchell. My brother Ernest couldn't be here
18 today because he's real emotional.

19 MS. DIAMOND: Mr. Mitchell, put your mouth right next
20 to it. Thank you.

21 MR. MITCHELL: My other brother and siblings couldn't
22 be here because they get real emotional or they have work
23 at this time. Thank you.

24 I'm here on behalf of my mother, Claudia
25 Mitchell. She lived in the Village for over 12 years and
0043

1 she got sick. She got sick and went to the doctor and
2 told her she had leukemia, cancer. And when I went with
3 her, I ended up talking to him myself and he asked me,
4 where did she work, what does she do for a living,
5 because this right here at the age of in here 60s, this
6 come from -- you have to be born with it or you have to
7 get it somewhere like at a factory or a plant from
8 working for so many years there and I said, "No, my
9 mother never worked. She had six children and she raised
10 all of us and she raised all our kids and she also raised
11 our family and friends' kids."

12 So like before day care existed, she was
13 considered day care mom, 'cause people always brought her
14 to take care of their kids and change it up, because
15 living off of the County wasn't really doing anything for
16 her. And the reason she lived off the County is because
17 when she was pregnant with my youngest brother, she fell
18 off some stairs and messed up her legs, so she couldn't
19 really work. So that's what she ended up doing, just
20 raising kids. And I told the doctor, "Okay. She didn't
21 work. That's what she did."

22 Now, the guy before talking about they're tested
23 and Exxon. Okay. If they had all the testing over
24 there, they need to reopen the Village and move their
25 family in there for over 10, 20 years and let them drink
0044

1 the water and live in that contaminated place and then
2 come back in and see if they're singing the same tune,
3 because I know something's wrong over there because a lot

4 of people -- mainly older people -- you know, as they get
5 actually older and everything, they start to drop and
6 they open their body up for the infection. I know a lot
7 of old people living over there is dying over there. Two
8 of my mother's friends were living over there and they're
9 all living there around the same time and they all died
10 around the same time, different forms of cancer. One of
11 them moved out, so that I guess saved her because she's
12 still living. She's still sick.

13 And now I'm kind of stressed out myself. Like
14 I -- on and off and I'm wondering if, you know, I'll go
15 to the doctor one day and they'll say, "Mr. Mitchell, you
16 have leukemia," you have this or that. I feel like my
17 nerves is real bad. I don't know if it's from over there
18 or just stressing about her and what's going on with this
19 situation because it's too overwhelming for me. Every
20 time I get a phone call, my eyes just shoot through the
21 roof. I'd just -- like I said, if they really think it's
22 nothing wrong over there, why don't they rebuild it and
23 move all their families over there and want to know --
24 they keep saying nothing's wrong over there. Okay.
25 Prove it to me. Move over there yourself. Move over
0045

1 there and move your family and loved ones over there and
2 then let -- I'll -- if God lets me live 15, 20 years, I'd
3 like to see the outcome of it. Thank you.

4 MS. DIAMOND: Thank you, Mr. Mitchell.

5 Dominique Nicole Tanner. Next card, Dominique.

6 MS. TANNER: Hi. My name is Dominique Tanner.

7 MS. DIAMOND: Can you put it a little closer to your
8 mouth?

9 MS. TANNER: Right there?

10 MS. DIAMOND: Yeah. That's better. Speak up.

11 MS. TANNER: I'm Dominique Nicole Tanner. I was born
12 there. My mom stayed there five years before I was born
13 in '76. I was born with a right kidney, no left kidney.
14 I found out when I was 16. But way before that time, I
15 used to always go outside and play and things with other
16 kids and stuff and then come back in the house and tell
17 my mom, "I'm hurting. My side is hurting." My mom used
18 to say, "You're playing too hard. You don't stop playing
19 out there. You're playing tough. That's what's wrong.
20 Sit down and rest." I said, "No, mom. I'm really
21 hurting." This is like when I was six and seven, you
22 know, and I used to tell my mom, "I'm hurting real bad.
23 Something's wrong." She said, "No. You're all right.
24 You just go ahead and, you know, sit down. You're
25 playing too much."

0046

1 So when I turned -- when I was 16, I had to go
2 to the emergency room because I was leaning over and
3 having abdominal pain; I mean, really pain that was
4 killing me. I was crying. And they said, you know,
5 "Ms. Tanner, you know, we're going to do an ultrasound on

6 you and see what's the matter." I said, "Okay."

7 So when they did the ultrasound, they found
8 out -- the guy was going and looking around, looking at
9 both sides, and he said, "You know, I'm just going to
10 send you back to the doctor and send the report over
11 here." I said, "What's the matter?" He said, "Just go
12 back to the doctor." You know, "Go back to your room and
13 they'll let you know."

14 So the doctor came back in and he said, "You
15 know, this is unusual. You was born with what looked
16 like on the ultrasound the right kidney. We don't see
17 the left." I said, "Where is it? Is it down there or
18 something? Is it behind something?" I said, "Where is
19 it?" He said, "We don't know. What we're going to have
20 to do is admit you into the hospital."

21 I was in the hospital for two weeks. They had
22 to give me antibiotics. They put me through a CAT scan
23 to make sure. Like the second day I was there, they
24 found out I was born with a right kidney, no left kidney
25 at all. They said it didn't form at all. So they called

0047

1 that a birth defect they told me. I'm like, "Wow, how
2 did this happen?" What they asked me, "Where did you
3 used to stay? Where did you" -- you know something? I'm
4 like, "I don't know." I'm 16 and still just afraid, like
5 "What is going to go on?" Am I going to die? What's
6 going to happen to me?"

7 They said, "Well, you know, we're just going to
8 treat you and from now on you have to be very careful."
9 They told me that I couldn't have any kids. I had my
10 daughter. You know, I had her before I knew about it.
11 They said they wanted me to tie my tubes. They didn't
12 want me to have any more kids. My life was limited, you
13 know and I'm like, "No. I want kids. I want more kids,
14 as many kids that I can take care of, if I can."

15 They said, "Oh, no. You need to stop now. You
16 have one. We need to tie." I said, "No. God's not
17 going to let you. I'm not going to let you do that.
18 God's going to make sure that I be able to have kids.
19 I'm going to have a normal life like everybody else out
20 here."

21 And they said, "Oh, well, Ms. Tanner, I
22 understand that you want to be able to have kids and all
23 and do these things, but now since you've found this out,
24 don't you think your life is important to you?" I said,
25 "Yes." I said, "Well" -- and I used to always cry and

0048

1 say, "Well, how can this happen to me? You know, how did
2 I get this way?" My mom and my dad had both of their
3 kidneys. I had my kids -- they told me to make sure that
4 my kids have both of theirs, always. I have three. I've
5 took them to the hospital every time I had a child to
6 make sure that they was born with both. It don't run
7 down in my family. Everybody has theirs. They just

8 said, you know, "Yours is called like a birth defect."

9 Right now I'm in pain. I have to go to the
10 doctor today to see my kidney specialist because I have
11 to see -- I can't drink like a dark drink. I don't care
12 what it is; no soda, not even too much orange juice,
13 because it goes and filters and goes there and I'm in
14 pain. I really am in pain. I have to take pain pills,
15 you know, to even get through the day and, too, sometimes
16 my stuff gets approved when I have to see the kidney
17 specialist; but when I see this kidney specialist very
18 often, I don't have to get approved now.

19 I've been going back and forth to the hospital
20 all the time, you know, with regards to this and they
21 have to give me antibiotics all the time, take this stuff
22 to always try to keep myself together and make sure it's
23 not overworked and everything.

24 Now I had a CAT scan twice this year. They told
25 me I can't take more than two or whatever because it had
0049

1 damaged me. My body can't take the stuff that the -- the
2 dye because the dye would affect me. I've got a little
3 kidney stone now. You know, I was born -- I mean, I
4 was -- they told me that a little kidney stone is there.
5 That kills me. Even though it's small, it bothers me.

6 They told me my life is limited. I have to eat
7 certain foods. I have to do this a certain way, got
8 this -- why should I have to be limited to what I have to
9 do? But I have to do it now because I know I'm born with
10 one kidney, you know.

11 They told me I have to keep blood going --
12 yesterday I just had blood drawn. You know, things like
13 that. I have to keep that going, have to go to the
14 doctor all the time. They told me that my -- I have to
15 make sure that somebody in my family has the same blood
16 type to make sure that I get -- in case I need a kidney,
17 in case it shuts down, you know, anything like that.

18 I mean, it is so, so much pain and it just kills
19 me sometimes that I can't sit up too long. I'm a happy
20 person, but no one can tell when a person is hurting
21 inside what's the matter with them. You know what I
22 mean? You can see that I'm maybe happy. I may look like
23 this, but I'm in pain, I mean, all the time, you know,
24 all the time.

25 And I just need to know -- have some answers. I
0050

1 need to know what they're going to do right now because
2 this is -- this is terrible to put me in a situation like
3 this and everybody else, you know, because we didn't ask
4 for none of this. You know, I'd like to know what Exxon
5 and the City are going to do about this. I would need
6 some answers right now because I should not have to have
7 limited myself to what I have to do. I can't even play
8 sports. I can't even run. If I run too much, just
9 running to exercise to lose weight, my side started

10 hurting.

11 You know, this is -- this is -- you know, it
12 just -- I don't know what to say no more, but I just
13 thank you guys for letting me speak and for this
14 opportunity to tell my story. You know, for years I've
15 just been saying, you know, why I have to be like this,
16 you know? Like when I leave here, I've got to go and
17 take care of myself. I stay at the hospital and the
18 doctor's office more than I stay at home you can say
19 because I've always got to keep myself together.

20 I have to keep myself treated. I have to drink
21 water all the time. You know how you want to drink a
22 soda pop or something? I can't drink that too much. I
23 can't drink it at all, really, because I have to go and
24 get antibiotics. So I don't know what we're going to do
25 today about my situation. I have to go to see my

0051

1 specialist today. I'm in pain right now, but I had to
2 come here and give you guys -- you know, let you guys
3 hear my story and hear what's going on with me. It's
4 hard to stand up sometimes. It goes and comes when
5 you're real bad --

6 MS. DIAMOND: Thank you, Ms. Tanner. Thanks for
7 sharing your story with us.

8 MS. TANNER: Thank you.

9 MS. DIAMOND: Ebonizha Jackson.

10 Hi. And I just wanted to remind you the public
11 forum is basically three minutes each.

12 MS. JACKSON: That's why I wrote something down, so
13 it's not going to be more than three minutes.

14 Hello. My name is Ebonizha Jackson. Hi.

15 I'm speaking on behalf of my grandmother. She's
16 over there (indicating). That was my mom that just left.
17 Yeah.

18 Her name is Margie Tillman. She lived at Ujima
19 Village she said for more than 15 years, or less, and she
20 suffered a great -- equal amount of pain and suffering.
21 I'm speaking on behalf of my grandma because this is
22 about her, you know, because she can't stand up here for
23 a long time. She can't stand at home for a long time
24 because of the medicines she's on.

25 She has cancer. She has actually two types of

0052

1 cancer. She has breast and lung cancer.

2 The Ujima Village -- I blame the Ujima Village
3 for the cancer because of all the pain and suffering my
4 mom has to go through, too. She had my mom there. She
5 was -- she got, you know, pregnant there and she, you
6 know, drank and ate with the water, you know, the
7 contaminated water, and she made my mom's bottles with
8 it, too.

9 I think it's not fair how this is happening. No
10 one should go -- be going through this. It's so many,
11 you know, medications my grandma have to go through.

12 Ever since I was little, my grandma, we would
13 always have to go to the doctor. We would always have to
14 go there. If it's not for us, it would be for my grandma
15 because she always had cancer. One time we thought she
16 was clear of it, but it came back because they said it
17 was so much. She had lymph nodes on her arm. They
18 couldn't get rid of it.

19 She never knew where it came from. She stopped
20 smoking when she was young. She said she smoked a lot,
21 but she stopped smoking. Until she started living there,
22 that's when she started getting the cancer. She never
23 knew like if you -- 'cause she had kids there. You know,
24 she didn't think that it would be consequences for the
25 child which she had, which is my mother. Her doctor even
0053

1 said, you know, didn't my grandma ever work in a bad
2 facility, you know, contaminated and stuff? But no. My
3 grandma always stayed home. She worked from home.

4 I think whoever is liable for this, I think they
5 should suffer the great consequences like everybody else
6 did.

7 All I want to know is I have one question. Why
8 is the Water Board, you know, just now finding out the
9 contamination has spread so far into the neighborhood and
10 could anyone have known sooner? Because it's -- it's
11 very bad. You know, it messes up so many -- so many
12 people and their lives and their children, too, because
13 that causes mutation and nobody knows -- nobody don't
14 care what will happen if, you know, I drink that
15 contaminated bottle or whatever because it always has
16 consequences from anything. I don't care how little it
17 is, how much it is. You know, it still had consequences.
18 You will get sick, period, and I know cancer isn't like
19 the common cold or whatever, but it's not likely that,
20 you know, half of the community gets cancer. It doesn't
21 make any sense.

22 Thank you for letting me speak.

23 MS. DIAMOND: Thank you very much.

24 I have three more cards. The next person is
25 Mark Pumford from the City of Oxnard.

0054

1 MR. PUMFORD: Good morning, Chair, members of the
2 Board. Mark Pumford with the City of Oxnard. It's now
3 very difficult to switch from the other side where you
4 have actually helped the kids.

5 Alex, if you have the pictures, I'd appreciate
6 those.

7 At the Annual CASQA Stormwater Conference in
8 September, Oxnard City Corps received an award for
9 outstanding BMP implementation for their innovative trash
10 monitoring project in the Calleguas Creek watershed.

11 When they found out that I was coming to this
12 meeting today, the City Corps founder, Efron Gore,
13 holding the award, asked me to thank you, Board and

14 staff, for your support.

15 You may remember that the Stormdrain Keeper
16 Program at City Corps started in 2000 with a Supplemental
17 Environmental Project, or SEP, grant provided by this
18 Board for the purpose of manually removing trash from
19 channels in the local area and studying the sources.

20 In its 11-plus years, the City Corps Stormdrain
21 Keeper Program has had a huge environmental benefit in
22 the Oxnard area, while keeping --

23 MS. DIAMOND: Excuse me, Mr. Pumford. She needs you
24 to speak up because she can't hear.

25 MR. PUMFORD: I'm sorry. It's had a huge

0055

1 environmental benefit, while keeping the kids off the
2 street and gainfully employed. Thank you for giving them
3 a start.

4 MS. DIAMOND: Thank you.

5 James Enriquez, from the City of El Monte. Are
6 you here? We'll go on to the next -- please come up.

7 MR. ENRIQUEZ: Good morning, Board members, Regional
8 Board staff. My name is James Enriquez. I represent the
9 City of El Monte. I'm the Director of Public Works and
10 the City Engineer and I'd like to comment this morning on
11 Agenda Item 16. The City of El Monte respectfully
12 requests the Regional Board --

13 MS. DIAMOND: Wait. Wait. Wait. Wait. Wait.

14 We're on public comment. Item 16 is going to
15 be -- is a regularly agendized item that we are going to
16 be hearing today. You'll have an opportunity to speak
17 then but not during Public Comment forum on that issue.

18 MR. ENRIQUEZ: I apologize for that. The card did
19 indicate that it was Item 16 that --

20 MS. DIAMOND: We're just on Public Forum and that is
21 the last card I have for Public Forum.

22 MR. STRINGER: Fran, can I just ask a question of
23 staff?

24 MS. DIAMOND: Yes.

25 MR. STRINGER: Sam, maybe you can address this. What

0056

1 health studies have been done on Ujima?

2 MR. UNGER: We are not aware that health studies have
3 been done. Our work, as I said, focuses on health risk
4 assessment where we're looking forward, so we haven't
5 gone back. We don't have the capability to go back.
6 We've been talking with the County Department of Public
7 Health to try to conduct that work and it hasn't yet been
8 initiated and I don't have anything more to report to you
9 on the status at this point.

10 MR. STRINGER: I know it's out of our purview to do
11 that. I'm just wondering what we can bring to bear on
12 others to ensure that it gets done. It sounds like
13 that's being done and I'd just encourage that it be done.

14 MR. UNGER: Thank you. I appreciate that and I will
15 bring that to our discussions to the County staff.

16 MS. DIAMOND: We know that it is an issue for the
17 County to deal with; but if they don't do it, certainly a
18 request from the Executive Director from -- you know,
19 from the Regional Board saying, We are concerned about
20 the health risks and we know that there's been a request
21 that's not happened yet, can you please move on it? I
22 mean, I don't know what it would take to help -- we hope
23 the County would be doing that, too, but since they're
24 not doing that on their own, we need to do it. And even
25 though it's not under our purview, we certainly have the
0057

1 opportunity to talk about public health issues in our
2 region and that would be something that I think we all
3 would encourage.

4 MR. UNGER: I will prepare such a letter and get it
5 out as soon as I can.

6 MS. LUTZ: Sam, can I just follow up and ask that you
7 keep us abreast of that information? You know,
8 as Mr. Stringer said, this is not under our purview.
9 However, we cannot ignore the fact that this park is not
10 keeping up with what we are doing to try to rectify the
11 situation there and whatever we can do to help make
12 matters better there and that the knowledge be gained is,
13 I think, good for the entire community. And I think one
14 of the things that one of the commentators said was
15 something about, you know, the City people need to be
16 there. Am I correct, this location is an unincorporated
17 County area?

18 MR. UNGER: That is correct.

19 MS. LUTZ: Yeah. So when the residents talk about
20 needing to talk to somebody in a political realm, what
21 they -- the people they need to talk to are the County
22 Board of Supervisors. This is their purview.

23 MR. UNGER: That's correct. As Chair Diamond
24 mentioned to you, we have had one meeting with the
25 Supervisor. I've talked with his staff regularly and I
0058

1 will prepare a letter to send to them requesting that
2 they undertake the health assessment.

3 MS. LUTZ: Thank you.

4 MS. MEHRANIAN: Madam Chair, I just -- and I'm
5 thinking that's under our purview of letting -- I mean, I
6 think everybody who spoke, they brought up the issues
7 that some of them we have done some things about and
8 there's some past records of things that we've done and
9 we're doing right now. It's very important I think that
10 they're informed of that and they have some certain level
11 of input to what it is. And I know you have public
12 hearings there, but I'm just reiterating.

13 MR. UNGER: Yes. We have held a series of public
14 workshops and hearings where the community can come
15 after-hours. We were waiting until we received the
16 results from this October 28th report to see off-site and
17 staff were planning to schedule one. With the holidays

18 coming up, we don't have the time schedule yet, but we
19 were planning on public -- another public meeting to
20 report on the results to the public.

21 MS. MEHRANIAN: Thank you.

22 MS. DIAMOND: Ms. Glickfeld.

23 MS. GLICKFELD: Yes. I want to ask about the time
24 schedule. I'm looking at the memo, the e-mail from Peter
25 Haviland to the Board, to you, Sam --

0059

1 MR. UNGER: Yes.

2 MS. GLICKFELD: -- and it looks like -- it looks like
3 all the other sites require a Phase I environmental
4 assessment. Does the site that the County owns require
5 that assessment, too, or has it already been done?

6 MR. UNGER: We think there's plenty of data on the
7 site that we have right now that we could make a decision
8 if the day care center could be moved to a cleaner area
9 on the site.

10 MS. GLICKFELD: Is it possible that the County could
11 temporarily put this -- put a facility on this site as
12 they're looking for other sites to put them? It just
13 seems to me that it's not to their advantage to look for
14 other sites when they have one that's already gone
15 through the process. If they look for other private
16 sites, there are all kinds of approvals. I think this
17 idea that they're going to get it done in 14 weeks is
18 unrealistic on their part. So I would really urge you to
19 continue to ask them and do everything we can to get
20 those kids off that site.

21 The fact that these soil gasses have not yet
22 affected those kids doesn't mean it couldn't happen
23 tomorrow. As you showed, it's a -- it's something that
24 there is no control on until we get them out of there.
25 Thank you.

0060

1 MR. UNGER: We agree. Thank you.

2 MS. DIAMOND: I've asked some of those questions
3 and at the meeting with the Supervisor, we brought up the
4 issue of the site that makes the most sense to move them
5 to, the site that we've just been discussing where
6 there's already been a study to make sure that it's not
7 contaminated, where it would take less time.

8 At that meeting, the Supervisor's office was not
9 very interested in that site. I don't know why, but he
10 did invite me to call him again. I am going to call him
11 again, hopefully meet with him again. I think that we
12 should urge as much as possible that that site be the
13 site that they are moved to, whether temporarily or
14 permanently, but it makes no sense. We know that the
15 airspace has not been contaminated, but nobody can answer
16 the question of if that will ever be contaminated. We
17 know the soil -- it hasn't come up into the airspace, but
18 we don't know and I don't think any of us want to take
19 that chance that we wait until it does.

20 So I urge the County and I think we all urge the
21 County and we need to do whatever we can to urge the
22 County to move the day care center as expeditiously as
23 possible and I guess we're all giving you that message
24 and we'll take it personally back to the Supervisors, but
25 they have to hear it as often as possible.

0061

1 MR. UNGER: I will -- I will prepare two letters
2 then, one to accelerate the relocation of the day care
3 center for your signature and then I'll prepare one to
4 the County Department of Public Health for a health
5 assessment request. Thank you.

6 MS. DIAMOND: I'm sorry. We do apparently have one
7 more person. I didn't have this card before. Mark
8 Lombos from the L.A. Flood Control District for Public
9 Forum.

10 Thank you. I'm sorry I missed your card.

11 MR. LOMBOS: Good morning. Can everybody hear me
12 clearly?

13 My name is Mark Lombos from the Los Angeles
14 County Flood Control District, and I'm here to give an
15 update on the Strathern Wetlands Park Project.

16 Next slide, please.

17 Just some background information on our project
18 area. Sun Valley is a 4.4 square mile watershed located
19 in the San Fernando Valley in the city of Los Angeles and
20 historically it suffers from a variety of watershed
21 health issues such as chronic flooding, poor stormwater
22 quality, and just due to dense urbanization, a lack of
23 recreational parks, open space, and natural habitat.

24 Our project site is located at the northeast
25 corner of Tujunga Avenue and Strathern Street and it's a

0062

1 46-acre property that was previously operated as a
2 construction debris landfill by a private property owner.

3 The Flood Control District acquired this
4 property back in March 2010, specific for the Strathern
5 Wetlands Park. One of the key aspects of our project is
6 just the collaborative effort that has gone in not just
7 through the planning process but also the design phase.

8 Earlier this year, we hosted a community
9 workshop to solicit input from the residents as to what
10 recreational amenities they wanted to see in their park.
11 And just working closely with our project partners from
12 the City of Los Angeles, local stakeholder groups, and
13 again with the residents, we were able to develop the
14 project concept for the Strathern Wetlands Park. I just
15 want to highlight some of the few project elements that
16 you can see from this screen.

17 It's going to feature a detention pond that will
18 provide flood alleviation from the surrounding areas. It
19 will also feature 10 acres of wetland areas that will
20 naturally treat the stormwater that's collected in the
21 pond and then also provide a natural habitat for various

22 plant species and small animals. And then finally, it's
23 going to feature 15 acres of recreational space and
24 that's going to allow for both passive and active
25 recreation.

0063

1 This (indicating) is what the property currently
2 looks like. Again, this is looking at the northeast
3 direction of Tujunga and Strathern, and this is an
4 artist's rendering of what the project would look like.

5 The next slide is again looking at that same
6 property but from the opposite side and, again, we have
7 an artist's rendering kind of highlighting what that
8 recreational area would look like.

9 So as you can see, it's definitely a highlight
10 of the multi-benefit approach that the Flood Control
11 District is trying to implement with a lot of these
12 projects.

13 We're currently in the design phase and we hope
14 to finish design plans by next fall and hopefully begin
15 construction by fall 2013.

16 And if you have any questions about the project,
17 my contact information was up on the screen, but we look
18 forward to providing you an update again in the near
19 future. Thank you.

20 MS. DIAMOND: I think this would be a good time for a
21 break. So we'll take a 15-minute break and then we'll
22 come back with Item Number 14.

23 Is that correct, Sam, the Basin Plan Amendment?

24 MR. UNGER: Yes.

25 MS. DIAMOND: Okay.

0064

1 MR. UNGER: Oh, we have to do the uncontested item
2 calendars.

3 MS. DIAMOND: Sorry. The uncontested items, but if
4 you're going to take a break, I'm sure you're not here
5 for the Uncontested Items.

6 MR. UNGER: Do you want to --

7 MS. DIAMOND: No. No. No.

8 MS. LUTZ: I move the uncontested items.

9 MS. GLICKFELD: Second.

10 MS. DIAMOND: All those in favor?

11 MS. GLICKFELD: Aye.

12 MR. STRINGER: Aye.

13 MR. BLOIS: Aye.

14 MS. MEHRANIAN: Aye.

15 MS. DIAMOND: It passes. We'll be back with the
16 Basin Plan Amendment.

17 (Recess)

18 MS. DIAMOND: Welcome back. We're about to -- we're
19 going to resume now with Item Number 14, which is a Basin
20 Plan Amendment, and so I'm going to ask Ms. Moffett to
21 open up the hearing, please.

22 MS. MOFFETT: This is a public hearing for
23 consideration of a proposed Basin Plan Amendment to

24 administratively update Chapter 2 beneficial uses by
25 incorporating previously adopted amendments and updated
0065

1 surface and groundwater maps and corresponding beneficial
2 use tables. Copies of the proposed resolution were sent
3 to the Environmental Protection Agency, the State Water
4 Resources Control Board, and other interested agencies,
5 persons and organizations.

6 All persons appearing before the Board today
7 should leave written copies of their testimony, if
8 available.

9 Madam Chair, will you now please open the
10 hearing and administer the oath.

11 MS. DIAMOND: Yes. Will all those who are going to
12 testify on this matter please stand and raise your right
13 hand. That's everyone for Item Number 14.

14 (Whereupon all prospective witnesses were
15 collectively sworn)

16 MS. DIAMOND: Thank you. So we'll begin with our
17 staff.

18 DR. AMAH: Thank you. Good morning.

19 Can you hear me?

20 Good morning, Board members. My name is Ginachi
21 Amah. I am an engineer with the Basin Planning Program.
22 With me is Thom Siebels, our GIS analyst, who is
23 responsible for the bulk of the GIS work conducted for
24 this project. He will be making part of the
25 presentation. I would also like to acknowledge the
0066

1 contributions of others --

2 MS. DIAMOND: Excuse me. I'm probably going to have
3 to remind you more than once. Slow down, slower and
4 closer.

5 MS. LUTZ: Slow down.

6 MS. DIAMOND: We can't hear you very well.

7 DR. AMAH: And again -- can you hear me now?

8 Okay. I would also like to acknowledge the
9 contributions from other staff involved in this project;
10 in particular, Joe Luera, Theresa Rodgers, and our
11 student intern Manasi.

12 Item 14 is a proposed amendment to
13 administratively update Chapter 2 of the Water Quality
14 Control Plan for the Los Angeles Region, also known as
15 the Basin Plan. The Basin Plan is our regulatory
16 guidance and planning document and an essential tool in
17 supporting our mission to preserve and protect water
18 quality. The Basin Plan has both regulatory and
19 nonregulatory elements. This is an administrative update
20 that focuses on the nonregulatory aspects of Chapter 2 of
21 the plan, incorporating previously adopted amendments and
22 updating maps and beneficial use tables.

23 This is the first nonregulatory amendment since
24 the current version of the Basin Plan was adopted in
25 1994. With this amendment, we are not creating any new

0067

1 regulations nor are we modifying or deleting any
2 regulatory requirements from the Basin Plan. But you
3 will be asked to adopt a resolution to amend the Basin
4 Plan. Upon your adoption of this amendment, State Board
5 approval and OAL concurrence with its nonregulatory
6 status will be required before it becomes effective.

7 Administratively updating the Basin Plan was
8 identified as a priority project in the 2008-2010
9 Triennial Review, recognizing that an updated plan would
10 provide a more current resource for use by Regional Board
11 staff, the regulated community, and other stakeholders.

12 We have a change sheet for this item. It is a
13 reference map for the Eastern Santa Clara Groundwater
14 Basin, to be included in the Appendix of the Basin Plan,
15 and it's supposed to be placed right behind page 14-88 in
16 your package. I will go into the details and the need
17 for the change later in our presentation.

18 Next slide. With this slide, I would like to
19 provide a little background information on our Basin
20 Plan. The Basin Plan is designed to preserve and enhance
21 water quality and protect the beneficial uses of all
22 regional waters. It designates beneficial uses for
23 surface and groundwaters, it sets narrative and numerical
24 objectives that must be attained or maintained to protect
25 the designated beneficial uses, and it describes

0068

1 implementation and monitoring programs to protect all
2 waters in the Region. In addition, the Basin Plan
3 incorporates, by reference, all applicable State and
4 Regional Board plans and policies and other pertinent
5 water quality policies and regulations.

6 The current Basin Plan when adopted by the
7 Regional Board on June 13, 1994 and subsequently approved
8 by the State Board, the State Office of Administrative
9 Law, and the EPA. Since 1994, several Basin Plan
10 amendments have been adopted and more current background
11 and geographical information has become available, but
12 these changes have yet to be reflected in the Basin Plan.

13 The administrative updates of the Basin Plan
14 have been conducted in phases, the first of which covers
15 the update of Chapter 2.

16 Chapter 2 of the Basin Plan is titled,
17 "Beneficial Uses" and it lists and provides standard
18 definitions for the beneficial uses supported by
19 waterbodies in the Los Angeles Region. It also contains
20 beneficial use tables in which major surface waters,
21 groundwater basins, coastal features, and wetlands are
22 listed with their designated beneficial uses. Detailed
23 maps of these features are included in this chapter.

24 The amendments to Chapter 2 incorporate the
25 language from three previously adopted amendments to

0069

1 beneficial uses, Regional Board Resolution 98-018,

2 Regional Board Resolution Number 2003-010, and State
3 Board Resolution Number 2005-0015. I will discuss these
4 in detail in the upcoming slides.

5 The proposed update also includes updates to the
6 surface water, groundwater, and coastal features maps
7 contained in Figures 2-1 to 2-22 of Chapter 2. These
8 updated maps are created from more current, higher
9 resolution data sets.

10 In addition, the beneficial use tables, Tables
11 2-1 to 2-4, in Chapter 2 have also been updated to align
12 them with the higher resolution maps.

13 Finally, new geographical information has
14 allowed identification of previously unnamed waterbodies.
15 These waterbodies have been added to the tributary table
16 contained in Appendix 1 of the Basin Plan.

17 Addition of these waterbodies to the tributary
18 table is for informational purposes only and does not
19 have any new regulatory implications. I will go into
20 this in more detail when I discuss the comments.

21 This update to Chapter 2 of the Basin Plan is
22 nonregulatory in nature and does not involve changes to
23 beneficial use definitions, nor does it assign, modify,
24 or delete beneficial uses of any surface or groundwaters
25 within the Los Angeles Region.

0070

1 In November 1998, the Regional Board adopted an
2 amendment to the Basin Plan that de-designated the
3 municipal and domestic beneficial use from two areas of
4 the West Coast groundwater water basin and eight
5 channelized surface waters. This amendment also assigned
6 additional beneficial uses to three surface waters and
7 removed the cold freshwater habitat from portions of
8 three surface waterbodies.

9 The amendment was approved by the State Water
10 Resources Control Board, but subsequently was disapproved
11 by the Office of Administrative Law in July of 1999 on
12 the grounds that the proposed amendments to beneficial
13 users of the surface waters did not meet the standards
14 for approval.

15 However, OAL did find that the two areas of the
16 West Coast Groundwater Basin met the requirements for
17 de-designation of the municipal beneficial uses.

18 Therefore, in December 1999, State Board
19 resubmitted modified provisions of the amendment, which
20 only contained modifications to the municipal beneficial
21 use of the two areas in the West Coast Groundwater Basin.
22 This was approved by OAL in February 2000. These areas
23 are in Figure 2-15 on page 14-53 of the package.

24 In July 2003, the Regional Board adopted an
25 amendment to the Basin Plan incorporating the suspension

0071

1 of recreational beneficial uses in engineered channels
2 during unsafe wet-weather conditions.

3 The amendment also identified 39 waterbodies

4 within Los Angeles County to be covered by the high-flow
5 suspension and directed that a new Table 2-1a in the
6 Basin Plan should be created to contain all the
7 recreational beneficial uses. This table is provided in
8 your package starting at page 14-23.

9 The photo or slide depicts the conditions in
10 some engineered channels during significant storm events.
11 It was taken in Ballona Creek at Overland Avenue, right
12 behind the Culver City Library.

13 The high-flow suspension applies to
14 water-contact recreational activities associated with the
15 swimmable goals of the REC-1 use, the noncontact water
16 recreation involving incidental water contact under the
17 REC-2 -- sorry. I'm trying really hard to slow down --
18 the noncontact water recreation involving water contact
19 under the REC-2 use, and the associated water bacteria
20 objectives set to protect those activities.

21 Water quality objectives set to protect other
22 recreational uses associated with the fishable goals of
23 the REC-1 use and other REC-2 uses, such as those
24 involving the aesthetic aspects of water, remain in
25 effect at all times for the 39 waterbodies identified.

0072

1 In June 2003, the Regional Board rejected a
2 proposed amendment to the Basin Plan to modify the
3 recreational beneficial uses of Reaches 1 and 2 of
4 Ballona Creek.

5 The Regional Board's action was later reviewed
6 by the State Water Board and determined to have been in
7 error. The State Water Board subsequently adopted the
8 proposed amendment through State Board Resolution Number
9 2005-0015, thereby adding a subcategory of water contact
10 recreation to the Basin Plan.

11 This subcategory, Limited Water Contact
12 Recreation, was defined as "Uses of water for
13 recreational activities involving body contact with
14 water, where full REC-1 use is limited by physical
15 conditions such as very shallow water depth and
16 restricted access and, as a result, ingestion of water is
17 incidental and infrequent."

18 The new beneficial use was applied to Reach 2 of
19 Ballona Creek, while the swimming component of the
20 potential REC-1 use was removed from both Reach 1 and
21 Reach 2 of Ballona Creek. And as a clarification, I
22 would like to point out that REC-1 has a fishable and a
23 swimmable component. The swimmable component applies to
24 the potential for ingestion of water during recreation,
25 while the fishable component applies to the consumption

0073

1 of aquatic organisms obtained through recreational
2 fishing.

3 At this point, I would like to turn the
4 presentation to Thom, who will present this work done to
5 update the maps and beneficial use tables.

6 MR. SIEBELS: Next slide, please.

7 Good morning, Board members. My name is Thom
8 Siebels and I'm going to talk to you about the GIS
9 portion of this project that I performed. You've seen
10 some of my maps before. This is the first time I'm
11 presenting myself, so I'm going to take advantage of my
12 15 minutes of fame and talk to you about all the surface
13 and groundwater in the entire region, and you'll see what
14 I mean as we go through this.

15 The Basin Plan was last updated in this manner
16 In 1994. A lot has happened in the 17 years since then.
17 Specifically in the areas of technology, there's been
18 many developments that allow us to better understand and
19 represent the water features in our region at this time.

20 In this project, we use technology called
21 Geographic Information Systems, commonly referred to as
22 GIS. GIS is the system that we use to map and analyze
23 features in our database. GIS was in its infant stages
24 in 1994. The software was difficult to use. In fact,
25 some of the maps were actually drawn by hand at that time

0074

1 and there wasn't a lot of good data available.

2 At this time, the software has been greatly
3 improved, there's a lot of sophisticated mapping and
4 analysis tools at our disposal, and there's a lot more
5 accurate data available that we can use for our analysis.

6 For example, we can be working on something and
7 display recent aerial photography in the background to
8 assist in our research.

9 For this project, there were three specific
10 things that needed to be updated in order for us to do
11 our GIS work.

12 The first was the hydrologic unit codes. A
13 hydrologic unit is a way of organizing hydrologic data.
14 Typically it could be defining drainage areas and
15 watersheds and so forth. There might be many hydrologic
16 units within a specific watershed. Each hydrologic unit
17 is assigned a code and that's what we use in our tables
18 to identify where things are in the region.

19 Also, we needed to analyze and update our
20 surface water features. This includes streams, lakes,
21 wetlands, things of that nature; and in the process of
22 using more recent data, we were able, as Ginachi referred
23 to, to identify some new features and we were also able
24 to make some changes in the way things were mapped based
25 on Basin Plan amendments that defined certain reaches a

0075

1 certain way.

2 The last thing we had to update was the
3 groundwater basins, which of course refers to the storage
4 of groundwater below the surface, and we updated those as
5 well with more recent data.

6 Once we had all of these things and did our
7 analysis, we were able to create updated tables,

8 specifically the Beneficial Use Table in Chapter 2 and we
9 were also able to update all of the maps. There was a
10 total of 22 maps in Chapter 2 that were updated.

11 Next slide.

12 In the beginning of a GIS project, it's
13 important to select the data that you're going to be
14 using. The key data elements are commonly referred to as
15 base layers. As you can see on this slide, we had
16 different base layers before than we have now and in
17 choosing the base layers, we were careful to choose -- to
18 be -- for consistency, we chose layers that were derived
19 from the original data that had been used in 1994 and
20 also data that was used by the State Water Resources
21 Control Board and the EPA.

22 As you can see on this slide, for example, the
23 hydrologic unit layer in 1994 was called Cal Water 1.0.
24 It has undergone a couple of revisions and it is now
25 known as the Watershed Boundary Dataset, and that's what
0076

1 we used for this project. Likewise, the EPA Reach File 3
2 for surface water features has undergone several
3 revisions and is now known as the National Hydrography
4 Dataset, and the groundwater basins from the Department
5 of Water Resources underwent one major update and we are
6 using that current version.

7 Next slide.

8 In this slide, I'm going to explain a little bit
9 more about the hydrologic unit issue.

10 As I mentioned, hydrologic units are used for
11 organization of hydrologic data. They can represent both
12 natural and man-made watersheds and drainage areas. In
13 the previous version that we used in 1994, they used an
14 eight-digit code to identify hydrologic code units, two
15 digits for each of four categories that were region,
16 subregion, hydrologic basin, and hydrologic sub-basin.
17 In this current update, the code is now a 12-digit code,
18 hydrologic unit code, and that represents those four and
19 an additional two, which is watershed and sub watershed.

20 In this slide, we have an example of some of the
21 reasons why we needed to do this update. On the left you
22 see the version of hydrologic units that was used in
23 1994, indicated by the brown line that runs across there
24 and as you can see, there were some issues with that. It
25 considered not only scientific but administrative
0077

1 boundaries. There wasn't as much data available to make
2 it accurate.

3 So you can see in this case, this unit here
4 (indicating) that's bounded by the brown line includes
5 Dominguez Channel, Los Angeles River, part of
6 Los Cerritos Channel, and even a little part of
7 San Gabriel River, which have their own distinct
8 watersheds.

9 You can see on the right the more recent version

10 outlined in green now clearly defines drainage areas for
11 Dominguez Channel, separate drainage area for Los Angeles
12 River, Los Cerritos Channel, and so forth. So it's much
13 more accurate. You can also see down along the coastal
14 harbor features, you can see that there's more accuracy
15 in the way things are mapped and more completeness for
16 things that have been built in the years since then.

17 I need to point out one other thing about this
18 hydrologic unit issue, which was we obtained this data in
19 May of this year. We did all of our analysis, created
20 all our tables and sent it out for public comment, and in
21 September, right after we released that for public
22 comment, a new version of the hydrologic -- what is known
23 as the Watershed Boundary Dataset, the current Hydrologic
24 Unit layer, was released. What had happened was that the
25 United States Geologic Survey, the USGS had developed

0078

1 this layer and they turned it over to State officials to
2 be the stewards of that data for the State of California.
3 After review by the State officials, some changes were
4 made that were only -- there were only two or three very
5 small edits to the actual boundaries, but there were
6 several changes in the numbering system along the coastal
7 regions and in the San Gabriel River Watershed.

8 So we had to go back and make those changes to
9 the most current version that had been released in
10 September. So when you look in your packets, you're
11 going to see a lot of red numbers in the tables and the
12 reason for that is because of that update that came out,
13 and it looks a little funny to see so many red numbers
14 but it's because we were even using the most recent data
15 as of September of this year.

16 Next slide, please.

17 I talked about the hydrologic units. The next
18 thing we needed to analyze was the surface water
19 features. Again, that includes things like streams,
20 lakes and wetlands.

21 In 1994, we used a layer called the EPA
22 Reach 3 -- Reach File 3 for the storm -- for the Stream
23 Network and now we're using the National Hydrography
24 Dataset again that was developed by the USGS.

25 The previous layer was mapped at about a scale
0079

1 of 1 to 100,000. It had some errors. It wasn't very
2 complete in naming features and a lot of that has been
3 improved and updated in this new version. You can see in
4 these two examples side by side in the Arroyo Seco area.
5 You can see on the right that there's a number of new
6 streams included now that have been mapped and you can
7 also see from the labeling that there are many more
8 streams that have been identified and labeled in the
9 updated version, and that is what Ginachi was referring
10 to earlier, that we were able to add those to the
11 Tributary Tables to help us get a more complete inventory

12 of what is in our Region.

13 You can also see, for example, in this area
14 right here (indicating) where the stream was not
15 completely edited to connect to that one and over here
16 they've corrected that and updated the editing. You can
17 see previously they interrupted the streams as they went
18 through larger waterbodies and here they've made one
19 continuous network. And so those are improvements that
20 needed to be included.

21 In addition to that, I don't know if you can see
22 it here, but this named segment is the Arroyo Seco and in
23 the new version, what we've done is defined that this
24 is -- below the dam is Arroyo Seco Reach 2 and above the
25 dam is Arroyo Seco Reach 3. We made those changes based
0080

1 on Basin Plan amendments, TMDLs, and so forth that have
2 defined reaches in specific ways that have occurred since
3 then, and we wanted to reflect that in our mapping and in
4 our tables to make it clear for people.

5 In total, there are over 4,000 miles of named
6 reaches in our region and we looked at every one of them
7 and we were able at the end of that to add 660
8 waterbodies to our tributary tables.

9 Next slide, please.

10 The last thing we had to look at was the
11 groundwater basins. The groundwater basin boundaries
12 that we use, again to be consistent with the EPA and the
13 State Water Resources Control Board, are provided by the
14 Department of Water Resources in what they call
15 Bulletin 118. In the previous version, the update was
16 Bulletin 118-80 from the year 1980; and in the current
17 version, it's Bulletin 118-update 2003, when that was
18 updated.

19 These boundaries are based on an evaluation of
20 the best available geologic and hydrologic information.
21 You can see that there were some significant differences.
22 Things happened like on the left -- I don't know if you
23 can see those faint lines, but this area (indicating) was
24 divided into sub-basins and on the right it's now blended
25 into one large basin. These sub-basins down here in the
0081

1 yellow have been separated into distinct basins. The
2 shape like in this area here has changed somewhat based
3 on more recent data in some cases. You can see also that
4 here this was -- this was formerly split. It was
5 combined together, and in this area down here it was one
6 area that's been split. We had to address all of those
7 issues and resolve all of them, but in all cases we took
8 care to maintain the current Beneficial Use Designations
9 and line them up with the new data.

10 Next slide, please.

11 Maybe the most important part of this project
12 was to update the tables in Chapter 2, especially the
13 Beneficial Use Table, which you can find in your packet

14 on page 14-13, and with the beneficial uses, as stated
15 before, since this was a nonregulatory update, care was
16 taken to preserve the current beneficial use
17 designations. We were very careful -- even though there
18 were some name changes and hydrologic unit changes, we
19 were careful to look on the map and make sure that we
20 matched each physical segment of a stream in the old and
21 the new with the same beneficial uses.

22 We also made some improvements to the Beneficial
23 Use Table. As I mentioned before, we listed things
24 according to the way reaches have been defined in TMDLs
25 and so forth. For example, the Los Angeles River used to
0082

1 be just listed as Los Angeles River and Hydrologic Unit
2 A, Los Angeles River Hydrologic Unit B, et cetera. It's
3 now known as Los Angeles River Reach 1 and Los Angeles
4 River Reach 2, and so forth.

5 We're using the new, as I mentioned, 12-digit
6 hydrologic codes. We also added descriptions. The maps
7 that we provide are at too large of a scale to get detail
8 on exactly where reaches begin and end, so we thought it
9 would be helpful to provide descriptions. As you can see
10 in this example, instead of just listing Santa Clara
11 River 1, we added the description that it is from the
12 estuary to the Highway 101 Bridge.

13 It was important to be able to compare the old
14 tables with the new tables, so we created a
15 cross-reference table. The cross-reference table lists
16 things in the exact order and name that they appeared in
17 the previous Basin Plan update, and then alongside of
18 that we have the new name and the new hydrologic unit
19 that is used in this update so that people would be able
20 to refer back and forth between them.

21 And finally, as I mentioned, we updated the
22 Tributary Table and we were -- based on our GIS work, we
23 were able to add 660 named waterbodies to those tributary
24 tables to make a much more robust reference; and since
25 they made the table longer, we decided to organize it by
0083

1 watershed so it would be more user friendly.

2 And as an example, there's a Coyote Creek in
3 multiple watersheds so now when you look at the table,
4 you'll know which one you're talking about. Again, these
5 new reaches included in the Tributary Table, none of them
6 were added to the Beneficial Use Tables. None of them
7 were assigned beneficial uses during this process.

8 Next slide, please.

9 Here is an example, a shot from the screen shot
10 from the Beneficial Use Table and you can see how it's
11 organized by watershed, you can see the new names,
12 including things like Los Angeles River Reach 1 and the
13 descriptions like Dominguez Channel, for example,
14 "Estuary ends at Vermont Avenue." The next reach is
15 "Estuary to 135th Street," and so forth that we added for

16 clarification. And we have here the 12-digit hydrologic
17 unit codes that we now use and then the table goes on to
18 list all the current beneficial use designations from the
19 Basin Plan.

20 Next slide, please.

21 The fun part of this project was to create the
22 new maps. We used -- we updated all 22 maps in
23 Chapter 2. We used the same basic format from the
24 previous chapter. It had a nice, simple, and useful look
25 to it, so we maintained that format. It also had the
0084

1 little insets that identified where this map is within
2 our Region, as you can see up in the upper left corner
3 there.

4 In the previous version, we had all the surface
5 water features mapped. In this version, we added a
6 couple little details. We included, as you can see in
7 green here, the hydrologic unit boundary and we also --
8 for some geographic orientation, we added the freeways in
9 our Region to the maps. And this is an example from the
10 Malibu Creek watershed.

11 Next slide, please.

12 In the process of updating the maps, we also did
13 some editing in GIS to better represent certain features
14 in our regions, such as harbors and marinas. In this
15 example, you can see how we digitized things around the
16 L.A. and Long Beach Harbor area and we added things like
17 breakwater, bridges, harbors and marinas to better
18 represent what is going on in that area.

19 In summary of this part of the presentation,
20 this was a very complex project that involved extensive
21 use of GIS, looking at a large amount of data. When I
22 told you I was going to talk about all the surface water
23 and groundwater in our region, now you know what I meant.
24 We did look at all of that.

25 We are the first region who has taken on this
0085

1 project because it is kind of complicated and time
2 intensive. State Board has hired consultants to do this
3 for other regions and we are in discussions with them to
4 compare notes on what we did here.

5 At this time I'm going to turn it back over to
6 Ginachi, who will talk about the public comments and
7 conclude the presentation.

8 DR. AMAH: Thank you, Thom.

9 That was a lot of work. Thom has been working
10 very hard for over seven and a half months to get that
11 together. I am going to try and match his nice measured
12 tones, so I am going to be really slow.

13 In all -- next slide -- it all, we got seven
14 comment letters from the County Sanitation Districts of
15 Los Angeles County, the Calleguas Creek Watershed
16 Management Plan, Los Angeles River Metals Jurisdictional
17 Group 1, County of Los Angeles and Los Angeles County

18 Flood Control District, the City of Oxnard, the City of
19 Los Angeles, and the private citizen Theresa Jordan.
20 Responses to all comments received on the
21 August 19th, 2011 draft documents for this proposed
22 amendment are provided starting at page 14-111 of your
23 package. I will present some of the comments in the
24 following slide.

25 The County Sanitation Districts of Los Angeles County,
0086

1 Calleguas Creek Watershed Management Plan, and the City
2 of Los Angeles had comments regarding the appropriateness
3 of deleting certain language pertaining to the
4 application of the municipal use designation in
5 determining effluent limitations. This language was
6 deleted from the Basin Plan as part of the incorporation
7 of Regional Board Resolution Number 98-018, which removed
8 the municipal designation from two areas within the West
9 Coast groundwater basin.

10 In response, as previously mentioned, Resolution
11 98-018 had been adopted by the Regional Board and
12 subsequently approved by the State Water Board before
13 portions of it were disapproved by the Office of
14 Administrative Law. The Basin Plan language initially
15 approved by the Regional Board removed a provision in
16 Chapter 2 stating that no effluent limitations would be
17 placed in Waste Discharge Requirements as a result of the
18 municipal use designation ensuing from the State's
19 Sources of Drinking Water Policy until such a time as the
20 Regional Board conducted a detailed review to determine
21 which waters should be excepted from the municipal
22 designations.

23 Upon a thorough review of the administrative
24 record for this particular amendment, staff came to the
25 conclusion that the language in question should be

0087

1 reinstated, as its deletion was not included in the
2 portion of the amendment that was eventually approved by
3 the OAL.

4 County Sanitation Districts of Los Angeles
5 County also commented about the potential for changes to
6 beneficial uses as a result of modifications to reach
7 boundaries for surface waters and sub-basin boundaries
8 for groundwater basins.

9 In response, staff has tried to clarify that it
10 is not the intent of this update to modify or assign any
11 beneficial use changes. This update was conducted in
12 such a manner as to ensure that the surface water reaches
13 of segments and groundwater sub-basins retain the
14 beneficial use designations contained in the 1994 Basin
15 Plan, in spite of the new delineations -- this is -- we
16 are trying to do this in spite of the new delineations.
17 Revisions were made to the draft Beneficial Use Tables to
18 correct any errors noted and confirmed by staff.

19 Next slide.

20 The County of Los Angeles and the Los Angeles
21 County Flood Control District commented that the addition
22 of newly named waterbodies to the Tributary Table in
23 Appendix 1 of the Basin Plan constituted a regulatory
24 change, since these tributaries would be subjected to the
25 Tributary Rule of the Basin Plan and be assigned to the
0088

1 beneficial uses of the waters to which they are
2 tributary.

3 Staff's response is that the Tributary Rule
4 covers all waters of the state, whether or not they are
5 explicitly identified in the Basin Plan. As such, these
6 waterbodies have always been assigned the same beneficial
7 uses of the waters to which they are tributary. Thus,
8 their inclusion in the tributary tables does not have any
9 new regulatory implications and was done simply for
10 informational purposes.

11 Next slide.

12 The County of Los Angeles and the Los Angeles
13 County Flood Control District made comments regarding the
14 appropriateness of some of the language in previously
15 adopted Basin Plan amendments, specifically Regional
16 Board Resolution Number R03-010, which suspended
17 recreational uses and associated bacteria objectives in
18 engineered channels during unsafe wet-weather conditions,
19 and State Board Resolution Number 2005-0015, which
20 modified the recreational use designations for Reaches 1
21 and 2 of Ballona Creek.

22 Staff's response is that comments concerning the
23 appropriateness of previously adopted amendments are
24 outside the scope of the proposed nonregulatory amendment
25 and that making changes to specific language adopted by
0089

1 the Regional Board or State Board and approved by the
2 State Board and U.S. EPA would constitute a regulatory
3 change, which is not the purpose of this administrative
4 amendment.

5 Calleguas Creek Watershed Management Plan, the
6 City of Los Angeles, and the County Sanitation Districts
7 requested that, given the complexity and the level of
8 detail associated with this update, provisions should be
9 made to allow for the correction of inadvertent errors
10 identified at a future date.

11 Staff has responded that the Tentative
12 Resolution allows for nonsubstantial changes to be made
13 during the approval process and that other avenues exist
14 for the correction of errors after final approval,
15 including making corrections to during the other phases
16 of this administrative update or as part of a separate
17 Basin Plan amendment.

18 The Los Angeles River Metals TMDL Jurisdictional
19 Group 1 expressed concern that Compton Creek is depicted
20 to tributary to Reach 2 of the Los Angeles River based on
21 boundary definitions in the Beneficial Use Tables. Their

22 concern is that this conflicts with the L.A. River Metals
23 TMDL which, for implementation planning purposes,
24 considers Reach 1 as extending to the confluence with
25 Compton Creek.

0090

1 In response, while Compton Creek is in Reach 2
2 of the Los Angeles River, for TMDL purposes, Reach 1 is
3 extended to the confluence with Compton Creek and,
4 therefore, Compton Creek is considered a tributary of
5 Reach 1. This is due to its proximity to the Reach 1
6 boundary and the greater potential for its discharge to
7 impact the water quality of Reach 1 rather than Reach 2.

8 The location of Compton Creek in relation to
9 Reach 1 is shown on the map. Reach 2 is about 19 and a
10 quarter miles long and Compton Creek comes in at the last
11 half-mile just upstream of the boundary with Reach 1.

12 We did consider formally extending the Reach 1
13 boundary to include Compton Creek as part of this update
14 but wanted to preserve the administrative nature of this
15 Basin Plan Amendment. We expect to make this change
16 sometime in the near future.

17 Next slide.

18 Finally, the County Sanitation Districts of
19 Los Angeles commented that the 2011 update did not
20 contain some of the sub-basin delineations in the Eastern
21 Santa Clara groundwater basin maps, as had been provided
22 in the 1994 Basin Plan. They requested that these
23 delineations be provided for the purpose of determining
24 where water quality objectives apply.

25 The 2003 DWR bulletin on which the updated maps

0091

1 are based combined the sub-basins in the Eastern
2 Santa Clara Groundwater Basins into a single large basin.
3 While the previous sub-basins are preserved in the
4 Beneficial Use Tables for the purpose of maintaining
5 their beneficial uses, they are no longer included in the
6 updated maps. However, in recognition of the need to
7 distinguish between groundwater sub-areas where different
8 beneficial uses apply, staff has provided a reference map
9 making these distinctions.

10 This map is to be included in Appendix 2 of the
11 Basin Plan as an updated change sheet for this item.

12 When we conduct the update of Chapter 3 of the
13 Basin Plan which contains the water quality objectives,
14 we intend to create additional reference maps where we
15 find that delineation of sub-basins are necessary to
16 distinguish between sub-areas with different water
17 quality objectives.

18 The Board has the following alternative actions:
19 To adopt the proposed Resolution and amendment, which
20 will administratively update Chapter 2 of the Basin Plan;
21 to modify the proposed Resolution based on the changes
22 proposed, and adopt; or to decline to adopt the proposed
23 Resolution, in which case Chapter 2 will remain as-is.

24 Staff recommends that the Board adopt the
25 proposed administrative update to Chapter 2 of the Basin
0092

1 Plan with the changes provided in the change sheet in
2 order to provide a more current for use by staff, the
3 regulated community, and stakeholders.

4 This concludes my presentation.

5 MS. DIAMOND: Thank you. Thank you. We have three
6 cards and I'm going to call them. The first person is
7 John Hunter.

8 MR. HUNTER: Thank you. My name is John Hunter. I'm
9 the chair of the Jurisdictional Group Reach 1 Metals TMDL
10 and I've got a very brief slide presentation on this.

11 I just wanted mainly to come up here to thank
12 staff for working with us on this. We did have a concern
13 on this because the Reach 1 of the L.A. River goes almost
14 to Compton Creek and then it becomes Reach 2 and then we
15 get to Compton Creek. So essentially what we end up with
16 is we as Jurisdictional Group 1 flow into Compton Creek
17 and then that runoff goes into Reach 2 and then it comes
18 back into Reach 1. And it's just -- it's not a clean
19 situation. It looks like we're having problems with the
20 slide, and I'll be done with my presentation before they
21 get the slides squared away.

22 But, yeah, I just wanted to thank staff for
23 working with us to get that done.

24 They've said that Compton Creek is now going to
25 be a tributary of Reach 1, so we can begin working with
0093

1 that, that area.

2 So should I wait until they have the slide
3 presentation up?

4 MS. DIAMOND: Do you know how long that will take to
5 get up?

6 MR. CARLOS: Less than a minute.

7 MS. DIAMOND: Should we take the next person and then
8 have you come back afterwards?

9 So Ann Heil for the L.A. Sanitation Districts of
10 L.A. County.

11 MS. HEIL: Well, good morning. My name is Ann Heil
12 and I'm representing the County Sanitation Districts of
13 Los Angeles County today.

14 I want to start first by thanking all the Board
15 members for approving the update of this Basin Plan as
16 part of the 2008-2010 Triennial Review. We really think
17 it was an excellent undertaking and very valuable to
18 bring the Basin Plan up to modern standards and we really
19 think it's going to be a lot more user friendly and a lot
20 more clearer to everybody when we're done with it.

21 And I also want to take this time to thank the
22 staff that's been working on this, particularly Ginachi
23 and Thom Siebels. It really -- I don't know that you
24 appreciate what a monumental undertaking this whole thing
25 was with all those maps and all those groundwater basins

0094

1 and all those tables. And, you know, even just checking
2 it was a major effort on the part of my staff, just
3 looking at our watershed and making sure that each reach
4 exactly matched up. They could not have been, to use
5 Board Member Lutz's phrase, more collaborative and more
6 cooperative in the process; very professional, very eager
7 to get their work done, you know, exactly right of high
8 quality.

9 It was just truly a pleasure to work them on
10 that. There were some really tricky issues that we had
11 to sort through about the MUN issue and they were
12 willing. They went back and they requested records from
13 the State Board, very thorough in doing their work to
14 make sure that they had everything just right.

15 You know, as we got near the end, what we really
16 found -- people were really overlooking at first -- were
17 those groundwater basins ended up being really tricky
18 because the maps of them where B.U.'s apply isn't linear
19 like on a stream where it's from here to here
20 (indicating). It's spread out, you know, in two
21 dimensions. So they were really good with us in working
22 with that and we are really glad that for the one basin
23 where we were concerned about where B.U.'s applied, they
24 brought the change forward that delineates this update
25 where it applies.

0095

1 So we just request that when you adopt it, be
2 sure to include that change sheet.

3 Thanks so much and we look forward to working
4 with your staff as they move forward on the other ones.
5 They're really doing an excellent job.

6 MS. DIAMOND: Thank you, Ann.

7 We'll go to the last card before we come back to
8 you.

9 Mark Pumford.

10 MR. PUMFORD: Good afternoon, Chair, Members of the
11 Board. Mark Pumford for the City of Oxnard.

12 Ours is also picture-dependent and we have only
13 one issue we're debating. We did work through all of our
14 issues with staff. One remaining problem was related to
15 the Oxnard industrial drain.

16 This is a graphic showing the Oxnard industrial
17 drain as it goes through the Halaco property and ends up
18 at the ocean. In response to comments, the staff agreed
19 that the Oxnard industrial drain is an indigent channel
20 going through where a historical slough existed, but the
21 Oxnard industrial drain is not a natural channel. It was
22 dug out in the late 1880's to transport sugar bead waste
23 to the ocean and if you look at the table -- the next
24 slide -- it's listed as a Ventura coastal stream
25 tributary to the Ormond Beach wetlands.

0096

1 Go ahead, Alex.

2 There are reasons why labeling the Oxnard
3 industrial drain as a stream would have disastrous
4 effects on our future plans for the drain.

5 This (indicating) is a graphic from the
6 California Coastal Conservancy's Restoration Feasibility
7 Study for the Ormond Wetlands. They and I would like to
8 redirect the flow of the Oxnard industrial drain to the
9 headlands of the Ormond Wetlands, providing a freshwater
10 gradient through the system. This would mimic the
11 original slough structure.

12 MS. DIAMOND: Mark, can you get a little closer?

13 MR. PUMFORD: Sure. If the Oxnard industrial drain
14 is called a stream or waters of the United States, this
15 would not be allowed nor would any trash removal devices
16 that we are proposing in concert with the Watershed
17 Protection District be allowed. We recommend removal of
18 the Oxnard industrial drain from the Table 1 to clarify
19 that it is not a natural stream, but a stormwater
20 conveyance system.

21 Thank you very much for your consideration of
22 this request.

23 MS. DIAMOND: Thank you.

24 I think -- John, do you want -- do you have
25 anything more to say?

0097

1 MR. HUNTER: No. Technical difficulties.

2 MS. DIAMOND: Thank you. Sorry about that.

3 Okay. Those are all the cards, so at this point
4 we can go to questions from the Board. I'll start with
5 Mr. Stringer.

6 MR. STRINGER: I just have actually just one question
7 on that last comment about the Oxnard industrial drain,
8 if you could address that point.

9 MR. UNGER: We're going to ask Deb to help with that
10 question.

11 MR. STRINGER: Okay. Thank you.

12 MS. SMITH: This is Deb Smith. Staff can add some of
13 the detail because I haven't been involved in all of the
14 conversations about this, but just from my viewing of
15 this and hearing about this issue, I would view this as a
16 regulatory change that would go above and beyond what
17 we're doing here today, which is just an administrative
18 update to the Basin Plan, bringing in existing
19 information that's already been adopted by the Board or
20 enhancing maps for reference, and we cannot -- I believe
21 we cannot consider this today, but we can certainly take
22 a look at it, my gut reaction.

23 MR. STRINGER: So are you suggesting that we remove
24 that piece of it from the --

25 MS. SMITH: No. I'm suggesting that we leave it as

0098

1 staff has proposed. You know, if it's identified as a
2 drain in the Basin Plan now that goes to the wetlands, it
3 should remain so.

4 MS. DIAMOND: Speak up, Deb. Everybody, please speak
5 up.

6 MS. LUTZ: It's really difficult to hear.

7 MS. DIAMOND: It's really hard to hear.

8 MS. SMITH: I'm recommending that making any such
9 change would be a regulatory change which hasn't been
10 agendized here, that we're just doing nonregulatory
11 administrative changes.

12 MR. STRINGER: I understand.

13 MS. DIAMOND: Okay.

14 MS. SMITH: So --

15 MR. STRINGER: Okay.

16 MS. SMITH: -- we can get into the substance of it
17 after the meeting.

18 MR. STRINGER: Okay. I get it. Thank you.

19 Was there more, though?

20 MR. UNGER: No. That's it.

21 MR. STRINGER: That was my only question.

22 Just a comment, it looks like really fabulous
23 work and congratulations to everyone who worked on it.
24 It appears to be an enormous amount of work that was done
25 and anything that could be done to get better, more
0099

1 accurate information to ensure that decisions are being
2 made on a scientific rather than sort of political
3 boundary kind of basis is obviously the best thing for
4 the resources, and just thank you and commend you for
5 your work.

6 DR. AMAH: Thank you.

7 MS. GLICKFELD: Thank you, Madam Chair. I just also
8 want to add a commendation as a member who's been here
9 for three years waiting to see these maps, I'm really --
10 I've been asking and asking, "When are we going to get
11 them?" So I really appreciate it. I also know how much
12 work it is. I work with GIS all the time and I also know
13 it's going to be of great help to the regulated community
14 and the other stakeholders.

15 I have just a couple of questions and it relates
16 to the one that Board Member Stringer asked.

17 I'm a bit confused. As I understand it, all of
18 these tributaries, all of the mapped waterbodies, are
19 defined as waters of the United States. Is that correct?

20 DR. AMAH: Well, all the maps are waters of the
21 state.

22 MS. GLICKFELD: Waters of the state. So when
23 something is formed like the industrial drain which
24 actually is still water that used to flow through some
25 other water that was of the United States, does it become

0100

1 not the waters of the United States?

2 DR. AMAH: Well, we don't believe so --

3 MS. GLICKFELD: A little slower and louder.

4 DR. AMAH: We don't believe so because waterbodies
5 have actually been diverted and straightened and

6 engineered and have become drains.

7 MS. GLICKFELD: So we're still counting anything
8 that's open and has been engineered as a water of the
9 United States?

10 DR. AMAH: Yes.

11 MS. GLICKFELD: So why is it that we decided that
12 when arbitrarily instead of making it an open channel a
13 City decides or the County decides to put a storm drain
14 underground, why does it disappear from the map?

15 DR. AMAH: Well, because I guess it becomes a closed
16 drain, but you'd be able to tell from the storm drain
17 maps and that sort of thing what actually happened.

18 MS. GLICKFELD: So I just don't understand why storm
19 drain water is not waters of the United States if
20 agricultural drain waters are, and I'm glad that the
21 attorneys decided to step up.

22 MS. FORDYCE: Hi. Jennifer Fordyce.

23 I think I want to clarify. All waters of the
24 United States are waters of the state, but not all waters
25 of the state are considered waters of the United States.

0101

1 So in terms of the Oxnard industrial drain, the
2 Oxnard industrial drain is considered a tributary to the
3 Pacific Ocean. The Pacific Ocean is considered a water
4 to the United States. Therefore, Oxnard industrial drain
5 is considered a water of the state. I wanted to
6 clarify -- am I not speaking close enough?

7 MS. LUTZ: No. Just slower. See, we're having to
8 concentrate very carefully to hear what you're saying, so
9 if you speak slower, we can understand it better.

10 MS. FORDYCE: Okay.

11 MS. LUTZ: Thank you.

12 MS. FORDYCE: So I just want to echo what Deb had
13 said previously is that this item has been noticed as an
14 administrative update, nonregulatory. So I understand
15 that the request has been to remove the Oxnard industrial
16 drain.

17 MS. GLICKFELD: That's actually not my question. My
18 question is Why are the storm drained waters where
19 arbitrarily a City or County decides to underground their
20 drain, as opposed to leave it open to the surface, why is
21 that not qualified to be on this map?

22 MS. PURDY: Okay. I'm going to try to answer the
23 question.

24 The areas that you're talking about where there
25 is an enclosed storm drain are waterbodies -- those are

0102

1 not considered waters of the U.S., and I understand what
2 you're saying. You're saying that there may be
3 situations where there may be a water of the U.S. that is
4 open, but then it's put into a storm drain and it's
5 enclosed and it's put underground and --

6 MS. GLICKFELD: And, you know, one of the ones I
7 noticed, all of the drainages that come across from the

8 Santa Monica mountains like the Pico Kenner drain, not on
9 this map. That was a stream at one time, so why isn't it
10 included here?

11 MS. PURDY: Right. And I think that is somewhat of a
12 legal issue and I might let Jennifer come back up to
13 the -- but my -- my position is from my understanding,
14 that because it's in an underground storm drain, it is
15 not considered a water of the State or a water of the
16 U.S. I understand what you're saying. It used to be,
17 but it's now been put into a storm drain and it no longer
18 exists as a surface water; it exists as a storm drain.

19 And so those are -- I think to further get at
20 what you're asking, the mapping of those storm drains is
21 something that a number of agencies within the region are
22 doing and do have GIS data layers for, but they're not
23 the -- it's not the type of information that's reflected
24 in our Chapter 2 because what our Chapter 2 is doing is
25 identifying all the surface and groundwaters to which our
0103

1 water quality standards apply in the Los Angeles Region,
2 and the water quality standards do not actually apply to
3 the storm drains, per se. They apply to the waters to
4 which the storm drain discharges.

5 MS. GLICKFELD: Okay. That -- I don't think I want
6 you to go any further on that.

7 MS. MEHRANIAN: I wanted to possibly think if I can
8 shed some light on this because as a planner, I worked
9 with GIS data and for a lot of time before and after GIS,
10 and in my experience, because it's so layered -- when you
11 have a flat map, everything is in that flat map. When
12 you go to GIS, because it's layered, some of the
13 underground water or -- that becomes on the second layer.
14 So if it's not on the layer that they already converted,
15 you would not see it on the surface for layers. It could
16 be a technical issue more than a legal issue, I'm
17 thinking.

18 MS. GLICKFELD: I think it's really more of the
19 other. I don't want to belabor this. I don't think we
20 can make any changes to this. It would not be
21 administrative if we did, but I would hope that at some
22 point somewhere in the Basin Plan, since we do regulate
23 storm drains, we do regulate storm drains through the
24 municipal permit, we regulate them through the TMDLs, it
25 would be nice to have a map that had all the major storm
0104

1 drains on it. So it doesn't have to be this one, but it
2 should be another one.

3 MR. UNGER: May I suggest that perhaps we compose --
4 we get a memorandum to your specific question and as soon
5 as we can, get that to you?

6 MS. GLICKFELD: Again, you know, I don't think it has
7 to be to me or to the Board, but this issue of what is a
8 water of the state and whether, in fact, there's a
9 substantial legal difference between, yes, an open canal

10 is and, no, a closed drain is not doesn't sound terribly
11 good to me. It would be good that you looked at that,
12 but report back to the whole Board rather than to me.

13 I think I have just one other question about
14 this. So one of the maps that I see and that our staff
15 identified was we created a new watershed. The
16 Los Cerritos watershed wasn't even included on the prior
17 maps and now it does include it, so my question to you is
18 does this change -- prior to this map, was the area that
19 was formerly looked at as part of the L.A. River that's
20 now the Cerritos area, were they subject to the L.A.
21 River TMDLs and are they now not or do we need to do new
22 TMDLs for the Los Cerritos? What happens here?

23 DR. AMAH: No. The Los Cerritos Channel has always
24 had its own watershed and so the L.A. River TMDL's not
25 applied directly to the Cerritos watershed. They have

0105

1 their own distinct --

2 MS. GLICKFELD: We have our own TMDLs for the
3 Los Cerritos area?

4 DR. AMAH: Yes.

5 MS. GLICKFELD: And they know where they are even
6 though our maps don't show it?

7 DR. AMAH: Yes.

8 MS. GLICKFELD: That's my second question.

9 My third one is you mentioned in the report that
10 we're going to give people pdf's of the maps that are now
11 in this plan, the revised maps, and I want to make sure
12 that they can get to the data layers themselves. Is
13 there a problem with them getting to the data layers so
14 they can use it for their own planning?

15 DR. AMAH: We have the data layers available on our
16 website.

17 MS. GLICKFELD: Okay. That's it. Thank you.

18 MS. DIAMOND: Ms. Lutz?

19 MS. LUTZ: Thank you.

20 Well, I first want to commend you for a great
21 job. This was -- I mean, I was going through this just
22 looking at these maps and marvelling and looking at how
23 you were doing this.

24 Great explanation, Thom. I appreciate that very
25 much.

0106

1 It is a difficult thing and I'll tell you what.

2 Knowing that we requested this to be updated, I don't
3 think I anticipated it to be as comprehensive as you've
4 done. So I really want to commend you on that and the
5 work that we are hearing, that you collaborated with
6 everybody else, that's -- it's just great. We love to
7 see that.

8 My question is -- you know, I don't have any
9 real questions about anything. You've answered the
10 questions I had, but the one question I have is, you
11 know, when I first became a Water Board Member blah,

12 blah, blah years ago, they gave me this beautiful binder
13 of our Basin Plan and so I would like to request that we
14 all receive the new documentation so we can slip it into
15 that beautiful binder we have.

16 DR. AMAH: Okay. Yes. And perhaps you might want to
17 hold off on it, though, because we are doing a phased
18 update of the Basin Plan and the next one is Chapter 7
19 that does not physically exist in the plan but exists up
20 there on our website, and we're going to compile
21 everything in December, I believe, and we're going to
22 present Chapter 7.

23 MS. LUTZ: So we'll have new beautiful binders.

24 DR. AMAH: We're going to have brand-new. You may
25 still keep the front page, but the contents will be
0107

1 different and we're going to do a lot of the other
2 chapters early next year. So sometime before the summer
3 we hope to present you with a new beautiful binder.

4 MS. LUTZ: Great. I know people hear me talk about
5 this. I say it's the bible and we kind of go from there.
6 So it's great to have the most updated one that we can
7 get. I very much appreciate that.

8 The other thing that I would ask is that as you
9 go through and you work with the MUNs that we be given as
10 much information as we can as that process goes through,
11 seeing as what happened in the past and I know that now
12 you've got a whole lot more data to be able to get the
13 information that is needed so that those things can take
14 place and hopefully won't be, you know, kicked back like
15 they were before. So I appreciate that you're doing that
16 and if we can just be kept up-to-date on that.

17 DR. AMAH: We will keep you up-to-date.

18 MS. LUTZ: Thank you.

19 MS. MEHRANIAN: I just want to let you know that I
20 appreciate what you've done because I have worked before
21 and after GIS numbers, maps, and what happens is that the
22 hardest part is the conversion. After you convert, you
23 have this great resource; but to get the pre and post GIS
24 to read with each other, it's just a massive, massive
25 effort.

0108

1 I know that some of the questions we might bring
2 up might have to do with how would it translate from one
3 to the other and I think it's a matter of time for all of
4 us to clarify on that.

5 DR. AMAH: Well, we are trying to make sure that it
6 is an easy transition between the two because we provided
7 the cross-reference tables that will allow you to match
8 up every single waterbody for both the groundwater and
9 the surface water and all the other features.

10 MS. MEHRANIAN: Congratulations.

11 MR. BLOIS: Great questions have already been asked,
12 but I just wanted to make sure. My main concern in
13 looking at all this is I think everyone in this room

14 recognizes that this is an imperfect document and I
15 wanted to make sure, I guess, that all of our
16 stakeholders are convinced, because they're not objecting
17 here today, that we have in place a process to correct
18 administratively any typos or errors or things that have
19 come up or that are "Oh, gotcha's" and I want to make
20 sure that that has been done and are going forward.

21 Second of all, you know, when I get my packet
22 and do my homework, you call it comments. I really look
23 at comments as being objections. So I want to commend
24 staff on reducing 235 pages of objections down to just
25 one and so thank you very much and thank all the

0109

1 stakeholders, too, for working with our staff because I
2 think that, as my colleagues have said, this is a work
3 product that is really quite excellent.

4 But just for my own edification, I want to be
5 sure that what we have now before us and what we are
6 about to incorporate into the Basin Plan is literally the
7 same page as all the other people who deal with water,
8 the State Water Resources Board, the EPA, Regional Board,
9 are we all on the same page literally?

10 DR. AMAH: Yes, we are, because even as we speak, and
11 I think as Thom mentioned, State Board is trying to do
12 exactly what we've done and will be consulting with Thom
13 as an expert to figure out how to reconcile the new
14 layers with the previous layers. So they're probably
15 going to take a few pages from our Basin Plan.

16 MR. BLOIS: When we subcontract Thom out to the State
17 Board, make sure that we add in our overhead and profit
18 margin.

19 DR. AMAH: I have been considering that.

20 MR. UNGER: He's not being subcontracted from the
21 State Board.

22 DR. AMAH: To answer your question --

23 MS. DIAMOND: This isn't subcontracting.

24 MR. BLOIS: So then to the point that City of Oxnard
25 made on the Oxnard industrial drain, my only other

0110

1 question -- and I understand that we can't do what they
2 want to do, but my question really is where does that
3 leave the City of Oxnard to do what they want to do in
4 the future? Is this going to be a huge admin- -- a huge
5 deal for them to change it? Is this going to require a
6 change in the Basin Plan for them to make what they want
7 to do work?

8 DR. AMAH: Yes. It would require a Basin Plan
9 amendment.

10 MR. BLOIS: And we have no choice?

11 DR. AMAH: Well, any change to the Basin Plan would
12 require it because even updating the Basin Plan requires
13 an amendment, which is what we're doing today. So every
14 change that we make requires some form of an amendment.

15 MR. BLOIS: Sam, does -- I guess I need to ask Sam.

16 MS. FORDYCE: Can I just interject for one quick
17 second? I think what you're asking is what would need to
18 be done is a legal determination about whether the Oxnard
19 industrial drain is, in fact, a water of the State or a
20 water of U.S. or both. That's a preliminary
21 determination first and foremost and then once that --
22 based on that legal determination, then there's different
23 avenues on how to implement that. Basin Plan Amendment
24 which would likely require U.S. EPA approval and all the
25 way up.

0111

1 MR. BLOIS: My concern is I want to make sure by
2 doing this for all the right reasons we're not throwing
3 up an additional hurdle that's not there now in the way
4 of the City of Oxnard.

5 MR. UNGER: Well, I'm not sure it is an additional
6 hurdle because the hurdle is already there. It's the
7 same burden that they would have right now, we believe.

8 And what I'm going to suggest is we have our
9 retreat planned in January. We can talk about calendar
10 issues, too, and I have some suggestions there as well;
11 but what we can do is we can prioritize that Basin Plan
12 amendment if it's a high priority to do that and we can
13 be sure that it's done in a timely manner. That would be
14 my response.

15 MR. BLOIS: Okay.

16 MR. UNGER: We don't think it's additional because
17 they have the burden right now, we believe.

18 MR. BLOIS: All right. Well, as long as we're not
19 adding any regulatory burdens to the City of Oxnard on
20 this issue of their industrial drain, then I'm okay with
21 that.

22 MS. FORDYCE: This is Jennifer. I think what I want
23 to make sure is clear is this Basin Plan amendment is the
24 status quo. We're not changing anything.

25 MR. BLOIS: Okay. That's the only questions I have.

0112

1 MR. UNGER: Steve, let me add one other thing, if I
2 could.

3 What we would like to do is look into the
4 legalities of this, number one, some of the issues that
5 Madelyn brought forth, number one, and then number two,
6 meet with the City of Oxnard. We'd like to do that
7 before we have our retreat in January and then I'd be
8 able to scope it for you and give you a much more
9 informed answer as to what we can do.

10 MR. BLOIS: Great. I'd appreciate that. Thank you.

11 MS. DIAMOND: I just want to add my kudos to all of
12 you for the work you did. It doesn't look as hard as it
13 was. Once you open this up and get to look at what you
14 actually did, it is really monumental and fortunately
15 you're not unsung heroes because we're singing your
16 praises today and want to thank you so much for doing
17 this. And once again, the L.A. Regional Water Quality

18 Board is the first to do something very important in an
19 area that I think will be done by the other regions and
20 we'll be -- we are leading the way. So thank you so much
21 for that.

22 And I think I'd like to entertain a motion for
23 the passage of this proposed amendment to the Basin Plan.
24 Madelyn?

25 MS. GLICKFELD: Yeah. I'd like to move approval for
0113

1 this Basin Plan amendment, subject to the Change Sheet
2 for Item Number 14 that was given to us. Is that an
3 adequate motion? Thank you.

4 MR. STRINGER: Second.

5 MS. DIAMOND: Is there a second?

6 MS. LUTZ: Charlie just did.

7 MS. DIAMOND: Sorry. I didn't hear you.

8 Everybody in favor?

9 MR. BLOIS: Aye.

10 MS. MEHRANIAN: Aye.

11 MS. LUTZ: Aye.

12 MS. GLICKFELD: Aye.

13 MR. STRINGER: Aye.

14 MS. DIAMOND: Thank you very much.

15 Before we break for lunch, we're going to have
16 an announcement by Jennifer about our Executive Session
17 and then we will break for lunch.

18 Sam, do you want to add something?

19 MR. UNGER: I may want to suggest that perhaps we
20 consider hearing the informational item, because I
21 don't -- for State Board. I think it's about a 20-minute
22 item and I understand that lunch may not be delivered
23 until 12:30 anyways.

24 MS. DIAMOND: That's fine.

25 MR. UNGER: So then we can focus the afternoon on
0114

1 calendar issues and I also wanted to discuss before we
2 broke, in deference to Mary Ann's schedule, because the
3 MS4 is after lunch, you may not be here -- I'm not sure
4 what her plans are. I had a proposal you may want to
5 entertain for the calendar issues, too, to get us to the
6 first part of the year.

7 MS. DIAMOND: Okay. Sorry. I jumped the gun.

8 MR. UNGER: With that, I think I'd like to turn it
9 over to Mr. Borkovich.

10 MR. BORKOVICH: Good afternoon. Louder? Can you
11 hear me now?

12 MS. DIAMOND: Yes.

13 MR. BORKOVICH: Good afternoon. My name is
14 John Borkovich and I am the GAMA Program Manager at the
15 State Water Resources Control Board. That's part of the
16 Division of Water Quality.

17 Today I'll be providing you with an overview
18 of -- next slide, please -- what the GAMA Program status
19 and background is and then give you an overview of our

20 groundwater information system called GeoTracker GAMA.
21 So I'm already snowing you over with acronyms, but bear
22 with me.

23 GAMA is the Groundwater Ambient Monitoring and
24 Assessment program. Next slide, please.

25 GAMA was created due to the concern by the

0115

1 Legislature and the public about groundwater quality and
2 as a result of the Budget Act in 2000, the State Water
3 Board undertook creating ambient monitoring and
4 assessment, a program for groundwater in the state.

5 Subsequent to the initiation of the original
6 GAMA program, the Assembly Member Liu sponsored a bill,
7 AB 599, Groundwater Quality Monitoring Act of 2001, which
8 enhanced the GAMA program. There were two critical
9 pieces to that law. One was to make publicly available
10 groundwater quality information in the state accessible
11 to the public and to comprehensively monitoring
12 groundwater. So it's a statewide program, comprehensive
13 groundwater monitoring program.

14 And subsequent to that in 2008, Senator
15 Caballero of Salinas sponsored AB 2222, which there are
16 two pieces of that legislation. First was to identify
17 future funding sources for the program and also
18 continuing the program.

19 Next slide, please.

20 So part of our main function at the Water Board
21 to do GAMA is to coordinate with other water agencies,
22 collecting new data -- and I'll go into more detail later
23 on that -- combine new and existing data or water
24 quality, water level, contaminant sources, assess
25 groundwater quality, and serve this information to the

0116

1 public.

2 Next slide, please.

3 So this slide depicts what I call the Wheel of
4 GAMA. There are four active current projects within the
5 program. One is the Special Studies Project -- and I'll
6 go into more detail later; the Priority Basins Project;
7 our Domestic Well Project; and GeoTracker GAMA, which
8 I'll elaborate on in the future. But I want to emphasize
9 that the sampling for GAMA program, specific sampling,
10 not all the data -- all the data that we have we've
11 shared with multiple entities, but the sampling that we
12 conduct and our contractors conduct are done in voluntary
13 cooperation with participants. So people volunteer to
14 have their wells sampled as a result of this program.

15 Next slide, please.

16 Our Priority Basin Project is -- the technical
17 lead is run by the U.S. Geological Survey. It's the
18 first statewide sampling cycle done in the state. It's
19 nearly complete. There have been over 2200 wells
20 sampled. Primarily those wells are public water supply
21 wells, since the emphasis was on the zone that was used

22 in groundwater for purposes of consumption, so drinking
23 water wells.

24 They've issued dozens of reports and
25 informational fact sheets and a four-page document that
0117

1 members of the public, legislators, Board members can
2 understand what happened in the sampling as a result of
3 what the USGS did and also using other sources of data
4 that are available.

5 Next slide, please.

6 Our Special Studies Project, the lead on that is
7 the Lawrence Livermore Lab. They study groundwater
8 quality concern -- areas of concern. So in other words,
9 a big issue on the statewide level is nitrate in
10 groundwater as a result of contamination sources that
11 include dairies, fertilizer, and wastewater. So they've
12 innovated different types of analysis as a result of this
13 study using isotopic analysis, age dating to determine
14 how old or young the waters are. So that would help us
15 to identify if recharged projects are mining water that's
16 older or if the actual recharged water that's being used
17 is actually getting to where it needs to go.

18 Next slide, please.

19 Our Domestic Well Project is run by State Water
20 Board staff. It runs out of our GAMA program at the
21 State Water Board. We've sampled nearly 1100 wells since
22 2003.

23 For the first five study -- groundwater focus
24 areas, County focus areas, our results have indicated
25 that approximately 28 percent of the wells have tested
0118

1 positive for total coliform. So what that would indicate
2 is that if there is -- if you're getting coliform, that
3 there's some sort of connection possibly with surface
4 activities. Then if we get a positive for total
5 coliform, then we'd test it for fecal coliform.

6 Nitrate: Average, 10 percent of the wells have
7 tested above the maximum contaminant levels for nitrate.
8 However, when we sampled in Tulare County, nearly over 41
9 percent of the wells tested above the MCL.

10 Of interest, when we sampled in San Diego
11 County, we had been testing for radionuclides. We
12 weren't really -- it wasn't really on our radar, so to
13 speak, but we were encouraged to test for it and in
14 San Diego County, a third of the wells tested positive
15 above the MCL for radionuc's.

16 And we just recently completed Monterey County
17 so these statistics will be updated in the near future,
18 and all of our results will be posted on our website.

19 So today I'd like to spend a little more time
20 talking about our groundwater information system. As you
21 recall, when I was speaking about the creation of GAMA,
22 AB 599 identified that we were to develop a central data
23 system for groundwater quality data.

24 So we shared data with what we call the
25 Inner-Agency Task Force. It's the California Department
0119

1 of Public Health, U.S. Geological Survey, Lawrence
2 Livermore National Lab, the Department of Water
3 Resources, the Department of Pesticide Regulation, and
4 the State and Regional Water Boards.

5 So coupled with the data that we collect for
6 groundwater quality in the state, from all these
7 disparate databases, we collect them into one system and
8 we believe that it's important to also have an idea of
9 what the water quantity, if at all possible, as to
10 associate it with water quality. They go hand in hand.

11 So we've incorporated water levels into our
12 system as well as contaminant sources and any other
13 groundwater publications that are in the area of study.

14 So groundwater quality data collected with the
15 State funds -- okay. That's -- that bullet is basically
16 to represent that eventually we'd like to get all the
17 data, that anything that's been collected using State
18 funds would be uploaded to our system and we can expand
19 the system even more.

20 Next slide, please.

21 So groundwater quality information -- next
22 slide. This is our home page on the State Water Board
23 site for GAMA and it provides you with an
24 informational -- basically, the background that I just
25 provided you and also a gateway into the groundwater
0120

1 information system. So easy access and we identify who
2 is sharing data with us.

3 Next slide, please.

4 So when you go click on the link to go to the
5 site, there are multiple choices that you can make. You
6 can either type in your address or your Zip code into the
7 Google-like interface and hit "enter" or you can look for
8 other databases that are related to surface and
9 groundwater studies in the area or you can do a mass data
10 download -- we call that the big red button -- where you
11 can sort things by county, and I'll show a slide of that
12 in a second, just to emphasize that we have data from all
13 different sources.

14 Next slide, please.

15 So this is the big red button. Essentially what
16 we've done is broken it down by county, and every dataset
17 that's shared with us or the data that we collect is
18 obtainable by county individual of that dataset or all of
19 the above. So there are over 100 million analytical
20 results that are in this dataset.

21 Next slide.

22 So some of these files are so large, especially
23 for L.A. County, and in this area in particular there's
24 so much data that have been collected that it's too large
25 for a lot of -- not the most recent version of Excel that

0121

1 we send it to a text delimited format so you don't get a
2 truncated table. There are literally millions of results
3 that we have in the system.

4 And so just to go back for a second, I want to
5 emphasize on that one. So we show that all this data can
6 be imported into our GIS system and map or anyone who's
7 doing any kind of studies in the future associated with
8 the analytical results.

9 Next slide, please.

10 So this map is a zoomed-out version of what you
11 would see if you were to type in "Los Angeles," for
12 instance, and I took the liberty of zooming out just to
13 show you that we have over 221,000 individual well points
14 in the system.

15 Next slide, please.

16 So our default query -- the default's on
17 nitrate. Nitrate's one of the most prevalently found
18 groundwater contaminants in the state. So some of the
19 features that you have in this view -- and I'm going to
20 be giving you a high-level view of it, but if you dig
21 into it you can get a lot more out of it.

22 You have access to groundwater quality reports
23 up on the left-hand side. Also, there are additional
24 tools. As I mentioned, we have water levels so we have
25 boxes that you can check for depth of water,

0122

1 depth-to-water changes, the delta -- not the delta up
2 north, but the actual changes in the level, groundwater
3 elevations as well.

4 And then also in the arrow that's below the map,
5 it identifies how many wells are in that field of view
6 that have a concentration above whatever your query is
7 asking for.

8 So in this particular case, it's identified
9 results that are above the comparison concentration. I'd
10 just like to take a second.

11 A lot of -- we have over 200 chemicals. I have
12 concerned constituents that are in our dataset that have
13 been mapped across all these disparate datasets and so
14 what we've done is a lot of these chemicals do not have a
15 maximum contaminant level, so we've determined the
16 concentration. So if there is an MCL, there will be --
17 it will be compared against the MCL. If there is no
18 primary MCL, we go to the secondary MCL and so on.

19 In some cases, there's not even a DLR, the
20 detection required for reporting that sets up, so we do
21 an 80th percentile.

22 So there are GIS layers that you can choose. We
23 have it sorted by counties and in this particular case,
24 it's Sacramento County. It shows the border of
25 Sacramento County and at the border, again I've

0123

1 identified there are 11 matching wells for nitrate that

2 are above that concentration. So it's a quick snapshot
3 view. You can zoom in, click on the well, get the data
4 out. You can scroll down to the bottom of the page. You
5 can't see the bottom of it on this view, but you can also
6 extract the data directly from the bottom.

7 So go ahead and go to the next slide, please.

8 So if you export this information, you can
9 export it to Excel and use it in a map-making program.

10 Next slide, please.

11 Also, we have hydrographs and a
12 concentration-over-time graphs. So these are generated
13 instantaneously with the results that are in the system.

14 So it provides you with a snapshot of what we
15 have available within the system on that particular well.

16 Next slide, please.

17 Other groundwater data that we have, as I
18 indicated, we have water levels, but we also have
19 well-boring logs. Our sister site, GeoTracker, that was
20 used for site cleanups across -- for all the Regional
21 Boards to use and County and local oversight programs,
22 those well logs that were collected don't fall under the
23 restrictions associated with a log that's on the books
24 where we can't post public -- for wells that have been
25 used for purposes of site cleanups. We can post that
0124

1 information. So that's what we're using here.

2 If a law were to pass where we could show the
3 water wells, we would be able to serve that up on the
4 system.

5 Next slide, please.

6 And so this is an example of what you would see
7 if you were to click on an individual well from our map
8 view.

9 This view shows the L.A. Basin and if you were
10 to click on the depth of water, it gives you a relative
11 idea what the water levels are, of course divorced from
12 any idea of what the elevations are at that point, but it
13 gives you a snapshot of over time in that same time
14 period.

15 So, for instance, at the bottom arrow, it points
16 out where it shows you the depth to water and those are
17 for environmental monitoring wells. These are all the
18 site cleanup sites that are regulated by the Regional
19 Boards in the area and for that particular quarter for
20 2010, you can get the data from our system to be able
21 to -- next slide, please -- and also we flipped it around
22 and for groundwater elevation where we've tied it to
23 actual elevations that have been surveyed in that same
24 quarter to give you an idea of what the water elevations
25 are.

0125

1 So you can zoom in, click on one of the circles,
2 it will bring you to a site, and that site has multiple
3 levels on it. So this is not a median, but it's the mean

4 of the water levels for that particular quarter.

5 Next slide, please.

6 So here's the one where I intimated before about
7 the actual changes. So like a streetlight, if it's green
8 that means it's coming up, if it's yellow it's staying
9 about the same, and if it's red that means it's dropping.
10 So these dots represent actual wells in this particular
11 instance for the area in view around the Glendale area.
12 So there's 255 matching wells in that area and you can
13 choose any time frame.

14 If you want to go from as far back as we have
15 actual data for this in the -- I think it started to be
16 collected in the early 2000's, you can pick all the way
17 through the present and it will give you a map.

18 Next slide, please.

19 Also, if you click on a well, you'll get a
20 hydrograph map for the water levels that have been
21 measured for that specific well.

22 Next slide, please.

23 Other uses of GAMA: We've used this data to
24 overlay on our website. We have what we call the
25 Hydrogeologic Vulnerable Areas Map and this is

0126

1 essentially Water Table conditions. There are other
2 areas outside of these areas that are also vulnerable but
3 not as vulnerable as what we would have under Water Table
4 conditions.

5 So what we did is we overlaid the nitrate
6 concentrations above MCLs and you'll see a pretty good
7 association between where the hot spots for nitrate are
8 and where these hydrogeologically vulnerable areas are in
9 the state.

10 Next slide, please.

11 Also, we use the data -- the first slide showed
12 drinking wells from the CHP database. This is showing
13 the monitoring wells from the Regional Board and local
14 oversight program and regulating sites and these are
15 typically completed in shallower conditions, so you'll
16 see that some of the wells that had concentrations for
17 nitrate that were above the MCL are outside of the
18 hydrogeologically vulnerable areas, but there are quite a
19 few that are still within it.

20 Next slide, please.

21 So in summary, the Legislature wanted us to get
22 going on collecting groundwater quality data for the
23 State. We've created the GeoTracker GAMA informational
24 system for the public to use. We have over 100 million
25 analytical results mapped across multiple disparate

0127

1 datasets. We also have quote, unquote, "non Water
2 Quality" functionality like well logs and water levels
3 and we've colocated those locations on GoogleMaps
4 interface for easy use.

5 And -- next slide, please -- that completes my

6 presentation.

7 MS. DIAMOND: All I feel like saying is "Wow."

8 That's amazing. It's amazing to have your presentation

9 right after the last presentation.

10 MR. BORKOVICH: We're hoping that anything that we do

11 for this program, that people, not just the public, but

12 the Regional Boards can use and we're getting closer and

13 closer to having something, I believe, where the Regional

14 Boards can use it for Basin Plan amendments.

15 There's a lot of data in the system, and any

16 suggestions that Regional Board folks have to make

17 revisions or refinements to the system, we meet on a

18 weekly basis with our I.T. folks to make the changes.

19 MS. DIAMOND: Thank you so much. I know we have

20 comments from our Board, but we all want to thank you.

21 Steven, do you want to start? Do you have any

22 comments?

23 MR. BLOIS: No. I'm blown away. That's great work.

24 I'm going to go on and check it out.

25 MS. DIAMOND: It sounds like fun.

0128

1 MS. MEHRANIAN: I don't have comments. I'd like to

2 see it, but I don't have comments. I'll go and check it

3 out.

4 MS. LUTZ: Same thing. Just great work and I can't

5 wait to go home to the computer and play.

6 MS. GLICKFELD: Well, I have been sort of playing

7 with this for a few months now so now I understand what

8 I'm playing with a little bit more.

9 First, could I get your PowerPoint? Could we

10 all get your PowerPoint?

11 MR. BORKOVICH: Sure. Absolutely.

12 MS. GLICKFELD: Second, one of the things that we've

13 been struggling with here is how we're going to clean

14 stormwater and a lot of the discussion or some of the

15 discussion is about capturing stormwater, infiltrating or

16 injecting it into groundwater. What kind of a use -- how

17 could this data which shows groundwater quality and

18 groundwater levels help us in that effort?

19 You know, one of the things we don't want to see

20 happen is clean water put into dirty water and then have

21 to be treated to come back up again, so I'm sort of

22 interested in this as a guide to our dischargers who may

23 develop projects to comply with their stormwater permits

24 to infiltrate their water. How can we help them with

25 this?

0129

1 MR. BORKOVICH: Well, what I would suggest is that

2 staff or those folks look at the system and get an idea

3 of what the analytical results are showing for compounds

4 or chemicals of concern in those areas.

5 The data that are in there is pretty extensive,

6 so if there's a specific area that you're concerned with,

7 I would just -- if it's in a particular basin, I would

8 choose that GIS layer, click on that, and then download
9 the data and then start looking at the data to see what
10 story it's telling; and also, being able to sort it by
11 chemical to find out what those chemicals of concern you
12 would be interested in.

13 So that would provide you with a baseline before
14 the water would be added and then you could compare the
15 quality of the water that's going to be used to recharge
16 the aquifer and see what you'd have. So that would be my
17 suggestion with the system.

18 MS. GLICKFELD: So my second question is about, you
19 know, another application of this, we have many POTWs
20 that are moving more and more towards recycling water.
21 We really encourage them to do that and indirect
22 recycling involves storage and groundwater basins again
23 and there's been some discussion among POTWs that they
24 don't want to store in groundwater basins because they
25 have to treat it, it's too expensive, and they may as

0130

1 well go with direct potable.

2 I think that from when we saw this in
3 Sacramento, we saw the USGS person that made the
4 presentation to the Boards seemed to indicate that a lot
5 of what his results showed was that it wasn't as polluted
6 as people thought it was. So this may on the other hand
7 help people who want to do indirect storage.

8 MR. BORKOVICH: Well, there's two ways of looking at
9 that -- and that was Ken Belitz. He's awesome.

10 The USGS portion of their -- what we call the
11 Priority Basin Project is focusing on the aquifers that
12 are being used for drinking water purposes; so in other
13 words, public water supply zone.

14 Even though they've sampled other types of
15 wells, primarily they've sampled from public supply wells
16 and typically what we find -- and he's right -- the data
17 that we have currently being collected by the different
18 water systems that submit their data to the California
19 Department of Public Health, and that's the dataset we
20 have incorporated into our system, is closely matching
21 the results that USGS has. There have been some cases
22 where there have been some areas where there have been
23 differences, but for the most part by and large it's been
24 a close match.

25 So I think -- having heard Ken speak several

0131

1 times, I think what we might have been intimating there
2 is the difference that the data that we have in
3 GeoTracker GAMA is that that's a raw water quality
4 essentially. The water that's served to the public, over
5 95 percent of it is being served by a public water entity
6 that's typically treated. Sometimes it's not because
7 it's cleanup and they're required to test it. It's the
8 other 5 percent in the State like the state's smalls or
9 private domestic well owners, they're responsible for

10 maintaining the quality of their water that they consume.

11 So there are receptors out there, if you will,
12 that may come in contact or may greatly benefit from
13 learning more about what the conditions are, ambient in
14 the ground.

15 So I have -- I think that what I'd like to say
16 is that the water from stormwater, if it's of less
17 quality than what's already in the ground, then maybe the
18 Regional Board would have to look at that of course, but
19 I think you can use our system to make that type of an
20 evaluation and get a better idea of what the conditions
21 are ambient prior to making any kind of a decision with
22 respect to that.

23 MS. GLICKFELD: Just my last question: Did I
24 understand you right? For instance, today we looked at
25 Ujima Village, which is an old tank site which has

0132

1 polluted soil and polluted groundwater. We have required
2 hundreds of water quality tests and soil quality tests.

3 Do those go into this system or is that something
4 separate?

5 MR. BORKOVICH: If it's the result of any data being
6 collected by the Regional Boards and it's uploaded to the
7 GeoTracker system, then we would have it incorporated in
8 these systems. So yes, it would be there.

9 MS. GLICKFELD: Wow. Okay.

10 MS. DIAMOND: Mr. Stringer.

11 MR. STRINGER: Yes. I do have a question about how
12 you are collecting the data. Is it all the public wells
13 or are you also collecting data -- are you collecting
14 data from private wells in addition?

15 MR. BORKOVICH: Well, thank you. That's a good
16 question. The private domestic well project that we
17 have, those are the only data that we have from private
18 domestic wells, because the State of California does not
19 regulate water quality for private domestic well water.

20 So what we've done as part of our public
21 outreach, we identify a county, we work with the County
22 Public Health entities. So far we've sampled in
23 San Diego County, Tujana County, Yuba County, El Dorado
24 County, most recently in Monterey County, and we've also
25 sampled in Tulare.

0133

1 So we work with Public Health officials in those
2 areas and they have datasets for people that have
3 domestic wells, and some data systems are better than
4 others.

5 So we send a pamphlet out and ask people if they
6 want to have their well sampled for free and those are
7 the data that we have right now for private well water in
8 the system.

9 MR. STRINGER: So have you been getting good
10 participation rates with people who --

11 MR. BORKOVICH: It depends. We most recently sampled

12 in Monterey County and in Monterey County it was
13 relatively low compared to other counties we've sampled
14 in. San Diego County, we had a pretty high participation
15 area.

16 MR. STRINGER: What about in the agriculture
17 community? Are you getting well data from irrigation
18 districts and farmers?

19 MR. BORKOVICH: For instance, we've been working with
20 some to try to get the data for that and we've been
21 unsuccessful up to this point to get those data because
22 we do not have any type of data from irrigation districts
23 in our system.

24 MR. STRINGER: So the irrigation --

25 MR. BORKOVICH: If we could get it, we would include
0134

1 it.

2 MR. STRINGER: So they've chosen not to participate?
3 Is that what you're saying?

4 MR. BORKOVICH: I think a better way of saying it is
5 that I don't think they -- I think on one hand, we
6 probably haven't really formally asked them for it is a
7 better way of asking, except in one case and they didn't
8 share it with us.

9 MR. STRINGER: So your data from the Central Valley,
10 for instance, that's all from public wells?

11 MR. BORKOVICH: Public wells and in the counties
12 where we sampled, it includes public -- private domestic
13 well water as well as the site cleanup well.

14 So a good analogy -- analog to shallower
15 groundwater conditions in the state, you could use the
16 cleanup site wells data that we have collected to compare
17 because typically domestic wells are completed in a
18 shallower zone so they're technically more vulnerable to
19 contamination than public supply wells because they're a
20 lot deeper typically.

21 MR. STRINGER: Thank you.

22 MS. DIAMOND: Thank you very much. It's very
23 informative and very helpful and great.

24 Okay. Sam, do you want to talk about the
25 calendar before we break?

0135

1 MR. UNGER: Yeah. I think real briefly and then if
2 we can't get to a resolution on this real quickly, maybe
3 we'll break for lunch.

4 What I was going to suggest is that we look
5 ahead and we just adopt the calendar as it was sent out
6 to the Board members through May and with the suggestion
7 of changing the May 3rd meeting to May 10th and then we
8 come back next month and we finish off the calendar for
9 2012. So if we can -- if that can work for now, then
10 I think that would -- no, that doesn't work?

11 MS. DIAMOND: So you --

12 MR. UNGER: So should we leave it May 3rd?

13 MS. GLICKFELD: What's wrong with May?

14 MS. DIAMOND: Would you want to say why you're
15 suggesting we do this change?

16 MR. UNGER: Yeah. I'm sorry. My e-mail last night
17 was a little oblique. Basically, as you know, we share
18 Francis with Region 3 and it turns out Region 3 has
19 adopted their 2012 calendar in September and so before we
20 were even thinking about ours -- I hate to say, and that
21 won't happen again next year -- with that being said,
22 Francis has a lot of conflicts later in the year. Her
23 conflicts -- she doesn't have any conflicts early in the
24 year and we thought we could get through May -- only
25 April. We could adopt through April what we have. We
0136

1 have the March 15th Proposed Panel Hearing and then we
2 can come back and send another proposal out to you next
3 month to finish off the year. So if you thought that
4 that could work, we could do it. If it requires a lot of
5 discussion, I would suggest maybe we table that until
6 next month.

7 MS. DIAMOND: Well, let's just -- is there anyone
8 today that does not -- on the Board that doesn't know
9 whether May 10th will work?

10 MS. MEHRANIAN: I can't do May 10th. I know I can't.

11 MS. DIAMOND: You can't do it on the 10th?

12 MS. MEHRANIAN: No.

13 MS. GLICKFELD: I recommend that we go through April
14 and then see what we can sort out after that. I would
15 also like to -- on the panels, I think that it's great we
16 have some dates set aside for the panels. Only I can't
17 make the March 15th date and I just wanted to make sure
18 that there would be enough other people that could.

19 MS. LUTZ: I agree with the panels, but I think we've
20 always had to kind of as they come up see who's available
21 for the panels.

22 MS. DIAMOND: So then maybe what we should just do is
23 adopt the calendar through April and --

24 MR. UNGER: Good.

25 MS. DIAMOND: -- then next month we'll --
0137

1 MR. UNGER: Ronji and I will then send out to you
2 next week or the week after at the very latest a proposed
3 schedule for the rest. We will try to match it as
4 Francis's schedule becomes clear.

5 MS. GLICKFELD: Madam Chair --

6 MS. DIAMOND: Yes.

7 MS. GLICKFELD: -- you know, one of the other issues
8 I wanted to discuss, you know, we noted that we're
9 actually going dark for January as we usually do and for
10 August and -- oh, we do have an October meeting. We had
11 that added.

12 MS. DIAMOND: Yes. We added an October.

13 MS. GLICKFELD: Thank you.

14 MS. DIAMOND: So can I have a motion for the calendar
15 from January through April?

16 MS. LUTZ: I move we adopt the tentative calendar as
17 effective January, February, March, and April months.

18 MS. DIAMOND: Second?

19 MR. BLOIS: Second.

20 MS. DIAMOND: All those in favor?

21 MS. MEHRANIAN: Aye.

22 MS. LUTZ: Aye.

23 MS. GLICKFELD: Aye.

24 MR. BLOIS: Aye.

25 MR. STRINGER: Aye.

0138

1 MR. UNGER: And our closed session will be upstairs
2 right off the elevator.

3 MS. DIAMOND: Second floor.

4 MR. UNGER: Second floor, yes. Just take the
5 elevator.

6 MS. FORDYCE: During Closed Session, the Board will
7 discuss Items 17.1, 17.9 and 17.11 subdivision (b).

8 MS. DIAMOND: Thank you. Shall we say 2:00 o'clock?
9 That gives us enough time to begin?

10 MR. UNGER: We think we have a short Agenda. We can
11 probably -- do you want to say --

12 MS. DIAMOND: Okay. 1:45?

13 MR. UNGER: 1:45?

14 MS. DIAMOND: Okay. We'll be back at 1:45 for Item
15 Number 16.

16 (Lunch recess)

17 (Whereupon Ms. Lutz left the proceedings

18 following Closed Session, before Item Number 16)

19 MS. DIAMOND: Good afternoon, everybody. Welcome to
20 the Regional Water Quality Board. We are going to begin
21 with Item -- we are going to go to Item Number 16, which
22 is the workshop on the issuance of a new Los Angeles
23 County municipal separate stormwater four permit or MS4.

24 Board Member Lutz is not here for the afternoon
25 because she's recused from this item.

0139

1 We will begin with a staff presentation and then
2 after that we have a lot of speaker cards, and times have
3 been discussed with some of you. So we will go over that
4 when we get to your portion of the presentation.

5 So to start with, we are going to begin with the
6 staff presentation.

7 MS. PURDY: Thank you very much. Good afternoon. My
8 name is Renee Purdy and I am the Section Chief of the
9 Regional Program Section here at the Regional Board which
10 oversees the Stormwater Permitting Program as well as the
11 TMDL Program as well as a few others.

12 The purpose of today's L.A. workshop on the MS4
13 permit is twofold -- thank you. Please let me know if
14 you're having difficulty hearing me.

15 First, it is a chance to inform you of where we
16 are with permit development and, in particular, present
17 to you staff's evaluation and conclusions regarding

18 permit structure and describe for you key permit topics
19 that staff has been working on and where we're headed on
20 some of these. Second, it also provides permittees and
21 stakeholders an opportunity to address you with their
22 preliminary comments.

23 While we don't have a draft permit yet, we felt
24 it would be valuable to share some of our conceptual
25 approaches with you earlier, as opposed to later. We are
0140

1 particularly interested today in your feedback on the
2 results of our evaluation of alternative permit
3 structures. We continue to evaluate a number of permit
4 topics and develop approaches to address these. We don't
5 have all the answers for you today, but we look forward
6 to your thoughts on those areas where we have focused our
7 efforts over the past several months.

8 Just to begin, the Los Angeles County Municipal
9 Separate Storm Sewer System, or MS4, is one of the most
10 important permits issued and administered by the Regional
11 Board. The permit regulates the commingled discharges of
12 stormwater and urban runoff from one of the nation's
13 largest municipal separate storm sewer systems covering
14 the jurisdictional areas of 85 permittees plus the MS4
15 facilities owned and operated by the Los Angeles County
16 Flood Control District.

17 Following is an outline of the topics that I and
18 Ivar Ridgeway will cover in our joint presentation this
19 afternoon. First, I'll briefly provide some background
20 on the L.A. MS4 permit for orientation and also give you
21 a status update on permit development and our outreach to
22 permittees and stakeholders over the last several months.

23 Next we'll focus on three main topics. The
24 first is our evaluation of alternative permit structures.
25 We have spent significant effort on this issue since it
0141

1 is critical to how we move forward with permit
2 development and specifically drafting tentative
3 permitting language. Then we'll present staff's
4 evaluation of and proposed path forward for several
5 permit requirements, including some of the core permit
6 elements that we refer to as minimum control measures,
7 including some of the LID provisions and we'll also
8 present to you some tentative approaches on how to
9 incorporate TMDL provisions.

10 Next slide, please.

11 As background, the L.A. MS4 permit was first
12 issued in 1990, then updated in 1996 and again in 2001.
13 The 2001 permit has been reopened three times to
14 incorporate TMDL provisions and was recently amended this
15 past spring in response to a writ of mandate. This
16 update will be the fourth generation of the L.A. MS4
17 permit.

18 The MS4 program has evolved significantly at the
19 local, regional, and national levels over the past

20 decade. The 2012 MS4 permit will reflect these
21 developments, incorporate new requirements, and
22 capitalize on lessons learned.

23 Specifically, we have growing knowledge and
24 experience regarding technologies to control MS4
25 discharges, as seen by the widespread and effective use

0142

1 of low-flow diversions as well as the development of a
2 variety of full-capture trash devices throughout our
3 region.

4 Additionally, although it's an industrial site,
5 you've seen the kind of advances that are possible on
6 your recent tour of the Santa Susana Field Laboratory.

7 Nationally, there's a growing database of BMP
8 performance studies that can be used to identify
9 effective controls and there's also been more widespread
10 research on the use of low-impact development
11 technologies to improve water quality and address
12 hydromodification impacts due to stormwater.

13 EPA is also in the process of assessing the
14 Stormwater Program at the national level through its
15 proposed rulemaking which it initiated in December of
16 2009 and is evaluating options for how to strengthen the
17 program and achieve better water quality outcomes.

18 Lastly, in the past decade, many TMDLs have been
19 developed to address ongoing water quality impairments.
20 Many of these TMDLs have confirmed that discharges from
21 the MS4 are a source of pollutants. These TMDLs, as
22 you've heard many times, are not self-implementing and,
23 therefore, must be included in the MS4 permits to
24 implement the waste load allocations that are assigned to
25 the MS4 discharges.

0143

1 Next slide.

2 Staff has identified four overarching objectives
3 for the new L.A. MS4 permit. These are first to increase
4 the flexibility of provisions in the MS4 permit, while
5 ensuring a consistent baseline level of implementation.
6 This will allow permittees to focus on priorities within
7 watersheds and also individualize requirements based on
8 local initiatives such as some of the local LID
9 initiatives that we've seen through local ordinances.
10 This will also ensure consistent and equitable
11 requirements among permittees.

12 The second objective is to improve our
13 Stormwater Quality Management Program requirements and
14 minimum control measures to achieve water quality
15 standards.

16 The third is to implement TMDL waste load
17 allocations that are assigned to MS4 discharges within
18 Los Angeles County, and the fourth is to clarify
19 compliance determination for permit provisions in a
20 commingled system.

21 With regard to the last objective, permittees

22 have expressed concerns about how their individual
23 compliance will be determined and specifically have
24 voiced concerns that in some cases, one permittee may be
25 held for another co-permittee's discharges.

0144

1 Per Federal regulations, co-permittees are only
2 responsible for complying with permit conditions relating
3 to their own MS4 discharges. This clarification may be
4 made in the updated permit through the permit's
5 monitoring and reporting requirements, provisions to
6 implement TMDL waste load allocations, and possibly in
7 other areas of the permit.

8 Next slide, please.

9 Over the past months, we have conducted a number
10 of activities to support permit development, leading off
11 with a kick-off meeting which we held at the end of May,
12 which was attended by over 90 individuals. We followed
13 this meeting with a web-based survey to solicit more
14 comprehensive input from permittees on the preferred
15 structure for the new permit, as well as on topics for
16 future workshops during the permit development process.

17 Additionally, we've conducted several targeted
18 Municipal Stormwater Program assessments to help inform
19 permit development, including looking at some
20 construction and post-construction stormwater control
21 programs and illicit connection and illicit discharge
22 elimination programs.

23 We've also met upon request with a number of
24 permittees and other stakeholders including several
25 meetings with the Los Angeles County Flood Control

0145

1 District, the City of Los Angeles, the environmental
2 organizations Heal the Bay, Santa Monica Bay Keeper and
3 NRDC, as well as meetings with the City of Downey, the
4 City of Signal Hill, Mr. Ray Tahir representing a number
5 of cities, and most recently the L.A. Permit Group which
6 has a growing membership of 43 co-permittees and are
7 meeting at our meetings; specifically, we met with
8 Monrovia, Santa Clarita, Carson, Agoura Hills,
9 Westlake Village, and Torrance. Throughout, we've been
10 working very closely with U.S. EPA Region 9 and are also
11 being assisted in some areas by one of their consultants,
12 P.G. Environmental.

13 After today's Board workshop, we continue to
14 meet upon request with permittees and stakeholders as
15 well as hold two staff-level workshops on key topics for
16 the permit development.

17 We are currently scheduled to release a draft
18 permit in early March with plans to bring the tentative
19 permit to you for consideration at the May 2012 Board
20 meeting.

21 Next slide, please.

22 So as background, the existing 2001 permit
23 regulates the discharges of stormwater and nonstormwater

24 runoff from 84 cities, Los Angeles County, and the
25 Los Angeles County Flood Control District. In the 2001
0146

1 permit, the District is also named the principal
2 permittee with additional requirements for monitoring,
3 reporting, and coordination on behalf of all permittees.

4 There were a number of reasons for issuing a
5 single permit for the entire Los Angeles County MS4 in
6 2001, most of which still apply today.

7 These are first that the L.A. MS4 is a highly
8 interconnected system across jurisdictional boundaries
9 which receives commingled discharges that are then
10 conveyed by the MS4 to receiving waters.

11 Second, a single permit provided opportunities
12 for cooperation which resulted in efficiencies in areas
13 of public outreach, monitoring, and reporting.

14 Third, as the owner/operator of a large part of
15 the L.A. County MS4, the Flood Control District agreed to
16 serve as principal permittee and assumed special
17 responsibilities with regard to overall coordination and
18 unified monitoring and reporting.

19 Next slide, please.

20 One of the fundamental decisions that staff had
21 to evaluate at the outset was the basic permit structure
22 for the updated permit, and what I mean here really is Do
23 we keep generally the same structure of a single permit
24 as we've had or change it?

25 Staff evaluated three general alternatives for a
0147

1 permit structure, including a single unified permit but
2 with watershed sections, watershed-based permits, and
3 other multiple-permit approaches, including individual
4 permits or permits based on the Reports of Waste
5 Discharge, also known as ROWDs, that were submitted in
6 2006 and later in 2010. And I'll talk about these a
7 little bit later in my presentation.

8 Next, please.

9 Federal regulations identify a couple of
10 possible permitting structures for MS4 permits, including
11 a systemwide permit and a structure that addresses all
12 discharges within an MS4 that discharge to the same
13 watershed.

14 Clean Water Act Section 402(p) and the
15 Implementing Regulations at 40 CFR 122.26 provide
16 flexibility to the permitting authority -- that is, the
17 Regional Board -- to issue permits on a systemwide or
18 jurisdiction-wide basis, taking into consideration a
19 variety of factors, and these include the location of the
20 discharge with respect to waters of the United States,
21 the size of the discharge, the quantity and nature of the
22 pollutant's discharge to waters of the United States, and
23 other relevant factors.

24 In evaluating the structure for the new permit,
25 Board staff considered a number of factors, including the

0148

1 nature of the Greater L.A. County MS4, permittees' input,
2 TMDLs, and also opportunities for collaboration,
3 including the proposed L.A. County Flood Control
4 District's water quality funding initiative. I'll talk
5 about each of these factors in the next four slides.

6 Next.

7 The first factor staff considered was the nature
8 of the Los Angeles County MS4. The Greater L.A. County
9 MS4 is an extensive, interconnected, and overlapping
10 system, the infrastructure of which is controlled in
11 large part by the Los Angeles County Flood Control
12 District, among others. It is the receptacle for urban
13 runoff and stormwater from multiple cities, along with
14 Los Angeles County. The discharges from these entities
15 frequently commingle in the MS4 prior to discharge to the
16 receiving waters.

17 Next slide, please.

18 To give you an idea of the extent of the Greater
19 L.A. County MS4, the Flood Control District area
20 encompasses more than 3,000 square miles and
21 approximately 2.1 million land parcels. The drainage
22 infrastructure within the Greater L.A. County MS4
23 includes approximately 500 miles of open channel, 2800
24 miles of underground storm drain, and an estimated
25 120,000 catch basins. And in this map here (indicating),

0149

1 if you can see the dotted red line which essentially
2 traces the boundary of Los Angeles County, that's the
3 boundary for the Los Angeles County Flood Control
4 District and the slightly shaded areas are all the
5 incorporated cities within L.A. County. The yellow areas
6 are the unincorporated areas of Los Angeles County, and
7 you can see some of the waterbodies represented on the
8 map as well.

9 Next, please.

10 Second, staff considered the results of the
11 online survey regarding permit structure. The results
12 indicated that a majority of permittees support a single
13 MS4 permit for Los Angeles County. A significant
14 minority support multiple watershed-based permits.
15 Overall, 85 percent of permittees support either a single
16 MS4 permit or watershed-based permits. A small number of
17 permittees support alternative groupings other than
18 watershed-based groupings. Only four permittees
19 expressed a preference for individual MS4 permits.

20 Staff also considered the 2006 and 2010 Reports
21 of Waste Discharge, or ROWDs. Eight permittees submitted
22 individual or small-group ROWDs. These included
23 individual ROWDs from the cities of Signal Hill and
24 Downey and a small-group ROWD submitted by five cities in
25 the upper San Gabriel River watershed. All of these were

0150

1 submitted in 2006. Additionally, an individual ROWD from

2 the Flood Control District was submitted in the fall of
3 2010. Staff, at the time, found these ROWDs to be
4 inadequate. We can discuss staff's evaluation of these
5 ROWDs in greater detail during your questions, if you
6 desire.

7 Additionally, in its 2010 ROWD, the District
8 requested that if the Board does not issue an individual
9 permit to the District, that it is relieved of its
10 principal permittee responsibilities.

11 Next, please.

12 Staff also considered the requirement to
13 implement waste load allocations from 29 TMDLs in the new
14 permit and these are included in your Board package as
15 one of the attachments to the brief paper that was
16 included. This will likely be the most significant
17 addition to the L.A. MS4 permit. These TMDLs are largely
18 watershed-based. Aggregate waste load allocations are
19 assigned to MS4 permittees within the same watershed and,
20 as such, implementation actions as well as monitoring are
21 watershed-based. TMDLs are well-suited to implementation
22 through a single permit with watershed sections,
23 particularly given the significant efforts that have been
24 undertaken by many permittees to develop watershed or
25 sub-watershed-based TMDL implementation plans.

0151

1 Next, please.

2 Lastly, staff considered the opportunities for
3 collaboration that could be promoted by a single permit.
4 During the adoption of many TMDLs, we've discussed that
5 regional solutions populated throughout a watershed may
6 be the most cost-effective both for structural BMP
7 implementation as well as for programs such as
8 monitoring, implementation planning, and public education
9 and outreach. Opportunities for collaboration during the
10 coming permit term may also be enhanced by the passage of
11 the 2010 act to amend the Los Angeles County Flood
12 Control Act. This is referred to as Assembly Bill 2554.

13 This statute allows the District to assess a
14 parcel tax for stormwater and clean water programs;
15 funding is subject to local voter approval under
16 Proposition 218. 50 percent of the funding would be
17 allocated to nine watershed authority groups, or WAGs, to
18 implement collaborative water quality improvement plans.

19 Next slide, please.

20 So after evaluating the factors that I just
21 discussed, staff intends to propose a single permit for
22 the Greater L.A. County MS4. The permit will include
23 watershed-based requirements in separate sections,
24 relying upon the Regional Board watershed management
25 areas, but with flexibility to reflect the water quality

0152

1 funding initiatives, WAGs, once those are established.

2 A single permit would include baseline
3 provisions that are applicable to all permittees, but

4 with opportunities for tailoring provisions on the basis
5 of watershed priorities or local initiatives, and I do
6 want to mention that Federal regulations give the
7 permitting authority the discretion to specify different
8 conditions relating to different discharges covered under
9 the permit, including different management programs for
10 different drainage areas or watersheds.

11 A single permit would provide continued and
12 potentially new opportunities for collaboration,
13 resulting in more cost-effective monitoring, reporting,
14 and implementation of other requirements such as TMDLs
15 and public information and education.

16 Staff is not currently proposing to designate a
17 principal permittee. The Flood Control District would be
18 treated as a co-permittee, though it may have some
19 different requirements as compared to jurisdictional
20 areas. We know this is of concern to some of the other
21 permittees; however, we have seen through TMDL
22 implementation planning some permittees assume a
23 leadership role and we believe that this will continue
24 and be further supported by the institutional structure
25 that may be created through the water quality funding
0153

1 initiative and the WAGs.

2 A single permit would include revised compliance
3 monitoring provisions to address, in part, concerns
4 regarding how an individual permittee's compliance with
5 permit provisions is determined. And I spoke about that
6 a little bit earlier under the objectives for the new
7 permit.

8 Staff is not planning to propose watershed-based
9 permits because this would result in some permittees
10 having multiple permits. For example, the cities of
11 Downey, Los Angeles, the County of L.A. are some examples
12 where they would need to be covered under three or four
13 permits in that situation and could result also in
14 undesirable inconsistencies among permits within the
15 Los Angeles County area.

16 Staff is also not planning to propose individual
17 permits or other grouped permits except in the case of
18 Long Beach, which has had its own permit since 1999 and
19 has a well-established and robust individual monitoring
20 and reporting program. We are planning to propose that
21 Long Beach continue to have its own permit and we intend
22 to undertake renewal of the Long Beach permit as soon as
23 the Los Angeles County MS4 permit is completed, but while
24 we intend to propose an individual permit for Long Beach,
25 the permit will be similarly organized by watershed.
0154

1 Long Beach actually falls within four watershed
2 management areas such that actions taken by Long Beach
3 can align with watershed-based efforts of L.A. MS4
4 co-permittees where appropriate.

5 A single permit is consistent with the direction

6 of other regions in California, including San Diego,
7 Riverside, and the Bay Area, and also I want to mention
8 that EPA has expressed support for a single permit as
9 we're recommending.

10 At this point I want to turn over the
11 presentation to Ivar Ridgeway to talk about the
12 Stormwater Quality Management Program and some of the
13 permit's minimum control measures and then I'll be back
14 to discuss TMDLs and a few other key areas of permit
15 development.

16 MR. RIDGEWAY: Good afternoon. I'm Ivar Ridgeway of
17 the Stormwater Permitting Unit and I'm the Unit Chief.

18 I'd like to briefly describe some of the
19 requirements staff is considering to incorporate into the
20 upcoming L.A. MS4 permit.

21 As part of the Phase I MS4 application
22 requirements, the U.S. EPA required proposed management
23 programs which would require a description of priorities
24 for implementing controls. The proposed management
25 programs are minimum control measures consisting of the

0155

1 six programs listed in the slide.

2 I'll briefly describe some of the proposed
3 requirements for each of these measurements, which are
4 described in your Board package in greater detail
5 beginning on Tab 16.8, page 16-33.

6 Generally, the Stormwater Management Program is
7 intended to reduce discharges of pollutants in stormwater
8 to the maximum extent practicable and achieve water
9 quality standards.

10 For the industrial/commercial minimum measure,
11 staff proposes to incorporate provisions almost identical
12 to the Ventura MS4 requiring BMP implementation or
13 source-control BMPs identified in the CASQA
14 industrial/commercial BMP handbook. The rationale for
15 referencing the CASQA manual is to ensure appropriate
16 BMPs are implemented for the various activities conducted
17 at industrial/commercial facilities and hopefully serve
18 as guidance for permittees who want to utilize effective
19 measures for potential pollutant-generating activities.
20 The CASQA manual includes numerous BMPs, ranging from
21 simple source-control BMPs to media filters similar in
22 operation to what Board members observed during their
23 Boeing field trip.

24 The inspection frequency proposed is identical
25 to what's in the current 2001 L.A. MS4 permit and also

0156

1 the current Ventura MS4 permit: two inspections per
2 designated facility within five years.

3 Next slide, please.

4 For the Development Construction Minimum
5 Measure, as required in the current Ventura MS4 permit,
6 staff proposes to require an electronic inventory of
7 grading permits, encroachment permits, and building and

8 construction permits within a permittee's jurisdiction.
9 Prior to issuing a grading or building permit, an Erosion
10 and Sediment Control Plan must be submitted for permittee
11 approval prior to land disturbance. The Erosion and
12 Sediment Control Plan must include the elements of a
13 Stormwater Pollution Plan, or an SPP. Controls for the
14 various construction activities must be consistent with
15 the applicable CASQA best management practices handbook
16 or the CalTrans handbook for public
17 transportation-related projects and must be tailored to
18 the risks posed by the project.

19 Next slide, please.

20 For the Illicit Connections, Illicit Discharges
21 Elimination Minimum Measure, which addresses in part the
22 control of nonstormwater discharges to the MS4, staff are
23 proposing to have permittees identify priority areas in
24 the MS4 and identify a minimum number of stations within
25 the priority areas identified at which field

0157

1 observations, field screening, monitoring and possible
2 analytical monitoring will take place.

3 Staff, in conjunction with permittees, plan to
4 develop and implement protocols for investigating and
5 eliminating illicit connections and discharges. This
6 will be in contrast to the requirements in the current
7 L.A. MS4 order where illicit connection screenings was
8 required for stormwater pipes of a given size. The
9 proposed requirement would identify areas for permittee
10 follow-up actions.

11 Next slide, please.

12 For the Public Agency Activities Program, or
13 minimum control measure, staff is proposing to require an
14 inventory and map of all permittee owned or operated
15 facilities. Staff is recommending the mapping to be done
16 in GIS. Staff intend to continue permit requirements
17 such as catch basin cleaning, open channel maintenance,
18 and street sweeping.

19 Next slide, please.

20 The first slide for the new and redevelopment
21 minimum measure describes a requirement that addresses
22 water quality issues. Staff intend to propose an LID
23 design storm similar to the current Ventura MS4 permit
24 and current L.A. MS4 SUSMP sizing. Designated new
25 development and redevelopment projects would retain

0158

1 on-site the stormwater runoff volume resulting from the
2 85th percentile 24-hour storm or the three-quarter-inch
3 24-hour storm, whichever is greater. The reference for
4 the 85th percentile storm would be taken from the 2004
5 Los Angeles County Hydrologic Manual.

6 Staff is proposing to shift from a strict
7 percent effective impervious area in the Ventura order to
8 a volume capture approach. The draft permit encourages
9 designs that minimize impervious areas because the

10 stormwater volume is related to the amount of impervious
11 surface.

12 Next slide, please.

13 The following two slides address the impacts of
14 stormwater runoff on the geomorphology of natural
15 drainage systems. Staff are proposing to incorporate
16 hydromodification requirements for natural drainage areas
17 in the upcoming L.A. MS4 permit. Final hydromodification
18 requirements may be developed in coordination with the
19 permittees based on pending studies to be approved by the
20 State Board. Each of the proposed requirements in this
21 slide will satisfy the hydromodification requirements for
22 sites less than 50 acres.

23 An example is the on-site retention of the
24 volume of the runoff resulting from the 95th percentile
25 24-hour storm. This requirement was derived from the

0159

1 U.S. EPA's stormwater requirement for Federal facilities.

2 Next slide.

3 For sites over 50 acres, the proposed
4 requirements are similar, with exception of the volume of
5 runoff from a larger hydromodification design storm
6 event, which is required to be retained on-site, and
7 hydrologic modeling is required to demonstrate the
8 matching of predevelopment and post-development
9 conditions.

10 Next slide, please.

11 For the Public Information and Participation
12 Minimum Measure, staff is proposing that permittees
13 conduct a stormwater pollution prevention advertising
14 campaign and distribute stormwater pollution prevention
15 public educational materials to potential
16 pollutant-contributing entities within the watersheds.
17 Examples are automotive parts stores and home improvement
18 centers.

19 In addition, staff are proposing that permittees
20 develop or implement or continue the implementation of a
21 watershed-wide reporting hot line to serve as the general
22 public reporting contact for reporting illicit discharges
23 and dumping. The proposed approach would allow each
24 permittee to establish their own hot line if preferred.

25 I would now like to return the presentation back

0160

1 over to Renee.

2 MS. PURDY: I'd like to move on to TMDL provisions
3 now and to start out with, I want to just give you some
4 background, which is that, as you know, there are a
5 number of TMDLs that have been adopted by this Board or
6 established by EPA for the region; and specifically in
7 Los Angeles County, there are 29 TMDLs that have been
8 adopted and are either in effect or will soon be in
9 effect that contain waste load allocations for discharges
10 from the L.A. County MS4. The updated L.A. permit is
11 required to include effluent limitations and other

12 provisions to implement these waste load allocations.

13 Next, please.

14 Specifically, Federal regulations require that
15 NPDES permits contain effluent limitations that are
16 consistent with the assumptions and requirements of all
17 available waste load allocations. Therefore, as part of
18 the update of the L.A. County MS4 permit, Board staff
19 will be developing numeric effluent limitations and other
20 provisions to implement the TMDL waste load allocations
21 assigned to permittees regulated by the L.A. County MS4
22 permit.

23 Staff intends to propose inclusion of all
24 interim and final allocations, even if beyond the
25 five-year term of the permit. This is consistent with

0161

1 the Board's incorporation of all interim and final
2 effluent limitations for the L.A. River Trash TMDL, which
3 extended beyond the current permit term and was adopted.
4 That reopener was adopted by the Board back in 2009.

5 The Regional Board has some flexibility when
6 establishing permit provisions to determine compliance
7 with the numeric effluent limitations that are derived
8 from the TMDL waste load allocations. Broadly, the
9 Regional Board may either require a demonstration that
10 permittees are complying with the numeric effluent
11 limitations through monitorings such as outfall
12 monitoring or, alternatively, may allow permittees to
13 propose and implement control measures to achieve the
14 numeric effluent limitations, which I'm referring to
15 today as an action-based compliance demonstration; and
16 this can be provided where there is reasonable assurance
17 in the record that the proposed actions and the schedule
18 will achieve the numeric effluent limitations within the
19 required time frame.

20 Next, please.

21 The Regional Board has previously established
22 the numeric effluent limitations when it reopened the
23 L.A. County MS4 permit in 2009, as I just mentioned, to
24 incorporate permit provisions to implement the
25 Los Angeles River Trash TMDL. In that case, numeric

0162

1 effluent limitations are included in the permit for all
2 permittees that are subject to the L.A. River Trash TMDL;
3 however, permittees have the option to employ any of
4 three general compliance strategies to achieve the
5 numeric effluent limitations.

6 Depending on the strategies suggested, the
7 permittees may demonstrate compliance either by
8 documenting the percentage of area addressed by full
9 capture of trash systems, and this is where I'm referring
10 to an action-based compliance demonstration, or by
11 calculating their annual trash discharge to the MS4 and
12 comparing that directly to the numeric effluent
13 limitation, which I'll refer to as a direct compliance

14 demonstration based on monitoring data.

15 This approach allows permittees the flexibility
16 to comply with the numeric effluent limitations using any
17 lawful means and establishes appropriate and enforceable
18 compliance metrics, depending on the method of compliance
19 and level of assurance provided by the permittee, that
20 the selected method will achieve the numeric effluent
21 limitations that are derived from the TMDL's waste load
22 allocations.

23 Next, please.

24 As described in the last two slides, staff
25 intends to propose a similar dual-path compliance

0163

1 determination approach to developing permit provisions
2 for the other TMDL waste load allocations. Staff intends
3 to propose numeric effluent limitations that are
4 consistent with the waste load allocations, but with an
5 alternative to pursue an action-based compliance path
6 where there's adequate demonstration that the actions
7 will achieve the effluent limitations.

8 This gives permittees flexibility regarding
9 compliance demonstrations but ensures accountability for
10 action-based approaches through, first of all, a
11 requirement to provide an Implementation Plan for E.O.
12 approval that provides reasonable assurance that the
13 actions will achieve the numeric effluent limitations and
14 validation monitoring to confirm that the expected BMP
15 performance and/or water quality outcomes are being
16 achieved at critical implementation milestones.

17 Next, please.

18 So finally what I'd like to do is touch on four
19 other key permit areas and ones that you'll likely hear
20 about from permittees and the environmental community
21 today. These permit areas are not as fully vetted as the
22 ones we've just discussed, but they are still very
23 important and are topics that staff is actively working
24 on.

25 The first of these is nonstormwater discharge

0164

1 prohibitions. Section 402(p)(b)(3) of the Clean Water
2 Act, which specifies requirements for permits for
3 discharges from MS4's, requires an effective prohibition
4 on nonstormwater discharges.

5 The current L.A. permit relies most heavily on
6 two elements of the Stormwater Management Program to
7 address these nonstormwater discharges and Ivar described
8 these briefly. These are the Illicit Connection, Illicit
9 Discharge Elimination Program and Public Outreach
10 Education Programs such as catch basin stenciling. While
11 these programs have had some success, nonstormwater
12 discharges continue to cause or contribute to dry-weather
13 impairments in our region's waterbodies. As a result,
14 we're exploring new directions to address nonstormwater
15 discharges as Ivar described. We'll continue to evaluate

16 and vet these with permittees and stakeholders in the
17 coming months.

18 The next significant area relates to the
19 permit's receiving water limitations language in part two
20 of the permit. Per 40 CFR Section 122.44(d)(1), the
21 receiving water limitations section of the 2001 permit,
22 as well as all MS4 permits in California, contains a
23 requirement that prohibits discharges from the MS4 that
24 cause or contribute to a violation of water quality
25 standards.

0165

1 This section of the 2001 permit also contains
2 provisions that establish an iterative process whereby
3 certain actions are required when exceedances of water
4 quality standards occur. This iterative process includes
5 submitting a Receiving Water Limitations Compliance
6 Report, revising the Stormwater Quality Management
7 Program and its components to include modified BMPs, and
8 an implementation schedule and additional monitoring to
9 address the exceedances.

10 Many permittees believe that if they fully
11 comply with the iterative process in response to
12 exceedances of water quality objectives or standards,
13 then they should have -- excuse me -- they should not be
14 in violation of the discharge prohibitions in the
15 Receiving Waters Limitation section of the permit,
16 meaning part 2.1.

17 The Regional Board has held that compliance with
18 the iterative process as outlined in the 2001 permit is
19 not a safe harbor for compliance with water quality
20 standards or objectives.

21 In evaluating the receiving water limitations
22 language for the updated permit, we are exploring
23 potentially different approaches for waterbodies subject
24 to TMDLs and those that are not subject to TMDLs. Staff
25 is also looking at how other Regional Water Boards are

0166

1 dealing with this issue in their MS4 permits.

2 Next, please.

3 Water quality-based effluent limitations, or as
4 they're sometimes called WQBELs, are those limitations
5 established to achieve compliance with water quality
6 standards. Numeric WQBELs are derived from water quality
7 standards or TMDL waste load allocations. WQBELs are
8 routinely expressed as numeric thresholds for effluent
9 quality needed to achieve water quality standards.

10 Recently, U.S. EPA revised its guidance on the
11 use of numeric WQBELs in MS4 permits, recommending
12 that -- and I'm quoting -- "NPDES permitting authorities
13 use numeric effluent limitations where feasible, as these
14 types of effluent limitations create objective and
15 accountable means for controlling stormwater discharges."

16 As I discussed earlier, it may be possible for
17 compliance determination to translate numeric WQBELs into

18 action-based equivalents where reasonable assurance is
19 provided that the actions will achieve the numeric
20 WQBELs.

21 In discussions with several permittees to date,
22 there is not a common understanding among permittees
23 about the use of WQBELs in MS4 permits. Staff will
24 continue to vet various options regarding the use of
25 numeric WQBELs in the L.A. MS4 permit as applied to
0167

1 discharges that are subject to TMDL waste load
2 allocations, nonstormwater discharges, and stormwater
3 discharges.

4 Lastly, I want to touch on monitoring.
5 Specifically, I want to go over four objectives that
6 we've identified for the updated monitoring program in
7 the new permit.

8 These are, first of all, to establish a linkage
9 through the monitoring program between the MS4 discharges
10 and receiving water quality. The second is to determine
11 compliance with TMDL provisions that will be included, as
12 well as any other numeric WQBELs. The third is to target
13 implementation actions and improvements in the Stormwater
14 Water Quality Management Program, and the fourth is to
15 validate performance and outcome expectations in cases
16 where action-based compliance demonstrations are being
17 pursued. And an ancillary objective may also be to
18 develop a monitoring program that will help clarify
19 individual compliance in a commingled system, as I
20 discussed earlier.

21 To achieve these objectives, the updated permit
22 will likely need to include a combination of receiving
23 water and outfall monitoring with a greater focus on
24 outfall monitoring. Additionally, the Monitoring Program
25 design will need to take into account TMDL compliance
0168

1 monitoring plans that have been developed and the program
2 will likely end up being somewhat similar to the Ventura
3 County MS4 permit which does rely largely on outfall
4 monitoring. But given the extensiveness of the
5 Los Angeles County MS4, the monitoring program for this
6 updated permit will likely need representative or some
7 sort of stratified random sampling of outfalls.

8 We will be working with the permittees to gather
9 the information that's necessary to establish an
10 appropriate monitoring program for the updated permit.

11 Next slide -- next and last slide.

12 In conclusion, we feel like we have a viable
13 option for permit structure with a single unified permit
14 containing watershed sections that strikes an appropriate
15 balance between consistency within the region and
16 flexibility to address watershed priorities and pursue
17 local initiatives.

18 We're also well under way on permit requirements
19 for the minimum control measures, as described by Ivar,

20 including new and redevelopment and low-impact
21 development. We intend to more fully vet these at a
22 staff-level workshop in the near future and we're looking
23 at potentially a mid-December time frame for that.

24 Finally, we also believe that we have a sound
25 approach to incorporating TMDL waste load allocations
0169

1 which meets Federal requirements and direction to include
2 effluent limitations yet gives permittees the flexibility
3 to use action-based approaches for compliance
4 demonstration if there's a reasonable assurance that such
5 actions will achieve the effluent limitations.

6 So I know that we've covered quite a bit of
7 ground today and we haven't even covered all the ground
8 there is to cover, but we're looking forward to your
9 input on what we have presented today and particularly
10 any feedback that you might have on the permit structure
11 in particular since that is critical to how we will be
12 moving forward over the next several months.

13 And with that, thank you, and I'll close.

14 MS. DIAMOND: Thank you, Renee and Ivar.

15 So at this time -- do you think we can get the
16 lights back on?

17 Anyway, we're going to move on to our speaker
18 cards. I do have two people, one elected official who
19 I'm going to call up first, Council Member Ili from the
20 City of South El Monte.

21 Would you please announce yourself, for the
22 record.

23 MR. ILI: Good afternoon, Chair and Members of the
24 Board. My name is Willhans Ili. I am a Council Member
25 for the City of South El Monte. To make things go a
0170

1 little bit quicker, I'm going to ask the independent
2 cities that are in the audience that are trying to
3 request an extension for the permit, please rise and be
4 counted.

5 Thank you.

6 We are all here requesting that the Regional
7 Board extend the adoption date for the MS4 NPDES permit
8 from March 2012 to December 2012. The cities feel that
9 the Regional Board's deadline to adopt this document is
10 unreasonable for the following reasons: One, the draft
11 permit has not been issued yet; two, the four months is
12 not enough time for us to review and adopt this permit;
13 and finally, the Regional Board gave Ventura County two
14 years to review and negotiate their permit.

15 The additional time is needed in order to
16 analyze the permit. The additional time is needed for
17 our cities to analyze the permit and to see how they will
18 affect our cities.

19 Thank you for your time, and I hope you guys
20 consider our request.

21 MS. DIAMOND: Thank you. I have Ms. Susan Reyes,

22 representing Senator Ed Hernandez.

23 MS. REYES: Hi. Good afternoon, Chair and Members of
24 the Board. I'm here -- my name is Susan Reyes. I'm here
25 on behalf of Senator Ed Hernandez to read a statement,
0171

1 but before I do that, if I may, I'd like to thank Member
2 Madelyn Glickfeld for coming out to West Covina last
3 month and meeting with the San Gabriel cities and other
4 cities from L.A. County. So thank you for making that
5 effort to listen to us. Thank you.

6 So I'm going to go ahead and read the statement.

7 MS. DIAMOND: Would you please -- I don't want to
8 interrupt you, but please speak into the mike because
9 it's really hard to hear in all parts of the room.

10 MS. REYES: Okay. Can you hear me now?

11 MS. DIAMOND: Can people hear in the back? Thank
12 you.

13 MS. REYES: I'd like to thank the L.A. Regional Board
14 for offering this public workshop that gives cities the
15 opportunity to state their comments and concerns
16 regarding the reissuance of the MS4 permit.

17 As chair of the San Gabriel Valley Legislative
18 Caucus, I realize the importance of water quality and I
19 value the work that this Board does to regulate
20 stormwater. I have followed this issue for the last 16
21 months and I understand that cities are currently
22 operating under the previous MS4 permit that expired
23 nearly six years ago.

24 Given this long period of uncertainty and the
25 history of litigation, there are a number of concerns
0172

1 that need to be addressed. I encourage the Regional
2 Board to continue hosting public workshops and work
3 towards a process that allows stakeholders to have their
4 concerns addressed.

5 Cities in my district need more time during this
6 negotiation process as well as more time to carefully
7 review the draft permit once it is issued, even if it
8 means extending the adoption date of the new permit.
9 It is important cities have the opportunity to analyze
10 the regulations adopted in the permit and develop
11 strategies to help ensure their full compliance before
12 the regulations are made effective.

13 I look forward to continuing my involvement in
14 this process and the development of a reasonable permit.

15 As always, my office is here to assist if
16 needed. Thank you from Senator Ed Hernandez.

17 MS. DIAMOND: Thank you.

18 The next card I have is -- and I'm just going to
19 confirm with you, Mr. Unger -- Heather Maloney, Heather
20 Merenda, John Dettle representing the L.A. Permit Group
21 and they've asked for 20 minutes.

22 MR. UNGER: That's correct.

23 MS. DIAMOND: The L.A. Permit Group and I'm sure

24 you're going to tell us exactly who you are and make sure
25 that you're right on top of the mike.

0173

1 MS. MALONEY: Is that good?

2 MS. DIAMOND: Yes, and speak loud.

3 MS. MALONEY: Yes. Everybody's up here.

4 Good afternoon, Madam Chair and Regional Board
5 members. My name is Heather Maloney. I am with the City
6 of Monrovia and also the chair of the L.A. Permit Group.
7 Myself and two other members of the L.A. Permit Group's
8 negotiating committee, John Dettle and Heather Merenda,
9 will be speaking and presenting comments on the MS4
10 permit development on behalf of The L.A. Permit Group.

11 The L.A. Permit Group has reviewed this
12 presentation and has approved its contents.

13 Next slide, please.

14 So currently the L.A. Permit Group includes 51
15 cities who have been working collaboratively to develop
16 comments on the MS4 permit, the names of which of all
17 these cities are listed up on the screen there, and
18 several additional agencies have been attending meetings
19 such as L.A. County Flood Control, L.A. County, City of
20 Los Angeles and elected officials' staff, and all cities
21 have been invited to join The L.A. Permit Group and
22 meeting attendance is continually growing.

23 There are many more cities that are attending on
24 a regular basis that are not listed on this screen so we
25 anticipate this list will continue growing.

0174

1 The L.A. Permit Group was established in
2 partnership with Vice Chair Mary Ann Lutz back in January
3 2011 and we have been actively meeting and working on
4 permit commitments or comments since last February and
5 our purpose here today is to deliver the general
6 consensus of the larger group.

7 Next slide.

8 The L.A. Permit Group identified four initial
9 priority focused areas of concern for the development of
10 the new permit: TMDLs development programs, monitoring
11 and reporting, and then technical subgroups were
12 established for each of these subject areas. And you can
13 see the subcommittee chairs are listed there on the
14 screen as well.

15 The subgroups then report back to The L.A.
16 Permit Group and the general consensus of the group is
17 represented by the negotiating committee.

18 MS. GLICKFELD: Excuse me. Do we have a copy of this
19 PowerPoint?

20 MS. MALONEY: You have it.

21 MR. UNGER: You can send it to us.

22 MS. MALONEY: Yeah. It's on the laptop and --

23 MS. GLICKFELD: So is it possible that we can get a
24 copy delivered to our staff, who can then deliver it to
25 us?

0175

1 MS. MALONEY: Absolutely.
2 So the negotiating committee contains
3 representatives from each of the watershed management
4 areas throughout the County and our negotiating committee
5 members are up front here with us today and I'm going to
6 read off their names and the watersheds that they're
7 representing.

8 We have Heather Merenda from the Santa Clara
9 River watershed, John Dettle from the Santa Monica Bay,
10 and Joe Bellomo from the Malibu Creek and rural
11 watersheds, as well as Patricia Elkins from the Dominguez
12 Channel. We have Ray Tahir from the San Gabriel River,
13 Rene Bobadilla from the L.A. San Gabriel River, and then
14 myself from the L.A. River, and John Hunter from the L.A.
15 River watershed.

16 Next slide.

17 So we're requesting that additional time be
18 allowed for the MS4 permit development for several
19 reasons. The first, it takes time to organize a large
20 amount of agencies, 80-plus for this permit, which are
21 very unique and individual municipalities.

22 To put this in context, you know, we tried to
23 imagine, you know, getting 80 different State agencies to
24 work together, which takes a while to get collaboration.

25 And then the MS4 permits on average take at

0176

1 least two years throughout the State to negotiate with
2 permittees and stakeholders, so the proposed time line
3 allows significantly less time to do that, and then the
4 over 28 TMDLs are expected to be incorporated into the
5 permit and this will be challenging in a timely process
6 that needs time to do it right.

7 In regards to the EPA TMDLs specifically, many
8 of the EPA TMDLs are still in draft form and are not
9 expected to be released until March 2012. We haven't
10 even seen the final TMDLs yet and we'd like to have the
11 time to digest and analyze these EPA TMDLs and prepare
12 Implementation Plans for them. Therefore, the TMDLs will
13 be released rather late for sensible incorporation based
14 on the time frame proposed.

15 Some of the EPA TMDLs will not be adopted until
16 later as well. I believe a few of them got extensions to
17 2013 and a permit reopener would be needed in order to
18 incorporate these into the permit.

19 As we've seen with many of the MS4 permits
20 around the State, if rushed, several complications can
21 occur after adoption. Instead, we're proposing to extend
22 the adoption time to work through the issues
23 collaboratively through the permit development phase.

24 In addition, we'll need time to bring the permit
25 drafts to our elected officials' attention as well. This

0177

1 will be important that time is allowed for this process

2 so that they can understand the permit requirements as
3 well as the financial implications for implementing the
4 permit.

5 Regional Board staff has indicated that they are
6 encouraged by the L.A. County Flood Control's proposed
7 funding initiative. We are proposing that the permit not
8 be based on the funding initiative; however, if it is the
9 Board's desire, it is proposed that the permit would be
10 based -- that the permit would be based on the funding
11 initiative, the permit adoption should be extended; and
12 in addition to knowing what extent of the revenues will
13 be available for the permit adoption, there are several
14 challenges that still need to be addressed in the funding
15 initiative structure, as currently proposed, and will
16 make compliance very challenging if those aren't
17 resolved.

18 For all these reasons, we're requesting the
19 permit adoption date should be revised to at least
20 December 2012.

21 Next slide.

22 The permit should allow variability and
23 implementation in each of the sub regions to accommodate
24 the unique and varying nature of L.A. County's subregions
25 as well as the TMDLs that will be incorporated. While we
0178

1 are hopeful that the L.A. County Flood Control funding
2 initiative will be successful, we should not base a
3 permit on revenues that do not yet exist. Rather, the
4 permit should be based on existing resources and sound
5 science.

6 Next slide.

7 Each of the subgroups have gone through a great
8 deal of technical analysis and have prepared some
9 examples of our comments for our presentation today. We
10 look forward to future workshops to discuss all of these
11 topics as well as other aspects of the permit.

12 So I'm going to hand the presentation off to
13 Heather Merenda and John Dettle, who will be providing
14 the subgroup comments.

15 MS. MERENDA: Good afternoon. Is this -- can you
16 hear me? I can speak loud. That's something I can do.

17 MS. DIAMOND: Speak loud.

18 MS. MERENDA: So thank you for the opportunity to
19 speak with you this afternoon. I appreciate your time
20 and efforts.

21 So if I could have the next slide, please, as
22 the slide said, I'm the chair of the TMDL subcommittee,
23 so we have been working on language and things of that
24 nature. But to date, the consensus of our group is that
25 we believe that the attainment of water quality standards
0179

1 and waste load allocations should be accomplished through
2 an iterative approach. This will ensure that
3 municipalities have the structure necessary to provide a

4 process that would otherwise result in a lot of
5 regulatory uncertainty. It will also allow for
6 reasonable and effective processes to attain water
7 quality standards.

8 With municipalities facing historically limited
9 resources, the iterative process would provide a
10 structure for cities to concentrate very limited
11 resources toward attainment of the water quality
12 standards and waste load allocations rather than through
13 litigation. This process is allowed for in all MS4
14 permits throughout the state and most throughout the
15 United States.

16 Furthermore, receiving water limitation language
17 should be revised to ensure the retention and inclusion
18 of the iterative process. Waste load allocation
19 attainment should be allowed through best management
20 practices and in order to establish the structure and
21 process in the permit, detailed implementation plans will
22 support and inform the iterative approach. An integrated
23 watershed monitoring program, which we will talk about
24 later in the presentation, will provide vital feedback to
25 the iterative approach.

0180

1 Next slide, please.

2 Development programs, this would include the
3 construction and planning programs -- we consolidated it
4 into one slide.

5 Development programs should be based on the goal
6 of improving stormwater quality but not on specific
7 methodologies. Specifically, they should be tailored to
8 our unique characteristics in Los angeles County in our
9 watersheds in our sub-drainage areas. Development
10 programs should be based on a design storm and each
11 municipality should be able to prioritize best management
12 practices in these programs based on the unique
13 characteristics of the site, the unique characteristics
14 of the area, and related TMDLs.

15 And with that, I will pass the presentation on
16 to John Dettle.

17 MR. DETTLE: Hi. I'm John Dettle from the City of
18 Torrance, engineering manager, and I'll be speaking on
19 monitoring and reporting. Can you all hear me? All
20 right.

21 Next slide, please.

22 The permittees recognize the benefits of having
23 integrated watershed monitoring plans that would address
24 all the TMDLs within the watershed and this is because
25 with 84 cities and now 29 TMDLs, it results in too many

0181

1 plans and too many annual reports for the permittees and
2 the Board staff to manage. With an integrated watershed
3 monitoring plan, it would eliminate redundancy on the
4 monitoring and would help to fill in data gaps and this
5 would also give you the big picture for watershed health

6 for each watershed.

7 The purpose of the integrated watershed
8 monitoring plans should be to focus on identifying the
9 problems within each watershed and to give the agencies a
10 chance to select the proper BMPs without the concern that
11 those monitoring results would trigger enforcement
12 actions.

13 Next slide, please. Next slide.

14 We request that the current permit reporting
15 system be streamlined. We'd recommend an on-line
16 reporting system for the Annual Report submission such as
17 the Smart system or any Internet-based system.

18 We'd also like to see once a milestone or
19 requirement is documented and met that the item would be
20 removed from the report so that you don't have to report
21 on it again each year.

22 We'd also like to have the questions in the
23 Annual Report correspond directly to the language in the
24 report, also, again just streamlining the reporting
25 process.

0182

1 In conclusion, we are asking for an extension of
2 the permit time line. We are asking for the permit to be
3 economically reasonable and have flexibility within it.
4 We are proposing the coordinated monitoring for each
5 watershed. We do support the iterative process. We are
6 requesting that the Annual Reports be streamlined and
7 that the development programs be tailored to the unique
8 characteristics of L.A. County. Thank you.

9 MS. GLICKFELD: Madam Chair, before this goes
10 further, I've heard two people testify and talk about a
11 development program. If the next person who is going to
12 testify could explain what you mean by a development
13 program, it would help me.

14 MS. MERENDA: I'm sorry. Heather Merenda, City of
15 Santa Clarita.

16 MS. DIAMOND: We can't hear you.

17 MS. MERENDA: I'm sorry.

18 When we are talking about the development
19 program, we essentially are talking about the
20 development, construction, and development planning model
21 programs. I'm sorry. I tried to clarify that and didn't
22 do it, apparently.

23 MS. GLICKFELD: Okay. Got it. Thank you.

24 MR. DETTLE: Questions?

25 MS. DIAMOND: We'll take questions at the end after

0183

1 we've heard from everybody. Thank you.

2 I have Daniel Pankau from the City of Calabasas.
3 You're already -- you also identify yourself from the
4 L.A. Permit Group, but do you want to testify with
5 something different, Daniel Pankau?

6 Okay. Then we'll go on.

7 Daniel Wall. Is Daniel Wall here?

8 MS. SMITH: I think he was with that larger group.

9 MS. DIAMOND: Daren Grilley?

10 MS. MERENDA: I think he was part of that large
11 group.

12 MS. DIAMOND: How long did you anticipate each one to
13 have if they've not requested special time? Was this
14 three minutes?

15 MR. UNGER: Three minutes.

16 MS. DIAMOND: We're with the regular three-minute
17 reports from all three here.

18 Are you Daren?

19 MR. GRILLEY: Yes, I'm Daren, but I think my -- I was
20 just requesting a postponement until December 2012, so at
21 the risk of being redundant, there's no reason for
22 anything else.

23 MS. DIAMOND: Okay. Thank you very much.

24 I'm going to assume that the same is true for
25 John DiMario 'cause you've indicated on your card that
0184

1 you're here to request that the Board extend the date of
2 adoption to December 2012. Since I don't see you and
3 you've written that, we note that comment.

4 Lisa Bugrova from the City of San Dimas.

5 MS. BUGROVA: Requesting an extension of the time
6 line to December 2012.

7 MS. DIAMOND: Thank you.

8 Vivian Castro from the City of Covina?

9 MS. CASTRO: Also requesting extension of time line.

10 MS. DIAMOND: If you don't come up and you stand up,
11 I'll assume that your request has already been given.

12 Jose Espinoza? Okay.

13 John Beshay?

14 MR. BESHAY: Also requesting an extension.

15 MS. DIAMOND: Thank you.

16 Sean Hagerty?

17 MR. HAGERTY: Same.

18 MS. DIAMOND: I should mention City of Claremont.

19 We already heard from this speaker.

20 Julie Hegvold.

21 MS. HEGVOLD: Same, requesting extension.

22 MS. DIAMOND: Thank you, from the City of Lawndale.

23 John Oskoui from the City of Downey. I

24 apologize.

25 MR. HUNTER: He had to leave for a meeting and he
0185

1 asked me to read his statement in.

2 MS. DIAMOND: Can we just have you hand in the
3 statement and we will -- rather than read it?

4 MS. FORDYCE: I think he should read it.

5 MS. DIAMOND: I'm sorry. Please come up and read it.

6 MR. HUNTER: Thank you. I apologize. I was just
7 handed this script, so I'm going to read it verbatim.

8 I'm John Hunter. I'm a consultant to the City of Downey.

9 MS. DIAMOND: Just speak to the mike.

10 MR. HUNTER: Is that better? As I said, John Oskoui
11 had to leave for another meeting. He's the Public Works
12 Director of the City of Downey.

13 "Just as some background, the City of Downey
14 filed an ROWD in 2006 for coverage under an industrial
15 MS4 permit. That application was returned as incomplete
16 but indicated that meetings between the City and the
17 Regional Board staff would be initiated to work out
18 differences. For the next five years, these meetings
19 never took place and the City of Downey continued to
20 request an individual permit.

21 "Before continuing with my comments, I'd like to
22 take a moment to thank the Executive Officer Sam Unger
23 and his staff for meeting with us, along with the City of
24 Signal Hill and County Flood Control District, on
25 October 31st, to discuss this and other related permit

0186

1 issues. The result of that meeting was that we continued
2 to disagree but are willing to keep a dialogue open.

3 "The reasons the City of Downey is requesting a
4 separate permit is simple. The city is bordered on the
5 east and west by the Los Angeles and San Gabriel Rivers
6 respectively and the Santa Ana Freeway on the north, so
7 there is very little run-on from other co-permittees
8 flowing onto and through the city of Downey. Downey has
9 embarked on a significant effort which includes an 89
10 percent compliance with the trash TMDL, 60 percent being
11 required this previous year, and the installation of
12 approximately 1,000 infiltration systems, including the
13 Discovery Park infiltration facility that has been shown
14 to this Board on several prior occasions and by itself
15 accepts runoff from a 15-acre drainage area.

16 "The City of Downey has been and will continue
17 to be committed to be on the leading edge of implementing
18 the MS4 permits.

19 "With the unique characteristics of the City of
20 Downey and the level of effort that has been put forth
21 over the past decade, Downey does not wish to be tied
22 into a permit system of joint and several liability with
23 33 permittees of the Los Angeles River and over 28
24 permittees of the San Gabriel River.

25 "The City of Downey feels that cities should

0187

1 have the ability to respond -- to be responsible for
2 their own discharges if they request so. This request is
3 supported by 40 CFR Section 122.26 (a)(b). We have no
4 objections to other cities operating under a single
5 countywide permit or forming watershed and sub-watershed
6 groups if they wish now that the City of Downey
7 understands that the primary reason for the
8 recommendation to issue a single MS4 permit is that we
9 are all part of a unified or a joint system, but we don't
10 think that the referenced CFR section has been put in
11 place in absence of considering similar scenarios.

12 "Furthermore, even within our system, the
13 precedent has already been established with the issuance
14 of separate permits.

15 "We also understand that in recommending
16 issuance of a single permit that results of -- based on
17 the results of a survey involving entities within this
18 broader system, and it has been signed just recently, as
19 you're aware, apparently most of the cities involved have
20 voted to go under a single permit, but Downey was one of
21 the few that voted to go under an individual permit and
22 hereby requests that we be allowed to operate under a
23 single MS4 permit."

24 MS. DIAMOND: Thank you. Would you hand that to the
25 court reporter, 'cause she may need to look at it.

0188

1 THE REPORTER: Could I get his name?

2 MS. GLICKFELD: Repeat his name, please.

3 MR. UNGER: This is John Hunter.

4 MS. DIAMOND: He's reading it for someone else.

5 Shahram Kharaghani, with the City of
6 Los Angeles. The City of Los Angeles requested and was
7 given ten minutes.

8 MR. KHARAGHANI: Good afternoon.

9 MS. DIAMOND: Mr. Kharaghani, we need you to speak
10 really close because the speaker system isn't so great.
11 It's hard to hear.

12 MR. KHARAGHANI: Good afternoon, Madam Chair, Board
13 members. Shahram Kharaghani, City of Los Angeles.

14 Before I start my presentation, I want to take
15 this moment to thank Mr. Sam Unger, Ms. Smith, Ms. Purdy,
16 and also Mr. Ridgeway for meeting with us, with the City
17 of Los Angeles, to go over some of the issues that we
18 had.

19 I have prepared a presentation for you that I
20 should be able to complete in ten minutes. It's a lot of
21 pictures, so you don't have to look at so many words.

22 The outline I would say is regarding the MS4
23 Permit, City of Los Angeles City Green Initiatives that
24 we have implemented in the City regarding our
25 Proposition O that, Madam Chair, you have helped us a lot

0189

1 on that program, and then the TMDL implementation plans,
2 and funding.

3 As Renee, your staff, described, the City of
4 Los Angeles also supports the city single permit,
5 watershed-based. These are the chapters of the same
6 permit and we would like to talk about some of the
7 program flexibility regarding outreach, inspection,
8 construction, development, and monitoring that I will be
9 referring to.

10 The City of Los Angeles, as you know, we share
11 four large watersheds: Los Angeles River, Santa Monica
12 Bay, Ballona Creek, and Dominguez Channel, and these
13 watersheds have lots of discharges and we have to work

14 with lots of people in the L.A. County.

15 We are very much proud of our public outreach.
16 As you know, we have been using more and more our social
17 media and we have used what we call "It Takes Everyone
18 for us to Improve Water Quality," a lot of blogs on our
19 website, and we do also have a newsletter every month,
20 and right now we have about 7,000 subscribers, becoming
21 more and more every month.

22 Our public agency activities, we work with 44
23 City departments and we are very proud to mention to you
24 that all the 44 departments have been trained on new
25 construction and new site requirements and most of our
0190

1 staff within the 44 departments have been qualified as
2 either QSP or QSD.

3 Now, the Green Initiative that we are very much
4 pleased with, these are some of the ones and I will go
5 over them briefly. We have created a series of various
6 manuals under green standards. We have green street
7 standards. These are the streets within the City of
8 Los Angeles that anyone who wants to improve the street,
9 they have to have a green element as part of that.

10 Green standards are the way to systematize or
11 institutionalize everything that happens in the public
12 right-of-way. We have 52 sheets of the green standards
13 for the City that are online, and this is the first in
14 the nation. We have our LID ordinance that we passed and
15 it was adopted back on September 27th.

16 We have rainwater harvesting that I will
17 go over, the effect of that within the city. We are also
18 very pleased to have worked with Heal the Bay, Dr. Gold,
19 and others and created a water quality and matrix
20 standards for the use of rainwater as a resource; and
21 last but not least, we are working with a lot of our
22 friends on stream protection.

23 So I'll show you some of the pictures of those
24 green initiatives and what those things are that we are
25 accomplishing right now.

0191

1 As you can see, the Green Streets manuals are
2 the manuals that we have created for both public and
3 private. They have been completed and right now we are
4 working on the Rainwater Harvesting Program and urban
5 greening policies and the deadline would be for those
6 2013.

7 Residential Parkway Landscaping is another
8 manual that we have, and all of these are on our websites
9 that people can reach.

10 The Green Streets Master List Database, this is
11 all of our capital improvement programs. All of the
12 streets that we have within the City of Los Angeles,
13 anytime somebody wants to improve the street, they have
14 to have a green element as a part of that improvement.

15 The standard plans, as I mentioned, these are 52

16 sheets within the city. Public or private, when they
17 want to improve a development within the city and they
18 want to use public right-of-way, they have to add a green
19 element.

20 These are some of the standards. Again, these
21 are on our website. Our standards go by numbers. I
22 wanted to just show to you what are the standards. Put
23 in simple terms, that means if they are going to use the
24 public right-of-way, the parkways, make them green for
25 them to receive rainwater.

0192

1 Now, LID impact development, after a most
2 exhaustive discussion with all our friends, within the
3 City of Los Angeles, we were able to pass the low-impact
4 development within the City and some of the benefits, as
5 you can see right now, these three slides that you see,
6 obviously it is going to deal with the polluted water, it
7 is going to increase water supply, and also it is going
8 to be not having as much -- as much reliance on the water
9 from far, far, faraway places when we have the rainwater
10 in our local places.

11 Low-impact development we are going to
12 prioritize. As you see, the three integration of those
13 circles basically says any development within the City,
14 we are going to concentrate first on infiltration.
15 That's recharging our groundwater. If the source
16 condition or basin does not accept that, we will have the
17 capture and use. And last but not least, it will go
18 through biofiltration and retention. Those are some of
19 the examples that you see as far as rain gardens and rain
20 barrels and planter boxes.

21 The ordinance was accompanied by a handbook.
22 Again, that was put through a stakeholder-driven process
23 and was prepared as one of the handbooks that is easy to
24 understand and follow and is available on the website and
25 is a companion to our LID ordinance to make sure

0193

1 everybody knows what to do within the city.

2 These are some of the scale residential BMPs.
3 As you can see, everyone can do something, you know,
4 whether it is a rain barrel on the left-hand side, dry
5 wells, whether it is permeable pavement and driveway,
6 rain gardens or planter boxes, there is almost a tool for
7 everyone within the city when they are doing
8 redevelopments.

9 Rainwater Harvesting Program. We did receive a
10 million-dollar grant and we were able to retrofit 600
11 properties and the desire within the City was so much
12 that I have still 2400 applications that they are asking
13 me for rainwater and we are looking for different sources
14 to provide them also with that request.

15 These are some of the examples that you see
16 right now as far as our rainwater harvesting and the
17 strong support that we had within the City.

18 These are some of the examples within the City,
19 what people can accomplish of every site. Site is
20 specific. These are the pictures. Lowe's, they're using
21 infiltration. We have Elmer Street. That was done with
22 partnership with a nonprofit and the community to create
23 a street that was full of flooding and right now you can
24 see everyone is proud of that.

25 And so when there is a will, there is a way and
0194

1 I think we have shown it in the City. Again, you see the
2 rainwater barrels that we have. This is our rainwater
3 harvesting. This is the example of that. This is
4 capture and use, a Proposition O program, Temescal Canyon
5 Park that Madam Chair is fully aware of this. This is
6 what we're going to use huge 3 million-gallons system and
7 a 1-and-a-half million-gallons system in Temescal Canyon
8 to capture the rain and use it in the summer months when
9 we need the water.

10 Green streets right now: One street at a time,
11 we are making every street in the City of Los Angeles
12 green. We started with Oros Street, which you see in the
13 picture on the right-hand side. Then we went to
14 Riverdale Avenue to make that street green. You know,
15 these were all dry and no plantations and no landscaping.
16 Then Elmer and then South Park and all of these are
17 examples of what can be done in the city and we hope to
18 duplicate that throughout the city.

19 Oros is before and after, just to see what are
20 the BMPs we are capturing the water, infiltrating, and at
21 the end the water goes to a park that we have at the end
22 of the street.

23 Elmer Street is a street that was flooding,
24 flooded every year. We took the opportunity to work with
25 everyone within the committee and nonprofit and others
0195

1 and we were able to make that flooded street right now a
2 green street that everyone is happy with. As you can see
3 again, before and after pictures, it's just like day and
4 night.

5 Riverdale, another street again, dry, no
6 landscaping in the parking lot and we were able also to
7 receive through a rain garden through that and receive
8 the water and filter that.

9 Stream protection: As we have allowed
10 development to go ahead and embark, there are streams
11 that are so sensitive and these are the last of the
12 streams that we have in the city. We are working on a
13 the Stream Protection Ordinance to make sure we create a
14 buffer zone so the last pieces of the streams that we
15 have in the city are protected.

16 Proposition O, a \$500 million General Obligation
17 Bond that the voters passed, 76 percent, unheard of
18 within the City history, it provided us a down payment
19 for us to improve water quality.

20 I'll go very briefly through some pictures of
21 some of the projects that this proposition is helping us
22 to implement.

23 South Los Angeles: As you see in the picture:
24 A nine-acre bus depot, an eyesore, in the middle of a
25 community that don't have any parks for miles away and
0196

1 once we have that project, you know, converted to a
2 wetlands, you can see what a transformation can take
3 place.

4 Just very briefly, these are a rendering of the
5 project in South Los Angeles, what you will see when it
6 is finished and it should end up at the December of 2011.

7 Echo Park Lake, another resource, \$80 million,
8 Proposition O, the lake that has a number of TMDLs. We
9 are going to have wetlands and are making sure that the
10 lake is also repaired for some of the ignored problems
11 that we have had over the years.

12 Machado Lake is another resource right now that
13 we have in San Pedro and that's the project we are
14 spending \$120 million to make sure we meet all the TMDLs
15 and we make that resource that has been hidden by trash
16 and other pollutants to become the jewel that it is.

17 Strathern Wetlands Park, another pit as you see
18 it on the right-hand side, an inert landfill. We're
19 spending and working with L.A. County and we will have
20 that inert landfill to be converted to wetlands, passive
21 recreation, and savings on a retention basis.

22 These are some of the examples that we have seen
23 with the Proposition O: the L.A.'s Zoo, permeable
24 pavers, as you can see, and other projects that we have
25 talked about.

0197

1 Trash TMDL, a technology base. These are the
2 numbers, as you see: 35,000 screens, 7,600 inserts,
3 70 percent compliance.

4 Number of TMDLs right now -- not to bore you
5 with the details when Rene has already covered these.
6 Our strategy has been to make sure that the TMDLs are
7 based on green infrastructures.

8 And finally, last but not least right now, we
9 have spent the down payment of Proposition O, but we are
10 working with our friends within the L.A. County to make
11 sure that we have a sustainable source of funding and
12 that's the one we refer to as AB 2554.

13 And the last slide, which is my favorite, is our
14 public outreach each year. Just about in June, we go to
15 the Santa Monica Bay and some 7,000 kids come and pick up
16 trash and they create those kind of pictures. That
17 picture says "Help us" or "Kelp us right now" and that
18 happens each year and you are all invited to attend if
19 you wish.

20 That concludes my remarks, Madam Chair.

21 MS. DIAMOND: Thank you very much.

22 Next is Rene Guerrero, City of Pico Rivera.

23 MR. GUERRERO: Yes. The City of Pico Rivera requests
24 the same extension, December 2012.

25 MS. DIAMOND: Thank you.

0198

1 Sarina Morales-Choate, City of Santa Fe Springs.

2 MS. MORALES-CHOATE: Same thing.

3 MS. DIAMOND: Okay. C. Alba? Just requesting I

4 believe -- I'm not sure you're still here, but you're

5 requesting an extension to December 2011 -- I think you

6 probably mean 2012.

7 MR. UNGER: We're happy to do it in '11.

8 MS. DIAMOND: We can do it.

9 Steve Myrter -- sorry. I'm not reading your

10 handwriting. City of Signal Hill?

11 MR. MYRTER: Yes.

12 MS. DIAMOND: Would you like to come up?

13 MR. MYRTER: Yes.

14 MS. DIAMOND: Thank you. I'm sorry if I

15 mispronounced your name. Did we have 15 minutes --

16 MR. UNGER: Do you have a handout to the Board

17 members?

18 MS. DIAMOND: Was there a period of time agreed to?

19 MR. UNGER: I believe it was 15 minutes.

20 MR. MYRTER: 15 minutes. I should be done before

21 that.

22 MS. DIAMOND: Do you need --

23 MR. MYRTER: Between 10 and 15.

24 MS. DIAMOND: Okay. Thank you.

25 MR. MYRTER: I have a slide presentation as well.

0199

1 Madam Chair, members of the Board, today I'd

2 like to be presenting our -- Signal Hill's -- well,

3 first, I should start out Steve Myrter, Public Works

4 Director for Signal Hill. My presentation is essentially

5 why Signal Hill is requesting an individual permit be

6 issued. How's my voice sound?

7 MS. DIAMOND: A little bit louder. Would you repeat

8 that last sentence?

9 MR. MYRTER: Okay. I am here today to request that

10 Signal Hill be issued an individual MS4 permit and my

11 presentation will go into why we believe this would be

12 appropriate for our city.

13 Next slide.

14 Outline or summary of the presentation: City of

15 Signal Hill's case for an individual permit. I'll be

16 presenting a few slides on that. The City's unique

17 factors that we believe warrant an individual permit.

18 The City's actions taken so far in anticipation of

19 receiving an individual permit. And finally, concerns we

20 have with a system-wide MS4 permit.

21 Next slide, please.

22 I'd like to start out with the quote from the

23 U.S. EPA's adopted principles for restoration of the

24 nation's urban waterbodies, June 24, 2011. It simply
25 says:

0200

1 "Be open and honest, and listening to
2 communities. Recognize their values and
3 seek to understand environmental issues
4 through their eyes. We will work from the
5 bottom up rather than taking a top down,
6 one-size-fits-all approach."

7 Next slide.

8 This next set of slides are just simply why we
9 feel that it's appropriate that an individual MS4 permit
10 be issued to City of Signal Hill: Opportunity for the
11 Board to work with a small community that is taking
12 seriously its responsibilities to improve water quality,
13 while addressing our unique circumstances; other cities
14 have grouped together for their own reasons and we
15 respect their decisions. We hope that our decision is
16 also respected.

17 Thank you. Next slide.

18 City of Signal Hill submitted an ROWD back in
19 June 2006. The Executive Officer replied on July 12th,
20 2006 that Signal Hill was proposing some positive changes
21 and that staff looked forward to working out these
22 details with your staff during the MS4 permit
23 reapplication process.

24 Next slide. Regional Board responded
25 approximately five years later, essentially saying that

0201

1 probably was not going to be the recommendation. Absent
2 a response from the Board, Signal Hill has worked to
3 design and implement new programs to ensure compliance
4 with our application and our individual permit.

5 Signal Hill has demonstrated our commitment is
6 at 89 percent trash reduction in the L.A. Trash TMDL and
7 this year we're requiring 60 percent.

8 Next slide.

9 As this slide suggests, Signal Hill has some
10 unique legacy issues. Next, click. Obviously, we're a
11 small town, 2.1 square miles. We have a legacy of oil
12 production since 1924 when it was ushered in. It
13 included heavy industry, oil drilling, oil sumps,
14 pipeline construction, tank farms, and refineries. The
15 City -- at one point, the oil field covered 75 percent of
16 the community. Decades of oil production left a legacy
17 of soil contamination, Redevelopment Agency was formed in
18 1978 to deal with these legacy issues. Agencies have
19 invested over 15 million so far in soil remediation and
20 today we have over 600 active wells and produce over a
21 million barrels of oil annually.

22 Next slide.

23 Of course this oil legacy creates a need for an
24 individual MS4 permit and individually tailored
25 stormwater programs.

0202

1 Signal Hill has applied for an individual
2 stand-alone County Sanitation District to deal with these
3 legacy issues. This District was created many decades
4 ago and it was recognized that Signal Hill was unique in
5 this respect. We believe an individual permit will be
6 more responsive to the unique issues confronting
7 Signal Hill.

8 Next slide.

9 Again, we have unique topography over southeast
10 Los Angeles, so -- click one more click. Of course we're
11 a hill. We raise about 300 feet above feet above
12 Long Beach. We are surrounded by the city of Long Beach,
13 which makes us kind of unique in that respect. Runoff
14 originates in the upper hill portions of the community
15 and drains into the Los Angeles River and Los Cerritos
16 Channel. Signal Hill drains through the city of
17 Long Beach and also through the County Flood Control
18 facilities. The Regional Board is planning on issuing an
19 individual permit to the City of Long Beach.

20 So this is the actions we've taken since 2006.
21 Obviously moving forward, the City Council directed
22 preparation of a Stormwater Quality Master plan.
23 Signal Hill has installed CDS units and 14 trash nets at
24 the Hamilton Bowl, a critical retention basin for our
25 community; completed installation of trash capture

0203

1 devices on 134 trash capture basins so far. They
2 implemented SUSMPs and LIDs in dozens of our development
3 projects. Also, the National Academy of Sciences studied
4 state-of-the-art runoff requirements at a recently
5 constructed Signal Hill concrete batch plant.

6 Next slide.

7 The City has submitted a monitoring plan and an
8 ROWD. The City has initiated its own monitoring program,
9 budgeted installation of two auto samplers. Additional
10 auto samplers plan to be installed and drains leading to
11 the Los Angeles River and Los Cerritos Channel. The City
12 is designing a dry-weather diversion program for L.A.
13 River Metals and Bacteria TMDL.

14 Next slide. The City will continue to
15 participate in the regional efforts, even with an
16 individual permit. We have been leading L.A. River
17 Metals TMDL special studies, leading Los Cerritos Channel
18 Metals TMDL Implementation Plan, participate in L.A.
19 River CMP, and participate in the L.A. County-wide
20 outreach effort.

21 The next set of slides is really kind of our
22 concerns with the systemwide permit. L.A. River Metals
23 TMDL assigns group waste load allocations to
24 jurisdictional groups. The Board's current position on
25 joint and several liability has the practical effect of

0204

1 making one city responsible for all cities. The Board's

2 position is that compliance with the iterative process
3 does not constitute compliance with receiving waters
4 limitation requirements in the 2001 permit.

5 Next slide.

6 The Board has the authority to issue a
7 systemwide permit when requested by the cities. Federal
8 regulations prohibit the Regional Board from forcing a
9 systemwide permit on cities. Cities are allowed to
10 participate with one or more operators.

11 Next slide.

12 Federal Code allows for a distinct permit
13 application which covers the discharges from municipal
14 separate form water sewers for which the operator is
15 responsible. Cities under 100,000 population have the
16 right to choose to be included in a systemwide permit or
17 to apply for an individual permit.

18 Next slide.

19 Federal regulations identify the permit and
20 application process for small MS4 dischargers. Section
21 122.33 outlines the application process, permitting
22 options and specifically allows small cities to obtain
23 individual permits even if they are part of a larger
24 medium-sized MS4 system.

25 Next slide.

0205

1 Numeric limits are also a concern. Regional
2 Board appears to be headed toward incorporating the
3 numeric limits from TMDLs into the MS4 permits. Regional
4 Board appears to be headed toward holding cities strictly
5 responsible for compliance with water quality standards
6 and effluent limits.

7 Next slide.

8 Joint and several liability, receiving waters
9 limitations language in the permit, and the Board's lack
10 of support of BMPs and the iterative process is the
11 beginning of what we believe is the "watershed of
12 litigation" that many have predicted. And below are some
13 of the current litigations.

14 Next slide, please.

15 In conclusion, the City of Signal Hill does not
16 choose to be included in the systemwide permit. The City
17 has unique legacy issues, unique factors, unique
18 topography which require specific programs. The City is
19 proposing a robust monitoring program. The City does not
20 want to be dragged into massive Countywide litigation.
21 The City does not want a top-down, one-size-fits-all,
22 systemwide permit being proposed, and the City looks
23 forward to working with the Board, the City of Long Beach
24 and the Flood Control District in a collaborative process
25 to obtain our individual permit.

0206

1 And that concludes my presentation.

2 MS. DIAMOND: Thank you.

3 Ray Tahir?

4 MR. TAHIR: Good afternoon, Board members. My name
5 is Ray Tahir and I am representing those cities that are
6 representative on the screen to the left of you and
7 behind you.

8 I am here to discuss the following: Target date
9 for issuing the next round of L.A. County MS4 permits is
10 too short. This is something that's been discussed in
11 great detail earlier. There is also a need to resolve
12 the permit structure, single versus multiple permits.
13 There is the need to resolve the compliance point issue,
14 outfall versus receiving water, but I do believe that
15 staff has resolved that. There is also the need to
16 resolve how the iterative process is going to operate in
17 the next permit. And finally, there's a need to revise
18 the nonstormwater discharge prohibition to exclude water
19 courses; and we also need to talk about WQBELs to attain
20 water quality standards and TMDL waste load allocations;
21 this requires clarification. And there needs to be some
22 kind of mechanism to verify information during permit
23 discussions so that misinformation doesn't get into the
24 decision-making stream.

25 Next, please.

0207

1 Well, it's clear that the March target date for
2 issuing the permit is too soon.

3 Next, please.

4 As mentioned, the Regional Board has given
5 Ventura County over two years to negotiate its permit
6 with the Regional Board. As you know, that permit was
7 issued to -- a draft permit was issued in 2007 and the
8 final permit was adopted shortly after 2010.

9 By the way, the CalTrans permit was adopted in
10 1999; it is also overdue. The General Industrial Storm
11 Activity permit is overdue. I should point out that L.A.
12 permits are more complicated and controversial than the
13 Ventura permit. There are more TMDLs than any other
14 permit issued in the state, and it's really not clear at
15 this point how the U.S. EPA-adopted TMDLs will be
16 incorporated into the next permits.

17 And then there's the impact of the Ninth Circuit
18 ruling in NRDC versus L.A. County Food Control District
19 on the next MS4 permits, making it uncertain.

20 The issue of permit structure is not resolved,
21 one versus several permits. The bottom line, there
22 should be no rush. Let's take our time and do it right.

23 All the TMDLs except trash include the receiving
24 water as the compliance point, but the 9th Circuit Court
25 of Appeal ruled that the outfall is where compliance

0208

1 should be determined, not the receiving water. The
2 judges told NRDC that if you want evidence of
3 exceedences, sample at the outfall. The ruling also
4 supports Federal stormwater regulation setting the
5 outfall as the compliance point.

6 Setting the compliance point at the outfall
7 enables better MS4 stormwater management. We'll be able
8 to determine to what extent an MS4 is generating
9 pollutants that exceed water quality standards. Again,
10 this includes TMDLs. The data generated from outfall
11 monitoring would establish a baseline over a five-year
12 period instead of relying on in-stream monitoring station
13 data.

14 BMPs could be focused on intra-MS4 pollution
15 issues instead of issues outside the MS4 in the receiving
16 water where you have commingled discharges from multiple
17 sources, including those that aren't permitted.

18 For example, if an exceedence occurs in a
19 receiving water, all dischargers would be held
20 collectively responsible even if an MS4 permittee did not
21 cause the exceedence, but I thought I heard staff say
22 that that might not be the case.

23 In any case, at this point in time, this is
24 neither fair nor keeping with Federal regulations, nor
25 effective stormwater.

0209

1 Here's a picture, a cartoon picture that
2 illustrates two MS4 systems, each having their own
3 outfall. It's obvious that one permittee should not be
4 responsible for the other permittee's discharges. That's
5 good enough. Thank you.

6 A real big issue here is the conflict between
7 the TMDL and the permit which needs to be reconciled. If
8 the Regional Board places a compliance point at the
9 outfall, this would conflict with the TMDLs' placement of
10 the compliance point in the receiving water. How do we
11 resolve this conflict? You either put language in the
12 permit to override what is in the TMDL or reopen each
13 TMDL to correct the conflict. We recommend that the
14 Regional Board request the State Board's Office of Chief
15 Counsel to help in resolving this conflict by issuing a
16 memorandum on it as soon as possible. Cities will also
17 recommend appropriate language in the Findings section of
18 the new permit.

19 The iterative process: There's some confusion
20 as to how this process would operate in the next MS4
21 permit. In its L.A. County MS4 permit status and
22 development paper, staff says that the iterative process
23 does not protect against enforcement action. We
24 disagree. The iterative process is present in most, if
25 not all, MS4 permits issued in the United States which

0210

1 serve this very purpose if properly followed. The
2 iterative process is required by the State Water
3 Resources Control Board, as mentioned in two
4 precedent-setting Water Quality orders. Contrary to what
5 staff asserts, the 9th Circuit ruling in NRDC versus L.A.
6 County Flood Control District process did not eliminate
7 the iterative process.

8 Next slide. Thank you. Continue.

9 Instead, the Court just said that there is no
10 textual support for the proposition in the current MS4
11 permit, that an exceedance may be forgiven if a permittee
12 implements BMPs in accordance with its SQMP. The Court
13 held that the County could not be afforded the iterative
14 process protection under the Receiving Water Limitation
15 provisions of the current permit because it did not
16 follow the procedure for addressing an exceedance;
17 namely, that is submitting a Receiving Water Limitation
18 report and amending BMPs in its SQMP. There's a reason
19 why that didn't happen. The County wasn't aware that it
20 caused an exceedance because at the time the assumption
21 was that the monitoring stations receiving waters would
22 pick up multiple discharges, not being able to point to
23 the County specifically as causing the exceedance.

24 In any case, we recommend that the Regional
25 Board request the State Board's Office of Chief Counsel
0211

1 to provide an opinion memorandum on the impact of the
2 9th Circuit's decision on this matter.

3 A clearly defined and reasoned iterative process
4 is needed to prevent Regional Board enforcement action
5 and third-party litigation. If a weak iterative process
6 is placed into the next MS4 permit, permittees could be
7 at risk for noncompliance and exposed to third-party
8 litigation. This includes those TMDLs with a 25-year
9 compliance period.

10 In fact, notwithstanding the 25-year compliance
11 period established in the L.A. River Bacterial TMDL, NRDC
12 effectively sued the County of Los Angeles for exceeding
13 the TMDL waste load allocations, recently -- well, not
14 recently; over the last few years, even before the
15 Bacteria TMDL was adopted.

16 The L.A. River Bacteria TMDL language is of help
17 because it is the permit that controls. The cities will
18 propose a revision to receiving water limitation language
19 with clarification in the Findings section of the permit.

20 Now, with respect to nonstormwater discharge,
21 staff's new permit development paper carries over the
22 nonstormwater discharge prohibition from the current
23 permit to include water courses.

24 This exceeds Federal regulations. Staff
25 concludes that Clean Water Act 402(p) as well as all MS4
0212

1 permits in California prohibits nonstormwater discharges
2 to MS4 and water courses. We disagree.

3 Actually, Clean Water Act 402(p) says that
4 permits for discharges from municipal storm sewers shall
5 include a requirement to effectively prohibit
6 nonstormwater discharges into the storm sewers. There is
7 no reference to water courses. As a matter of fact,
8 there's no definition of "water courses" in the current
9 MS4 permit and we are not able to find any other MS4

10 issued in California that asserts that a nonstormwater
11 prohibition extends to water courses. And once again,
12 there's no definition of "water courses" in the MS4
13 permit.

14 Please note that the San Diego Regional Board's
15 Office of Chief Counsel affirmed this in a memo to
16 Chairman Wright and San Diego Regional Board members
17 dated November 5th, 2009. It contained no reference to
18 water courses as being subject to the nonstormwater
19 discharge prohibition.

20 Why is this a big deal? Because including water
21 courses would place permittees in a state of
22 noncompliance for dry-weather discharges to receiving
23 waters -- oceans, lakes, rivers, streams -- which exceed
24 the TMDL waste load allocations. This was, by the way,
25 as you know, justification for issuing 22 notices of

0213

1 violations to those permittees that discharge into the
2 Santa Monica Bay for exceeding the dry-weather waste load
3 allocation for bacteria. Were it not for a procedural
4 error made by the Regional Board, those cities and the
5 County could have been open to the enforcement actions
6 and possible third-party litigation.

7 How then would receiving waters be protected
8 from contaminated from nonstormwater discharge? Through
9 a well-designed and implemented illicit
10 discharge/correction elimination program that prohibits
11 unauthorized discharges to the MS4, as Congress intended.

12 Clearly, more discussion with staff is needed on
13 WQBELs. Generally, WQBELs translate waste load
14 allocations -- water quality standards and TMDL waste
15 load allocations into BMPs. There are two types of
16 WQBELs, numeric and non-numeric.

17 Staff asserts that because the TMDL waste
18 allocations are expressed numerically, numeric WQBELs in
19 MS4 permits are appropriate. However, that should be not
20 be the determinant. California courts have held that
21 WQBELs simply means BMPs. California courts have also
22 said that a waste load allocation, which is inherently
23 numeric, and numeric WQBELs are not the same. One is the
24 problem; the one is the solution. They are different.

25 A numeric WQBELs is a numeric BMP. A numeric

0214

1 waste load allocation does not require a numeric WQBEL,
2 as evidenced by the San Francisco Regional Board's use of
3 a narrative BMP that addresses the waste load allocation
4 metric for diazinon.

5 Next, please, here's that example.

6 Despite the metric for diazinon, which is less
7 than 50 nanograms per liter, what was proposed is a
8 management plan, an implemented pesticide management plan
9 designed to control pesticides caused by toxicity.

10 Next, please.

11 Staff says that the trash TMDL determines it

12 could be a numeric WQBEL. There is nothing in the final
13 trash TMDL, however, or the amended L.A. County MS4
14 permit that refers to the trash TMDL as a WQBEL at all.
15 There's no reference to U.S. EPA's 2002 memorandum on
16 this.

17 To clarify the definition of WQBELs, the cities
18 recommend that L.A. Regional staff invite Tom Mumley of
19 the San Francisco Regional Board to do a presentation on
20 numeric and narrative WQBELs at a workshop devoted to the
21 subject. He could also help with the language with
22 respect to the Receiving Water Limitations.

23 In any case, future workshops are needed to
24 evaluate information for accuracy. As mentioned earlier,
25 proposed requirements need to be vetted for accuracy,
0215

1 water courses being subject to nonstormwater discharges,
2 trash TMDL as a numeric WQBEL, and the iterative process
3 not safeguarding permittees against exceedances. All
4 these issues need to be clarified and accurate
5 information must be presented in order for this Board to
6 make a fully informed decision on them.

7 Thank you very much for your patience.

8 MS. DIAMOND: Thank you.

9 I'm going to first ask our court reporter if she
10 needs a break. You're okay?

11 THE REPORTER: A break would be good.

12 MS. DIAMOND: A break would be good. Ten minutes?

13 Before we break, I have three cities and then
14 some other cards as well. I want to find out if these
15 cities are only going to stand to say they want the date
16 changed.

17 Ed Suher for the City of Industry?

18 MR. SUHER: Yes. The City of Industry requests an
19 extension.

20 MS. DIAMOND: Thank you.

21 Patricia Elkins from the City of Carson?

22 MS. ELKINS: Two minutes.

23 MS. DIAMOND: You need two minutes. Okay. We'll
24 have that. We'll have you for that.

25 And Ron Ruiz, City of San Fernando?

0216

1 MS. MERENDA: He left, Madam Chair. He also requests
2 an extension.

3 MS. DIAMOND: And we also have the City of Vernon,
4 Jerrick Torres.

5 MR. TORRES: We're requesting a time extension also.

6 MS. DIAMOND: I'm sorry. I didn't hear you.

7 MR. TORRES: We are requesting a time extension also.

8 MS. DIAMOND: All right. We're going to take a
9 ten-minute break and then come back.

10 (Recess)

11 MS. DIAMOND: All right. Everybody, if I can get
12 everybody to go back to their seats, we can resume. So
13 we'll start with the remaining cities and see who wants

14 to have some time.

15 Patricia Elkins from Carson?

16 MR. STEVENS: Can we have the lights back on, please.

17 MS. DIAMOND: Thank you.

18 MS. ELKINS: Good afternoon, Madam Chair and Regional
19 Board members. Hopefully you all have a sense of humor
20 for my presentation. Perhaps you've received a card from
21 your grandchild or son or daughter that had a word
22 spelled out one letter above the other, so think about
23 that when you hear my presentation.

24 MR. SPRINGER: What's the name?

25 MS. ELKINS: My name is Patricia Elkins. I'm with

0217

1 the City of Carson. I'm the Stormwater Quality Programs
2 Manager. The city of Carson drains to the L.A. River via
3 Compton Creek, it drains predominantly to the Dominguez
4 Channel, and it also drains to Machado Lake. So we have
5 all of those TMDL's to deal with.

6 I think there's consensus that the permit is
7 very special, so I prepared an acrostic for the word
8 "special" to highlight the important aspects of the
9 permit that we think are important.

10 "S" is for streamline, especially the reporting.

11 "P" is for progressive in terms of technology and
12 science. "E," you can guess, is for economically
13 reasonable. "C" is for coordinate, especially the
14 testing. "I" is for the iterative process; it is most
15 important. "A" is for accommodating, a synonym for
16 flexible. And "L" is of course for Los Angeles County
17 specific.

18 The City of Carson also respectfully requests
19 that additional time be given for the Regional Board
20 staff and the MS4 permittees to develop this special
21 permit; therefore, we recommend the permit adoption date
22 be revised to at least December 2012.

23 MS. DIAMOND: Thank you.

24 James Enriquez from the City of El Monte.

25 MR. ENRIQUEZ: Madam Chair, the City of El Monte is

0218

1 requesting the same extension.

2 MS. DIAMOND: Thank you.

3 Michael Sha, City of Redondo Beach.

4 MR. SHA: Yes. The same extension.

5 MS. DIAMOND: Thank you.

6 Mark Lombos, Los Angeles County Flood Control
7 District.

8 UNIDENTIFIED SPEAKER: He already spoke at the Public
9 Forum.

10 MS. GLICKFELD: Actually, we stopped him.

11 MS. DIAMOND: Well, he got up to speak and he said it
12 was for Item 16 and if he would want to speak --

13 UNIDENTIFIED SPEAKER: No. That was James Enriquez.

14 MS. DIAMOND: Oh, that was James Enriquez.

15 Gary Hildebrand, County of Los Angeles and Flood

16 Control District. And you've requested and received 20
17 minutes.

18 MR. HILDEBRAND: Thank you.

19 Good evening, Madam Chair Diamond, Board
20 members. My name is Gary Hildebrand. I'm with the L.A.
21 County Flood Control District and I'm also here
22 representing the County of Los Angeles this afternoon.

23 First off, I'd like to also thank Sam Unger and
24 the staff for being very accommodating and meeting with
25 us over the last several months. We've had a number of
0219

1 very productive meetings and we look forward to
2 continuing those discussions with Sam as we further
3 develop the permit requirements in the coming months and
4 deal with some of the issues that relate to the Flood
5 Control District and L.A. County.

6 There are about a half dozen issues that the
7 County or the Flood Control District is concerned about
8 in the permit. I'd like to go through those briefly this
9 afternoon with all of you.

10 First, as you heard in the staff report, the
11 Flood Control District is one of the agencies that has
12 submitted a Report of Waste Discharge for its own
13 individual permit. Though the Regional Board staff has
14 indicated it's pursuing a single permit for the County, I
15 would like to go over some of the elements that were
16 included in the Report of Waste Discharge to describe the
17 unique nature of the Flood Control District and why we
18 submitted our own individual Report of Waste Discharge.

19 First off, the District is a special district
20 created by State law. As such, the District has very
21 limited authority and, in essence, there's two key issues
22 that the Flood Control District is responsible for: one,
23 providing flood control or flood-risk mitigation for the
24 communities within L.A. County and providing stormwater
25 capture for groundwater recharge.

0220

1 As such, being a special district, the Flood
2 Control District does not have any authority over land
3 uses that drain into the system, unlike a municipality
4 who does have that type of authority. So when it comes
5 to regulating activities that involve residential and
6 commercial/industrial uses, the District doesn't have
7 authority. Our authority is limited to the facilities
8 that we operate.

9 Now, within that, the District is also in a
10 position where it isn't able to control pollutants that
11 are generated in the watersheds that ultimately drain
12 into our system. Again, we're reliant on the cities that
13 control the watersheds and are able to deal with the
14 regulation of activities that occur in the watershed to
15 deal with those pollutants.

16 The District being a special District and
17 required to provide flood-risk protection, even though

18 there are, say, pollutants that are found in the
19 stormwater discharge, the District is not in a position
20 where it's able to not accept stormwater into its system.
21 Because of our responsibilities to provide public safety
22 and protection of life and property, we're obligated to
23 accept stormwater. So we really have a limited ability
24 to on its own deal with control of stormwater pollution.

25 The next slide, please.

0221

1 There was much discussion this morning regarding
2 the issue of the extent of the Flood Control District's
3 system relevant to the County area served by the District
4 and this slide here basically shows, first off, based on
5 the definition of the MS4, the Federal Stormwater
6 regulations, which basically includes the gutters of the
7 street, storm drains, channels, that entire system, when
8 you look at that, that's the green that's shown in this
9 map. Superimposed on that is the Flood Control
10 District's system itself, which is the red on this map.

11 When you look at the totality of that system,
12 the District itself only controls a little less than
13 10 percent of that entire system. So it gives you some
14 more perspective as to what portion of the flood control
15 system or the MS4 system is actually under the control of
16 the District.

17 Next slide, please.

18 Now, some of the activities the District
19 believes are appropriate, and these were issues that were
20 described as part of our Report of Waste Discharge, is
21 that, again, the District controlling the backbone
22 flood-control system, as part of the existing permit, the
23 District has been handling the mass emissions monitoring
24 which is done in our receiving waters to help
25 characterize the quality of runoff in the receiving

0222

1 waters. The District continues to propose to have that
2 as an ongoing activity under its next permit.

3 We also looked at expanding and conducting
4 monitoring in the tributaries that lead into our larger
5 systems, again, providing more information that can be
6 utilized by the Regional Board and the permittees to
7 better define pollutant loading, pollutant sources, and
8 to improve their programs.

9 The District also is implementing its own
10 Stormwater Management Plan. There are certain elements
11 of that plan that are unique to the District. We are a
12 public agency so the various public agency activities
13 that are required as part of the permit are elements that
14 are implemented by the District. We also have a very
15 aggressive illicit connection to illegal discharge
16 program. That is an area where the District has taken a
17 strong leadership role in the County. The 300,000 and
18 some miles of the flood-control system that's operated by
19 the County, we inspect that on a six-year cycle. We've

20 been very aggressive in identifying discharges and
21 eliminating those dry-weather discharges from our system.

22 And also, we feel our role is also to work with
23 the cities, coordinate with the cities, and participate
24 in regional approaches where appropriate, where we can.

25 Two examples of that -- one was presented this

0223

1 morning in the Public Information session by one of my
2 staff. The Strathern Wetlands Project, that's an example
3 of the type of project where the District will partner
4 with local agencies to develop projects that include not
5 only flood control and stormwater capture but can provide
6 water quality and recreational benefits.

7 Another project that is an example of our desire
8 to coordinate and participate with the various cities is
9 the L.A. River Trash TMDL, the retrofit of catch basins
10 that's ongoing by the numerous cities to be able to
11 satisfy the waste load allocations under that program.

12 We're working with many of the cities to allow the
13 retrofit of catch basins contained within their cities.
14 Many of those catch basins are Flood Control District
15 catch basins so we've been coordinating with them to
16 allow those retrofits to occur.

17 Next slide.

18 You've heard much discussion today about
19 receiving water limitations and some of the impacts to
20 the receiving water limitations from the NRDC versus
21 Flood Control District litigation, and I just want to --
22 I'm not an attorney so I'm going to explain it in
23 laymen's terms what the issue is, but historically under
24 the permit when it comes to the receiving water
25 limitations, the permittees' understanding has been that

0224

1 the iterative process is the process that's followed when
2 there is an exceedance of a water quality standard that's
3 discovered as part of the permit.

4 Going through that process, the permittees
5 demonstrate that they are implementing programs in
6 compliance with the permit and, as such, they are then in
7 compliance with the receiving water limitations.

8 The Court of Appeals, in their recent ruling,
9 basically indicated that the iterative process is
10 separate from the receiving water limitations
11 requirements in the permit. Basically, the need to
12 comply with water quality standards is a separate and
13 distinct process from the iterative process.

14 Now, that of course caused a lot of concern
15 amongst the permittees, as it puts us in a position where
16 it's going to be very difficult or impossible through
17 monitoring results for the permittees to be able to
18 demonstrate they're in compliance.

19 I think one thing to look at is the various
20 TMDLs that have been adopted over the years. Many of
21 them have compliance schedules that go for 10, 15, 20

22 years. Those TMDLs actually recognize it's going to take
23 that long to be able to implement the measures that allow
24 us to be in compliance with the water quality standards.

25 So as we work with the Regional Board staff
0225

1 developing a new permit, clarifying the receiving water
2 limitations issues in the iterative process versus
3 compliance of the water quality standards will be a key
4 issue. We need to be able to have in the permit the
5 ability through demonstration of implementation of our
6 programs and compliance of the permit requirements that
7 we are in compliance with the receiving waters standards.

8 Another issue that we've had discussions about
9 over the years is What is the appropriate role for the
10 District as a responsible party in TMDLs?

11 As I mentioned previously, the District as a
12 Special District has no land use authority. We aren't
13 able to control pollutants that are generated in the
14 watersheds that lead to our systems and as such, we are
15 unable to directly regulate those pollutants. So when it
16 comes to establishing waste load allocations, waste load
17 allocations truly need to be established for those
18 entities that are able to regulate control.

19 So where does that leave the District? We
20 believe we have a role as a responsible party in TMDLs.
21 A good example is the L.A. River Trash TMDL. There,
22 though the District doesn't have a specific waste load
23 allocation, the District is included in the TMDL as
24 recognition that its system will be utilized by the
25 permittees, as I mentioned previously, in compliance with
0226

1 the TMDL waste load allocations for those particular
2 cities.

3 The catch basin retrofits that I mentioned are
4 an example of the Flood Control District's cooperation
5 with cities in dealing with TMDLs.

6 Another role that we see for the District in the
7 TMDLs is our ability to conduct monitoring and
8 investigation in our system. We've done monitoring for
9 many years and the characterization of the pollutant
10 sources in our system and characterization of those
11 pollutants and the availability of that information for
12 the Regional Board for permittees and for program
13 development is an area that the District is proposing to
14 continue to be heavily involved with in the future.

15 Next slide.

16 We also heard this morning or this afternoon
17 much discussion about the issue of joint responsibility
18 or joint liability. I want to explain a little bit what
19 that issue is.

20 First off, many of the TMDLs contain language
21 which requires that the responsible parties are jointly
22 responsible or jointly liable for meeting waste load
23 allocations. What that actually means is that

24 collectively those cities need to be responsible for each
25 other's compliance under that TMDL, and I know the Board
0227

1 is strongly encouraging collaboration among the
2 permittees. We've heard a lot this morning about that
3 being a benefit for a single-permit approach and we also
4 support collaboration and we do believe that
5 collaboration does result in efficiencies and program
6 development, but we need to have a permit that is
7 conducive to collaboration, and joint liability is
8 something that actually discourages collaboration among
9 the permittees.

10 To put it in perspective, if you take a look at
11 a particular TMDL where an Implementation Plan needs to
12 be developed, if you have a number of cities in that
13 watershed and they are now looking at working together to
14 develop a single Implementation Plan and that plan
15 describes regional BMPs to be implemented throughout the
16 watershed in certain locations, actions that will be
17 undertaken by the individual permittees within their
18 jurisdiction, and collectively implementing that plan is
19 then needed for the permittees to be able to demonstrate
20 compliance with that TMDL.

21 Now, when it comes to implementation of that
22 plan, if there are particular cities within that
23 watershed that for whatever circumstances are not able to
24 implement their share of that plan, that then puts the
25 entire plan in jeopardy and the other cities, looking at
0228

1 this joint liability issue, would then be concerned about
2 having to be responsible for the plan's lack of
3 implementation due to the fact that a small number of
4 cities were not able to fully implement their elements of
5 the plan. What that does is make cities step back and
6 say, "Well, if I'm going to be held jointly liable for
7 other cities' compliance, then perhaps to be able to
8 assure that I can demonstrate that I'm clearly in
9 compliance with the plan, developing my own individual
10 plan may be the best way to go. That way, I'm not
11 dependent on other permittees implementing the elements
12 of the plan to be in compliance."

13 That may not be the most cost-efficient way to
14 go, but it does provide the permittee with assurance that
15 by implementing that plan, they are able to demonstrate
16 compliance. So really we're looking at having this issue
17 dealt with in the new permit so it's clear that the
18 permittees are not jointly liable, that permittees are
19 individually accountable, and please -- I mean, don't
20 misunderstand what I'm saying. I mean, we clearly
21 support the fact that permittees need to be accountable,
22 but we believe that they need to be accountable on an
23 individual basis since truly no city has any other
24 authority over another city.

25 So when it comes to being able to have other

0229

1 cities implement certain programs in their jurisdiction
2 that require compliance collectively, if the City isn't
3 enacting, there's really no way to have a City have that
4 happen. So really we're looking at having this joint
5 liability issue dealt with in a manner that it is
6 modified so that cities can collaborate and work
7 together.

8 Next slide, please.

9 On to monitoring. We've heard a lot of
10 discussion regarding monitoring this morning. There are
11 different types of monitoring. Obviously there's
12 monitoring for compliance purposes. There's also
13 monitoring for characterization purposes.

14 Now, the regional mass emissions monitoring
15 that's been done for many, many years is monitoring that
16 the District has done and is something the District
17 proposes to continue to do under the new permit program.
18 However, one of the issues that did arise as part of the
19 NRDC lawsuit against the District is involving the
20 mass-emissions monitoring sites. The 9th Circuit Court
21 of Appeal did determine that exceedances at those sites
22 resulted in liability to the District.

23 Now, clearly over the years, those sites, their
24 purpose has been characterization monitoring and we
25 believe that the need to continue with characterization

0230

1 monitoring to identify pollutant sources, trends, provide
2 information to better our programs is needed; and to be
3 able to comfortably be able to continue that monitoring,
4 we do need clarification in the permit that monitoring
5 for characterization purposes would not be monitoring
6 that would be utilized for the compliance purposes. So
7 we do need clarification of that issue.

8 Next slide.

9 All right. Moving on to the County of L.A.,
10 there's a few issues that the County would like to
11 present.

12 Next slide, please.

13 MS. GLICKFELD: Are you now -- are you still speaking
14 as the Flood Control District or now you're speaking as
15 the County of Los Angeles?

16 MR. HILDEBRAND: Now I'm speaking as the County of
17 Los Angeles. The County has a few issues that it wishes
18 to present. First off, on the issues of TMDLs, as
19 mentioned earlier, there were many TMDLs that were
20 developed many years ago. This chart here shows the 28
21 TMDLs that have been developed and adopted in the past
22 several years. Out of those 28 TMDLs, 11 of those TMDLs
23 have had reopeners or reconsideration dates. Those dates
24 have passed and those dates have passed with no
25 reconsideration actions taken by the Regional Board; and

0231

1 knowing that these TMDLs are now going to be incorporated

2 into the new permit, it's really important that we have
3 these TMDLs be updated so the most recent scientific
4 information, the most recent information on BMP
5 implementation, is reflected in those TMDLs and also that
6 the compliance schedules are truly effective and
7 realistic.

8 So this is, again, a key issue that the
9 permittees are going to be facing with all these TMDLs
10 being brought in and making sure that they are in the
11 most up-to-date situation and contain the most up-to-date
12 information available so we can best develop our programs
13 and best proceed in assuring compliance under these
14 TMDLs.

15 Next slide.

16 Of course it was touched upon earlier as to how
17 TMDLs will be incorporated into the permit and the issue
18 of having narrative nonnumeric standards in the current
19 for TMDL implementation is an issue that the County
20 supports and we'll be working with the Regional Board
21 staff in developing language in the permit to demonstrate
22 that type of compliance.

23 A good example of an approach that was taken in
24 this regard is the L.A. River Trash TMDL where you have a
25 waste load allocation, a numerical standard established
0232

1 for the permittees, and you have a clear narrative
2 description of the compliance requirements to demonstrate
3 compliance with that standard.

4 Low-impact development is also a major issue in
5 the next permit and this is something that the County
6 clearly supports. In fact, it's been very proactive in
7 pursuing. We actually adopted a low-impact development
8 ordinance over a year ago in the County and since that
9 time we've had many other cities, Los Angeles and others,
10 that have gone ahead and adopted LID ordinances. And one
11 of the issues that are of concern to us is that there be
12 sufficient flexibility included in the new permit so
13 those entities that have already adopted LID ordinances
14 can continue with the implementation of those ordinances.
15 So we'll be working with the staff to see how that issue
16 develops.

17 With that, I want to thank you. Thank you for
18 this opportunity to speak this afternoon

19 MS. DIAMOND: Thank you very much.

20 Now we have a joint presentation by the
21 environmental community with Liz Crosson, Mark Gold,
22 Noah Garrison, representing Santa Monica Bay Keeper,
23 NRDC, and Heal the Bay, and you've requested and received
24 40 minutes.

25 MR. GOLD: Good afternoon. My name is Mark Gold and
0233

1 I am the president of the environmental group Heal the
2 Bay. I'm leading off and Liz Crosson will be second and
3 then Noah Garrison, and then I'll be back up here again.

4 I think I'm the only one here -- maybe
5 Deb Smith -- who's worked on each and every one of these
6 stormwater permits in this region. So that started in
7 1990. So we're talking about 21 years that we've been
8 working on stormwater pollution coming from
9 municipalities; and a lot of the very same problems,
10 water quality problems that we had at the beginning of
11 this back in 1990 in response to the 1987 Clean Water
12 Act, we still have today.

13 You know, despite many tens of thousands of
14 trash catch basin screens being put in, dry-weather
15 diversions being put in, other great projects, most of
16 our progress today has been dry weather. We really have
17 not barely scratched the surface on what we're doing in
18 wet weather, so when you go to the beach after the rain,
19 it still looks like a landfill and the water is too
20 polluted for you to go swimming safely.

21 I bring that up just to remind you that this is
22 really what this is all about. We've heard about, "Well,
23 water quality standards can't be met," this, that and the
24 other thing, "It's all too hard," but I want to remind
25 you we're not even close from the standpoint no one can
0234

1 say the past 21 years that there's been a lot of
2 progress.

3 At 21 years, you're an adult, you're a grown-up.
4 In 1990, the permit was in its infancy. All it really
5 required was for everyone to get together, start putting
6 together programs, although it did require for all storm
7 drains to be mapped and presented to the Regional Board.
8 So I thought that was interesting that Board Member
9 Glickfeld asked about that, when that's been a
10 requirement now for 21 years.

11 In 1996, that was probably childhood is the best
12 way to look at that permit. There was a great deal of
13 flexibility within that permit and yet it was also a lot
14 more detailed. It was like your first hundred-page
15 permit, but the end result is that you still had many
16 folks in the regulated community that didn't know what to
17 do with that flexibility and then it ended up being a
18 great deal of litigation and adversity over that
19 particular permit.

20 In 2001 to the present, I guess that would be a
21 very long adolescence that this program has been in. You
22 had the SUSMP program which started creating some
23 accountability for what we're actually trying to achieve
24 on new and redevelopment. Of course it only deals with
25 the new and redevelopment; it doesn't deal with the
0235

1 existing water quality problems that we already have. So
2 that's been a problem.

3 It also made it abundantly clear -- it was
4 actually the Long Beach permit of 1988 or 1989 that said
5 that receiving water limitations needs to be met. That's

6 what this is all about. We're supposed to be protecting
7 public health. We're supposed to be protecting aquatic
8 life and clearly that's not being done.

9 Also, 2001 was the iterative process which
10 you've heard so much about. I would be very interested
11 to see if you called up each and every city that talked
12 about how great the iterative process was, how they've
13 used the iterative process in the last ten years.

14 Believe me, water quality standards are being
15 violated and exceeded on a regular basis during rain, but
16 the iterative process has not occurred for a number of
17 different reasons, including the Regional Board staff.
18 There's not adequate staffing to frankly ensure that it
19 occurs.

20 So it doesn't mean it's a horrible idea. It's
21 in the permit, but it's been in the permit for ten years.
22 This is not a new concept. So I just wanted to make sure
23 that everybody understood that. There's been no
24 enforcement of the iterative process and there's been no
25 implementation of the iterative process either, so I

0236

1 think that's important.

2 Now, it doesn't mean there haven't been
3 improvements at all. I think in dry weather there have
4 been improvements and I think, you know, you look at City
5 of L.A., you look at City of Santa Monica, and there's
6 been some pretty amazing improvements where we've seen
7 some dry-weather diversions. In L.A. County we've seen
8 some amazing things. Would any of those have happened
9 without Beach Bacteria TMDLS that people thought were
10 enforceable but of course L.A. County sued to get out of
11 the permit? Of course not. But the end result is
12 projects were put in and even the most chronically
13 polluted beaches like Santa Monica Pier are now getting
14 A's on the Heal the Bay's Beach Report Card. Beaches
15 that used to get F's, some of the ten most polluted
16 beaches in the entire state of California are now getting
17 A's on their report card. So it shows you can clean up
18 these beaches if the Regional Board really makes it clear
19 that water quality standards need to be protected.

20 One other thing before I pass this on is that
21 ten years for one permit is ridiculous. We're already
22 ten years into this and you're hearing from every single
23 person who's come up, "We need an extension." Really?
24 Five years' extension is not enough? The permit's only
25 supposed to be a five-year permit and we're ten years

0237

1 out. People are asking all the way to December 2012, and
2 are the funding measures going to keep getting pushed
3 back further and further and originally people talked
4 about 2010, now it's 2012, now it's going to be pushed
5 into 2013?

6 When are we going to start taking this problem
7 seriously enough to do this? That to me is a big

8 question. You guys, when we talked about Beach Bacteria
9 TMDL and not -- trying to deal with how to make it
10 enforceable in the interim by putting it back in the
11 permit, about nine months ago -- perhaps you remember me
12 testifying on that -- I got a very strong reassurance
13 from this Board that we'd have a permit in place before
14 the next beach-bathing season so that we don't have
15 another summer where we have 50 million-plus people going
16 to the beach and not knowing whether or not it's safe for
17 them to swim or not, because we're not moving forward and
18 making the Beach Bacteria TMDL enforceable.

19 So that's been a big problem and I'd hate to see
20 that happen again. How many years is that going to
21 continue? Where's the safe harbor that everyone's asking
22 for, for the swimmers and surfers? They're not getting a
23 safe harbor. So that's a big problem.

24 Now an overview on the permit structure. We
25 strongly support as a group the single permit, as you've
0238

1 heard before. I won't go into detail. You've heard the
2 strong arguments laid out by your own staff. I thought
3 Renee did a wonderful job on that.

4 The nature of the L.A. County MS4, it's large,
5 it's interconnected, and it's an integrated system. We
6 have watershed-based TMDLs in place. We have a
7 stormwater pollution abatement fee draft that's going to
8 be in front of the Board of Supervisors. It's very
9 watershed-based and so saying, Let's have one permit with
10 the watershed components at the end of the permit so
11 there's some watershed-specific requirements, it just
12 makes sense. It's common sense. Your staff came up with
13 the right recommendation there and you even see strong
14 support from your online survey with 85 percent of the
15 cities in support of that.

16 With that, I'll pass it over to Liz.

17 MS. CROSSON: Would you mind going forward a couple
18 of slides. Thanks.

19 Good afternoon. I'm Liz Crosson, from
20 Santa Monica Bay Keeper. Thank you for the opportunity
21 to speak.

22 I want to talk about some of the permit
23 requirements in part one and part two and the monitoring
24 that goes along with that to determine compliance.

25 Next slide, please.

0239

1 So first, parts one and two of the permit
2 include some of the most straightforward, clear
3 provisions of the permit. The nonstormwater discharge
4 prohibitions have been a factor and nonstormwater
5 discharges, as acknowledged by your staff today, this is
6 required by Section 1342(p) of the Clean Water Act. It
7 is something that is critical to meet water quality
8 standards and, as Mark mentioned, critical to meet public
9 health standards.

10 We believe that this provision should remain as
11 is. I understand staff is considering some additional
12 provisions to ensure that it's more effectively applied
13 and that's something that we're open to, but this
14 language as it stands should definitely remain as a
15 strong, clear provision as it's written.

16 And 2.1 and 2.2 are receiving water limitations,
17 both. One is to prohibit discharges that cause or
18 contribute to violations and the other is to prohibit
19 discharges that contribute to pollution. Again, these
20 are both clear provisions. They have been upheld over
21 time in State court and Federal court. The language in
22 the receiving water limitations was challenged and upheld
23 in over five years of litigation in State court and it's
24 litigation that was filed by the County of Los Angeles
25 and has now most recently been upheld in the 9th Circuit

0240

1 and also in the Federal district court under the
2 litigation under those permits.

3 So we've got these very clear provisions that
4 have been upheld as stand-alone requirements. Since that
5 time in 2005, the State Court found that those were
6 stand-alone requirements, it has been acknowledged that
7 2.3, which requires the receiving water compliance
8 reports, is an additional requirement, not a safe harbor.
9 So what I think we heard from at least one of the County
10 representatives today was that there is some sort of safe
11 harbor or there should be and that this new 9th Circuit
12 decision somehow changed the understanding of the
13 permittees. That's been an understanding since years of
14 litigation, litigation that was filed by the County. And
15 so in my opinion, that's a huge mischaracterization of
16 that case.

17 And yes, 2.3 is still a part of the permit and
18 does include a process, too, for the permittees to reach
19 compliance when exceedances are documented. But that is,
20 again, an additional requirement to the stand-alone
21 requirements to comply with water quality standards.

22 So we urge the Board to keep that language in.
23 This is language that is a success. It's a result of the
24 hard work of the Board and the hard work of the staff of
25 the Regional Board to put this language in, to strive for

0241

1 water quality compliance and it's defended those
2 positions in Court time after time. It's consistent with
3 your position that you've taken most recently in the
4 amicus brief in the 9th Circuit. These provisions are
5 what we need in order to reach compliance. They're
6 legal, they're consistent, and under the Clean Water Act
7 under regulations. So we urge you to keep those.

8 Next slide, please.

9 As far as monitoring goes, compliance
10 monitoring, now the permit, as you know, is determined by
11 the mass emissions stations and the 9th Circuit did hold

12 that mass emissions stations is a proper point to
13 determine compliance, which we heard some contradictory
14 testimony from County representatives. One of them
15 actually thought that the 9th Circuit decision said that
16 that was not the point of compliance and the other seemed
17 to -- from the District seemed to acknowledge that that
18 is, in fact, what the 9th Circuit held, and it also is
19 consistent with the understanding that every single
20 permit has to have a compliance monitoring mechanism in
21 order for us to ensure that there's a way for permittees
22 to be held in compliance.

23 So the mass emissions stations is a -- it was
24 requested by the dischargers when this original permit
25 came out. It's a successful way to determine compliance,
0242

1 as we've seen recently. It also provides some clarity.

2 We do ask the Board to consider adding
3 additional monitoring, end-of-pipe monitoring, and this
4 is exemplified by your recent Ventura MS4 permit. Each
5 discharger in the sub-watershed should provide regular
6 end-of-pipe monitoring. In my opinion, this really
7 provides not only the enforcement mechanism for the Board
8 that is important, but it also provides clarity for the
9 permittees to determine who is responsible for what and
10 where it's coming from. I think that is a really wise
11 way to move forward and I think that's probably why you
12 moved forward with that in the Ventura permit.

13 Lastly, I would just like to point out something
14 that was in some of the documents that we've received
15 from staff regarding action levels for water quality
16 compliance. The Board should not consider these as a way
17 to achieve compliance with water quality standards. That
18 would be wholly inconsistent with the decade or more of
19 case law that we've seen on how to reach compliance of
20 standards under 2.1 and 2.2. However, if the Board
21 wanted to consider action levels, they could be -- like
22 as interim goals for TMDLs, that might be acceptable as
23 long as they are consistent with the TMDL and included in
24 the permit like every other TMDL requirement.

25 So, again, I appreciate the time and I will pass
0243

1 it on to Noah Garrison.

2 MR. GARRISON: Good afternoon. My name is
3 Noah Garrison. I'm with the Natural Resources Defense
4 Council.

5 Madam Chair, Members of the Board, I'm going to
6 talk mostly about low-impact development standards and
7 the requirements for new and redevelopment in the permit,
8 but first I did want to address sort of broadly some of
9 the contentions that have been made by the County and
10 some of the other permittees that the permittee needs a
11 safe harbor, that they have to have one in order to be
12 able to persist under this permit effectively; and the
13 focus here really needs to not be on how they can evade

14 responsibility, and that is exactly what they have been
15 doing.

16 They have been avoiding responsibility at every
17 turn throughout the ten years that this permit has been
18 in action and really throughout the 20 years that we've
19 had permits for Los Angeles, and there's been much
20 discussion about the fact that they need a safe harbor in
21 order to avoid litigation, but truly it's the County that
22 has been bringing litigation under this permit. When the
23 permit was first adopted, the County sued over it. When
24 you attempted to implement a Trash TMDL, the County sued.
25 The Bacteria and Metals TMDLs, they sued and sued again

0244

1 and the permit was upheld in State court. They didn't
2 like the decision and they attempted to prove it was
3 unfounded mandate and they found another route to have
4 the permit invalidated.

5 The County has attempted to stop this Board from
6 taking action to protect water quality at every turn
7 throughout the ten-year term of this permit, and whether
8 or not a safe harbor is needed to protect one or possibly
9 two lawsuits for the permit for egregious violations of
10 water quality standards is not the issue. The issue
11 needs to be How can the County clean up the water that
12 they are discharging pollution to and how can we move
13 forward to make sure we're protecting water quality in
14 the region?

15 With that, I'd like to turn to low-impact
16 developments and mostly give a little bit of background
17 here with a couple of specifics of things that were
18 mentioned in the documents provided by staff before this
19 meeting, but I did want to start with the basics of
20 low-impact development as a starting point for this
21 permit, which is to say that according to the Ocean
22 Protection Council and according to the United States
23 Environmental Protection Agency, "Low-impact development
24 is a practicable and superior method" of dealing with
25 pollution and runoff in stormwater and it is also a -- it

0245

1 results in enhanced environmental performance.

2 It is absolutely a superior means of reduction
3 of stormwater pollution and this permit should continue
4 on with the trend that has been showing up in California
5 permits that all of them have been adopting. Low-impact
6 developments is the principal means of dealing with new
7 and redevelopment.

8 Next slide, please.

9 In fact, this Board in the Ventura permit has
10 reached the same finding, that The Implementation of LID
11 techniques in United States and Canada results in more
12 benefits than single-purpose stormwater controls and this
13 is a -- there is a growing acceptance that your changing
14 standards and other means of implementing LID are the
15 appropriate way to address stormwater pollution. So that

16 forms the background.

17 Next slide, please.

18 We also would like to see certain requirements
19 pushed towards offsetting mitigation. I think Mark Gold
20 is going to talk about the existing built environment in
21 a little while. I'll return to this shortly again, but
22 there are opportunities using low-impact development
23 under this permit to begin addressing retrofits. We'd
24 like to see the permit pushed in that direction.

25 One of the concerns we do have -- if I could
0246

1 have the next slide -- is the use of ulterior means of
2 performance, particularly the use of biofiltration.

3 What I have here is a chart looking at the
4 best-performing conventional BMPs, including filter
5 strips and biofiltration against use of low-impact
6 development or treatment of storm runoff on-site, and
7 using low-impact development as a retention practice so
8 that water is either infiltrated into the ground,
9 evapotranspired, or is captured and reused, which in
10 addition provides a water source for a region that badly
11 needs new sources of water.

12 You can retain 100 percent or close to 100
13 percent of the pollution in any volume of water that is
14 retained on-site. That pollution will never reach
15 receiving waters. With the best-performing conventional
16 BMPs, you are looking at between 60 and 80 percent
17 retention of pollutants. So you are still resulting in
18 the discharge of pollutants -- go to the next side,
19 please -- and that's using the best-performing things.

20 For a typical biofiltration system that may not
21 be set up to deal with every specific pollutant, you're
22 looking at retaining between about 60 percent of total
23 suspended solids, up to 80 percent of total copper and
24 when you get to the group such as nitrogen and nitrates,
25 the amount of pollutant that is actually retained on-site
0247

1 prevented from reaching receiving waters plummets to 55
2 to 65 percent of Kjeldahl nitrogen down to 20 percent of
3 nitrate.

4 So there are real reasons to push for the
5 retention of stormwater on-site.

6 If I could have the next slide, please, one of
7 the concerns we have with the documentation that was sent
8 around by staff recently is it includes a provision where
9 it is technically infeasible to retain the water on-site,
10 that sites are directed to use biofiltration for 1.5
11 times the volume of runoff that would have been retained
12 on-site, and that is certainly something we support in
13 terms of the volume, but it doesn't go far enough. It
14 does not ensure that pollutant load will be reduced to an
15 equivalent or even a particularly strong amount.

16 The Ventura MS4 permit went further in this
17 regard. It required that biofiltration be used to treat

18 1.5 times the volume but also 1.5 times the pollutant
19 load reduction, as would have been achieved had you
20 retained the water on-site, and so that absolutely needs
21 to be incorporated into the L.A. permit. We have to
22 ensure -- if biofiltration is to be used at all, we have
23 to ensure that it will achieve an equivalent or greater
24 load reduction of retention on-site. Otherwise, we're
25 just going to continue to pollute our waters.

0248

1 If I could have the next slide, please, the
2 other thing I'd like to point out is that the language in
3 the current version of the permit sent around by staff
4 says that if it is technically infeasible to retain the
5 runoff on-site, the project must -- it is absolutely
6 required -- to design and operate a biofiltration system
7 to take on 1.5 times the volume of water that would have
8 been retained on-site.

9 We're concerned that this actually precludes the
10 use of off-site mitigation, which is preferable in our
11 view, because you can simply shift the off-site retention
12 to another site. This is a perfect way to start dealing
13 with the existing built-in environment, moving towards
14 retrofits, whether it's either requiring a construction
15 of LID features on another site within the same watershed
16 to retain runoff or whether it's paying directly a fee
17 that can be used to build LID features on another site.

18 The focus here should be on retaining an
19 equivalent volume of runoff and pollutant load rather
20 than just on putting in a biofiltration system. So
21 again, the planning should be the off-site mitigation
22 rather than on putting in a biofiltration to achieve a
23 greater volume of runoff.

24 If I could have the next slide, I also want
25 to -- at the start, I sort of dispelled any outstanding

0249

1 notions that low-impact development is costly and is not
2 something that can be implemented or is not practicable
3 to be implemented. This has been basically refuted time
4 and time again by studies and actually on-the-ground
5 implementation.

6 Two studies I'll point to here: Of particular
7 relevance are the low-impact study taken on by the U.S.
8 Environmental Protection Agency, which found in the vast
9 majority of cases they looked at, significant savings
10 were actually realized by using low-impact development
11 rather than stormwater treatment.

12 Another study that came out just recently in
13 June 2011 by ECO Northwest pointed out that in surveyed
14 locations, no staff, absolutely none of the staff were
15 aware of any development that was being forced to
16 greenfield rather than conducting redevelopment projects.
17 They found that cities and developers and different
18 projects were finding ways to meet the stormwater
19 standards and there was no evidence whatsoever that

20 development was actually being forced out to greenfields
21 or being forced to redevelopment or from smart growth
22 projects. If anything, they found that stormwater
23 requirements being placed on new developments were one of
24 many factors that went into the consideration of where
25 projects would be sited and it was rarely the defining
0250

1 characteristic.

2 Again, we'd like to highlight -- the City of
3 L.A. was here earlier and they pointed out that retrofit
4 programs, they were bringing in green programs, taking
5 the existing built environment and finding ways to green
6 it so runoff is actually retained on-site rather than
7 continuing to discharge into our sewer systems. This is
8 exactly the opportunity for low-impact development to be
9 used and exactly the opportunity for off-site mitigation
10 to be used, and I think Mark Gold will talk in greater
11 detail about that and some other issues.

12 Thank you very much for your time.

13 MR. GOLD: Next slide.

14 So this topic should be familiar to most of you
15 who were here for the Ventura permit and so this is the
16 issue of BMP performance standards. And just to remind
17 you, the whole concept is you wouldn't build a sewage
18 treatment plant without design criteria and we shouldn't
19 be putting BMPs into the ground without the same sorts of
20 requirements.

21 We're trying to move forward hopefully past
22 adolescence into adulthood on the stormwater permit where
23 the BMPs we're putting into the ground are actually
24 effective.

25 So just as a reminder, this was the sort of

0251

1 stuff that we had provided in the last Ventura permit and
2 you adopted, which is BMP performance criteria. Looking
3 at a number of different types of BMPs and what the
4 pollutant removal efficiency is, for median values --
5 that's just the median values -- for various different
6 BMPs for a wide variety of constituents and that's using
7 the EPA ASCE database.

8 If you actually wanted to move forward,
9 especially in impaired waters, you would probably want to
10 increase that to the 75 percentile value rather than just
11 the median value, which is the average that's been done
12 across the country.

13 Next slide.

14 On the retrofit concept, I think Noah did a
15 really good job on that. Obviously the LID off-ramp --
16 if you can't do low-impact development on-site, then you
17 can do it nearby. Off-site alternatives are basically
18 retrofit parking lots, green streets. There's a huge
19 opportunity to do that with all the street construction
20 projects where people are redoing streets. Those are the
21 sorts of really high-value, low-impact development sorts

22 of projects we should be encouraging.

23 Also, we've seen through Proposition O and
24 through Measure V a wide variety -- in Santa Monica, a
25 wide variety of other different retrofit projects that
0252

1 are really starting to make a significant difference.

2 And so we think that this permit should push
3 retrofit. It hasn't yet to date. Obviously the 2001
4 permit did not, but you are seeing permits in other parts
5 of the state and in other parts of the country that are
6 moving forward on this concept of retrofit because, let's
7 face it, the existing development has already been
8 demonstrated to cause a wide variety of water quality
9 problems.

10 Next. This you've already seen before. This is
11 just to demonstrate obviously how big the water quality
12 problem is and obviously stormwater is a big part of
13 this. So this is the list of TMDLs, which it seems like
14 most of the folks have been bringing up this similar
15 list. This is really just to show you that stormwater is
16 causing water quality impairments throughout Los Angeles.
17 So this TMDL list wouldn't be so long if we weren't still
18 having the same sorts of water quality impairment
19 problems that we've had for quite some time. So it just
20 demonstrates the scope and scale of the problem and why
21 waste load allocations are so direly needed within the
22 permit.

23 Next up.

24 In addition, you'll see new TMDLs from EPA on
25 lakes for the TMDLs and those obviously would have
0253

1 significant runoff inputs and are of concern there and to
2 a less extent DDT and PCBs where there's some degree of
3 impact, but it's pretty trivial compared to latency
4 pollutants.

5 On the waste load allocation issues, obviously
6 this is just saying -- echoing what's been said earlier,
7 that waste load allocations are clearly needed within the
8 permit to really make a difference in protecting --
9 getting to meet water quality standards. And that's
10 really the point of it.

11 One of the things that we've heard about on
12 TMDLs to date, which was a little bit disturbing to say
13 the least was, quote, "Providing action-based compliance
14 paths" and this is actually a major step backwards from
15 Ventura and ensures that receiving water quality won't be
16 met, from our perspective. It's one thing saying you're
17 going to come up with a functional equivalent for Trash
18 TMDL and I can say this, as being one of the people who
19 helped negotiate the functional equivalent for what a
20 full capture device actually was, but that's a pollutant
21 that you can see and a large -- you know, well-understood
22 BMPs from the standpoint of what those removable
23 efficiencies are and even that took us about nine months

24 to a year to negotiate, just for the Trash TMDL. So keep
25 that in mind. If we're talking about doing something

0254

1 functionally equivalent for each and every constituent or
2 each and every impairment caused by a TMDL, that's
3 nonsensical from the standpoint of the complexity that
4 would be required there.

5 In talking about plans and models somehow being
6 the functional equivalent of actually meeting water
7 quality standards in some way, that doesn't really make
8 sense either. Even though L.A. County and L.A. City have
9 come a long way in their stormwater modeling, the
10 modeling is not done to actually determine what BMPs will
11 actually lead you to water quality standards attainment
12 in receiving waters. It's really more of a reduction and
13 what's the most cost-effective reduction, but it's not to
14 the point of actually getting you to attainment.

15 So just so you understand the state of the
16 science and the state of the modeling that's being used
17 right now, that's not where we're at. So to put that in
18 a permit and somehow say, Oh, if you have a plan in
19 place -- first of all, you have to make sure you
20 implement the darn plan, but somehow that's going to be a
21 quality of water standards, that's just not reality.

22 All right. Next -- okay. So one more thing.

23 So on Ventura County on the MS4, I bring this up
24 because obviously this group spent two years and two
25 tries at making sure that this was actually the permit

0255

1 for Ventura County. As you recall, all 11 cities in
2 Ventura County were supportive of that permit. It took
3 nine months of negotiations between the environmental
4 community and Ventura County and the cities to actually
5 come up with those, with the many aspects of the Ventura
6 County MS4 and so to reinvent the wheel in Los Angeles
7 just doesn't make sense. You came up with a good permit
8 that you spent a huge amount of time talking about and
9 that absolutely should be the baseline for Los Angeles
10 County as well.

11 Next. Some of the key elements of that on
12 monitoring in the Ventura County permit or outfall
13 monitoring, receiving water monitoring, both mass
14 emission and others, as has been talked about earlier,
15 bioassessment, toxicity on beach monitoring, and total
16 maximum daily load monitoring.

17 Next. On bioassessment, this was from -- again,
18 was adopted in Ventura. The next few slides are all
19 that. They're tracking trends from year to year; at
20 least one reference and six permit sites in each
21 watershed and minimum annual monitoring at each location.
22 That's what was agreed to in Ventura. It seems to make
23 sense to do the same thing in L.A. County.

24 Next. Toxicity: Again, why reinvent what
25 you -- what's already been negotiated and approved by

0256

1 this Regional Board in a commonsense approach to toxicity
2 monitoring?

3 Next. On beach monitoring, one of the important
4 things on beach monitoring was that we had seen a number
5 of beach monitoring programs get gutted because of lack
6 of funding. County Health Departments were doing the
7 beach monitoring and by putting it into the permit, which
8 you have done historically for the L.A. County permit,
9 that'll just make sure that beaches are being monitored
10 on an annual basis. And obviously here in L.A. County,
11 people are in the water each and every day, so it's very
12 important that we're actually measuring beach water
13 quality and protecting public health.

14 Next. And then another item on TMDLs is that
15 all monitoring requirements in the adopted TMDLs of
16 course should be incorporated into the permit. So I
17 think that's very, very important as well.

18 I brought this up earlier, but I think it's
19 important to bring it up again that the time frame, the
20 way this is put in that you're basically getting a draft
21 in March and then approval in May already is a problem
22 from the standpoint that a day before 11 is October and
23 frankly under the Beach Bacterial TMDL, it includes dry
24 weather right now in the winter season. It has since
25 2009. So the longer this permit gets delayed, the more

0257

1 that you're basically putting millions of beachgoers at
2 risk needlessly and that's just not right. So realize
3 the other side of that equation is obviously from the
4 standpoint of protection of public health.

5 In conclusion, I think you've seen from a lot of
6 speakers previously what they're asking for. We're
7 asking for clean water. We're asking for water that
8 protects beneficial uses like recreation and aquatic
9 life. 21 years has been too long to wait to actually
10 achieve that, so there's a big opportunity here to come
11 up with a permit that's finally going to move us forward
12 to protect those beneficial uses and attain those
13 beneficial uses to protect public health and aquatic
14 life. Thank you.

15 MS. DIAMOND: Thank you. And we have our last card
16 today. Our last speaker is John Kemmerer from the U.S.
17 EPA Region 9.

18 MR. KEMMERER: Good afternoon, Chair Diamond and
19 Board members. My name is John Kemmerer. I'm an
20 Associate Director in EPA Region 9, Water Division, and I
21 appreciate the opportunity to speak to you today about
22 the direction your staff are taking in drafting your
23 renewal of the L.A. County MS4 permit. I'd like to touch
24 on a couple of issues.

25 First of all, we support the direction your

0258

1 staff is taking on permit structure. We agree that it

2 makes sense to reissue a single permit, MS4 permit, for
3 Los Angeles County and it's our view that splitting the
4 permit up into multiple permits would increase the
5 administrative burden on many parties, especially your
6 staff.

7 Splitting up the permit into multiple permits
8 would be contrary to the MS4 permit consolidation efforts
9 that a lot of Regional Boards around the state are
10 pursuing.

11 In 2009, we were very supportive of what the
12 San Francisco Bay Region did when they took what was six
13 separate Phase I MS4 permits and consolidated into a
14 single regional permit and the San Diego Regional Board
15 has announced their intention to consolidate the three
16 counties into Regional Board 9, into one single regional
17 permit, and we believe these approaches make sense. They
18 enable the Regional Boards to spend more time on critical
19 issues rather than constantly needing to come back and
20 renew the permits. That's of course where the work gets
21 done with implementation. And given the workload
22 challenges your staff face, we really have concerns about
23 breaking this permit into multiple permits.

24 Secondly, I'd like to emphasize that we see the
25 approach that your staff are taking here as consistent
0259

1 with Federal stormwater requirements. There's a lot of
2 citations brought up on the screen today about different
3 provisions in the Clean Water Act and the regulatory
4 requirements. I thought Renee did an excellent job in
5 her overview of laying out what's in the 402(p) and 40
6 CFR 122.

7 Basically, in short, the Clean Water Act
8 prohibits discharges from MS4s without authorization
9 through an NPDES permit and the Clean Water Act and its
10 implementing regulations has requirements and controls
11 that must be incorporated into these permits and EPA's
12 issued guidance on how the statutory and regulatory
13 guidelines are to be implemented.

14 We allow for flexibility in how there are
15 optimized reductions in stormwater pollutants. The
16 flexibility is necessary, given the different nature of
17 discharges across the country, different parts of the
18 country, and our expectation is that permitting
19 authorities are going to determine appropriate approaches
20 to reduce the discharges for their circumstances.

21 Of course here in L.A. County, we see that
22 stormwater discharges are primary cause of impairments
23 and so it's important to take that into account in coming
24 up with standards that are tailored to address the
25 problems we have here.

0260

1 So we're working very closely with your staff on
2 the direction of this permit and are seeing that the
3 approaches they're taking that are under consideration

4 right now are consistent with what's laid out in the
5 Clean Water Act and its implementing regulations at EPA's
6 guidance and are concluding that this approach does not
7 go beyond Federal requirements.

8 Lastly, I want to talk a little bit about
9 timing. There's been obviously a lot of folks that would
10 like to see the schedule extended. We're supportive of
11 what the staff have laid out. We think that it's a
12 reasonable and deliberate process to have these two
13 issues-specific workshops in the next couple months, have
14 a draft permit in March, and a Board hearing to consider
15 adoption in May. We'll see how that goes. I think it's
16 worth sticking to that schedule.

17 We heard some discussion today about different
18 reasons why there needs to be schedule extensions. You
19 know, one thing that comes to mind for me is just
20 low-impact development and the post-construction
21 requirements that was mentioned, that maybe the
22 permittees need more time to work with the State on.

23 I guess the way I look at it here, I work in
24 Region 9 as our regional representative and LID workers
25 and I work across the country. Really, we have a lot of
0261

1 the nation's leaders, in my opinion, in LID
2 implementation here in L.A. County. Projects that have
3 been implemented by L.A. County, the City of L.A., the
4 ordinances in L.A., the County, Santa Monica, the
5 projects in Hermosa Beach, the projects in Downey. We've
6 got a lot of leadership here and some great work that's
7 been done to implement low-impact development. I think
8 it would be a real shine to, in Mark's terms, reinvent
9 the wheel of what needs to be done with LID.

10 We have a great framework of how it's been
11 adopted over the past two years across California and in
12 nine different MS4 permits. So we really need to take
13 advantage of the investments that you all have made to
14 date and, again, try to take advantage of those and not
15 in my opinion really delay this, and try to get it
16 implemented as quickly as possible.

17 So that's all I have today. So thanks for your
18 time.

19 MS. DIAMOND: Thank you.

20 Now it's time for the Board members to ask
21 questions and so I'm going to start with my usual right
22 side.

23 Mr. Blois.

24 MS. GLICKFELD: A point of information, Madam Chair.
25 Would you like us to ask questions and then make comments
0262

1 afterwards or would you like us to do both?

2 MS. DIAMOND: Well, I guess I really don't care. We
3 can just each take our -- use your time and I don't care
4 if you want to come back. You know, we've listened for a
5 long time. We all have questions, I'm sure, and you can

6 feel free to use the time and if you forget something, we
7 can come back to you. Okay.

8 Mr. Blois.

9 MR. BLOIS: Well, I'm sure to forget a lot of things
10 so I'm going to try and make it as quick and brief as I
11 can.

12 It seems to me that the main issues are time and
13 the complexity of the permit and I think that that comes
14 down to cost and how the reporting is implemented and how
15 the implementation is implemented, and I'm not -- you
16 know, I can spend an hour trying to delve into that, so
17 I'm not going to. I'm going to let the workshops -- all
18 I would do at this point is add my two cents' worth to
19 staff that we consider the costs that we're implementing
20 upon the various permittees. I've heard no testimony or
21 no mention of cost studies. Obviously there's a cost
22 associated with the current permit.

23 What I would like to see and urge our staff to
24 do and also the stakeholders, the permittees, to help
25 educate our staff and the Board, for that matter, as to
0263

1 how much the cost is of the things that we're asking you
2 or going to ask you to do. I think it's essential that
3 we hear -- I don't want to hear like CalTrans did on the
4 CalTrans general permit a couple of weeks ago where they
5 estimated a cost between 50 and 500 million. You know,
6 that's too much of a swing.

7 I'd like for staff and permittees to try and
8 figure out, Is this going to cost \$100,000 or is it going
9 to cost a million dollars? You know, just to try and get
10 a handle on where we're at so we have a better idea or at
11 least I have a better idea of costs and benefits, and I
12 included in "benefits" the environmental benefits. I
13 recognize that that's important and oftentimes difficult
14 to put a cost on.

15 Most of the testimony from the permittees has
16 revolved around time and I think that everybody's saying
17 that this permit was going to be issued in March. It's
18 not going to be issued in March. The draft is going to
19 be issued in March and then we'll spend some period of
20 time taking a look at it.

21 I would encourage us not to be absolutely rigid
22 in allowing only two months, but to absolutely issue the
23 draft permit in March and then let's see how much
24 consensus we reach; and if it takes -- if it's obvious to
25 staff and to the stakeholders that we can't reach
0264

1 consensus in two months, then maybe extend it. But let's
2 stick to some sort of a goal and then be flexible in
3 extending it if it looks like it needs to be extended.

4 That's my two cents on that.

5 And then what was the other point I was going to
6 make? Time -- God, I'm acting like Rick Perry now.

7 MS. DIAMOND: No, you're not.

8 MR. STRINGER: As long as you don't start acting like
9 Herman Cain, you're fine.

10 MS. DIAMOND: Yeah. Don't eliminate Regional Board.

11 MS. MEHRANIAN: Don't eliminate everything.

12 MR. BLOIS: The LID stuff, I've heard testimony from
13 all sides on that. I don't think that's as big of an
14 issue as the environmental folks think it is. I think my
15 colleagues on the Board support all that stuff for all
16 the reasons we've heard today. I really don't see that
17 as a huge issue.

18 Oh, the other issue was one permit versus a
19 bunch of permits and, you know, I think that it makes
20 sense to have a single permit from our point, which is
21 why we have it now; but be -- you know, if we've got a
22 permittee out there that absolutely insists for whatever
23 reason that he needs a separate permit, then I would say
24 that we should not close our minds to that possibility,
25 but we should listen to their reasons and consider them.

0265

1 But I will say this: It's going to obviously cost us
2 more to administer several permits, as opposed to one,
3 and we need to make sure that if we do that that we
4 incorporate those additional costs to us into that
5 additional permit. You know, it's got to come at a cost.
6 And obviously there are other good reasons why the
7 permittees or the stakeholders are asking for separate
8 permits. I think that that, again, needs to be looked at
9 from a cost-benefit standpoint.

10 And when it comes to the cost -- oh, the last
11 issue, that's the one I was thinking of. I just
12 remembered it. It's the issue of joint and several
13 liability. I think that that's an underlying element
14 here that is driving most of our stakeholders, quite
15 frankly, into separate permits and I would encourage us
16 to -- and this probably is, you know, going to take our
17 legal beagles. We need to figure out a way or at least
18 investigate really seriously if there is some other
19 alternative other than the traditional joint and several
20 liability because that's, quite frankly -- at least my
21 sense is that that's what's driving the underlying issue
22 of multiple permits.

23 So with that, I'll shut up.

24 MS. MEHRANIAN: Okay. I have a number of questions
25 and a few comments on the issues that I've been

0266

1 struggling with and I'm hoping that we don't have to
2 resolve them now, but at least we'll make a list of these
3 things that we can discuss.

4 Going back again to the single permit versus
5 multiple permits, I understand the single-permit issue in
6 light of the watershed, the watershed-based approach in
7 ensuring that the flexibility is there, the provision of
8 that, but I'm trying to understand what that really is
9 because in my mind, yes, we're here to clean the water;

10 but in my mind is the distance, how much of what kind of
11 pollutant, where the city's located, they all have to
12 come into some kind of an equation and the reality is
13 that the purpose here is not to come up with the best and
14 stellar plan but a plan that doesn't get hung up in some
15 court because that's not going to clean the water.

16 So what I'm trying to understand is when we say
17 there is provision that gives flexibility to the city,
18 each city, what are those provisions and how does it work
19 in reality? I would like to know about this in the next
20 workshop.

21 My second question was -- again, you know, in
22 your recommendation, you talk about sections that -- you
23 say something like "All permittees and others devoted to
24 requirements specific to each major watershed management
25 area." I'm trying to understand what are those

0267

1 requirements, those specific requirements for each one?

2 My second -- my second issue was again going
3 back to the monitoring. Somehow I'm seeing there's -- we
4 kept hearing about two-track monitorings, one monitoring
5 going on the track of TMDL and numeric values and the
6 other one was going on the basis of BMPs. I'm trying to
7 see -- again, we understand the talk of this, but in
8 reality, when we come to monitor something, how would
9 this work? Which one takes priority over the other? I'd
10 like to know that.

11 And the reality that -- again, this question
12 came up, the joint liability also comes up here like when
13 we monitor, how do we address the joint liability issue?

14 There was this issue of receiving water. I'd
15 like to discuss that. Again, when we measure and
16 monitor, is it the end of the pipe? Is it the receiving
17 water? Why and how? I mean, I think this is another
18 subject again for the next meeting that goes back again
19 to somehow the real steps of the monitoring system.

20 And then I have a question of the potential
21 challenges that might be posed to us in adopting this in
22 light of the NRDC versus L.A., City of L.A., and timing
23 of it. If that goes through, what happens to our adopted
24 measures? I tried to understand it. I don't know. It's
25 something that I would like to hear from you.

0268

1 And when -- somewhere in your discussions, I
2 think the staff said that there is not one principal
3 permittee. I would want to understand what that is. Now
4 that we're saying there is two and then in this system
5 it's only one and then we still say there's not one
6 principal permittee, does that mean there's not one
7 principal permittee that is not -- that is liable? Is it
8 going back to the joint liability issue? I want to
9 understand that.

10 So I think that's all I have. Thank you.

11 MS. DIAMOND: And these are questions that you would

12 like addressed at the next workshop or by staff?

13 MS. MEHRANIAN: Yes, at some point in one of the
14 workshops.

15 MS. DIAMOND: Right. Okay.

16 Madelyn?

17 MS. GLICKFELD: Thank you, Madam Chair.

18 I have several points. I really listened
19 carefully today and I want to talk to all of the groups
20 that have spoken to us today. I wish this was more of a
21 dialogue. It's really not possible to make this a
22 dialogue.

23 I would recommend to the Board and the staff and
24 my feeling on the permit issue is that I'm really, really
25 sorry that the County's decided not to be the principal
0269

1 co-permittee in this.

2 I think that the County is the entity that has
3 the major system. They're the entity that has the
4 capability of doing the kind of monitoring that's needed,
5 and I think that they've provided an enormous amount of
6 coordination for a lot of tiny cities that do not have
7 this capability. So I would say Not only do I not want
8 to give them an individual permit, I wish they were back
9 taking the role of the primary permittee.

10 So that's one comment.

11 Secondly, I don't think we can all -- I really
12 can't really grasp, we have environmental organizations
13 that want us to do X, County that wants us to do Y, and a
14 variety of different cities asking for delay, and they're
15 asking for a whole bunch of different changes or
16 approaches to the permit. So they want certain ways of
17 handling development issues in the permit. They want --
18 I think the presentations that we saw earlier by that
19 group of cities depicts what they want in terms of the
20 iterative approach.

21 I'm not clear what the real differences are
22 between those statements and I'm not clear that they're
23 really -- that the differences that they think are there
24 between the staff and them are actually there.

25 So I'd like to ask that the staff sometime
0270

1 between now and our next meeting put together some kind
2 of a summary of what you think the major issues are and
3 where the different parties stand on those issues, sort
4 of as a road map for the Board to see where we are today.

5 On the timing issue, I'm very torn on this issue
6 because, again, I am sympathetic to small cities. The
7 turnaround in 60 days from the date of an announcement
8 to -- it's not even 60 days. If we put a draft permit
9 out in March, in order to hear it in May, people have to
10 return comments in much less than 60 days to be able to
11 get that done. I think that lots of cities don't have
12 the capacity to do that and I'm worried about that, and
13 so I want you to think about how we can address that.

14 On the other hand, I was the person who was most
15 anxious to get the Santa Monica Bay TMDL and Marina
16 Bacterial TMDL back into the permit and we agreed not to
17 push this last year because we wanted to deal with the
18 whole permit in an appropriate way.

19 So I'm not -- I'm very torn by the idea that we
20 should take as much time as -- theoretically, we should
21 take as much time as it takes to get consensus and at the
22 same time I do want to make sure that we still have the
23 capacity to enforce the bacterial limits that we were not
24 able to put back into the -- in the permit this last
25 year. So I'm not sure which way to go on this. I'm very

0271

1 torn about it and very sympathetic to the cities about
2 their needs.

3 So let's see what the staff can do in thinking
4 about both of those issues. Are there ways that we can
5 continue to enforce the Santa Monica Bay and the
6 Marina Del Rey TMDLs and give the cities the extra time
7 they need? At least give them more than 45 days in
8 between the date that the draft permit is issued.

9 The second thing is -- the next thing is I would
10 like to see there be a workshop after the draft is
11 issued. It doesn't need to be a Board workshop. It
12 should be a workshop that Board members can come to --
13 I'd be happy to come to it -- where we'd get to hear what
14 people's reactions are to it and you get to hear what
15 people's reactions are to the draft permit and I think
16 that would be a way to shake out some of these issues.

17 And I think -- finally, I think it's really
18 important -- I know that the staff has been meeting one
19 on one with cities and that's been very helpful and one
20 on one with the County. That's been really helpful.
21 There have been these workshops, but ultimately what we
22 found in Ventura County is that somehow we had to get
23 into the same room, the environmental groups, the
24 development industry who's interested in the LID issue,
25 and the cities and the County. They have to get into the

0272

1 same room at the same point. Otherwise, nobody's going
2 to make any compromises. Everybody's going to come here
3 and tell us what to do, and I think that these groups are
4 better able to make the compromises than we are able to
5 make it for them.

6 So that's my last comment except for the
7 following to the County and to the cities and to the
8 environment groups: We decide -- I urge you to decide
9 today whether or not we're heading towards another
10 plethora of lawsuits or we're heading toward a permit
11 that the cities can live with that they don't have to
12 live in fear if they do their job, that they're going to
13 be sued anyway. I want you all to think about that. I
14 want especially the County to think about it.

15 And the one thing that I would tell you very

16 strongly is I feel right now is that there is no way in
17 the world that I will agree to vote ever for a permit
18 that says that the County is just the transporter of
19 pollutants, that the Flood Control District has no
20 responsibility. I think the Flood Control District has
21 tremendous responsibility and they aren't separate from
22 the Department of Public Works, which is the County of
23 Los Angeles, which also has tremendous responsibility.

24 Many of the areas of Los Angeles County were
25 developed when they were unincorporated areas. Most of
0273

1 the city of Santa Clarita, most of many other cities --
2 there was no city of La Canada Flintridge. There were no
3 cities when this Flood Control District decided to -- was
4 formed. There were almost no cities other than the City
5 of L.A. and the City of Long Beach and the City of
6 Pasadena.

7 So almost all of the development that occurred
8 occurred under the auspices of the County. The whole
9 flood control design system, which is really an amazing
10 system for getting water from one place to another in an
11 incredibly fast way, was also a perfect design for
12 pollution carrying, for carrying pollutants.

13 When we had a field trip last year, the County
14 Flood Control District took us on a field trip up to the
15 top of the watershed in La Canada Flintridge and showed
16 us one of the catch basins. The Flood Control District
17 decided that they were going to buy the minimum area
18 possible to build a catch basin and then allow private
19 development to continue to occur right on top of the
20 catch basin. So there is no way now when you stop at
21 the -- start at the top of the District and put all of
22 the water, you collect all of the water that was going
23 into a watershed and being absorbed in the watershed and
24 you take all these streams that were discharging and you
25 concentrate at one place right at the top of the

0274

1 watershed and then you design your systems so it's only
2 designed to take clear cold water with no sediments in
3 it, you're creating the system that requires all the
4 pollution that we have today.

5 So the County, I believe, and the counties --
6 the County has a responsibility historically for the
7 land-use patterns and the Flood Control District made
8 some decisions about how they wanted to approach flood
9 control in this County that is really an inheritance for
10 us all and I think there's a responsibility there.

11 I would hope, and I'm asking you with your
12 attorneys here, to abandon the idea that you should
13 somehow be considered just a neutral transporter of
14 pollutants. That's a nonstarter. If we can talk -- if
15 we can get past that point, there are lots of other
16 things that we can talk about. We can't start with that,
17 though.

18 That would be my last comment.

19 MS. DIAMOND: Mr. Stringer.

20 MR. STRINGER: Yeah. Thank you. I'll be very brief.

21 On the issue of timing, I am sympathetic to the
22 enormous complexity of this process and the permit that
23 you all are trying to pull together.

24 At the same time, I do think it's very important
25 to stick to deadlines and I am very concerned about the
0275

1 Beach Bacteria TMDL that was referenced earlier and I do
2 recall our admonitions that we'd be done by next summer.
3 So I don't know if we can have it both ways and I
4 certainly hope that when the draft permit comes out that
5 there are no surprises. I don't know that having a
6 workshop after that is necessary if you all are working
7 together. It seems to me that the draft permit should
8 contain things that everyone is already fully aware of.

9 So there are a lot of details in today's
10 discussions and presentations and they're incredibly
11 informative. I don't know that it's our place at this
12 point in time anyway to comment too deeply on those.

13 I have great trust in staff and all the
14 stakeholders to work together. I'm not incredibly
15 optimistic that everyone's going to be happy. I think,
16 frankly, that whether we issue the permit in the spring
17 or next winter or whenever we issue it, there will
18 probably be people that will be unhappy and my guess is
19 that some of those issues will have to be resolved by
20 third parties and I just wouldn't want -- I wouldn't want
21 us to delay issuing the permit just because we're trying
22 to get everybody, you know, together and happy.

23 I know that everyone is trying their best to do
24 that, but I'm also very realistic about the challenges
25 that that presents.

0276

1 You asked for feedback, staff, on the issue of
2 the structure. I don't see any way to go other than an
3 individual permit. I just think that any other way -- is
4 there -- pardon me?

5 MS. GLICKFELD: Did you mean single permit or
6 individual?

7 MR. STRINGER: Single, one, one overall permit.

8 I just don't see any other way to parse out
9 particular parties. Everyone's going to feel unique and
10 have their unique issues.

11 At the same time, I do look forward to learning
12 more about issues of joint and several liability, issues
13 of how the various permit requirements are going to be
14 managed so that folks aren't held responsible for things
15 that are not under their control and I know you guys are
16 all thinking hard about that and I look forward to
17 hearing more about it.

18 That's all I have. Thank you.

19 MS. DIAMOND: I'll just make a couple of comments and

20 say what I'm most interested in.

21 I agree with Board Member Stringer and others
22 who have spoken today about the timing being very
23 important, that we have had a permit that is long
24 overdue, a ten-year permit. It's really unbelievable
25 that it's gone so long and I don't believe that

0277

1 protecting water quality and public health would allow us
2 to have another summer without a new stormwater permit in
3 place. So I'm very supportive of the deadline that is
4 contained in this recommendation from staff.

5 I believe if we have our draft in March that it
6 is not really -- there is -- they need to respond to it
7 and comment to it and have it back to -- have it back to
8 us for the May meeting in order for us to issue a permit
9 that would be ready for this summer.

10 I don't really believe that it's too much to
11 ask. It's 45 days in some ways, but this has been long
12 coming and the fact that we have much of it based on the
13 Ventura permit is not -- so it's not really a surprise to
14 the permittees.

15 I do think that as much as it can be based on
16 the Ventura permit, that is a really good thing. The
17 Ventura permit was a very good permit. The LID aspect to
18 it is incredibly important for us to be able to
19 accommodate that; and to the extent that we can push
20 retrofit, which was mentioned by the representative from
21 NRDC, to encourage as much as we can retrofit in L.A., in
22 the L.A. permit, I think that would be really important.

23 And I think that when you do have workshops,
24 which I know you intend to have for the permittees, you
25 should let the Board know in advance when those will be

0278

1 so if members of the Board would like to attend, we can.

2 And I'm very happy to know that the EPA is very
3 supportive of this permit. That gives me a lot of
4 comfort, and I think that basically the questions that
5 have been posed that we'd like to have answers to, those
6 are the questions that I have, too.

7 There was one thing about the issue of the
8 County Flood Control not being the principal permittee.
9 The responsibilities that they have had as principal
10 permittee, whether they've been met or not, who will be
11 responsible for those? I'd like to know who will be -- I
12 mean, how will that be coordinated? It's too bad, I
13 agree, that they're not going to be the principal permittee,
14 but I do think that we have to make sure that the
15 responsibilities are nonetheless accounted for in the
16 next permit.

17 So I want to thank the staff for issuing -- and
18 the presentation of Renee and Ivar today was very
19 helpful. I think if we -- I think the concept of having
20 the single permit for the permittees and then the
21 flexibility within it for the -- with the watershed

22 approach is really a very improved permit and I look
23 forward to seeing how that will play out when you present
24 to us what that will look like, but it makes sense and --
25 and I do -- I think we need to do it by this summer.

0279

1 I personally think that as a Water Board, our
2 primary -- our only mission is to improve and restore
3 water quality; and as was noted before and many times
4 before, stormwater pollution is the biggest problem we
5 face in our region. So this region really has to make
6 sure that our permit's in place, a new, improved permit
7 by this summer. I don't want to see any more kids
8 surfing in the water without an enforceable permit this
9 summer.

10 That's my comment.

11 MS. MEHRANIAN: Madam Chair, in light of everything
12 that was said, I just have -- I'm trying to understand
13 how this will work because it seems we all agree that the
14 timing of this should not be postponed and then there
15 were all these questions that were listed by all of us.
16 So I'm just wanting to hear how we would -- because I
17 believe that answering these questions is also a process
18 of building consensus to meet the deadlines. So I'm
19 trying to see what the timing of it would be, if you can
20 give us an idea.

21 MR. UNGER: I'm going to try to talk -- to answer
22 that generally and I'll let Renee and Deb, as needed,
23 fill in some of the details.

24 But first of all, thank you very much for all
25 your comments and for listening to the permittees and
0280

1 other stakeholders and the Board staff as to the
2 direction that we are planning to recommend to you for
3 the permit.

4 I think with the plans that we have in place, we
5 can -- back up just a second.

6 I think basically on most of these issues, we
7 may be a lot closer than we think we are. Whether we're
8 going to get the consensus or not, I agree it may not be
9 possible like we were able to do in Ventura. But given
10 that being said, I don't think the directions are too far
11 apart. The permittees who -- the smaller cities,
12 certainly they can look at other permits -- MS4 permits
13 have been adopted in recent history in Region 9, as
14 Mr. Kemmerer suggested, so they're not going to be going
15 into this blind. They have plenty of time to get up to
16 speed on what the issues are and how these issues have
17 been identified and resolved in other regions. I'm not
18 saying they're going to be resolved the same way here,
19 but at least they can go into this with the familiarity
20 of what the issues are.

21 I think our path forward, to answer your
22 question, Ms. Mehranian, is to get a memo to the Board
23 certainly by the end of the year with all the comments

24 that were said, hopefully sooner than that, hopefully by
25 next month. But with the holidays and such and with the
0281

1 other workload that the TMDL Development Team has on
2 their plate right now, I think something by the end of
3 the year that you could look at and we would capture all
4 your comments, we would respond to all the comments. All
5 the comments are very valid, very good.

6 I think that Mr. Blois's comments about cost, we
7 have a basis to start looking at costs in the TMDLs that
8 have been adopted and we need to parse that out and give
9 it to you in a succinct format so you can see that.

10 We'll address all your comments. We've all been
11 taking notes, we have the transcript, and we will get you
12 a memo at the same time that we are looking forward to
13 develop a draft. I think the schedule that we have
14 planned out, certainly we're planning some Board staff
15 workshops on specific issues that permittees will be well
16 advised of and they can attend and provide comments there
17 and we stick with the plan that we have in place right
18 now to get it to the schedule and if there's something
19 that would change something in your minds, at least to
20 want to delay it or something like that, that would be
21 your choice; but you wouldn't be held up because we would
22 stick to the schedule.

23 MS. MEHRANIAN: Thank you.

24 MR. UNGER: That's what I propose, to get you a memo.

25 Deb, Renee, do you want to add anything?
0282

1 MS. PURDY: The only thing I was going to add, just
2 echoing Sam, is that I agree. I agree in many ways that
3 we perhaps aren't as far apart as with a lot of
4 permittees and other stakeholders as perhaps some think
5 we are. I think that will become more clear as we have
6 these staff-level workshops that we've been talking about
7 and specifically, as we mentioned, we're thinking of
8 two -- one will probably be in the mid-December time
9 frame and then another probably in the mid-January time
10 frame -- and we'll be hitting on a lot of the key issues
11 that were raised today such as the LID provisions for the
12 new and redevelopment; additionally, how TMDLs are going
13 into the permit, receiving water limitation language and
14 water quality-based effluent limits and monitoring.

15 So I think, you know, the distance between us
16 will become more clear as we start to have those
17 staff-level workshops, and that will help also -- at
18 least the December workshop can help form the memo Sam's
19 hoping to get to you regarding some of the questions.

20 MS. MEHRANIAN: Thank you.

21 MS. GLICKFELD: Madam Chair, I just want to make sure
22 that we get the dates, times, and places of these
23 workshops.

24 MS. PURDY: Certainly.

25 MS. DIAMOND: Well, if there are no other -- anybody

0283

1 have anything else to say?

2 Well, I want to thank everybody who
3 participated. Thank you for being here, for giving us
4 your comments, your letters, and I know you'll be working
5 very hard with staff, as will we. And thank you all for
6 being here. Thank you to staff.

7 We're adjourned.

LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD

FROM: Samuel Unger, P.E.
Executive Officer
LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD

DATE: January 20, 2012

SUBJECT: Key Issues Raised by Stakeholders Regarding the Reissuance of the Los Angeles County MS4 Permit

In 2012, the Los Angeles Regional Water Quality Control Board (Regional Board or Board) will consider reissuing the Los Angeles County Municipal Separate Storm Sewer System permit (hereinafter, the LA County MS4 permit). The LA County MS4 permit is a federal National Pollutant Discharge Elimination System (NPDES) permit that regulates municipal separate storm sewer system (MS4)¹ discharges of stormwater and urban runoff. As with all NPDES permits, the LA County MS4 permit must comply with all applicable provisions of the federal Clean Water Act and implementing regulations. Discharges from the MS4 reach receiving waters in Los Angeles County including, but not limited to, Santa Monica Bay, Los Angeles and Long Beach Harbors, and the Los Angeles and San Gabriel Rivers and their tributaries.

The LA County MS4 permit was last reissued by the Regional Board in 2001, and has been amended three times in the past five years to incorporate provisions to implement total maximum daily loads (TMDLs) for bacteria and trash. However, since 2001, thirty-four TMDLs have been developed by either the Regional Board or US EPA that need to be implemented through an updated MS4 permit. It is also widely recognized that the LA County MS4 permit needs to be updated to reflect the best science and lessons learned in stormwater and urban

¹ According to 40 CFR section 122.26(b)(8), "[a] municipal separate storm sewer system (MS4) means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

- (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;
- (ii) Designed or used for collecting or conveying storm water;
- (iii) Which is not a combined sewer; and
- (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2."

runoff management over the past eleven years. An updated LA County MS4 permit will provide improvements and efficiencies in regulating discharges from the MS4 to improve water quality. Enhancements to water quality may also have a positive effect on local water supply for the Los Angeles Region.

This memorandum stems from the Regional Board's workshop on November 10, 2011 whereby Regional Board staff provided an update on the status and development of the LA County MS4 permit and permittees and stakeholders then presented comments and concerns regarding an updated permit. At the end of the workshop, several Regional Board members posed comments and/or questions to staff. At the close of the workshop, I offered to prepare a memorandum for the Regional Board summarizing the key issues brought forth by staff, permittees, stakeholders, and the Regional Board members prior to the Board's consideration of the updated MS4 permit. This memorandum does not provide responses to all of the issues raised. Since the permit is still being developed by staff, it is premature to provide responses to comments at this time. The Regional Board will be provided with an agenda binder, including responses to all comments raised, prior to the Board's consideration of the permit.

This memorandum is structured in five sections. For the benefit of the newer board members, the first three sections provide general background. Section I provides background on the regulatory framework for stormwater and urban runoff management. Section II provides a description of the Los Angeles County MS4. Section III provides an overview of the current LA County MS4 permit. Section IV provides a status of permit development. Lastly, Section V provides a description of key issues raised by stakeholders regarding the reissuance of the LA County MS4 Permit.

I. REGULATORY FRAMEWORK FOR STORMWATER AND URBAN RUNOFF MANAGEMENT

The regulatory framework for NPDES permits is provided by the federal Clean Water Act and its implementing regulations contained in Title 40 of the Code of Federal Regulations (40 CFR).

Under the NPDES program, all facilities that discharge pollutants from any point source² into waters of the United States are required to obtain an NPDES permit. The stated goals of the Clean Water Act are to restore and maintain the chemical, physical, and biological integrity of the nation's waters. Another notable goal is that the discharge of pollutants into the nation's navigable waters be eliminated by 1985. While that goal was not realized, it remains a principle for establishing NPDES permit requirements.

In 1987, Congress amended the Clean Water Act to bring discharges from MS4s under the NPDES program. USEPA has identified stormwater and urban runoff as one of the most significant sources of water pollution in the country and a serious threat to aquatic life and habitat as well as to human health. Stormwater is precipitation that flows over streets, parking lots, and other developed parcels, and through commercial, industrial and residential sites, and is then collected in MS4s and conveyed to surface waters, which are waters of the United States and State of California. When stormwater flows over urban environs, it collects

² "The term 'point source' means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharged and return from irrigated agriculture." (33 U.S.C. § 1362(14).)

suspended metals, sediments, nutrients (nitrogen and phosphorus), trash and debris, petroleum products, untreated sewage, pesticides, and other toxic pollutants, which are then discharged to creeks, rivers, estuaries and the Pacific Ocean. In addition to stormwater, the MS4 collects non-stormwater runoff from urban activities such as street washing, potable water system testing, and discharges from groundwater treatment programs. These non-stormwater discharges can also contain pollutants that impair the beneficial uses (e.g. recreation, habitat protection, etc.) of the region's water, including the recreational uses of the Pacific Ocean. While non-stormwater discharges are most obvious during dry periods and are seen as the water flowing in the gutters, they can and do occur year round.

Section 402(p) of the Clean Water Act states that permits for discharges from MS4s: (1) may be issued on a system-wide or jurisdiction-wide basis; (2) shall include a requirement to effectively prohibit non-stormwater discharges into the MS4; and (3) shall require controls to reduce the discharge of pollutants to the maximum extent practicable (MEP), including management practices, control techniques and system, design, and engineering methods, and such other provisions as the Regional Board determines appropriate for the control of such pollutants. Congress established this flexible MEP standard, and gave permitting authorities discretion to include other provisions as necessary, so that administrative bodies would have the tools to meet the fundamental goals of the Clean Water Act in the context of stormwater pollution, especially as the field of stormwater management is constantly changing as new information and technologies become available.

MS4s are required to develop and implement a stormwater management program (SWMP). The required elements of a SWMP are described in 40 CFR section 122.26(d)(2)(iv). Historically, the SWMP has been the "bread and butter" of stormwater management programs. Permit provisions to implement a SWMP have been historically grouped into six categories of so-called "minimum control measures":

- (1) programs to monitor and control pollutants in stormwater discharges from commercial areas and industrial facilities;
- (2) a program to maintain structural and non-structural best management practices (BMPs) to reduce pollutants in stormwater runoff from construction sites;
- (3) programs to detect and remove illicit discharges and improper disposal into the MS4;
- (4) public agency activities to reduce the impact of MS4 discharges to receiving waters, including impacts from residential areas and flood management projects;
- (5) planning procedures to reduce pollutants from areas of new development and significant redevelopment; and
- (6) a public information and participation program (PIPP) related to the above five areas.

Implementing these minimum control measures typically requires the application of one or more structural or non-structural best management practices (BMPs). Pursuant to California Water Code section 13360, the Regional Board cannot specify the design, location, type of construction, or particular manner in which a permittee complies with its permit. As long as a permittee complies with the standard set (prohibition for non-stormwater discharges and MEP and other provisions as necessary for stormwater), then a permittee may comply in any lawful manner. It is important to recognize that there is site-specific, regional, and national variability associated with the selection of appropriate BMPs, as well as in the design constraints and pollution control effectiveness of practices. Thus, BMPs that work in one part of the state may not necessarily work in the Los Angeles region, and vice-versa.

Once pollutants are present in a waterbody, or after a receiving waterbody's physical structure and habitat have been altered, it is much more difficult and expensive to restore it to an unimpaired condition. Therefore, the use of BMPs that rely first on preventing degradation of receiving waters is recommended. BMPs under each of the minimum control measures generally focus on preventing pollutants from being discharged to the MS4 or the receiving water. For example, for non-stormwater discharges, many permittees have installed "low flow diversions" (LFDs), which are structural devices that re-route urban runoff discharged to the MS4 during dry weather conditions into the sanitary sewer system, where the polluted runoff then receives treatment before being discharged to a receiving water.

Over the last decade, the Regional Board and US EPA have developed approximately 50 total maximum daily loads (TMDLs) to remedy water quality impairments in various waterbodies within Los Angeles County. In most cases, these TMDLs identify MS4 discharges as a source of pollutants to these waterbodies and, as required, set wasteload allocations (WLAs) for MS4 discharges to reduce the amount of pollutants discharged to receiving waters. Federal regulations require that NPDES permits contain effluent limitations consistent with the assumptions and requirements of all available WLAs (40 CFR §122.44(d)(1)(vii)(B)). Therefore, as part of the update of the LA County MS4 Permit, staff will be developing numeric limitations and other provisions to implement the TMDL WLAs assigned to permittees regulated by the LA County MS4 Permit. The Regional Board has some flexibility when establishing permit provisions that are designed to determine compliance with the numeric limitations derived from the TMDL WLAs. Broadly, this means that the Regional Board may either require a demonstration that permittees comply with the numeric limitations through monitoring (such as outfall and/or receiving water monitoring) or, alternatively, allow permittees to develop and implement control measures to achieve the numeric limitations (referred to as an "action-based" compliance demonstration) where there is an adequate demonstration in the record that the selected control measures and schedule will achieve the numeric limitations. As described below, the manner in which the TMDLs will be incorporated in the forthcoming MS4 permit is one of the key comments that underlie much of the controversy in the development of the reissued MS4 permit.

Lastly, when an NPDES permit is renewed, reissued or modified, it generally must be at least as stringent as the prior permit. This is consistent with Congress' intent that state management programs evolve based on changing conditions from program development and implementation and corresponding improvements in water quality.

II. THE LOS ANGELES COUNTY MS4

The Los Angeles County MS4, like many MS4s in the nation, is based on regional floodwater management systems that use both natural and altered waterbodies to achieve flood management goals. The LA County MS4 is a large interconnected system, controlled in large part by the Los Angeles County Flood Control District (County FCD), among others, and used by multiple cities along with Los Angeles County. These systems convey stormwater and non-stormwater urban runoff across municipal boundaries where it is commingled within the MS4 and then discharged to a receiving waterbody.

The Los Angeles County Flood Control Act was passed in 1915. The original storm drain system was developed in the 1930s by the U.S. Army Corps of Engineers (ACOE). As Los

Angeles began to grow rapidly in the 1920s and 1930s, stormwater that was once absorbed by acres of undeveloped land began to run off the newly paved and developed areas, leading to an increased amount of water flowing into the region's rivers and local creeks. These waterways could not contain the increased amount of water and the region experienced extensive flooding. In response, the ACOE lined the Los Angeles River and Ballona Creek with concrete and initiated the development of an underground urban drainage system. As Los Angeles continued to grow, the complex drainage system we now know as the Los Angeles County MS4 developed.

Today, a total of approximately 120,000 catch basins, over 2,800 miles of underground pipes, and 500 miles of open channels comprise the Los Angeles County MS4. In total, runoff from approximately 1,060 square miles of developed land reach Santa Monica and San Pedro Bays through approximately 60 storm drain outfalls. Approximately 100 million gallons of urban runoff flow through Los Angeles County's MS4 on an average dry day. When it rains, the amount of water flowing through the channels can increase to 10 billion gallons, reaching speeds of 35 mph and depths of 25 feet. The chemical and hydrological variability of stormwater and urban runoff within the MS4 creates both technical and regulatory complexity. The treatment technologies for these discharges are not as well developed as those for sewage and industrial waste discharges and cannot be easily centralized. Issues of shared responsibility for compliance with TMDL wasteload allocations and receiving water limitations, and equity and fairness between multiple permittees are far more complex in an MS4 permit that regulates commingled discharges compared to an individual NPDES permit.

III. CURRENT LOS ANGELES COUNTY MS4 PERMIT

The LA County MS4 Permit is one of the most important permits issued and administered by the Regional Board. The permit regulates commingled discharges of stormwater and urban runoff from one of the nation's largest MS4s, covering the jurisdictional areas of 86 permittees. Permittees regulated by the LA County MS4 Permit include the County FCD as owner and operator of the MS4 infrastructure, Los Angeles County, and 84 incorporated cities³ within Los Angeles County.

The current LA County MS4 Permit was last reissued by the Regional Board in 2001. The permit expired in 2006, but has been administratively extended pursuant to federal regulations. Since 2006, the current permit has been reopened and amended three times to incorporate provisions to implement three TMDLs. It was further amended in 2010 and 2011 pursuant to a peremptory writ of mandate.

The current LA County MS4 Permit is organized under the following seven parts and includes several attachments. The description below summarizes key permit parts and attachments:

Part 1 – Discharge Prohibitions

As required by section 402(p) of the Clean Water Act, Part 1 requires permittees to “effectively prohibit non-storm water discharges into the MS4 and watercourses, except where such discharges” are covered by a separate MS4 permit or fall within one of thirteen categories of flows that are conditionally exempted from the discharge prohibition. These exempted flows fall under the general categories of natural flows, firefighting flows, and flows incidental to urban activities (i.e. landscape irrigation, sidewalk rinsing). These non-stormwater flows may be

³ With the exception of the City of Long Beach, who has had a separate MS4 permit since 1991.

exempted so long as (i) they are not a source of pollutants, (ii) their effective prohibition is not necessary to comply with TMDL provisions, and (iii) they do not violate antidegradation policies.

Part 1 also authorizes the Executive Officer to impose conditions on these types of discharges and to add or remove categories of conditionally exempted non-stormwater discharges based on their potential to contribute pollutants to receiving waters.

Part 2 – Receiving Water Limitations

As required by 40 CFR section 122.44(d)(1), Part 2 prohibits discharges from the MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives. In addition, discharges from the MS4 of stormwater or non-stormwater, for which a Permittee is responsible, may not cause or contribute to a condition of nuisance. Part 2.3 states that permittees shall comply with these prohibitions “through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with [the Los Angeles Stormwater Quality Management Program (SQMP)] and its components and other requirements of [the LA County MS4 Permit].” Part 2.3 establishes an “iterative process” whereby certain actions are required when exceedances of water quality standards or objectives occur. This iterative process includes submitting a Receiving Water Limitations Compliance Report; revising the SWMP and its components to include modified BMPs, an implementation schedule and additional monitoring to address the exceedances; and implementing the revised SWMP.

Part 2 also includes provisions relating to the Marina del Rey Harbor Mothers’ Beach and Back Basins Bacteria TMDL (summer dry weather provisions only). During summer dry weather, Part 2.6 prohibits discharges of bacteria from MS4s into Marina del Rey Harbor Basins D, E, or F, including Mothers’ Beach that cause or contribute to exceedance of the applicable bacteria objectives.

Part 2 had also included similar TMDL provisions relating to the Santa Monica Bay summer dry weather bacteria TMDL. However, as a result of a legal challenge by Los Angeles County and the County FCD, the Regional Board was required to void and set aside those provisions, which the Regional Board did in 2011.

Part 3 – Stormwater Quality Management Program (SQMP) Implementation

Under Part 3, each permittee shall, at a minimum, implement the SQMP, which is an enforceable element of the LA County MS4 Permit. The SQMP, at a minimum, shall also comply with the applicable stormwater program requirements of 40 CFR 122.26(d)(2), which includes the minimum control measures outlined above. The SQMP and its components shall be implemented so as to reduce the discharges of pollutants in stormwater to the MEP and effectively prohibit non-stormwater discharges to the MS4. Each permittee shall also implement additional controls, where necessary, to reduce the discharge of pollutants from the MS4. Permittees shall revise the SQMP at the direction of the Regional Board Executive Officer to comply with regional, watershed specific requirements, and/or TMDL wasteload allocations.

Part 3 also sets forth specific responsibilities of the Principal Permittee, which under the 2001 permit is the County FCD, and co-permittees. In addition, Part 3 sets forth requirements for Watershed Management Committees (WMCs) which, among other tasks, prioritize pollution control efforts and evaluate the effectiveness of and recommend changes to the SQMP and its components. Each Permittee must also have the necessary legal authority to prohibit non-stormwater discharges to the MS4, as well as possess adequate legal authority to develop and

enforce stormwater and non-stormwater ordinances for its jurisdiction.

Part 4 – Special Provisions

Part 4 sets forth provisions for public information and participation, industrial/commercial facilities control program, development planning, development construction, public agency activities, and illicit connections and illicit discharges elimination. These programs are termed “minimum control measures” and have been in place since the inception of the stormwater program.

Part 5 – Definitions

Part 5 includes definitions for terms used within the LA County MS4 Permit.

Part 6 – Standard Provisions

Part 6 includes standard provisions relating to implementation of the programs required by the permit. Such provisions include the duty to comply, the duty to mitigate, inspection and entry requirements, proper operation and maintenance requirements, and the duty to provide information. Most of these provisions are required by 40 CFR section 122.41 and apply to all NPDES permits.

Part 7 – TMDL Provisions

In 2009, the permit was amended to include provisions that are consistent with the assumptions and requirements of wasteload allocations from the Los Angeles River Trash TMDL. Appendix 7-1 identifies the permittees subject to the Los Angeles River Trash TMDL and sets forth the interim and final numeric effluent limitations for trash that the permittees must comply with. Part 7 also sets forth how permittees can demonstrate compliance with the numeric effluent limitations. Permittees have the option to employ three general compliance strategies to achieve the numeric effluent limitations. Depending on the strategy selected, the Permittee may demonstrate compliance either by documenting the percentage of its area addressed by full capture systems (“action-based” demonstration) or by calculating its annual trash discharge to the MS4 and comparing that to its effluent limitation. This approach allows the Permittee the flexibility to comply with the numeric effluent limitations using any lawful means, and establishes appropriate and enforceable compliance metrics depending on the method of compliance and level of assurance provided by the Permittee that the selected method will achieve the numeric effluent limitations derived from the TMDL WLAs.

Attachment U – Monitoring and Reporting Program

The LA County MS4 Permit has both self-monitoring and public reporting requirements, which include: (1) monitoring of “mass emissions” at seven mass emission monitoring stations; (2) Water Column Toxicity Monitoring; (3) Tributary Monitoring; (4) Shoreline Monitoring; (5) Trash Monitoring; (6) Estuary Sampling; (7) Bioassessment; and (8) Special Studies. The purpose of mass emissions monitoring is to: (1) estimate the mass emissions from the MS4; (2) assess trends in the mass emissions over time; and (3) determine if the MS4 is contributing to exceedances of Water Quality Standards or objectives by comparing results to the applicable standards and objectives in the Basin Plan. The permit establishes that the Principal Permittee shall monitor the mass emissions stations. The permit requires that mass emission sampling is conducted five times per year for the Watershed Rivers.

IV. STATUS OF PERMIT DEVELOPMENT

Regional Board staff plans to bring an updated permit for the Board's consideration in late spring 2012. Updating the LA County MS4 Permit is one of the highest priorities of the Board. Board staff in the Stormwater Permitting Unit is being assisted by staff from other programs, as well as by contractor support provided by the U.S. Environmental Protection Agency (US EPA).

Staff held a kick-off meeting on May 25, 2011 to discuss the preliminary schedule for permit development; identify potential alternative permit structures; and outline some of the major technical and policy aspects of permit development. All LA County MS4 Permittees, as well as other known interested stakeholders, were invited to attend. Ninety-five individuals attended the meeting, representing most of the permittees as well as environmental organizations. After a presentation by Board staff, Permittees and interested persons had an initial opportunity to ask questions of staff, raise concerns, and provide feedback.

Since the kick-off meeting, staff has held numerous meetings upon request to discuss specifics with permittees, consultants representing permittees, and environmental organizations. In addition, staff has also been conducting inspections of several program areas, including municipal oversight of construction and post-construction stormwater controls and control measures to detect and eliminate illicit discharges and illicit connections to the MS4. The results of these inspections will help inform permit development and determine areas of possible customization on a watershed or individual Permittee basis.

On November 10, 2011, the Board held a public workshop on the issuance of the new LA County MS4 Permit. Staff made a presentation on the status of permit development and key elements of the permit. Permittees and other stakeholders also had an opportunity to address the Board to make comments and raise concerns.

Since the November 10, 2011 Board workshop, staff has continued working on a draft permit with the assistance of US EPA, as well as hold meetings with stakeholders to discuss various aspects of permit development.

A staff-level workshop with a focused discussion on incorporation of TMDLs and monitoring requirements is scheduled for January 23, 2012.

V. KEY ISSUES RAISED BY STAKEHOLDERS

The remainder of this memorandum summarizes the key issues that stakeholders have raised during the current effort to develop a draft LA County MS4 Permit for the Regional Board's consideration in late Spring 2012. The issues identified below have been raised during staff-level meetings and workshops, as well as the Regional Board workshop held on November 10, 2011. For many of these issues, staff has formulated conceptual approaches. However, in other areas, staff continues to formulate approaches that will be presented to stakeholders and the Regional Board at future meetings. As stated above, the purpose of this memorandum is to summarize the key issues raised to date, and not to provide responses to all concerns raised. Doing so at this time would be premature. Staff will provide responses to all comments received after a draft permit is released for public review and comment.

The Ventura County MS4 Permit issued by this Board is one of many recent MS4 permits that have been issued nationwide and within southern California. While the Ventura County MS4 permit provides guidance for developing an MS4 permit in southern California, there are a number of technical and policy aspects that are unique in Los Angeles County that staff is considering when drafting the LA County MS4 Permit for Board consideration. The following key issues are addressed in this memorandum:

Permit Structure

The current 2001 Permit is a single permit whereby all 86 permittees are assigned uniform requirements with additional requirements for the Principal Permittee.

One of the fundamental issues for the forthcoming permit was a reconsideration of the basic permit structure. The structure of an updated MS4 permit and the relationship among the permittees has been an issue raised by multiple permittees for several years. In 2006, the Cities of Downey and Signal Hill each submitted an individual Report of Waste Discharge (ROWD), which serves as an application for an individual MS4 permit. Also in 2006, five cities in the upper San Gabriel River watershed submitted a ROWD for a small group MS4 permit. In 2010, the County FCD submitted a ROWD also requesting an individual MS4 permit. The County FCD's ROWD asserted that there is a fundamental difference in their activities relative to the other municipalities and the unincorporated areas of the County of Los Angeles, in that the County FCD does not own or control land areas where pollutants originate. The County FCD also requested that if an individual MS4 permit was not issued to them, that it no longer be designated as the Principal Permittee and that it is relieved of Principal Permittee responsibilities. Regional Board staff evaluated these ROWDs and found them to be inadequate.

The federal Clean Water Act (CWA) section 402(p) and implementing regulations at 40 CFR section 122.26(a)(1)(v) allows the permitting authority to issue permits for MS4 discharges on a system-wide or jurisdiction-wide basis taking into consideration a variety of factors. Such factors include the location of the discharge with respect to waters of the United States, the size of the discharge, the quantity and nature of the pollutants discharged to waters of the United States, and other relevant factors. Federal regulations at 40 CFR section 122.26(a)(3)(ii) identify a variety of possible permitting structures, including one system-wide permit covering all MS4 discharges or distinct permits for appropriate categories of MS4 discharges including, but not limited to, all discharges owned or operated by the same municipality, located within the same jurisdiction, all discharges within a system that discharge to the same watershed, discharges within a MS4 system that are similar in nature, or for individual discharges from MS4s.

At the May 25, 2011 kick-off meeting, Board staff requested input from the attendees on various permit structures. The permittees in attendance brought forth several key considerations, such as:

- The passage of Assembly Bill 2554 in 2010, which amended the Los Angeles County Flood Control Act. This statute allows the County FCD to assess a parcel tax for stormwater and clean water programs. Funding is subject to voter approval in accordance with Proposition 218. Fifty percent of funding is allocated to nine "watershed authority groups" to implement collaborative water quality improvement plans; and

- The Regional Board and US EPA have developed 34 TMDLs that need to be incorporated into the LA County MS4 permit, and permittees have set up jurisdictional groups on a watershed or subwatershed basis for TMDL implementation.

In addition, a shared comment from many stakeholders is that they would like the LA County MS4 permit to provide flexibility to allow them to pool resources to implement stormwater BMPs and address TMDL requirements on a watershed scale in the reissued MS4 permit. Board staff was motivated to set up a MS4 permit structure that would allow governance and compliance either through a watershed based group, or individually.

In response to a suggestion from permittees at the kick-off meeting, staff developed and distributed an online survey to permittees in order to solicit input regarding alternative permit structures, including an individual permit for each municipality, a single permit for all permittees (i.e., the existing permit structure), and a single or multiple watershed-based permits. Fifty-two permittees responded to the survey. The results of the survey showed that a majority of the permittees preferred a single MS4 permit for all municipalities and the County entities. A significant minority supported multiple watershed-based permits. Overall, 85 percent of the permittees that responded to the survey supported either a single MS4 permit or several individual watershed-based permits. A small number of permittees supported alternative groupings of adjacent municipalities instead of watershed-based groupings. Only four permittees expressed a preference for individual MS4 permits.

The issue of permit structure was a key subject for the Regional Board workshop on November 10, 2011. At that workshop, Board staff recommended a single permit with some sections devoted to universal requirements for all permittees and others devoted to requirements specific to each major Watershed Management Area (WMA), which would include TMDL implementation provisions. This structure is supported by section 402(p) of the Clean Water Act and 40 CFR section 122.26, subdivisions (a)(1)(v) and (a)(3)(ii). Staff explained that a single permit will ensure consistency and equitability in regulatory requirements within the county, while watershed-based sections within the single permit will provide flexibility to tailor permit provisions to address distinct watershed characteristics and water quality issues. Additionally, an internal watershed-based structure comports with the Regional Board's watershed-based TMDL requirements and the County FCD's funding initiative passed in Assembly Bill 2554. Watershed-based sections will help promote watershed-wide solutions to address water quality problems, which in many cases are the most efficient and cost-effective means to address stormwater and urban runoff pollution. Further, watershed-based sections may encourage collaboration among permittees to implement regional integrated water resources approaches such as stormwater capture and re-use to achieve multiple benefits.

Staff also explained that it did not plan to recommend multiple permits or individual permits for Signal Hill, Downey, the five upper San Gabriel River cities, or the County FCD. The information presented in the ROWDs does not reflect evolved program elements that have emerged over the past decade. Further, individually tailored permittee requirements can be provided in a single permit, where appropriate. In response to the request from the County FCD to be relieved of its responsibilities as Principal Permittee, staff agreed with this request. Staff explained that it did not intend to recommend any permittee as Principal Permittee in the updated permit and staff would continue to evaluate appropriate requirements for the County FCD in the permit.

While the Board did not take any formal action at the November 10, 2011 workshop, the Board supported staff's recommendation of structuring a single permit with a combination of universal requirements for all permittees and specific watershed-based requirements.

Incorporation of TMDLs

As part of the updated LA County MS4 Permit, the Regional Board must include provisions implementing 34 TMDLs into the permit. As explained above, NPDES permits are required by federal regulations to include numeric limitations consistent with the assumptions and requirements of all available TMDL wasteload allocations. These WLAs regulate the mass or concentration of constituents discharged into receiving waters. How the Regional Board translates WLAs into numeric limitations has garnered significant debate among the stakeholder community.

Recent US EPA guidance on this subject indicates that WLAs can be included in the permit either as numeric water quality based effluent limits (WQBELs) or as BMPs that have reasonable assurance to meet WLAs. Staff believes that since the WLAs are expressed numerically, numeric limitations in MS4 permits are appropriate. Many Permittees, on the other hand, have asserted that TMDL WLAs do not need to be interpreted as numeric limits, but can be implemented as BMPs that can achieve water quality objectives. On this subject, US EPA recommends that, "NPDES permitting authorities use numeric effluent limitations where feasible as these types of effluent limitations create objective and accountable means for controlling stormwater discharges."

To date, the Regional Board has only established numeric WQBELs to implement the Los Angeles River Watershed Trash TMDL WLAs. In that case, Permittees have the option to employ three general compliance strategies to achieve the numeric WQBELs. Depending on the strategy selected, the Permittee may demonstrate compliance either by documenting the percentage of its area addressed by full capture systems ("action-based" demonstration) or by calculating its annual trash discharge to the MS4 and comparing that to its effluent limitation. This approach allows the Permittee the flexibility to comply with the numeric effluent limitations using any lawful means, and establishes appropriate and enforceable compliance metrics depending on the method of compliance and level of assurance provided by the Permittee that the selected method will achieve the numeric effluent limitations derived from the TMDL WLAs. Staff is considering similar approaches for the other TMDLs that have to be put into the permit, where appropriate. In addition, many of the permittees have asked that such an option is included in the reissued LA County MS4 Permit.

Another key issue raised by stakeholders is how the numeric limitations and associated implementation schedules derived from TMDLs will interact with other permit provisions. Many of the TMDLs that need to be incorporated have implementation periods that exceed the 5-year NPDES permit term and include performance based interim WLAs. Options under consideration by staff include acknowledgement in the permit provisions that if a permittee is in full compliance with the interim numeric limitations derived from the TMDL per an approved implementation plan/program, then although there may be exceedances of water quality standards in the receiving water, this would not represent a violation of the permit's Receiving Water Limitations.

Non-Stormwater Discharge Prohibition

As noted above, Part 1 of the 2001 Permit contains a requirement for permittees to effectively prohibit discharges of non-stormwater into the MS4 and to watercourses, except where such discharges are covered by a separate MS4 permit or fall within one of thirteen categories of flows that are conditionally exempted from the discharge prohibition.

Some permittees assert that the language in Part 1 of the current permit is inconsistent with federal requirements. These permittees assert that under the Clean Water Act, the MS4 permit is only required to prohibit non-stormwater discharges into, and not out of, the MS4. Staff and legal counsel do not agree with these permittees' interpretation of the Clean Water Act as the federal requirement to prohibit non-stormwater discharges into the MS4 is necessary to prevent non-stormwater discharges from the MS4 to the receiving water. This is consistent with Congress' intent to ultimately to control MS4 discharges to receiving waters.

Further, some permittees comment that some of the flows that are exempted from the non-storm water prohibition may contain pollutants that can cause violations of other provisions of the permit such as receiving water limitations. As noted above, the 2001 Permit conditionally exempts certain non-stormwater flows so long as they are not a source of pollutants. However, the effect of individual and collective exempted discharges into the MS4 on the quality of non-stormwater discharged from the MS4 has not been well characterized. Historically, the control measures required to achieve this effective prohibition have been those included in the illicit discharges/illicit connections elimination (IC/IDE) program of the SWMP. However, recent inspections of Permittees' IC/IDE program have indicated that while Permittees have conducted screening of their MS4 as required by the permit, non-stormwater discharges to the MS4 and watercourses continue, often resulting in exceedances of water quality standards. Staff is considering bringing some of the currently conditionally exempted flows, such as municipal water system line flushing, under individual NPDES permits, if appropriate.

Staff continues to evaluate options to improve the effectiveness of this section of the Permit through the use of dry weather outfall screening along with non-stormwater action levels.

Receiving Water Limitations

As noted above, Part 2 of the 2001 Permit contains a requirement that prohibits discharges from the MS4 that cause or contribute to violations of Water Quality Objectives or Standards. This section of the 2001 Permit also contains provisions that establish an "iterative process" whereby certain actions are required when exceedances of Water Quality Objectives or Standards occur. This iterative process includes submitting a Receiving Water Limitations Compliance Report; revising the SWMP and its components to include modified BMPs, an implementation schedule and additional monitoring to address the exceedances; and implementing the revised SWMP.

Many permittees have expressed concern regarding compliance with receiving water limitations, because they claim a lack of clarity as to whether compliance with the iterative process in Part 2.3 deems them in compliance with the discharge prohibitions in Parts 2.1 and 2.2. Many Permittees believe that if they fully comply with the iterative process in response to exceedances of Water Quality Objectives or Standards, then those Permittees should not be in violation, and thus not be subject to enforcement, of the discharge prohibitions in the Receiving Water Limitations section of the permit.

Permittees have commented that improvement to water quality will be realized through implementation of additional BMPs or source control, that such BMPs will take time to implement, and that if permittees are found to be in non-compliance, it will deter them from investing in additional BMPs.

The Regional Board has held that compliance with the iterative process as outlined in the 2001 Permit is not a “safe harbor” for compliance with Water Quality Standards or Objectives, and that the discharge prohibitions are independently and separately enforceable provisions of the 2001 Permit. The Regional Board’s interpretation was recently upheld in July 2011 by the United States Court of Appeal for the Ninth Circuit in the *Natural Resources Defense Council (NRDC) v. County of Los Angeles* case. The Court ruled that the discharge prohibitions are independently enforceable requirements, separate and distinct from the iterative process requirements.

In evaluating the iterative process for the updated permit, staff has looked to see how other regional boards are dealing with this issue. Some regional boards have issued permits that contain not just receiving water monitoring, but also outfall monitoring paired with “action levels” that, if exceeded, trigger requirements to submit and implement a plan to enhance or implement additional BMPs to eliminate the exceedances of Water Quality Objectives or Standards. In the Regional Board’s deliberations on the Ventura County MS4 Permit, the Regional Board supported outfall monitoring, but rejected the use of action levels as proposed. Staff continues to evaluate options and tools that will acknowledge the iterative process of SWMP and BMP implementation, while ensuring accountability for taking appropriate, timely, and effective actions toward achieving Receiving Water Limitations.

Low Impact Development

Research over the past decade has shown the effectiveness of low impact development⁴ (LID) in reducing storm water discharges and improving receiving water quality. Effective BMP requirements on new development and redevelopment also offer a cost effective strategy to reduce pollutant loads to surface waters. These controls not only provide pollutant reduction/elimination but also treat water as a resource by augmenting groundwater supplies and reusing captured rainfall.

Recent MS4 permits issued across the nation and within California have included requirements for low impact development. In the 2010 Ventura County MS4 permit issued by this Board, LID requirements were required for certain developments throughout Ventura County. In Los Angeles County, several municipalities, including the Cities of Los Angeles and Santa Monica, have adopted LID ordinances and implemented LID programs.

Key issues with LID involve prioritization of BMPs, such as retention, over other treatment technologies, and provisions for offsite mitigation when onsite retention is not feasible. In addition, the American Society of Civil Engineers (ASCE) and the Water Environment Federation (WEF) have recommended a numerical BMP design standard for stormwater that is derived from a mathematical equation to maximize treatment of runoff volume for water quality

⁴ Low Impact Development (LID) is a stormwater management approach. The goal of LID is to mimic a site's predevelopment hydrology by using design techniques that infiltrate, store, evaporate, filter, and detain runoff close to its source. Techniques are based on the premise that stormwater management should not be seen as stormwater disposal. Instead of conveying and managing / treating stormwater in large, end-of-pipe facilities located at the bottom of drainage areas, LID addresses stormwater through small, cost-effective landscape features located at the lot level.

based on rainfall/runoff statistics and which is economically sound. The maximized treatment volume is cut-off at the point of diminishing returns for rainfall/runoff frequency. The ASCE and WEF's recommendation was incorporated in the water quality storm sizing for the Standard Urban Stormwater Mitigation Plan (SUSMP) in the 2001 LA County MS4 Permit. The Board also approved a numeric criterion for LID in the 2010 Ventura County MS4 Permit.

Many areas within the Los Angeles County are densely developed and there may be less opportunity for infiltration than areas covered by other MS4 permits. Because the growth rate in Los Angeles County has slowed and is projected to stay low, the effectiveness and controversy surrounding LID requirements is not as intense as during the Ventura County MS4 permit adoption. However, Staff is considering proposing language to require permittees to ensure that new and re-development projects implement LID similar to the Ventura County MS4 Permit requirements, including an emphasis on onsite retention, with offsite mitigation as an alternative where onsite retention is infeasible. Staff is also considering provisions to encourage adoption of local LID ordinances, and where LID ordinances are in place an option to demonstrate compliance with the new and redevelopment provisions of the permit through implementation of a local LID ordinance if reasonable assurance is provided that the LID ordinance will provide equivalent water quality benefit as that anticipated from the permit provisions.

Water Conservation

Some stakeholders have commented that the LA County MS4 permit should incentivize water conservation by requiring or incentivizing infiltration⁵ over other BMPs. There has been significant work accomplished by Los Angeles County Department of Public Works, City of Los Angeles and numerous water purveyors that have studied and mapped areas where stormwater can be effectively infiltrated. Further, Board staff is working with many stakeholders to develop salt and nutrient management plans to preserve our groundwater basins as viable resources for future water resources in Los Angeles County. However, there is no direct authority in the Clean Water Act or the California Water Code for the Regional Board to require that a given amount or percentage of stormwater be infiltrated. Nonetheless, staff understands the importance of increased water conservation as an important priority for our region.

Monitoring

The monitoring and reporting program in the current LA County MS4 Permit focuses on mass emission station and receiving water monitoring. This monitoring evaluates water quality in the receiving water rather than directly evaluating the nature of the stormwater and urban runoff that is discharged from the LA County MS4. There is a growing consensus regarding the need for outfall, or end-of-pipe, monitoring, which may provide more insightful information on the effectiveness of BMPs in reducing pollutant loads than mass emission monitoring. Outfall monitoring is necessary to determine compliance with numeric effluent limitations and may also provide information on which permittees are implementing more effective BMPs and which are not.

One of the key difficulties in implementing outfall monitoring is that there are thousands of MS4 outfalls that drain to receiving waters in Los Angeles County. Clearly, monitoring each outfall is neither cost effective nor practical. In the Ventura County MS4 Permit, each permittee is responsible for monitoring one "representative" outfall pipe in addition to the mass emission

⁵ Practices that capture and temporarily store stormwater before allowing it to infiltrate into the soil over a period of time.

monitoring. During the Ventura County MS4 permit development, these representative drains were proposed by the City of Ventura and reviewed by Regional Board staff. Specific drains were approved with requirements to monitor during both wet and dry seasons. Other methods were also considered such as rotating monitoring stations, watershed based monitoring, and monitoring on a less frequent than annual basis.

Staff has concluded that outfall monitoring is necessary and will provide key information for the LA County MS4 Permit, but has not yet determined a plan for the monitoring.

Compliance Determination

Permittees are understandably concerned about how compliance with the various provisions of the updated LA County MS4 Permit will be determined. This concern is due not only to potential enforcement actions that may be taken by the Regional Board, but also by citizen suits that may be initiated by third parties. For permittees, this concern was realized when the environmental groups Natural Resources Defense Council and Santa Monica Baykeeper brought citizen suits against the County of Los Angeles, the County FCD, and the City of Malibu for violations of the current permit. As discussed in more detail above, staff is considering development of a multifaceted approach to clarify compliance requirements in the updated permit. Elements that staff is considering include the use of action levels for non-stormwater discharges and WQBELs and/or implementation of BMPs that have a reasonable assurance of achieving WQBELs derived from TMDL WLAs.

Another issue raised by stakeholders is whether the updated permit will address whether permittees are jointly responsible for complying with permit provisions. In the 2006 amendment to the current LA County MS4 Permit to incorporate the Santa Monica Bay dry weather bacteria TMDL, the Board included a footnote stating that permittees were jointly responsible for complying with the TMDL provisions. This language was taken directly from the TMDL itself. Several permittees believe that assigning joint responsibility is unlawful, and request that such language not be reinstated in the updated MS4 permit. Staff believes that since MS4 discharges from multiple Permittees commingle prior to discharge to a receiving water, compliance with certain permit provisions, such as receiving water limitations, is the joint responsibility of all those Permittees who discharge to that receiving water.

While staff continues to evaluate options concerning compliance determination, it is clear that the updated permit needs to include language clearly describing how the Board intends to determine compliance with the various permit provisions.

VI. CONCLUSION

Staff has made substantial progress on some key issues concerning the reissuance of the Los Angeles County MS4 permit. However, there are a number of areas in which staff has not fully identified and evaluated options. Staff intends to continue the dialogue among the permittees and other stakeholders in order to meet a tentative schedule for Board consideration of the permit by late Spring 2012. Overall, staff feels there is an opportunity for the Board to issue an updated LA County MS4 Permit that can greatly improve water quality and potentially increase water resources in Los Angeles County.

Edmund G. Brown Jr.
Governor

TO: MS4 Permittees and Interested Persons

FROM: Renee A. Purdy, Section Chief *Renee A. Purdy*
Regional Programs

DATE: December 1, 2011

SUBJECT: NOTICE OF PUBLIC WORKSHOP ON THE DEVELOPMENT OF AN
UPDATED GREATER LOS ANGELES COUNTY MUNICIPAL SEPARATE
STORM SEWER SYSTEM (MS4) PERMIT

The Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) will hold a public workshop to discuss tentative requirements to be incorporated in the updated Greater Los Angeles County MS4 Permit. Los Angeles Water Board staff invites Co-permittees and interested persons to a public workshop on:

**Thursday, December 15, 2011
1:00 - 4:00 PM
California Regional Water Quality Control Board
First Floor Carmel Room
320 W. 4th Street
Los Angeles, CA 90013**

At the workshop, Los Angeles Water Board staff will discuss with Co-permittees and interested persons:

- Tentative permit requirements for the following minimum control measures comprising Co-permittees' core stormwater management program;
 - Development Construction Program
 - Planning and Land Development Program
 - Public Agency Activities Program
 - Industrial/Commercial Facilities Control Program
 - Public Information and Participation Program
 - Illicit Connections and Illicit Discharges Detection and Elimination Program
- Options for flexibility in the above core stormwater management program areas to address watershed priorities; and
- Tentative approaches to addressing non-stormwater MS4 discharges.

Another public workshop will be held on January 23, 2012 from 1:00 - 4:00 PM at the same location to discuss TMDL-related permit requirements and the Monitoring and Reporting Program.

Permittees and interested persons will have an opportunity to ask questions of Los Angeles Water Board staff and provide initial feedback. Please contact me at (213) 576-6622 or rpurdy@waterboards.ca.gov or, alternatively, Mr. Ivar Ridgeway at (213) 620-2150 or iridgeway@waterboards.ca.gov with questions.

**Los Angeles MS4 Permit:
Minimum Control Measure
Workshop**

Los Angeles Regional Board
December 15, 2011

**Minimum Control Measure –
Industrial/Commercial Sources**

- Significant Difference(s)
 - Prescriptive BMP implementation (e.g. CASQA manual)

**Storm Water Management
Program: Minimum Control
Measures**

40 CFR 122.26(d)(2)(iv)

- Industrial / Commercial Program
- Development Construction Program
- Illicit Connections/Illicit Discharges Elimination Program
- Public Agency Activities Program
- New Development/Redevelopment Program
- Public Information and Participation Program

**Minimum Control Measure –
Development Construction Program**

- Key Objective: Ensure the implementation of BMPs at construction sites to reduce the contribution of pollutants to the MS4 from construction activities.
- Key Requirements
 - Inventory of grading permits, encroachment permits, demolition permits, building permits, or construction permits
 - Development, review and written approval of a Erosion and Sediment Control Plan (ESCP)
 - BMP implementation (per CASQA or Caltrans manual)

**Minimum Control Measure –
Industrial/Commercial Sources**

- Key Objective: Ensure the implementation of BMPs at industrial/commercial facilities to reduce the contribution of pollutants to the MS4 from industrial/commercial activities.
- Key Requirements
 - Watershed-based database of all industrial and commercial facilities
 - 2 Inspections of all designated industrial/commercial facilities within 5 years
 - Ensure BMP implementation (e.g. CASQA manual)
 - Verification of Permit Coverage and No Exposure Condition (if Necessary)
 - Investigation of Regional Board Submitted Complaints

**Minimum Control Measure –
Development Construction Program**

- Significant Difference(s)
 - Electronic Inventory
 - Elimination of Local SWPPP Requirement
 - Prescriptive BMP implementation (e.g. CASQA manual and Caltrans Manual)
 - Tiered BMP Approach
 - e.g. Non-storm water management listed for larger sites
 - Risk Level BMP Implementation
 - E.g Sites discharging to sediment/siltation require enhanced BMPs

Minimum Control Measure – Illicit Connections and Illicit Discharges Elimination (Non-stormwater Discharges Oversight)

- Key Objective: Effectively prohibit non-storm water discharges to the MS4.
- Key Requirements
 - Development and implementation a Dry Weather Outfall Screening Program to identify priority areas.
 - Monitoring/Field Screening of selected outfalls within priority areas.
 - Development procedures for conducting source investigations for IC/IDs
 - Development of procedures for eliminating for IC/IDs

Minimum Control Measure – Public Agency Activities Program

- Significant Difference(s)
 - Implementation of prescriptive BMPs (e.g Caltrans Manual)
 - Implementation of an Integrated Pesticide Management Program.

Minimum Control Measure – Illicit Connections and Illicit Discharges Elimination (Non-stormwater Discharges Oversight)

- Significant Difference(s)
 - Elimination of illicit connection screening for all storm water pipes of a given size.
 - Use of field sampling/monitoring to identify potential ICs/IDs
 - Identification of Priority Areas and stations within the priority areas
 - Development of a protocol to eliminate ICs/IDs

Minimum Control Measure- New Development and Redevelopment

- Key Objective: Minimize the impacts of development and significant re-development projects on water quality and hydrology.
- Key Requirements
 - On-site retention of the storm water runoff volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater.
 - Off-site mitigation required where on-site retention is technically infeasible.
 - Development of a prioritized list of off-site mitigation projects

Minimum Control Measure – Public Agency Activities Program

- Key Objective: Minimize storm water pollution impacts from permittee owned or operated facilities and activities.
- Key Requirements
 - Maintain an inventory and map of all Permittee-owned or operated facilities.
 - Implement activity specific BMPs (such as catch basin cleaning, open channel maintenance, street sweeping, and appropriate pesticide application)
 - Training of employees and contractors.

Minimum Control Measure- New Development and Redevelopment

- Significant Difference(s)
 - On-site retention of the storm water runoff volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater.
 - Treatment BMPs would only be allowed in the form of biofiltration (only when infiltration is technically infeasible).
 - The allowance of subwatershed/regional BMPs in lieu of on-site BMPs

Minimum Control Measure- New Development and Redevelopment

Interim Hydromodification.
(Sites < 50 acres)

- Applies to "Natural Drainage Areas"
- Requirements
 - On-site retention of the volume of runoff from the 95th percentile, 24-hour storm, or
 - BMP implementation to ensure the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event.
 - The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study

Minimum Control Measure - Public Information and Participation Program

- Key Objective: To measurably increase the knowledge of the target audience about the adverse impacts of storm water pollution and change the waste disposal and storm water pollution generation behavior of target audiences.
- Key Requirements
 - Watershed-wide reporting hotline
 - Storm water pollution prevention advertising campaign
 - Distribution of outreach materials
 - Conduct storm water pollution prevention public service announcements
 - Provide schools within each school district in the watershed storm water pollution prevention materials

Minimum Control Measure- New Development and Redevelopment

Interim Hydromodification
(Sites > 50 acres)

- Applies to "Natural Drainage Areas"
- Requirements
 - On-site project infiltration of at least the runoff from a 2-year, 24-hour storm event, or
 - BMP implementation to ensure the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event. These conditions must be substantiated by hydrologic modeling acceptable to the Permittee, or
 - The Erosion Potential (Ep) in the receiving water channel <1.

Storm Water Management Program: Minimum Control Measures (Flexibility)

- Substitution Process
 - Specific Permit Requirements
 - Individual Plan review
- Equivalency Demonstration

Minimum Control Measure- New Development and Redevelopment

Interim Hydromodification

- Significant Difference(s)
 - The inclusion of very specific and detailed hydromodification requirements

LA County MS4 Permit Reissuance December 15, 2011 Workshop

Part II: Regulation of
Non-Stormwater Discharges

Background

- Permittees must effectively prohibit non-stormwater discharges into separate storm sewers
- Some exemptions allowed
 - Discharges covered under an NPDES permit
 - Categorical exemptions (conditionally allowed)
- Illicit Discharge Detection and Elimination (IDDE) Program required

Background (cont.)

- Order No. 01-182
 - Includes non-stormwater discharge prohibition
 - Includes list of exempted non-stormwater discharges
 - Discharges covered under an NPDES permit
 - Discharges resulting from natural flows (Category A)
 - Discharges from emergency fire fighting (Category B)
 - Discharges incidental to urban activities (Category C)
 - Includes IDDE program requirements
 - Requires dry-weather monitoring at mass emission stations

Evaluation of Current Approaches

- IDDE program effectiveness
 - Review of annual reports
 - Inspections
- Results of dry-weather monitoring data from mass emission stations (MES)
 - Based on annual reports from 2005 to 2011
 - Provides 15 dry-weather data sets for each MES

Results of Recent IDDE Program Inspections

- Widespread presence of persistent dry weather flows
- Little done to identify the source(s) and characteristics
- No program in place to address these persistent flows

Evaluation of Dry-Weather Monitoring Data

- Used to evaluate effectiveness of programs to prohibit non-stormwater discharges
- Used to make preliminary determination regarding whether reasonable potential exists for non-stormwater discharges from the MS4 to contribute to WQS exceedances during dry weather

MES Dry-Weather Data (2005-2011): Exceedances of WQS

Parameter	Santa Clara River	Los Angeles River	Dominguez Channel	Ballona Creek	Malibu Creek	San Gabriel River	
						Upper Portion	Lower Portion
Total Coliform	√	√	√	√	√	√	√
Fecal Coliform	√	√	√	√	√	√	√
Enterococcus	√	√	√	√	√	√	√
Chloride	√	√	√	√	√	√	√
Nitrate				√			
Sulfate					√	√	√
Total Dissolved Solids	√	√	√	√	√	√	√
Methylene Blue Active Substances	√						
Cyanide		√	√	√		√	√
Total Aluminum	√		√	√		√	
Dissolved Copper			√	√		√	
Total Copper	√	√	√	√		√	
Dissolved Lead				√		√	
Total Lead			√	√		√	
Total Mercury		√				√	
Total Nickel						√	
Dissolved Selenium	√	√		√	√		√
Total Selenium	√	√	√	√	√	√	√
Dissolved Zinc						√	
Total Zinc				√		√	

Summary of Evaluation

- Non-stormwater discharges from the MS4 are routinely observed
- Water quality at MES indicates frequent and widespread exceedances of WQS during dry-weather
- Some exempted categories of non-stormwater discharges and some permitted non-stormwater discharges cause concerns

Proposed Enhancements - 1

- Refine list of conditionally exempted non-stormwater discharges
 - Include more specific discharge conditions
 - Potentially remove several currently exempted discharges (e.g., landscape irrigation)
 - Evaluate general permits for some exempted discharges

Proposed Enhancements - 2

- Incorporate non-stormwater action levels as interim approach
- Uses:
 - To evaluate effectiveness of programs to prohibit non-stormwater discharges
 - To trigger actions to identify and address non-stormwater discharges
 - To determine reasonable potential for non-stormwater discharges from the MS4 to contribute to WQS exceedances during dry weather

Non-stormwater Action Levels (cont.)

- Based on water quality objectives
- Included for inland and shoreline discharges
- Established for pollutants showing reasonable potential based on MES data; additional pollutants of concern
- Applied to major outfalls within each watershed management area
- Outfall based monitoring required to assess attainment/exceedance of action levels

Non-stormwater Action Levels (cont.)

- Exceedance indicates potential lack of compliance with requirement to effectively prohibit non-stormwater discharges
- Exceedance triggers requirement to investigate source(s)
- Required response by Permittee(s) depends on source
 - Illicit discharge = Eliminate
 - Exempted category = Re-evaluate
 - Discharges violating NPDES permit = Report to Regional Water Board
 - Unknown or natural source = Additional monitoring and evaluations, and program changes as necessary

Proposed Enhancements - 3

- Refine IDDE Program
 - Develop and implement dry-weather outfall screening program
 - Identify priority areas based on non-stormwater action levels
 - Conduct source investigations
 - Implement targeted procedures to address illicit connections/illicit discharges

Conclusion

- Three areas of enhancement to improve regulation of non-stormwater discharges
 - Refine list of conditionally exempted non-stormwater discharges
 - Incorporate non-stormwater action levels
 - Refine IDDE Program

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Industrial/Commercial Storm Water Sources

<p>Primary Objectives:</p>	<ul style="list-style-type: none"> Identify and track industrial/commercial facilities which may be critical sources of storm water pollution to the MS4. Educate and raise storm water awareness of industrial/commercial facility employees to ultimately change behaviors that will reduce pollutant discharges to the MS4. Ensure the implementation of BMPs at industrial/commercial facilities to reduce the contribution of pollutants to storm water from industrial/commercial activities and materials storage. Increase the detection of illicit discharges and connections to the MS4 from industrial/commercial facilities. Minimize the occurrence of illicit discharges and connections to the MS4 from industrial/commercial facilities.
-----------------------------------	---

<p>Legal Authorities:</p>	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)(A) and (C)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
----------------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
General	Ensure implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water.	Draft April 2011 LA County and Ventura County MS4 Permits	
Track	Maintain an updated watershed-based inventory or database of all industrial and commercial facilities within the jurisdiction that are critical sources of storm water pollution. Incorporate this information into GIS.	Draft April 2011 LA County and Ventura County MS4 Permits	
Track	This permit requirement lists the specific information which must be included in the inventory or database of critical sources.	Draft April 2011 LA County and Ventura County MS4 Permits	
Track	Update the inventory or database of critical sources at least annually.	Draft April 2011 LA County and Ventura County MS4 Permits	
Inspect	Inspect all commercial facilities identified by the Permit twice during the 5-year term of the Order, with the first mandatory compliance inspection within 2 years after Order adoption date. This permit requirement includes subsections that detail inspection and BMP requirements for different types of facilities, such as, (1)	Ventura County MS4 Permit	

	restaurants, (2) automotive service facilities, (3) retail gasoline outlets and automobile dealerships, and (4) commercial nurseries and nursery centers.		
Inspect	Conduct compliance inspections at industrial facilities identified by the Permit. Initial inspection must be within 2 years after Order adoption date. Conduct follow-up inspections at 20 percent of non-exposure facilities each year after the initial inspections are complete.	Ventura County MS4 Permit	
Inspect	During each inspection, confirm that each operator has a current WQID number, has a No Exposure Certification, if applicable, and is effectively implementing BMPs for the reduction of pollutants in storm water discharges from the facility or maintaining a condition of no exposure of industrial activities to storm water, if applicable.	Ventura County MS4 Permit	
Ensure Compliance	Ensure BMP implementation of the source control BMPs identified in the <i>CASQA Industrial and Commercial BMP Handbook</i> .	Ventura County MS4 Permit	
Ensure Compliance	Ensure implementation of additional pollutant-specific controls for critical sources that discharge to MS4s that directly discharge to ESAs or to CWA § 303(d) listed impaired waterbodies.	Ventura County MS4 Permit	
Ensure Compliance	Implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period, as specified in the Permit.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	A Permittee may refer a violation(s) of its municipal storm water ordinances and California Water Code § 13260 by Industrial and Commercial facilities to the Regional Water Board provided that the Permittee has conducted and documented at least two follow-up inspections and two warning letters or notices of violation.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	For facilities in violation of municipal storm water ordinances and subject to the Industrial Activities Storm Water General Permit (IASGP), Permittees may escalate referral of such violations to the Regional Water Board (promptly via telephone or electronically) after one inspection and one written notice of violation.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	Initiate, within one business day of complaint transmittal by the Regional Water Board, investigation of complaints (other than non-storm water discharges to the MS4) from facilities.	Draft April 2011 LA County and Ventura County MS4 Permits	
Interagency Coordination	Provide assistance to the Regional Water Board for enforcement actions, as directed by the Regional Water Board Executive Officer.	Draft April 2011 LA County and Ventura County and Ventura

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues
Minimum Control Measure – Development Construction Program

<p>Primary Objectives:</p>	<ul style="list-style-type: none"> Prevent illicit construction-related discharges of pollutants into the MS4. Ensure that structural and non-structural BMPs are implemented and maintained. Reduce discharge of pollutants from construction sites to the MEP. Minimize the potential for sediment discharges from construction activities to impact sensitive receiving waterbodies. Minimize soil compaction during construction activities to preserve the highest potential for infiltration of post-construction storm water.
<p>Legal Authority:</p>	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)(D)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
<p>Category Purpose</p>	<p>Description of Requirement</p> <p>Each Permittee shall implement a construction program that prevents illicit construction-related discharges of pollutants into the MS4, implements and maintains structural and non-structural BMPs to reduce pollutants in storm water runoff from construction sites, reduces construction site discharges of pollutants from the MS4 to the MEP, and prevents construction site discharges from the MS4 from causing or contributing to a violation of water quality standards.</p>
<p>Applicability</p>	<p>Origin of Requirement</p> <p>Ventura County MS4 Permit</p> <p>Contractor, with language from the State Water Board Construction General Permit (CGP)</p>
<p>Inventory/Electronic Tracking System</p>	<p>Ventura County MS4 Permit</p> <p>SWRCB's Draft Small MS4s General Permit</p>
<p>Notes</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>requirement, the use of a database or GIS system is encouraged, but not required.</p> <p>The tracking system shall contain the following information:</p> <ul style="list-style-type: none"> (a) Relevant contact information for each project (e.g., name, address, phone, email, etc. for the owner and contractor), (b) The basic site information including location, status, size of the project and area of disturbance, (c) The proximity all water bodies, water bodies listed as impaired by sediment-related pollutants, and water bodies for which a sediment-related TMDL has been adopted and approved by USEPA, (d) Significant threat to water quality status, based on consideration of factors listed in Appendix 1 to the State Water Board's Constructin General Permit (CGP), (e) Current construction phase. (f) The required inspection frequency, (g) The project start and anticipated completion dates, (h) Whether the project has coverage under the State Water Board's CGP, (i) The date the Permittee approved the erosion and sediment control plan (j) Post-Construction Structural BMPs subject to Operation and Maintenance Requirements. 	<p>Contractor recommends the addition of Post-Construction BMPs to the tracking system for continuity between Construction and Post-Construction Phases.</p>	
<p>Plan Review and Approval Procedures</p>	<p>Prior to issuance of a grading or building permit, the operator shall submit the Erosion and Sediment Control Plan (ESCP) prior to the disturbance of land for the Permittee's review and written approval. The construction site operator shall be prohibited from commencing construction activity prior to receipt of written approval.</p>	<p>SWRCB's Draft Small MS4s General Permit</p>	
<p>Criteria for Review</p>	<p>The ESCP must include the elements of a Storm Water Pollution Prevention Plan (SWPPP). Controls must be consistent with the applicable California Stormwater Quality Association (CASQA) Best Management Practices Handbooks (or Caltrans Handbooks for public transportation related construction projects) and tailored to the risks posed by the project. Projects are ranked from Low Risk</p>	<p>Ventura County MS4 Permit SWRCB's Draft Small MS4s General Permit and the CGP</p>	

Category	Description of Requirement	Origin of Requirement	Notes
<p>Required Elements of the ESCP/SWPPP</p> <ul style="list-style-type: none"> • At a minimum, the ESCP/SWPPP must address the following elements: <ul style="list-style-type: none"> • Scheduling--soil disturbance activities shall be scheduled for completion during the dry weather season to the extent feasible, • Methods to minimize the footprint of the disturbed area and to prevent soil compaction outside of the disturbed area, • Methods used to protect native vegetation and trees, • Sediment/Erosion Control, • Controls to prevent tracking on and off the site, • Non-storm water controls (e.g., vehicle washing, dewatering, etc.), • Materials Management (delivery and storage), • Spill Prevention and Control • Waste Management (e.g., concrete washout/waste 	<p>(Risk 1) to High Risk (Risk 3). Project risks are calculated based on the potential for erosion from the site and the sensitivity of the receiving waterbody. Receiving waterbodies that are listed on the Clean Water Act (CWA) Section 303(d) list for sediment or siltation are considered high risk. Likewise, waterbodies with designated beneficial uses of SPWN, COLD, and MIGRATORY are also considered to be high risk. The combined (sediment/receiving water) site risk may be calculated using the methods provided in Attachment 1 of the State Water Board's CGP.</p> <p>Applicable BMP controls for projects of different sizes are referenced in Tables VI.C.10-A, B, and C of this order.</p> <p>Applicable BMPs for enhanced requirements for high-risk sites are referenced in Table VI.C.10-D. of this order.</p> <p>Applicable BMPs for paving projects are described in Table VI.C.10-E. of this order.</p>	<p>Ventura County MS4 Permit</p> <p>SWRCB's Draft Small MS4s General Permit and CGP</p> <p>Contractor recommends limitations on soil disturbance during wet weather, minimizing footprint of the disturbed area and protection of native vegetation and trees.</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	<p>management; sanitary waste management),</p> <ul style="list-style-type: none"> Rain Event Action Plan (REAP) when soil disturbance activities will be conducted during the wet-weather season. 		
Rationale for Selection and Design of BMPs	The ESCP/SWPPP must include the rationale for the selection and design of the proposed BMPs including quantifying the expected soil loss from different BMPs.	Ventura County MS4 Permit and the SWRCB's Draft Small MS4s General Permit	
Certification	<p>(A) Each Permittee shall require that for projects disturbing 1 acre or more, the ESCP/SWPPP is developed and certified by a Qualified SWPPP Developer (QSD).</p> <p>(B) Each Permittee shall require that all structural BMPs be designed by a California licensed engineer.</p> <p>(C) Each Permittee shall require that for all projects, the landowner or the landowner's agent sign a statement on the Local ESCP/SWPPP to the effect:</p> <p><i>"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/or adequately implement the ESCP/SWPPP may result in revocation of grading and/or other permits or other sanctions provided by law."</i></p>	<p>State Water Board CGP</p> <p>Ventura County MS4 Permit</p>	
Confirming Coverage under Other Permits	Prior to issuing a grading or building permit, the Permittee shall verify that the construction site operators have existing coverage under applicable permits, including, but not limited to the State Water Board's CGP, State Water Board 401 Water Quality Certification, U.S. Army Corp 404 permit, and California Department	SWRCB's Draft Small MS4s General Permit	

Category	Description of Requirement	Origin of Requirement	Notes
ESCP/SWPPP Plan Review Checklist	<p>of Fish and Game 1600 Agreement.</p> <p>The Permittee shall develop a checklist to be used to conduct and document review of each ESCP/SWPPP.</p>	SWRCB's Draft Small MS4s General Permit	
Inspection Authority	<p>the Permittee shall use legal authority to implement procedures for inspecting public and private projects and conducting enforcement if necessary.</p>	SWRCB's Draft Small MS4s General Permit	
Inspection Frequency	<p>The Permittee shall inspect all phases of construction as follows:</p> <p>(1) Prior to Land Disturbance: Prior to allowing an operator to commence land disturbance, the Permittee shall perform an inspection to ensure all necessary erosion and sediment structural and non-structural BMP materials and procedures are available per the erosion and sediment control plan.</p> <p>(2) Grading and Land Development: During grading and land development activities, conduct inspections in accordance with the frequencies specified in Section VI.C.10-F of this Order.</p> <p>(3) Streets and Utilities: During street and utilities activities, conduct inspections in accordance with the frequencies specified in Table VI.C.10-F of this Order.</p> <p>(4) Vertical Construction: During vertical construction activities, conduct inspections in accordance with the frequencies specified in Table VI.C.10-F of this Order.</p> <p>(5) Final Landscaping and Site Stabilization: At the conclusion of the project, the Permittee shall inspect 10% of all projects to ensure that all graded areas have reached final stabilization and that all trash, debris, and construction materials, and temporary erosion and sediment BMPs are removed.</p>	SWRCB's Draft Small MS4s General Permit	
Inspection Procedures	<p>The Permittee shall develop, implement, and revise as necessary, standard operating procedures that identify the inspection and enforcement procedures the Permittee will follow.</p> <p>Inspections of construction sites, and the standard operating procedures, shall include, but are not limited to:</p> <p>(1) Verification of active coverage under the State Water Board's CGP for projects disturbing 1 acre or more, or are part of a</p>	<p>SWRCB's Draft Small MS4s General Permit</p> <p>Contractor recommends sampling and analysis of storm</p>	

Category	Description of Requirement	Origin of Requirement	Notes
Enforcement Procedures	<p>planned development that will disturb 1 acre or more.</p> <p>(2) Review of the applicable ESCP/SWPPP and inspection of the construction site to determine whether all BMPs have been selected, installed, implemented, and maintained according to the approved plan.</p> <p>(3) Assessment of the appropriateness of the planned BMPs and their effectiveness.</p> <p>(4) Visual observation and record keeping of non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff.</p> <p>(6) Sampling and analysis of storm water runoff discharges from the property when visual observation indicates turbidity in the storm water discharge.</p> <p>(7) Development of a written or electronic inspection report generated from an inspection checklist used in the field</p> <p>(8) Tracking of the number of inspections for the inventoried construction sites throughout the reporting period to verify that the sites are inspected at the minimum frequencies required in Table VI.C.10-F of this Order.</p> <p>(1) Take all necessary follow-up actions (e.g., re-inspection, enforcement) to ensure compliance in accordance with the Permittee's Legal Authority and Enforcement Response Plan. At a minimum, follow-up inspections shall be conducted within 2 weeks after for inspected sites that have not adequately implemented their ESCP/SWPPP.</p> <p>(2) The Permittee shall track and report these follow-up inspections and enforcement actions.</p> <p>(3) Each Permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.</p> <p>(4) Each Permittee can refer sites to the Regional Water Board for joint enforcement actions for violation of municipal storm water ordinances and the CGP, after conducting a minimum of 2 site inspections and issuing a minimum of two written notices to the operator regarding the violation (copied to the</p>	<p>water discharge from the property when visual observation indicates turbidity.</p> <p>Ventura County MS4 Permit</p>	

Category	Description of Requirement	Origin of Requirement	Notes
Certificate of Occupancy	Regional Water Board. Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each Permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order.	Ventura County MS4 Permit	
Training of Permittee Staff	<p>Task Description – The Permittee shall ensure that all staff whose primary job duties are related to implementing the construction storm water program are adequately trained.</p> <p>Implementation Level – The Permittee may conduct in-house training or contract with consultants. Training shall be provided to the following staff positions of the MS4:</p> <p>(a) Plan Reviewers and Permitting Staff - Ensure staff and consultants are trained as qualified individuals, knowledgeable in the technical review of local erosion and sediment control plans and the key objectives of the State Water Board Qualified SWPPP Developer (QSD) program. Permittees may provide internal training to staff or require staff to obtain QSD certification.</p> <p>(b) Erosion Sediment Control/Storm Water Inspectors - The Permittee shall ensure that its inspectors are knowledgeable in inspection procedures consistent with the State Water Board sponsored program QSD or a Qualified SWPPP Practitioner (QSP) or ensure that a designated person on staff who has been trained in the key objectives of the QSD/QSP programs supervise inspection operations. Permittees may provide internal training to staff or require staff to obtain QSD/QSP certification.</p> <p>(c) Third-Party Plan Reviewers, Permitting Staff, and Inspectors - If the Permittee utilizes outside parties to conduct inspections and/or review plans, the Permittee shall ensure these staff are trained per the requirements listed above.</p>	SWRCB's Draft Small MS4s General Permit and collaboration between the Regional Water Board staff and the contractor.	
Education Outreach to Development Community	The Permittee shall develop and distribute educational materials to construction site operators. The Permittee shall do the following: (a) Each year, provide information on training opportunities for	SWRCB's Draft Small MS4s General Permit	

Los Angeles County MS4 Permit Development

Category	Description of Requirement	Origin of Requirement	Notes
	<p>construction operators on BMP selection, installation, implementation, and maintenance as well as overall program compliance</p> <p>(b) Develop or utilize existing outreach tools (i.e. brochures, posters, etc.) aimed at educating construction operators on appropriate selection, installation, implementation, and maintenance of storm water BMPs, as well as overall program compliance.</p> <p>(c) Distribute appropriate outreach materials to all construction operators who will be disturbing land within the MS4 boundary. The Permittee's contact information and website shall be included in these materials.</p> <p>(d) Update the existing website to include information on appropriate selection, installation, implementation, and maintenance of BMPs, as well as overall program compliance.</p>

Stabilized Construction Entrance/Exit	TC-1	TC-1
Stabilized Construction Roadway	TC-2	TC-2
Entrance/Exit Tire Wash	TC-3	TC-3
Advanced Treatment Systems ¹		
Non-Storm Water Management		
Water Conservation Practices	NS-1	NS-1
Dewatering Operations (Groundwater dewatering only under NPDES Permit No. CAG994004)	NS-2	NS-2
Vehicle and Equipment Washing	NS-8	NS-8
Vehicle and Equipment Fueling	NS-9	NS-9
Vehicle and Equipment Maintenance	NS-10	NS-10
Waste Management		
Material Delivery and Storage	WM-1	WM-1
Stockpile Management	WM-3	WM-2
Spill Prevention and Control	WM-4	WM-4
Solid Waste Management	WM-5	WM-5

¹ Applies to public roadway projects.

Table VI.C.10-E-Minimum Required BMPs for Roadway Paving or Repair Operation (For Private or Public Projects)

1.	Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions.
2.	Install gravel bags and filter fabric or other equivalent inlet protection at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat.
3.	Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or receiving waters.
4.	Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt.
5.	Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.
6.	Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
7.	Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
8.	Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
9.	Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
10.	Minimize airborne dust by using water spray or other approved dust suppressant during grinding.
11.	Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or receiving waters.
12.	Protect stockpiles with a cover or sediment barriers during a rain.

Table IV.C.10-F. Inspection Frequencies

Site Risks	Inspection Frequency
a. All sites one (1) acre or larger that discharge to a tributary listed by the state as an impaired water for sediment or turbidity under the CWA § 303(d)	1) when two or more consecutive days with greater than 50% chance of rainfall are predicted by NOAA ¹ and 2) within 48 hours of a ½-inch rain event and at least once every two weeks
b. Other sites one (1) acre or more determined to be a significant threat to water quality.	
c. All other construction sites with one (1) acre or more of soil disturbance not meeting the criteria above	At least monthly
d. Construction sites less than one (1) acre in size	As needed based on the evaluation of the factors that are a threat to water quality
A follow-up inspection shall take place within two weeks for inspected sites that have not adequately implemented the ESCP/SWPPP.	
*In evaluating the threat to water quality, the following factors shall be considered: soil erosion potential; site slope; project size and type; sensitivity of receiving water bodies; proximity to receiving water bodies; non-storm water discharges; past record of non-compliance by the operators of the construction site; and any water quality issues relevant to the particular MS4.

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues
Minimum Control Measure – Illicit Connections and Illicit Discharges Detection and Elimination Program (IC/ID)

Primary Objectives:	<ul style="list-style-type: none"> Gain an understanding of the MS4 and possible sources of pollution to the MS4 through mapping activities and to provide a tool to track or trace illicit discharges. Minimize the occurrence of illicit discharges and connections to the MS4. Increase the detection of illicit discharges and connections to the MS4 which do occur and eliminate them as needed. Document sufficient information to demonstrate the effectiveness of the IC/ID program.
----------------------------	---

Regulatory Authority:	Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))
------------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
General	Continue to implement an IC/ID Program to detect, investigate, and eliminate IC/IDs to the storm drain system.	Draft April 2011 LA County and Ventura County MS4 Permits	
General	Ensure that the Permittee has adequate legal authority to prohibit IC/IDs to the storm drain system and enable enforcement capabilities to eliminate the source of IC/IDs.	Draft April 2011 LA County and Ventura County MS4 Permits	
General	The IC/ID Program must consist of at least the following major components: <ol style="list-style-type: none"> An up-to-date storm sewer system map (see Part X) Procedures for identifying priority areas within the MS4 likely to have IC/IDs, and a list of all such areas identified in the system (see Part X) Procedures for field screening to detect IC/IDs (see part X) Procedures for conducting source investigations for IC/IDs (see Part X) Procedures for eliminating the source of IC/IDs (see Part X) Spill response plan (see Part X) IC/ID education and training for Permittee staff (see Part X) 	Draft April 2011 LA County and Ventura County MS4 Permits and SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide.	

Category	Description of Requirement	Origin of Requirement	Notes
Mapping	<p>Develop and maintain an up-to-date, accurate map of the MS4. If possible, the map should be maintained in GIS. The map must include at least, the following:</p> <ol style="list-style-type: none"> (1) MS4 outfalls (2) Drainage areas contributing to those outfalls (3) The location and length of underground storm drain pipes 18 inches and greater in diameter (4) The location and length of open stormwater channels (5) Priority areas (6) Receiving waters (7) Field screening stations (8) Dry weather diversions 	<p>Draft April 2011 LA County and Ventura County MS4 Permits and SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide</p>	
Priority Areas	<p>Identify priority areas in the MS4 and include them on the MS4 map. The Permit defines specific types of areas which must be identified as priority areas and requires that at least 20 percent of the system be identified as a priority area. The list of priority areas must be evaluated yearly to determine whether areas should be added or removed from the list.</p>	<p>Draft April 2011 LA County and Ventura County MS4 Permits and SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide</p>	
Field Screening	<p>Develop and implement a Dry Weather Field Screening and Analytical Monitoring Program to detect and eliminate IC/IDs.</p>	<p>SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide</p>	
Field Screening	<p>Document how the Dry Weather Field Screening and Analytical Monitoring Program will be implemented with written procedures. Procedures must be updated to reflect current program.</p>	<p>SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide</p>	
Field Screening	<p>Identify a minimum of [specify number] stations within the priority areas it identified in Part X at which field observations, field screening monitoring and analytical monitoring will take place. This list should be updated annually in concert with the evaluation of priority areas.</p>	<p>SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide</p>	
Field Screening	<p>Conduct dry weather field observations and field screening</p>	<p>SWRCB's Draft Small</p>	

Category	Description of Requirement	Origin of Requirement	Notes
	monitoring at each station identified above at least once per year.	MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Field Observations - Visually observe each identified station and document the observations in either hardcopy and/or electronic format.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Field Screening Monitoring Requirements - Conduct a field screening analysis for the following constituents: XX, XX, XX, XX, and XX. Samples must be collected and analyzed consistent with the procedures required by 40 CFR Part 136	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Conduct sampling of flow or ponded runoff if observed at a field screening station and there has been at least seventy-two (72) hours of dry weather prior to the observation.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Field Screening	Conduct an annual evaluation of the Dry Weather Field Screening and Analytical Monitoring Program to determine whether changes or updates are needed. Make changes as necessary.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Illicit Discharge Investigation & Elimination	Develop written procedures for conducting investigations to identify the source of all illicit discharges, including procedures to eliminate the discharge once the source is located.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Illicit Discharge Investigation & Elimination	Conduct an investigation(s) to identify and locate the source of any continuous or intermittent non-stormwater discharge within 48 hours of becoming aware of the illicit discharge. Part VI.C.12.e.iii specifies conditions which must be met for conducting the investigations.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Illicit Discharge Investigation & Elimination	Corrective Action to Eliminate Illicit Discharges – Once the source of the illicit discharge has been determined, the Permittee must immediately notify the responsible party of the problem, and require the responsible party to conduct all necessary corrective actions to eliminate the non-stormwater discharge within 48 hours of notification. The Permittee must formally verify and document.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
Illicit Connection Investigation & Elimination	that the illicit discharge has been eliminated. Conduct screening for illicit connections to the MS4. The Permit outlines an implementation schedule for this activity.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Maintain a list containing all connections under investigation for possible illicit connection and their current status.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Upon discovery or upon receiving a report of a suspected illicit connection, complete an investigation within 21 days.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Upon confirmation of an illicit storm drain connection, ensure that the connection is eliminated within 180 days of completion of the investigation, using its formal enforcement authority, if necessary, to eliminate the illicit connection.	Ventura County MS4 Permit	
Illicit Connection Investigation & Elimination	Formal records must be maintained for all illicit connection investigations and the formal enforcement taken to eliminate illicit connections.	Ventura County MS4 Permit	
Public Reporting	Promote, publicize, and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into	Ventura County MS4 Permit and	

Category	Description of Requirement	Origin of Requirement	Notes
Public Reporting	Develop and maintain written procedures that document how complaint calls are received, documented, and tracked to ensure that all complaints are adequately addressed. Evaluate procedures annually and make changes as necessary.	EPA Permit Improvement Guide	
Public Reporting	Maintain documentation of the complaint calls and record the location of the reported spill or IC/ID and the actions undertaken in response to all IC/ID complaints.	Draft April 2011 LA County and Ventura County MS4 Permits and EPA Permit Improvement Guide	
Spill Response	Develop a written spill/dumping response procedure, and a flow chart or phone tree, or similar list for internal use; that shows the procedures for responding to public notices of illicit discharges, the various responsible agencies and their contacts, and who would be involved in illicit discharge incidence response, even if it is a different entity other than the Permittee.	EPA Permit Improvement Guide	
Education & Training	Continue to implement a training program regarding the identification of IC/IDs for all municipal field staff and contractors, who, as part of their normal job responsibilities (e.g., street sweeping, storm drain maintenance, collection system maintenance, road maintenance), may come into contact with or otherwise observe an illicit discharge or illicit connection to the storm sewer system. Training program documents must be available for review by the permitting authority.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Education & Training	Training program should address, at a minimum, the following: (1) IC/ID identification, (2) investigation, (3) elimination, (4) cleanup, (5) reporting, and (6) documentation.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	
Education & Training	Create a list of applicable staff which require IC/ID training and ensure that training is provided at least annually. Maintain documentation of the training activities.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
Education & Training	New Permittee staff members must be provided with IC/ID training within six months of starting employment.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues

Minimum Control Measure – Public Agency Activities Program

<p>Primary Objectives:</p>	<ul style="list-style-type: none"> Minimize storm water pollution impacts from permittee owned or operated facilities and activities. Develop, deploy, and ensure ongoing operation and maintenance of BMPs for facilities, activities, and staff. Train public employees on the need for, use, and maintenance of BMPs.
<p>Legal Authority:</p>	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)) Regulations addressing structural and source control measures to reduce pollutants from runoff (40 CFR §122.26(d)(2)(i)(A)(1),(3),(5),and(6)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B))

Category	Description of Requirement	Origin of Requirement	Notes
General	Implement a Public Agency Activities Program to minimize storm water pollution impacts from Permittee-owned or operated facilities and activities.	Ventura County MS4 Permit	
Public Construction Activities Management	Implement and comply with the Planning and Land Development Program requirements in Part X of this Order.	Ventura County MS4 Permit	
Public Construction Activities Management	Implement and comply with the appropriate Development Construction Program requirements in Part X of this Order.	Ventura County MS4 Permit	
Public Construction Activities Management	Projects that disturb less than one acre of soil shall require the development and implementation of a Storm Water Pollution Control Plan (SWPCP).	Ventura County MS4 Permit	
Public Construction Activities Management	Obtain separate coverage under the CASGP or Small LUP General Permit for all Permittee-owned or operated construction sites that require coverage.	Ventura County MS4 Permit	
Public Facility Inventory	Maintain an updated watershed-based inventory and map of all Permittee-owned or operated facilities within its jurisdiction that are potential sources of storm water pollution. The incorporation of facility information into a Geographical Information System (GIS) is required.	SWRCB's Draft Small MS4s General Permit and EPA Permit Improvement Guide	

Category	Description of Requirement	Origin of Requirement	Notes
Public Facility Inventory	Include the following minimum fields of information for each Permittee-owned or operated facility in its watershed-based inventory and map.	Ventura County MS4 Permit	
Public Facility Inventory	Update its inventory and map at least annually.	Ventura County MS4 Permit	
Public Agency Facility and Activity Management	Obtain separate coverage under the IASGP for all Permittee-owned or operated facilities where industrial activities are conducted that require coverage under the IASGP.	Ventura County MS4 Permit	
Public Agency Facility and Activity Management	Implement and maintain the general and activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities) when such activities occur at Permittee-owned or operated facilities and field activities or that have the potential to discharge pollutants in storm water.	Ventura County MS4 Permit	
Public Agency Facility and Activity Management	Any contractors hired by the Permittee to conduct Public Agency Activities (e.g., municipal maintenance) shall be contractually required to implement and maintain the general and activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities). Conduct oversight of contractor activities to ensure these BMPs are implemented and maintained.	Ventura County MS4 Permit and EPA Permit Improvement Guide (for inclusion of contractors)	
Vehicle and Equipment Washing	Implement and maintain the activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities) for all vehicle and equipment washing.	Ventura County MS4 Permit	
Vehicle and Equipment Washing	Eliminate all existing discharges of wash waters from vehicle and equipment washing.	Ventura County MS4 Permit	
Vehicle and Equipment Washing	Ensure that any municipal facilities constructed, redeveloped, or replaced shall prohibit discharges to the MS4 for all vehicle and equipment wash areas.	Ventura County MS4 Permit	
Landscape, Park, and Recreational Facilities Management	Implement and maintain the activity specific BMPs listed in Table x (BMPs for Public Agency Facilities and Activities) for all landscape, park, and recreational facilities and activities.	Ventura County MS4 Permit	
Landscape, Park, and Recreational Facilities Management	Implement Integrated Pest Management (IPM) Program.	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
Landscape, Park, and Recreational Facilities Management	Implement additional the following requirements: 1. Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ) (Vector Control) and Order No. 2004-0009-DWQ (Weed Control). 2. Consistency with the State Board's guidelines and monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2001-12 DWQ). 3. Use a standardized protocol for the routine and non-routine application of pesticides and fertilizers. 4. Ensure there is no application of pesticides or fertilizers immediately prior to, during, or immediately after a rain event, or when water is flowing off the area where the application is to occur. 5. Ensure that no banned or unregistered pesticides are stored or applied. 6. Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category. 7. Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs 8. Store pesticides and fertilizers indoors or under cover on paved surfaces, or use secondary containment.	Ventura County MS4 Permit and Inclusion of Aquatic Pesticide Orders and Guidance	
Storm Drain Operation and Maintenance (General)	1. Implement and maintain the activity specific BMPs listed in Table X (BMPs for Public Agency Facilities and Activities) for storm drain operation and maintenance. 2. Ensure that all material removed from the storm drain system does not reenter the system. Solid material shall be dewatered in a contained area and liquid material shall be disposed in accordance with approved measures.	Ventura County MS4 Permit and EPA Permit Improvement Guide for Item 2	

Category	Description of Requirement	Origin of Requirement	Notes
Storm Drain Operation and Maintenance (Catch Basin Prioritization)	<p>Designate catch basin inlets within its jurisdiction as one of the following:</p> <p><u>Priority A:</u> Catch basins that are designated as consistently generating the highest volumes of trash and/or debris.</p> <p><u>Priority B:</u> Catch basins that are designated as consistently generating moderate volumes of trash and/or debris.</p> <p><u>Priority C:</u> Catch basins that are designated as generating low volumes of trash and/or debris.</p> <p>Submit a map or list of Catch Basins with their GPS coordinates and their priority designations. The map or list shall contain the rationale or data to support designations.</p>	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Catch Basin Inspection and Cleaning)	<p>In areas that are not subject to a trash TMDL, inspect catch basins according to the following schedule:</p> <p><u>Priority A:</u> A minimum of 3 times during the wet season (October 1 through April 15) and once during the dry season every year.</p> <p><u>Priority B:</u> A minimum of once during the wet season and once during the dry season every year.</p> <p><u>Priority C:</u> A minimum of once per year.</p> <p>Catch basins shall be cleaned as necessary on the basis of inspections. At a minimum, ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out.</p> <p>Maintain inspection and cleaning records for Regional Water Board review.</p>	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Catch Basin Inspection and Cleaning)	<p>In areas that are subject to a trash TMDL, continue to implement the requirements listed below until trash TMDL implementation measures are adopted. Thereafter, implement programs in conformance with the TMDL implementation schedule, which shall include an effective combination of measures such as street sweeping, catch basin cleaning, installation of treatment devices and trash receptacles, or other BMPs. Default requirements include:</p>	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
	<ol style="list-style-type: none"> 1. Inspection and cleaning of all catch basins a minimum of 3 times during the wet season (October 1 through April 15) and once during the dry season every year; 2. For any catch basin that is found to be \geq 40% full of trash and/or debris during an inspection; the inspection and cleaning frequency shall be increased to 4 times during the wet season and once during the dry season every year; 3. Record keeping of catch basins cleaned, demonstrating that all required catch basin cleaning has been conducted; and 4. Recording of the overall quantity of catch basin waste collected. 		
Storm Drain Operation and Maintenance (Trash Management at Public Events)	<p>Require the following measures for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, including events located in areas that are subject to a trash TMDL:</p> <ol style="list-style-type: none"> 1. Proper management of trash and litter generated; and 2. Arrangement for temporary screens to be placed on catch basins; or 3. Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Trash Receptacles)	<ol style="list-style-type: none"> 1. Install trash receptacles, or equivalent trash capturing devices in areas that are subject to a trash TMDL, and all other areas subject to high trash generation within its jurisdiction; 2. Ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Catch Basin Labels)	<ol style="list-style-type: none"> 1. Inspect the legibility of the stencil or label nearest each inlet prior to the wet season every year. 2. Record all catch basins with illegible stencils and re-stencil or re-label within 15 days of inspection. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Additional Trash)	Install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water in areas defined as Priority A or B. Criteria and	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
Storm Drain Operation and Maintenance (Storm Drain Maintenance)	<p>corresponding exceptions for flooding and alternatives BMPs are included.</p> <p>Implement a program for Storm Drain Maintenance includes the following:</p> <ol style="list-style-type: none"> 1. Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually. 2. Remove trash and debris from open channel storm drains a minimum of once per year before the wet season. 3. Eliminate the discharge of contaminants during MS4 maintenance and clean outs. 4. Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of. 	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Spill Response)	Each Permittee which owns and /or operates a sanitary sewer system that requires coverage under the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (Order No. 2006-0003-DWC), shall comply with the provisions and the monitoring requirements associated with this Order.	Ventura County MS4 Permit	
Storm Drain Operation and Maintenance (Permittee Owned Treatment Control BMPs)	<ol style="list-style-type: none"> 1. Implement an inspection and maintenance program for all Permittee owned treatment control BMPs, including post-construction treatment control BMPs. 2. Ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs. 3. Implement BMPs for all residual water produced by a treatment control BMP and not being internal to the BMP performance. 	Ventura County MS4 Permit	
Streets, Roads, and Parking Facilities Maintenance (Prioritization)	<p>Designate streets and/or street segments within its jurisdiction as one of the following:</p> <p><u>Priority A:</u> Streets and/or street segments that are designated as consistently generating the highest volumes of trash and/or debris.</p> <p><u>Priority B:</u> Streets and/or street segments that are designated as consistently generating moderate volumes of trash and/or debris.</p> <p><u>Priority C:</u> Streets and/or street segments that are designated as</p>	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
Streets, Roads, and Parking Facilities Maintenance (Street Sweeping)	<p>generating low volumes of trash and/or debris.</p> <p>Perform street sweeping of curbed streets according to the following schedule:</p> <p><u>Priority A:</u> Streets and/or street segments that are designated as Priority A shall be swept at least two times per month.</p> <p><u>Priority B:</u> Streets and/or street segments that are designated as Priority B shall be swept at least once per month.</p> <p><u>Priority C:</u> Streets and/or street segments that are designated as Priority C shall be swept as necessary but in no case less than once per year.</p>	Ventura County MS4 Permit	
Streets, Roads, and Parking Facilities Maintenance (Road Reconstruction)	Require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the BMPs in X (BMPs for Public Agency Facilities and Activities) and as specified in Part X (Development Construction Program) be implemented for each project.	Ventura County MS4 Permit	
Streets, Roads, and Parking Facilities Maintenance (Parking Facilities Maintenance)	Permittee-owned parking lots exposed to storm water shall be kept clear of debris and excessive oil buildup and cleaned using street sweeping equipment no less than 2 times per month and/or inspected no less than 2 times per month to determine if cleaning is necessary. In no case shall a Permittee-owned parking lot be cleaned less than once a month.	Ventura County MS4 Permit	
Emergency Procedures	<p>Each Permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order as follows:</p> <ol style="list-style-type: none"> 1. Providing an explanation of the circumstances, and the measures that were implemented to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed. 2. Minor repairs of essential public service systems and infrastructure in emergency situations (that can be completed in less than one day) are not subject to the notification provisions. 	Ventura County MS4 Permit	
Municipal Employee and Contractor Training	Train all of their employees and contractors in targeted positions on the requirements of the overall storm water management program	Ventura County MS4 Permit	

Category	Description of Requirement	Origin of Requirement	Notes
Municipal Employee and Contractor Training	to: 1. Promote a clear understanding of the potential for activities to pollute storm water. 2. Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work. Annually train all of their employees and contractors who use or have the potential to use pesticides or fertilizers to address: 1. The potential for pesticide-related surface water toxicity. 2. Proper use, handling, and disposal of pesticides. 3. Least toxic methods of pest prevention and control, including IPM. 4. Reduction of pesticide use.	Ventura County MS4 Permit	

DRAFT Core Permit Requirements – Table of Objectives, Elements, and Issues
Minimum Control Measure – Planning and Land Development Program

<p>Primary Objectives:</p>	<ul style="list-style-type: none"> Lessen the impacts of development and significant re-development projects on water quality and hydrology by designing projects to minimize the impervious area footprint and employing Low Impact Development (LID) design principles to mimic pre-development water balance through infiltration, evapotranspiration and re-use Minimize pollutant loadings through the use of properly designed, technically appropriate BMPs (including source control BMPs), LID strategies, and treatment control BMPs. Minimize the adverse impacts from storm water runoff on the biological integrity of natural drainage systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100). Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, safeguarding of environmentally sensitive areas, mixing of land uses (e.g., homes, offices, and shops), transit accessibility, and better pedestrian and bicycle amenities.
-----------------------------------	---

<p>Legal Authority:</p>	<ul style="list-style-type: none"> Requirements regarding proposed management program, covering minimum control measures to be included (40 CFR §122.26(d)(2)(iv)) Regulations addressing post-construction controls for new development and significant re-development (40 CFR §122.26(d)(2)(iv)(A)(2)) Regulations addressing illicit discharges and improper disposal (40 CFR §122.26(d)(2)(iv)(B)) Regulations addressing discharges by implementing and maintaining structural and non-structural best management practices to reduce pollutants in storm water runoff (40 CFR §122.26(d)(2)(iv)(D))
--------------------------------	---

Category	Description of Requirement	Origin of Requirement	Notes
<p>Purpose</p> <ul style="list-style-type: none"> Lessen the impact of new development and significant re-development on pollutant loading to receiving waterbodies. Minimize the hydromodification impacts on natural drainage systems. Provide criteria to ensure the effective design, operation and maintenance of LID and hydromodification control BMPs. 		<p>Ventura County MS4 Permit with modifications based on collaboration between the contractor, Regional Board staff and EPA.</p>	
<p>Applicability</p>	<p>Define new development and re-development projects that are subject to the requirements of Part X.</p>	<p>Ventura County MS4 Permit</p>	
<p>Performance Criteria</p>	<p>Except as provided for under Part X or X, new development and re-development projects must retain on-site the storm water runoff</p>	<p>Collaboration between the contractor,</p>	

<p>Performance Criteria for Infiltration</p>	<p>volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater.</p> <p>If it is not technically feasible to retain on-site the entire storm water runoff volume, the project must be designed and operated to biofiltrate 1.5 times the storm water runoff volume that cannot be retained on-site.</p> <p><u>Note:</u> The draft permit language does not restrict the percent effective impervious area (EIA). The draft permit encourages designs that minimize impervious surfaces because the storm water runoff volume is related to the amount of impervious surface.</p>	<p>Regional Board staff and EPA. The 85th percentile, 24-hour storm is the design storm used in recently-issued California MS4 permits. * A minimum requirement based on the 0.75 inch 24-hour storm is required in this permit to prevent backsliding from the previous permit.</p> <p>*The following permits include requirements to retain on-site the runoff volume from the 85th percentile design storm:</p> <ul style="list-style-type: none"> San Bernardino County MS4 Permit (Order No. R8-2010-0036) Riverside County in San Diego Region (Order No. R9-2010-0016). 	
	<p>The infiltration rate of soils decrease as the moisture content increases-- to the point of saturation. When calculating the infiltration rates of underlying soils, the Permittees will account for the infiltration loss considering the impact of increasing soil moisture using Horton's Equation or other means approved by the Executive Officer of the Los Angeles Regional Water Quality Control Board. Alternatively, the Permittee may assume that the soil is</p>	<p>Horton's Equation is referenced in the Energy Independence and Security Act (EISA) Technical Guidance Manual.</p> <p>The State Water</p>	

	<p>saturated and the minimum infiltration rate applies.</p>	<p>Resources Control Board developed a Post-Construction Water Balance Calculator spreadsheet for estimating the performance of LID elements. The calculator input assumes wet soil conditions and the minimum infiltration rate for the specified soil classification.</p>
<p>Design Criteria for Biofiltration</p>	<p>Bio-filtration BMPs shall be designed to accommodate the design flow at a surface loading rate no greater than 5 inches per hour and shall have a total volume, including pore spaces and pre-filter, detention volume, no less than the runoff volume generated by the design storm depth times 0.75. [Note: These design criteria are under review based on more recent information.]</p>	<p>Collaboration with the contractor, Regional Board staff and EPA. Similar to provisions in the San Diego Regional Board MS4 Permit for South Orange County (Order No. R9-2009-002).</p>
<p>Performance Criteria for Harvest and Re-use</p>	<p>If rainwater harvested for use in irrigation is to be credited toward the total volume of storm water runoff retained on-site, the Permittees must require that the project applicant to conduct a conservative (assuming reasonable worst-case scenarios) assessment of water demand during the wet season. This volume will be referred to as the "reliable" estimate of irrigation demand. The portion of water to be credited as retained on-site for re-use in irrigation may not exceed the reliable estimated irrigation demand during the wet season.</p>	<p>Collaboration with the contractor, Regional Board staff and EPA.</p>
<p>Alternative Compliance for Technical Infeasibility</p>	<p>Technical site constraints may preclude the use of infiltration LID measures and limit the ability to meet the Integrated Water Quality/Flow Reduction/Resources Management Criteria in Part X. The Permittees may allow projects that are unable to meet the</p>	<p>Ventura County MS4 Permit</p>

	<p>Integrated Water Quality/Flow Reduction/Resources Management Criteria in Part X to comply with this Order through the alternative compliance measures described in this section to encourage smart growth and infill development of existing urban centers where on-site compliance with post-construction requirements may be technically infeasible.</p>		
<p>Technical Infeasibility</p>	<p>Technical infeasibility may result from conditions including the following:</p> <ol style="list-style-type: none"> (1) Locations where seasonal high groundwater is within 5 to 10 feet of the surface (2) Locations within 100 feet of a groundwater well used for drinking water (3) Brownfield development sites or other locations where pollutant mobilization is a documented concern (4) Locations with potential geotechnical hazards (5) Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the on-site volume retention requirement. 	<p>Ventura County MS4 Permit with modifications to be consistent with municipal LID manuals. References to a Technical Guidance Manual have been deleted. The draft permit does not require the Permittees to develop a Technical Guidance Manual.</p>	
<p>Alternative Compliance Measures</p>	<p>When a Permittee finds that the project applicant has demonstrated technical infeasibility, after confirming that the project design minimizes the impervious area to the extent allowed by local zoning regulations and the project design incorporates all applicable LID BMPs including green roofs and rainfall harvest and re-use, and considering recommended protective buffers for riparian areas and environmentally sensitive areas, the Permittee shall require the applicant to provide off-site mitigation.</p> <p>The required off-site mitigation volume will be equal to 1.5 times the storm water volume runoff that cannot be retained on-site. The project applicant must perform off-site mitigation or provide sufficient funding for public or private off-site mitigation to achieve equivalent mitigation storm water volume reduction through infiltration, reuse, and/or evapotranspiration.</p> <p>The Permittees must develop a prioritized list of off-site mitigation projects, and when feasible, the mitigation must be directed to the highest priority mitigation project within the same drainage area as,</p>	<p>Ventura County MS4 Permit and collaboration between the contractor, the Regional Board staff and EPA.</p>	

Los Angeles County MS4 Permit Development

<p>Water Quality Mitigation Criteria</p>	<p>or the nearest downstream drainage from the proposed development or re-development.</p> <p>Off-site mitigation projects shall be completed as soon as possible, and at the latest, within 4 years of the certificate of occupancy for the first project that contributed funds toward the construction of the off-site mitigation project, unless a longer period is authorized by the Executive Officer of the Los Angeles Regional Water Quality Control Board.</p> <p>Applies when the project applicant has successfully demonstrated technical infeasibility to retain on-site the required storm water runoff volume. In addition to providing off-site mitigation, the project applicant must provide for effective treatment of the runoff from the project site.</p> <p>In addition to the requirements for controlling pollutant discharges as described above, the Permittee will ensure that the new development or re-development project will not cause the Permittee to exceed applicable wasteload allocations (WLAs) or fail to comply with Total Maximum Daily Load (TMDL) implementation plan requirements.</p>	<p>Ventura County MS4 Permit and collaboration between the contractor, the Regional Board and EPA.</p>	
<p>Hydromodification</p>	<p>Applies to natural drainage systems (to be defined). The goal of the hydromodification provisions is to preserve pre-development hydrology. The draft permit will provide interim hydromodification requirements. Final hydromodification requirements will be developed by the Permittees based on pending studies to be approved by the SWRCB.</p> <ul style="list-style-type: none"> The project is designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and reuse, the stormwater volume from the runoff of the 95th percentile, 24-hour storm, or The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event. 	<p>Ventura County MS4 Permit and collaboration with the contractor, Regional Board staff and EPA.</p>

Category	Description of Requirement	Origin of Requirement	Notes
Pollutant-specific Outreach	on storm water pollution. The Permittees shall coordinate to develop outreach programs that focus on the watershed-specific pollutants listed in Table 1.	Draft April 2011 LA County MS4 Permit	
Pollutant-specific Outreach	Each Permittee shall make outreach materials available to the general public and target audiences, such as schools, community groups, contractors and developers, and at appropriate public counters and events. Outreach material shall include information on pollutants of concern, sources, and source abatement measures.	Draft April 2011 LA County MS4 Permit	
Corporate Business Outreach	The Permittees shall consider working with other regional or statewide agencies and, associations such as the California Storm Water Quality Association (CASQA), to develop and implement a Corporate Outreach program to educate and inform corporate franchise operators and/or local facility managers about storm water regulations and BMPs.	Ventura County MS4 Permit	
Corporate Business Outreach	Once developed, the program shall consider targeting Retail Gasoline Outlets (RGO) franchisers, retail automotive parts franchisers, home improvement center franchisers and restaurant franchisers.	Ventura County MS4 Permit	
Business Assistance Program	The Permittees shall consider implementing a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The Permit specifies required components of the program.	Draft April 2011 LA County and Ventura County MS4 Permits	

City of Arcadia

Public Works Services Department

Tom Tait
Public Works Services Director

January 19, 2012

Ms. Francine Diamond, Chair
Los Angeles Regional Water Quality Control Board
320 West Fourth Street, Suite 200
Los Angeles, CA 90013

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Ms. Diamond:

The City of Arcadia operates a Community Water System (CWS), the Arcadia Water Department which are regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). The City also operates a Municipal Separate Storm Sewer System (MS4) through our Department of Public Works which is regulated under the Clean Water Act. Additionally, the City has a Fire Department which is regulated under the Government and Health and Safety Codes. Our goal is to provide our citizens the greatest protection against fire and flooding and a reliable and safe supply of water.

I am writing you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System (NPDES) permit. The MS4 permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of the upcoming changes to the Los Angeles County (LAC) MS4 permit. The Board Staff have indicated that there will be final draft of the permit as early as the end of February and that the Board plans on voting on the permit in May. However at the December 15, 2011 workshop held by Board staff, a number of important changes were proposed to how "allowed non-stormwater discharges" which will have a very significant impact on our Water Department, our Public Works Department, and our Fire Department. Given the lateness of announcement of these proposed changes to the MS4 permit and the speed with which the Board is pursuing adoption of the permit, the City is concerned that some very important issues have not had the appropriate amount of discussion.

The City is requesting that there be a formal Board Workshop on the topic of "allowed non-stormwater discharges" and how it will impact CWSs, MS4 operators, and Fire Departments in Los Angeles County. It is understood that the MS4 permit has been in development for a very long time and has been administratively extended several times so the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested, a Board Workshop does not appear to be too great an effort to make.

Thank you for your attention. Should you have any questions, please contact Vanessa Hevener, Environmental Services Officer at (626) 305-5327.

Sincerely,

Tom Tait
Public Works Services Director

RE: Proposed Storm Sewer System (MS4) NPDES Permit

Dear Ms. Diamond:

Several of the member agencies of the Three Valleys Municipal Water District (TVMWD) and specifically the cities within our service area are regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). Additionally, many have a Fire Department which is regulated under the Government and Health and Safety Codes. Their goal is to provide citizens the greatest protection against fire and flooding and a reliable and safe supply of water.

The purpose of this letter in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System (NPDES) permit. The MS4 permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, on behalf of our impacted member agencies, we are quite concerned about the implications of the upcoming changes to the Los Angeles County (LAC) MS4 permit. The Los Angeles Regional Water Quality Control Board (Board) staff has indicated that there will be final draft of the permit as early as the end of February and that the Board plans to vote on the permit in May. However at the December 15, 2011 workshop held by Board staff, a number of important changes were proposed to "allowed non-stormwater discharges" which will have a very significant impact on the local Water Departments, Public Works Departments and Fire Departments. Given the lateness of announcement of these proposed changes to the MS4 permit and the speed with which the Board is pursuing adoption of the permit, there is wide concern that some very important issues have not had the appropriate amount of discussion.

We are thus requesting that there be a formal Board Workshop on the topic of "allowed non-stormwater discharges" and how it will impact Water Departments, MS4 operators, and Fire Departments in Los Angeles County. It is understood that the MS4 permit has been in development for a very long time and has been administratively extended several times, so we can see why the Board is anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested, a Workshop would be a reasonable effort for the Board to make.

Thank you for your attention to this matter. If you have any questions or comments regarding our concerns, please contact me at 909-621-5568.

Sincerely,

Rick Hansen, P.E.

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Ms. Diamond:

The City of Alhambra operates a Community Water System (CWS), which is regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (CDPH). Alhambra also operates a Municipal Separate Storm Sewer System (MS4) through our Department of Utilities, which is regulated under the Clean Water Act. Additionally, Alhambra has a Fire Department which is regulated under the Government and Health and Safety Codes. Our goal is to provide our citizens with a reliable and safe supply of water, as well as protection against fire and flooding.

We are writing you in regard to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System (NPDES) permit. The MS4 permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of the proposed changes to the Los Angeles County (LAC) MS4 permit. The Regional Board staff has indicated that there will be final draft of the permit as early as the end of February and that the Board plans on voting on the permit in May. However, at the December 15, 2011 workshop held by Board staff, a number of important changes were proposed regarding "allowed non-stormwater discharges", which will have a significant impact on our Utilities and Fire Departments. In light of the fact that these proposed changes have just been introduced, the City is concerned that some very important issues have not had the appropriate amount of discussion.

The City is thus requesting that there be a formal Board Workshop on the topic of "allowed non-stormwater discharges" and how it will impact CWSs, MS4 operators, and Fire Departments in Los Angeles County. It is understood that the MS4 permit has been in development for a very long time and has been administratively extended several times, and that the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested, a Board Workshop does not appear to be too great an effort to make.

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Chair Diamond,

The Crescenta Valley Water District, a County water district formed under Division 12 of the Water Code (District), operates a Community Water System (CWS), which is regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). Our goal is to provide a safe, reliable supply of drinking water to our customers at a reasonable cost, and to provide for the best possible fire protection to ensure the safety of our citizens' lives and property.

I am writing you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System permit (MS4 Permit). The MS4 Permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of some of the changes being proposed to the MS4 Permit. Regional Board staff has indicated there will be a final draft of the permit prepared as early as the end of February and that the Board plans on considering and voting on the permit in May.

At the December 15, 2011 workshop held to discuss the MS4 Permit, a number of important changes were proposed on "allowed non-stormwater discharges" which will have a very significant impact on our district. Given the lateness of announcement of these proposed changes to the MS4 Permit and the speed with which the Board is pursuing adoption of the permit, we are concerned that some very important issues have not had the appropriate amount of discussion.

The District therefore requests that a formal Board Workshop be conducted on the topic of "allowed non-stormwater discharges" and how any changes proposed to the MS4 Permit on that issue will impact CWSs, MS4 operators, and fire departments in Los Angeles County. We are aware that the MS4 permit has been in development for a very long time and has been administratively extended several times, so the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested,

Ms. Francine Diamond, Chair

Los Angeles, CA 90013

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Chair Diamond:

We are special counsel to the Public Water Agencies Group (the "Group"). The Group is an informal association of 17 public water agencies that provide water service throughout Los Angeles County.¹ Each Group member operates a Community Water System (CWS), which is regulated under the Safe Drinking Water Act by the State of California Department of Public Health. As public agency water suppliers, the Group's members strive to provide safe, reliable drinking water to their customers at a reasonable cost, while providing the best possible fire protection to ensure the safety of their citizens' lives and property.

I am writing you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System permit (MS4 Permit). The Group's members understand the importance of the MS4 Permit with respect to the protection of the Los Angeles Region's water resources and generally support the goals the MS4 Permit achieves. However, the Group's members are quite concerned about the implications of some of the changes being proposed to the MS4 Permit. Regional Board staff has indicated there will be a final draft of the permit prepared as early as the end of February and that the Board plans on considering and voting on the permit in May.

At the December 15, 2011 workshop held to discuss the MS4 Permit, a number of important changes were proposed on "allowed non-stormwater discharges" which will have a

¹ The Group consists of Crescenta Valley Water District, Kinneloa Irrigation District, La Habra Heights County Water District, La Puente Valley County Water District, Newhall County Water District, Orchard Dale Water District, Palmdale Water District, Pico Water District, Quartz Hill Water District, Rowland Water District, San Gabriel County Water District, San Gabriel Valley Municipal Water District, Sativa-Los Angeles County Water District, South Montebello Irrigation District, Three Valleys Municipal Water District, Valley County Water District and Walnut Valley Water District. Group members Palmdale Water District and Quartz Hill Water District are not located in the Los Angeles Regional Board's jurisdiction, as they are under the jurisdiction of the Lahontan Regional Board.

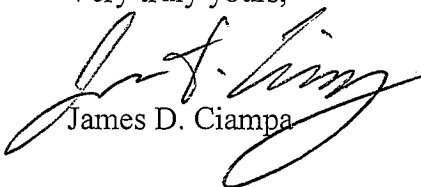

Ms. Francine Diamond, Chair
Los Angeles Regional Water Quality Control Board
January 20, 2012
Page 2

very significant impact on the Group's members and other CWS operators in the region. Given the lateness of announcement of these proposed changes to the MS4 Permit and the speed with which the Board is pursuing adoption of the permit, the Group's members are concerned that some very important issues have not had the appropriate amount of discussion.

On behalf of the Group, we therefore request that a formal Board Workshop be conducted on the topic of "allowed non-stormwater discharges" and how any changes proposed to the MS4 Permit on that issue will impact CWSs, MS4 operators, and fire departments in Los Angeles County. We are aware that the MS4 permit has been in development for a very long time and that the existing permit has been administratively extended several times, so the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested, we respectfully request that a Board Workshop on this specific issue so that the Group may present its concerns to the Board.

Thank you for your consideration of this request.

Very truly yours,

James D. Ciampa

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Chair Diamond,

The La Habra Heights County Water District, a county water district formed under Division 12 of the Water Code (District), operates a Community Water System (CWS), which is regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). Our goal is to provide a safe, reliable supply of drinking water to our customers at a reasonable cost, and to provide for the best possible fire protection to ensure the safety of our citizens' lives and property.

I am writing you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System permit (MS4 Permit). The MS4 Permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of some of the changes being proposed to the MS4 Permit. Regional Board staff has indicated there will be a final draft of the permit prepared as early as the end of February and that the Board plans on considering and voting on the permit in May.

At the December 15, 2011 workshop held to discuss the MS4 Permit, a number of important changes were proposed on "allowed non-storm water discharges" which will have a very significant impact on our district. Given the lateness of announcement of these proposed changes to the MS4 Permit and the speed with which the Board is pursuing adoption of the permit, we are concerned that some very important issues have not had the appropriate amount of discussion.

The District therefore requests that a formal Board Workshop be conducted on the topic of "allowed non-storm water discharges" and how any changes proposed to the MS4 Permit on that issue will impact CWSs, MS4 operators, and fire departments in Los Angeles County. We are aware that the MS4 permit has been in development for a very long time and has been administratively extended several times, so the Board is understandably anxious to move forward

Ms. Francine Diamond, Chair
Los Angeles Regional Water Quality Control Board

with this permit. Nonetheless, given the very significant implications of the changes suggested, we are respectfully requesting a Board Workshop on this specific issue so that we may present our concerns to the Board.

Thank you for your consideration of this request.

Sincerely,

A handwritten signature in black ink, appearing to read 'M. Gualtieri', written over a horizontal line.

QUALITY CONTROL BOARD
LOS ANGELES REGION

January 23, 2012

Mr. Samuel Unger, Executive Officer
Los Angeles Regional Water Quality Control Board
320 West Fourth Street, Suite 200
Los Angeles, CA 90013

RE: Proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Mr. Unger,

The Water Replenishment District of Southern California (WRD) manages the groundwater supply for nearly four million residents in 43 cities of Southern Los Angeles County and serves pumpers who may also fulfill the role as community water systems (CWS). As you are aware, CWS are regulated under the Safe Drinking Water Act (SDWA) by the California Department of Public Health (DPH), and at the same time, their discharges to the MS4 are regulated under an MS4 permit.

I am writing in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System (NPDES) permit currently being drafted by the Los Angeles Regional Water Quality Control Board (LARWQCB) staff. We understand that the LARWQCB plans to issue a tentative MS4 permit in March 2012 and to adopt a final MS4 permit by May 2012. The MS4 permit is important for the protection of our critical water resources, and as a groundwater management agency, we support the continued advancement of this effort.

At the December 15, 2011 workshop held by Board staff, a number of important changes were proposed as to how "allowed non-stormwater discharges" will be regulated. This was new information, and we would like to request additional time to evaluate these proposed changes to more fully understand how "allowed non-stormwater discharges" will be regulated. We request that the March and May 2012 timelines be extended to allow this thorough review and comment period.

Thank you very much for your attention and cooperation.

Sincerely,

Robb Whitaker, P.E.
General Manager
Water Replenishment District of Southern California

Re: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Chair Diamond:

Castaic Lake Water Agency was formed in 1962 to bring supplemental water to the Santa Clarita Valley from the State Water Project. As a water wholesaler, our goal is to provide a safe, reliable supply of drinking water to our retail customers at a reasonable cost, and to provide for the best possible fire protection ensuring the safety of life and property.

I am writing you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System National Pollution Discharge Elimination System Permit (MS4 Permit). The MS4 Permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of some of the changes being proposed to the MS4 Permit. Regional Board staff has indicated there will be a final draft of the permit prepared as early as the end of February, and that the Board plans on considering and voting on the proposed permit in May.

At the December 15, 2011 workshop held to discuss the MS4 Permit, a number of important changes were proposed on "allowed non-stormwater discharges", which will have a very significant impact on CLWA. Given the lateness of announcement of these proposed changes to the MS4 Permit and the speed with which the Board is taking to adopt the permit, we are concerned that some very important issues have not been fully vetted.

We are aware the MS4 Permit has been in development for a long time and its adoption has been administratively continued several times, and that the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the suggested changes, CLWA respectfully requests that a formal Board Workshop be conducted on the topic of "allowed non-stormwater discharges" and how any changes proposed to the MS4 Permit on that issue will impact CWSs, MS4 operators and fire departments in Los Angeles County.

Thank you for your consideration of this request.

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Ms. Diamond:

California Water Service Company (Cal Water) is a private water utility that owns and operates community water systems throughout California, with a significant number located in Los Angeles County. Cal Water is regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). Cal Water is also regulated by the California Public Utilities Commission. The primary goal of Cal Water is to protect public health while ensuring a reliable water supply for its customers.

The Los Angeles Regional Water Quality Control Board (LA RWQCB) has recently proposed changes to the Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System (NPDES) permit. Cal Water believes that these proposed changes would significantly impact how water utilities operate. These changes could potentially have a detrimental impact on the ability of Cal Water, as well as other water utilities in Los Angeles County, to continue to supply a reliable, high quality, water supply while protecting public health. A reliable water supply is also needed in order to insure adequate fire protection to the cities that we serve.

Cal Water agrees the MS4 permit is important for the protection of critical water resources, and supports the continued advancement of this effort. However, Cal Water is quite concerned about the implications of the proposed changes to the Los Angeles County MS4 permit. While the LA RWQCB has been working on this permit for quite some time, only recently has it indicated that it is proposing significant changes to the sections of the MS4 NPDES Permit that would have the greatest impact on public water systems. Cal Water understands the current schedule for adoption of this permit is aggressive. Therefore, Cal Water is concerned that some important aspects of the proposed changes will not be given the time to be adequately evaluated.

Cal Water is respectfully requesting that the LA RWQCB schedule a workshop to hear and discuss the proposed changes and related concerns of the public water systems, in particular, as they relate to "allowed non-stormwater discharges."

Respectfully,

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Chair Diamond,

South Montebello Irrigation District, an irrigation water district formed under Division 11 of the Water Code (District), operates a Community Water System (CWS), which is regulated under the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). Our goal is to provide a safe, reliable supply of drinking water to our customers at a reasonable cost, and to provide for the best possible fire protection to ensure the safety of our citizens' lives and property.

I am writing you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System permit (MS4 Permit). The MS4 Permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of some of the changes being proposed to the MS4 Permit. Regional Board staff has indicated there will be a final draft of the permit prepared as early as the end of February and that the Board plans on considering and voting on the permit in May.

At the December 15, 2011 workshop held to discuss the MS4 Permit, a number of important changes were proposed on "allowed non-stormwater discharges" which will have a very significant impact on our district. Given the lateness of announcement of these proposed changes to the MS4 Permit and the speed with which the Board is pursuing adoption of the permit, we are concerned that some very important issues have not had the appropriate amount of discussion.

The District therefore requests that a formal Board Workshop be conducted on the topic of "allowed non-stormwater discharges" and how any changes proposed to the MS4 Permit on that issue will impact CWSs, MS4 operators, and fire departments in Los Angeles County. We are aware that the MS4 permit has been in development for a very long time and has been administratively extended several times, so the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested, we are respectfully requesting a Board Workshop on this specific issue so that we may present our concerns to the Board.

Thank you for your consideration of this request.

Sincerely,

General Manager
 South Montebello Irrigation District

THE CITY OF
POMONA

Water Operations

February 6, 2012

Ms. Francine Diamond, Chair
Los Angeles Regional Water Quality Control Board
320 West Fourth Street, Suite 200
Los Angeles, CA 90013

**RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit**

Dear Ms. Diamond,

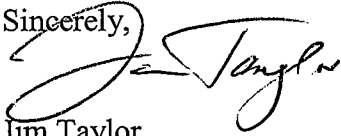

The City of Pomona operates a Community Water System (CWS) which is regulated by EPA and the California Department of Public Health (CDPH). Pomona also operates a Municipal Separate Storm Sewer System (MS4) through our Department of Public Works which is regulated under the Clean Water Act. Our goal is to provide our citizens the best possible protection against fire, flooding, and a reliable and safe supply of water.

I am writing to you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System MS4 National Pollution Discharge Elimination System NPDES Permit. The MS4 Permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are very concerned about the implications of the upcoming changes to the Los Angeles County (LAC) MS4 Permit regarding the impact to the operation of the city's water system. The Board Staff have indicated that there will be a final draft for the Permit as early as the end of February 2012, and the Board plans on voting on the Permit in May 2012. However, at the December 15, 2011 workshop held by Board Staff, a number of important changes were proposed to the "allowed non-stormwater discharges". Given the lateness of the announcement of these proposed changes to the MS4 Permit, and the speed with which the Board is pursuing adoption of the Permit, the City of Pomona is concerned that some very important issues have not had the appropriate amount of discussion.

The City of Pomona is thus requesting that there be a formal Board Workshop on the topic of "allowed non-stormwater discharges" and how it will impact CWS's, MS4 Operators, and the Fire Departments in Los Angeles County. It is understood that the MS4 Permit has been in development for a very long time, and has been administratively extended several times, so therefore, the Board is understandably anxious to move forward with this Permit. Nonetheless, given the very significant implications of the changes suggested, scheduling a Board Workshop in the near future does not appear to be too great an effort to make in order for the affected parties to voice our concerns.

Should you have any questions, please feel free to contact me at (909) 620-2251.

Sincerely,

A handwritten signature in black ink, appearing to read "Jim Taylor". The signature is written in a cursive style with a large initial "J" and "T".

RECEIVED

February 14, 2012

Samuel Unger
Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Unger:

MS4 PERMITS INVOLVING PUBLIC WATER SYSTEM DISCHARGES

The purpose of this letter is to outline the concerns of the California Department of Public Health (CDPH) regarding the proposed Los Angeles County MS4 permit to be issued by the Regional Water Quality Control Board. Our concern focuses primarily on "non-storm water discharges" that originate from public water systems regulated by the Drinking Water Program for compliance with the State and Federal Safe Drinking Water Acts.

There are a number of regulations enforced by our program that require public water systems to periodically maintain their facilities including flushing portions of their distribution systems and discharging potable water to ensure that the water delivered to customers remains safe for human consumption. In most cases, the water is discharged to storm drains. We understand that your agency's goal is to minimize the impacts of discharges on receiving waters. It is important that water system operations and maintenance activities are not adversely influenced by concerns of fines and penalties that may occur if distribution systems, reservoirs or wells are flushed and cleaned to improve water quality.

The list below summarizes the typical planned operations and maintenance activities that require discharge of water from public water systems to achieve compliance with Title 22, California Code of Regulations, Chapter 15, Article 16 §64449.5 and Title 22 California Code of Regulations, Chapter 16, Article 4 §64575, Article 6, §64585, and Article 8, §64600:

1. Flushing mains, dead ends or other areas to address water quality problems
2. Water main maintenance and repair
3. System wide distribution system flushing

Mr. Samuel Unger

Page 2

February 14, 2012

4. Wells start-up or development
5. Treatment facility start-ups
6. Well rehabilitation
7. Well head pump to waste on start-up
8. Small Scale Pilot or Demonstration systems
9. Sample drain lines (most to sewers)
10. Backwash decanting
11. Reservoir maintenance and/or cleaning
12. Hydrostatic discharges

When planned operations and maintenance activities including flushing are needed, public water systems routinely comply with required Best Management Practices (BMP) including dechlorination to protect plants, fish, and the environment; implement sediment control and prevent discharge scouring; and keep records of the volume of water flushed. The cost of drinking water supplies alone prevents excessive flushing and potable water discharges by public water systems since it increases their operating expenses.

Additionally, unplanned potable water discharges can occur on occasion. Examples include sheared fire hydrants, water main breaks, and treatment equipment malfunction. These discharges can be controlled and impacts minimized by rapid emergency response.

CDPH respectfully requests that your Board consider allowing the MS4 permit holders to work in partnership with the public water systems to develop and implement BMPs to minimize the impacts to the receiving waters to the maximum extent practicable, rather than establishing numerical effluent limits for potable discharges. CDPH feels that this approach would meet the objectives of both the State and Federal Safe Drinking Water Acts and the Clean Water Act.

We would be happy to meet with your staff to further discuss this issue upon your request. Thank you in advance for your attention to these matters.

Sincerely,

A handwritten signature in black ink that reads "Leah Godsey Walker for". The signature is written in a cursive, flowing style.

Leah Godsey Walker, P.E., Chief
Division of Drinking Water
and Environmental Management

Timothy J. Scranton, Fire Chief
Beverly Hills Fire Department

California Regional Water Quality Control Board
Chairperson Maria Mehranian
320 West Fourth Street, Ste. 200
Los Angeles, Ca 90013

RE: Proposed Municipal Separate Storm Sewer System (MS4) NPDES Permit

Dear Chairperson Mehranian:

Thank you for the opportunity to voice several concerns.

As President of the Los Angeles Area Fire Chiefs Association, I am writing on behalf of fire departments of the Los Angeles region regarding the proposed *Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollution Discharge Elimination System (NPDES) permit*.

Our cities provide fire suppression, fire prevention and emergency medical services to our communities. We also have mutual aid programs in place to assist our neighboring cities when necessary. Community Water Systems (CWS) are implemented and regulated by the Safe Drinking Water Act (SDWA) by the Department of Public Health (DPH). Our communities need such systems in place; it provides a sense of security knowing their fire department can effectively do their job, because it does. As part of our efforts, we need reliable and sustainable CWS.

On a daily basis, our regional offices must conduct various fire inspections like rough and final fire sprinkler systems, fire alarms, fire department connections, underground main fire supplies, and hydrant testing. Moreover, it is vital to continue providing training to our firefighters. Inspections and training requires water usage via fire hydrants, engines, and hose lines. It necessitates the discharge of water. Fire crews must routinely perform live exercises with significant water flow at high velocity and pressure. Performing these "Wet Drills" will prepare us for actual firefighting conditions. We cannot jeopardize the safety of our personnel either. Fire sprinkler/fire protection systems require periodic maintenance and testing, required by State regulation and to ensure operational efficiency.

These necessarily result in the significant discharge of water provided by CWS. Many of our cities suffered on budget reductions alone. Can you imagine the fallouts of compromising our water usage? Our goal is to provide safe and reliable fire protection.

The MS4 permit is important for the protection of our water resources and we support the continued advancement of this effort. However, we are greatly concerned about the implications of the upcoming potential changes to the Los Angeles County MS4 permit. CWS are required, under the threat of adverse legal action by DPH, to periodically discharge water from our distribution systems. The vast majority of this discharge ends up in the gutter and then into the storm drains. Fire departments must periodically exercise the valves on fire hydrants to ensure that they will work properly in an emergency. It is our duty to provide fire protection, upholding the quality of life of our citizens. Your proposal will hinder such rights.

Chairperson Mehranian and the Board, under the existing LAC MS4 permit, there is already considerable pressure upon the MS4 permit-holders to minimize the amount of non-stormwater discharge, even those non-stormwater discharges considered allowable under the "flow incidental to urban activities".

As more Total Maximum Daily Loads (TMDL) are adopted and incorporated into the MS4 permit, this pressure will increase. In other parts of the State, MS4 operators are issuing citations and fines to CWS, fire departments, and C-16 Contractors (those who install water based fire suppression equipment, like fire sprinklers) for discharging otherwise potable water into storm drains. This is true even if the CWS has a NPDES permit giving them authority to discharge "low threat" or "de minimis risk" waters by the local RWQCB. This trend is already being observed here in Los Angeles County even under the comparatively lenient existing permit. It would only get worse as more TMDLS are adopted and incorporated into the MS4 permit.

The MS4 operators do not care whether water from a CWS or fire department meets any TMDL based or any other effluent limit. Their best defense against a notice of violation (NOV) is zero discharge, the less non-stormwater they discharge, the better their odds of not receiving an NOV. Beyond that, even if a CWS or fire department were to discharge bottled water, it could still mobilize metals, salts, and bacteria in the street, gutter, or storm drains. The rule is "Less is More" from their perspective, quality does not matter. It has to be remembered that the MS4 operators have legal authority of their own beyond that of the RWQCB.

It is evident that CWS and fire departments are caught between the proverbial rock and a hard place. DPH demands that CWS discharge but MS4 operators are increasingly demanding that we do not discharge so that they can comply with their MS4 permits. Fire departments need to exercise hydrants, conduct Wet Drills and performing fire sprinkler/fire protection system testing and maintenance; not doing so is not a practical or legally possible option. We need some sort of regulatory relief which can only come from the RWQCB. We would thus like to request that the Los

Angeles Regional Water Quality Control Board hold a special Board Workshop on the issue on the regulation of non-stormwater discharges in the Los Angeles County MS4 permit.

Fire departments throughout California are dealing with the same economic conditions that the State and Federal Governments are addressing with legislation. Funds are not available for many of the training activities that the Fire Service once had. Now the Water Board is proposing to impose restrictive new conditions on the Fire Service as they go about their assignment of protecting the Life, Safety and Welfare of the residents of their communities.

Part 1.A.1.(c).(2) lists "Category B - Flows from emergency fire fighting activities." As an exempt discharge when they are not the source of pollutants that exceed water quality standards. Table 1 contains a condition under which the discharge is allowed. The condition is "Pooled water after fire must be controlled." This limit will put fire departments state-wide in a difficult position, given the need for additional staff to respond to incidents and the potential for a reduction in public safety if Incident Commanders must concern themselves with water runoff.

Everyone understands that putting water on a fire is in direct response to the fire emergency. In addition during the period when the debris is still smoldering and the firefighters are making sure that the fire is extinguished (the overhaul of the site), that activity is also considered part of the emergency.

The difficulty comes when the fire is out and the fire department begins the final phase of their responsibility. Currently, firefighter's transitions from the emergency response to the event clean up. The water that the fire department has applied during the emergency must be dealt with because it will continue to damage an already weakened structure. If they must stop to set up "BMP's" or worse turn the site over to Hazmat personnel for the removal of the remaining water, assuming that it is contaminated with chemicals, there will undoubtedly be an increased cost, becoming a burden on the property owner and the taxpaying public. Since every site is unique it is impossible for the fire department to respond with the necessary material and equipment to implement effective "BMP's" for every situation. So the fire department is required to either tell the property owner that the cleanup is their responsibility or they must try to implement a "universal" BMP that may or may not be effective to deal with the pooled water at the site. I would ask that the Board expand the definition of the emergency to include the "Pooled Water after fire".

Another indirect impact of the provisions of Part 1.A.1.(c).(3) is an unintended consequence on fire service training. While the hydrostatic testing of fire hydrants is typically not the responsibility of the fire department, it serves two purposes in assuring that the fire department is ready and able to respond to an emergency.

During the regular training that fire personnel undergo, they will drive to a predetermined area and practice the deployment of equipment that will include the flowing of a fire hydrant. This assures the fire department that water is available in sufficient quantity and pressure for their use at the location,

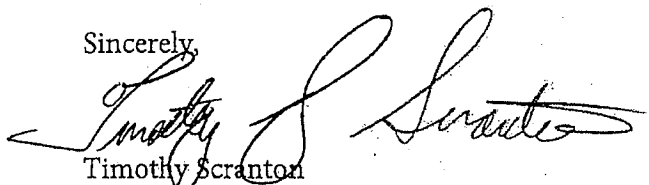

for effectiveness during an emergency. The condition contained in Table 1 will limit the fire departments ability to use this element in training. The condition itself is complex and states "discharges from water lines and potable water sources shall be dechlorinated, pH adjusted if necessary, reoxygenated, and volumetrically and velocity controlled to prevent resuspension of sediment." How would the fire crew know the answer to these questions? With the Boards consideration of the Potable Water System Discharge permit, is this provision needed in the MS4 permit?

We believe that the draft permit will have negative effects on the emergency response the public expects from fire departments. This unintended affect should be sufficient for the Board to return the permit to its previous wording to (1) remove the specific Condition for the treatment of Pooled water from a fire emergency and (2) to allow the occasional discharge of potable water by fire departments when training for emergency response.

The fire service state-wide is charged with protecting the Health, Safety and Welfare of the Community and its Citizens. The fire service does not knowingly or willfully pollute the waters of the State or the Nation, but when an emergency confronts fire departments of this State they must be able to attack the emergency with a focus that protects the public and themselves.

Thank you for your time and attention to this serious matter. I am confident the Board will do its due-diligence and give great consideration during deliberation on the impacts to Fire Service Preparedness if the language contained within the MS4 permit proposal is adopted in its current form.

Sincerely,

Timothy Scranton
Fire Chief

Ms. Francine Diamond, Chair
Los Angeles Regional Water Quality Control Board
320 West Fourth Street
Suite 200
Los Angeles, CA 90013

RE: Proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) Permit

Dear Ms. Diamond:

Golden State Water Company (GSWC) operates thirteen Community Water Systems (CWSs) in Los Angeles County which are regulated under the Safe Drinking Water Act (SDWA) by the California Department of Public Health (CDPH) and the California Public Utilities Commission (CPUC). As a regulated investor owned utility, GSWC is required to perform certain system maintenance operations that require us to discharge varying quantities of potable water to storm water conveyances in LA County. Therefore, it is necessary that GSWC be allowed to continue these discharges of "non-stormwater" to the County's storm sewers without GSWC being penalized for these discharges.

We are writing to you in regards to the proposed Los Angeles County Municipal Separate Storm Sewer System (MS4) permit issued as part of the National Pollutant Discharge Elimination System (NPDES) program. We realize that the MS4 permit is important for the protection of our critical water resources and we support the continued advancement of this effort. However, we are quite concerned about the implications of the proposed changes to the Los Angeles County MS4 permit. The Los Angeles Regional Water Quality Control Board (LARWQCB) staff has indicated that there will be a final draft of the permit as early as the end of February and that the Board plans on voting on the permit in May. However at the December 15, 2011 workshop held by Board staff, a number of important changes were proposed to "allowed non-stormwater discharges," which will have a very significant adverse impact on GSWC. Given the lateness of the announcement of these proposed changes to the MS4 permit and the speed with which the Board is pursuing adoption of the permit, we are concerned that some very important issues have not had the appropriate amount of discussion.

Golden State Water Company is thus requesting that there be a formal Board Workshop on the topic of "allowed non-stormwater discharges" and how it will impact CWSs and MS4 operators in Los Angeles County. It is understood that the MS4 permit has been in development for a very long time and has been administratively extended several times so the Board is understandably anxious to move forward with this permit. Nonetheless, given the very significant implications of the changes suggested, a Board Workshop does not appear to be an onerous request.

Thank you for your consideration of this request. We look forward to hearing from you and having the opportunity to discuss our concerns at a formal Board Workshop. Please contact Ms. Brandy Hancocks at (916) 853-3639 or at brandy.hancocks@gswater.com if you have any questions.

Sincerely,

David Chang, PhD, P.E.
Vice President Operations
Golden State Water Company

LA County MS4 Permit Workshop

- I. Incorporation of TMDLs
- II. Monitoring Requirements

January 23, 2012

TMDL Provisions

- 32 TMDLs with WLA for LA County MS4 Permittees
 - LA River Trash – in permit
 - MDR Bacteria (summer dry weather) – in permit
- Watershed-based implementation
 - Allocations
 - Implementation
 - Compliance monitoring

Basic Elements of TMDL Provisions in MS4 Permit

- Provisions consistent with assumptions and requirements of WLAs
 - Numeric interim & final effluent limitations and/or receiving water limitations
 - Alternative means to demonstrate compliance with numeric limitations
 - Deadlines according to TMDL implementation schedule
 - Compliance monitoring requirements consistent with TMDL monitoring requirements and approved monitoring plans
 - Reporting requirements

Organization of TMDL Provisions

- Part 7
 - General provisions, including language regarding compliance demonstration
 - Trash TMDLs
 - Others
 - Matrix of Permittees and TMDLs to identify those subject to TMDL-specific requirements
 - TMDLs grouped by watershed management area (WMA)
 - TMDL specific numeric effluent limitations and/or receiving water limitations + deadlines consistent with TMDL
- Monitoring Program
- Reporting Program

Methods for Demonstrating Compliance

- Meet numeric effluent limitations at MS4 "outfall"
- Meet water quality standards or interim receiving water limitations in receiving water
- No discharge from MS4 (dry weather only)
- Implement BMPs and other actions in accordance with an approved reasonable assurance plan (*action based compliance pathway*)

Action-based Compliance Requirements

- Submittal of *Reasonable Assurance Plans* (RAPs)
 - Watershed based plans encouraged
 - Timing
 - Approval process
- Elements of RAPs
- Annual monitoring and evaluation of RAP implementation
- Process to revise RAPs

**Elements of
Reasonable Assurance Plan**

- Address all effluent and/or receiving water limitations assigned to the Permittee(s) pursuant to established TMDLs
- Identify BMPs and other actions or programs to achieve limitations
- Include a schedule and milestones for implementing each BMP/action
- Identify responsibilities of each Permittee
- Demonstrate through quantitative analysis/modeling that plan has reasonable assurance of achieving limitations
- Monitoring and annual evaluation of effectiveness of RAP
- Triggers to revise RAP and implement additional BMPs/actions

**Monitoring and Evaluation
Requirements**

- Comprehensive reporting on BMPs/actions implemented, including their performance
- Ongoing model validation based on monitoring data
- Determination regarding whether suite of BMPs/actions continues to provide reasonable assurance that limitations will be met
- Timely modifications to RAP

**Compliance Determination:
Action-based Compliance**

- RAP is approved by EO
- Permittee is implementing all elements of RAP in accordance with approved schedule
- BMPs properly sized and operated/maintained
- Revisions to plan are submitted upon determination that interim milestones may not be/have not been met
- Approved revisions to plan are implemented per schedule
- If criteria are not met, Permittee is subject to compliance determination based on numeric effluent limitations and/or receiving water limitations

**Considerations Regarding
Past TMDL Deadlines**

- If anticipated immediate non-compliance
 - Permittees may request Time Schedule Order (TSO)
 - Justification including actions taken to date, status of attainment, planned actions and schedule to achieve TMDL deadlines as soon as possible
 - Board consideration of TSO or other appropriate orders

**Relationship of TMDLs to
Receiving Water Limitations (RWL)**

- MS4 discharges may not cause or contribute to violations of water quality standards (WQS) (Part 2.1).
 - Receiving Water Limitations = WQS
- State-adopted TMDLs provide implementation schedules to attain water quality standards
- During TMDL implementation, water quality standards may not be met in the receiving water
- For waterbodies subject to a TMDL, if a Permittee is in compliance with applicable provisions of Part 7 (TMDL Provisions), staff is considering proposing language that an exceedance of a RWL for a pollutant covered by a TMDL would not represent a violation of Part 2.1

Draft Los Angeles County MS4 Monitoring Program

January 23, 2012 Workshop

PG Environmental, LLC

Los Angeles Regional Water Quality
Control Board

Objectives

- Assess the chemical, physical and biological impacts of the MS4 discharges on receiving waters.
- Identify pollutant discharges to the MS4 that cause or contribute to an exceedance of water quality standards in the receiving water.
- Assess the effectiveness of the Permittee's BMPs and management practices in reducing pollutant discharges to the MS4.

Elements of the Monitoring Program

- Regional Monitoring Programs.
- TMDL Compliance Monitoring Programs.
- Storm drain outfall monitoring of stormwater (wet-weather discharges).
- Storm drain outfall monitoring of non-stormwater (dry-weather) discharges.

Monitoring Plans

RB-AR1054

- **Regional Monitoring Programs** are designed to assess whether receiving waters are fully supporting beneficial uses, and to identify pollutants and hydromodification that are causing or contributing to an exceedance of water quality standards. LID and BMP effectiveness studies may also be performed at a regional scale.
- **TMDL Monitoring Plans** are designed to assess whether the applicable interim and final waste load allocations (WLAs) are being achieved.
- **Stormwater Outfall-Based Monitoring Program** to characterize the effects of urban stormwater discharges on receiving waters and to measure the effectiveness of the Permittee's Best Management Practices and Control Measures.
- **Non-Stormwater Outfall-Based Monitoring Program** using screening methods to identify high-priority outfalls, and to determine whether non-stormwater flows are caused by other permitted NPDES discharges, authorized non-stormwater discharges, or illicit connections/illicit discharges (IC/IDs).

Regional Monitoring Programs

On-Going Regional Monitoring Programs include:

- Mass Emission
- Bioassessment
- Southern California Bight Project
- Beach Monitoring.

New Regional Monitoring Programs

- Hydromodification
- Pyrethroid Toxicity
- LID Effectiveness

New Regional Monitoring Programs

Hydromodification Study

The following assessment tools shall be developed:

- A system for mapping and classifying streams based on their susceptibility to the effects of hydromodification.
- Protocols for ongoing monitoring to assess the effects of hydromodification.
- Dynamic models to assess the effects of hydromodification on stream condition.
- Tools that managers can easily apply to make recommendations or set requirements relative to hydromodification for new development and redevelopment.

New Regional Monitoring Programs

Hydromodification Study

- Within 2 month after the Order adoption date, each Permittee with jurisdiction over drainages to a “natural waterbody” shall submit a letter to the Regional Water Board Executive Officer stating how it will satisfy the requirements to conduct a hydromodification study.
- This requirement can be satisfied by participating in the ‘Development of Tools for Hydromodification Assessment and Management’ Project undertaken by the SMC and coordinated by the SCCWRP and the State Water Resources Control Board.

New Regional Monitoring Programs

Pyrethroid Insecticide Study

- Each Permittee shall participate in the Regional Pyrethroid Insecticide Study for each watershed within the Permittee's jurisdiction.
- The study shall include:
 - Sediment Monitoring for the following Pyrethroids: bifenthrin, cyfluthrin, cypermethrin, deltamethrin, esfenvalerate, lambda-cyhalothrin, permethrin, and tralomethrin (if laboratory is capable of analyzing for it).
 - Each sediment sample to be analyzed for total organic carbon.
 - Testing of all sediment samples for toxicity to 7 to 10-day *Hyalella azteca*.
 - At least two monitoring stations along the main stem.

New Regional Monitoring Programs

Pyrethroid Study Actions

- Minimum monitoring frequency: once every three years , beginning no later than the second year after the Order Adoption date.
- If toxicity is attributed to Pyrethroids, consult with U.S. EPA, California Department of Pesticide Regulation, and CASQA to develop recommendations to mitigate toxicity.
- Submit a final report to the Executive Officer of the Regional Water Board within 8 months after the final monitoring event, but not later than 5 years after the effective Order date.

New Regional Monitoring

LID Development

Where new developments incorporating LID design have been constructed, the Permittee shall participate in regional studies to monitor and compare stormwater runoff from LID developments and traditional (non-LID) developments with comparable land use. This monitoring is intended to assess the effectiveness of the LID design and implementation.

TMDL Compliance Monitoring

The TMDLs effective or scheduled to be effective before the adoption of the Order include:

- Ballona Creek: Trash, Metals, Toxics, and Bacteria
- Ballona Creek Wetlands: Habitat Alteration, Exotic Vegetation, Hydromodification, and Reduced Tidal Flushing (EPA to establish)
- Calleguas Creek: Creek: Metals, Nutrients, Salts, Toxics, and Trash
- Colorado Lagoon: Pesticides, PAHs, PCBs, and Metals
- Dominguez Channel Watershed, Machado Lake: Trash, Nutrients, and Pesticides and PCBs (also see Los Angeles and Long Beach Harbors)
- Los Cerritos Channel: Metals (EPA established)
- Los Angeles Area Lakes Trash (L.A. River Trash TMDL) and Toxics (EPA to establish)
- Los Angeles Harbor: Bacteria
- Los Angeles and Long Beach Harbors, Dominguez Channel: Toxics
- Los Angeles River: Trash, Nutrients, Metals, and Bacteria
- Malibu Creek: Nutrients (EPA established), Bacteria and Trash
- Marina del Rey: Bacteria and Toxics
- San Gabriel River: Trash and Metals and Selenium (EPA established)
- Santa Clara River: Chloride, Nutrients, Trash, and Salts
- Lake Elizabeth, Munz Lake, and Lake Hughes Trash TML
- Santa Monica Bay: Bacteria, Debris, and DDT and PCBs (EPA to establish).
- Santa Clara River Estuary and Reaches 3,5,6, and 7 Indicator Bacteria

Outfall-Based Monitoring

- The outfall-based monitoring program includes monitoring of water conveyed by the storm drain system within a Permittee's jurisdictional boundary, regardless of whether there is an actual "outfall" at this location.
- Outfall-based monitoring may include monitoring at an outfall, manhole or from an open storm drain at the Permittee's jurisdictional boundary.

Outfall-Based Monitoring

- Within 6 months after the Order adoption date, each Permittee shall submit:
 - The latitude/longitude coordinates for each outfall within its jurisdictional boundary and the proposed stormwater monitoring locations, and
 - A description of each outfall and stormwater monitoring location including the outfall / storm drain size, shape and construction type (e.g., pipe, open channel, trapezoid shaped channel, etc.)

Stormwater Outfall-Based Monitoring Program

The number of outfall-based monitoring stations will depend on:

- The number of subwatersheds (HUC-12) located within the Permittee's jurisdictional boundary.
- At a minimum, each Permittee shall monitor at least one outfall within each subwatershed.

Stormwater Outfall-Based Monitoring Program

Outfall Selection Criteria:

- **To the extent possible, the drainage to the outfall shall be located entirely within the Permittee's jurisdictional boundary.** Otherwise, the Permittee must include monitoring upstream (where the storm drain flows into the Permittee's jurisdictional boundary). The upstream and downstream outfalls shall be monitored simultaneously. This "bracketing" will allow the Permittee to discount the upstream pollutant loadings. Alternatively, the Permittee may coordinate with the upstream, neighboring Co-Permittee to ensure that the Co-Permittee monitors the upstream outfall (i.e., the Co-Permittee's downstream) simultaneously.
- **The land uses within the outfall drainage shall be representative of the full range of land uses within the Permittee's jurisdictional boundary.** Otherwise, the Permittee may be required to monitor multiple outfalls to provide the estimated EMC and pollutant loading from each individual land use within its jurisdiction.

Stormwater Outfall-Based Monitoring Program

Outfall Selection Criteria:

- **To the extent possible, the selected outfall(s) shall not receive drainage from other permitted non-stormwater discharges, which may alter the estimated stormwater pollutant EMC and loading estimates.**
- **Where feasible, Permittees are encouraged to select outfalls that are also monitored under a TMDL Compliance Monitoring Plan, when it will result in overall cost savings.**

Stormwater Outfall-Based Monitoring Program

Parameters to include:

- Flow
- All 303(d) listed pollutants
- Totals Suspended Solids
 - If the 303(d) list includes sedimentation, siltation or turbidity include Suspended Sediment Concentration (SSC)
- Hardness, pH, temperature, specific conductivity
- Aquatic Toxicity.

Stormwater Outfall-Based Monitoring Program

- Monitoring Frequency
 - Three storms per year including the first storm of the season, with the exception of Aquatic Toxicity.
 - Aquatic toxicity: two storms during the first year including the first storm of the year. In subsequent years, aquatic toxicity is required for the first storm of the year.

Stormwater Outfall-Based Monitoring Program

- Monitoring Methods
 - Gauge, flow data logger, modeled: flow
 - Field Measurement: DO, Hardness, pH, temperature, specific conductivity
 - Grab: Indicator bacteria, oil & grease, cyanide and volatile organics
 - Flow-weighted 24-hour composite, volume-paced microsampling, targeted volume-paced sampling, pollutograph: other pollutants.

Non-Storm Water Outfall-Based Monitoring Program

- Identify outfalls with significant non-storm water flows. A significant flow is one that: (1) causes an overflow of a dry-weather diversion or (2) causes an increase of 10 percent or more above the lowest, rolling one-hour flow measured during a consecutive seven-day monitoring period.
- Determine whether the significant non-stormwater flows are caused by other NPDES permitted discharges, authorized non-stormwater discharges or illicit connections/illicit discharges (IC/IDs).
- Characterize the pollutant loading in authorized non-stormwater discharges.
- Identify and take corrective actions to control IC/IDs.

Non-Storm Water Outfall-Based Monitoring Program

- Screen outfalls to identify those with significant flow. Screening shall consist of :
 - Using remote sensing devices (e.g., flow data loggers) to monitor continuous flow for at least seven consecutive days.
 - Taking daily grab samples (5 samples per week) concurrently with flow monitoring and analyzing for applicable indicator bacteria within 6 hours.
- Screening data may be used to partially fulfill the Los Angeles River Bacteria TMDL Load Reduction Strategy monitoring requirements, and possibly other bacteria TMDL monitoring requirements.

Non-Storm Water Outfall-Based Monitoring Program

- Within 1 month after the Order adoption date, begin screening outfalls for dry-weather flow and indicator bacteria. At least one outfall per month shall be screened.
- Outfalls that are suspected of having significant dry-weather flows should be screened within 6 months after the Order adoption date.
- All outfalls shall be screened within 9 months after the Order adoption date.

Non-Storm Water Outfall-Based Monitoring Program

- Within 9 months after the Order adoption date, each Permittee shall determine the relative flow contribution from other permitted discharges and report this information to the Regional Water Board Executive Officer.
- Within 12 months after the Order adoption date, each Permittee shall identify non-stormwater outfalls that have significant dry-weather flow that is not attributed to other permitted NPDES discharges. These outfalls shall be designated as **high-priority** non-stormwater outfalls.
- Within 18 months after the Order adoption date, each Permittee shall implement a plan for monitoring **the high-priority** non-stormwater outfalls.

Non-Storm Water

Outfall-Based Monitoring Program

- The monitoring shall include:
 - 24-hour flow data (e.g., flow data loggers).
 - 24-hour flow weighted composite samples (or other methods approved by the Regional Water Board Executive Officer). Samples to be analyzed for:
 - Pollutants identified in a Reasonable Potential Analysis.
 - Pollutants assigned a dry-weather WLA in a currently effective TMDL.
 - CWA Section 303(d) listed pollutants.
 - TSS to be analyzed when metals are analyzed.
 - TSS and SSC to be analyzed when the receiving water is listed for sedimentation, siltation or turbidity.
 - Grab samples: indicator bacteria, oil & grease, cyanide and volatile organics (when parameters are identified in the RPA, listed on the Section 303(d) list or have a dry-weather WLA).
 - Field measurements: DO, hardness, pH, temperature, and specific conductivity.
 - Aquatic Toxicity.

Non-Storm Water Outfall-Based Monitoring Program

- Monitoring Frequency: each high-priority non-stormwater outfall shall be monitored at least quarterly during the first year of monitoring.
- Aquatic Toxicity Analysis shall be performed twice per year at each high-priority non-stormwater outfall.
- The monitoring frequency may be reduced to twice per year if the pollutant concentrations have not exceeded Action Levels identified in Part X of this Order or applicable dry-weather TMDL WLAs in any samples taken at the outfall during the previous 12 months.

Non-Storm Water Outfall-Based Monitoring Program

- Monitoring may be discontinued at a high-priority non-stormwater outfall if an RPA is conducted on a qualifying data set and it is determined that the discharge has no reasonable potential to cause or contribute to an exceedance of water quality standards in the receiving water.
- A qualifying data set shall consist of at least 10 samples distributed over a minimum period of at least 12 months and shall include all monitoring data collected at the outfall during the same period.

Non-Storm Water

Outfall-Based Monitoring Program

- Each Permittee shall use the monitoring results to identify pollutant sources and in conjunction with the IC/ID program.
- Each Permittee shall include in its Annual Report the results of its investigations and report:
 - For each outfall with significant flow during dry-weather conditions, the estimated volume contributed from the following sources:
 - Other NPDES permitted discharges,
 - Illicit connections/illicit discharges, and/or
 - Authorized non-stormwater discharges.
 - For each high-priority outfall:
 - The responsible party,
 - The type of activity resulting in the discharge, and
 - A description of corrective actions.

Questions?

TOTAL MAXIMUM DAILY LOADS (TMDL) BY WATERSHED MANAGEMENT AREA (WMA)

Multi-Jurisdictional Permittees

Part 7. TOTAL MAXIMUM DAILY LOADS (TMDLs) PROVISIONS

The provisions of this Part implement and are consistent with the assumptions and requirements of the waste load allocations (WLAs) from TMDLs for which some or all of the Permittees in this Order are responsible.

- Part 7 of this Order incorporates provisions to assure that Los Angeles County MS4 Permittees comply with WLAs and other requirements of TMDLs covering impaired waters impacted by the Permittees' discharges.
- The Permittees shall comply with the following effluent limitations and/or receiving water limitations, consistent with the assumptions and requirements of the waste load allocations documented in the Implementation Plans, including compliance schedules, associated with the State adoption and approval of the TMDL at compliance monitoring points established in each TMDL or its approved monitoring plan (40 CFR §122.44(d)(1)(vii)(B); Cal. Wat. Code §13263(a)).

A. TMDLs in the Santa Clara River Watershed Management Area

1. Santa Clara River Nitrogen Compounds TMDL

- a) Permittees subject to the provisions below are identified in Table X.
- b) Permittees shall comply with the following effluent limitations for discharges to the Santa Clara River Reach 5¹:

Constituent	Effluent Limitations (mg/L)	
	1-hour Average	30-day Average
Total Ammonia as Nitrogen	5.2	1.75
Nitrate as Nitrogen plus Nitrite as Nitrogen	--	6.8

2. Upper Santa Clara River Chloride TMDL

- a) Permittees subject to the provisions below are identified in Table X.
- b) Permittees shall comply with the following effluent limitation for discharges to the Santa Clara River Reaches 5 and 6:

Constituent	Effluent Limitation (mg/L)
Chloride	100

¹ The Basin Plan Chapter 7-9 Santa Clara River Nitrogen Compounds TMDL uses the USEPA Santa Clara River reach designations. USEPA Santa Clara River Reach 7 corresponds to the Regional Board Santa Clara River Reach 5.

3. Lake Elizabeth Trash TMDL

- a) Permittees subject to the provisions below are identified in Table X.
- b) Permittees shall comply with the final effluent limitation of zero trash discharged to Lake Elizabeth no later than March 6, 2016 and every year thereafter.
- c) Permittees shall comply with interim and final effluent limitations for trash discharged to Lake Elizabeth, per the schedule below:

Deadline	Effluent Limitation	
	Drainage Area covered by Full Capture Systems (%)	Annual Trash Discharge (gal/yr)
March 6, 2008	0	529
March 6, 2012	20	423
March 6, 2013	40	317
March 6, 2014	60	212
March 6, 2015	80	106
March 6, 2016	100	0

- d) Permittees shall comply with the interim and final effluent limitations for trash in 3(b) and 3(c) above per the provisions in Part 7.X.X [Permit Provisions to Implement Trash TMDLs].

4. Santa Clara River Indicator Bacteria TMDL

- a) Permittees subject to the provisions below are identified in Table X.
- b) Permittees shall comply with the following final effluent limitations for discharges to the Santa Clara River Reaches 5, 6 and 7 during dry weather no later than [11 years after the effective date of the TMDL] and during wet weather² no later than [17 years after the effective date of the TMDL].

Constituent	Effluent Limitation (MPN or cfu)	
	Daily Maximum	Geometric Mean
E. coli	235/100 mL	126/100 mL

² Wet weather is defined as days with 0.1 inch of rain or more and the three days following the rain event.

c) Receiving Water Limitations

(1) Permittees shall comply with the following interim receiving water limitations for the Santa Clara River Reaches 5, 6, and 7:

Time Period	Annual Allowable Exceedance Days of the Single Sample Objective (daily sampling)	Deadline
Dry Weather	17	[4 years after TMDL effective date]
Wet Weather	61	[4 years after TMDL effective date]

(2) Permittees shall comply with the following final receiving water limitations for the Santa Clara River Reaches 5, 6, and 7:

Time Period	Annual Allowable Exceedance Days of the Single Sample Objective (daily sampling)	Annual Allowable Exceedances of the Geometric Mean Objective (daily sampling)	Deadline
Dry Weather	5	0	[11 years after TMDL effective date]
Wet Weather	16	0	[17 years after TMDL effective date]

DRAFT

MS4 Permit Provisions to Implement Trash TMDLs

- A. Effluent Limitations: Permittees shall comply with the interim and final trash effluent limitations set forth in this Permit for the following Trash TMDLs:
- (1) Lake Elizabeth Trash TMDL
 - (2) Santa Monica Bay Nearshore and Offshore Debris TMDL
 - (3) Malibu Creek Watershed Trash TMDL
 - (4) Ballona Creek Trash TMDL
 - (5) Machado Lake Trash TMDL
 - (6) Los Angeles River Trash TMDL
 - (7) Legg Lake Trash TMDL
 - (8) Peck Road Park Lake
 - (9) Echo Park Lake
 - (10) Lincoln Park Lake
- B. Compliance:
- (1) Pursuant to Water Code section 13360(a), Permittees may comply with the trash effluent limitations using any lawful means. Such compliance options are broadly classified as *full capture*, *partial capture*, *institutional controls*, or *minimum frequency of assessment and collection*, as described below, and any combination of these may be employed to achieve compliance:
 - (a) Full Capture Systems:
 - 1) The Los Angeles Region's Basin Plan authorizes the Executive Officer to certify *full capture systems*, which are systems that meet the operating and performance requirements as described in this Order, and the procedures identified in "Procedures and Requirements for Certification of a Best Management Practice for Trash Control as a Full Capture System" (See Appendix X)¹
 - 2) Permittees are authorized to comply with their effluent limitations through certified *full capture systems* provided the requirements of paragraph 3), immediately below, and any conditions in the certification, continue to be met.
 - 3) Permittees may comply with their effluent limitations through progressive installation of *full capture systems* throughout their jurisdictional areas until all areas draining to Lake Elizabeth, Malibu Creek, Ballona Creek, Machado Lake, the Los Angeles River system, Legg Lake, Peck Road Park Lake, Echo Park Lake, and Lincoln Park Lake are addressed. For purposes of this Permit, attainment of the effluent limitations shall be conclusively presumed for any drainage area to Lake Elizabeth, Malibu Creek (and its tributaries), Ballona Creek (and its tributaries), Machado Lake, the Los Angeles River (and its tributaries), Legg Lake, Peck Road Lake, Echo Park Lake, and Lincoln Park Lake where certified *full capture systems* treat all drainage from the area, provided that the *full capture systems* are adequately sized and maintained, and that maintenance records are up-to-date and available for inspection by the Los Angeles Water Board.
 - i. Permittees shall be deemed in compliance with their final effluent limitations if the Permittee demonstrates that all drainage areas under its authority are serviced by appropriate certified *full capture systems* as described in paragraph (a)(3).

¹ The Los Angeles Water Board currently recognizes eight *full capture systems*. These are: Vortex Separation Systems (VSS) and seven other Executive Officer certified *full capture systems*, including specific types or designs of trash nets; two gross solids removal devices (GSRDs); catch basin brush inserts and mesh screens; vertical and horizontal trash capture screen inserts; and a connector pipe screen device.

- ii. Permittees shall be deemed in compliance with their interim effluent limitations, where applicable:
1. By demonstrating that *full capture systems* treat the percentage of drainage areas in the watershed that corresponds to the required trash abatement.
 2. Alternatively, Permittees may propose a schedule for installation of *full capture systems* in areas under its authority within a given watershed, targeting first the areas of greatest trash generation, for the Executive Officer's approval. The Executive Officer shall not approve any such schedule that does not result in timely compliance with the final effluent limitations, consistent with the established TMDL implementation schedule and applicable State policies. Permittees shall be deemed in compliance with their interim effluent limitations provided it is fully in compliance with any such approved schedule.
- (b) **Partial Capture Devices and Institutional Controls:** Permittees may comply with their interim and final effluent limitations through the installation of *partial capture devices* and the application of *institutional controls*.²
- 1) Trash discharges from areas serviced solely by *partial capture devices* may be estimated based on demonstrated performance of the device(s) in the implementing area.³ That is, trash reduction is equivalent to the *partial capture devices'* trash removal efficiency multiplied by the percentage of drainage area serviced by the devices.
 - 2) Except as provided in subdivision 3) below, trash discharges from areas addressed by *institutional controls* and/or *partial capture devices* (where site-specific performance data is not available) shall be calculated using a mass balance approach, based on the daily generation rate (DGR) for a representative area.⁴ The DGR shall be determined from direct measurement of trash deposited in the drainage area during any thirty-day period between June 22nd and September 22nd exclusive of rain events⁵, and shall be re-calculated every year thereafter unless a less frequent period for recalculation is approved by the Executive Officer. The DGR shall be calculated as the total amount of trash collected during this period divided by the length of the collection period.

$$DGR = (\text{Amount of trash collected during a 30-day collection period}^6) / (30 \text{ days})$$

The DGR for the applicable area under the Permittees' authority shall be extrapolated from that of the representative drainage area(s). A mass balance equation shall be used to estimate the amount of trash discharged during a storm event.⁷ The *Storm Event Trash Discharge* for a given rain event in the Permittees' drainage area shall be calculated by multiplying the number of days since the last street sweeping by the DGR and subtracting the amount of any trash recovered in the catch

² While interim effluent limitations may be complied with using *partial capture devices*, compliance with final effluent limitations cannot be achieved with the exclusive use of *partial capture devices*.

³ Performance shall be demonstrated under different conditions (e.g. low to high trash loading).

⁴ The area(s) should be representative of the land uses and activities within the Permittees' authority and shall be approved by the Executive Officer prior to the 30-day collection period.

⁵ Provided no special events are scheduled that may affect the representative nature of that collection period.

⁶ Between June 22nd and September 22nd

⁷ Amount of trash shall refer to the uncompressed volume (in gallons) or drip-dry weight (in pounds) of trash collected.

basins.⁸ For each day of a storm event that generates precipitation greater than 0.25 inch, the Permittees shall calculate a *Storm Event Trash Discharge*.

Storm Event Trash Discharge = [(Days since last street sweeping * DGR)] - [Amount of trash recovered from catch basins]⁹

The sum of the *Storm Event Trash Discharges* for the storm year shall be the Permittees' calculated annual trash discharge.

Total Storm Year Trash Discharge = Σ Storm Event Trash Discharges from Drainage Area

- 3) The Executive Officer may approve alternative compliance monitoring approaches for calculating total storm year trash discharge, upon finding that the program will provide a scientifically-based estimate of the amount of trash discharged from the Permittees' storm drains.
- (c) Combined Compliance Approaches:
Permittees may comply with their interim and final effluent limitations through a combination of *full capture systems*, *partial capture devices*, and *institutional controls*. Where the Permittees relies on a combination of approaches, it shall demonstrate compliance with the interim and final effluent limitations as specified in (a)(3) in areas where *full capture systems* are installed and as specified in (b)(2) in areas where *partial capture devices* and *institutional controls* are applied.
- (d) Minimum Frequency of Assessment and Collection:
If approved by the Executive Officer and specified in the TMDL, Permittees may alternatively comply with the effluent limitations by implementing a program for minimum frequency of assessment and collection (MFAC) in conjunction with BMPs. To the satisfaction of the Executive Officer, the MFAC/BMP program must meet the following criteria:
- 1) The MFAC/BMP Program includes an initial minimum frequency of trash assessment and collection and suite of structural and/or nonstructural BMPs. The MFAC/BMP program shall include collection and disposal of all trash found in the receiving water and shoreline. Permittees shall implement an initial suite of BMPs based on current trash management practices in land areas that are found to be sources of trash to the water body. The initial minimum frequency of trash assessment and collection shall be set as specified in the following TMDLs:
 - i. Malibu Creek Watershed Trash TMDL
 - ii. Machado Lake Trash TMDL
 - iii. Legg Lake Trash TMDL
 - 2) The MFAC/BMP Program includes reasonable assurances that it will be implemented by the responsible Permittees.
 - 3) The MFAC/BMP Program includes a Trash Monitoring and Reporting Plan, as described in the Monitoring and Reporting, and a requirement that the responsible Permittees will self-report any non-compliance with its provisions. The results and report of the Trash Monitoring and Reporting Plan must be submitted to Regional Board on an annual basis.

⁸ Any negative values shall be considered to represent a zero discharge.

⁹ When more than one storm event occurs prior to the next street sweeping the discharge shall be calculated from the date of the last assessment.

- 4) MFAC protocols may be based on SWAMP protocols for rapid trash assessment, or alternative protocols proposed by Permittees and approved by the Executive Officer.
 - 5) Implementation of the MFAC/BMP program should include a Health and Safety Program to protect personnel. The MFAC/BMP program shall not require Permittees to access and collect trash from areas where personnel are prohibited.
 - 6) The Executive Officer may approve or require a revised assessment and collection frequency and definition of the critical conditions under the MFAC:
 - i. To prevent trash from accumulating in deleterious amounts that cause nuisance or adversely affect beneficial uses between collections;
 - ii. To reflect the results of trash assessment and collection;
 - iii. If the amount of trash collected does not show a decreasing trend, where necessary, such that a shorter interval between collections is warranted; or
 - iv. If the amount of trash collected is decreasing such that a longer interval between collections is warranted.
 - 7) At the end of the implementation period, a revised MFAC/BMP program may be required if the Executive Officer determines that the amount of trash accumulating between collections is causing nuisance or otherwise adversely affecting beneficial uses.
 - 8) With regard to (i), (ii) or (iii), above, the Executive Officer is authorized to allow responsible Permittees to implement additional structural or non-structural BMPs in lieu of modifying the monitoring frequency.
- (2) If a Permittee is not in compliance with the applicable interim and/or final effluent limitation then it shall be in violation of this permit.
- (a) A Permittee relying on *partial capture devices* and/or *institutional controls* that has violated its interim or final effluent limitation shall be presumed to have violated the applicable limitation for each day of each storm event that generated precipitation greater than 0.25 inch during the applicable storm year, except those storm days on which it establishes that its cumulative Storm Event Trash Discharges has not exceeded the applicable effluent limitation.
 - (b) If a Permittee relying on *full capture systems* has failed to demonstrate that the *full capture systems* for any drainage area are adequately sized and maintained, and that maintenance records are up-to-date and available for inspection by the Los Angeles Water Board, and that it is in compliance with any conditions of its certification, shall be presumed to have discharged trash in an amount that corresponds to the percentage of the baseline waste load allocation represented by the drainage area in question.
 - 1) A Permittee may overcome this presumption by demonstrating (using any of the methods authorized in this Part B(1)(b)) that the actual or calculated discharge for that drainage area is in compliance with the applicable interim or final effluent limitation.
- (3) Permittees shall be held liable for violations of the effluent limitations assigned to their area. If the Permittees compliance strategy includes *full or partial capture devices* and they choose to install a full or partial capture device in the MS4 physical infrastructure of another public entity, it is responsible for obtaining all necessary permits to do so. If a Permittee believes it is unable to obtain the permits needed to install a full capture or partial capture device within another Permittee's MS4 physical infrastructure, either Permittee may request the Executive Officer to hold a conference with the Permittees. Nothing in this Order shall affect the right of that public entity or a Permittee to seek indemnity or other recourse from the other as they deem appropriate. Nothing in this subsection shall be construed as relieving a Permittee of any liability that the Permittee would otherwise have under this Order.

C. Monitoring and Reporting Requirements (pursuant to Water Code section 13383)

- (1) On October 31, 2012 and every year thereafter, the Permittees shall submit a TMDL Compliance Report detailing compliance with the interim and final effluent limitations. Reporting shall include the information specified below. The report shall be submitted on the reporting form specified by the Los Angeles Water Board Executive Officer. The report shall be signed under penalty of perjury by the Permittees Director or other agency head (or their delegee) that is responsible for ensuring compliance with this permit. Permittees shall be charged with and shall demonstrate compliance with the relevant effluent limitations beginning with their October 31, 2012 TMDL Compliance Report.
- (a) Reporting Compliance based on Full Capture Systems: Permittees shall provide information on the number and location of full capture installations, the sizing of each full capture installation, the drainage areas addressed by these installations, and compliance with the applicable interim or final effluent limitation, in its TMDL Compliance Report. The Los Angeles Water Board will periodically audit sizing, performance, and other data to validate that a system satisfies the criteria established for a *full capture system* and any conditions established by the Executive Officer in the certification.
- (b) Reporting Compliance based on Partial Capture Systems and/or Institutional Controls:
- 1) Using Performance Data Specific to the Permittees' Area: Permittees shall provide (i) site-specific performance data for the applicable device(s), (ii) information on the number and location of such installations, and the drainage areas addressed by these installations, and (iii) calculated compliance with the applicable effluent limitations, in their TMDL Compliance Report.
 - 2) Using Direct Measurement of Trash Discharge: Permittees shall provide an accounting of DGR and trash removal via street sweeping, catch basin clean outs, etc. in a database to facilitate the calculation of discharge for each rain event. The database shall be maintained and provided to the Los Angeles Water Board for inspection upon request. Permittees shall provide the annual DGR, calculated storm year discharge, and compliance with the applicable effluent limitation, in its TMDL Compliance Report.
- (c) Reporting Compliance based on Combined Compliance Approaches: Permittees shall provide the information specified in subsection (a) for areas where *full capture systems* are installed and that specified in subsection (b)(1) or (b)(2), as appropriate, for areas where *partial capture devices* and *institutional controls* are applied. Permittees shall also provide information on compliance with the applicable effluent limitation based on the combined compliance approaches, in its TMDL Compliance Report.
- (2) Violation of the reporting requirements of this Part shall be punishable pursuant to inter alia Water Code subdivision (a)(1) of section 13385.1 and/or subdivision (a)(3) of section 13385.

 Los Angeles, CA 90013

Attn: Ivar Ridgeway

Subject: Comments on Draft Core Permit Requirements-Development Construction Program for the Los Angeles County MS4 permit

Dear Mr. Unger:

Thank you and your staff for distributing the Draft Core Permit Requirements for the upcoming Los Angeles County MS4 permit. In my review of the Draft Core Permit Requirements, I have used the adopted Ventura permit process to evaluate what the final language will likely be and my comments should be understood to reflect the language that appears in the Ventura permit. In general terms, the Board has determined that the previous versions of the MS4 permit for Los Angeles County have not been adequately implemented by the permittees, so the Regional Board is providing specific guidance on how you believe that the Order should be followed. While I understand and agree with your findings, I believe that the language of the proposed Order must consider the reality of the economy and the industries that are being regulated by this Order.

At the bottom of page one (1) the Board Staff sets the requirement for each permittee to "use an electronic system to inventory grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/or construct or destruct that involves land disturbance) issued by the Permittees." Section F7 of the Ventura County permit contains virtually the same language. While the creation of the electronic tracking system would pose problems for most agencies, it is at a level that is supported by current technology. **I would request that the Board consider setting a minimum size project that must be included in this database.** Since section F7 of the

Ventura Permit is silent on the subject, it is my belief that the Regional Board does not want "every permit" that may cause a disturbance be listed. For example, if a resident asked for a permit to plant a parkway tree, it would likely require the City to issue an encroachment permit or construction permit. The resident would buy a tree, dig a hole and plant the tree. The resident would disturb the land, but the project would be done and stabilized on the same day or maybe the same hour as the work began. It is my belief that a minimum size project needs to be established for the information to be of real value to the Regional Board and understood by the individuals that must collect the data. **I would suggest the following criteria be considered for inclusion within the data base:**

- 1. Residential addition over 500 square feet,**
- 2. Excavation within a street for utility purposes that disturbs more than 500 square feet or**
- 3. Grading on private land that disturbs 50 cubic yards of soil.**

This will also make the data generated more relevant, in the event of public inquiries.

On page two (2) of the Core permit requirements document the Board staff proposed to require an erosion and sediment control plan (ESCP) be prepared for both Grading and Building projects that disturb the land. This provision is referenced to the SWRCB's Draft Small MS4 General Permit. The closest provision that is in the Ventura permit is in section F5 that requires sites that disturb more than 1 acre to prepare a Local SWPPP. As established by the Ventura permit the use of a minimum sized project for the applicability is the correct approach. The one acre limit may be high because that is the limit where controls are under the Construction General Permit (CGP) issued by the State Water Board. It would seem reasonable that anyone constructing a new home on a vacant site should prepare a local SWPPP. Residential additions of a certain minimum size could cause significant soil disturbance and, thus, warrant the preparation of an ESCP. **I ask that the Regional Board establish a reasonable minimum size project for which an ESCP is required**, rather than no minimum which requires all projects prepare an ESCP.

The last item on page two (2) establishes criteria for review of the ESCP. Most of the discussion is logical for construction projects of less than one acre in size. However, the one portion of this discussion that I cannot agree with is the portion of the statement that reads, "...and tailored to the risk posed by the project." To associate the CGP Risk Level evaluation to a project that will be less than one acre in size is excessive. Risk level one project requires minimum Best Management Practices (BMPs). For projects that are less than one acre and are surrounded in an urban setting the discussion of risk is not appropriate because the property cannot be interpreted as posing a risk to any environmental area. **If it is imperative that risk be considered, the Board staff needs to establish the key areas where risk may**

actually be important. Areas such as those adjacent to a State Board established ASBS or another ESHA may warrant risk consideration, but projects in the urban core do not rise to that level and should not be saddled with risk.

On page three (3) of the Core document the Board staff lists the elements that must be included in the ESCP/SWPPP. I can see the logic for all of the elements but one. That one element is the Rain Event Action Plan (REAP). By including this element in the ESCP the Board has elevated these small, less than one acre projects, to a Risk level 2. This is unreasonable. For a four to ten thousand square foot project to be raised to the level of requiring an REAP cannot be justified. The vast majority of projects in this less than one acre size have the grading done in two to four weeks maximum. A REAP is just not warranted when the grading activity will not likely face a rain event during the grading process. Once the rough grade levels are reached, the ESCP for the rough stage will remain in place for the balance of construction. **I would ask the Regional Board to remove the requirement for a REAP for a small project of less than one acre.**

On page four (4) of the core document the certification for ESCP/SWPPP is discussed. Item B is confusing to me. It states that "Each Permittee shall require that all structural BMPs be designed by a California licensed engineer." The origin is cited as the State CGP and the Ventura County MS4 permit. The CGP has a list of eight different professionals that are qualified to prepare and certify the CGP SWPPP document. The Ventura County permit, section F(5)(a)(1)(A)(ii) includes the requirement that the Project architect, engineer of record, or authorized qualified designee, must sign a statement on the Local SWPPP..." Neither one of these documents limits the preparation nor signature of the ESCP/SWPPP to a licensed engineer. **I would ask that the Board staff reconsider this requirement and allow the same list of individuals that are permitted by the CGP.**

In item C of this section the Regional Board describes the "certification" that must be made by the Landowner or his agent. Over the past several years for various legal reasons, the word Certify has evolved to the word "State". **I ask that the Regional Board consider the use of the word "Statement" instead of the word "Certification".**

The last item on page four (4) of the Core Permit Requirements is the "Confirmation of coverage under other permits". Verification that a project has coverage under the State CGP is a normal requirement today for every City. This is a normal part of processing a grading permit today. The Boards addition of the verification of the 401, 404, and 1600 documents for the Department of Fish and Game, or the Army Corp of Engineers is a significant increase in responsibility. First, these actions are not required for every project that disturbs more than an acre of land. By making this an obligation of the City to confirm, it will force projects that have no impact under these programs to contact the Department of Fish and Game or the Army Corp

to verify that they are not involved with their process. In 80% of the cases, they will not be involved so the time of the Fish and Game agent or the Army Corp officers will be interrupted reviewing a case that would not normally have been directed to them. **I would request that the City verification that 401, 404 or 1600 permits or clearances be removed from the MS4 permit.**

On page five (5) of the Core Permit Requirements the Regional Board Staff is proposing that Cities revise their inspection and enforcement procedures to include a review of the applicable ESCP/SWPPP to determine that all BMPs have been selected, installed, implemented and maintained according to the approved plan. This is a significant expansion of the authority and responsibility of the inspector into areas that they, in most cases, are not qualified to address. An inspector who is likely only a Qualified SWPPP Practitioner (QSP) is not qualified to "select" BMPs for a project. He certainly is qualified to verify the installation, implementation and maintenance for the BMPs selected, but he is not qualified to select the BMPs for use. For the Board Staff to impose this obligation on the inspection staff of cities in Los Angeles County is unreasonable. Secondly, the Board staff is asking that the inspector review the approved plan. In the case of a State CGP project, I am not aware that the State Water Resources Control Board is issuing approvals for the ESCP/SWPPP. So, if there is no approved ESCP for a State CGP what is the inspector to review? In reading section F8 of the Ventura County permit, there is no reference to this level of review. **I request that the Regional Board reconsider the Inspection Procedures Section of the Core document and do the following:**

- 1. Remove the review of the State SWPPP document by the local inspector, because it is not an approved document, and**
- 2. Remove the obligation of the local inspector to verify that BMPs were selected correctly for the project.**

I request that a distinct clarification be made by the Regional Board acknowledging its understanding that the State Board does not want local agencies reviewing and approving a State SWPPP.

On page six (6) of the core permit document, under inspection procedures, the item numbered (6) requires the City to amend their inspection procedures to include sampling and analysis of storm water runoff discharges from property when visual observation indicates turbidity in the storm water discharge. I must respectfully object to this transfer of responsibility from the project QSP to the City inspector. The sampling and analysis of the storm water discharge from a Risk level 2 site is clearly the responsibility of the QSP. That individual is obligated by the State CGP to have the needed equipment, the knowledge for the calibration of the equipment, and the obligation to take action if Action levels are exceeded. The City inspector on the other

hand does not have such equipment, has never been trained in sampling rain runoff and does not have the authority to tell the contractor to make necessary changes other than the legal authority afforded by City Ordinance to issue correction notices and citations when a violation is detected. **I ask that the Regional Board remove the requirement for the City inspection procedure to be revised to include sampling and analysis of the storm water runoff from construction projects. This requirement is not in the Ventura permit and it is not a logical extension of any inspection authority that cities currently have.**

On page seven (7) of the core permit requirements under the Training of Permittee staff, it appears that the Regional Board is imposing a mandate that Plan Review staff members be qualified under the State QSD program and that Inspection staff be qualified under the QSP program. This is a significant expansion of the provisions of the State CGP which does not require that City staff be trained or qualified as a QSD/QSP. The vast majority of plan reviewers and field inspectors have not undertaken this training and would be disqualified to review or inspect construction projects if the requirement is imposed on cities and counties. I see nothing similar in the Ventura County permit under their Development Construction Program. **I request that the Regional Board remove the requirement that Plan Reviewers be qualified under the QSD program and that inspectors be qualified under the QSP program. At a minimum, the Regional Board must allow an adequate "grace period" whereby Plan Review Staff and Inspection Staff can obtain the proper certifications.**

Finally, on page seven (7) and eight (8) it appears that the Regional Board staff is introducing a mandatory program for cities to educate contractors on the proper selection, installation, implementation and maintenance of site BMPs. This is an impossible task in today's society. With contractors chasing fewer and fewer projects, they are forced to leave their comfort zone and perform work in cities that they have never worked in before. Because of this nomadic nature, contractors move from city-to-city at will. For a city to be responsible for training the contractors that work within their community is not possible. This should either be a State responsibility (much like the QSD/QSP programs currently run by the State) or a county responsibility because they have control over the regional market. In addition to the contractors, I believe that it will be necessary that the Engineering and Architectural professions be included in the training program since they will likely be the parties that will be preparing the ESCP/SWPPP for smaller projects. **I therefore ask that the provision that the cities offer training to contractors, engineers and architects be removed from the proposed permit language in favor of a State or county mandate for a Statewide or Countywide Training Program.**

Again, I would like to thank the Regional Board for distributing the Core Permit Requirement tables so that the cities can submit their input. For the most part, the Development

Construction Program can be supported by the cities but, as with any regulatory document, input is necessary to ensure that the cities and the Regulators have the same understanding of the proposed regulatory language.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark R. Alexander", written in a cursive style.

SUBJECT: *LA Permit Group Comments Regarding the 1/23/12 Workshop on Monitoring and TMDLs*

Dear Mr. Unger:

The LA Permit group appreciates the opportunity to provide comments regarding the Regional Board's January 23, 2012 Workshop on the proposed Monitoring and TMDL programs for the upcoming Los Angeles County MS4 NPDES permit. Detailed comments and recommendations regarding each of these programs are attached (Monitoring Program Comments – Exhibit A and TMDL Program Comments – Exhibit B). The LA Permit Group recognizes that the upcoming MS4 NPDES permit is a very difficult and complicated permit to develop, especially given the integration of many TMDLs. However; the permit must contain provisions that are economically achievable and sustainable and that will not expose permittees to unreasonable compliance issues. We look forward to continued discussion and collaboration with you and your staff in order to cooperatively develop economically achievable and sustainable permit provisions.

The LA Permit Group is a collaborative effort developed to negotiate the Los Angeles County MS4 NPDES Permit. Over 60 Los Angeles County municipalities are actively participating in the effort to develop and provide comments and recommendations throughout the MS4 NPDES Permit development process. Comments and recommendations are developed by each of the LA Permit Group's four Technical Sub-Committees (Land Development, Reporting & Core Programs, Monitoring, and TMDLs) which are then approved by the LA Permit Group; the group's consensus is represented by the Negotiations Committee. The LA Permit Group's comments and recommendations contained in Exhibits A and B of this letter have been developed by the Monitoring and TMDL Technical Sub-Committees and were approved by the LA Permit Group at our February 8, 2012 meeting.

Thank you for the opportunity to comment on the proposed Monitoring and TMDLs programs and we look forward to meeting with you to discuss our comments and recommendations presented in this letter. Please feel free to contact me at (626) 932-5577 or hmaloney@ci.monrovia.ca.us if you have any questions regarding our comments.

Sincerely,

A handwritten signature in black ink, appearing to read "Heather M. Maloney", is written over a horizontal line. The signature is fluid and cursive.

**LA Permit Group
Comments on Monitoring Provisions Proposed at RWQCB Workshop on 1/23/12**

The LA Permit group appreciates the opportunity to provide comments regarding the Regional Board's 1/23/12 workshop on the proposed monitoring program for the upcoming NPDES permit. The comments are organized to provide our overall general comments regarding the monitoring program and then our specific comments on the details presented in the workshop.

General Comments

In our 11/10/11 presentation to the Regional Board, The LA Permit Group identified an Integrated Watershed Monitoring Program (IWMP) approach supporting a comprehensive and focused monitoring program. Although the Board staff indicated interest in the approach, we were disappointed to see the approach was not well captured in the 01/23/12 workshop. We still would submit that the overarching monitoring program should be based on the concepts found in an IWMP (see attached proposal for an IWMP, p.5 & 6).

Regional Monitoring Programs

1. Duplicative efforts. The proposed regional monitoring programs appears to duplicate ongoing studies/activities by other permittees in southern California, thus, we question what new and useful information will be provided that is not already being developed.

Recommendation: Modify the requirement for regional monitoring programs to account for existing and on-going regional monitoring efforts (also see our Special Comments on this issue).

Stormwater and Non-stormwater Monitoring Programs

1. Need to Promote a Watershed Approach. The proposed monitoring strategy appears to minimize instead of promote a watershed approach to monitoring and provides little insights into the water quality issues within a watershed. Instead it focuses exclusively on individual permittees.

Recommendation: It is recommended that the monitoring program be based on a watershed and TMDL and that it:

- a. evaluates the current conditions in impaired water bodies (identified by effective TMDLs),*
- b. facilitates the attainment of WLAs and assessment of effectiveness and improvement of BMPs to effectively address each impairment to the extent it is potentially contributed by the MS4, and*
- c. identifies the extent to which the impairment may be caused by factors or sources other than discharges from the MS4*
- d. promotes the IWMP and provides time schedule incentives.*

The LA Permit Group has developed a position paper that captures this fundamental strategy (see attachment). The strategy, we believe, would better serve as the framework for the monitoring program than the one currently being considered by the Regional Board.

2. Lack of Clear Goals and Objectives. The proposed strategy for stormwater and non-stormwater lacks well defined goals and management questions. Instead the strategy appears to be a resource-intensive, far reaching attempt to collect monitoring data for collection sake without any explanation as to how the data will be used to guide management decisions. The monitoring program must be designed to answer specific management questions and/or objectives. The program must provide a comprehensive but focused attempt to address a number of management

LA Permit Group**Comments on 1/23/12 LARWQCB Monitoring Program Presentation****Page 2 of 6**

questions. Furthermore the proposed strategy isolates the stormwater/non-stormwater monitoring from other elements of the monitoring program such as receiving water and tributary monitoring. As a result it is difficult to understand the overall relationships between the various monitoring efforts and limits the Permittees' ability to direct their monitoring efforts according to local and watershed specific concerns.

Recommendation: We strongly recommend that the Regional Board revisit the stormwater monitoring programs to incorporate an integrated watershed monitoring strategy that addresses water quality management based questions and TMDLs. Similarly, we recommend that the monitoring program reflect an adaptive management approach such that we have the ability to modify our monitoring efforts as monitoring data and information are gathered.

Specific Comments

Although we have fundamental concerns with the overall approach provided in the 1/23/12 workshop and strongly recommend modifications in the approach, we have none-the-less developed specific comments on the Regional Board approach. These comments are provided below.

Regional Monitoring Programs

1. **Pyrethroid Study**. We suggest that the Surface Water Ambient Monitoring Program would be a better vehicle for assessing the overall impacts of pesticides (pyrethroids) in the watersheds than the MS4 stormwater programs. This is especially true since pyrethroid is a statewide issue and not just a potential Los Angeles area issue.
2. **Hydromodification Study**. Many municipalities discharge directly or indirectly into concrete channels thus calling into question the value of a hydromodification study for these municipalities. Furthermore, the Southern California Coastal Water Research Project (SCCWRP) has a number of studies focused on hydromodification including one that assesses the impacts of hydromodification and identifies management practices that could offset the impacts¹. Thus we would suggest that the proposed hydromodification study for the LA permittees be eliminated and instead allow SCCWRP efforts in this area to be the base studies.
3. **Low Impact Development Study**. As with the hydromodification study we believe that there is already ongoing research with LID and that the proposed study for the LA permittees is unwarranted. The Southern California Monitoring Coalition had previously identified this area for research and received grant monies to assess the effectiveness of LID strategies. This work was recently conducted by the SCM. In addition, the SCM Coalition conducted a study to identify impediments to LID implementation and this study is also just now being completed. Thus we question the value of LA permittee specific studies for LID.

Recommendation: Modify the requirement for regional monitoring programs to account for existing and ongoing regional monitoring efforts.

1

<http://www.sccwrp.org/ResearchAreas/Stormwater/Hydromodification/AssessmentAndManagementOfHydromodification.aspx>

Stormwater and Non-stormwater Monitoring Programs

1. Clear Logic Needed for Deciding Monitoring Efforts. The logic for both stormwater and non-stormwater monitoring efforts is confusing and in some cases appears to be in conflict. Furthermore, there appears to be little nexus between TMDLs and the proposed monitoring effort.

Recommendation: It is absolutely necessary that a logical decision tree be developed to guide the Permittees. The development of a decision tree could be part of the integrated watershed monitoring plan.

2. Confusing objectives for non-stormwater monitoring. The proposed non-stormwater monitoring (slides 21-23²) does not address the stated requirement in slide 24 to determine the relative flow contribution of other permitted discharges. Also it is unclear what will be gained by the extensive monitoring effort. Furthermore the time line proposed to complete this work is woefully inadequate (9 months). If the purpose of the non-stormwater monitoring is to assess the categorical exemptions, then the current framework is inadequate.

Recommendation: We recommend that a well defined regional study be incorporated into the IWMP that already includes flow monitoring in numerous locations to assess categorical exemptions instead of the each permittee based approach currently proposed.

3. Aquatic Toxicity Monitoring. Slide 18 indicates that stormwater monitoring includes aquatic toxicity monitoring. We would submit that it is premature to conduct outfall toxicity monitoring until it has been established that toxicity is present in the receiving water. Furthermore we would submit that should toxicity monitoring be required, acute toxicity is the appropriate toxicity test given the short duration of stormwater discharges.

Recommendation: Toxicity monitoring should be acute and be limited to the receiving water and not be a part of an outfall monitoring program unless dictated by a TMDL. Aquatic Toxicity monitoring is required by a number of TMDLs and could be extracted from IWMP.

4. Technical concerns include the following:
 - a. Unclear how baseline non-stormwater flows are established.
 - b. Possible conflicting criteria regarding the use of land uses to identify outfalls and the minimum number of outfalls (slides 15-16).
 - c. Need better definition for "significant" non-stormwater flows. The requirement noted in slide 21 regarding 10% above the lowest rolling average needs to be evaluated more closely as it appears that all outfalls will qualify under this criteria.

² Slide numbers are based on Regional Board 1/23/12 presentation by PG Environmental.

LA Permit Group**Comments on 1/23/12 LARWQCB Monitoring Program Presentation****Page 4 of 6**

- d. When are field measurements and grab samples collected during a storm event? Logistically it will be difficult and costly to require grab samples in addition to the flow weighted samples. Most stormwater data are categorized as event mean concentrations which is a flow weighted composite sample. Grab samples do not reflect EMC but rather just a point in time concentrations.
- e. The use of bacteria as a monitoring parameter to identify sources of sewage is questionable given bacteria is ubiquitous in our environment and difficult to track. Bacteria source tracking should be addressed in the TMDL on a case by case situation.
- f. Without receiving water data the MS4 is limited in its ability to determine whether non-stormwater discharges are causing or contributing to exceedances of water quality standards. However there is no receiving water monitoring coupled with the non-stormwater monitoring.
- g. The 1/23/12 presentation introduced some new as well as some not so new terms. Given the relatively early stage of development of the stormwater permitting program, it is important to clearly define these terms to avoid confusion and misunderstanding during the permit approval process. We realize that the adopted Permit will have a definition section but to assist in the permit development and adoption stage it would be useful to provide definitions upfront including the definition for outfalls, major or otherwise.

Recommendation: Conduct case studies for Torrance and the Los Angeles River watershed and others as appropriate to address a range of different conditions (e.g. size, receiving waters, TMDLs, etc.). These case studies will likely clarify the purpose and approach of the monitoring and lead to improvements in the monitoring program. Furthermore we believe it would be constructive to have PG Environmental participate in these discussions.

Closing

The LA Permit Group again appreciates the opportunity to provide these comments and look forward to working with the Regional Board especially in evaluating case studies to better craft a long term, constructive and cost effective monitoring program.

LA Permit Group, proposal for

INTEGRATED WATERSHED MONITORING PLANS

It is the MS4 Co-Permittees' intent to utilize Total Maximum Daily Load (TMDL) monitoring as the primary monitoring program requirement in the next MS4 Permit. The Co-Permittees support a TMDL-driven monitoring program that:

- evaluates the current conditions of recognized impaired water bodies (identified by the 303d List),
- facilitates the attainment of WLAs and assessment of effectiveness and improvement of BMPs to effectively address each impairment to the extent it is potentially contributed by the MS4, and
- identifies the extent to which the impairment may be caused by factors or sources other than discharges from the MS4

The Co-Permittees wish to work cooperatively with the assistance of outside experts, e.g., Council for Watershed Health³ or consulting firm, to prepare Integrated Watershed Monitoring Plans to meet TMDL monitoring requirements. Currently the adopted TMDLs require each agency or subwatershed group to submit separate TMDL Monitoring and Reporting Plans and to prepare individual annual monitoring reports for each TMDL. The end result will be numerous monitoring plans that are not coordinated, with redundancies between monitoring programs, without standard sampling or analysis methods to ensure data comparability, and with the potential for data gaps, which will create a multitude of annual reports which must be reviewed by Regional Board staff that do not provide a comprehensive picture of watershed health.

The goal of Integrated Watershed Monitoring Plans would be to provide:

- TMDL objective-driven monitoring plan designs,
- comprehensive data management and reporting,
- SWAMP-compatible QA/QC and data validation,
- data synthesis and interpretation on a watershed scale, and
- single, comprehensive annual monitoring reports for each watershed addressing all the adopted TMDLs in that watershed.

Integrated Watershed Monitoring Plans will be developed and implemented for each major watershed in the County. The Co-Permittees recognize the efficiencies that can be obtained by preparing Integrated Watershed Monitoring Plans that address all TMDLs for that watershed. During the process of developing the Integrated Watershed Monitoring Plans the Co-Permittees would bring together watershed stakeholders, compile an inventory of existing or pending monitoring efforts, develop a comprehensive list of monitoring questions to address the identified watershed impairments and design coordinated monitoring programs. The provisions of the 3rd term permit Monitoring and Reporting Program and the relevant TMDL monitoring requirements will be incorporated into each Integrated

³ The Council for Watershed Health (Council) has worked with the Wastewater Treatment Plants to prepare coordinated monitoring plans for the Los Angeles and San Gabriel River watersheds.

Page 6 of 6

LA Permit Group, proposal for
INTEGRATED WATERSHED MONITORING PLANS, cont.

Watershed Monitoring Plan and the requirement for implementing individual TMDL monitoring plans would be eliminated once they have been incorporated into the approved Integrated Watershed Monitoring Plan. The Co-Permittees would need to develop a Memorandum of Understanding to contract for preparation of the Integrated Watershed Monitoring Plans and Annual Reports.

The Co-Permittees recognize the value of having Integrated Watershed Monitoring Plans to assess the extent of MS4 contribution to TMDL-listed impairments and to design and evaluate BMPs to reduce those contributions to attain WLAs, but also recognize that the same monitoring data can be used by the Regional Board to issue Notices of Violation and/or for Third Party lawsuits. Such regulatory and legal actions would be counterproductive and would obstruct the iterative adaptive process needed to efficiently and effectively improve water quality, thus the co-permittees request that the MS4 Permit language for Monitoring and TMDLs be written to require Integrated Watershed Monitoring Plans but to clearly state that so long as a Co-Permittee is carrying out its obligations in implementing measures in accordance with the provisions of an approved TMDL Implementation Plan and participating in a cooperative MOA to carry out the Integrated Watershed Monitoring Plans, that during this Permit term exceedances of Water Quality Standards, TMDL Waste Load Allocations, or Effluent Limits will not constitute a Permit violation. Integrated Watershed Monitoring Plans approved by the Executive Officer would supersede previously approved TMDL Monitoring and Reporting Plans.

Permittees that do not want to participate in the Integrated Watershed approach shall develop and/or utilize existing or future TMDL monitoring plans and schedules. Existing TMDLs should have the option to be included in the Integrated Watershed approach, and resulting timeframe adjustments, if they so chose.

EXHIBIT B

LA Permit Group
Draft Comments on TMDL Provisions Proposed at RWQCB Workshop on 1/23/12

The Los Angeles Permit Group appreciates the opportunity to provide input to RWQCB staff on the elements of TMDL WLA incorporation into the MS4 permit as provided in the presentation and handouts during the workshop on 1/23/12.

The group supports many of the concepts outlined in the presentation, particularly the multiple methods of demonstrating compliance, which includes the implementation of rigorous implementation plans using an adaptive management strategy as a method of compliance. However, the group has a few key concerns with the proposal that we would like to share.

Reasonable Assurance Plan

We request that the Reasonable Assurance Plan (RAP) not be used as the mechanism for identifying the BMPs that will be used to comply with the TMDL WLAs. Rather, we request that the requirements to meet TMDL WLAs be incorporated into the Stormwater Quality Management Plan, as described below.

1. Stormwater Quality Management Plans, based on the TMDL implementation plans and other elements, can be developed with a watershed/sub watershed based or individual permittee approach rather than a "one size fits all" approach.
 - a. Permittees shall develop a process to evaluate BMPs that will fall under one or more of the following categories:
 - i. Operational source control BMPs that prevent contact of pollutants with rainwater or stormwater runoff;
 - ii. Runoff reduction BMPs;
 - iii. Treatment control BMPs where effectiveness information is available;
 - iv. True source control BMPs that eliminate or greatly reduce a potential pollutant at the original source pursuant to a legislative or regulatory time schedule; or
 - v. Research and development for pollutant types where effective BMPs have not been identified.
 - b. These categories will be incorporated as part of the Stormwater Quality Management Plans.
 - c. Stormwater Quality Management Plans will identify effective BMPs to be implemented in an iterative manner to attain the WLAs based on the design storm.
2. Stormwater Quality Management Plans designed to attain the TMDL WLAs will include:
 - a. specific, targeted steps scheduled to attain the WLAs through the use of BMPs;
 - b. specific procedures for evaluating BMP effectiveness; and
 - c. provisions for special studies if needed.

The Stormwater Quality Management Plans can incorporate BMPs identified in implementation plans to address the TMDL requirements.

LA Permit Group
Comments on 1/23/12 LARWQCB TMDLs Program Presentation
Page 2 of 4

TMDL Compliance

Our second, and primary concern, is the way in which compliance with TMDL permit provisions is being discussed. It is our understanding from the presentation, that at the end of a TMDL implementation schedule, if a permittee is not meeting the numeric values assigned as WLAs in the TMDL, the permittee will be considered out of compliance with the permit requirements. We have significant concerns with this approach to developing the permit for a number of reasons.

It is our understanding that this approach would result in the inclusion of numeric effluent limitations as the mechanism for incorporating the TMDL WLAs. For those TMDLs whose compliance dates have passed, permittees would be considered in violation of the permit if they are not meeting the numeric effluent limitations from the moment the permit is effective. If warranted, the Regional Board would use a Time Schedule Order (TSO) to provide some additional time for coming into compliance. If this is the proposed approach, in essence, the permittees would be going from complying with the current permit that includes only a few TMDL requirements to potentially being out of compliance for requirements that have never been in their permit.

Permittees are planning on taking actions as outlined in the Stormwater Quality Management Plan above to make significant progress towards improving water quality. However, we have concerns that requirements being proposed go beyond MEP given the economic and staff resources available to achieve the WLAs for an unprecedented number of TMDLs being incorporated into this permit. These concerns are based on a number of factors including but not limited to:

- TMDLs were developed using inadequate data with the intent that TMDL provisions would be revised through TMDL reconsiderations and special studies. Most of the TMDLs have not been reconsidered.
- Other sources may prevent attainment of standards in the receiving water no matter what actions are taken by the MS4 permittees.
- Many WLAs cannot be met within the permit term.
- Regulation of the sources of some pollutants are outside of MS4 permittees control.
- The design storm has not yet been defined and implementation of BMPs to ensure compliance under all conditions, including extreme storm events, could be extremely costly and technically infeasible.

Although we recognize that additional requirements and rigor need to be added to the permit to address TMDLs, we feel that there are straightforward ways to do this that do not represent such a significant shift in the regulation of stormwater discharges and place dischargers into an untenable situation of potentially being out of compliance with their permit from the effective date.

To address these concerns, the group would like to propose the following approach for compliance with TMDL WLAs.

1. Implement TMDL WLAs as BMP-based water quality based effluent limitations (WQBELs) in the permit. This is consistent with federal regulations (40 CFR 122.44(d)(1)(vii)(B) which require inclusion of effluent limits, defined at 40 CFR 122.2 as "any restriction imposed by the Director on quantities, discharge rates, and concentrations of "pollutants" which are "discharged" from

LA Permit Group**Comments on 1/23/12 LARWQCB TMDLs Program Presentation****Page 3 of 4**

- “point sources”, which are “consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA.”
2. Define BMP-based WQBELs as “Implementation of BMPs included in a Regional Board Executive Officer approved Stormwater Quality Management Plan. The Stormwater Quality Management Plan (SQMP) shall describe the proposed BMPs and the documentation demonstrating that when implemented, the BMPs are expected to attain the WLAs, and a process for evaluating BMP effectiveness and implementing additional actions if necessary to meet the TMDL WLAs.” This is consistent with other recently adopted permits in California and with the requirements as described in the 1/23/12 RWQCB presentation.
 3. Consistent with the four methods for demonstrating compliance with TMDLs as presented in the 1/23/12 RWQCB presentation, a co-permittee which is achieving WLAs at the outfall (or equivalent point of compliance within the drainage system) or in receiving waters may cease implementing additional BMPs if appropriate.
 4. Violations of the BMP based WQBEL provisions would consist of the following provisions, in keeping with the 1/23/12 RWQCB presentation:
 - a. Not submitting the SQMP.
 - b. Not implementing all elements of the SQMP in accordance with the approved schedule.
 - c. Not implementing additional BMPs or revising the SQMP per the process outlined in the SQMP or on schedule.

We can provide example permit language to help expand upon the approach outlined above. We appreciate your consideration of this approach and would like to meet to discuss these important issues related to TMDLs.

Additional Comments on the Proposed Text

In addition to the general topics outlined above, we have some concerns about the draft language that was provided for the TMDLs. First, we request that a non-trash example be provided to allow a better understanding of how compliance will be determined for constituents that do not have a clear method of determining compliance outlined in the TMDL. Additionally, we feel that some of the language proposed is not consistent with the approach outlined in the presentation. We have highlighted the language of potential concern below.

Part 7. Total Maximum Daily Loads (TMDLs) Provisions

The second bullet states “The Permittees shall comply with the following effluent limitations and/or receiving water limitations...” This is followed by tables with the numeric WLAs.

We have three concerns with this language:

1. The language implies that the effluent limitations are strictly numeric.
2. The language does not include any reference to how compliance will be determined, with the exception of the trash TMDL.
3. The language refers to both effluent limitations and receiving water limitations for the Santa Clara River Bacteria TMDL. We feel this does not accurately reflect the language in the TMDL and creates confusion related to the receiving water limitations outlined in a separate portion of the document.

LA Permit Group
Comments on 1/23/12 LARWQCB TMDLs Program Presentation
Page 4 of 4

We feel that these concerns could be addressed through the approach outlined above for incorporation of TMDL WLAs.

MS4 Permit Provisions to Implement Trash TMDLs

We appreciate the incorporation of language to define alternative methods of compliance (i.e. full capture) and hope to see similar language for other constituents. However, we feel that some minor language modifications may be necessary to clearly show the linkage and ensure the permit is clear.

In B. (1)(d) Language regarding compliance through an MFAC program is not clearly defined. We feel that the language should clearly state that the permittee is deemed in compliance through implementing an approved MFAC program.

In B.(2), the language discussing violations of the permit should reference the previous section where compliance is defined.

Dear Ms. Purdy:

**COMMENT LETTER – LOS ANGELES COUNTY MUNICIPAL SEPARATE STORM
 SEWER SYSTEM PERMIT WORKSHOP ON JANUARY 23, 2012**

On behalf of the Los Angeles County Flood Control District and the County of Los Angeles, thank you for the opportunity to comment on the California Regional Water Quality Control Board, Los Angeles Region's presentation on January 23, 2012, on the Los Angeles County Municipal Separate Storm Sewer System Permit. Enclosed are our comments for your review and consideration.

We look forward to working with you on developing draft language for the next Municipal Separate Storm Sewer System Permit. If you have any questions, please contact me at (626) 458-4300 or ghildeb@dpw.lacounty.gov or your staff may contact Ms. Angela George at (626) 458-4325 or ageorge@dpw.lacounty.gov.

Very truly yours,

GAIL FARBER

COMMENTS OF THE LOS ANGELES COUNTY FLOOD CONTROL DISTRICT AND
THE COUNTY OF LOS ANGELES REGARDING INFORMATION PRESENTED
DURING THE LOS ANGELES WATER QUALITY CONTROL BOARD WORKSHOP
DATED JANUARY 23, 2012

Thank you for the opportunity to comment on the presentations dated January 23, 2012, which focused on the TMDLs and monitoring elements of the new Los Angeles County Municipal Separate Storm Sewer System (MS4) Permit. The Los Angeles County Flood Control District (LACFCD) and the County of Los Angeles (County) appreciate Los Angeles Water Quality Regional Board (LARWQCB) staff's efforts to solicit stakeholders' input before the release of the draft MS4 Permit. These comments are preliminary, and the LACFCD and the County and reserve the right to make additional comments on the TMDL provisions of the new permit as it continues through the permit development process.

TMDL PROVISIONS

The LACFCD and the County support the use of the action-based Reasonable Assurance framework to implement TMDLs. Our comments below focus on various details of how that framework should be implemented.

1. Effect of *NRDC, Inc. v. County of Los Angeles*

Under the decision of the United States Court of Appeal for the Ninth Circuit in *NRDC, Inc. v. County of Los Angeles* improved flood control channels operated by the LACFCD are considered to be portions of the MS4 and not a navigable water. This includes, but is not limited to, all improved portions of the Los Angeles River, San Gabriel River and Ballona Creek, as well as their improved channels and tributaries. Because these channels are MS4, they are not navigable waters to which any TMDL is applicable and the LARWQCB has no jurisdiction to apply TMDLs to them. While the County and the LACFCD do not agree with the reasoning of the Ninth Circuit and are awaiting a decision from the United States Supreme Court as to whether it will hear the case, that decision is currently binding on the County, LACFCD and the LARWQCB. TMDLs do not apply to any improved water body under the jurisdiction of the LACFCD and should not be included in the permit.

2. Action-based compliance approach should apply to final Wasteload Allocations (WLAs) as well as interim WLAs.

Staff indicated during the workshop that the action-based compliance approach is currently only applicable to interim WLAs, and that although a final decision has not been made, compliance with final WLAs may be assessed using numeric effluent limits. There is no logical basis for not using the same approach to assess compliance with final WLAs.

In fact, two MS4 permits issued by the Santa Ana Regional Board, Order R8-2010-0033 and Order R8-2010-0036, which apply to municipalities within Riverside and San Bernardino Counties, provide that permittees shall comply with final dry weather WLAs for the Middle Santa Ana River Bacteria Indicator TMDL through the implementation of an approved Comprehensive Bacteria Reduction Plan (CBRP) which is conceptually similar to the Reasonable Assurance Plan being proposed by the LARWQCB staff. The CBRP also contains interim compliance requirements and detailed reporting and scheduling requirements. It also may be updated by order of the Santa Ana Regional Board if monitoring reflects that Best Management Practices (BMPs) are not sufficient to attain compliance with the WLAs. We urge LARWQCB staff to apply the action-based approach to final WLAs compliance for TMDLs in the Los Angeles Region.

3. Instead of Time Schedule Order, LARWQCB should require compliance with TMDLs developed by EPA and TMDLs with past compliance dates through the action based compliance and Reasonable Assurance Plans.

Staff is proposing that Permittees may request a Time Schedule Order (TSO) if immediate "non-compliance" is anticipated for TMDLs, such as for USEPA's "technical" TMDLs which were developed without implementation plans, or for TMDLs that have passed compliance dates. Staff has said that TSOs, if granted, would provide Permittees with only up to five years to meet the final WLAs, although they have not indicated the basis for this position. Such an approach would be legally defective, an administrative nightmare and would result in a permit that could not be complied with, since there could be an immediate finding that the Permittees were in violation of its terms.

TSOs are authorized under Water Code § 13300, which provides:

Whenever a regional board finds that a discharge of waste is taking place or threatening to take place that violates or will violate requirements prescribed by the regional board, or the state board . . . the board may require the discharger to submit for approval of the board . . . a detailed time schedule of specific actions the discharger will take in order to correct or prevent a violation of requirements.

Time schedule orders are issued where the discharger cannot immediately meet permit requirements. A time schedule should include only dates for complete design, complete financial arrangements, start of construction, 50% completion of work, and full compliance with requirements. 22 Cal. Code Reg. § 2231.

Instead, the LARWQCB can accomplish its goals and reflect the provisions of these TMDLs by including in the permit a schedule of interim compliance dates or provisions for action-based compliance as a means for complying with these TMDLs.

The plain language of the statute indicates that a TSO is not to be issued unless the regional board finds that a waste discharge is occurring "that violates or will violate requirements prescribed by the regional board, or the state board." The permittees cannot be in violation of TMDLs that did not include a compliance schedule. In the case of the EPA TMDLs, EPA itself has recommended that the TMDLs be incorporated into MS4 permits in the form of BMPs, which can be adjusted as necessary based on monitoring. See "Establishing Total Maximum Daily Load (TMDL) Waste Load Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs" (EPA 2002).

We are very concerned that the TSO approach lacks regulatory consistency and does not provide Permittees sufficient time to comply. For example, the Los Angeles River Metals TMDL, developed by LARWQCB staff, provides a 22-year timeline to achieve final WLAs. USEPA has adopted a Metals TMDL for the neighboring San Gabriel River Watershed without a compliance schedule. If the TSO approach is adopted, Permittees could be required to meet final WLAs for the same pollutants within five years.

The TSO approach would also present significant logistical challenges for LARWQCB staff because Permittees would be required to submit a large number of TSO applications upon adoption of the new permit. The administrative burdens associated with this process will be significant. Also, Permittees have the right to challenge a TSO to the State Board, potentially increasing those burdens.

We believe that the appropriate course for the LARWQCB would be to implement these TMDLs through BMP-related action plans such as that contemplated by the draft Part 7 provisions. Such an approach would remain enforceable through the permit but would not subject the Permittees to the immediate threat of possible litigation. We look forward to meeting with LARWQCB staff to further explore the issues associated with the implementation of these TMDLs.

4. TMDLs should be grouped by watershed.

Two of the handouts from the January 23 workshop – one entitled "MS4 Permit Provisions to Implement Trash TMDLs" and the other entitled "Part 7. Total Maximum Daily Loads (TMDLs) Provisions" – appear to provide two conflicting ways of organizing TMDLs in the new permit. The former would suggest an organization based on pollutant type, while the latter would suggest an organization based on watershed.

We support organizing TMDLs by watershed, because such organization is more conducive to efficient and effective implementation.

5. Factual corrections to the responsible agencies matrix.

One of the handouts during the January 23 workshop was a matrix summarizing the responsible agencies for TMDLs to be incorporated into the new permit. Following are errors in the matrix and should be corrected:

- For the Lake Elizabeth, Munz Lake, and Lake Hughes Trash TMDL, the LACFCD should not be listed as a responsible agency because as these waterbodies are located outside of LACFCD's service area, and the TMDLs themselves do not identify the LACFCD as a responsible agency.
- For the Long Beach City Beaches and Los Angeles River Estuary Bacteria TMDL, the County should not be listed as a responsible agency because there is no unincorporated County area within this subwatershed, and the TMDL itself does not identify the County as a responsible agency.
- For the Colorado Lagoon TMDL, the County should not be listed as a responsible party, because there is no unincorporated County area within this subwatershed, and the TMDL itself does not identify the County as a responsible party.

6. Proposed TMDL language

Finally, at the request of LARWQCB staff, the we would like to provide the draft language below for staff's consideration.

"Part 7 - Total Maximum Daily Load Provisions

A. General Provisions

1. Part 7 of this Order incorporates provisions to assure that Los Angeles County MS4 Permittees comply with Wasteload Allocations (WLAs) and other requirements of TMDLs as they apply to each Permittee. TMDLs are grouped by watershed in Part 7.D through 7.X.
2. Each Permittee shall attain the storm water WLAs incorporated into this Order by using one of the following approaches:
 - a. Numeric Effluent Limit, or
 - b. Action Based with Reasonable Assurance

Each approach is described in detail in Sections B and C below.

3. The TMDLs shown in Table 1 below assign WLAs to Permittees and have an interim and/or final WLA attainment deadline during the permit term and/or have milestones scheduled for completion during the permit term. The TMDLs shown in Table 2 assign WLAs to Permittees but have no compliance

schedule or specific implementation requirements for attaining the WLAs. Permittees shall comply with these TMDLs pursuant to Section B or C below.

Table 1: List of TMDLs

Resolution Name	Resolution No.	Effective Date
Ballona Creek Estuary Toxic Pollutants	2005-008	11-Jan-06
Ballona Creek Metals TMDL	2007-015	29-Oct-08

Upper Santa Clara River Chloride TMDL Implementation Plan Reconsideration & Revise Chloride WQ Objectives	2008-012	6-Apr-10

Table 2: List of TMDLs (EPA Established)

Resolution Name	Resolution No.	Effective Date
Los Cerritos Channel Metals TMDLs for Copper, Lead and Zinc	EPA Established	17-Mar-10
Malibu Creek Nutrient TMDL	EPA Established	21-Mar-02
San Gabriel River Metals and Selenium TMDL	EPA Established	26-Mar-07

B. Numeric Effluent Limitations

1. Permittees choosing the Numeric Effluent Limit approach shall attain the numeric WLAs in accordance with the applicable TMDL's Basin Plan Amendment and/or as specified in the specific TMDL section of this Order.
2. Attainment of the numeric WLA shall be demonstrated through monitoring conducted either in the receiving waters or at stormdrain outfalls in accordance with a monitoring plan approved by the Executive Officer.
3. Permittee shall complete specific actions (monitoring plans, implementation plans, special studies) as required by each TMDL.
4. A Permittee shall be deemed in compliance with the TMDL WLAs if one of the following is attained:
 - a. No exceedances of WLAs are detected at the representative outfalls, or
 - b. No exceedances of the WLAs are detected in the receiving waters at or downstream of the Permittee's discharge, or
 - c. No discharge occurs from the Permittee's jurisdictional area.

C. Action Based with Reasonable Assurance

1. Permittees choosing the Action Based with Reasonable Assurance approach shall attain the numeric WLAs by implementing BMPs in accordance with a Reasonable Assurance Plan approved by the Executive Officer.
2. The Reasonable Assurance Plan must be submitted to the Executive Officer for approval within one year of the effective date of this Order and must include the following elements:
 - a. Describe specific BMPs each Permittee will implement within the watershed during the term of this Order to address each pollutant of concern,
 - b. Detailed schedules for BMP implementation within the term of this Order,

- c. Quantitative analyses showing reasonable assurance that the proposed BMPs will (1) attain applicable interim and/or final WLAs during the term of this Order and/or (2) represent progress towards attaining interim and/or final WLAs outside of the term of this Order,
 - d. A monitoring program designed to assess the effectiveness of the proposed BMPs.
3. Structural BMPs shall be sized to treat stormwater runoff from the Water Quality Design Storm (WQDS). The WQDS is defined as the 85th percentile 24-hour runoff volume specific to the watershed in question.
 4. Within 6 months upon a determination by the Executive Officer that interim or final WLAs are not being met, Permittees shall propose additional BMPs for the approval of the Executive Officer.
 5. At any time during implementation of a Reasonable Assurance Plan, a Permittee with good cause (for example, unexpected delays outside of the Permittee's control in obtaining necessary regulatory permits) may petition the Executive Officer for modifications to the approved Reasonable Assurance Plan.
 6. A Permittee shall be deemed in compliance with TMDL WLAs if it is implementing its Reasonable Assurance Plan in good faith and implements additional BMPs as described in Part 7.C.4 above.

MONITORING PROGRAM

The monitoring program as described during the January 23 workshop consists of four elements: regional monitoring, TMDL compliance monitoring, wet-weather storm drain outfall monitoring, and dry-weather storm drain outfall monitoring. At this time, our comments will focus on two main areas: regional monitoring and outfall monitoring.

In particular, we are very concerned about the proposed outfall monitoring requirements, which do not appear to consider the massive scale and highly complex nature of the storm drain network within Los Angeles County. We urge LARWQCB staff to reconsider the proposed approach and work collaboratively with Permittees to develop a more workable program.

Regional Monitoring

1. The mass emissions monitoring program should be scaled back.

As indicated in its November 2010 Report of Waste Discharge, the LACFCD believes that the monitoring frequency for the mass emissions monitoring program can be scaled back and still provide the necessary data to assess long term trends

in receiving water quality. Scaling back the mass emissions monitoring program would free up resources to conduct additional monitoring such as in tributary watersheds.

Secondly, the Permit should make clear that the mass emissions monitoring is to measure the mass of pollutants in the receiving water in order to identify trends and to facilitate additional BMPs and is not for compliance. Because the mass emissions stations measure pollutants from all sources including non-MS4 sources, the monitoring is not to be used for compliance purposes.

2. The LID special study should be reconsidered.

The proposed regional monitoring program includes a requirement to study the effectiveness of LID implementation. As LARWQCB staff may be aware, the Stormwater Monitoring Coalition has conducted a Low Impact Development for Southern California study since 2007 in which the LACFCD has been a participant. Any new requirement to study LID effectiveness should be informed by past and current efforts to avoid redundancy.

Outfall Monitoring

3. The outfall monitoring requirements are unrealistic, overly prescriptive, and should be completely revised.

The proposed outfall monitoring requirements, especially those for non-stormwater runoff, are not workable for a number of reasons as discussed below. However, we acknowledge the importance of outfall monitoring as part of a robust and accountable stormwater program. As such, where possible, in addition to describing our concerns regarding the proposed requirements, we have also provided general feedback towards the development of a more workable outfall monitoring program to reduce stormwater and non-stormwater pollutant loading incrementally and more cost-effectively. We look forward to further discussions with LARWQCB staff to explore these ideas more fully.

Our first concern with the proposed requirements is that they do not appear to fully consider the massive scale and the complex nature of the stormdrain system within Los Angeles County. Los Angeles County Permittees collectively own thousands of stormdrain outfalls, all of which would be subject to a highly resource intensive screening process (i.e. seven-day flow measurements plus concurrent daily bacteria grab samples) under the proposed approach. We do not believe that the proposed "shot-gun" approach is an effective way to reduce dry-weather pollutant loading in such a massive and complex system. Instead, we urge LARWQCB staff to consider a tiered approach combined with some form of representative sampling of "major outfalls" as defined by 40 CFR § 122.26¹.

¹ Major municipal separate storm sewer outfall (or "major outfall") means a municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance

The concept of representative sampling is crucial for entities such as the County, which consists of approximately 80 unincorporated islands throughout the Permit area, resulting in potentially a very large number of monitoring locations under the proposed requirements. To map, inventory, determine the drainage area of each outfall, characterize flow contributions from dischargers covered under other NPDES permits and Waste Discharge Requirements (WDRs), and propose monitoring locations based on analysis of all the information collected would require significantly more time than the proposed schedule allows.

Second, the proposed requirements do not appear to consider the highly variable and episodic nature of most non-stormwater runoff. For most non-stormwater runoff, a one-time seven-day screening of an outfall is simply a snap-shot and is not representative of non-stormwater runoff.

Third, the proposed requirements appear to require Permittees to identify "high priority" outfalls by determining the relative flow contributions from 1) other permitted discharges, 2) authorized non-stormwater discharges, and 3) illicit discharges. Attempting to characterize non-stormwater runoff in this manner is futile in a highly complex and comingled stormdrain network because most non-stormwater runoff is episodic and highly variable and the attempt would not likely provide meaningful results. Also the responsibility of determining the contribution of flows from other NPDES/WDR permittees should not lie with MS4 Permittees. Instead the LARWQCB should direct those dischargers to provide that information. We urge LARWQCB staff to consider a more strategic and targeted approach to identifying "high priority" drains such using factors such as land use and drainage area or data from available trend analyses.

It is critical to program sustainability that Permittees have the flexibility to focus response on high priority locations and larger issues. Laboratory analyses require approximately one week to complete. By the time the results are available for Permittees to review and take action, the "one-time" illicit discharge would have passed through the system. It would be unrealistic to expect an upstream investigation conducted over a week after the illicit discharge was observed to detect the source. This issue is highlighted in a dry-weather screening and monitoring program evaluation submitted as part of San Diego MS4 Permittees' Report of Waste Discharge. The approach taken by the North Orange County MS4 Permittees (Santa Ana Region) in implementing their dry-weather reconnaissance program is to focus on outfalls with persistent issues. Rather than pursue every result above a tolerance interval (or action level), they are allowed to prioritize and focus on discharges of greater concern; e.g., outfalls with persistent issues

other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more).

(2 consecutive hits or more), outfalls known to drain problematic areas, etc., and take appropriate steps for investigation and corrective action.

Recommendation – The Permittees should be given at least one year to collaboratively evaluate the MS4 system and propose an integrated monitoring program and response protocols for the approval of the Executive Officer. The proposal would assess stormwater and non-stormwater runoff from Permittees' jurisdictional areas and should be based on the following general framework:

- The outfall monitoring program should be integrated with existing monitoring efforts throughout the Los Angeles Region (e.g., TMDL monitoring, monitoring by other NPDES permittees, etc).
- Non-stormwater outfall monitoring should be done at the same outfalls where stormwater monitoring will occur. This will allow for a more effective use of resources and provide an appropriate baseline characterization of non-stormwater runoff. Additional non-stormwater outfall monitoring may be conducted based on a set of approved triggers.
- For Permittees that have disconnected jurisdictional areas, such as the County, representative outfalls should be selected.
- Outfall monitoring site selection criteria should be based on drain size, drainage area, history, land use, staff knowledge and experience, etc.
- Outfall monitoring should be limited to "major outfalls." A Permittee may propose an alternative monitoring location (e.g., manhole, where a drain crosses jurisdictional boundaries, catch basin, etc.) if it is not able to find an outfall location.
- Should monitoring results indicate a cause for concern (e.g., results above a pre-determined threshold), response protocols can be triggered to investigate the sources.

4. Miscellaneous comments

- a. **Action levels** – We support the concept of action levels, provided they are based on thresholds proposed by Permittees as part of the monitoring program. For example, the Orange County MS4 Permittees in the Santa Ana Region developed tolerance intervals and used them as action levels to trigger corrective action.
- b. **Please provide clarification on the following terms: jurisdictional boundaries, significant non-stormwater or dry-weather flow, and baseline non-stormwater flows** – We recommend that jurisdictional boundaries be tied to land use authority, since the selection criteria for proposed outfall monitoring locations is dependent upon the representative land uses of outfall drainage. Should flow be utilized as part of an action level, further evaluation is required to establish thresholds for "significant non-stormwater flows" and "baseline non-stormwater flows."

TO: MS4 Permittees and Interested Persons

FROM: Renee A. Purdy, Section Chief *Renee A. Purdy*
Regional Programs

DATE: February 16, 2012

SUBJECT: NOTICE OF STAFF LEVEL PUBLIC WORKSHOP ON THE DEVELOPMENT OF THE UPDATED GREATER LOS ANGELES COUNTY MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) NPDES PERMIT

Immediately after the Los Angeles Regional Water Quality Control Board's (Los Angeles Water Board or Board) regularly scheduled meeting on March 1, 2012, Board staff will hold a public workshop to discuss tentative requirements proposed to be incorporated in the updated Greater Los Angeles County MS4 Permit. MS4 permittees and interested persons are invited to the staff level public workshop on:

**Thursday, March 1, 2012
1:30 - 4:00 PM
The Metropolitan Water District of Southern California
Board Room
700 North Alameda Street, Los Angeles, CA**

A quorum of Los Angeles Water Board members may be present during the workshop. However, no action or voting will take place at the workshop.

At the workshop, Board staff will discuss with MS4 permittees and interested persons some of the following topics:

- Water Quality Based Effluent Limits (WQBELs)
- Monitoring requirements
- Tentative permit requirements for the following minimum control measures comprising co-permittees' core stormwater management program:
 - Development Construction Program
 - Planning and Land Development Program
 - Public Agency Activities Program
 - Industrial/Commercial Facilities Control Program
 - Public Information and Participation Program
 - Illicit Connections and Illicit Discharges Detection and Elimination Program

California Environmental Protection Agency

A board level workshop will be held on April 5, 2012 during the Los Angeles Water Board's regularly scheduled meeting regarding additional items for the MS4 permit. An agenda will be published at least 10 days prior to the meeting.

Permittees and interested persons will have an opportunity to ask questions of Los Angeles Water Board staff and provide initial feedback. Please contact me at (213) 576-6622 or rpurdy@waterboards.ca.gov or, alternatively, Mr. Ivar Ridgeway at (213) 620-2150 or iridgeway@waterboards.ca.gov with questions.

Los Angeles Regional Water Quality Control Board
PUBLIC WORKSHOP - LA COUNTY MS4 PERMIT

SPEAKER REQUEST CARD

Date: March 1, 2012

I wish to speak during the Workshop:

- I wish to speak on Water Quality Based Effluent Limitations (WQ BELS).
- I wish to speak on Minimum Control Measures (MCM).
- I wish to speak on MONITORING.

Name: Patricia Elkins

Representing Self
 Representing: Carson

Metropolitan Water District

March 1, 2012

Storm Water Management Program: Minimum Control Measures

40 CFR 122.26(d)(2)(iv)

- Industrial / Commercial Program
- Development Construction Program
- Illicit Connections/Illicit Discharges Elimination Program
- Public Agency Activities Program
- New Development/Redevelopment Program
- Public Information and Participation Program

Minimum Control Measure – Industrial/Commercial Sources

- Key Objective: Ensure the implementation of BMPs at industrial/commercial facilities to reduce the contribution of pollutants to the MS4 from industrial/commercial activities.
- Key Requirements
 - Watershed-based database of all industrial and commercial facilities
 - 2 Inspections of all designated industrial/commercial facilities within 5 years
 - Ensure BMP implementation (e.g. CASQA manual)
 - Verification of Permit Coverage and No Exposure Condition (if Necessary)
 - Investigation of Regional Board Submitted Complaints

Minimum Control Measure – Development Construction Program

- Key Objective: Ensure the implementation of BMPs at construction sites to reduce the contribution of pollutants to the MS4 from construction activities.
- Key Requirements
 - Inventory of grading permits, encroachment permits, demolition permits, building permits, or construction permits
 - **Development, review and written approval of a Erosion and Sediment Control Plan (ESCP)**
 - BMP implementation (per CASQA or Caltrans manual)
 - **Tiered Requirements**

Minimum Control Measure – Development Construction Program

- Significant Comment(s)
 - Substitution of State SWPPP (GCASP) for Erosion and Sediment Control Plan

Minimum Control Measure –Illicit Connections and Illicit Discharges Elimination (Non-stormwater Discharges Oversight)

- Key Objective: Effectively prohibit non-storm water discharges to the MS4.
- Key Requirements
 - Development procedures for conducting source investigations for IC/IDs
 - Development of procedures for eliminating for IC/IDs

Minimum Control Measure – Public Agency Activities Program

- Key Objective: Minimize storm water pollution impacts from permittee owned or operated facilities and activities.
- Key Requirements
 - Maintain an inventory and map of all Permittee-owned or operated facilities.
 - Implement activity specific BMPs (such as catch basin cleaning, open channel maintenance, street sweeping, and appropriate pesticide application)
 - Training of employees and contractors.

Minimum Control Measure- New Development and Redevelopment

- Key Objective: Minimize the impacts of development and significant re-development projects on water quality and hydrology.
- Key Requirements
 - **On-site retention of the storm water runoff volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater.**
 - Off-site mitigation required where on-site retention is technically infeasible.
 - Development of a prioritized list of off-site mitigation projects
 - **Offsite Alternatives**
 - **Retrofit Incentive**
 - **Groundwater Replenishment**

Minimum Control Measure- New Development and Redevelopment

- Significant Issue(s)
 - Equivalency Demonstration of Local LID Ordinances.
 - The allowance of infiltration to augment groundwater recharge in lieu of on-site infiltration.

Minimum Control Measure- New Development and Redevelopment

Hydromodification (Sites < 50 acres)

- Applies to “Natural Drainage Areas”
- Requirements
 - On-site retention of the volume of runoff from the 95th percentile, 24-hour storm, or
 - BMP implementation to ensure the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event.
 - The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study

Minimum Control Measure- New Development and Redevelopment

Hydromodification (Sites > 50 acres)

- Applies to “Natural Drainage Areas”
- Requirements
 - **On-site project infiltration of at least the runoff from a 2-year, 24-hour storm event**, or
 - BMP implementation to ensure the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event. These conditions must be substantiated by hydrologic modeling acceptable to the Permittee, or
 - The Erosion Potential (Ep) in the receiving water channel <1.

Minimum Control Measure - Public Information and Participation Program

- Key Objective: To measurably increase the knowledge of the target audience about the adverse impacts of storm water pollution and change the waste disposal and storm water pollution generation behavior of target audiences.
- Key Requirements
 - 12.5 Impressions per Resident Annually
 - Watershed-wide reporting hotline
 - Storm water pollution prevention advertising campaign
 - Distribution of outreach materials
 - Conduct storm water pollution prevention public service announcements
 - Provide schools within each school district in the watershed storm water pollution prevention materials

Storm Water Management Program: Minimum Control Measures (Implementation)

- “Implementation Scale”
 - County-wide
 - Watershed-based
 - Municipality
- Program Substitution

Water Quality Based Effluent Limitations

“WQBEL”

a restriction on the quantity or concentration of a pollutant that may be discharged necessary to achieve a water quality standard

3/1/2012

Greater LA County MS4 Permit Workshop

What do federal regulations say about WQBELS?

- NPDES permits shall include requirements in addition to or more stringent than TBELs necessary to achieve WQS
- Permits for discharges from MS4s must require controls to reduce the discharge of pollutants to the maximum extent practicable, and where necessary water quality-based controls
- WQBELs must be consistent with the assumptions and requirements of available WLAs established in TMDLs

3/1/2012

Greater LA County MS4 Permit Workshop

When are WQBELs needed in NPDES permits?

- Where the discharge has the reasonable potential to cause or contribute to an exceedance of water quality standards and TBELs are not sufficient to achieve water quality standards
- For discharges that are assigned a WLA in a TMDL

3/1/2012

Greater LA County MS4 Permit Workshop

What is the basis for WQBELs?

- Water Quality Standards
- TMDL Wasteload Allocations

3/1/2012

Greater LA County MS4 Permit Workshop

How has the LA Water Board expressed WQBELs in MS4 permits?

- LA River Trash TMDL
 - WQBELs based on:
 - Numeric TMDL Compliance Points; or
 - % Jurisdictional Area Covered by FCS (quantitative surrogate parameter)
- Ventura County MS4 Permit
 - WQBELs = Numeric WLAs from TMDLs

3/1/2012

Greater LA County MS4 Permit Workshop

What is the proposed scope of WQBELs in the LA County MS4 Permit?

- Included where WLAs assigned to stormwater and non-stormwater discharges from the MS4 in established TMDLs

3/1/2012

Greater LA County MS4 Permit Workshop

WQBELs and BMPs: Two Different Concepts

Effluent Limitations

Effluent limitation: any restriction imposed on quantities, discharge rates, and concentrations of "pollutants" which are "discharged" from "point sources" into "waters of the United States"

40 CFR §122.2

BMPs

Best management practices ("BMPs"): schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States."

BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

40 CFR §122.2

3/1/2012

Greater LA County MS4 Permit Workshop

How can MS4 Permittees demonstrate compliance with WQBELs?

- Dual path approach
- Either:
 - Implementation of approved "reasonable assurance program" (RAP)
 - Direct comparison of MS4 monitoring data results with WQBELs

3/1/2012

Greater LA County MS4 Permit Workshop

Greater LA County MS4 Permit - Monitoring Program Requirements

Staff-level Workshop

March 1, 2012

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Overarching Monitoring Program Objectives

- Assess the chemical, physical and biological impacts of MS4 discharges on receiving waters
- Determine compliance with WQBELs and RAP
 - Direct comparison to WQBELs
 - Validate BMP performance / outcome expectations for “Reasonable Assurance Program”
- Help target implementation actions

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Elements of the Monitoring Program

- TMDL Compliance Monitoring Programs
- MS4 outfall monitoring of stormwater discharges
- MS4 outfall monitoring of non-stormwater discharges
- Regional Monitoring Programs

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Specific Objectives

- **TMDL Compliance Monitoring Programs**
 - Assess whether the applicable interim and final WQBELs and RWLs are being achieved
- **Stormwater Outfall-Based Monitoring Program**
 - Characterize the quality of stormwater discharges and their impact on receiving waters
 - Measure the effectiveness of Permittees' Stormwater Management Program (i.e. MCMS/RAP)
- **Non-Stormwater Outfall-Based Monitoring Program**
 - Identify outfalls with significant non-stormwater discharges
 - Characterize the quality of non-stormwater discharges to determine whether these non-stormwater discharges are a source of pollutants
- **Regional Monitoring Programs**
 - Assess whether receiving waters are fully supporting beneficial uses
 - Identify pollutants that are causing or contributing to an exceedance of water quality standards

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Need for MS4 Outfall Monitoring

- Identified by EPA in federal regulations
- Provides data to determine impact of MS4 discharges on receiving water
- Provides data to evaluate whether authorized non-stormwater discharges are a source of pollutants
- Provides data to determine effectiveness of stormwater management programs and illicit discharge detection and elimination programs

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Integration of TMDL and Outfall Monitoring Requirements

Machado Toxics TMDL Monitoring Program

- Three wet weather events each year, including first large storm
- Appropriate locations in the subwatershed

Proposed Outfall Monitoring Program

- Three storms per year, including the first storm of the season
- At least one outfall within each subwatershed

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Comparison of Monitoring Requirements

Existing LA County MS4 Permit

- Mass Emissions
- Tributary
- Shoreline
- Trash Monitoring
- Bioassessment
- BMP Effectiveness
- Peak Discharge Impact Study

Proposed Requirements

- Receiving water
- TMDL/outfall monitoring
- Shoreline (TMDL driven)
- Trash (TMDL driven)
- Bioassessment
- LID Effectiveness Study
- Hydromodification Study
- Pyrethroids Special Study

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Development of Monitoring Program Framework for Permit

- Outfall monitoring
 - Program objectives
 - Outfall / site selection criteria or screening process
 - Minimum frequency
 - Process for adaptive monitoring
- TMDL monitoring requirements
- Regional monitoring requirements/special studies

3/1/2012

LA Co. MS4 Permit - Staff-level Workshop

Timing of New Monitoring Requirements

- Within first year
 - Update inventories of MS4 outfalls
 - Develop integrated monitoring plans
 - Continue TMDL monitoring
 - Continue mass emission monitoring and other on-going regional monitoring programs
 - Begin screening of outfalls for non-stormwater discharges

Committee on the
Development of the Central LA County MS4 NPDES Permit
March 19, 2012

LA PERMIT GROUP

*A collaborative effort to negotiate the
Los Angeles County MS4 NPDES Permit*

LA Permit Group Structure

LA Permit Group
 (Heather Maloney, City of Monrovia)

Negotiating Committee

Technical Sub-Groups

Development Programs
 (Kosta Kaporis, City of Los Angeles)

Monitoring
 (John DeNile, City of Torrance)

Reporting & CORE Programs
 (Joe Belomo, Westlake Village & Agoura Hills)

TMDLs
 (Heather Merenda, City of Santa Clarita)

WQBELS

Water Quality Based Effluent Limitations

- * BMP-based WQBELs that allow the implementation of Best Management Practices to be utilized as a method of compliance for meeting TMDL WLAs
- * Final TMDL WLAs are not required to be put in as numeric WQBELs
- * The definition of numeric WQBELs as proposed by staff would put permittees out of compliance with the permit from day one and would not recognize the significant efforts that have been implemented to date to comply with TMDLs

Monitoring

TMDL WATER QUALITY MONITORING

- * TMDL Monitoring is excessive and costly
- * 88 cities and 32 TMDLS results in over 250 plans and annual reports for Permittees and Board
- * TMDL monitoring per City is redundant with adjacent cities
- * TMDL monitoring data per City has limited use for BMP siting and sizing
- * Cost for typical City of 150,000 est. at \$800,000 per year

ADDITIONAL WATER QUALITY MONITORING

* **Regional Monitoring:**

- * Hydromodification
- * LID
- * Pyrethroid

* **Non-Stormwater Monitoring:**

- * outfalls for “significant” flows with analysis for 303(d) listed pollutants
- * TMDL

* **Stormwater Monitoring:**

- * each outfall for flow
- * 303(d) listed pollutants
- * misc. physical parameters
- * aquatic toxicity
- * constituents with potential to contribute to exceedences of water quality standards

LA PERMIT GROUP CONCERNS ABOUT WATER QUALITY MONITORING

- * Regional Monitoring for Hydromodification, LID and Pyrethroid is redundant with existing studies
- * Stormwater Monitoring is duplicative of TMDL monitoring and lacks clear goals
- * Non-Stormwater Monitoring is duplicative of TMDL monitoring and pollutant source investigations
 - * Elimination of dry weather flows will harm wetlands, rivers and lakes dependent on urban run off
- * Limits Permittees' ability to direct monitoring efforts and prepare integrated compliance plans
- * Additional costs on top of TMDL monitoring

INTEGRATED WATERSHED MONITORING

Monitoring Program Proposal:

- * Permittees recognize benefits of having Integrated Watershed Monitoring Plans (IWMP) for all TMDL and Permit monitoring within each Watershed
- * Cities would pool their resources and implement a plan based on targeted monitoring of high priority sub-watersheds and receiving water bodies
- * IWMPs eliminate redundancy and data gaps and **give the Big**

Picture for Watershed Health

- * One monitoring plan and annual report for each Watershed for all TMDLs and permit monitoring

INTEGRATED WATERSHED MONITORING

Monitoring Program Proposal cont...

- * Provides data needed to prepare Integrated Stormwater Quality Management Plans that address multiple pollutants
- * Provides data needed to implement BMPs where multiple pollutant loads are highest
- * Provides for the development of watershed storm drain maps and identifies outfalls with significant dry weather flows
- * Provides for the MOST COST EFFECTIVE water quality monitoring program

Minimum Control Measures

Development Programs

- * Development Programs should be based on the goal of improving stormwater quality not on specific control strategies
- * Development Programs should be tailored to the unique characteristics of LA County
- * Development Programs should be based on a design storm
- * Municipality should be able to prioritize BMPs based on its unique characteristics and TMDLs for in their watershed(s)

CONSTRUCTION PROGRAM

COMMENTS

Review on the Draft Core Permit Requirements Table (Oct 2014)

Applicable to all activities involving soil disturbance
(Denuded Hillides vs. Backyard Patio)

Requirements:

- * Use electronic tracking system to inventory grading, encroachment, demolition, building and construction permits
- * Prior to issuance of grading/building permit, approve ESCP

Suggestion:

Establish reasonable thresholds, excessive number of projects and parameters to keep track of and manage (i.e. L.A. issues 40,000 building permits/year).

Construction Program

Requirements:

- * The ESCP must include the elements of a SWPPP including risk-based BMPs
- * ESCP should include a Rain Event Action Plan (REAP)

Suggestion:

Support 1-acre threshold provided by State General Construction Permit

- * Never intended for small sites (typical SWPPP cost is \$20,000 per project)
- * Keep the <1-acre SWPPP requirement basic

Construction Program

Requirement:

The Permittee shall inspect all phases of construction including

- 1) prior to land disturbance, 2) Grading & Land Development
- 3) Streets and Utilities, 4) Vertical Construction,
- 5) Final Landscaping and Site Stabilization

Suggestion:

The requirement is overtly burdensome and they serve no benefit. The only reasonable inspection would be during the grading phase and upon project completion and as part of existing inspections.

PLANNING AND LAND DEVELOPMENT FOCUSED COMMENTS

Suggestions:

- * Requirements should have clear water quality benefits.
- * Reduce 1.5 times the volume of water for use of biofiltration on-site and off-site mitigation to 1.0;
- * Self-Inspection of post-construction BMPs by parcel owners. Agencies to function as an auditor of maintenance and repair records of BMPs on a random and as-needed basis.

Volume of Water to Retain On-Site

Suggestions:

- * Retainage should be based on soil characteristics
- * Roadway construction – Ventura Permit requirements have low thresholds are not appropriate for LA County public roadway construction where most projects are retrofits.
- * Hydromodification Control - Ventura Permit criteria are not appropriate especially the use of Erosion Potential

Minimum Control Measures

General Comments

- * **Provide the requirement, allow the Permittee the flexibility to implement**
 - Maintain a watershed/jurisdiction-based map in GIS
 - Installation of trash excluder devices on catch basins or outfalls of MS4
- * **Provide the time necessary to comply with the requirements**
 - Some requirements affect agency budgeting processes, contracting agreements, and stakeholder involvement
- * **Provide clear definition of key terms**
- * **Consider the cost to comply**

Water Quality Based Effluent Limits (WQBELs)

Ray Tahir

Cities of Baldwin Park, Compton, Gardena, Irwindale, Inglewood, and
South El Monte

Concerns

- **Concerns with WQBELs**
 - A WQBEL is a federal stormwater requirement that translates a water quality standard (includes TMDL numeric waste load allocations) into BMPs or other actions to achieve compliance
 - BMPs operate to reduce or eliminate pollutants in stormwater discharges to the maximum extent practicable (MEP)
 - BMPs do this by preventing stormwater contact with pollutants, or, if not possible, by treating or preventing runoff before it enters the MS4 (streets, catch basins, storm drains)

Trash BMP

Infiltration (LID) BMP for New Developments

Concerns

- Concerns with WQBELS
 - Absence of WQBELS has resulted in enforcement action against 22 cities in 2008
 - Santa Monica Bay Beaches Dry Weather TMDL (placed in the current permit in 2007) contained a bacteria WLA that had to be met no matter what)
 - It did not allow for WQBELS to translate its waste load allocation into BMPs (even though USEPA's 2002 memo required WQBELS for TMDL WLAs)
 - Affected permittees thought that by implementing BMPs they would be in compliance (some permittees spent millions of dollars diverting non-stormwater runoff away from the beaches to the sewer system) but were still in violation)
 - Fortunately, two court decisions invalidated the enforcement actions

Concerns

- Concerns with WQBELS
 - Regional Board staff proposes to apply numeric WQBELS to all of the TMDLs to be placed into the next MS4 permit
 - Problem: Regional Board staff interprets numeric WQBELS to mean absolute compliance with TMDL WLAs (which are numeric) -- **by any BMP means necessary**
 - Permittees must meet the 32 numeric WLAs or be out of compliance
 - Non-compliance would require enforcement action or exposure to third party litigation

Concerns

- Cities are concerned about Regional Board's staff application of WQBELs
 - It is not certain if the Regional Board can at this time can legally compel compliance with numeric limits
 - We do know that a Blue Ribbon Panel convened by the State Water Resources Control Board concluded that numeric limits are not feasible at this time
 - A Sacramento Superior Court recently ruled that numeric limits in the General Construction Stormwater Activity NPDES Permit are impermissible
 - USEPA issued a memo issued last year clarifying its November 2010 guidance memo on WQBELs:
 - *A key issue addressed in the 2010 memorandum is the feasibility of including numeric effluent limitations in NPDES permits for stormwater discharges. Some stakeholders are concerned that the 2010 memorandum can be read as advising NPDES permit authorities to impose end-of-pipe (outfall) limitations on each outfall in an MS4. In general, EPA does not anticipate that end-of-pipe effluent limitations on each outfall will be used frequently.*

Concerns

- But numeric Limits Are Infeasible:
 - Because of costs:
 - For example, according to the Regional Board's own data, the cost of complying with the L.A. River bacteria TMDL WLAs is estimated to be 5.4 billion over a 22 year period
 - The City of Bradbury's annual cost would be \$1.2 million per year; its annual budget is only \$800,000
 - The City of Cudahy is one of the poorest cities in the County – its cost will be \$1.4 million per year (7% of its total budget) -- raises environmental justice issues
 - The bacteria TMDL is just one TMDL – there are 31 others
 - Regional Board has not effectively addressed these costs and how cities are expected to meet them

Concerns

LAR Bacteria TMDL Implementation Plan Watershed Cost Estimate May 11, 2010			
City	Watershed Area sq.miles	Percentage	Estimated Annual Costs for 25 Year Implementation Period \$216,000,000
Alhambra	7.60	1.22583%	\$3,171,760
Arcadia	10.93	1.76293%	\$4,088,267
Bell	2.74	0.44194%	\$1,834,131
Bell Gardens	2.48	0.40001%	\$1,762,671
Bradbury	1.40	0.22581%	\$1,465,322
Burbank	17.35	2.79843%	\$5,856,246
Caltrans	11.24	1.81293%	\$4,173,588
Calabasas	5.58	0.90001%	\$2,616,785
Carson	0.88	0.14194%	\$1,322,203
Commerce	6.56	1.05808%	\$2,885,510
Compton	8.60	1.38712%	\$3,446,980
Cudahy	1.12	0.18065%	\$1,388,258
Downey	5.66	0.91292%	\$2,637,803
Duarte	2.30	0.37097%	\$1,713,030
El Monte	6.97	1.12421%	\$2,998,355
Glendale	30.62	4.93879%	\$9,507,550
Hidden Hills	1.57	0.25323%	\$1,512,111
Huntington Park	3.03	0.48872%	\$1,913,948
Irwindale	1.89	0.30484%	\$1,600,186
La Canada Flintridge	8.57	1.38228%	\$3,438,723
Long Beach	16.66	2.88714%	\$5,666,336
Los Angeles	281.44	45.39428%	\$78,540,800
Lynwood	4.85	0.78227%	\$2,414,867
Maywood	1.18	0.19033%	\$1,404,772

Concerns

- Numeric Limits Are Infeasible:
 - There's **no outfall data** showing that an MS4 permittee has not met the TMDL WLA
 - Although federal regulations require stormwater monitoring at the outfall for compliance, the Regional Board has never required outfall monitoring
 - Regional Board staff has relied on receiving water monitoring to determine compliance

Concerns

Concerns

- Numeric Limits Are Infeasible:
 - Because the TMDL WLAs are based on improper receiving water monitoring methodology (did not follow State SWAMP policy)
 - The WLAs are based on non-ambient monitoring (i.e., samples were taken during rain events only)
 - Ambient monitoring requires samples from the receiving water taken after it rains (48 to 72 hours)
 - So what's the difference?
 - Monitoring conducted during a storm event is when the water body is at its worse -- resulting in a more stringent standard
 - Ambient monitoring provides a more accurate characterization of the health of a receiving water body because it is done when things have calmed down
 - The Regional Board's SWAMP unit knows this

Remedies

- Okay, Now What?
 - How do permittees comply with the 32 TMDLs that will be placed into the next MS4 permit?
 - Re-open those TMDLs that set the compliance point in the receiving water and change it to the outfall (unless the permittees can show compliance in the receiving water or that there is no exceedance there)
 - Eliminate the compliance schedules in the TMDLs
 - Conduct SWAMP monitoring in the receiving waters (as the Regional Board has already done to some extent for L.A. basin water bodies) to **re-set** TMDL waste load allocations
 - Allow compliance with “pending” TMDLs through revised BMPs now implemented through the current MS4 permit and will be modified and carried-over to the next MS4 permit

Remedies

- Okay, Now What? -- continued
 - The proposed “enhanced” BMPs would be implemented through the core programs as they are now through Stormwater Quality Management Plan **instead** of a Reasonable Assurance Plan as proposed by Regional Board Staff – for example:
 - Focus public education outreach on TMDLs
 - Adjusting industrial/commercial inspections to identify and control TMDL-pollutants used, stored, or handled at such facilities
 - Implement low impact development (LID) strategies retain more runoff on-site
 - Conduct more or modified street sweeping (through the public agency program)

Remedies

- Okay, Now What? -- continued
 - Conduct outfall monitoring over the 5-year term of the permit to characterize each permittee's MS4 for TMDL pollutants and to evaluate BMP performance vis-à-vis TMDL WLAs

Remedies

- Okay, Now What? – continued
 - In the 5th permit year (2017), propose in the next MS4 permit application (known as the Report of Waste Discharge) additional or more intensified BMPs based on outfall monitoring data
 - Determine if TMDLs should continue or be de-listed
 - Recommend ramped-up BMPs – if warranted (this is adaptive/management-iterative process)

Remedies

- Approach may not be perfect but it is sane under the circumstances

Remedies

Thanks!

Central Coast
1610 Oak St., Suite 106
Solvang, CA 93463

1 LOS ANGELES, CALIFORNIA, THURSDAY, MARCH 1, 2012

2
3 MR. UNGER: On the MS-4 permit, I'm Sam Unger. I'm the
4 Executive Officer of the Regional Board, and I would like to
5 welcome everyone.

6 To update you on several key areas of development
7 of the MS-4 permit, our workshop will cover control
8 measures, the WQ BELS, and the monitoring.

9 Although this meeting has been publicly noticed so
10 our Board Members can attend, we're going to hold it as if
11 it were just a Staff Level Workshop, that is similar to
12 previous Staff Level Workshops you may have attended on each
13 of these topics.

14 Board Staff will present the current status of
15 development of these sections of the permit. In the case of
16 the WQ BELS, there will be WQ BELS, and the discussion will
17 focus on the clarification of what Q BELS are, and how they
18 will be utilized in the permit.

19 And following each of those topical presentations,
20 staff will both entertain questions, and there's some people
21 have requested blocks of time to speak on those; and those
22 times, Theresa Rogers will be monitoring your time. You can
23 come up here and present your comments, and I would just
24 like to say, the key here is the Board is here just to
25 listen.

1 They're not here to deliberate, as they were in
2 November. They're not here to provide their opinions.

3 If they have questions, they will be writing them
4 down, they will be forwarding them to me, and I will move
5 them on. They may ask questions just simply for clarity, if
6 they don't understand an issue; but that's basically the
7 extent of their interaction at this Staff Level Workshop.

8 There will be other workshops scheduled as
9 Board-level workshops, in which case, it will be run more as
10 it was in November, and you will have an opportunity to
11 interact and respond directly to their questions.

12 And before I introduce Ivar Ridgeway, I would also
13 let you know, for those of you who may not have been here
14 this morning, that during the Executive Officer Report out
15 to the Board, I announced that the permit schedule has been
16 -- is going to be delayed from May of this year to September
17 of this year. And so I thought you'd all be interested in
18 knowing that as you make your summer plans.

19 And with that, I would like to turn it over to Ivar
20 Ridgeway, who is going to talk about the minimum control
21 measures. So with that, Ivar, please?

22 For those of you who brought some presentations, we
23 may -- we have been experiencing difficulties with the
24 audio/visuals. One of the things, I'd say too, we had this
25 scheduled to end at 4:00, we'll move it to 4:30 to account

1 for this time that we have lost.

2 So I think, Ivar, you're going to have to get
3 started because, in the interest of time, and the fact is
4 that we don't really control the audio/visual system here.
5 So we may or may not have it. It may come back on.

6 For those of you planning to make presentations, be
7 prepared to make them without the benefit of the
8 audio/visual system. Thank you.

9 MR. RIDGEWAY: Good afternoon. I'm Ivar Ridgeway, Unit
10 Chief of the Storm Water Permitting Unit. And I would like
11 to briefly describe some of the proposed requirements for
12 the measures required under 40 CFR.

13 Well, it's not -- if the audio/video comes up, we
14 have bolded and underlined the provisions that are unique to
15 our region, for the first time. The provisions for all six
16 memo control measures apply to the permittees.

17 With an industrial or commercial -- with an
18 industrial or commercial program, the Inspector Frequency
19 proposed is identical to what is required in the current
20 2001 L.A. MS-4 permits, and the current Ventura MS-4 permit,
21 two inspections for designated facility, within five years.

22 The most significant change from the 2001 LA MS-4
23 permit is the use of prescriptive BMPs from the California
24 Storm Water Quality Association Manual.

25 The requirements for the construction program are

1 largely based on those on the current Ventura MS-4 permit.
2 Prior to issuing a grading or building permit, permittees
3 are required to have the project proposal, and submit an
4 erosion and sediment control plan. The erosion and sediment
5 control plan will include all the elements of a storm water
6 pollution prevention plan, which specifies control measures
7 to be implemented to reduce or eliminate pollutants in storm
8 water.

9 The controls for the construction activities are
10 derived from the California Storm Water Quality Association
11 Manual, for construction activity, or the Caltrans Handbook
12 for transportation-related construction projects.

13 Inspection frequency and level of controls required
14 on-site are based on the risks posed by the project.

15 In response to permittee input, staff are proposing
16 to include language to allow the State SWPP to substitute
17 for the erosion and sediment control plan, and those who
18 apply for sites one acre and above.

19 MR. UNGER: Tell them what SWPP is.

20 MR. RIDGEWAY: The Storm Water Prevention Plan, which is
21 a document that specifies the controls required on-site. It
22 would specify what best management practices are appropriate
23 or required to use.

24 The list of connection on Discharge Elimination
25 Program is one which has changed significantly, what's

1 proposed in the earlier MS-4 permits, and what was presented
2 in workshops.

3 Staff are now proposing to have the committees
4 identify priority areas in the MS-4, and identify minimum of
5 stations within those areas, at which field observations,
6 field screen monitoring, and possibly analytical monitoring,
7 are conducted, which will be done as part of the monitoring
8 program this time, rather than as part of the illicit
9 connection, and illicit discharge elimination program.

10 The illicit discharge -- the illicit
11 detection/elimination program this time will solely be
12 focused on the elimination of illicit discharges. It would
13 be those identified by dry weather monitoring and those
14 reported to the permittees as currently done in the 2001
15 permit.

16 The requirements for the Public Agency Activities
17 Program is very similar to what's in the current L.A. MS-4
18 Permit, and virtually identical to what's in the recently
19 adopted Ventura MS-4 Permit.

20 Staff are proposing to continue permit
21 requirements, such as catch basin cleaning, open channel
22 maintenance, and street sweeping.

23 For the new development and redevelopment program,
24 the provisions are similar to what's in the current Ventura
25 MS-4 Permit. Staff are proposing to incorporate an L.I.D.

1 design storm, similar to the current Ventura MS-4 Permit,
2 and current L.A. MS-4 sub-sizing.

3 Those designated new development and redevelopment
4 projects would retain on-site the storm water runoff,
5 resulting from the 85th percentile, 24-hour storm or the
6 three-quarter-inch, 24-hour storm, or whichever is greater.

7 When a permittee finds that project applicant has
8 demonstrated technical infeasibility, just as at Ventura,
9 has taken all steps feasibly to comply with those on-site
10 requirements, Staff is proposing committees require the
11 applicant to provide off-site mitigation.

12 Unique to this permit -- unique to this permit,
13 Staff intends to incorporate language which would allow
14 off-site retrofit projects and groundwater replenishment
15 projects to be implemented in lieu of the on-site B.M.P.
16 controls.

17 As one of the issues brought up, Staff will include
18 language to allow those, if permittees that have L.I.D.
19 ordinances to substitute their L.I.D. ordinance, if they can
20 demonstrate that their current ordinances would result in
21 equivalent or improved water quality benefits.

22 Low Impact Development, L.I.D., is practices green
23 building, it's practice is designed to mimic natural
24 conditions for hydrology; meaning, we'll be looking for an
25 infiltration of groundwater, rather than the runoff of

1 hardened surfaces usually contribute.

2 The hydro modification requirements Staff intend to
3 incorporate are largely derived from the current
4 requirements in the Ventura MS-4 Permit.

5 The key difference in this provision, compared to
6 the Ventura MS-4 Permit is we're allowing an on-site
7 retention from a larger storm event than the L.I.D. storm
8 event, to comply with those hydro modification requirements.

9 For those projects over 50 acres, 50 acres or
10 above, the proposed requirements are virtually identical,
11 with the exception that the volume of runoff is from a
12 larger hydro modification design storm, and hydrologic
13 modeling is required to demonstrate the maximum of
14 pre-development and post-development conditions.

15 The Public Information Program is based on the
16 current Ventura MS-4 Permit, and fairly similar to what's in
17 the current L.A. MS-4 Permit. Staff are proposing that
18 permittees conduct the storm water pollution prevention
19 advertising campaign, and distribute storm water pollution
20 prevention education materials to potential entities such as
21 automotive parts stores, and home improvement centers.

22 In addition, Staff are proposing that permittees
23 develop and implement or continue the implementation of a
24 reporting hotline to serve as the general public reporting
25 contact for reporting of listed discharges and dumping.

1 And lastly, on the scale of implementation for all
2 of these program measures, Staff has crafted language that
3 applies to all the fixed minimal control measures, allowing
4 the compliance on those to be conducted on a countywide
5 program, on a watershed scale, or within an individual
6 municipality.

7 As part of the reasonable assurance plans that our
8 municipalities will be developing to comply with the TMDL
9 requirements, we'll also allow provisions within those RAPS,
10 or Reasonable Assurance Plans, to substitute for any of
11 those home program elements, in whole or partly. That
12 concludes my presentation.

13 MR. KHARAGHANI: Good afternoon, Madam Chair, Board
14 Members, my name is Shahram Kharaghani. I'm the Watershed
15 Protection Program Manager for City of Los Angeles.

16 I know you're running late, so I'll make my remarks
17 very short. I really appreciate that your Board and Staff
18 have provided this type of workshop for the permittees to
19 provide their input.

20 In particular, I want to thank Mr. Unger,
21 Ms. Smith, Ms. Birdy, and Mr. Ridgeway, to have constant
22 communication with permittees regarding the development of
23 this permit.

24 We believe this kind of cooperation would create a
25 permit that all could support and implement to improve water

1 quality for our citizens. Thank you so much.

2 MR. GARRISON: Good afternoon, Members of the Board and
3 Board Staff. Thank you for hosting this workshop. I'm Noah
4 Garrison, with the Natural Resource Defense Council. And
5 I'm going to be partnering with Kirsten James, of Heal the
6 Bay.

7 Just to very quickly give an overview of two issues
8 that we've noted with the minimum control measures. First
9 is with respect to loan back development. We are very glad
10 to see that the Board Staff have effectively taken the
11 Ventura permit as a floor for what's to be required.

12 A couple points that we would push to the Board,
13 which I didn't note up there, is just in the case that there
14 is technical infeasibility, that bio-filtration should be
15 required at a multiplier for the volume that is required to
16 be retained on-site.

17 That is, if you're unable to retain water on-site,
18 and you're going to use bio-treatment as a secondary means
19 of addressing that runoff, you should be required to treat a
20 larger volume of water than you would have been required to
21 retain on-site.

22 And that's in order to ensure an equivalent water
23 quality benefit is achieved.

24 With that, regardless of whether a specific
25 multiplier is set in the Ventura Permit, they require that

1 you have to bio-treat 1.5 times the volume of water that is
2 retained on-site through on-site retention practices.

3 The site must ensure that equivalent water quality
4 benefit or pollutant loading reduction is achieved, so that
5 even if you meet that 1.5 times multiplier, if the site
6 can't demonstrate that equivalent pollutant loading
7 reduction will be achieved by the bio-treatment, then you
8 would still have to increase the amount of bio-treatment
9 that results.

10 I would also point that in the event that regional
11 projects are allowed, we certainly would encourage regional
12 projects that retain water, either infiltrating it,
13 evaporating it or putting that water to beneficial use
14 through capture.

15 But where regional projects in it may be suggested
16 that would allow for treatment and discharge of the runoff,
17 such as a managed wetland, or other regional project that
18 will ultimately allow in water being discharged from the
19 site, we would say that is inappropriate where on-site
20 retention is feasible, and that such a regional project
21 should not be allowed, and that's something that needs to be
22 included in the permit.

23 Finally, with respect to the off-site provisions
24 that are being mentioned here, I believe for the first time,
25 I don't believe we've seen those previously.

1 We would caution that while we absolutely do want
2 to see that groundwater is recharged, or the water that is
3 retained is put to the best possible benefit, whether that's
4 captured or recharging of groundwater supplies, we need to
5 make sure that an absolutely equivalent pollutant load
6 reduction is achieved, or at the same time, that the runoff
7 from that site, that site that is using an in lieu feature,
8 is treated in some manner.

9 Under Regional Board Order from 2000 -- or excuse
10 me, State Board Order from 2000, all sites must treat their
11 runoff, and there is no exemption for that.

12 So even if they're going to choose to do off-site
13 practices, they have to treat the water on-site.

14 As a second point that Ms. James will talk about in
15 more detail, we want to bring up the fact that while all
16 this will apply to new development and redevelopment
17 projects, and absolutely should, under the Clean Water Act's
18 MEP Standard, that's not going to be enough to address the
19 region's water problems. And we really need to start
20 getting at the existing built environment, not just the new
21 development projects or the redevelopment projects.

22 And we would strongly encourage the Board to
23 include a retrofit provision, or some sort of retrofit
24 program within the new permit.

25 There are plenty of opportunities to implement

1 retrofit projects that will result in retention, whether it
2 is redevelopment of streets, to create green streets,
3 parking lots, other public buildings.

4 There's a lot of opportunity to retrofit the
5 existing environment, and start getting at the root of the
6 problem that's causing this. And under M.E.P., where the
7 Clean Water Act requires that this program reduce pollutants
8 in storm water runoff to the maximum percent practicable,
9 retrofits should be incorporated under that.

10 It's not just the new development that's a problem,
11 and I'll let Ms. James speak in more detail as to the
12 retrofit issue.

13 MS. JAMES: Retrofit of existing development with storm
14 water treatment controls, including low impact development,
15 is necessary to address storm water discharges from existing
16 development that cause or contribute to water quality
17 standards exceedances. And the good news here is that there
18 have been a lot of work done in this area.

19 A lot of your fellow regional boards have put
20 forward permits that start to include these retrofit
21 concepts. I just got back from a conference in Washington,
22 D.C., where that city was talking about all that they've
23 done in the retrofit arena. So there is a lot that we can
24 build on, because we really need to go from just looking at
25 new and redevelopment, to the entire watershed, and what we

1 can do in the entire built environment.

2 So just to get into some of the specifics that we
3 would really like to see in the draft permit is, first of
4 all, at a minimum, this should reply -- all these
5 requirements should apply to water bodies listed as impaired
6 by one or more pollutants on the 303-D list. This is really
7 critical to get these impaired water bodies off that 303-D
8 list, and meeting water quality standards attainment.

9 The Regional Board should specify a volume of storm
10 that should be treated through these retrofit requirements,
11 and then as far as the process goes, we believe that the
12 permittees should start to identify and inventory existing
13 areas of development, you know, whether it's municipal,
14 industrial, commercial, residential, that are good
15 candidates for retrofitting.

16 So, you know, take an inventory of their local
17 area, and see what might be a possible upcoming project, and
18 then to take that list and evaluate it, and prioritize and
19 rank those projects, so that we can really start the ball
20 going on these retrofit projects.

21 And we also encourage that the permittees
22 prioritize on-site retention in these retrofit projects,
23 over the more traditional treat and release, for the
24 benefits that Noah stated earlier.

25 As I said, retrofit has moved forward in other

1 parts of the nation. We really need to do this in L.A., and
2 be a leader on this issue. And frankly, that's how we're
3 going to get to water quality standards attainment. So we
4 encourage Board and Staff to push forward retrofit
5 requirements. Thank you.

6 MS. MALONEY: Hi. Good afternoon. My name is Heather
7 Maloney, and I'm with the City of Monrovia, and also the
8 Chair of the L.A. Permit Group. And I'll be presenting with
9 Joe Bellamo, who is the Chair of our Reporting and Core
10 Program Sub Group. The L.A. Permit Group is a collaborative
11 effort developed to negotiate the Los Angeles County MS-4
12 NPDES permit.

13 Over 60 Los Angeles County municipalities are
14 actively participating in the effort to develop and provide
15 comments and recommendations throughout the MS-4 NPDES
16 permit processes. The current voting agencies are listed
17 above, we currently have 60 that are listed on the slide --
18 or 61, excuse me.

19 In order to reach consensus with this group,
20 comments and recommendations are developed by each of the
21 L.A. permit groups, four technical subcommittees. We have
22 development programs, reporting and core programs,
23 monitoring and TMDL subcommittees, which are then approved
24 the -- the talking points are then approved by the L.A.
25 Permit Group as a whole, and the consensus is represented by

1 the negotiations committee.

2 I'm going to turn the discussion over to Joe, who
3 is going to talk to the Minimum Control Measures.

4 MR. BELLAMO: Good afternoon. I would just like to
5 start off with the Minimum Control Measures, and the
6 comments that the group has compiled with the development
7 programs.

8 Some general comments that the group has regarding
9 the development programs, and this would be the development
10 construction, and development planning.

11 The programs, you know, the goal of it would be
12 based on improving water quality, not to dictate specific
13 control strategies. The development program should be
14 tailored to the need characteristics of Los Angeles County.

15 The development programs should be based on a
16 designed storm, it sounds like from Ivar's presentation,
17 that that is the goal, that's the direction it will be
18 going. And so it was encouraging to hear that.

19 Municipalities should be allowed to prioritize
20 B.M.P.s based on its unique characteristics, and TMDL's for
21 their watersheds.

22 For the construction programs in this, our review
23 was based upon the prior release of the minimum control
24 measures, and it seemed to be applicable. There didn't seem
25 to be any differentiating between a small construction site

1 and a large construction site. So we'd like to, you know,
2 keep the -- the difference between a large denuded hillside,
3 versus a backyard patio in mind, as we're going through
4 these couple of requirements, as we are seeing these things,
5 as we went through the prior release of the information.

6 So there's the electronic tracking, and
7 inventorying of creating encroachment, demolition, building
8 and construction permits, and the other requirement prior to
9 issuance of a grading permit, that the erosion and sediment
10 control plan be approved.

11 Our suggestion is that the -- that there be an
12 establishment of a reasonable threshold. As the -- as is
13 currently proposed, it's an excessive number of projects and
14 parameters to keep track of and manage.

15 To give you an idea, Los Angeles City has about
16 40,000 building permits that is not -- in addition to the --
17 the grading and encroachment permits, that we added to that
18 number.

19 The erosion and sediment control plan seems to
20 mirror what the requirements of the SWPP, as dictated by the
21 State's general construction permit, such as risk-based
22 B.M.P.'s and the range of inaction plans, which is unique to
23 a Risk II and Risk III project under the State's general
24 construction permit.

25 The group would like to recommend support for that

1 one acre lower threshold, as provided by the State's general
2 construction permit, as it was never intended for smaller
3 construction sites.

4 To give you an idea, the cost of a SWPP, in
5 general, is about \$20,000 dollars for an average project,
6 that's required to, under the State's general construction
7 permit.

8 And that current -- to keep the projects that are
9 less than an acre, their SWPP requirements for those
10 projects basic, as they currently are in the permit.

11 The requirement for the permittees to inspect
12 construction, all phases of construction projects, that
13 would include the prior land disturbance, grading and land
14 development, streets, utilities, road construction, and
15 final landscape, the requirement is overtly burdensome; and
16 they serve no benefit.

17 The only reasonable inspection would be during the
18 grading phase, and then upon completion of the project,
19 there's always a process where we have an inspector going
20 out and verifying certain things that are done.

21 And then our current permit requires that we do
22 rain inspections, you know, as part of the -- our program.

23 So looking at the planning and land development
24 programs, the group is recommending several things here.

25 That the requirements should be clearly based on

1 water quality benefits. It sometimes is not clear that they
2 are when you read through the minimum control measures. A
3 reduction of the 1.5 times volume for water that's used in
4 bio-filtration off-site, on-site or off-site, be reduced to
5 one. It's punitive, the way it's currently proposed, and as
6 the prior speakers were suggesting.

7 The self-inspection of post-B.M.P.'s be done by
8 parcel owners, and that the agencies function as an auditor
9 in the program, collecting information from those property
10 owners, when, you know, on a random basis or as needed;
11 again, to perform an audit as needed.

12 The retainage be based on soil characteristics of
13 the site. Roadway construction, as is currently proposed in
14 the Ventura Permit, has a lower threshold where we don't
15 feel it's appropriate for Los Angeles and the built-out
16 environment.

17 A lot of our streets are being retrofitted through
18 other means, and other requirements.

19 The hydro-modification, you know, Ivar had some
20 more information on that in his presentation. So I think
21 that this bullet point is not relevant right now.

22 In the minimum control measures, and the general
23 comments, we're asking that you provide the requirement and
24 allow the permittees the flexibility to implement. Two
25 examples of this: Maintaining a watershed and

1 jurisdiction-based map in G.I.S.; and we're asking that you
2 allow the permittees the flexibility to determine the format
3 and how it's done.

4 The installation of trash excluding devices on all
5 catch basins or outfalls of the MS-4. This is contrary to
6 what's provided for in the language under the trash TMDL's,
7 at least in the Malibu Creek Watershed.

8 We ask that you provide the time necessary to
9 comply with the requirements; some of these requirements
10 affect agencies' budgeting processes, contracting
11 agreements, and stakeholder involvements.

12 Clear -- provide clear definition of key terms such
13 as MS-4, where does that end, where does that start,
14 especially when you're in the Malibu Creek Watershed, and
15 you have a receiving water body followed by an MS-4.

16 And lastly, the cost to comply is a key point.
17 Thank you.

18 MR. UNGER: Theresa, just to be clear, we have two
19 speaker cards on this item, and then we're going to move on
20 to the next item, for everyone's -- and these are the two.
21 We have another one on another topic.

22 UNIDENTIFIED SPEAKER: (Inaudible).

23 MR. UNGER: Got it? Thank you.

24 MS. ELKINS: Good afternoon. My name is Patricia
25 Elkins. I'm the storm water -- sorry. Storm Water Programs

1 Manager -- it's a real long title -- for the City of Carson.

2 If you haven't seen it on T.V. already, please go
3 to the [www.tobaccofreecalifornia -- CA.com](http://www.tobaccofreecalifornia.ca.com), and watch the
4 T.V. ad titled, "Thrown Away."

5 The ad shows a cigarette butt that is dropped into
6 the street, rolls into the catch basin, floats to the storm
7 drain system, and ends up in the ocean, where it is washed up
8 onto the beach, and sniffed out by a dog.

9 During the ad, the narrator says, "Cigarettes are
10 not just dangerous when they're smoked, they're dangerous
11 long after. Cigarette butts are toxic. They release
12 chemicals that poison our water and harm wildlife. And
13 millions are polluting our environment."

14 This is a powerful message. The website and the
15 ads are the product of the California Department of Public
16 Health. I am working with their media specialist to allow
17 this particular ad to be used on cities' website and cable
18 channels, at a minimum. I'm very excited to report that
19 their response has been very positive.

20 Why do I bring this up? It's costly to do public
21 information participation programs, and I believe that
22 coordinating public education efforts like these in economic
23 times is paramount.

24 I'm here to comment on two, in particular,
25 requirements, of the Draft Minimum Requirements.

1 One of the requirements is that the cities train
2 contractors. As a former construction manager, I can attest
3 to the fact that cities do take this seriously, and do
4 address storm water issues with contractors, most often in
5 the capital improvement program project pre-construction
6 meetings.

7 But it is my opinion that the Contractor's State
8 License Board should be responsible for administering the
9 training of contractors.

10 A volunteer committee, headed by the Regional
11 Board, could prepare the materials, and all contractors,
12 regardless of their license type, general or specialty,
13 would be required to have at least one individual in their
14 company trained.

15 The training materials could be made available
16 online, and the test could be administered online. A
17 minimal fee could be charged to offset the administration.

18 I'm a licensed contractor, and I would not object
19 to paying the fee. But then again, I am a little bit
20 biased.

21 The second minimum control measure I am concerned
22 about is the dry weather observation of storm drain outfalls
23 36 inches or greater. This requirement needs to provide for
24 significant flexibility.

25 The number of outfalls varies by cities. Carson

1 has 83 outfalls, greater than 36 inches to the Dominguez
2 Channel Estuary alone. That doesn't count the Torrance
3 Lateral. I'm looking forward to working out a reasonable
4 cost efficient method of achieving this goal. Thank you.

5 UNIDENTIFIED SPEAKER: Okay. So at this point in the
6 workshop, we're going to go ahead and turn our attention to
7 the next topic that was noticed, which was the water quality
8 based effluent limitations.

9 And I want to apologize to everybody right now.
10 Unfortunately, I don't have a Power Point to put up on the
11 screen. Apparently, my flash drive is corrupted, and that's
12 the only place that it exists. So some of you probably got
13 copies of the presentation.

14 If not, we'll make sure to post the presentation on
15 the website after the workshop. So share with your
16 neighbor, and we'll get a copy up afterwards.

17 And we actually do have more copies coming. So you
18 might be able to take one with you before you leave today.

19 So thanks for your patience, and I apologize for
20 that, again. So like I said, what I wanted to do today is
21 talk about water quality-based effluent limitations.

22 We often refer to these as WQ BELS or Q BELS, and
23 they are a permitting construct that's designed to achieve
24 water quality standards. And effluent limitation,
25 generally, is defined in federal regulations as any

1 restriction that's imposed on the quantities, discharge
2 rates, and concentrations of pollutants, which are
3 discharged from point sources into waters of the United
4 States.

5 In the world of permitting, typically we have two
6 kinds of effluent limitations. We have technology-based
7 effluent limitations, which we refer to as T BELS, and then
8 we have the water quality-based effluent limitations that we
9 refer to as WQ BELS.

10 While both of these are the restrictions on the
11 quantity of a pollutant discharge, the basis for each one is
12 very different. A WQ BEL is an effluent limitation for a
13 pollutant that's calculated from the water quality standard,
14 itself; while a T BEL is an effluent limitation for a
15 pollutant that's based on the capability of a treatment
16 method to reduce a pollutant to a certain level.

17 And I'm going on to the next slide, for those of
18 you who do have a copy of the presentation.

19 The implementing regulations for the Clean Water
20 Act state that each NPDES permit shall include any
21 requirements in addition to, or more stringent than the
22 promulgated effluent limitation guidelines, which are
23 basically, the technology-based standards, as necessary to
24 achieve water quality standards.

25 And the other thing that I wanted to point out,

1 here is: In its 1990 rulemaking -- and that was the
2 rulemaking regarding the permitting of municipal storm water
3 discharges, E.P.A. stated that permits for discharges from
4 MS-4's specifically must require controls to reduce the
5 discharge of pollutant to the maximum extent possible, and
6 for necessary water quality-based controls.

7 Federal regulations also state that WQ BELS must be
8 consistent with the assumptions and requirements of
9 available waste load allocations that are established in
10 TMDL's.

11 So the next thing I wanted to touch on is when our
12 WQ BELS needed NPDES permits, and specifically, in MS-4
13 permits, like we're talking about today.

14 And I wanted to start out by saying that the
15 ultimate goal for all permits is to ensure that discharges
16 do not cause or contribute to exceedances of water quality
17 standards.

18 So permit requirements are developed with this goal
19 front and center. Generally, in the NPDES permitting
20 program, WQ BELS are required for discharges that have the
21 reasonable potential to cause or contribute to an exceedance
22 of water quality standards, and where technology-based
23 effluent limitations are not sufficient to achieve those
24 water quality standards quality based standards. And
25 federal regulations are clear that both of these types of

1 effluent limitations can be required in permits, both the T
2 BELS as well as the WQ BELS.

3 T BELS are typically the first step in controlling
4 pollutants and discharges, followed then, were necessary by
5 the water quality-based effluent limitations.

6 So using this framework, like I said, in its 1990
7 rulemaking regarding regulation of municipal storm water
8 discharges, E.P.A. indicated then in addition to controls to
9 reduce the discharge of pollutants in storm water to the
10 maximum extent practicable, which is basically a form of a
11 technology-based control, that water quality-based controls
12 may also be necessary in permits regulating municipal storm
13 water discharges, in order to achieve water quality

14 standards.

15 And recently, E.P.A. has stated that it does
16 recommend the use of WQ BELS to meet water quality standards
17 in MS-4 permits. E.P.A. recognizes that these water
18 quality-based effluent limitations will clarify permits,
19 permit requirements, and will also improve accountability in
20 the storm water program.

21 Now, when it comes to TMDL waste allocations, the
22 point that I want to make here is that where there is a
23 discharge that has been assigned a waste load allocation in
24 a TMDL, it's concluded that the discharge does have a
25 reasonable potential to cause or contribute to an exceedence

1 of a water quality standard.

2 Therefore, in that case, a water quality-based
3 effluent limitation must be developed for those discharges
4 that are assigned to waste load allocations in TMDL's.

5 And basically, the water quality-based effluent
6 limitation is a mechanism to implement the TMDL waste load
7 allocation in the permit.

8 So next, I want to turn to what is the basis then,
9 for these water quality-based effluent limitations, or WQ
10 BELS.

11 By definition, like I've said, a WQ BEL must be set
12 at a level necessary to achieve water quality standards and
13 any available waste load allocation in an established TMDL.

14 And I want to note here, that what the relationship
15 between a WQ BEL and a waste load allocation is, just to be
16 clear. Both are restrictions on the amount of a pollutant
17 that can be discharged, that are necessary to achieve water
18 quality standards.

19 A waste load allocation is basically the numeric
20 restriction on, that's placed in the TMDL, which is
21 typically incorporated into our water quality control plan
22 or basin plan; whereas the WQ BEL is the translation of that
23 waste load allocation into a numeric effluent limitation
24 that's put into a specific permit.

25 And often this is mainly a matter of semantics in

1 that waste load allocation is the term we use to describe
2 the restriction in the TMDL; and then the WQ BEL is the term
3 that we use in the permitting -- permitting realm.

4 The next thing that I want to do is I want to just
5 give you an example by talking about how the L.A. Water
6 Board has expressed water quality-based effluent limitations
7 in MS-4 permits within this region.

8 And I want to give you two examples of this. And
9 one, you've heard me talk about a number of times before, as
10 we've been developing this permit, and that's the L.A. River
11 Trash TMDL.

12 And for L.A. River Trash TMDL, when the provisions
13 for that TMDL were incorporated into the L.A. MS-4 permit,
14 we incorporated the waste load allocation as water
15 quality-based effluent limitation; and those were expressed
16 numerically, and were essentially equivalent to, in the
17 TMDL, what we call the compliance points, which is
18 essentially a three-year rolling average of the waste load
19 allocation.

20 So they're expressed as numeric water quality-based
21 effluent limitations. However, we also allowed within the
22 permit, for a jurisdiction or a permittee, to basically
23 document the percent of jurisdictional area covered by a
24 full capture device.

25 And as part of the TMDL process, the full capture

1 device was identified as a single B.M.P., that could,
2 essentially, achieve the goal of the TMDL.

3 And so in that case, basically, there's an option
4 to express -- and it has been expressed in the L.A. MS-4
5 permit -- as in a way, a quantitative surrogate parameter,
6 meaning, the percent of a jurisdiction area that's addressed
7 by a full capture system.

8 So that's one example. The other example that I
9 want to give you is the incorporation of TMDL provisions
10 into the Ventura County MS-4 permit, most recently in 2009
11 and 2010.

12 And in that case, we simply took the numeric waste
13 load allocations, and put them directly into the Ventura
14 MS-4 Permit as numeric limitation in the permit.

15 And so, those are two examples of how we've
16 incorporated these water quality or waste load allocations
17 as water quality-based effluent limitations in permits in
18 the L.A. Region.

19 The next thing that I want to briefly touch on is
20 what is the proposed scope of water quality-based effluent
21 limitations in the proposed L.A. County MS-4 Permit that we
22 are working on right now.

23 And for the upcoming permit, what we're
24 anticipating right now is including water quality-based
25 effluent limitations, where there are interim and final

1 waste load allocations that have been assigned to storm
2 water and non-storm water discharges from the MS-4 and
3 established TMDL's.

4 And at this point, those are the only waste load --
5 or water quality-based effluent limitations that we're
6 anticipating including in this permit, this next permit term
7 that we're working on.

8 The next thing that I want to talk about is the
9 relationship between water quality-based effluent
10 limitations and B.M.P., or Best Management Practices.

11 And I wish I had the slide for you guys to look at
12 at this point, but I know some of you do have a handout, and
13 on the handout there's basically a definition of what an
14 effluent limitation is, and what a best management practice
15 is.

16 According to federal regulations, both may be
17 requirements in an MS-4 permit. And as I stated at the
18 beginning, a water quality-based effluent limitation is a
19 restriction on the quantity of a pollutants that can be
20 discharged, that's necessary to achieve water quality
21 standards.

22 B.M.P.'s or Best Management Practices, on the other
23 hand, are management practices that are designed to prevent
24 or reduce pollution; and these might include structural
25 treatment devices, diversion facilities, activities, O&M

1 procedures, and prohibitions on certain types of practices.
2 And these two concepts work together in MS-4 permits; but
3 they're fundamentally different concepts.

4 The effluent limitation, again, is the restriction
5 that's placed on the amount of the pollutant that may be
6 discharged; where the B.M.P. is the structural device or the
7 action that is taken to actually achieve that effluent
8 limitation.

9 And there has been some discussion during the
10 permit development process by some, that we incorporate a
11 B.M.P.-based water quality-based effluent limitation, or WQ
12 BEL's in the MS-4 permit.

13 However, this is really conflating these two
14 different concepts.

15 So what I want to go to next -- and actually,
16 lastly, as part of this presentation, is how can then MS-4
17 permittees demonstrate compliance with these water
18 quality-based effluent limitations?

19 So I've talked about this in some of the previous
20 workshops that we've had during the development process, and
21 what we're proposing is basically a dual path approach to
22 demonstrating compliance.

23 And what we're anticipating is that we'll be
24 including two different things in the permit. We'll be
25 including the numeric water quality-based effluent

1 limitations, as I've just described, but we'll also be
2 including the possibility of developing what we're calling a
3 reasonable assurance program, that would basically outline a
4 set of structural and non-structural actions that will be
5 taken, and will demonstrate that those actions have a
6 reasonable assurance of achieving the numeric water
7 quality-based effluent limitations.

8 And compliance then can be demonstrated through
9 that reasonable assurance program, and that there will be a
10 process by which there will be a proposal by either a
11 permittee individually or ideally, collectively, on a
12 watershed basis, to propose a set of B.M.P.'s and actions to
13 the Regional Board, and then, that will be reviewed and
14 ultimately approved by the Executive Officer as a program
15 that can be implemented.

16 And during the TMDL implementation period, then
17 following that plan can be the mechanism for demonstrating
18 compliance with the numeric water quality-based effluent
19 limitations.

20 And with that, I want to end my presentation and
21 turn it over to the speakers that we have on this topic.

22 Theresa?

23 MR. GARRISON: Good afternoon. Noah Garrison, with the
24 Natural Resources Defense Council again.

25 I very briefly want to state that, reiterating the

1 Board's point, under federal regulations, NPDES permits must
2 contain effluent limits that are consistent with the
3 assumptions and requirements of available waste load
4 allocations, and the simplest and most straightforward thing
5 to do is simply to incorporate the waste load allocation,
6 the numeric waste load allocation into the permit.

7 And we absolutely support that approach, and it's
8 what E.P.A. in fact recommends. With regard to the Board's
9 proposal on potential B.M.P. programs or Reasonable
10 Assurance Programs, I do want to reiterate also, that time
11 and time again, over 20 years of permit implementation, that
12 we've seen in Los Angeles, we have found that B.M.P.
13 programs simply do not result in appreciable improvements in
14 water quality.

15 We find these programs tend to be difficult to
16 enforce, not to result in appreciable water quality
17 improvements, and ultimately, not to be the best route to
18 take, particularly to TMDL's. And I think Ms. James will
19 speak in greater detail about that.

20 Thank you.

21 MS. JONES: Kirsten James, Water Quality Director with
22 Heal the Bay.

23 Just to jump off on Noah's point about the proposed
24 reasonable assurance program and compliance demonstration
25 through that mechanism.

1 One thing I've mentioned to Staff before, is the
2 extreme resource burden of this.

3 So not only do we have to call into extreme
4 question that a B.M.P. program would actually get us to
5 water quality standards at the end of the day, but also,
6 this is a huge resource issue for Staff.

7 So what we did back at Heal the Bay, is we went
8 back through all the TMDL's for the L.A. Region, and looked
9 at how many responsible parties were included for each TMDL
10 in the MS-4. And we came to a number of over 300.

11 So what does that mean?

12 Well, that means, potentially, your Staff could be
13 getting 300 individual reasonable assurance plans, that they
14 need to evaluate in extreme detail, to make sure all the
15 complicated models, all the complicated B.M.P. programs are
16 actually going to help lead us to where we want to be.

17 That is an extreme burden on your staff, and also
18 along the way, out there inspecting to make sure they're
19 actually implementing this.

20 So is Staff really going to be able to do all of
21 these complicated reviews, and extremely technical reviews,
22 not only stakeholders like Heal the Bay, and N.R.D.C., that
23 would like to be involved in that, as well.

24 That is an extreme burden on staff that I don't
25 think they realize they're getting themselves into.

1 And furthermore, at the end of the day, we need to
2 make sure that beneficial uses are being met.

3 And so that is our goal at the end of the day.
4 That needs to be what we see as final compliance points.
5 These water quality standards that have been turned into
6 waste load allocations and put in these TMDL's, are the way
7 we're going to get to beneficial uses attainment; and so
8 that's what we need to remember at the end of the day.

9 The reasonable assurance plans, we don't have
10 confidence that Staff can adequately review them, or that
11 any plan can really get us to where we need to be. Thank
12 you.

13 UNIDENTIFIED SPEAKER: We put them all in together,
14 flipping through the slides. I'm sorry? (Inaudible).

15 UNIDENTIFIED SPEAKER: Well, thank you for letting us
16 speak on this topic. I first want to very quickly address
17 the prior group's comments that B.M.P.'s have been shown not
18 to be effective.

19 Those B.M.P.'s, one example of an effective B.M.P.
20 is some low flow diversions that have been installed, and
21 those are the very things -- B.M.P.'s structural and
22 non-structural, regardless of the R.A.P., will be
23 implementing. So they are effective, and that's really the
24 only tool that we have to meeting water quality standards.

25 So we are supportive of that, of a B.M.P. approach,

1 because that is exactly where we need to go to meet water
2 quality standards.

3 So rather than the approach proposed by Staff, the
4 L.A. Permit Group supports the use of water quality-based
5 effluent limitations, expressed as B.M.P.'s, that allow the
6 implementation of best management practices, to be utilized
7 as a method of compliance for meeting TMDL waste load
8 allocations.

9 We feel it is critical that municipalities be
10 allowed to comply with both interim and final waste load
11 allocations, through the implementation of B.M.P.'s. We
12 don't feel that the final TMDL waste load allocations are
13 required to be put as numeric WQ BELS, as stated by Staff.

14 There are several examples of other California storm
15 water permits. Language in the federal regulations, and
16 E.P.A. guidance that demonstrate B.M.P.-based WQ BELS, can
17 and should be utilized for incorporating both interim and
18 final waste load allocations.

19 We are concerned that the definition of numeric WQ
20 BELS, as proposed by Staff, would put permittees out of
21 compliance with the permit from day one, and would not
22 recognize the significant efforts that have been implemented
23 to date, to comply with the TMDL's.

24 Using numeric WQ BELS would mean that an agency
25 that has implemented all the actions outlined in an

1 Executive Officer-approved plan, but for some reason, is
2 still seeing exceedances of the numeric values of the waste
3 load allocations, would be held in violation regardless of
4 the steps being taken to find a solution and/or implement
5 those additional B.M.P.'s.

6 One example of this is the work that's been done on
7 the Santa Monica Beach Bacteria TMDL.

8 The city's recognized that there were some issues,
9 and reported that in their compliance report, and laid out
10 the specific strategies to work towards compliance. And
11 that still hasn't received a response from the Regional
12 Board. But they continue to work towards compliance and
13 water quality.

14 We, therefore, request that the Regional Water
15 Quality Control Board Staff, use B.M.P. based WQ BELS,
16 rather than numeric WQ BELS, as defined by Staff, for both
17 interim and final waste load allocations.

18 Thank you for your time.

19 MR. TAHIR: Good afternoon, Board Members. My name is
20 Ray Tahir. I'm a consultant with Techs Environmental, and
21 today I represent the cities that are mentioned on the
22 screen there.

23 And I'll be talking about this very arcane subject
24 of WQ BELS; and I hope that I can demystify some of the
25 issues that surround the usage of this term.

1 There are, as you just heard, concerns with WQ
2 BELS; but as you know, WQ BEL is a federal storm water
3 requirement that translates a water quality standard, and
4 this includes TMDL waste load allocations, into B.M.P.'s or
5 other actions to achieve compliance. B.M.P.'s operate to
6 reduce or eliminate pollutants and storm water discharges to
7 the maximum step practicable.

8 B.M.P.'s do this by preventing storm water contact
9 with pollutants, or if not possible, by treating or
10 preventing run-off before it enters the MS-4.

11 The MS-4 is, in effect, the municipal storm drain
12 system, that consists of streets catch basins and storm
13 drains.

14 As an example, a trash B.M.P. This is
15 debris-excluded screen located in Gardena. This is an
16 infiltration control at a parking lot, and this type of
17 design is typically used for new developments that are
18 subject to the current permits, standard Urban Storm Water
19 Mitigation Plan requirement.

20 This particular device infiltrates run-off, treats
21 it, you know, if there's any overflow, the overflowing will
22 go into the MS-4; but it will have been treated by that
23 time.

24 I should point out that there has been an absence
25 of WQ BELS in previously-adopted TMDL's, and under the

1 current permit, which has been reopened twice, there has
2 been no reference to WQ BELS in either of those documents.

3 The Santa Monica Bay Beach's dry weather TMDL,
4 which was incorporated in the current permit in 2007,
5 contained a bacteria waste load allocation. It had to be
6 met no matter what.

7 There were no WQ BELS. It did not allow for WQ
8 BELS to translate this waste load allocation to B.M.P.'s,
9 even though U.S. E.P.A.'s 2002 Guidance Memorandum required
10 WQ BELS for TMDL waste load allocations.

11 And affected permittees, and I mentioned that there
12 were 22 of them, thought that by implementing B.M.P.'s, they
13 would be in compliance.

14 And some permittees spent millions of dollars in
15 diverting non-storm water run-off away from the beaches to
16 the sewer systems; but they were still found in violation;
17 again, because there was no WQ BEL.

18 Fortunately, two court decisions invalidated the
19 enforcement actions.

20 These reports Staff proposes, apply numeric WQ BELS
21 to all the TMDL's to be placed in the next MS-4 permit.
22 There's a problem, though. The Regional Board, as Renee
23 just mentioned, interprets numeric WQ BELS to meet absolute
24 compliance with TMDL waste load allocations, which are
25 numeric, by any B.M.P. means necessary.

1 Permittees must meet the 32 numeric waste load
2 allocations associated with the TMDL's, or be out of
3 compliance. Noncompliance would require enforcement action
4 or exposure to third party litigation.

5 From this, one of the N.G.O.'s here, which is
6 Natural Resources Defense Council, which has already done
7 that.

8 Cities are concerned about the Regional Board Staff
9 application of WQ BELS, because it's not certain if the
10 Regional Board can at this time legally compel compliance
11 with numeric limits.

12 We do know that a Blue Ribbon Panel convened by the
13 the State Water Resources Control Board, concluded that
14 numeric limits are not feasible at this time.

15 And recently, a Sacramento Superior Court ruled
16 that numeric limits in the general construction storm water
17 activity permit are impermissible.

18 The U.S. E.P.A. issued a Guidance Memorandum last
19 year, clarifying its November 2010 Memorandum on WQ BELS, by
20 saying a key issue addressed in the 2002 memo is the
21 feasibility of including numeric effluent limitations in
22 NPDES permits for storm water discharges.

23 Some stakeholders are concerned that the 2002 memo
24 can be read as advising NPDES permittee authorities --
25 that's the Regional Board to impose end of pipe outfall

1 limitations on each fallout on MS-4.

2 In general, though, E.P.A. does not anticipate that
3 end of pipe effluent limitations on each outfall will be
4 used frequently.

5 But numeric limits are infeasible because of costs.

6 For example, according to the Regional Board's own
7 data, the cost of complying with the L.A. River Bacteria
8 TMDL, is estimated to be \$5.4 billion dollars over a 22-year
9 period. The City of Bradbury's annual cost would be
10 \$1.2 million a year. Its annual budget is only \$800,000 a
11 year.

12 The City of Cudahy is one of the poorest cities in
13 the county. Its cost will be \$1.4 million per year. That
14 is seven percent of its total operating budget. This raises
15 serious environmental justice issues.

16 The bacteria TMDL is just one TMDL. There are 31
17 others that are going to be incorporated into the next MS-4
18 permit.

19 The Regional Board, unfortunately, has not
20 effectively addressed these costs, and how cities are
21 expected to meet them. Here's an example: A cost breakdown
22 for the cost impact of the L.A. River Bacteria TMDL on each
23 of the 40 cities of the L.A. River.

24 I should mention one thing about the City of
25 Cudahy. The purpose of the L.A. River Bacteria TMDL is to

1 protect recreational uses; the City of Cudahy doesn't have a
2 swimming pool. The closest thing that it has to aquatic
3 recreation is a lawn sprinkler at a park next to City Hall.

4 Numeric limits are infeasible, also because there
5 is no outfall data showing that an MS-4 permittee has not
6 met the TMDL waste load allocation.

7 That is to say that there's no data that shows that
8 any particular municipality has cause to contribute to an
9 exceedance of a water quality standard.

10 Although federal regulation requires storm water
11 monitoring at the outfall for compliance, the Regional Board
12 has never required outfall monitoring. The Regional Board
13 Staff has relied on receiving water monitoring to determine
14 compliance.

15 Now, ladies and gentlemen, this is an outfall or
16 end of pipe, to give you an example here. This is where the
17 compliance point should be, at the outfall. In the
18 discharge from the outfall, not the discharge in the
19 receiving water.

20 The receiving water TMDL waste load allocation is a
21 target to shoot for through B.M.P.'s. It is not where
22 compliance is to be determined.

23 Numeric limits are also infeasible because the TMDL
24 waste load allocations are based on improper receiving water
25 monitoring methodology.

1 The waste load allocations that were set were based
2 on monitoring data provided by L.A. County Mass Emissions
3 Stations, for the most part.

4 But when the monitoring was conducted, when the
5 samples were conducted, they were conducted at the time it
6 was raining. That's the worst time to do a sample. SWPPP
7 policy requires monitoring to be done between 40 and
8 72 hours after a storm event. So what we're dealing with
9 here, are unjustifiably stringent waste load allocations.

10 So what's the difference between ambient monitoring
11 and non-ambient monitoring?

12 Again, monitoring conducted in a storm event is
13 when a water body is at its worst, resulting in a more
14 stringent standard. Because when it rains, you have all
15 that junk being presented to receding water at once.

16 When you take the sample, you're going to get high
17 reads of pollutants. It's like going in for a physical when
18 you have the flu, and then having your temperature taken.
19 Well, you're going to be sick. That's the worst time to
20 take a physical.

21 Same thing with the issue of ambient monitoring.
22 We want to do monitoring when things have settled down.
23 That hasn't happened. Ambient monitoring provides a more
24 accurate characterization of a healthy receiving water,
25 because it was done when things have calmed down.

1 The Regional Board SWPPP Unit knows this.

2 Okay. Now what? How do permittees comply with the
3 32 TMDL's that will be placed in the next MS-4 permit?

4 Reopen those TMDL's that set the compliance point in the
5 receiving water, and change it to the outfall, unless the
6 permittees can show compliance in the receiving water, or
7 that there is no exceedance there, or if there's no
8 discharges there. Eliminate the compliance schedules in the
9 TMDL.

10 There are schedules in the TMDL that would -- some
11 TMDL's that would, once the TMDL's are incorporated in the
12 permit, cities will be out of compliance with that TMDL.

13 Get rid of them. Conduct SWPPP monitoring in the
14 receiving waters, as the Regional Board has already done to
15 some extent, for L.A. Basin water bodies, to reset waste
16 water load allocations, so we have an accurate target to
17 shoot for, not something that is unreasonable and impossible
18 to meet.

19 Allow compliance with pending TMDL's to revise
20 B.M.P.'s now implemented to the current MS-4 permit, and
21 will be modified and carried over to the next MS-4 permit.

22 The proposed enhanced B.M.P.'s would be implemented
23 in the core programs as they are now, through a Storm Water
24 Quality Management Plan, instead of a reasonable assurance
25 plan proposed by Regional Board Staff.

1 The B.M.P.'s would, for example, focus on public
2 education, outreach on TMDLs; adjusting industrial
3 commercial inspections to identify and control pollutants
4 used, stored, or handled at such facilities.

5 Implement low impact development strategies to
6 retain more run-off onsite; conduct more or modified street
7 sweeping through the public agencies program.

8 More importantly, conduct outfall monitoring over
9 the five-year term of the permit, which could be considered
10 a B.M.P., to characterize each permittee's MS-4 for TMDL
11 pollutants, and to evaluate B.M.P.'s performance vis-à-vis,
12 TMDL waste load allocations. That's very important.

13 We really do not know to what extent any permittee
14 that is causing or contributing to an exceedance of any
15 water quality standard or waste load allocation for a TMDL.
16 The data just is not there.

17 In the fifth year of the permit, which would be
18 assuming that it's adopted this year, in 2017, we would
19 propose in the next MS-4 permit application, which is known
20 as the Report of Waste Discharge, which is the application
21 that is due 180 days prior to the expiration of an MS-4
22 permit, to provide or propose additional or more intensified
23 B.M.P.'s on outfall monitoring -- based on outfall
24 monitoring data.

25 And then determine if the TMDL's are to be

1 continued or to be delisted.

2 And then, recommend a ramped up B.M.P.'s, if
3 necessary, and this would be part of the adaptive management
4 (Inaudible) process, the trial and error process.

5 The approach may not be perfect, but it certainly
6 is sane, under these circumstances.

7 And that's all I have. Thank you very much for
8 your patience and indulgence.

9 UNIDENTIFIED SPEAKER: Okay. I think that's all the
10 speakers that we had on the water quality-based effluent
11 limitation.

12 So at this point, we are going to turn our
13 attention to the monitoring program element part of the
14 workshop.

15 And if you could just give me a minute, here.
16 Okay. So I'm going to go ahead and get started on the
17 monitoring program requirements that we're currently
18 considered for the upcoming L.A. MS-4 Permit.

19 Many of you may have been at the workshop that we
20 had on January the 23rd, in which we did talk about
21 monitoring program requirements for the upcoming L.A. MS-4
22 Permit.

23 So for this presentation, what I'm going to focus
24 on is the objectives overarching and more specific
25 objectives for the monitoring program requirements in the

1 permit.

2 I am also going to provide sort of a refresher for
3 what some of those key monitoring program elements are that
4 we're currently contemplating for the permit; and I will
5 talk about some of the significant issues that were raised,
6 both at the January 23rd workshop, as well as that we've
7 heard since that time, from permittees and stakeholders
8 regarding some of the proposed monitoring requirements.

9 And then I'll talk about the next steps that we're
10 taking, in consideration of some of these issues that have
11 been raised.

12 So for the monitoring program requirements, we have
13 several objectives, generally, for the monitoring program.

14 And one of the comments that was made by permittees
15 at the January 23rd workshop was the importance of very
16 clearly identifying the objectives of the monitoring program
17 up front, and using these objectives to guide the
18 development of the monitoring program requirements that are
19 to be included in the permit.

20 And we identified several overarching objectives
21 for the monitoring program; and these are, specifically,
22 first of all, to assess the chemical, physical, and
23 biological impacts of MS-4 discharges on receiving waters.
24 And there are two aspects to this first objective.

25 The first is assessing the impacts of storm water

1 discharges from the MS-4 on receiving waters; and the second
2 is identifying non-storm water discharges that may be a
3 source of pollutants to receiving waters.

4 The second objective relates to determining
5 compliance with TMDL provisions; and specifically, as we
6 just talked about, in the last topic, the water
7 quality-based effluent limitation, or the reasonable
8 assurance program.

9 And the third objective is for the monitoring data
10 to help inform implementation actions by permittees. And
11 this might occur by prioritizing drainages for illicit
12 discharge detection and elimination, or diversion of
13 non-storm water flows.

14 It could be identifying areas where retrofit of
15 existing developments should be prioritized. Or it also
16 could include evaluating the effectiveness, generally, of a
17 permittee's storm water management program; meaning their
18 core management program elements that Ivar discussed
19 earlier, and seeing whether any of those areas need
20 additional B.M.P.'s implemented, or enhancement of the
21 current B.M.P.'s that are being implemented.

22 So to achieve these overarching objectives, we've
23 contemplated four general areas for the monitoring program
24 and the permit.

25 The first and last of these, which are the TMDL

1 compliance monitoring programs, and the regional monitoring
2 programs, are already incorporated to a certain extent in
3 the MS-4 permit.

4 While the two middle ones on the slide, that some
5 of you do have copies of, are the MS-4 outflow monitoring of
6 storm water discharges, and then the outflow monitoring of
7 non-storm water discharges.

8 And these are newly proposed components; and you
9 just heard that from Ray Tahir, that these have not been
10 previously incorporated in the L.A. Permit, and we are
11 proposing them for the next round of the permit.

12 I do want to note, while I've listed all four of
13 these elements individually in the presentation, we do
14 expect that there's going to be significant overlap between
15 the four elements; meaning that the monitoring requirements
16 of one of these elements will most likely fulfill many of
17 the monitoring requirements of the other elements.

18 In particular, we expect that the TMDL compliance
19 monitoring programs and outflow monitoring programs will be
20 highly integrated, such that one monitoring location can
21 meet several monitoring program requirements.

22 So what I wanted to do now is just briefly go
23 through some of the more specific objectives of those four
24 monitoring programs.

25 For the TMDL compliance monitoring programs,

1 clearly, the objective there is to assess whether the
2 applicable interim and final water quality-based effluent
3 limitations are being achieved.

4 For the storm water outfall-based monitoring
5 program, we have two main objectives.

6 The first is to characterize the quality of the
7 storm water discharges and their impact on receiving waters;
8 and the second is to measure the effectiveness of
9 permittees' storm water management programs, and target
10 actions to improve those programs.

11 For the non-storm water outfall-based monitoring
12 program, the first objective is to identify outfalls that
13 have significant non-storm water discharges from them.

14 And the second objective is to characterize then
15 the quality of those non-storm water discharges, to
16 determine whether they are contributing pollutants to the
17 receiving waters.

18 And then for the regional monitoring programs, the
19 objectives of those are to assess whether receiving waters
20 are fully supporting their beneficial uses, and then to
21 identify the pollutants that are causing or contributing to
22 an exceedance of water quality standards, and an impairment
23 of beneficial uses.

24 So what I want to do now is take a moment to talk
25 about the need for the MS-4 outfall monitoring. Because

1 like I said, this is a new component that we're proposing as
2 part of the upcoming L.A. permit.

3 Federal regulations anticipated that MS-4
4 permittees would conduct outfall monitoring. Specifically,
5 the federal regulations identify several important outflow
6 monitoring tasks. And I want to list for you several of
7 those.

8 First of all, they anticipated conducting a mapping
9 inventory of MS-4 outfalls within a permittee's
10 jurisdiction. They also contemplated characterizing the
11 general quality of those discharges from MS-4 outfalls.

12 The federal regulations also anticipated conducting
13 field screening for non-storm water discharges from the
14 MS-4; and then, ultimately, to select representative
15 outfalls in consideration of a permittee's or a watershed's
16 water quality concerns to monitor during the permit term.

17 This outfall monitoring data is very critical to
18 determine the impact of MS-4 discharges on receiving waters.
19 To evaluate whether some of the non-storm water discharges
20 through the MS-4 are a source of pollutants, and to
21 determine the effectiveness of storm water management
22 programs, and illicit detection elimination programs that
23 are contained also within the storm water management
24 programs of the permittees.

25 As I mentioned, historically, outfall monitoring

1 has not been included as part of the monitoring requirements
2 in the L.A. County MS-4 Permit. I would say the requirement
3 that has been probably closest to outfall monitoring has
4 been some of the shoreline monitoring that's been conducted
5 at the point where the discharge initially mixes with the
6 surf zone, as part of the Santa Monica Bay Beaches Bacteria
7 TMDL monitoring requirements.

8 However, you may remember, and the Board probably
9 remembers, those who were on the Board at that time, when
10 the Ventura County MS-4 Permit was adopted in 2009, that
11 outfall monitoring was incorporated into that permit at 11
12 representative locations.

13 Clearly, Ventura County and the amount of
14 urbanization there is much less than it is in L.A. County.
15 So we do expect that the monitoring program will be
16 substantially bigger in L.A. County.

17 Additionally, for Ventura County, the Board
18 included dry weather analytical monitoring requirements as
19 well, for non-storm water discharges.

20 And each permittee in that permit was required to
21 identify locations where they would conduct that dry weather
22 analytical monitoring.

23 So the next thing that I want to talk about, that I
24 touched on briefly earlier, is the integration of the TMDL
25 and outfall monitoring requirements that I have just been

1 talking about.

2 Because another significant comment that we've
3 received in response to our initial discussion on the
4 monitoring program requirements at the January 23rd
5 workshop, was that the outfall monitoring program
6 requirements, and to a certain extent also the regional
7 monitoring program requirements, should be integrated with
8 TMDL monitoring requirements as much as possible, and that
9 these should be done on a watershed basis.

10 And there was some concern that was expressed that
11 this integration, as we described at the January 23rd
12 workshop, was not really being reflected in Staff's
13 proposal.

14 And so I want to clarify today that the integration
15 of TMDL and outfall-based monitoring requirements in the
16 L.A. MS-4 Permit that's upcoming is Staff's intent.

17 The TMDL's adopted by this Board have established a
18 lot of detailed monitoring requirements on a watershed
19 basis.

20 In many cases, these include outfall-based
21 monitoring of wet weather and dry weather discharges from
22 the MS-4.

23 These monitoring requirements have been further
24 detailed in TMDL coordinated monitoring plans, or C.M.P.'s,
25 as we often call them, and those have subsequently been

1 approved by the Executive Officer.

2 So it's our intent, as much as possible, to allow
3 permittees to utilize the existing TMDL monitoring, to meet
4 the requirements of the proposed outfall-based monitoring,
5 as well as some of the regional monitoring programs.

6 And what I did present, and I heard a flurry of
7 papers, so I think more copies have been passed out now, so
8 the slide, if you're at Slide 6, that's where I am in the
9 presentation.

10 It shows you just a simple example of how this
11 integration will likely occur. And it's just showing the --
12 some of the requirements for the Machado Toxics TMDL
13 Monitoring Program for wet weather, with some of what we're
14 anticipating for a proposed outfall monitoring program.

15 Just to show you that in both cases, there's a
16 requirement to sample three storm events each year;
17 including, in both cases, the first large storm at
18 appropriate locations within the sub-watershed area.

19 And so there will be opportunity to really align a
20 lot of these requirements and integrate those, so that there
21 won't be an additive, but they can complimentary.

22 So the other thing that I wanted to point out, is
23 that to the extent that a coordinated -- a TMDL coordinated
24 monitoring plan could be modified while still being
25 consistent with TMDL requirements to further align TMDL and

1 outfall-based monitoring requirements, Staff is going to
2 work with permittees to see where there's opportunities
3 exist.

4 So in response to the concerns that have been
5 expressed, one of the things that Staff is doing right now
6 as the next step, is we're working with the L.A. Permit
7 Group, and also with the City of L.A. to, basically, conduct
8 two case studies.

9 And we're hoping to get those kicked off in just
10 the next couple of weeks, to actually test out how this
11 integration of monitoring requirements might occur, both on
12 an individual permittee basis, as well as on a watershed
13 basis.

14 And that will help us better understand what the
15 scope of the proposed monitoring requirements will be for
16 the upcoming permit.

17 So if you would turn now to Slide 7 in the
18 presentation, I want to take a moment here to just generally
19 compare the monitoring requirements of the existing permit,
20 with the proposed requirements.

21 And you'll see, basically, on the left, the
22 existing requirements in the L.A. MS-4 Permit, and then on
23 the right, what Staff's current thinking is regarding
24 proposed requirements for the upcoming MS-4 Permit.

25 And the most significant difference is -- I had

1 these in color, if I only had my Power Point -- were the --
2 first of all, the replacement of the tributary monitoring,
3 with basically, the TMDL and outfall monitoring; and then
4 the addition of other TMDL monitoring requirements. Some of
5 those -- okay.

6 Some of those have already been incorporated into
7 the existing permit.

8 For example, for the L.A. River Trash TMDL, as well
9 as some requirements for the Shoreline Bacteria, as a result
10 of TMDL's. And then the final difference is Staff's
11 proposal to include several special studies.

12 And regarding the special studies, I wanted to take
13 a moment to talk about those.

14 Given the increasing focus on L.I.D., or Low Impact
15 Development, like you heard Ivar talking about, as a tool to
16 reduce run-off, and the discharge of pollutants to receiving
17 waters, we've proposed an L.I.D. Effectiveness Study; and
18 this is somewhat similar to something that we had in the
19 previous permit, that we referred to the B.M.P.
20 Effectiveness Study. But in this case, we're targeting it
21 to L.I.D.

22 We are currently evaluating, as a result of some
23 comments that we received, whether this study could be
24 integrated with some other regional efforts, to evaluate
25 L.I.D. practices throughout Southern California.

1 We've also proposed, as a possibility, a study of
2 hydro-modification impacts, and also a study on the
3 occurrence of Pyrethroid pesticides in the L.A. Region, and
4 specifically, L.A. County.

5 The hydro-modification study can be conducted
6 through the S.M.C., that's the Storm Water Monitoring
7 Coalition Effort, that being coordinated through SCCWRP, and
8 the State Water Board.

9 And then the Pyrethroid Study that's being proposed
10 is equivalent to the study that was included, again, in the
11 most recent Ventura County MS-4 Permit, but of course this
12 one would be focused on the occurrence in L.A. County.

13 We did hear some concerns regarding these special
14 studies, as I said, and we are looking into the extent to
15 which two of these, the L.I.D. effectiveness and
16 hydro-modification impact studies, might be addressed
17 through ongoing regional efforts.

18 So next, I want to briefly discuss our thinking
19 regarding the process for developing the specific monitoring
20 requirements for the permit.

21 Permittees have stated, and we definitely recognize
22 that it will take time for permittees to integrate and align
23 the existing TMDL requirements for the 32 TMDL's that will
24 be going into this permit, with the proposed outfall
25 monitoring requirements.

1 Therefore, what we intend to do is incorporate a
2 framework for the required monitoring program elements in
3 the MS-4 Permit, and then provide a certain amount of time
4 for permittees to either individually or ideally,
5 collectively, on a watershed basis, propose an integrated
6 monitoring program to fulfill the monitoring requirements of
7 the permit.

8 And the elements of the framework that we would
9 include in the permit would likely include for outfall
10 monitoring, the following pieces:

11 First of all, a clear statement of what the
12 monitoring program objectives are, what the outfall or site
13 selection criteria will be for the storm water outfall
14 monitoring program, and then what the screening and
15 selection process would be for the non-storm water outfall
16 monitoring program.

17 The timing and minimum frequency of sampling for
18 each of those programs, and then a process for adaptive
19 monitoring.

20 And what I mean by a "process for adaptive
21 monitoring," this might include mechanisms for rotating
22 among representative outfall locations.

23 It might include changing monitoring frequency or
24 locations based on analytical results. And for the
25 non-storm water outfall monitoring program, it may include a

1 tiered framework for screening outfalls, for significant
2 non-storm water flows, such as doing, for example,
3 25 percent of major outfalls each year, over the course of
4 the permit term, understanding that that screening process
5 may take significant resources to conduct.

6 The framework that we're talking about to include
7 in the MS-4 permit would also include TMDL monitoring
8 requirements that have been established through approved
9 C.M.P.'s, Coordinating Monitoring Programs, as well as
10 regional monitoring requirements, such as mass emissions or
11 receiving water monitoring and bio-assessment, as well as
12 some of the special studies that I discussed earlier,
13 depending on, ultimately, which of those we decide to
14 propose for inclusion.

15 Next, I want to talk about the timing of the new
16 monitoring requirements, because permittees have expressed
17 concerns regarding the timing of the monitoring requirements
18 in the new permit, relative to their cities' budgeting
19 processes, that are in many cases, starting up now or have
20 already started up.

21 And we're sensitive to the fact that this budgeting
22 process has already started, and that permittees need to
23 know as clearly as possible, what the monitoring
24 requirements will be in this first year of the permit, in
25 order to start planning for that now.

1 So what we're anticipating is that within the first
2 year, the permit would require the following monitoring
3 requirements: First of all, an update of inventories of
4 MS-4 outfalls.

5 Second, would be to actually do the work to develop
6 these integrated monitoring plans that I mentioned earlier,
7 that would align the TMDL and outfall-based monitoring
8 requirements.

9 It would also include continued TMDL monitoring,
10 which is already ongoing in many cases, through the approved
11 C.M.P.'s.

12 It would also include continuing some of the mass
13 emissions monitoring, and other ongoing regional monitoring
14 programs that permittees are participating in, as well as to
15 begin screening of outfalls for non-storm water discharges.

16 Once the integrated monitoring plans were approved,
17 then additional outfall-based monitoring may be required in
18 subsequent years of the permit term. And additionally, as I
19 mentioned, for the non-storm water outfall monitoring
20 requirements, recognizing the concerns about the potential
21 scope of this program in particular, we're currently
22 evaluating options for tiering the screening of non-storm
23 water discharges from MS-4 outfalls, and how the subsequent
24 monitoring of those significant non-storm water discharges
25 would occur.

1 And with that, I'm going to end my presentation and
2 turn it over to the speakers that have requested time.

3 MS. JAMES: Kirsten James, Water Quality Director with
4 Heal the Bay.

5 We're supportive of the basic structure of what
6 Regional Board is proposing; but obviously, the devil is in
7 the details. And I want to get into, a little, specifics of
8 what we think are the six key parts of any MS-4 Monitoring
9 Program.

10 The first is compliance monitoring; and this
11 consists of two elements, outfall and receiving water.

12 We believe that there is an opportunity to improve
13 the monitoring program, and to provide some clarity by
14 including both of these elements.

15 As Renee mentioned, outfall monitoring, we've seen
16 this in Ventura County in the last permit, and we believe
17 that the Regional Board's program should include end of pipe
18 monitoring; and specifically, each discharger in each
19 sub-watershed should provide regular end of pipe monitoring,
20 to coordinate with those mass emission stations which are in
21 the receiving water, so that they can look at together.

22 And we think that this will have two main benefits.

23 First, it will help provide additional clarity to
24 permittees on the sources of pollution; and then also, it
25 will provide permittees an additional tool to develop and

1 improve their B.M.P.'s, and other measures for specific
2 areas in watersheds to ensure compliance with water quality
3 standards and TMDL's.

4 And, of note, we think these outfall locations
5 should be selected to represent worst case conditions, so to
6 speak.

7 For example, a commercial area, industrial, or
8 high-use transportation, would represent some of those
9 worst-case scenarios.

10 So the second component would be the receiving
11 water. And we see this in the current permit; and again, in
12 the Ventura Permit.

13 And this would be retaining the current mass
14 emission stations that can then again be coordinated with
15 that outfall monitoring. And this is -- has been
16 successfully employed to determine compliance.

17 We saw that the Ninth Circuit Court decision found
18 that receiving water monitoring is sufficient to determine
19 compliance; so we believe that this should continue. And it
20 provides some clarity on sources of pollution to continue
21 that receiving water monitoring.

22 And as you've heard from other presenters today,
23 this has also been requested by dischargers. So this is a
24 point, I think, of shared comment from the N.G.O. community,
25 and some of the discharge community.

1 So the other elements that I think are really
2 important, and Renee touched on some of these, but one is
3 bio-assessment; and this can, of course, relate to the
4 receiving water monitoring.

5 So this is something that you -- the Regional Board
6 put in the Ventura Permit. This is really helpful to track
7 trends from year to year, to have this bio-assessment
8 monitoring.

9 At a minimum, we should see this on an annual basis
10 so we can capture some of the variability, and get to
11 understand the trends a bit better.

12 Also toxicity monitoring. This is really critical.
13 This is your safety net kind of monitoring, to capture those
14 chemicals that might not be in your routine monitoring
15 program. And This is really critical at both the outfall
16 and the receiving water level.

17 And we believe that a minimum two dry weather and
18 two wet weather samples per year are necessary in order to
19 capture some of that variability that we frequently see.

20 The fifth component is beaches, your beach water
21 quality monitoring.

22 As Renee said, we see this in the current MS-4. We
23 saw it in Ventura as well. This is really a critical type
24 of monitoring, to ensure that we're understanding what those
25 public health impacts might be at our beaches.

1 And this needs to happen on a weekly, year-round
2 basis. Because as you all know, here in Southern
3 California, we have beach goers that go to the beach on a
4 year-round basis because of our beautiful weather here.

5 And then lastly, the sixth component, we believe is
6 TMDL monitoring. This is monitoring that has been
7 stipulated in various TMDL's that the Board has adopted, and
8 also in the resulting monitoring plans that has been
9 approved by your Board.

10 So we believe that these six components are really
11 critical in moving forward with the monitoring plan, and
12 urge the Board to pursue these elements.

13 Thank you.

14 MR. DETTLE: I am John Dettle. I'm an Engineering
15 Manager with the City of Torrance. And first of all, I
16 would thank Renee and the Board Staff for making my
17 presentation the most non-confrontational or non -- non --
18 well, frankly, this will be pretty easy.

19 Do I have my presentation here? All right.

20 The TMDL monitoring, one of the points we've been
21 trying to make, is that the monitoring required for the 32
22 TMDL's in the 88 cities is an extreme program. It's a lot
23 of monitoring that is going to be required that we have to
24 do for the TMDL's.

25 And every city is going to have to do some TMDL

1 monitoring; so that's one thing all of the cities have in
2 common.

3 Currently, if we just go by the city-by-city TMDL
4 basis, the result would be that we would have to provide
5 over 250 monitoring plans that the permittees would have to
6 prepare, and the Board Staff would have to review; and as
7 said before, that would be excessive.

8 TMDL monitoring permit per city is redundant with
9 the adjacent cities.

10 For example, in Torrance, the City of Rolling Hills
11 Estates flows into Torrance; they would have to monitor
12 their flows, then we would monitor the flows across the
13 street, coming in, and then vice-versa, as it comes out.

14 We'd monitor the flows coming out, and then Lomita
15 would monitor those same flows. So there's a lot of
16 redundancy by going city by city.

17 Also, the monitoring city by city gives you limited
18 data that you could use for B.M.P. sizing and placement.
19 Additional monitoring would have to be done for that, if you
20 don't use a watershed-based approach.

21 We've estimated for the City of Torrance, with a
22 population of about \$150,000 dollars (sic) to do monitoring
23 separately for each TMDL, would be \$800,000 dollars a year,
24 and if we were looking at our fee, if the L.A. Permit fee
25 went through, we would be looking at \$875,000 per year for

1 Torrance, which would pretty much be eaten up by that
2 budget. So just to emphasize the point, for a different
3 approach.

4 As before, we talked, there is additional
5 monitoring proposed besides the TMDL monitoring. The
6 regional monitoring, the non-storm water monitoring, and the
7 storm water monitoring.

8 Our biggest issue still remaining is the regional
9 monitoring for hydro-modification, L.I.D. and Pyrethroids.

10 We do believe that this monitoring is redundant
11 with other existing studies, and that we should be looking
12 to the other studies instead of recreating ones here.

13 The storm water monitoring is duplicated with the
14 TMDL monitoring, and the non-storm monitoring is also
15 duplicated with the TMDL monitoring.

16 One point we'd like to make is if the purpose of
17 the non-storm water monitoring is to eliminate urban
18 run-off, dry weather flows, that that could have an impact
19 on wetlands, rivers, lakes, that are currently dependent on
20 those dry weather flows.

21 For example, we have Machado Lake, which is
22 dependent on dry weather flows, and we have the Madrona
23 Marsh, in the City of Torrance, which is dependent on those
24 flows.

25 So if the purpose is to eliminate those flows, you

1 have to think of the big picture and how that would affect
2 freshwater bodies.

3 Prescribed monitoring limits our ability to direct
4 monitoring efforts, and to prepare an integrated compliance
5 plan, and ultimately, that is the best approach towards
6 getting to TMDL compliance, is to integrative plans that
7 look at multiple pollutants.

8 And these studies before, or noted, would be
9 additional costs to that TMDL monitoring.

10 But there is a way to have cost-effective water
11 quality monitoring, and also to address those storm water
12 and non-storm water monitoring requests.

13 The L.A. Permit Group recognizes the benefits of
14 having integrated watershed monitoring plans. And each of
15 those plans would address all the TMDL's and all the permit
16 monitoring within a watershed. So it would be one plan per
17 watershed.

18 The cities would pool their resources to implement
19 a plan, based on targeted monitoring that would look at the
20 sub-watersheds that have highest concentration of
21 pollutants.

22 Integrated plans would eliminate the redundancies I
23 spoke of before. They would eliminate data gaps and would
24 give us the big picture for watershed health for each
25 watershed.

1 The best part is we would get one monitoring plan
2 and one annual report for each watershed, that would look at
3 all the TMDL's, and all the permit monitoring that was
4 required.

5 And as we've talked before, these monitoring plans
6 are proposed to be, like, swamp compatible, so that they
7 would also be used for the entire State of California.

8 The monitoring -- integrative monitoring plans
9 provide data that is needed to prepare, like I said before,
10 the integrated storm water quality management plans to
11 address multiple pollutants; and that is our goal.

12 The integrative plans provides data needed to
13 integrate B.M.P.'s where the multiple pollutant loads are
14 highest. We need to find out where those high priority
15 sub-watersheds are, and that's where we would target our
16 efforts.

17 Integrative plans provide for the development of
18 watershed storm drain maps, and we would be identifying
19 outfalls with significant dry weather flows, because again,
20 that's part of our TMDL compliance.

21 We need to track down the pollutant sources, so we
22 can eliminate them, wet weather and dry weather.

23 Integrative plans provide for the most cost-effective water
24 quality monitoring program.

25 We believe that with a integrated plan, we can

1 address water quality issues that have been brought up for
2 storm water and non-storm water flows by the Board, with a
3 very marginal additional cost for what we're already going
4 to have to do for the the TMDL's. We believe that this is a
5 win-win approach, and that we support the integrative
6 monitoring program.

7 And we also support integrative watershed planning.
8 And I look forward to those being a priority in the next
9 permit. Thank you.

10 MS. CLARK: Hi. My name is Margaret Clark. I'm on the
11 Rosemead City Council, and I've been on the Council for
12 20 years.

13 And I just want to share with you my feelings about
14 -- I really appreciate the integrated approach that you are
15 allowing, and I don't know how many of you are aware of how
16 devastating the State action of eliminating redevelopment
17 agencies has been on the cities of California.

18 I mean, we are really hurting. We have a
19 \$2 million dollar shortfall, just all of a sudden.

20 I can't believe that the legislators thought it
21 through, and realized how it would be even hurting the
22 environment when they did that. But be it, it is what it
23 is. And we have to cope with it.

24 And, for example, it's really going to hurt the
25 programs that we need to do, as far as the storm water

1 monitoring.

2 We will have to be cutting programs across the
3 board. And some cities are worse off than we are; but it's
4 really something to really think about.

5 And so we are very passionate about wanting to do
6 this right. And some of the statistics that the new
7 monitoring program would require, for example, just an
8 outfall costs would be about \$100,000. That's our entire
9 storm water budget right now.

10 And the early estimates for some of the compliance
11 on the bacteria and metals TMDL, would be \$3 to \$10 million.
12 I mean, it's just staggering. So my passion is, I've been
13 on environmental committees at the State level, the regional
14 level, and the National League of Cities level, for many,
15 many years.

16 And my passion is helping the environment; but
17 doing it right. And my biggest "I told you so" of my life
18 -- I just have to share this with you.

19 How just mandating something to be done, a cleanup
20 standard, for example, and not thinking it through, and I am
21 one of the founding members of the San Gabriel Basin Water
22 Quality Authority, which oversees the groundwater cleanup
23 for the San Gabriel Basin, the pollution that's down there.

24 And when, in the mid-90's, the California Air
25 Resources Board wanted to put MTBE in the gasoline to clean

1 up the air, and the water people knew that the
2 characteristics of methyl tertiary butyl ether were -- that
3 they would get into the groundwater.

4 And so we had a meeting, the California League of
5 Cities Environmental Quality Committee that I was on, met
6 with the CARB representative -- do I only have 21 seconds
7 left?

8 Oh, my goodness.

9 Long story short --

10 UNIDENTIFIED SPEAKER: (Inaudible).

11 MS. CLARK: Thank you so much. Thank you very much.

12 Where was I?

13 Okay. We met with him, and we said, the water
14 people said it's going to get in the groundwater, and the
15 air people just wanted to do this, and they really felt -- I
16 am sure they really felt they were doing the right thing,
17 but it did get into the groundwater, and the multi-million
18 dollar cleanup, I mean, Santa Monica's wells are just now
19 starting to be cleaned up. The multi-million dollars that
20 could have been used for other environmental programs.

21 So if we don't do it right, just throwing money at
22 it -- but it's got to be done right. So I really appreciate
23 your willingness to look at best management practices,
24 making sure it's done right, so that we don't waste the
25 precious resources that we don't even have that could be

1 used to help the environment. So I appreciate your taking
2 this approach. Thank you so much.

3 MS. GEORGE: Hello. My name is Angela George. I'm a
4 Principal Engineer with the Los Angeles County Department of
5 Public Works.

6 I'm here today speaking on behalf of the County of
7 Los Angeles and the Los Angeles County Flood Control
8 District.

9 In lieu of detailed comments, the County and the
10 Flood Control District really want to just express thanks to
11 the Executive Officer, and its Staff on all of your efforts
12 today.

13 We would like to thank you for meeting with us
14 several times over the last six months, to discuss the
15 District's and the County's issues or concerns regarding the
16 proposed new permit.

17 We think that the way we're going with the
18 workshops, the discussions, the open discussions, and just
19 the general communication, is going to provide for an
20 effective and implementable permit that should be, for all
21 intents and purposes, satisfactory to all the stakeholders
22 involved.

23 So we just want to, once again, say, "thank you."

24 MR. UNGER: That concludes the speaker cards. I don't
25 know if it's because it's a new month, or our Board Members

1 are here, but everyone has been especially polite, relative
2 to one of our previous workshops.

3 So I'll let you guys try to figure out which one it
4 is. I have my own thoughts. But I think we have some -- I
5 think we have some time for questions of Staff on anything
6 that was presented.

7 I mean, we're scheduled to 4:00 o'clock, so if you
8 want to let it go for another 10 or 15 minutes or so, I
9 think that would be fine.

10 So I don't know if anyone has any questions for
11 Renee or Ivar on this. You're more than welcome to come up
12 and engage in more of the dialogue that we've had at
13 previous workshops. Or if not, we can -- there's
14 excitement, here, with the idea of questions.

15 (Inaudible voices).

16 UNIDENTIFIED SPEAKER: Sam, I'd like to know the impact
17 of extending the permit out until September will have. What
18 are we looking for as far as additional workshops?

19 What topics are going to be discussed in the coming
20 future?

21 MR. UNGER: I would have to say I don't have specific
22 answers for that. One thing that we do want to do is we
23 want to have a workshop where, like we had last November,
24 where the Board can actually deliberate, and give direction
25 at some point.

1 Well, not deliberations. Excuse me. But be more
2 interactive. This one was a Staff workshop, so they could
3 see that. But we will be getting that information out to
4 you as soon as we possibly can.

5 UNIDENTIFIED SPEAKER: Specifically, is April still on?

6 UNIDENTIFIED SPEAKER: Yes.

7 MR. UNGER: Are you going to speak now?

8 Go ahead, Renee, please.

9 MS. PURDY: Well, for the April workshop, we were
10 planning on TMDL's and non-storm water as a topic for that
11 one, seeing as they're, you know, we're sort of taking, you
12 know, M.C.M.'s. We've had several workshops, and sort of a,
13 you know, a wrap-up of that today, and a little bit of
14 monitoring.

15 We want to branch out into TMDL's, and non-storm
16 water, are the next ones.

17 UNIDENTIFIED SPEAKER: Do you think it would be
18 possible to do an example of how water quality-based
19 effluent limitation translation would work, relative to
20 either the metals or L.A. River Metals TMDL, or the Bacteria
21 TMDL, how it would be determined, how monitoring would come
22 into play to evaluate meeting the waste load allocations
23 through a numeric WQ BEL?

24 How the adaptive management process would work?

25 It would be nice to see a full, working example and

1 to know how much the costs would be and what the potential
2 is for third party litigation exposure. Thank you.

3 UNIDENTIFIED SPEAKER: Before we finish, I just wanted
4 to, on behalf of the Board, thank the Staff and Sam Unger
5 for all the work you did to put together this workshop; and
6 everybody else that was here.

7 Please know that it was very important for us to
8 have this, in the light of the new Board Members, and in
9 light of this permit being so important. We wanted to make
10 sure that we take a route of hearing everybody, and making
11 sure that we do have consensus at the end of the day.

12 So thanks, everyone.

13 MR. UNGER: I hope this was a good workshop for you all
14 to at least know that your direct concerns and questions on
15 various topics are being heard by the Board. And I hope it
16 was also helpful for the Board to get a sense of where we
17 are, in terms (inaudible).

18 So if that is it, I think we'll close the workshop.

19 (Workshop adjourned)

Theresa Rodgers - April 5, 2012 WORKSHOP ON LA COUNTY MS4 PERMIT

From: <lyris@swrcb18.waterboards.ca.gov>
To: Theresa Rodgers <trodgers@waterboards.ca.gov>
Date: 3/20/2012 2:22 PM
Subject: April 5, 2012 WORKSHOP ON LA COUNTY MS4 PERMIT
Attachments: Apr5.pdf

Please see attached Agenda containing information on the Workshop on the issuance of a new Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit. Staff will make a presentation on provisions related to non-stormwater discharges through the MS4 and the incorporation of TMDL related requirements. Permittees and other interested persons will have the opportunity to make oral comments subject to time limits.

Please note that this workshop will not begin prior to 1:30 PM.

LEONARD C. BROWN, JR.
MEMBER

MATTHEW RODRIGUEZ
SECRETARY

Los Angeles Regional Water Quality Control Board

Notice of Public Meeting

Thursday, April 5, 2012

9:00 a.m.

Meeting Location:

The Metropolitan Water District of Southern California

Board Room

700 North Alameda Street

Los Angeles, California

Agenda

The Regional Board strives to conduct an accessible, orderly, and fair meeting. During the meeting, the Chair will conduct the meeting and establish appropriate rules and time limitations for each item. The Board will only act on items designated as action items. Action items on the agenda are staff proposals, and may be modified by the Board as a result of public comment or Board member input. Additional information about Regional Board meeting procedures is included after the last agenda item.

To ensure a fair hearing and that the Regional Board Members have an opportunity to fully study and consider written material, unless stated otherwise, written materials must be provided to the Executive Officer **not later than 5:00 p.m. on March 26, 2012. Please consult the agenda description for specific items, because certain items may have an earlier deadline for written submissions. If you are considering submitting written materials, please consult the notes at the end of the agenda. Failure to follow the required procedures may result in your materials being excluded from the hearing record; however, failure to timely submit written materials does not preclude a person from testifying before the Board.**

INTRODUCTORY ITEMS

1. Roll Call.
2. Order of Agenda. The agenda items are numbered for identification purposes only and may not necessarily be considered in this order.
3. Approval of draft meeting Minutes for the March 1, 2012 Board meeting.
[Ronji Moffett, (213) 576-6612]
4. Board Member Communications.
 - 4.a. Ex Parte Disclosure. Board Members will identify any discussions they may have had requiring disclosure pursuant to Government Code section 11430.40.
 - 4.b. Board Member Reports. The Board Members may discuss communications, correspondence, or other items of general interest relating to matters within the Board's jurisdiction.

MARY MERRILLIAN, CHAIR | SAM UNGER, EXECUTIVE OFFICER

320 West 4th St. Suite 200 Los Angeles, CA 90013 | www.waterboards.ca.gov/losangeles

Los Angeles Water Board Meeting Agenda

- 5.a. **Executive Officer's Report.**
[Sam Unger, (213) 576-6605]
6. **Update from State Board.** [Fran Spivy-Weber]
7. **Public Forum.** Any person may address the Board regarding any matter within the Board's jurisdiction provided the matter does not appear elsewhere on this agenda, has not been scheduled to appear on a future agenda, and is not expected to be imminently scheduled for the Board's consideration. Remarks will be limited to three (3) minutes, unless otherwise directed by the Chair. If a person intends to use a PowerPoint presentation or other visual aid, you must contact Ronji Moffett, (213) 576-6612, at the Regional Board at least 48 hours prior to the meeting to arrange for equipment use and be prepared to load any PowerPoint presentation on the computer prior to the meeting to assure the orderly conduct of the meeting.

UNCONTESTED ITEMS

(Items marked with an asterisk are expected to be routine and noncontroversial. The Board will be asked to approve these items at one time without discussion. Any Board member or person may request that an item be removed from the uncontested calendar. The Chair will determine the appropriate time to consider an item removed from the consent calendar.)

Waste Discharge Requirements that Serve as NPDES Permits Termination-

- *8. City of Santa Clarita, Santa Clarita (Drainage Benefit Assessment Areas No. 6 and No. 18); NPDES No. CA0061638 [Jau Ren Chen, (213) 576-6656]

Other Business-

- *9. Consideration of a tentative Resolution approving the Los Angeles County Sanitation Districts' proposed Special Study for the Joint Water Pollution Control Plant. (Comment submittal deadline was March 5, 2012) [Brandi Outwin-Beals, (213) 576-6664]
- *10. Consideration of a tentative Resolution approving the City of Los Angeles' proposed Special Study for the Hyperion Treatment Plant. (Comment submittal deadline was March 5, 2012.) [Brandi Outwin-Beals, (213) 576-6664]
- *11. Consideration of a tentative Resolution approving the City of Los Angeles' proposed Special Study for the Terminal Island Water Reclamation Plant. (Comment submittal deadline was March 5, 2012) [Brandi Outwin-Beals, (213) 576-6664]
- *12. Consideration of a tentative Resolution approving the City of Oxnard's proposed Special Study for the Oxnard Wastewater Treatment Plant. (Comment submittal deadline was March 5, 2012) [Brandi Outwin-Beals, (213) 576-6664]

Los Angeles Water Board Meeting Agenda

Non-NPDES State Discharge Requirements**Renewal-**

- *13. Ventura Regional Sanitation District (Malibu Bay Club Wastewater Treatment Plant), Waste Discharge Requirements Order No. 01-008, CI No. 5774, file No. 72-006; County of Ventura. (Comment submittal deadline was March 9, 2012) [Mercedes Merino, (213) 620-6156]

Termination-

- *14. PanAmerican Seed Company, Order No. 87-93, CI No. 4246, File No. 62-76, Santa Paula. (Comment submittal deadline was March 9, 2012) [Mercedes Merino, (213) 620-6156]
- *15. ConocoPhillips Company - 76 Station No. 6965, Order No. R4-2004-0110, CI No. 8773, Long Beach. (Comment submittal deadline was March 2, 2012) [David Koo, (213) 620-6155]

ACTION ITEMS**Other Business-**

16. Consideration of a tentative Resolution adopting the Petroleum Underground Storage Tank Fund. *Emergency, Abandoned, and Recalcitrant (EAR) Account* Fiscal Year 2012-2013, Annual Priority List for the Los Angeles Region. (The public will be provided the opportunity to comment on this matter.) [Dixon Oriola, (213) 576-6747]

Waste Discharge Requirements and Time Schedule Order-

17. Consideration of revised tentative Waste Discharge Requirements and Time Schedule Order for the California Department of Water Resources (William E. Warne Power Plant), Castaic; NPDES No. CA0059188. (Comment submittal deadline was March 5, 2012) [Jau Ren Chen, (213) 576-6656]

17.1 Waste Discharge Requirements

17.2 Time Schedule Order

Other Business

18. Consideration of tentative Cease and Desist Order requiring the City of Avalon to cease and desist alleged discharges of waste in violation of requirements in Regional Board Order No. R4-2008-0028 and State Water Board Order No. 2006-0003-WQ and to implement actions to achieve wasteload allocations assigned to the City's discharges of waste. (Comment submittal deadline was March 15, 2012) [Russ Colby, (213) 620-6373; L.B. Nye, (213) 576-6785]

INFORMATION (This matter is for informational purposes only. No voting will take place on this matter.)

19. Informational overview by the City of Signal Hill's on the City's illicit Connection/illicit Discharge program, sediment control procedures, and treatment control best management practices (BMPs) to comply with the existing Los Angeles County MS4 Permit.

WORKSHOP**NOTE: The Workshop will not begin before 1:30 p.m.**

20. Workshop on the issuance of a new Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit. Staff will make a presentation on provisions related to non-stormwater discharges through the MS4 and the incorporation of TMDL related requirements. Permittees and other interested persons will have the opportunity to make oral comments subject to time limits. *(The Board may provide general feedback to staff on development of the permit; however, no action or voting will take place at this workshop.)* [Renee Purdy, (213) 576-6622; Ivar Ridgeway, (213) 620-2150]

CLOSED SESSION

21. As authorized by the Government Code section 11126, the Regional Board will be meeting in closed session. Closed session items are not open to the public. Items the Board may discuss include the following: [Jennifer Fordyce (JF) (916) 324-6682; Frances McChesney (FM) (916) 341-5174].
- 21.1 *State Department of Finance, State Water Resources Control Board and Los Angeles Regional Water Quality Control Board v. Commission on State Mandates*, Los Angeles County Superior Court Case No. BS130730. [Challenging the Commission's decision that portions of the LA MS4 permit created unfunded State mandates]. (JF)
- 21.2 *In re Halaco Engineering Company*, United States Bankruptcy Court, Central District of California, Northern Division, No. ND-02-12255 RR [Regarding a CDO and CAO at the Oxnard Property]. (JF)
- 21.3 *In re: Los Angeles Region Water Permit- Ventura County*, Commission on State Mandate Test Claim No. 11-TC-01 [Regarding a test claim filed by Ventura County Watershed Protection District and the County of Ventura alleging that portions of Order No. R4-2010-0108 created an unfunded state mandate]. (JF)
- 21.4 *In re: Petition of City of Redondo Beach for Review of Administrative Civil Liability Order No. R4-2008-0058-M, SWRCB/OCC File A-2124* [Challenging assessment of mandatory minimum penalties for violations of Order Nos. 99-057 and R4-2005-0016]. (FM)
- 21.5 *In re: Petition of Signal Hill, Downey, et al, for Review of Order No. R4-2009-0130, SWRCB/OCC File A-2071* [Challenging the incorporation into the MS4 Permit of the Waste Load Allocations from the Los Angeles River Watershed Trash TMDL.] (JF)
- 21.6 *In re: Kinder Morgan, Inc., Chevron Corp., et al for Review of Revised Cleanup and Abatement Order No. R4-2008-0006, SWRCB/OCC File A-2085* [Challenging the revised cleanup goals in the order]. (FM)
- 21.7 *In re: Upper Santa Clara River Chloride Total Maximum Daily Load Requirements Imposed by the Los Angeles Regional Water Quality Control Board in Resolution R4-2008-0012*. Commission on State Mandates Test Claim No. 10-TC-09 [Regarding a test claim filed by the Santa Clarita Valley Sanitation District of Los Angeles County alleging that portions of Resolution R4-2008-0012 created an unfunded state mandate]. (JF)

Los Angeles Water Board Meeting Agenda

- 21.8 *Joan C. Lavine v. State Water Resources Control Board and Los Angeles Regional Board*, Los Angeles County Superior Court Case No. BS128989 [Challenging the Basin Plan Amendment prohibiting on-site wastewater disposal systems in the Malibu Civic Center Area]. (FM)
- 21.9 *Charles Conway et al. v. State Water Resources Control Board and Los Angeles Regional Water Quality Control Board*, Ventura County Superior Court Case No. 56-2011-00399391-CU-WM-VTA [Challenging the McGrath Lake TMDL for polychlorinated biphenyls (PCBs), pesticides, and sediment toxicity]. (JF)
- 21.10 Consultation with counsel about:
- (a) A judicial or administrative adjudicatory proceeding that has been formally initiated to which the Regional Board is a party;
 - (b) A matter that, based on existing facts and circumstances, presents significant exposure to litigation against the Regional Board;
 - (c) A matter which, based on existing facts and circumstances, the Regional Board is deciding whether to initiate litigation. (JF/FM)
- 21.11 Consideration of the appointment, employment, or evaluation of performance about a public employee. (JF/FM)
22. **Adjournment of Current Meeting.** The next meeting will be held on May 3, 2012 beginning at 9:00 a.m. at the City of Simi Valley Council Chambers, located at 2929 Tapo Canyon Road, 2929 Tapo Canyon Road, Simi Valley, California.

*

NOTICE

Ex Parte Communications: An ex parte communication is a communication to a board member from any person, about a pending matter, that occurs in the absence of other parties and without notice and opportunity for them to respond. The California Government Code prohibits the board members from engaging in ex parte communications during permitting, enforcement, and other "quasi-adjudicatory" matters. The Regional Board discourages ex parte communications during rulemaking and other "quasi-legislative" proceedings. The ex parte rules are intended to provide fairness, and to ensure that the board's decisions are transparent, based on the evidence in the administrative record, and that evidence is used only if stakeholders have had the opportunity to hear and respond to it. Ex parte rules do not prevent anyone from providing information to the water boards or requesting that the water boards take a particular action. They simply require that the information come into the record through proper channels during a duly noticed, public meeting. A board member who has engaged or been engaged in a prohibited ex parte communication will be required to publicly disclose the communication on the record and may be disqualified from participating in the proceeding. For more information, please look at the ex parte questions and answers document found at www.waterboards.ca.gov/laws_regulations/docs/exparte.pdf

Procedures: The Regional Board follows procedures established by the State Water Resources Control Board. These procedures are established in regulations commencing with section 647 of title 23 of the California Code of Regulations. The Chair may establish specific procedures for each item, and consistent with section 648, subdivision (d) of title 23 of the California Code of Regulations may waive nonstatutory provisions of the regulations. Generally, all witnesses testifying before the Regional Board must affirm the truth of their testimony and are subject to questioning by the Board Members. The Board does not, generally, require the

Los Angeles Water Board Meeting Agenda

designation of parties, the prior identification of witnesses, or the cross examination of witnesses. Generally, speakers are allowed three minutes for comments. Any requests for an alternate hearing process, such as requesting additional time to make a presentation, should be made to the Executive Officer in advance of the meeting, and under no circumstances later than 5:00 p.m. on the Thursday preceding the Board meeting. The provisions of this paragraph shall be deemed superseded to the extent that they are contradicted by a hearing notice specific to a particular agenda item.

Written Submissions: Written materials (whether hand-delivered, mailed, e-mailed, or facsimiled) *must be received prior to the relevant deadline* established in the agenda and public notice for an item. If the submitted material is more than 10 pages or contains foldouts, color graphics, maps, or similar items, 12 copies must be submitted prior to the relevant deadline.

Failure to comply with requirements for written submissions is grounds for the Chair to refuse to admit the proposed written comment or exhibit into evidence. (Cal. Code Regs. tit. 23, § 648.4(e).) The Chair may refuse to admit written testimony into evidence unless the proponent can demonstrate why he or she was unable to submit the material on time or that compliance with the deadline would otherwise create a hardship. If any other party demonstrates prejudice resulting from admission of the written testimony, the Chair may refuse to admit it.

Administrative Record: Material presented to the Board as part of testimony that is to be made part of the record must be left with the Board. This includes photographs, slides, charts, diagrams, etc. All Board files pertaining to the items on this Agenda are hereby made a part of the record submitted to the Regional Board by staff for its consideration prior to action on the related items.

Accessibility: Individuals requiring special accommodations or language needs should contact Dolores Renick at (213) 576-6629 or drenick@waterboards.ca.gov at least ten working days prior to the meeting. TTY/TDD Speech-to-Speech users may dial 7-1-1 for the California Relay Service.

Availability of Complete Agenda Package: A copy of the complete agenda package is available for examination at the Regional Board Office during regular working hours (8:00 a.m. to 5:00 p.m. Monday through Friday) beginning 10 days before the Board meeting. Questions about specific items on the agenda should be directed to the staff person whose name is listed with the item.

Continuance of Items: The Board will endeavor to consider all matters listed on this agenda. However, time may not allow the Board to hear all matters listed. Matters not heard at this meeting may be carried over to the next Board meeting or to a future Board meeting. Parties will be notified in writing of the rescheduling of their item. Please contact the Regional Board staff to find out about rescheduled items.

Challenging Regional Board Actions: Pursuant to Water Code section 13320, any aggrieved person may file a petition to seek review by the State Water Resources Control Board of most actions taken by the Regional Board. A petition must be filed within 30 days of the action. Petitions must be sent to State Water Resources Control Board, Office of Chief Counsel; ATTN: Phil Wyels, Assistant Chief Counsel; 1001 "I" Street, 22nd Floor; Sacramento, CA 95814.

Sent via email to: sunger@waterboards.ca.gov

Los Angeles Regional Water Quality Control Board
320 West Fourth Street, Suite 200
Los Angeles, CA 90013

Re: April 5 Board Workshop on non-stormwater discharges in MS4 General Permit

Dear Mr. Unger,

On April 5, 2012, the Los Angeles Regional Water Quality Control Board (RWQCB) is planning a Board Workshop to discuss the issue of how non-stormwater discharges could be regulated under the new Los Angeles County Municipal Separate Storm Sewer System (MS4) General Permit. This is an issue of great significance to community water systems (CWSs) of Los Angeles County, the entities that provide potable water to the people of this region. Not only is the ability of CWSs to discharge water an essential function for the protection of public health and physical security of water distribution systems, but these discharges are a condition under their permits through the Department of Public Health's Drinking Water Program.

The proposed MS4 General Permit could well create significant legal barriers that will hinder CWS's ability to carry out this critical function. There have already been situations where MS4 permittees have sought to prevent or limit discharges from CWSs because of concerns that these discharges would compromise their ability to comply with the MS4 permit. It is anticipated that as more Total Maximum Daily Load (TMDL) allocations are incorporated into the MS4 General Permit, these conflicts will only increase.

The Association of California Water Agencies (ACWA) is an organization of nearly 440 public agency members collectively responsible for 90% of the water delivered to cities, farms and businesses in California. The California-Nevada Section of the American Water Works Association is a membership organization comprising more than 6,000 drinking water professionals active in California and Nevada working together for the goal of safe and reliable drinking water. The California Water Association (CWA) represents the interests of approximately 130 investor-owned water utilities that are regulated by the California Public Utilities Commission, and strive to provide high quality water utility services to customers throughout California. Together, these three groups represent the vast majority of CWSs in the state and Los Angeles County.

ACWA, CA-NV AWWA, and CWA would like to request the opportunity to jointly address the Board at the April 5 Workshop on the issue of discharges from CWSs. Rather than having a large number of CWSs

ACWA/CA-NV-AWWA/CWA Letter

April 5 Workshop

Page 2

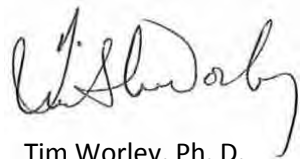

each address the Board separately, we feel it would be more efficient to have a single presentation representing the interests of community water systems. To that end, we are requesting a single block of time of approximately 15 minutes to present the issues associated with CWSs and also offer a possible solution for the Board's consideration. We believe this will provide the CWSs, MS4 permittees, and the RWQCB the best opportunity to move toward a mutually agreeable solution.

If you have questions or would like to discuss this matter further, please contact Danielle Blacet at 916-441-4545 or danielleb@acwa.com. Thank you for your consideration.

Sincerely,

Jack Hawks
Executive Director
California Water Association

Tim Worley, Ph. D.
Executive Director

Los Angeles Regional Water Quality Control Board

TO: Los Angeles County MS4 Permittees and Other Interested Persons

FROM: Renee A. Purdy, Chief *Renee A. Purdy*
Regional Programs Section

DATE: March 21, 2012

SUBJECT: TRANSMITTAL OF STAFF WORKING PROPOSAL ON LA COUNTY MS4 PERMIT

As staff committed to in previous workshops on the renewal of the Los Angeles County MS4 Permit, attached is a working proposal of the permit provisions related to the **Minimum Control Measures (MCMs)**. Staff of the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) is distributing to Los Angeles County MS4 Permittees and other interested persons the attached staff working proposal for preliminary review and discussion purposes only.

Please note the following: Staff will accept both written and oral comments on these working proposals. Please be advised, however, that these staff working proposals neither constitute a "draft permit" or a "proposed permit" as defined in Title 40 Code of Federal Regulations (40 CFR) sections 122.2 or 124.6. Further, distribution of these staff working proposals for review and discussion does not constitute a public comment period pursuant to 40 CFR sections 124.10 or 124.17. Accordingly, while staff will accept and consider written comments on these working proposals, staff does not intend to formally respond to written comments received that pertain to the working proposals. In addition to, or in lieu of, written comments, Permittees and interested persons are also encouraged to make oral comments to staff during telephone conversations and/or in-person meetings. Staff looks forward to input on this working proposal from Permittees and other interested persons.

For written and oral comments on this working proposal to be considered by staff in preparing the forthcoming draft Los Angeles County MS4 Permit, comments need to be made and/or submitted no later than **April 6, 2012**. Written comments should be submitted by e-mail to iridgeway@waterboards.ca.gov and rpurdy@waterboards.ca.gov.

Written comments received will be included in the administrative record for the renewal of the Los Angeles County MS4 Permit, but will not be provided to the individual Los Angeles Water Board members. When a draft permit is released, interest persons will be provided an opportunity to submit written comments in compliance with 40 CFR sections 124.10 or 124.17.

MARIA MEHRANIAN, CHAIR | SAM UNGER, EXECUTIVE OFFICER

LA County MS4 Permittees
and Interested Persons

- 2 -

March 21, 2012

Consistent with federal regulations, staff will prepare responses to significant comments received on the draft permit submitted in compliance with the public notice and will make comments and responses available to the Los Angeles Water Board members.

Staff looks forward to further discussions on this working proposal. Please do not hesitate to contact Mr. Ivar Ridgeway, Chief, Storm Water Permitting at (213) 620-2150 or myself at (213) 576-6622 if you wish to schedule a meeting with us or if you have any questions or comments.

VI. Provisions

A. Standard Provisions (TBD)

B. Monitoring and Reporting Program (MRP) Requirements (TBD)

C. Special Provisions

1. General Requirements

a. Each Permittee shall implement the requirements in Parts [TBD for each Minimum Control Measure (MCM)] below, or customized actions within each of these general categories of control measures to achieve equivalent pollutant control, considering the water quality conditions in the area under the Permittee’s jurisdiction or within the watershed, where approved by the Executive Officer. [Placeholder for language linking customized MCMs to TMDL provisions, including reasonable assurance provisions.] Implementation shall be consistent with the requirements of 40 CFR § 122.26(d)(2)(iv).

b. Timelines for Implementation

- i. Unless otherwise noted in Part VI.C.6 or in Table [TBD] below, each Permittee shall ensure implementation of the requirements contained in Part VI.C.6. upon the Effective Date of the Order.
- ii. Each Permittee shall ensure implementation of the following requirements per the schedule specified in Table [TBD] below:

Table [TBD] -

Part	Provision	Due Date

c. Minimum Control Measure Definitions

- i. **BMP:** Best Management Practice; a practice or physical device or system designed to prevent or reduce pollutant loading from stormwater or non-stormwater discharges to receiving waters, or designed to reduce the volume of stormwater or non-stormwater discharged to the receiving water.
- ii. **Biofiltration:** A LID BMP that reduces stormwater pollutant discharges by intercepting rainfall on vegetative canopy, and through evapotranspiration, incidental infiltration, and filtration. As described in the *Ventura County Technical Guidance Manual*, studies have demonstrated that bioinfiltration of 1.5 times the stormwater quality design volume (SWQDv) provides approximately equivalent or greater reductions in pollutant loading when compared to bioretention or infiltration of the SWQDv.¹ Incidental infiltration is an important factor in achieving the required pollutant load reduction. Therefore, the term “biofiltration” as used in this Order is defined to include only systems designed to facilitate incidental infiltration. Biofiltration BMPs include bioretention systems with an underdrain and bioswales.
- iii. **Bioretention:** A LID BMP that reduces stormwater runoff by intercepting rainfall on vegetative canopy, and through evapotranspiration and infiltration. The bioretention system typically includes a minimum 2-foot top layer of a specified soil and compost mixture underlain by a gravel-filled temporary storage pit dug into the *in-situ* soil. As defined in this Order, a bioretention BMP may be designed with an overflow drain, but may not include an underdrain. When a bioretention BMP is designed or constructed with an underdrain it is regulated in this Order as biofiltration.
- iv. **Bioswale:** A LID BMP consisting of a shallow channel lined with grass or other dense, low-growing vegetation. Bioswales are designed to collect stormwater runoff and to achieve a uniform sheet flow through the dense vegetation for a period of several minutes.
- v. **Effective impervious area (EIA):** the portion of the surface area that is hydrologically connected to a drainage system via a hardened conveyance or impervious surface without any intervening median to mitigate the flow volume.
- vi. **Green roof:** A LID BMP using planter boxes and vegetation to intercept rainfall on the roof surface. Rainfall is intercepted by vegetation leaves and through evapotranspiration. Green roofs may be designed as either a bioretention BMP or as a planter box flow-through treatment BMP. To receive credit as a bioretention BMP, the

¹ Geosyntec Consultants and Larry Walker Associates. 2011. *Ventura County Technical Guidance Manual for Stormwater Quality and Control Measures, Manual Update 2011. Appendix D*. Prepared for the Ventura Countywide Stormwater Quality Management Program. July 13, 2011. pp. D-6 – D-15.

green roof system planting medium shall be of sufficient depth to provide capacity within the pore space volume to contain the design storm depth and may not be designed or constructed with an underdrain.

- vii. Improved drainage system:** a drainage system that has been channelized or armored. The clearing or dredging of a natural drainage system does not cause the system to be classified as an improved drainage system.
- viii. Infiltration:** A LID BMP that reduces stormwater runoff by capturing and infiltrating the runoff into in-situ soils or amended on-site soils. Examples of infiltration BMPs include infiltration basins, dry wells, and pervious pavement.²
- ix. LID:** Low Impact Development; building and landscape features designed to retain or filter stormwater runoff.
- x. Natural drainage system:** a drainage system that has not been improved (e.g., channelized or armored). The clearing or dredging of a natural drainage system does not cause the system to be classified as an improved drainage system.
- xi. Planter boxes and other flow-through treatment BMPs:** modular, vault type planter boxes or “high flow biotreatment” devices contained within an impervious vault with an underdrain or designed with an impervious liner and an underdrain. Planter boxes do not allow for incidental infiltration and therefore do not meet the requirements for biofiltration as defined in this Order. However, planter boxes may be used to meet the Water Quality Mitigation Criteria as specified in Part [TBD] of this Order.
- xii. Rainfall harvest and use:** an LID BMP system designed to capture runoff from a roof and to provide for temporary storage until the harvested water can be used for irrigation or non-potable uses. The harvested water may also be used for potable water uses if the system includes disinfection treatment and is approved for such use by the local building department.

2. Legal Authority

- a.** Each Permittee must establish and maintain adequate legal authority, within its respective jurisdiction, to control pollutant discharges into and from its MS4 through ordinance, statute, permit, contract or similar means. This legal authority must, at a minimum, authorize or enable the Permittee to:

² Some types of infiltration BMPs such as dry wells, may meet the definition of a Class V, deep well injection facility and may be subject to permitting under U.S. EPA requirements.

- i.** Control the contribution of pollutants to its MS4 from stormwater discharges associated with industrial and construction activity and control the quality of stormwater discharged from industrial and construction sites. This requirement applies both to industrial and construction sites with coverage under an NPDES permit, as well as to those sites that do not have coverage under an NPDES permit. Grading ordinances must be updated and enforced as necessary to comply with this Order;
- ii.** Prohibit all non-stormwater discharges not otherwise conditionally allowed pursuant to Part [TBD];
- iii.** Prohibit and eliminate illicit discharges and illicit connections to the MS4;
- iv.** Control the discharge of spills, dumping, or disposal of materials other than stormwater to its MS4;
- v.** Require compliance with conditions in Permittee ordinances, permits, contracts or orders (i.e., hold dischargers to its MS4 accountable for their contributions of pollutants and flows);
- vi.** Utilize enforcement mechanisms to require compliance with applicable ordinances, permits, contracts, or orders;
- vii.** Control the contribution of pollutants from one portion of the shared MS4 to another portion of the MS4 through interagency agreements among Co-permittees;
- viii.** Control of the contribution of pollutants from one portion of the shared MS4 to another portion of the MS4 through interagency agreements with other owners of the MS4 such as the State of California Department of Transportation;
- ix.** Carry out all inspections, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with applicable municipal ordinances, permits, contracts and orders, and with the provisions of this Order, including the prohibition of non-stormwater discharges into the MS4 and receiving waters. This means the Permittee must have authority to enter, monitor, inspect, take measurements, review and copy records, and require regular reports from entities discharging into its MS4;
- x.** Require the use of control measures to prevent or reduce the discharge of pollutants to achieve Water Quality Standards;
- xi.** Require that structural BMPs are properly operated and maintained; and

5. Responsibilities of the Permittees (TBD)

6. Public Information and Participation Program

a. General

- i. Each Permittee shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this part. Each Permittee shall be responsible for developing and implementing the PIPP and implementing specific PIPP requirements. The objectives of the PIPP are as follows:
- ii. To measurably increase the knowledge of the target audiences about the MS4, the adverse impacts of stormwater pollution on receiving waters and potential solutions to mitigate the impacts.
- iii. To measurably change the waste disposal and stormwater pollution generation behavior of target audiences by developing and encouraging the implementation of appropriate alternatives.
- iv. To involve and engage a diversity of socio-economic groups and ethnic communities in Los Angeles County to participate in mitigating the impacts of stormwater pollution.

b. PIPP Implementation

- i. Each Permittee shall implement the PIPP requirements listed in this part using one or more of the following approaches:
 - (1) By participating in a County sponsored PIPP
 - (2) By participating in one or more Watershed Group sponsored PIPPs
 - (3) Or individually within its jurisdiction.
- ii. If participating in a County or Watershed Group PIPP, provide the contact information for their appropriate staff responsible for stormwater public education activities to the organizing body (i.e., County or Watershed Group) and contact information changes no later than 30 days after a change occurs.

c. Public Participation

- i. Each Permittee, whether participating in a County or Watershed Group sponsored PIPP, or acting individually, shall provide a means for public reporting of clogged catch basin inlets and illicit discharges/dumping, faded or missing catch basin labels, and general stormwater management information.

- (1) Permittees may elect to use the 888-CLEAN-LA hotline as the general public reporting contact or each Permittee or Watershed Group may establish its own hotline, if preferred.
 - (2) Each Permittee shall include the reporting information, updated when necessary, in public information, and the government pages of the telephone book, as they are developed or published.
 - (3) Each Permittee shall identify staff or departments who will serve as the contact person(s) and shall make this information available on its website.
 - (4) Each Permittee is responsible for providing current, updated hotline contact information to the general public within its jurisdiction.
- ii. Organize events targeted to residents and population subgroups to educate and involve the community in stormwater pollution prevention and clean-up (e.g., education seminars, clean-ups, and community catch basin stenciling).

d. Residential Outreach Program

- i. Working in conjunction with a County or Watershed Group sponsored PIPP or individually, each Permittee shall implement the following activities:
- (1) Conduct stormwater pollution prevention public service announcements and advertising campaigns
 - (2) Public education materials shall include but are not limited to information on the proper handling (i.e., disposal, storage and/or use) of:
 - (a) Vehicle waste fluids
 - (b) Household waste materials (i.e., trash and household hazardous waste, including personal care products and pharmaceuticals)
 - (c) Construction waste materials
 - (d) Pesticides and fertilizers (including integrated pest management practices [IPM] to promote reduced use of pesticides),
 - (e) Green waste (including lawn clippings and leaves)
 - (f) Animal wastes

- (3) Distribute activity specific stormwater pollution prevention public education materials at, but not limited to, the following points of purchase:
 - (a) Automotive parts stores
 - (b) Home improvement centers / lumber yards / hardware stores
 - (c) Landscaping / gardening centers
 - (d) Pharmacies
 - (e) Pet shops / feed stores
- (4) Maintain stormwater websites or provide links to stormwater websites via the Permittee's website, which shall include educational material and opportunities for the public to participate in stormwater pollution prevention and clean-up activities listed in Part [TBD – this part].
- (5) Provide independent, parochial, and public schools within in each Permittee's jurisdiction with materials to educate school children (K-12) on stormwater pollution. Material may include videos, live presentations, and other information. Permittees are encouraged to work with, or leverage, materials produced by other statewide agencies and associations such as the State Water Board's "Erase the Waste" educational program and the California Environmental Education Interagency Network (CEEIN) to implement this requirement.
- (6) When implementing activities in (1)-(4), Permittees shall use effective strategies to educate and involve ethnic communities in stormwater pollution prevention through culturally effective methods.

7. Industrial/Commercial Facilities Program

a. General

- i. Each Permittee shall implement an Industrial / Commercial Facilities Program that meets the requirements of this Part, prevents illicit discharges into the MS4 and receiving waters, reduces industrial / commercial discharges of stormwater to the maximum extent practicable, and prevents industrial / commercial discharges from the MS4 from causing or contributing to a violation of water quality standards. At a minimum, the Industrial / Commercial Facilities Control Program shall be implemented in accordance with the requirements listed in this part, or an equivalent Industrial / Commercial Facilities Control Program as approved in a Permittee's individual or watershed based Reasonable Assurance Program (RAP) per Part 7.

- (1) Track
 - (2) Educate
 - (3) Inspect
 - (4) Ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in stormwater
- ii. The BMPs listed in Parts [TBD – TBD] below refer to the January 2003 version of the California Stormwater BMP Handbook, Industrial and Commercial. Permittees are authorized to substitute the listed BMPs with the equivalent BMP contained in the most current version of the California Stormwater BMP Handbook, Industrial and Commercial, throughout the term of this Order.

b. Track Critical Sources

- i. Each Permittee shall maintain an updated watershed-based inventory or database containing the latitude / longitude coordinates of all industrial and commercial facilities within its jurisdiction that are critical sources of stormwater pollution. The inventory or database shall be maintained in electronic format and incorporation of facility information into a Geographical Information System (GIS) is recommended. Critical Sources to be tracked are summarized below, and specified in Attachment [TBD]:
- (1) Commercial Facilities
 - (a) Restaurants
 - (b) Automotive service facilities (including those located at automotive dealerships)
 - (c) RGOs
 - (d) Nurseries and Nursery Centers (Merchant Wholesalers, Nondurable Goods, and Retail Trade)
 - (2) U.S. EPA “Phase I” Facilities [as specified in 40 CFR §122.26(b)(14)(i)-(xi)]
 - (3) Other federally-mandated facilities [as specified in 40 CFR §122.26(d)(2)(iv)(C)]
 - (a) Municipal landfills
 - (b) Hazardous waste treatment, disposal, and recovery facilities
 - (c) Industrial facilities subject to section 313 “Toxic Release Inventory” reporting requirements of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) [42 U.S.C. 11023]

- (4) All other commercial or industrial facilities tributary to a waterbody segment addressed by TMDL Provisions in Part 7, where the facility generates pollutants addressed by the TMDL for that waterbody.
 - (5) All other commercial or industrial facilities that the Permittee determines may contribute a substantial pollutant load to the MS4.
- ii.** Each Permittee shall include the following minimum fields of information for each critical source industrial and commercial facility identified in its watershed-based inventory or database:
- (1) Name of facility
 - (2) Name of owner/ operator and contact information
 - (3) Address of facility (physical and mailing)
 - (4) North American Industry Classification System (NAICS) code
 - (5) Standard Industrial Classification (SIC) code
 - (6) A narrative description that describes the economic activities performed and principal products used at each facility
 - (7) Status of exposure of materials to stormwater
 - (8) Name of receiving water
 - (9) Identification of whether the facility is tributary to a CWA § 303(d) listed waterbody segment or waterbody segment subject to a TMDL, where the facility generates pollutants for which the waterbody segment is impaired.
 - (10) Coverage under the Permit for the Discharge of Stormwater Associated with Industrial Activities (Industrial General Permit) or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Water Board pertaining to stormwater discharges.
- iii.** Each Permittee shall update its inventory of critical sources at least annually. The update shall be accomplished through collection of new information obtained through field activities or through other readily available inter- and intra-agency informational databases (e.g., business licenses, pretreatment permits, sanitary sewer connection permits, and similar information).

c. Educate Industrial/Commercial Sources

- i.** At least once during the five-year period of this Order, each Permittee shall notify the owner/operator of each of its inventoried commercial and industrial sites identified in Part [TBD] of the BMP requirements applicable to the site/source.

ii. Business Assistance Program

- (1) Each Permittee shall implement a Business Assistance Program to provide technical information to businesses to facilitate their efforts to reduce the discharge of pollutants in stormwater. Assistance shall be targeted to select business sectors or small businesses upon a determination that their activities may be contributing substantial pollutant loads to the MS4 or receiving water. Assistance may include technical guidance and provision of educational materials. The Program may include:
 - (a) On-site technical assistance, telephone, or e-mail consultation regarding the responsibilities of business to reduce the discharge of pollutants, procedural requirements, and available guidance documents.
 - (b) Distribution of stormwater pollution prevention educational materials to operators of auto repair shops; car wash facilities; restaurants and mobile sources including automobile/equipment repair, washing, or detailing; power washing services; mobile carpet, drape, or upholstery cleaning services; swimming pool, water softener, and spa services; portable sanitary services; and commercial applicators and distributors of pesticides, herbicides and fertilizers, if present.

d. Inspect Critical Sources**i. Commercial Facilities**

- (1) Mandatory Compliance Inspections:

Each Permittee shall inspect all commercial facilities identified in Parts [TBD, TBD, TBD] twice during the 5-year term of the Order, provided that the first mandatory compliance inspection occurs no later than 2 years after Order adoption date. A minimum interval of 6 months between the first and the second mandatory compliance inspection is required. In addition, each Permittee shall implement the activities outlined in the following subparts. At each facility, inspectors shall verify that the operator is implementing the source control BMPs listed in Tables [TBD] and [TBD] for the corresponding facility type as specified in Parts [TBD], [TBD], and [TBD]. Each Permittee shall require implementation of additional BMPs where stormwater from the MS4 discharges to an environmentally sensitive area (ESA, see Part [TBD] for definition), a waterbody subject to TMDL provisions in Part 7, or a CWA § 303(d) listed waterbody (see Part [TBD] below).

- (a) Restaurants

(i) Scope of Inspection

Each Permittee shall inspect all restaurants within its jurisdiction to confirm that stormwater BMPs are being effectively implemented in compliance with state law, and county and municipal ordinances. The BMPs listed in Table [TBD] shall be implemented, unless the pollutant generating activity does not occur:

Table [TBD] - BMPs at Restaurants

Pollutant-Generating Activity	BMP Narrative Description	California Stormwater BMP Handbook Industrial and Commercial BMP Identification #
Waste/ Hazardous Materials Storage, Handling and Disposal	Implementation of effective storage, handling and disposal procedures for hazardous materials	NA
Unauthorized Non-Stormwater Discharges	Effective elimination of non-stormwater discharges	SC-10
Accidental Spills/ Leaks	Implementation of effective spills/ leaks prevention and response procedures	SC-11
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices	SC-33
Storage and Handling of Solid Waste	Implementation of effective solid waste storage/ handling practices and appropriate control measures	SC-34
Parking/ Storage Area Maintenance	Implementation of effective parking/ storage area designs and housekeeping/ maintenance practices	SC-43
Stormwater Conveyance System Maintenance	Implementation of proper conveyance system operation and maintenance protocols	SC-44
Pollutant-Generating Activity	BMP Narrative Description from Regional Water Board Resolution No. 98-08	
Sidewalk Washing	1. Remove trash, debris, and free standing oil/grease spills/leaks (use absorbent material, if necessary) from the area before washing; and 2. Use high pressure, low volume spray washing using only potable water with no cleaning agents at an average usage of 0.006 gallons per square feet of	

	sidewalk area.
Street Washing	Collect and divert wash water to the sanitary sewer – publically owned treatment works (POTW). Note: POTW approval may be needed.

(b) Automotive Service Facilities

(i) Scope of Inspection

Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that stormwater BMPs are being effectively implemented in compliance with state law, and county and municipal ordinances. The BMPs listed in Table [TBD] shall be implemented, unless the pollutant generating activity does not occur:

Table [TBD] - BMPs at Automotive Service Facilities

Pollutant-Generating Activity	BMP Narrative Description	California Stormwater BMP Handbook Industrial and Commercial BMP Identification #
Unauthorized Non-Stormwater Discharges	Effective elimination of non-stormwater discharges	SC-10
Accidental Spills/ Leaks	Implementation of effective spills/ leaks prevention and response procedures	SC-11
Vehicle/ Equipment Fueling	Implementation of effective fueling source control devices and practices	SC-20
Vehicle/ Equipment Cleaning	Implementation of effective equipment/ vehicle cleaning practices and appropriate wash water management practices	SC-21
Vehicle/ Equipment Repair	Implementation of effective vehicle/ equipment repair practices and source control devices	SC-22
Outdoor Liquid Storage	Implementation of effective outdoor liquid storage source controls and practices	SC-31
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices	SC-33

Storage and Handling of Solid Waste	Implementation of effective solid waste storage/ handling practices and appropriate control measures	SC-34
Parking/ Storage Area Maintenance	Implementation of effective parking/ storage area designs and housekeeping/ maintenance practices	SC-43
Stormwater Conveyance System Maintenance Practices	Implementation of proper conveyance system operation and maintenance protocols	SC-44
Pollutant-Generating Activity	BMP Narrative Description from Regional Water Board Resolution No. 98-08	
Sidewalk Washing	1. Remove trash, debris, and free standing oil/grease spills/leaks (use absorbent material, if necessary) from the area before washing; and 2. Use high pressure, low volume spray washing using only potable water with no cleaning agents at an average usage of 0.006 gallons per square feet of sidewalk area.	
Street Washing	Collect and divert wash water to the sanitary sewer – publically owned treatment works (POTW). Note: POTW approval may be needed.	

(c) Retail Gasoline Outlets

(i) Scope of Inspection

Each Permittee shall inspect all RGOs within its jurisdiction to confirm that stormwater BMPs are being effectively implemented in compliance with state law, and county and municipal ordinances. The BMPs listed in Table [TBD] shall be implemented, unless the pollutant generating activity does not occur:

Table [TBD] - BMPs at Retail Gasoline Outlets

Pollutant-Generating Activity	BMP Narrative Description	California Stormwater BMP Handbook Industrial and Commercial BMP Identification #
Unauthorized Non-Stormwater Discharges	Effective elimination of non-stormwater discharges	SC-10
Accidental Spills/ Leaks	Implementation of effective spills/ leaks prevention and response procedures	SC-11
Vehicle/ Equipment Fueling	Implementation of effective fueling source control devices and practices	SC-20

Staff Working Proposal
Greater Los Angeles County MS4 Permit

Vehicle/ Equipment Cleaning	Implementation of effective wash water control devices	SC-21
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices	SC-33
Storage and Handling of Solid Waste	Implementation of effective solid waste storage/ handling practices and appropriate control measures	SC-34
Building and Grounds Maintenance	Implementation of effective facility maintenance practices	SC-41
Parking/ Storage Area Maintenance	Implementation of effective parking/ storage area designs and housekeeping/ maintenance practices	SC-43
Pollutant-Generating Activity	BMP Narrative Description from Regional Water Board Resolution No. 98-08	
Sidewalk Washing	1. Remove trash, debris, and free standing oil/grease spills/leaks (use absorbent material, if necessary) from the area before washing; and 2. Use high pressure, low volume spray washing using only potable water with no cleaning agents at an average usage of 0.006 gallons per square feet of sidewalk area.	
Street Washing	Collect and divert wash water to the sanitary sewer – publically owned treatment works (POTW). Note: POTW approval may be needed.	

(d) Commercial Nurseries and Nursery Centers (Merchant Wholesalers, Nondurable Goods, and Retail Trade)

(i) Scope of Inspection

Each Permittee shall inspect all commercial nurseries and nursery centers within its jurisdiction to confirm that stormwater BMPs are being effectively implemented in compliance with state law, and county and municipal ordinances. The BMPs listed in Table [TBD] shall be implemented, unless the pollutant generating activity does not occur.

Table [TBD] - BMPs at Nurseries

Pollutant-Generating Activity	BMP Narrative Description	California Stormwater BMP Handbook Industrial and Commercial BMP Identification #
Unauthorized Non-Stormwater Discharges	Effective elimination of non-stormwater discharges	SC-10
Outdoor Loading/ Unloading	Implementation of effective outdoor loading/ unloading practices	SC-30
Outdoor Liquid Storage	Implementation of effective outdoor liquid storage source controls and practices	SC-31
Outdoor Equipment Operations	Implementation of effective outdoor equipment source control devices and practices	SC-32
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices	SC-33
Building and Grounds Maintenance	Implementation of effective facility maintenance practices	SC-41

ii. Industrial Facilities

Each Permittee shall conduct compliance inspections as specified below or as approved in a Permittee's individual or watershed based Reasonable Assurance Program (RAP) per Part 7.

(1) Frequency of Inspections

(a) Mandatory Compliance Inspections

Each Permittee shall perform an initial mandatory compliance inspection at all industrial facilities identified in Parts [TBD] no later than 2 years after Order adoption date. After the initial inspection, all facilities determined as having exposure of industrial activities to stormwater are subject to a second mandatory compliance inspection. A minimum interval of 6 months between the first and the second mandatory compliance inspection is required. A facility need not be inspected more than twice during the term of the Order unless subject to an enforcement action as specified in Part [TBD] below.

(b) No Exposure Verification

Following the first mandatory compliance inspection, each Permittee shall also perform a second mandatory

compliance inspection yearly at a minimum of 20% of the facilities determined not to have exposure of industrial activities to stormwater at the time of the first mandatory compliance inspection. The purpose of this inspection is to verify the continuity of the no exposure status. Facilities determined as having exposure will be notified that they must obtain coverage under the Industrial General Permit. A minimum interval of 6 months between the first and the second mandatory compliance inspection is required.

(c) Applicable to All Facilities

Each Permittee need not inspect facilities that have been inspected by the Regional Water Board within the previous 24 month interval. However, if the Regional Water Board performed only one inspection, the Permittee shall conduct the second required mandatory compliance inspection.

(2) Scope of Inspection

(a) Each Permittee shall confirm that each operator:

- (i) Has a current Waste Discharge Identification (WDID) number for facilities discharging stormwater associated with industrial activity, and that a Stormwater Pollution Prevention Plan (SWPPP) is available on-site; or
- (ii) Has applied and has a current No Exposure Certification (and WDID number) for facilities subject to this requirement;
- (iii) Is effectively implementing BMPs in compliance with state law, and county and municipal ordinances. Facilities must implement the source control BMPs identified in the *California Stormwater BMP Handbook, Industrial and Commercial*, unless the pollutant generating activity does not occur. The Permittees shall require implementation of additional BMPs where stormwater from the MS4 discharges to an environmentally sensitive area (ESA, see Part [TBD] for definition), a waterbody subject to TMDL Provisions in Part 7, or a CWA § 303(d) listed waterbody (see Part [TBD] below).

e. Ensure Compliance of Critical Sources

i. BMP Implementation

Facilities must implement the source control BMPs identified in the *California Stormwater BMP Handbook, Industrial and Commercial*, unless the pollutant generating activity does not occur. In the event that a Permittee determines that a BMP is infeasible at any site, the

Permittee shall require implementation of similar BMPs that will achieve the equivalent reduction of pollutants in the stormwater discharges. Likewise, for those BMPs that are not adequately protective of water quality standards, a Permittee may require additional site-specific controls.

ii. Environmentally Sensitive Areas (ESAs)

For critical sources that discharge to MS4s that discharge to ESAs, each Permittee shall require operators to implement additional pollutant-specific controls to reduce pollutants in stormwater runoff that are causing or contributing to exceedances of water quality objectives.

iii. Progressive Enforcement

Each Permittee shall develop and implement a Progressive Enforcement Policy to ensure that facilities are brought into compliance with all stormwater requirements within a reasonable time period as specified below.

(1) Follow-up inspections

In the event that a Permittee determines, based on an inspection conducted, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement actions which, at a minimum, shall include a follow-up inspection within 2 weeks from the date of the initial inspection.

(2) Enforcement action

In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take enforcement action as established through authority in its municipal code and ordinances or through the judicial system.

(3) Each Permittee shall maintain records and make them available on request to the Regional Water Board, including inspection reports, warning letters, notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

f. Interagency Coordination

i. Referral of Violations of Municipal Ordinances and California Water Code § 13260

A Permittee may refer a violation(s) of its municipal stormwater ordinances and California Water Code § 13260 by Industrial and Commercial facilities to the Regional Water Board provided that the Permittee has made a good faith effort of progressive enforcement to

achieve compliance with its own ordinances. At a minimum, a Permittee's good faith effort must be documented with:

- (1) Two follow-up inspections
- (2) Two warning letters or notices of violation

ii. Referral of Violations of the Industrial General Permit, including Requirements to File a Notice of Intent or No Exposure Certification

For those facilities in violation of municipal stormwater ordinances and subject to the Industrial General Permit, Permittees may escalate referral of such violations to the Regional Water Board (promptly via telephone or electronically) after one inspection and one written notice of violation (copied to the Regional Water Board) to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Name of the facility
- (2) Operator of the facility
- (3) Owner of the facility
- (4) WDID Number (if applicable)
- (5) Industrial activity being conducted at the facility that is subject to the Industrial General Permit
- (6) Records of communication with the facility operator regarding the violation, which shall include at least one inspection report
- (7) The written notice of violation copied to the Regional Water Board

iii. Investigation of Complaints Transmitted by the Regional Water Board Staff

Each Permittee shall initiate, within one business day,³ investigation of complaints (other than non-stormwater discharges to the MS4) from facilities within its jurisdiction. The initial investigation shall include, at a minimum, a limited inspection of the facility to confirm validity of the complaint and to determine if the facility is in compliance with municipal stormwater ordinances and, if necessary, to oversee corrective action.

iv. Assistance with Regional Water Board Enforcement Actions

As directed by the Regional Water Board Executive Officer, Permittees shall assist Regional Water Board enforcement actions by:

³ Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to "initiate" the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

- (1) Assisting in identification of current owners, operators, and lessees of properties and sites.
 - (2) Providing staff, when available, for joint inspections with Regional Water Board inspectors.
 - (3) Appearing to testify as witnesses in Regional Water Board enforcement hearings.
 - (4) Providing copies of inspection reports and other progressive enforcement documentation.
- v. Participation in a Task Force

The Permittees may participate with the Regional Water Board, and other public agencies on an enforcement task force to communicate concerns regarding special cases of stormwater violations by industrial and commercial facilities, and to develop a coordinated approach to enforcement action.

8. Planning and Land Development Program

a. Purpose

- i. Each Permittee shall implement a Planning and Land Development Program pursuant to Part [TBD] for all New Development and Redevelopment projects subject to this Order to:
 - (1) Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, and safeguarding of environmentally sensitive areas.
 - (2) Minimize the adverse impacts from stormwater runoff on the biological integrity of Natural Drainage Systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100).
 - (3) Minimize the percentage of impervious surfaces on land developments by minimizing soil compaction during construction, designing projects to minimize the impervious area footprint, and employing Low Impact Development (LID) design principles to mimic predevelopment water balance through infiltration, evapotranspiration and rainfall harvest and use.
 - (4) Maintain existing riparian buffers and enhance riparian buffers when possible.
 - (5) Minimize pollutant loadings from impervious surfaces such as roof tops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs (including

Source Control BMPs such as good housekeeping practices), LID Strategies, and Treatment Control BMPs.

- (6) Properly select, design and maintain LID and Hydromodification Control BMPs to address pollutants that are likely to be generated, reduce changes to pre-development hydrology, assure long-term function, and avoid the breeding of vectors⁴.
- (7) Prioritize the selection of BMPs to remove stormwater pollutants, reduce stormwater runoff volume, and beneficially use stormwater to support an integrated approach to protecting water quality and managing water resources in the following order of preference:
 - (a) Infiltration, bioretention and/or rainfall harvest and use.
 - (b) Biofiltration.

b. Applicability

i. New Development Projects

- (1) Development projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution, prior to completion of the project(s), are:
 - (a) All development projects equal to 1 acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area
 - (b) Industrial parks 10,000 square feet or more of surface area
 - (c) Commercial strip malls 10,000 square feet or more surface area
 - (d) Retail gasoline outlets 5,000 square feet or more of surface area
 - (e) Restaurants (SIC 5812) 5,000 square feet or more of surface area
 - (f) Parking lots 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces
 - (g) Streets, roads, highways, and freeway construction of 10,000 square feet or more of impervious surface area shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets⁵ to the maximum extent practicable

⁴ Treatment BMPs when designed to drain within 72 hours of the end of rainfall minimize the potential for the breeding of vectors.

⁵ <http://water.epa.gov/infrastructure/greeninfrastructure/index.cfm>

- (h) Automotive service facilities (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539) 5,000 square feet or more of surface area
- (i) Redevelopment projects in subject categories that meet Redevelopment thresholds identified in Part [TBD] (Redevelopment Projects) below
- (j) Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
 - (i) Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and
 - (ii) Create 2,500 square feet or more of impervious surface area
- (k) Single-family hillside homes. To the extent that a Permittee may lawfully impose conditions, mitigation measures or other requirements on the development or construction of a single-family home in a hillside area as defined in the applicable Permittee's Code and Ordinances, each Permittee shall require that during the construction of a single-family hillside home, the following measures are implemented:
 - (i) Conserve natural areas
 - (ii) Protect slopes and channels
 - (iii) Provide storm drain system stenciling and signage
 - (iv) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability
 - (v) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability.

ii. Redevelopment Projects

- (1) Redevelopment projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution, prior to completion of the project(s), are:
 - (a) Land-disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on development categories identified in Part [TBD] (New Development/Redevelopment Performance Criteria).
 - (b) Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject

to post-construction stormwater quality control requirements, the entire project must be mitigated.

- (c) Where Redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.
 - (i) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.
 - (ii) Existing single-family dwelling and accessory structures are exempt from the Redevelopment requirements unless such projects create, add, or replace 10,000 square feet of impervious surface area.
- iii. Existing Development or Redevelopment projects shall mean projects that have been constructed or for which grading or land disturbance permits have been submitted and are deemed complete prior to the adoption date of this Order, except as otherwise specified in this Order.
- iv. Specifically, the Newhall Ranch Project Phases I and II (a.k.a. the Landmark and Mission Village projects) are deemed to be an existing development that will at a minimum, be designed to comply with the Specific LID Performance Standards attached to the Waste Discharge Requirements (Order No. X). All subsequent phases of the Newhall Ranch Project constructed during the term of this Order shall be subject to the requirements of this Order.

c. New Development/ Redevelopment Project Performance Criteria

- i. Integrated Water Quality/ Flow Reduction/Resources Management Criteria
 - (1) Each Permittee shall require all New Development and Redevelopment projects (referred to hereinafter as “new projects”) identified in Part [TBD] to control pollutants, pollutant

- loads, and runoff volume emanating from the project site by: (1) minimizing the impervious surface area and (2) controlling runoff from impervious surfaces through infiltration, bioretention and/or rainfall harvest and use.
- (2) Except as provided in Part [TBD] (Technical Infeasibility or Opportunity for Regional Groundwater Replenishment), Part [TBD] (Local Ordinance Equivalence), or Part [TBD] (Hydromodification), below, each Permittee shall require the project to retain on-site the Stormwater Quality Design Volume (SWQDv) defined as the runoff from:
 - (a) The 0.75-inch, 24-hour rain event or
 - (b) The 85th percentile, 24-hour rain event, as determined from the Los Angeles County 85th percentile precipitation isohyetal map, **whichever is greater.**
 - (3) When calculating the capacity of an infiltration system, each Permittee shall account for the 24-hour infiltration assuming that the soil is saturated. Infiltration BMPs shall be limited to project sites where the *in-situ* soil or the amended on-site soils have a demonstrated infiltration rate under saturated conditions of no less than 0.15 inch per hour.
 - (4) Bioretention BMPs shall be designed to accommodate the minimum design flow at a surface loading rate of 5 inches per hour and no greater than 12 inches per hour, and shall have a total volume, including pore spaces and pre-filter detention volume of no less than the SWQDv. Bioretention systems shall meet the design specifications provided in Attachment X to this Order unless otherwise approved by the Regional Water Board Executive Officer.
 - (5) If rainwater harvested for use in irrigation is to be credited toward the total volume of stormwater runoff retained on-site, each Permittee shall require the project proponent to conduct a conservative (assuming reasonable worst-case scenarios) assessment of water demand during the wet-weather season. This volume will be referred to as the “reliable” estimate of irrigation demand. The portion of water to be credited as retained on-site for use in irrigation shall not exceed the reliable estimate of irrigation demand.
 - (6) Harvested rainwater must be stored in a manner that precludes the breeding of mosquitoes or other vectors or with a draw down not to exceed 72 hours.
 - (7) When evaluating the potential for on-site retention, each Permittee shall consider the maximum potential for

evapotranspiration from green roofs and rainfall harvest and use.

- (8) Project requirements shall address at a minimum the use of harvested rainwater for non-potable uses including toilet flushing, laundry, and cooling water makeup water. If the municipal or county plumbing code does not specifically address requirements for harvested rainwater, each Permittee shall develop a model ordinance and submit it to the city council or County Supervisors for consideration within 24 months after the Order effective date. The model ordinances shall be based on the International Association of Plumbing and Mechanical Officials' (IAPMO's) Green Plumbing and Mechanical Code Supplement to the 2012 National Standard Plumbing Code, or similar guidance to ensure the safe and effective use of harvested rainwater, separate from the existing provisions, if any, for reclaimed wastewater.

ii. Alternative Compliance for Technical Infeasibility or Opportunity for Regional Groundwater Replenishment

- (1) In instances of technical infeasibility or where a project has been determined to provide an opportunity to replenish regional groundwater supplies at an offsite location, each Permittee may allow projects to comply with this Order through the alternative compliance measures process depicted in Table [TBD] and as described in Part [TBD] below.

Table [TBD]. New Development and Redevelopment Projects – Options for Stormwater Management Design (listed in order of preference)

Most Preferred Stormwater Management Options:		
<p>On-site retention of the SWQDv. New Development and Re-development Projects to be designed to minimize the impervious area footprint and to retain stormwater runoff using Low Impact Development designs which may include infiltration, bioretention, and/or rainfall harvest and use.</p> <p>Note: Biofiltration does not provide 100 % retention of the design volume and is not credited under this preferred option.</p>	<p>OR</p>	<p>Offsite regional groundwater replenishment if the following conditions apply:</p> <ul style="list-style-type: none"> • The volume of stormwater runoff used to replenish groundwater must be equal to or greater than the SWQDv. • Must demonstrate that equal benefits to groundwater recharge could not be met on the project site. • Must provide equal or greater benefits to surface water quality in the same

		<p>subwatershed as the proposed project.</p> <p>Note: Must also provide pollutant reduction through treatment of the SWQDv at the project site.</p>
<p align="center">Medium Preferred Options:</p> <p>If it is technically infeasible to retain 100 percent of the SWQDv by one of the preferred options described above, then offsite mitigation may be provided via one of the following Alternative Compliance Measures in conjunction with pollutant reduction through treatment of the SWQDv at the project site.</p>		
<p>Offsite infiltration or bioretention. The following conditions apply:</p> <ul style="list-style-type: none"> • The volume of stormwater runoff retained at the mitigation site must be equal to or greater than the Mv. • Must provide equal or greater benefits to surface water quality in the same subwatershed as the proposed project. 	<p>Offsite groundwater replenishment. The following conditions apply:</p> <ul style="list-style-type: none"> • The volume of stormwater runoff used to replenish groundwater must be equal to or greater than the Mv. • Must demonstrate that equal benefits to groundwater recharge could not be met on the project site. • Must provide equal or greater benefits to surface water quality in the same subwatershed as the proposed project. 	<p>Retrofit an existing developed site to increase the volume of stormwater runoff addressed on-site. The following conditions apply:</p> <ul style="list-style-type: none"> • The increase in the volume of stormwater runoff addressed as a result of the retrofitting of the existing developed site must be equal to or greater than the Mv. • Must provide equal or greater benefits to surface water quality in the same subwatershed as the proposed project. <p>Note: Biofiltration allowed under retrofit provisions.</p>
<p align="center">Least Preferred Option:</p> <p>If it is infeasible to retain 100 percent of the SWQDv using a combination of the above described options, then on-site biofiltration systems, sized to treat 1.5 times the remaining design stormwater runoff volume, may be used.</p>		

- (2) To demonstrate technical infeasibility, the project applicant must demonstrate that the project cannot reliably retain 100 percent of the SWQDv on-site, even with the maximum application of green roofs and rainwater harvest and use, and that compliance with the applicable post-construction requirements would be technically infeasible by submitting a site-specific hydrologic and/or design analysis conducted and endorsed by a registered professional engineer, geologist, architect, and/or landscape

architect. Technical infeasibility may result from conditions including the following:

- (a) The infiltration rate of saturated *in-situ* soils is less than 0.15 inch per hour and it is not technically feasible to amend the *in-situ* soils to attain an infiltration rate necessary to achieve reliable performance of infiltration or bioretention BMPs in retaining the SWQDv on-site.
 - (b) Locations where seasonal high groundwater is within 5 to 10 feet of the surface,
 - (c) Locations within 100 feet of a groundwater well used for drinking water,
 - (d) Brownfield development sites or other locations where pollutant mobilization is a documented concern,
 - (e) Locations with potential geotechnical hazards, or
 - (f) Smart growth and infill or redevelopment locations where the density and/ or nature of the project would create significant difficulty for compliance with the on-site volume retention requirement.
- (3) To utilize alternative compliance measures to replenish groundwater at an offsite location, the project applicant shall demonstrate why it is not advantageous to replenish groundwater at the project site, and that the alternative measures shall also provide equal or greater water quality benefits to the receiving surface water than the Water Quality/Flow Reduction/Resource Management Criteria in this Part.

iii. Alternative Compliance Measures

When a Permittee determines a project applicant has demonstrated technical infeasibility or is proposing an alternative offsite project to replenish regional groundwater supplies, each Permittee shall require one of the following mitigation options:

- (1) Offsite Projects – Infiltration/bioretention or Groundwater Replenishment
 - (a) Use of infiltration or bioretention BMPs to intercept a volume of stormwater runoff equal to the SWQDv, less the volume of stormwater runoff reliably retained on-site, at an approved offsite project, and
 - (b) Provide pollutant reduction (treatment) of the stormwater runoff discharged from the project site in accordance with the Water Quality Mitigation Criteria provided in Part [TBD].

(c) The required offsite mitigation volume shall be equal to:

Equation No [TBD]:

$$Mv = 1.0 * [SWQDv - Rv]$$

Where:

Mv = mitigation volume

SWQDv = runoff from the 0.75 inch, 24-hour storm event or the 85th percentile storm, **whichever is greater**

Rv = the volume of stormwater runoff reliably retained on-site

Or

(2) Offsite Project - Retrofit Existing Development

(a) Use infiltration, bioretention, rainfall harvest and use and/or biofiltration BMPs to retrofit an existing development, with similar land uses as the new development or land uses associated with comparable or higher stormwater runoff event mean concentrations (EMCs) than the new development. Comparison of EMCs for different land uses shall be based on published data from studies performed in southern California. The retrofit plan shall be designed and constructed to intercept a volume of stormwater runoff equal to the mitigation volume (Mv) as described above in Equation [TBD], and

(b) Provide pollutant reduction (treatment) of the stormwater runoff from the project site as described in the Water Quality Mitigation Criteria provided in Part [TBD].

(3) Conditions for Offsite Projects

(a) Project applicants seeking to utilize these alternative compliance provisions may propose other offsite projects, which the Permittees may approve if they meet the requirements of this subpart.

(b) Location of offsite projects. Offsite projects shall be located in the same sub-watershed (defined as draining to the same HUC-12 hydrologic area in the Basin Plan) as the new development or redevelopment project. Each Permittee may consider locations outside of the HUC-12 but within the HUC-10 subwatershed area if there are no opportunities within the HUC-12 subwatershed or if greater pollutant reductions and/or groundwater replenishment can be achieved at a location within the expanded HUC-10 subwatershed. The use of a mitigation, groundwater replenishment, or retrofit project outside of the HUC-12 subwatershed is subject to the

- approval of the Executive Officer of the Regional Water Board.
- (c) Project applicant must demonstrate that equal benefits to groundwater recharge cannot be met on the project site.
 - (d) Each Permittee shall develop a prioritized list of offsite mitigation, groundwater replenishment and/or retrofit projects, and when feasible, the mitigation must be directed to the highest priority project within the same HUC-12 or if approved by the Executive Officer of the Regional Water Board, the HUC-10 drainage area, as the new development project.
 - (e) Infiltration/bioretention shall be the preferred LID BMP for offsite mitigation or groundwater replenishment projects. Offsite retrofit projects may include green streets, parking lot retrofits, green roofs, and rainfall harvest and use. Biofiltration BMPs may be considered for retrofit projects when infiltration, bioretention or rainfall harvest and use is technically infeasible.
 - (f) Each Permittee shall develop a schedule for the completion of offsite projects, including milestone dates to identify, fund, design, and construct the projects. Offsite projects shall be completed as soon as possible, and at the latest, within 4 years of the certificate of occupancy for the first project that contributed funds toward the construction of the offsite project, unless a longer period is otherwise authorized by the Executive Officer of the Regional Water Board. For public offsite projects, each Permittee must provide in their annual reports a summary of total offsite project funds raised to date and a description (including location, general design concept, volume of water expected to be retained, and total estimated budget) of all pending public offsite projects. Funding sufficient to address the offsite volume must be transferred to the Permittee (for public offsite mitigation projects) or to an escrow account (for private offsite mitigation projects) within one year of the initiation of construction.
 - (g) Offsite projects must be approved by the Permittee and may be subject to approval by the Executive Officer of the Regional Water Board, if a third-party petitions the Executive Officer to review the project.
 - (h) The project applicant must perform the offsite projects as approved by either the Permittee or the Executive Officer of the Regional Water Board or provide sufficient funding for public or private offsite projects to achieve the equivalent mitigation stormwater volume.

(4) On-site Biofiltration

If offsite mitigation (including groundwater replenishment projects) and retrofit opportunities are not available, then the new project must biofiltrate 1.5 times the portion of the SWQDv that is not reliably retained on-site, as calculated by Equation No. [TBD].

Equation No [TBD]:

$$Bv = 1.5 * [SWQDv - Rv]$$

(a) Where:

Bv = biofiltration volume

SWQDv = the stormwater runoff from a 0.75 inch, 24-hour storm or the 85th percentile storm, **whichever is greater.**

Rv = volume reliably retained on-site

(5) Conditions for On-Site Biofiltration

- (a) Biofiltration systems shall meet the design specifications provided in Attachment [TBD] to this Order unless otherwise approved by the Regional Water Board Executive Officer.
- (b) Biofiltration BMPs shall be designed to accommodate the minimum design flow at a surface loading rate of 5 inches per hour and no greater than 12 inches per hour, and shall have a total volume, including pore spaces and pre-filter detention volume of no less than the biofiltration volume (Bv).
- (c) Biofiltration systems discharging to a receiving water that is included on the Clean Water Act section 303(d) list of water-quality-limited water bodies due to nitrogen compounds or related effects shall be designed and maintained to achieve enhanced nitrogen removal capability. See Attachment [TBD] for design criteria for underdrain placement to achieve enhanced nitrogen removal.

iv. Water Quality Mitigation Criteria

- (1) Each Permittee shall require all New Development and Redevelopment projects that have been approved for offsite mitigation or groundwater replenishment projects as defined in Part [TBD] to also provide treatment of stormwater runoff from the project site. Each Permittee shall require these projects to implement post-construction stormwater BMPs and control measures to reduce pollutant loading as necessary to:

- (a) Meet the pollutant specific benchmarks listed in Table [TBD] at the treatment systems outlet or prior to the discharge to the MS4, or
 - (b) Ensure that the discharge does not cause or contribute to an exceedance of water quality standards at the Permittee's downstream MS4 outfall.
- (2) The benchmarks shall be applied at the outlet from the treatment devices, treatment train or at the project property line and prior to the discharge to the MS4.
- (a) Each Permittee may monitor or shall require the project proponent to monitor the effluent from three qualifying storm events during the first year. If any of the three samples exceed the applicable benchmarks, the Permittee shall require the project proponent to upgrade the treatment system and repeat the monitoring until all three consecutive samples are below the applicable benchmarks, or
 - (b) Each Permittee may determine, based on data from its MS4 outfall monitoring program, that the discharge is not causing an exceedance of water quality standards. In this scenario, the Permittee shall require at a minimum, the project proponent to monitor the treatment system discharge during the first storm during the first two years after project completion and report the data to the Permittee for inclusion in its Annual Report.
 - (c) Each Permittee may allow the project proponent to install flow-through modular treatment systems including sand filters, or other proprietary BMP treatment systems including planter boxes, with a demonstrated efficiency at least equivalent to a sand filter. The sizing of the flow through treatment device shall be based on a rainfall intensity of:
 - (i) 0.2 inches per hour or
 - (ii) The one-year, one-hour rainfall intensity as determined from the most recent Los Angeles County isohyetal map, **whichever is greater**.

Table [TBD] Benchmarks Applicable to New Development Treatment BMPs

Parameter	Units	Benchmark Levels
Total Suspended Solids (TSS)	mg/L	100
Trash	Pounds	0

Staff Working Proposal
Greater Los Angeles County MS4 Permit

Parameter	Units	Benchmark Levels
E. coli bacteria	counts per 100 mL	235
Total coliform bacteria	counts per 100 mL	10,000
Enterococcus bacteria	counts per 100 mL	104

150-175	0.151	0.0221	0.18
175-200	0.182	0.0253	0.20
200-225	0.213	0.0285	0.23
225-250	0.246	0.0316	0.25
250+	0.262	0.0332	0.26

- (3) In addition to the requirements for controlling pollutant discharges as described in Part [TBD] and the treatment requirements described above, each Permittee shall ensure that the new development or redevelopment will not cause or contribute to an exceedance of applicable Water Quality Based Effluent Limitations established in Part [TBD] pursuant to Total Maximum Daily Loads (TMDLs).

v. Hydromodification (Flow/ Volume/ Duration) Control Criteria

- (1) Each Permittee shall require all New Development and Redevelopment projects identified in Part [TBD] to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic stormwater runoff discharge rates, velocities, and duration. This shall be achieved by maintaining the project's pre-project stormwater runoff flow rates and durations.

(a) Description

- (i) Hydromodification control in natural drainage systems shall be achieved by maintaining the Erosion Potential (E_p) in streams at a value of 1, unless an alternative

value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and prevent damage to stream habitat in natural drainage system tributaries. (see Attachment [TBD] - Determination of Erosion Potential).

- (ii) Hydromodification control may include one, or a combination of on-site, regional or sub-regional hydromodification control BMPs, LID strategies, or stream and riparian buffer restoration measures. Any in-stream restoration measure shall not adversely affect the beneficial uses of the natural drainage systems.
 - (i) Natural drainage systems that are subject to the hydromodification assessments and controls as described in this Part of the Order, include all drainages that have not been improved (e.g., channelized or armored with concrete, shotcrete, or rip-rap) or drainage systems that are tributary to a natural drainage system, except as provided in Part [TBD-- Exemptions to Hydromodification Controls, see below]. The clearing or dredging of a natural drainage system does not constitute an "improvement."
 - (iii) Until the State Water Resources Control Board or the Regional Water Board adopts a final Hydromodification Policy or criteria, Permittees shall implement the Interim Hydromodification Control Criteria, described in Part [TBD] to control the potential adverse impacts of changes in hydrology that may result from new development and redevelopment projects identified in Part [TBD].
- (b) Exemptions to Hydromodification Controls. Permittees may exempt the following New Development and Redevelopment projects from implementation of hydromodification controls where assessments of downstream channel conditions and proposed discharge hydrology indicate that adverse hydromodification effects to present and future beneficial uses of Natural Drainage Systems are unlikely:
- (ii) Projects that are replacement, maintenance or repair of a Permittee's existing flood control facility, storm drain, or transportation network.
 - (iii) Redevelopment Projects in the Urban Core that do not increase the effective impervious area or decrease the

- infiltration capacity of pervious areas compared to the pre-project conditions.
- (iv) Projects that have any increased discharge directly or via a storm drain to a sump, lake, area under tidal influence, into a waterway that has a 100-year peak flow (Q100) of 25,000 cfs or more, or other receiving water that is not susceptible to hydromodification impacts.
 - (v) Projects that discharge directly or via a storm drain into concrete or otherwise engineered (not natural) channels (e.g., channelized or armored with rip rap, shotcrete, etc.), which, in turn, discharge into receiving water that is not susceptible to hydromodification impacts (as in Part [TBD] above).
- (c) Interim Hydromodification Control Criteria. The Interim Hydromodification Control Criteria to protect natural drainage systems until the State or Regional Water Board adopts a final Hydromodification Policy or criteria are as follows:
- (i) Except as provided for in Part [TBD], projects disturbing an area greater than 1 acre but less than 50 acres within natural drainage systems will be presumed to meet pre-development hydrology if one of the following demonstrations is made:
 1. The project is designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and use, the stormwater volume from the runoff of the 95th percentile storm, or
 2. The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour rainfall event. This condition may be substantiated by simple screening models, including those described in *Hydromodification Effects on Flow Peaks and Durations in Southern California Urbanizing Watersheds* (Hawley et al., 2011) or other models acceptable to the Executive Officer of the Regional Water Board, or
 3. The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study and the equation presented in Attachment [TBD].

- (ii) Projects disturbing 50 acres or more within natural drainage systems will be presumed to meet pre-development hydrology based on the successful demonstration of one of the following conditions:
 1. The site infiltrates on-site at least the runoff from a 2-year, 24-hour storm event, or
 2. The runoff flow rate, volume, velocity, and duration for the post-development condition does not exceed the pre-development condition for the 2-year, 24-hour rainfall events. These conditions must be substantiated by hydrologic modeling acceptable to the Executive Officer of the Regional Water Board, or
 3. The Erosion Potential (E_p) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study and the equation presented in Attachment [TBD].

(d) Final Criteria

- (i) Each Permittee shall develop and implement watershed specific HCPs no later than (TBD) after the State Water Board issues final a Hydromodification Policy or criteria.
- (ii) The HCP shall identify:
 1. Stream classifications
 2. Flow rate and duration control methods
 3. Sub-watershed mitigation strategies
 4. Stream and/or riparian buffer restoration measures, which will maintain the stream and tributary Erosion Potential at 1 unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and prevent damage to stream habitat in natural drainage system tributaries.
- (iii) The HCP shall contain the following elements:
 1. Hydromodification Management Standards
 2. Natural Drainage Areas and Hydromodification Management Control Areas
 3. New Development and Redevelopment Projects subject to the HCP

4. Description of authorized Hydromodification Management Control BMPs
5. Hydromodification Management Control BMP Design Criteria
6. For flow duration control methods, the range of flows to control for, and goodness of fit criteria
7. Allowable low critical flow, Q_c , which initiates sediment transport
8. Description of the approved Hydromodification Model
9. Any alternate Hydromodification Management Model and Design
10. Stream Restoration Measures Design Criteria
11. Monitoring and Effectiveness Assessment
12. Record Keeping
13. The HCP shall be deemed in effect upon Executive Officer approval.

vi. Watershed Equivalence.

Regardless of the methods through which Permittees allow project applicants to implement alternative compliance measures, the subwatershed-wide (defined as draining to the same HUC-12 hydrologic area in the Basin Plan) result of all development must be at least the same level of water quality protection as would have been achieved if all projects utilizing these alternative compliance provisions had complied with Part [TBD] (Integrated Water Quality/Flow Reduction/Resource Management Criteria).

vii. Annual Report

Each Permittee shall provide in their annual report to the Regional Water Board a list of mitigation project descriptions and pollutant and flow reduction analyses (compiled from design specifications submitted by project applicants and approved by the Permittee(s)) comparing the expected aggregate results of alternative compliance projects to the results that would otherwise have been achieved by retaining on site the SWQDv.

d. Implementation

i. Local Ordinance Equivalence

A local LID ordinance that does not fully incorporate the applicable requirements of this Order, shall be submitted to the Executive Officer of the Regional Water Board for approval, within X months after the Order effective date. The Executive Officer shall assess whether the Permittee has provided reasonable assurance that the alternative requirements in the local ordinance will provide equal or greater reduction in storm water discharge pollutant loading and volume as would have been obtained through strict conformance with Part [TBD] (Integrated Water Quality/Flow Reduction Resources Management Criteria) or Part [TBD] (Alternative Compliance Measures for Technical Infeasibility or Opportunity for Regional Groundwater Replenishment) of this Order and, if applicable, Part [TBD] (Hydromodification (Flow/Volume Duration) Control Criteria). Local ordinances that do not strictly conform to the provisions of this Order must be approved by the Executive Officer of the Regional Water Board as being "equivalent" in effect to the applicable provisions of this Order.

ii. Project Coordination

- (1) Each Permittee shall facilitate a process for effective approval of post-construction stormwater control measures. The process shall include:
 - (a) Detailed LID site design and BMP review including BMP sizing calculations, BMP pollutant removal performance, and municipal approval; and
 - (b) An established structure for communication and delineated authority between and among municipal departments that have jurisdiction over project review, plan approval, and project construction through memoranda of understanding (MOU) or an equivalent agreement.

iii. Maintenance Agreement and Transfer

- (1) Prior to issuing approval for final occupancy, each Permittee shall require that all new development and redevelopment projects subject to post-construction BMP requirements provide an operation and maintenance plan and verification of ongoing maintenance provisions for LID practices, Treatment Control BMPs, and Hydromodification Control BMPs including but not limited to: final map conditions, legal agreements, covenants, conditions or restrictions, CEQA mitigation requirements, conditional use permits, and/ or other legally binding maintenance agreements.

- (a) Verification at a minimum shall include the developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either:
- (i) A signed statement from the public entity assuming responsibility for BMP maintenance; or
 - (ii) Written conditions in the sales or lease agreement, which require the property owner or tenant to assume responsibility for BMP maintenance and conduct a maintenance inspection at least once a year; or
 - (iii) Written text in project covenants, conditions, and restrictions (CCRs) for residential properties assigning BMP maintenance responsibilities to the Home Owners Association (HOA); or
 - (iv) Any other legally enforceable agreement or mechanism that assigns responsibility for the maintenance of BMPs.
- (2) Each Permittee shall require all development projects subject to post-construction BMP requirements to provide a plan for the operation and maintenance of all structural and treatment controls. The plan shall be submitted for examination of relevance to keeping the BMPs in proper working order. Where BMPs are transferred to Permittee for ownership and maintenance, the plan shall also include all relevant costs for upkeep of BMPs in the transfer. Operation and Maintenance plans for private BMPs shall be kept on-site for periodic review by Permittee inspectors.

iv. Tracking, Inspection, and Enforcement of Post-Construction BMPs

- (1) Each Permittee shall implement a tracking system and an inspection and enforcement program for new development and redevelopment post-construction stormwater BMPs as set forth in Part [TBD] no later than X year after Order adoption date.
- (a) Implement a GIS or other electronic system for tracking projects that have been conditioned for post-construction BMPs. The electronic system, at a minimum, should contain the following information:
- (i) Municipal Project ID
 - (ii) State WDID No
 - (iii) Project Acreage
 - (iv) BMP Type and Description
 - (v) BMP Location (coordinates)

- (vi) Date of Acceptance
 - (vii) Date of Maintenance Agreement
 - (viii) Maintenance Records
 - (ix) Inspection Date and Summary
 - (x) Corrective Action
 - (xi) Date Certificate of Occupancy Issued
 - (xii) Replacement or Repair Date
- (b) Inspect all development sites upon completion of construction and prior to the issuance of occupancy certificates to ensure proper installation of LID measures, structural BMPs, treatment control BMPs and hydromodification control BMPs. The inspection may be combined with other inspections provided it is conducted by trained personnel.
- (c) Verify proper maintenance and operation of post-construction BMPs previously approved for new development and redevelopment and operated by the Permittee. The post-construction BMP maintenance inspection program shall incorporate the following elements:
- (i) Post-construction BMP Maintenance Inspection checklist
 - (ii) Inspection at least once every 2 years after project completion, of post-construction BMPs to assess operation conditions with particular attention to criteria and procedures for post-construction treatment control and hydromodification control BMP repair, replacement, or re-vegetation.
- (d) For post-construction BMPs operated and maintained by parties other than the Permittee, the Permittee shall require annual reports by the other parties demonstrating proper maintenance and operations.
- (e) Undertake enforcement action per progressive enforcement procedures (Part TBD) as appropriate based on the results of the inspection.

9. Development Construction Program

- a. Each Permittee shall develop, implement, and enforce a construction program that:
 - i. Prevents illicit construction-related discharges of pollutants into the MS4 and receiving waters.

- (5) Current construction phase.
- (6) The required inspection frequency.
- (7) The project start date and anticipated completion date.
- (8) Whether the project has coverage under the Construction General Permit.
- (9) The date the Permittee approved the erosion and sediment control plan.
- (10) Post-Construction Structural BMPs subject to Operation and Maintenance Requirements.

f. Construction Plan Review and Approval Procedures

- i. Each Permittee shall develop procedures to review and approve relevant construction plan documents.
- ii. The review procedures shall be developed and implemented such that the following minimum requirements are met:
 - (1) Prior to issuing a grading or building permit, each Permittee shall require each operator of a construction activity within its jurisdiction to prepare and submit an Erosion and Sediment Control Plan (ESCP) prior to the disturbance of land for the Permittee's review and written approval. The construction site operator shall be prohibited from commencing construction activity prior to receipt of written approval by the Permittee. Each Permittee shall not approve any erosion and sediment control plan unless it contains appropriate site-specific construction site BMPs that meet the minimum requirements of a Permittee's erosion and sediment control ordinance.
 - (2) ESCPs must include the elements of a Stormwater Pollution Prevention Plan (SWPPP). SWPPPs prepared in accordance with the requirements of the Construction General Permit can be accepted as ESCPs for construction sites larger than 1 acre.
 - (3) At a minimum, the ESCP/SWPPP must address the following elements:
 - (a) Methods to minimize the footprint of the disturbed area and to prevent soil compaction outside of the disturbed area
 - (b) Methods used to protect native vegetation and trees
 - (c) Sediment/Erosion Control
 - (d) Controls to prevent tracking on and off the site
 - (e) Non-stormwater controls (e.g., vehicle washing, dewatering, etc.)
 - (f) Materials Management (delivery and storage)

- (g) Spill Prevention and Control
 - (h) Waste Management (e.g., concrete washout/waste management; sanitary waste management)
 - (i) Rain Event Action Plan (REAP) when soil disturbance activities will be conducted during the wet-weather season.
- (4) The ESCP/SWPPP must include the rationale for the selection and design of the proposed BMPs, including quantifying the expected soil loss from different BMPs.
 - (5) Each Permittee shall require that for projects disturbing 1 acre or more, the ESCP/SWPPP is developed and certified by a *Qualified SWPPP Developer (QSD)*.
 - (6) Each Permittee shall require that all structural BMPs be designed by a California licensed engineer.
 - (7) Each Permittee shall require that for all projects, the landowner or the landowner's agent sign a statement on the Local ESCP/SWPPP to the effect:
 - (a) *"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/ or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/ or adequately implement the ESCP/ SWPPP may result in revocation of grading and/ or other permits or other sanctions provided by law."*
 - (8) Prior to issuing a grading or building permit, each Permittee must verify that the construction site operators have existing coverage under applicable permits, including, but not limited to the Construction General Permit, State Water Board 401 Water Quality Certification, U.S. Army Corp 404 permit, and California Department of Fish and Game 1600 Agreement.
 - (9) Each Permittee shall develop and implement a checklist to be used to conduct and document review of each ESCP/SWPPP.

g. BMP Implementation Level

- i. BMPs must be consistent with the applicable California Stormwater Quality Association (CASQA) Best Management Practices

Handbooks (or the Caltrans Handbook for public transportation related construction projects) tailored to the risks posed by the project. Projects are ranked from Low Risk (Risk 1) to High Risk (Risk 3). Project risks are calculated based on the potential for erosion from the site and the sensitivity of the receiving waterbody. Receiving waterbodies that are listed on the Clean Water Act (CWA) Section 303(d) list for sediment or siltation are considered high risk. Likewise, waterbodies with designated beneficial uses of SPWN, COLD, and MIGR are also considered to be high risk. The combined (sediment/receiving water) site risk may be calculated using the methods provided in Attachment 1 of the Construction General Permit.

- ii. Applicable BMP controls for projects of different sizes are referenced in Tables [TBD] of this Order. Applicable BMPs for enhanced requirements for high-risk sites are referenced in Table [TBD] of this Order. Applicable BMPs for paving projects are described in Tables [TBD] of this Order.
- iii. For construction sites less than one acre, each Permittee shall require the implementation of an effective combination of erosion and sediment control BMPs from Table [TBD] to prevent erosion and sediment loss, and the discharge of construction wastes.
- iv. The applicable BMPs listed in Tables [TBD – TBD] refer to the January 2003 version of the California Stormwater BMP Handbook, Industrial and Commercial. Permittees are authorized to substitute the listed BMPs with the equivalent BMP contained in the most current version of the California Stormwater BMP Handbook, Industrial and Commercial, throughout the term of this Order.

Solid Waste Management	WM-5	WM-5

¹ Applies to public roadway projects.

**Table [TBD] Minimum Required BMPs for Roadway Paving or Repair Operation
(For Private or Public Projects)**

1.	Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions.
2.	Install gravel bags and filter fabric or other equivalent inlet protection at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat.
3.	Prevent the discharge of release agents including soybean oil, other oils, or diesel to the stormwater drainage system or receiving waters.
4.	Minimize non stormwater runoff from water use for the roller and for evaporative cooling of the asphalt.
5.	Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.
6.	Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
7.	Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
8.	Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
9.	Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
10.	Minimize airborne dust by using water spray or other approved dust suppressant during grinding.
11.	Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near stormwater drainage system or receiving waters.
12.	Protect stockpiles with a cover or sediment barriers during a rain.

h. Construction Site Inspection and Enforcement

- i. Each Permittee shall use its legal authority to implement procedures for inspecting public and private construction projects and conducting enforcement if necessary.
- ii. The inspection procedures shall be implemented as follows:
 - (1) Inspect the public and private construction projects as specified in Table [TBD] below:

Table [TBD]: Inspection Frequencies

Site	Inspection Frequency Shall Occur
a. All sites one (1) acre or larger that discharge to a tributary listed by the state as an impaired water for sediment or turbidity under the CWA § 303(d)	(1) when two or more consecutive days with greater than 50% chance of rainfall are predicted by NOAA ⁶ , (2) within 48 hours of a ½-inch rain event and at (3) least once every two weeks
b. Other sites one (1) acre or more determined to be a significant threat to water quality*	
c. All other construction sites with one (1) acre or more of soil disturbance not meeting the criteria above	At least monthly
d. Construction sites less than one (1) acre in size	As needed based on the evaluation of the factors that are a threat to water quality*
*In evaluating the threat to water quality, the following factors shall be considered: soil erosion potential; site slope; project size and type; sensitivity of receiving waterbodies; proximity to receiving waterbodies; non-stormwater discharges; past record of non-compliance by the operators of the construction site; and any water quality issues relevant to the particular MS4.	

(2) Each Permittee shall inspect all phases of construction as follows:

(a) Prior to Land Disturbance

Prior to allowing an operator to commence land disturbance, each Permittee shall perform an inspection to ensure all necessary erosion and sediment structural and non-structural BMP materials and procedures are available per the erosion and sediment control plan.

(b) Grading and Land Development⁷

During grading and land development activities, conduct inspections in accordance with the frequencies specified in Part [TBD] Table [TBD] of this Order.

(c) Streets and Utilities⁸

⁶ www.srh.noaa.gov/forecast

⁷ Activities include cuts and fills, rough and finished grading; alluvium removals; canyon cleanouts; rock undercuts; keyway excavations; and stockpiling of select material for capping operations.

⁸ Activities include excavation and street paving, lot grading, curbs, gutters and sidewalks, public utilities, public water facilities including fire hydrants, public sanitary sewer systems, storm sewer system and/or other drainage improvement.

During street and utilities activities, conduct inspections in accordance with the frequencies specified in Table [TBD] of this Order.

(d) Vertical Construction⁹

During vertical construction activities, conduct inspections in accordance with the frequencies specified in Table [TBD] of this Order.

(e) Final Landscaping and Site Stabilization¹⁰

At the conclusion of the project, each Permittee shall inspect 10% of all projects to ensure that all graded areas have reached final stabilization and that all trash, debris, and construction materials, and temporary erosion and sediment BMPs are removed.

(3) Each Permittee shall develop and implement a Progressive Enforcement Policy to ensure that facilities are brought into compliance with all stormwater requirements within a reasonable time period as specified below.

(a) Follow-up inspections

In the event that a Permittee determines, based on an inspection conducted, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement actions which, at a minimum, shall include a follow-up inspection within 2 weeks from the date of the initial inspection.

(b) Enforcement action

In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take enforcement action as established through authority in its municipal code and ordinances or through the judicial system.

(c) Each Permittee shall maintain records and make them available on request to the Regional Water Board, including inspection reports, warning letters, notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

(4) Certificate of Occupancy

Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each Permittee shall inspect the

⁹ The build out of structures from foundations to roofing, including rough landscaping.

¹⁰ All soil disturbing activities at each individual parcel within the site have been completed.

constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order.

(5) Inspection and Enforcement Standard Operating Procedures

Each Permittee shall develop, implement, and revise as necessary, standard operating procedures that identify the inspection and enforcement procedures each Permittee will follow. Inspections of construction sites, and the standard operating procedures, shall include, but are not limited to:

- (a) Verification of active coverage under the Construction General Permit for projects disturbing 1 acre or more, or that are part of a planned development that will disturb 1 acre or more.
- (b) Review of the applicable ESCP/SWPPP and inspection of the construction site to determine whether all BMPs have been selected, installed, implemented, and maintained according to the approved plan.
- (c) Assessment of compliance with each Permittee's legal authority related to stormwater runoff, including the implementation and maintenance of minimum BMPs designated in each Permittee's legal authority.
- (d) Assessment of the appropriateness of the planned BMPs and their effectiveness.
- (e) Visual observation and record keeping of non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff.
- (f) Development of a written or electronic inspection report generated from an inspection checklist used in the field.
- (g) Tracking of the number of inspections for the inventoried construction sites throughout the reporting period to verify that the sites are inspected at the minimum frequencies required in Table [TBD] of this Order.

i. Permittee Staff Training

- i. Each Permittee shall ensure that all staff whose primary job duties are related to implementing the construction stormwater program is adequately trained.
- ii. Each Permittee may conduct in-house training or contract with consultants. Training shall be provided to the following staff positions of the MS4:

(1) Plan Reviewers and Permitting Staff

Ensure staff and consultants are trained as qualified individuals, knowledgeable in the technical review of local erosion and sediment control plans and the key objectives of the State Water Board Qualified SWPPP Developer (QSD) program. Permittees may provide internal training to staff or require staff to obtain QSD certification.

(2) Erosion Sediment Control/Stormwater Inspectors

Each Permittee shall ensure that its inspectors are knowledgeable in inspection procedures consistent with the State Water Board sponsored program QSD or a Qualified SWPPP Practitioner (QSP) or that a designated person on staff who has been trained in the key objectives of the QSD/QSP programs supervises inspection operations. Each Permittee may provide internal training to staff or require staff to obtain QSD/QSP certification.

(3) Third-Party Plan Reviewers, Permitting Staff, and Inspectors

If the Permittee utilizes outside parties to conduct inspections and/or review plans, each Permittee shall ensure these staff are trained per the requirements listed above.

j. Education Outreach to Development Community

i. Each Permittee shall develop and distribute educational materials to construction site operators.

ii. Each Permittee shall do the following:

(1) Each year, provide information on training opportunities for construction operators on BMP selection, installation, implementation, and maintenance as well as overall program compliance.

(2) Develop or utilize existing outreach tools (i.e. brochures, posters, etc.) aimed at educating construction operators on appropriate selection, installation, implementation, and maintenance of stormwater BMPs, as well as overall program compliance.

(3) Distribute appropriate outreach materials to all construction operators who will be disturbing land within the MS4 boundary. Each Permittee's contact information and website shall be included in these materials.

(4) Update the existing website to include information on appropriate selection, installation, implementation, and maintenance of BMPs, as well as overall program compliance.

10. Public Agency Activities Program

- a. Each Permittee shall implement a Public Agency Activities Program to minimize stormwater pollution impacts from Permittee-owned or operated facilities and activities and to identify opportunities to reduce stormwater pollution impacts from areas of existing development. Requirements for Public Agency Facilities and Activities consist of the following components:

- i. Public Construction Activities Management
- ii. Public Facility Inventory
- iii. Inventory of Existing Development for Retrofitting Opportunities
- iv. Public Facility and Activity Management
- v. Vehicle and Equipment Wash Areas
- vi. Landscape, Park, and Recreational Facilities Management
- vii. Storm Drain Operation and Maintenance
- viii. Streets, Roads, and Parking Facilities Maintenance
- ix. Emergency Procedures
- x. Municipal Employee and Contractor Training

b. Public Construction Activities Management

- i. Each Permittee shall implement and comply with the Planning and Land Development Program requirements in Part [TBD] of this Order at Permittee-owned or operated (i.e., public or Permittee sponsored) construction projects that are categorized under the project types identified in Part [TBD] of this Order.
- ii. Each Permittee shall implement and comply with the appropriate Development Construction Program requirements in Part [TBD] of this Order at Permittee-owned or operated construction projects as applicable.
- iii. For Permittee-owned or operated projects (including those under a capital improvement project plan) that disturb less than one acre of soil, each Permittee shall require the development and implementation of an ESCP. The ESCP shall include an effective combination of erosion and sediment control BMPs from Table [TBD] (see Construction Development Program).
- iv. Each Permittee shall obtain separate coverage under the Construction General Permit for all Permittee-owned or operated construction sites that require coverage.

c. Public Facility Inventory

- i. Each Permittee shall maintain an updated watershed-based inventory and map of all Permittee-owned or operated (i.e., public) facilities within its jurisdiction that are potential sources of stormwater pollution. The incorporation of facility information into a GIS is recommended. Sources to be tracked include but are not limited to the following:
- (1) Animal control facilities
 - (2) Chemical storage facilities
 - (3) Composting facilities
 - (4) Equipment storage and maintenance facilities (including landscape maintenance-related operations)
 - (5) Fueling or fuel storage facilities (including municipal airports)
 - (6) Hazardous waste disposal facilities
 - (7) Hazardous waste handling and transfer facilities
 - (8) Incinerators
 - (9) Landfills
 - (10) Materials storage yards
 - (11) Pesticide storage facilities
 - (12) Public buildings, including schools, libraries, police stations, fire stations, Permittee (municipal) buildings, restrooms, and similar buildings
 - (13) Public parking lots
 - (14) Public golf courses
 - (15) Public swimming pools
 - (16) Public parks
 - (17) Public works yards
 - (18) Public marinas
 - (19) Recycling facilities
 - (20) Solid waste handling and transfer facilities
 - (21) Vehicle storage and maintenance yards
 - (22) Flood control facilities (e.g., debris basins, sediment placement sites)
 - (23) All other Permittee-owned or operated facilities tributary to a waterbody segment subject to a TMDL, where the facility

generates pollutants for which the waterbody segment is impaired.

(24) All other Permittee-owned or operated facilities or activities that each Permittee determines may contribute a substantial pollutant load to the MS4.

- ii. Each Permittee shall include the following minimum fields of information for each Permittee-owned or operated facility in its watershed-based inventory and map.
 - (1) Name of facility
 - (2) Name of facility manager and contact information
 - (3) Address of facility (physical and mailing)
 - (4) A narrative description of activities performed and principal products used at each facility and status of exposure to stormwater.
 - (5) MS4 outfalls that receive, or potentially receive discharges from the facility, and corresponding receiving water(s).
 - (6) Identification of whether the facility is tributary to a waterbody segment subject to a TMDL, where the facility generates pollutants for which the waterbody segment is impaired.
 - (7) Coverage under the Industrial General Permit or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Water Board pertaining to stormwater discharges.
- iii. Each Permittee shall update its inventory and map at least annually. The update shall be accomplished through collection of new information obtained through field activities or through other readily available inter and intra-agency informational databases (e.g., property management, land-use approvals, and similar information).

d. Inventory of Existing Development for Retrofitting Opportunities

- i. Each Permittee shall develop an inventory of retrofitting opportunities that meets the requirements of this Part. The goals of the existing development retrofitting inventory are to address the impacts of existing development through retrofit projects that reduce the discharges of stormwater pollutants into the MS4 and prevent discharges from the MS4 from causing or contributing to a violation of water quality standards.
- ii. Each Permittee shall identify and inventory existing areas of development (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting. Potential retrofitting candidates shall include but are not limited to:

Staff Working Proposal
Greater Los Angeles County MS4 Permit

- (1) Areas of existing development that generate pollutants subject to a TMDL for the receiving water;
 - (2) Areas of existing development tributary to receiving waters that are significantly eroded; and
 - (3) Areas of development tributary to an ASBS or SWQPA.
- iii.** Each Permittee shall evaluate and rank the inventoried areas of existing developments to prioritize retrofitting. Criteria for evaluation may include but are not limited to:
- (1) Feasibility;
 - (2) Cost effectiveness;
 - (3) Pollutant removal effectiveness;
 - (4) Tributary area potentially treated;
 - (5) Maintenance requirements;
 - (6) Landowner cooperation;
 - (7) Neighborhood acceptance;
 - (8) Aesthetic qualities;
 - (9) Efficacy at addressing concern; and
 - (10) Potential improvements to public health and safety.
- iv.** Each Permittee shall consider the results of the evaluation in the following programs:
- (1) The Permittee's reasonable assurance program (RAP): Highly feasible projects expected to benefit water quality should be given a high priority to implement source control and treatment control BMPs in a Permittee's RAP.
 - (2) Off-site mitigation for New and Significant Re-development: Each Permittee shall consider high priority retrofit projects as candidates for off-site mitigation projects per Part [TBD].
 - (3) Where feasible, at the discretion of the Permittee, the existing development retrofitting program may be coordinated with flood control projects and other infrastructure improvement programs per Part [TBD].

- v. Each Permittee shall cooperate with private landowners to encourage site specific retrofitting projects. Each Permittee shall consider the following practices in cooperating with private landowners to retrofit existing development:
 - (1) Demonstration retrofit projects;
 - (2) Retrofits on public land and easements that treat runoff from private developments;
 - (3) Education and outreach;
 - (4) Subsidies for retrofit projects;
 - (5) Requiring retrofit projects as enforcement, mitigation or ordinance compliance;
 - (6) Public and private partnerships;
 - (7) Fees for existing discharges to the MS4 and reduction of fees for retrofit implementation.

e. Public Agency Facility and Activity Management

- i. Each Permittee shall obtain separate coverage under the Industrial General Permit for all Permittee-owned or operated facilities where industrial activities are conducted that require coverage under the Industrial General Permit.
- ii. Each Permittee shall implement the following measures for flood management projects:
 - (1) Develop procedures to assess the impacts of flood management projects on the water quality of receiving waterbodies;
 - (2) Evaluate existing structural flood control facilities to determine if retrofitting the facility to provide additional pollutant removal from stormwater is feasible; and
 - (3) For the Los Angeles County Flood Control District, ensure that that maintenance of earth-bottom flood control channels is conducted in accordance with Regional Water Board Order No. R4-2010-0021.
- iii. Each Permittee shall implement and maintain the general and activity specific BMPs listed in Table [TBD] (BMPs for Public Agency Facilities and Activities) when such activities occur at Permittee-owned or operated facilities and field activities (e.g., project sites) including but not limited to the facility types listed in Part [TBD]

above, and at any area that includes the activities described in Table [TBD], or that have the potential to discharge pollutants in stormwater.

- iv. Any contractors hired by the Permittee to conduct Public Agency Activities (e.g., municipal maintenance) shall be contractually required to implement and maintain the general and activity specific BMPs listed in Table [TBD]. Each Permittee shall conduct oversight of contractor activities to ensure these BMPs are implemented and maintained.

**Table [TBD] - BMPs for Public Agency Facilities and Activities
(from the Caltrans Stormwater Quality Handbook Maintenance Staff Guide
Appendix B)**

General and Activity Specific BMPs	Page
General BMPs	B-4
Scheduling and Planning	B-4
Spill Prevention and Control	B-5
Sanitary/Septic Waste Management	B-5
Material Use	B-6
Safer Alternative Products	B-6
Vehicle/Equipment Cleaning, Fueling and Maintenance	B-7
Illicit Connection Detection, Reporting and Removal	B-7
Illegal Spill Discharge Control	B-7
Maintenance Facility Housekeeping Practices	B-8
Flexible Pavement	B-9
Asphalt Cement Crack and Joint Grinding/ Sealing	B-9

f. Vehicle and Equipment Washing

- i. Each Permittee shall implement and maintain the activity specific BMPs listed in Table [TBD] (BMPs for Public Agency Facilities and Activities) for all vehicle and equipment washing; including fire fighting and emergency response vehicles.
- ii. Each Permittee shall prevent discharges of wash waters from vehicle and equipment washing by implementing any of the following measures at existing facilities with vehicle or equipment wash areas:
 - (1) Self-contain, and haul off for disposal; or
 - (2) Equip with a clarifier or an alternative pre-treatment device and plumb to the sanitary sewer in accordance with applicable waste water provider regulations
- iii. Each Permittee shall ensure that any municipal facilities constructed, redeveloped, or replaced shall not discharge wastewater from vehicle and equipment wash areas to the MS4 by plumbing all areas to the sanitary sewer in accordance with applicable waste water provider regulations, or self-containing all waste water/ wash water and hauling to a point of legal disposal.

g. Landscape, Park, and Recreational Facilities Management

- i. Each Permittee shall implement and maintain the activity specific BMPs listed in Table [TBD] (BMPs for Public Agency Facilities and Activities) for all public right-of-ways, flood control facilities and open channels, lakes and reservoirs, and landscape, park, and recreational facilities and activities.
- ii. Integrated Pest Management (IPM) is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of

resistant varieties. Each Permittee shall implement an IPM program that includes the following:

- (1) Pesticides are used only if monitoring indicates they are needed, and pesticides are applied according to applicable permits and established guidelines.
- (2) Treatments are made with the goal of removing only the target organism.
- (3) Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial non-target organisms, and the environment.
- (4) The use of pesticides, including Organophosphates and Pyrethroids, does not threaten water quality.
- (5) Partner with other agencies and organizations to encourage the use of IPM.
- (6) Adopt and verifiably implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) for Public Agency Facilities and Activities.
- (7) Policies, procedures, and ordinances shall include commitments and a schedule to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures:
 - (a) Prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units.
 - (b) Quantify pesticide use by staff and hired contractors.
 - (c) Demonstrate measurable reductions in pesticide use.

iii. Each Permittee shall implement the following requirements:

- (1) Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2011-003-DWQ) (**Aquatic Animal Invasive Species Control**), WQ Order No. 2011-0002-DWQ (**Vector Control**), and WQ Order No. 2004-0009-DWQ (**Weed Control**).
- (2) Use a standardized protocol for the routine and non-routine application of pesticides (including pre-emergents), and fertilizers.
- (3) Ensure there is no application of pesticides or fertilizers (1) when two or more consecutive days with greater than 50% chance of rainfall are predicted by NOAA¹¹, (2) within 48 hours

¹¹ www.srh.noaa.gov/forecast

of a 1/2-inch rain event, or (3) when water is flowing off the area where the application is to occur. This requirement does not apply to the application of aquatic pesticides described in Part [TBD] above.

- (4) Ensure that no banned or unregistered pesticides are stored or applied.
- (5) Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category.
- (6) Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs; and
- (7) Store pesticides and fertilizers indoors or under cover on paved surfaces, or use secondary containment.
 - (a) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills.
 - (b) Regularly inspect storage areas.

h. Storm Drain Operation and Maintenance

- i. Each Permittee shall implement and maintain the activity specific BMPs listed in Table [TBD] for storm drain operation and maintenance.
- ii. Ensure that all material removed from the MS4 does not reenter the system. Solid material shall be dewatered in a contained area and liquid material shall be disposed in accordance with any of the following measures:
 - (1) Self-contain, and haul off for legal disposal; or
 - (2) Equip with a clarifier or an alternative pre-treatment device; and plumb to the sanitary sewer in accordance with applicable waste water provider regulations.
- iii. Catch Basin Cleaning
 - (1) In areas that are not subject to a trash TMDL, each Permittee shall determine priority areas and shall update its map or list of Catch Basins with their GPS coordinates and priority:

Priority A: Catch basins that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Catch basins that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Catch basins that are designated as generating low volumes of trash and/or debris.

The map or list shall contain the rationale or data to support priority designations.

- (2) In areas that are not subject to a trash TMDL, each Permittee shall inspect catch basins according to the following schedule:

Priority A: A minimum of 3 times during the wet season (October 1 through April 15) and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

Priority C: A minimum of once per year.

Catch basins shall be cleaned as necessary on the basis of inspections. At a minimum, Permittees shall ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out. Permittees shall maintain inspection and cleaning records for Regional Water Board review.

- (3) In areas that are subject to a trash TMDL, the subject Permittees shall implement the applicable provisions in Part 7.

iv. Trash Management at Public Events

- (1) Each Permittee shall require the following measures for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, including events located in areas that are subject to a trash TMDL:
- (a) Proper management of trash and litter generated; and
 - (b) Arrangement for temporary screens to be placed on catch basins; or
 - (c) Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event.

v. Trash Receptacles

- (1) Each Permittee shall ensure trash receptacles, or equivalent trash capturing devices, are covered in areas newly identified as high trash generation areas within its jurisdiction.
- (2) Each Permittee shall ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow.

vi. Catch Basin Labels and Open Channel Signage

- (1) Each Permittee shall label all storm drain inlets that they own with a legible “no dumping” message.
- (2) Each Permittee shall inspect the legibility of the stencil or label nearest each inlet prior to the wet season every year.
- (3) Each Permittee shall record all catch basins with illegible stencils and re-stencil or re-label within 15 days of inspection.
- (4) Each Permittee shall post signs, referencing local code(s) that prohibit littering and illegal dumping, at designated public access points to open channels, creeks, urban lakes, and other relevant waterbodies.

vii. Additional Trash Management Practices

- (1) In areas that are not subject to a trash TMDL, each Permittee shall install trash excluders, or equivalent devices, on or in catch basins or outfalls to prevent the discharge of trash to the MS4 or receiving water no later than two years after Order adoption date in areas defined as Priority A and Priority B (Part [TBD]) except at sites where the application of such BMP(s) alone will cause flooding. Lack of maintenance that causes flooding is not an acceptable exception to the requirement to install BMPs. Alternatively each Permittee may implement alternative or enhanced BMPs beyond the provisions of this Order (such as but not limited to increased street sweeping, adding trash cans near trash generation sites, prompt enforcement of trash accumulation, increased trash collection on public property, increased litter prevention messages or trash nets within the MS4) that provide substantially equivalent removal of trash. Each Permittee shall demonstrate that BMPs, which substituted for trash excluders, provide equivalent trash removal performance as excluders. When outfall trash capture is provided, revision of the schedule for inspection and cleanout of catch basins in Part [TBD] may be proposed by the Permittee for approval by the Executive Officer.

viii. Storm Drain Maintenance

Each Permittee shall implement a program for Storm Drain Maintenance that includes the following:

- (1) Visual monitoring of Permittee-owned open channels and other drainage structures, including debris basins, for debris at least annually.
- (2) Remove trash and debris from open channels and debris basins a minimum of once per year before the wet season.

- (3) Eliminate the discharge of contaminants during MS4 maintenance and clean outs.
 - (4) Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of.
- ix. Infiltration from Sanitary Sewer to MS4/Preventive Maintenance**
- (1) Each Permittee shall implement controls and measures to prevent and eliminate infiltration of seepage from sanitary sewers to MS4s through thorough, routine preventive maintenance of the MS4.
 - (2) Each Permittee that operates both a municipal sanitary sewer system and a MS4 must implement controls and measures to prevent and eliminate infiltration of seepage from the sanitary sewers to the MS4s that must include overall sanitary sewer and MS4 surveys and thorough, routine preventive maintenance of both.
 - (3) Each Permittee shall implement controls to limit infiltration of seepage from sanitary sewers to the MS4 where necessary. Such controls must include:
 - i. Adequate plan checking for construction and new development;
 - ii. Incident response training for its municipal employees that identify sanitary sewer spills;
 - iii. Code enforcement inspections;
 - iv. MS4 maintenance and inspections;
 - v. Interagency coordination with sewer agencies; and
 - vi. Proper education of its municipal staff and contractors conducting field operations on the MS4 or its municipal sanitary sewer (if applicable).
 - (4) Each Permittee which owns and /or operates a sanitary sewer system that requires coverage under the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (Order No. 2006-0003-DWQ), shall comply with the provisions and the monitoring requirements associated with this Order.
- x. Permittee Owned Treatment Control BMPs**
- (1) Each Permittee shall implement an inspection and maintenance program for all Permittee owned treatment control BMPs, including post-construction treatment control BMPs.
 - (2) Each Permittee shall ensure proper operation of all treatment control BMPs and maintain them as necessary for proper

operation, including all post-construction treatment control BMPs.

- (3) Any residual water produced by a treatment control BMP and not being internal to the BMP performance when being maintained shall be:
- (a) Hauled away and legally disposed of; or
 - (b) Applied to the land without runoff; or
 - (c) Discharged to the sanitary sewer system (with permits or authorization); or
 - (d) Treated or filtered to remove bacteria, sediments, nutrients, and meet the limitations set in Table TBD (Discharge Limitations for Dewatering Treatment BMPs), prior to discharge to the MS4.

Table TBD - Discharge Limitations for Dewatering Treatment BMPs¹²

Parameter	Units	Limitation
Total Suspended Solids	mg/L	100
Turbidity	NTU	50
Oil and Grease	mg/L	10

i. Streets, Roads, and Parking Facilities Maintenance

- i. Each Permittee shall designate streets and/or street segments within its jurisdiction as one of the following:

Priority A: Streets and/or street segments that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Streets and/or street segments that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Streets and/or street segments that are designated as generating low volumes of trash and/or debris.

- ii. Each Permittee shall perform street sweeping of curbed streets according to the following schedule:

Priority A: Streets and/or street segments that are designated as Priority A shall be swept at least two times per month.

Priority B: Streets and/or street segments that are designated as Priority B shall be swept at least once per month.

¹² Technology based effluent limits.

Priority C: Streets and/or street segments that are designated as Priority C shall be swept as necessary but in no case less than once per year.

iii. Road Reconstruction

Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.

- (1) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall¹³ unless required by emergency conditions.
- (2) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat;
- (3) Prevent the discharge of release agents including soybean oil, other oils, or diesel into the MS4 or receiving waters.
- (4) Prevent non-stormwater runoff from water use for the roller and for evaporative cooling of the asphalt.
- (5) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.
- (6) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
- (7) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
- (8) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
- (9) Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
- (10) Minimize airborne dust by using water spray during grinding.
- (11) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near MS4 or receiving waters.
- (12) Protect stockpiles with a cover or sediment barriers during a rain.

¹³ A probability of precipitation (POP) of 50% is required.

iv. Parking Facilities Maintenance

- (1) Permittee-owned parking lots exposed to stormwater shall be kept clear of debris and excessive oil buildup and cleaned using street sweeping equipment no less than 2 times per month and/or inspected no less than 2 times per month to determine if cleaning is necessary. In no case shall a Permittee-owned parking lot be cleaned less than once a month.

j. Emergency Procedures

Each Permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order as follows:

- i. The Permittee shall abide by all other regulatory requirements, including notification to other agencies as appropriate.
- ii. Where the self-waiver has been invoked, the Permittee shall submit to the Regional Water Board Executive Officer a statement of the occurrence of the emergency, an explanation of the circumstances, and the measures that were implemented to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed.
- iii. Minor repairs of essential public service systems and infrastructure in emergency situations (that can be completed in less than one day) are not subject to the notification provisions. Appropriate BMPs to reduce the threat to water quality shall be implemented.

k. Municipal Employee and Contractor Training

- i. Each Permittee shall, no later than X year after Order adoption and annually thereafter before June 30, train all of their employees and contractors in targeted positions (whose interactions, jobs, and activities affect stormwater quality) on the requirements of the overall stormwater management program to:
 - (1) Promote a clear understanding of the potential for activities to pollute stormwater.
 - (2) Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.
- ii. Each Permittee shall, no later than X year after Order adoption and annually thereafter before June 30, train all of their employees and contractors who use or have the potential to use pesticides or fertilizers (whether or not they normally apply these as part of their work). Training programs shall address:
 - (1) The potential for pesticide-related surface water toxicity.
 - (2) Proper use, handling, and disposal of pesticides.

- (3) Least toxic methods of pest prevention and control, including IPM.
- (4) Reduction of pesticide use.

11. Illicit Connection and Illicit Discharge Elimination Program

a. General

- i. Each Permittee shall continue to implement an Illicit Connection and Illicit Discharge Elimination (IC/ID) Program to detect, investigate, and eliminate IC/IDs to the MS4. The IC/ID Program must be implemented in accordance with the requirements and performance measures specified in this Order.
- ii. As stated in Part [TBD] of this Order, each Permittee must have adequate legal authority to prohibit IC/IDs to the MS4 and enable enforcement capabilities to eliminate the source of IC/IDs.
- iii. Each Permittee's IC/ID Program shall consist of at least the following major program components:
 - (1) An up-to-date municipal separate storm sewer system (MS4) map
 - (2) Procedures for conducting a non-stormwater outfall-based monitoring program to detect IC/IDs
 - (3) Procedures for conducting source investigations for IC/IDs
 - (4) Procedures for eliminating the source of IC/IDs
 - (5) Procedures for public reporting of illicit discharges
 - (6) Spill response plan
 - (7) IC/IDs education and training for Permittee staff

b. MS4 Mapping

- i. Each Permittee shall maintain an up-to-date and accurate electronic MS4 map. If possible, the map should be maintained within a GIS. The MS4 map must show the following, at a minimum:
 - (1) The location of all MS4 outfalls within the Permittee's jurisdictional boundary. The contributing drainage area for each outfall should be clearly discernible. Each MS4 outfall shall be given an alphanumeric identifier, which must be noted on the map. If an outfall is owned by another public entity, the name of the entity shall be recorded on the map. Each mapped MS4 outfall shall be located using a geographic positioning system (GPS) and photographs of the outfall shall be taken to provide baseline information to track operation and maintenance needs over time. Per Part [TBD] (non-stormwater monitoring),

additional attribute data are required for those outfalls determined to have persistent dry weather flows.

- (2) The location and length of all open channels and underground MS4 pipes 18 inches in diameter or greater.
- (3) The location and name of all waterbodies receiving discharges from those MS4 outfalls identified in (1).
- (4) All dry weather diversions installed within the MS4 to direct flows from the MS4 to the sanitary sewer system, including the owner and operator of each diversion.
- (5) Priority areas identified under [Part TBD], below.

- ii. The MS4 map shall be updated annually to reflect current conditions within the MS4.

c. Implementation of Non-Stormwater Outfall-Based Monitoring Program to Detect IC/IDs

- i. Each Permittee shall develop and implement a non-stormwater outfall-based monitoring program consistent with Part [TBD] (non-stormwater outfall-based monitoring program) to detect and eliminate illicit connections and illicit discharges to the MS4. The non-stormwater outfall-based monitoring program shall consist of (1) identification of outfalls with persistent dry weather flows, (2) determination of significant dry weather flows through characterization and field screening, (3) identification of sources of significant dry weather flows, (4) monitoring of unknown or authorized non-stormwater discharges, and (5) annual re-assessment and reporting.
- ii. The non-stormwater outfall-based monitoring program shall be documented with written procedures that provide an explanation of how the program is to be implemented and the procedures must be updated as needed to reflect the Permittee's program.
- iii. Observations and data collected during the implementation of the non-stormwater outfall-based monitoring program shall be maintained in a database or electronic format. The use of a GIS to record observations and data is preferred but not required.
- iv. Each Permittee shall conduct an annual re-assessment of its non-stormwater outfall-based monitoring program to determine whether changes or updates are needed. Where changes are needed, the Permittee shall make the changes in its written program documents and implement these changes in practice.

d. Illicit Discharge Source Investigation and Elimination

- i. Each Permittee shall develop written procedures for conducting investigations to identify the source of all illicit discharges, including procedures to eliminate the discharge once the source is located.
- ii. At a minimum, each Permittee shall conduct an investigation(s) to identify and locate the source within 48 hours of becoming aware of the illicit discharge.
- iii. When conducting investigations, each Permittee shall comply with the following:
 - (1) Illicit discharges suspected of being sanitary sewage and/or significantly contaminated shall be investigated first.
 - (2) Each Permittee shall track all investigations to document at a minimum the date(s) the illicit discharge was observed; the results of the investigation; any follow-up of the investigation; and the date the investigation was closed.
 - (3) Each Permittee shall investigate the source of all observed illicit discharges.
 - (4) If the source of the illicit discharge is found to be a discharge authorized under an NPDES permit the Permittee shall document the source and report to the Regional Water Board within 30 days of determination. No further action is required.
- iv. When taking corrective action to eliminate illicit discharges, each Permittee shall comply with the following:
 - (1) If the source of the illicit discharge has been determined to originate within the Permittee's jurisdiction, the Permittee shall immediately notify the responsible party of the problem, and require the responsible party to conduct all necessary corrective actions to eliminate the non-stormwater discharge within 48 hours of notification. Upon being notified that the discharge has been eliminated, the Permittee shall conduct a follow-up investigation to verify that the discharge has been eliminated. Each Permittee shall document its follow-up investigation. Each Permittee may seek recovery and remediation costs from responsible parties or require compensation for the cost of field screening, monitoring and investigations. Resulting enforcement actions shall follow the program's Progressive Enforcement Policy.
 - (2) If the source of the illicit discharge has been determined to originate within an upstream jurisdiction, the Permittee shall inform in writing both the upstream jurisdiction and the Regional Water Board within 30 days of such determination and provide all characterization and field screening data collected as a

component of the field survey and efforts taken to identify its source.

- v. In the event the Permittee is unable to eliminate an ongoing illicit discharge following full execution of its legal authority and in accordance with its Progressive Enforcement Policy, or other circumstances prevent the full elimination of an ongoing illicit discharge, the Permittee shall work with the Regional Water Board to provide for diversion of the entire flow to the sanitary sewer or provide treatment. In either instance, the Permittee shall notify the Regional Water Board in writing within 30 days of such determination and shall provide a written plan for review and comment that describes the efforts that have been undertaken to eliminate the illicit discharge, a description of the actions to be undertaken, anticipated costs, and a schedule for completion.

e. Identification and Response to Illicit Connections

i. Investigation

Each Permittee, upon discovery or upon receiving a report of a suspected illicit connection, shall complete an investigation within 21 days, to determine the following: (1) source of the connection, (2) nature and volume of discharge through the connection, and (3) responsible party for the connection.

ii. Elimination

Each Permittee, upon confirmation of an illicit MS4 connection, shall ensure that the connection is eliminated within 90 days of completion of the investigation, using its formal enforcement authority, if necessary, to eliminate the illicit connection.

iii. Documentation

Formal records must be maintained for all illicit connection investigations and the formal enforcement taken to eliminate illicit connections.

f. Public Reporting of Non-Stormwater Discharges and Spills

- i. Each Permittee shall promote, publicize, and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into or from MS4s through a central contact point, including phone numbers and an internet site for complaints and spill reporting. Each Permittee shall also provide the reporting hotline to Permittee staff to leverage the field staff that has direct contact with the MS4 in detecting and eliminating illicit discharges.
- ii. Each Permittee shall implement the central point of contact and reporting hotline requirements listed in this part in one or more of the following methods:

- (1) By participating in a County sponsored PIPP
 - (2) By participating in one or more Watershed Group sponsored PIPPs
 - (3) Or individually within its own jurisdiction.
- iii. Each Permittee shall include information regarding public reporting of illicit discharges or improper disposal on the signage adjacent to open channels as required in Part [TBD].
- iv. Each Permittee shall develop and maintain written procedures that document how complaint calls are received, documented, and tracked to ensure that all complaints are adequately addressed. The procedures shall be evaluated annually to determine whether changes or updates are needed to ensure that the procedures accurately document the methods employed by the Permittee. Any identified changes shall be made to the procedures subsequent to the annual evaluation.
- v. Each Permittee shall maintain documentation of the complaint calls and record the location of the reported spill or IC/ ID and the actions undertaken in response to all IC/ID complaints.

g. Illicit Discharge and Spill Response Plan

- i. Each Permittee shall implement an ID and spill response plan for all sewage and other spills that may discharge into the MS4 from any source (including private laterals and failing on-site wastewater treatment systems). The ID and spill response plan shall clearly identify agencies responsible for ID and spill response and cleanup, telephone numbers and e-mail address for contacts, and shall contain at a minimum the following requirements:
- (1) Coordination with spill response teams throughout all appropriate departments, programs and agencies so that maximum water quality protection is provided.
 - (2) Investigation of all public and employee ID and spill complaints within 24 hours of receiving the complaint to assess validity.
 - (3) Response to ID and spills for containment within 2 hours of becoming aware of the ID or spill, except where such IDs or spills occur on private property, in which case the response should be within 2 hours of gaining legal access to the property.
 - (4) IDs or spills that may endanger health or the environment shall be reported to appropriate public health agencies and the Office of Emergency Services (OES).

h. Illicit Connection and Illicit Discharge Education and Training

- i.** Each Permittee must continue to implement a training program regarding the identification of IC/IDs for all municipal field staff and contractors, who, as part of their normal job responsibilities (e.g., street sweeping, storm drain maintenance, collection system maintenance, road maintenance), may come into contact with or otherwise observe an illicit discharge or illicit connection to the storm sewer system. Contact information, including the procedure for reporting an illicit discharge, must be included in the Permittee's fleet vehicles that are used by field staff. Training program documents must be available for review by the permitting authority.
- ii.** Each Permittee's training program should address, at a minimum, the following:
 - (1) IC/ID identification, including definitions and numerous examples,
 - (2) investigation,
 - (3) elimination,
 - (4) cleanup,
 - (5) reporting, and
 - (6) documentation.
- iii.** Each Permittee must create a list of applicable staff which require IC/ID training and ensure that training is provided at least twice during the term of the Order. Each Permittee must maintain documentation of the training activities.
- iv.** New Permittee staff members must be provided with IC/ID training within six months of starting employment.

ATTACHMENT TBD

BIORETENTION / BIOFILTRATION DESIGN CRITERIA

Note: A significant portion of the information in this appendix has been copied verbatim from the *Ventura County Technical Guidance Manual*, Updated 2011, and modified to reflect recent changes to the bioretention/biofiltration soil media specifications as adopted by the California Regional Water Quality Control Board, San Francisco Region, on November 28, 2011, Order No. R2-2011-083, Attachment L.

1. Geometry

- a. Bioretention/biofiltration areas shall be sized to capture and treat the design with an 18-inch maximum ponding depth. *The intention is that the ponding depth be limited to a depth that will allow for a healthy vegetation layer.*
- b. Minimum planting soil depth should be 2 feet, although 3 feet is preferred. *The intention is that the minimum planting soil depth should provide a beneficial root zone for the chosen plant palette and adequate water storage for the SWQDv.*
- c. A gravel storage layer below the bioretention/biofiltration soil media is required as necessary to provide adequate temporary storage to retain the SWQDv and to promote infiltration.

2. Drainage

- a. Bioretention and biofiltration BMPs should be designed to drain below the planting soil in less than 48 hours and completely drain in less than 96 hours. *The intention is that soils must be allowed to dry out periodically in order to restore hydraulic capacity needed to receive flows from subsequent storms, maintain infiltration rates, maintain adequate soil oxygen levels for healthy soil biota and vegetation, and to provide proper soil conditions for biodegradation and retention of pollutants.*
- b. *Biofiltration BMPs are designed and constructed with an underdrain. The underdrain is preferably placed near the top of the gravel storage area to promote incidental infiltration and enhanced nitrogen removal. However, if in-situ, underlying soils do not provide sufficient drainage, the underdrain may need to be placed lower in the gravel storage area (within 6 inches of the bottom) to prevent the unit from holding stagnant water for extended periods of time. At many sites, clay soils will drain sufficiently fast, particularly if they are not compacted. Observing soil moisture and surface conditions in the days following a wet period may provide sufficient information for making this decision and may be more directly applicable than in situ or laboratory testing of soil characteristics.*

14

¹⁴¹⁴ Dan Cloak, Dan Cloak Environmental Consulting to Tom Dalziel, Contra Costa County, February 22, 2011.

3. Overflow

An overflow device is required at the 18-inch ponding depth. The following, or equivalent, should be provided:

- a. A vertical PVC pipe (SDR 35) to act as an overflow riser.
- b. The overflow riser(s) should be 6 inches or greater in diameter, so it can be cleaned without damage to the pipe.

The inlet to the riser should be at the ponding depth (18 inches for fenced bioretention areas and 6 inches for areas that are not fenced), and be capped with a spider cap to exclude floating mulch and debris. Spider caps should be screwed in or glued, i.e., not removable.

4. Hydraulic Restriction Layers

Infiltration pathways may need to be restricted due to the close proximity of roads, foundations, or other infrastructure. A geomembrane liner, or other equivalent water proofing, may be placed along the vertical walls to reduce lateral flows. This liner should have a minimum thickness of 30 mils. Waterproof barriers may not be placed on the bottom of the biofiltration unit, as this would prevent incidental infiltration which is critical to meeting the required pollutant load reduction.

5. Planting/Storage Media Specifications

- a. The planting media placed in the cell should achieve a long-term, in-place infiltration rate of at least 5 inches per hour. Higher infiltration rates of up to 12 inches per hour are permissible. Bioretention/biofiltration soil shall retain sufficient moisture to support vigorous plant growth.
- b. Planting media should consist of 60 to 80% fine sand and 20 to 40% compost.
- c. Sand should be free of wood, waste, coating such as clay, stone dust, carbonate, etc. or any other deleterious material. All aggregate passing the No. 200 sieve size should be non-plastic. Sand for bioretention should be analyzed by an accredited lab using #200, #100, #40, #30, #16, #8, #4, and 3/8 sieves (ASTM D 422 or as approved by the local permitting authority) and meet the following gradation (Note: all sands complying with ASTM C33 for fine aggregate comply with the gradation requirements provided in Table TBD-1):

Table [TBD] – Sand Texture Specifications

Sieve Size ASTM D422	Percent Passing by Weight	
	Minimum	Maximum
3 /8 inch	100	100
No. 4	90	100

Sieve Size ASTM D422	Percent Passing by Weight	
	Minimum	Maximum
No. 8	70	100
No. 16	40	95
No. 30	15	70
No. 40	5	55
No. 110	0	15
No. 200	0	5

Note: the gradation of the sand component of the media is believed to be a major factor in the hydraulic conductivity of the media mix. If the desired hydraulic conductivity of the media cannot be achieved within the specified proportions of sand and compost (#2), then it may be necessary to utilize sand at the coarser end of the range specified in above ("minimum" column).

- d. Compost should be a well decomposed, stable, weed free organic matter source derived from waste materials including yard debris, wood wastes, or other organic materials not including manure or biosolids meeting standards developed by the US Composting Council (USCC). The product shall be certified through the USCC Seal of Testing Assurance (STA) Program (a compost testing and information disclosure program). Compost quality should be verified via a lab analysis to be:
- Feedstock materials shall be specified and include one or more of the following: landscape/yard trimmings, grass clippings, food scraps, and agricultural crop residues.
 - Organic matter: 35-75% dry weight basis.
 - Carbon and Nitrogen Ratio: 15:1 < C:N < 25:1
 - Maturity/Stability: shall have dark brown color and a soil-like odor. Compost exhibiting a sour or putrid smell, containing recognizable grass or leaves, or is hot (120 F) upon delivery or rewetting is not acceptable.
 - Toxicity: any one of the following measures is sufficient to indicate non-toxicity:
 - $\text{NH}_4:\text{NH}_3 < 3$
 - Ammonium < 500 ppm, dry weight basis
 - Seed Germination > 80% of control
 - Plant trials > 80% of control
 - Solvita® > 5 index value

- Nutrient content:
 - Total Nitrogen content 0.9% or above preferred
 - Total Boron should be <80 ppm, soluble boron < 2.5 ppm
- Salinity: < 6.0 mmhos/cm
- pH between 6.5 and 8 (may vary with plant palette)
- Compost for bioretention should be analyzed by an accredited lab using #200, ¼ inch, ½ inch, and 1 inch sieves (ASTM D 422) and meet the gradation described in Table No. TBD-2:

Table [TBD] – Compost Texture Specifications

Sieve Size ASTM D422	Percent Passing by Weight	
	Minimum	Maximum
1 inch	99	100
½ inch	90	100
¼ inch	40	90
#200	2	10

Tests should be sufficiently recent to represent the actual material that is anticipated to be delivered to the site. If processes or sources used by the supplier have changed significantly since the most recent testing, new tests should be requested.

Note: the gradation of compost used in bioretention/biofiltration media is believed to play an important role in the saturated hydraulic conductivity of the media. To achieve a higher saturated hydraulic conductivity, it may be necessary to utilize compost at the coarser end of this range (“minimum” column). The percent passing the #200 sieve (fines) is believed to be the most important factor in hydraulic conductivity.

In addition, a coarser compost mix provides more heterogeneity of the bioretention media, which is believed to be advantageous for more rapid development of soil structure needed to support health biological processes. This may be an advantage for plant establishment with lower nutrient and water input.

- e. Bioretention/Biofiltration soils not meeting the above criteria shall be evaluated on a case by case basis. Alternative bioretention soil shall meet the following specification: “Soils for bioretention facilities shall be sufficiently permeable to infiltrate runoff at a minimum rate of 5 inches per hour during the life of the facility, and provide sufficient retention of moisture and nutrients to support healthy vegetation.” The following steps shall be followed by the Permittees to verify that alternative soil mixes meet the specification:

- Submittals – The applicant must submit to the Permittee for approval:
 - A sample of mixed bioretention/biofiltration soil.
 - Certification from the soil supplier or an accredited laboratory that the bioretention/biofiltration soil meets the requirements of this specification.
 - Certification from an accredited geotechnical testing laboratory that the bioretention/biofiltration soil has an infiltration rate of between 5 and 12 inches per hour.
 - Organic content test results of mixed bioretention/biofiltration soil. Organic content test shall be performed in accordance with by Testing Methods for the Examination of Compost and Composting (TMECC) 05.07A, “Loss-On-Ignition Organic Matter Method”.
 - Organic Grain size analysis results of mixed bioretention/biofiltration soil performed in accordance with ASTM D 422, Standard Test Method for Particle Size Analysis of Soils.
 - A description of the equipment and methods used to mix the sand and compost to produce the bioretention/biofiltration soil.
- The name of the testing laboratory(s) and the following information:
 - Contact person(s)
 - Address(s)
 - Phone contact(s)
 - email address(s)
 - Qualifications of laboratory(s), and personnel including date of current
 - Certification by STA, ASTM, or approved equal.
- Bioretention/biofiltration soils shall be analyzed by an accredited lab using #200, and 1/2” inch sieves (ASTM D 422 or as approved by municipality), and meet the gradation described in Table TBD-3).

Table [TBD] – Alternative Bioretention/Biofiltration Soil Texture Specifications

Sieve Size ASTM D422	Percent Passing by Weight	
	Minimum	Maximum
1/2 inch	97	100
200	2	5

- Bioretention/biofiltration soils shall be analyzed by an accredited geotechnical lab for the following tests:
 - Moisture – density relationships (compaction tests) shall be conducted on bioretention soil. Bioretention/biofiltration soil for the permeability test shall be compacted to 85 to 90 percent of the maximum dry density (ASTM D1557).
 - Constant head permeability testing in accordance with ASTM D2434 shall be conducted on a minimum of two samples with a 6-inch mold and vacuum saturation.

6. Mulch for Bioretention/Biofiltration Facilities

Mulch is recommended for the purpose of retaining moisture, preventing erosion and minimizing weed growth. Projects subject to the State's Model Water Efficiency Landscaping Ordinance (or comparable local ordinance) will be required to provide at least two inches of mulch. Aged mulch, also called compost mulch, reduces the ability of weeds to establish, keeps soil moist, and replenishes soil nutrients. Aged mulch can be obtained through soil suppliers or directly from commercial recycling yards. It is recommended to apply 1" to 2" of composted mulch, once a year, preferably in June following weeding

7. Plants

- a. Plant materials should be tolerant of summer drought, ponding fluctuations, and saturated soil conditions for 48 to 96 hours.
- b. It is recommended that a minimum of three types of tree, shrubs, and/or herbaceous groundcover species be incorporated to protect against facility failure due to disease and insect infestations of a single species.
- c. Native plant species and/or hardy cultivars that are not invasive and do not require chemical inputs should be used to the maximum extent practicable.

ATTACHMENT TBD

DEVELOPER TECHNICAL INFORMATION AND GUIDELINES

1. Each Permittee shall make available to the Development Community reference information and recommended guidelines. Such information may include the following:
 - a. Hydromodification Control criteria described in this Order, including numerical criteria
 - b. Links to the State Water Board's Water Balance Calculator
 - c. Expected BMP pollutant removal performance including effluent quality (ASCE/ U.S. EPA International BMP Database, CASQA New Development BMP Handbook, technical reports, local data on BMP performance, and the scientific literature appropriate for southern California geography and climate)
 - d. Selection of appropriate BMPs for stormwater pollutants of concern
 - e. Data on observed local effectiveness and performance of implemented BMPs
 - f. BMP maintenance and cost considerations
 - g. Guiding principles to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and existing retrofits
 - h. LID principles and specifications, including the objectives and specifications for integration of LID strategies in the areas of:
 - i. Site Assessment
 - ii. Site Planning and Design
 - iii. Vegetative Protection, Revegetation, and Maintenance
 - iv. Techniques to Minimize Land Disturbance
 - v. Techniques to Implement LID Measures at Various Scales
 - vi. Integrated Water Resources Management Practices
 - vii. LID Design and Flow Modeling Guidance
 - viii. Hydrologic Analysis
 - ix. LID Credits for trees or other features that intercept storm water runoff.
 - i. Recommended Guidelines to include:
 - i. Locate structures on less pervious soils where possible so as to preserve areas with permeable soils (Hydrologic Soil Group Classes A and B, as defined by the National Cooperative Soil Survey), for use in stormwater infiltration and groundwater recharge. Minimize the need to grade the site by concentrating development in areas with minimal non-

- engineered slopes and existing infrastructure, and mitigate any construction disturbance.
- ii. The total disturbed area shall be no greater than 110 percent of the final project footprint plus the area of the construction stormwater detention basins, if any, and as required to meet applicable Fire Department regulations for brush clearance.
 - iii. Construction vehicles shall be confined at all times to the area specifically permitted to be disturbed by construction as depicted in the approved construction documents. Physical barriers shall be used to designate and protect the boundary between disturbed and undisturbed areas.
 - iv. Materials staging shall be confined to the area permitted to be disturbed by construction or may be temporarily stored off-site at an approved location at the Contractor's option.
 - v. Construction vehicles shall not traverse areas within the drip lines of those trees and other landscaping to be preserved. Approved visible physical barriers, such as continuous fencing, shall be provided to completely surround all trees and other landscaping to be preserved. Barriers shall be placed not less than 5 feet outside the drip lines of trees.
 - vi. Preserve or restore continuous riparian buffers widths along all natural drainages to a minimum width of 100 feet from each bank top, for a total of 200 feet plus the width of the stream, unless the Watershed Plan demonstrates that a smaller riparian buffer width is protective of water quality, hydrology, and aquatic life beneficial uses within a specific drainage.
 - vii. Identify and avoid development of areas containing habitat with threatened or endangered plant and animal species¹⁵.
- j.** Each Permittee shall facilitate implementation of LID by providing key industry, regulatory, and other stakeholders with information regarding LID objectives and specifications through a training program. The LID training program will include the following:
- i. LID targeted sessions and materials for builders, design professionals, regulators, resource agencies, and stakeholders
 - ii. A combination of awareness on national efforts and local experience gained through LID pilot projects and demonstration projects
 - iii. Materials and data from LID pilot projects and demonstration projects including case studies
 - iv. Guidance on how to integrate LID requirements at various project scales

¹⁵ Endangered Species Act, 16 U.S.C. §§ 1531–1544: <http://water.epa.gov/lawsregs/guidance/wetlands/eo11990.cfm>

- v. Guidance on the relationship among LID strategies, Source Control BMPs, Treatment Control BMPs, and Hydromodification Control requirements

FROM: Samuel Unger, P.E. *SU*
Executive Officer

DATE: March 22, 2012

SUBJECT: REISSUANCE OF LOS ANGELES COUNTY MS4 PERMIT – NOTICE OF BOARD WORKSHOP ON PROVISIONS REGARDING AUTHORIZED NON-STORM WATER DISCHARGES, INCLUDING POTABLE WATER SUPPLY AND DISTRIBUTION SYSTEM RELEASES AND FIRE FIGHTING FLOWS

During the on-going development of the new Los Angeles County Municipal Separate Storm Sewer System (MS4) Permit, staff of the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) has received a number of requests from community water supply operators and local fire departments for a Board workshop on the topic of authorized non-storm water discharges to the MS4. Board staff has had several conversations with representatives of community water supply systems and fire departments during this time, including a recent meeting on February 23, 2012.

We wish to inform you of an upcoming Board workshop on April 5, 2012. At this workshop, staff will be discussing with the Board the topic of non-storm water discharges into the MS4 and from the MS4 to receiving waters, and present a working proposal for regulating these discharges under the Los Angeles County MS4 Permit. The topic of authorized non-storm water discharges, on which community water suppliers and fire departments have requested a Board workshop, is nested within the topic of non-storm water discharges. As such, staff will be discussing how it intends to address different categories of authorized non-storm water discharges, including the conditions under which they are authorized. We anticipate distributing a staff working proposal on the non-storm water provisions to interested persons prior to the workshop for discussion purposes.

We encourage you to attend the April 5, 2012 Board workshop and provide your input on this topic and on staff's working proposal. Details of the Board workshop are as follows:

**Thursday, April 5, 2012
1:30 PM
The Metropolitan Water District of Southern California
Board Room
700 North Alameda Street
Los Angeles, California**

If you have questions regarding the upcoming workshop or would like to request time to speak, please contact Mr. Ivar Ridgeway, Chief, Storm Water Permitting, at (213) 620-2150. Please share this notice with others who may be interested in this topic.

Los Angeles Regional Water Quality Control Board**TO:** LA County MS4 Permittees and Interested Persons
FROM: Deborah Smith,
Chief Deputy Executive Officer**DATE:** March 26, 2012**RE: CHANGE OF APRIL 5, 2012 BOARD WORKSHOP TOPICS ON REISSUANCE OF LA COUNTY
MS4 PERMIT**

Staff of the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) previously noticed two topics for the April 5, 2012 Board Workshop on the reissuance of the LA County MS4 Permit. The two topics previously noticed were (1) permit provisions addressing non-storm water discharges through the MS4 and (2) permit provisions to implement total maximum daily loads (TMDLs).

Since that time, Los Angeles Water Board staff released a staff working proposal of permit provisions for the minimum control measures (MCMs) that comprise a Permittee's baseline Storm Water Quality Management Program (SQMP). This staff working proposal was distributed electronically via the Los Angeles Water Board's e-mail notification service on March 21, 2012. In order to provide Permittees and other interested persons an opportunity to comment on this staff working proposal before the Los Angeles Water Board, staff is postponing a workshop on permit provisions to implement TMDLs, and will instead discuss the staff working proposal on the MCMs along with permit provisions related to non-storm water discharges through the MS4 during the April 5, 2012 Board Workshop. The Los Angeles Water Board may provide feedback to staff on these topics; however, no action or voting will take place at this workshop.

A revised agenda for the April 5, 2012 Los Angeles Water Board meeting, reflecting this change of topics, is attached.

As with previous board workshops, Permittees and other interested persons will have the opportunity to make oral comments subject to time limits. Oral comments may be limited to 3 minutes each, at the discretion of the Chair, depending on the number of commenters wishing to be heard. Permittees and interested persons with similar comments or concerns are encouraged to choose one representative to speak on their behalf. Permittees and other interested persons may request additional time to make

MARIA MEHRANIAN, CHAIR | SAMUEL UNGER, EXECUTIVE OFFICER

oral comments prior to the workshop. Requests for additional time must be sent to Ms. Ronji Moffett via e-mail at rmoffett@waterboards.ca.gov no later than **Friday, March 30, 2012 by 4:00 PM** to be considered by the Chair. Please indicate in the subject line "Request for Additional Time – April 5, 2012 Workshop on Reissuance of LA County MS4 Permit."

Staff anticipates scheduling a workshop on permit provisions to implement TMDLs, once a staff working proposal for these provisions has been developed.

If you have any questions about the upcoming April 5, 2012 Board Workshop, please feel free to contact Mr. Ivar Ridgeway, Chief, Storm Water Permitting Unit at (213) 620-2150 or iridgeway@waterboards.ca.gov or Renee Purdy at (213) 576-6622 or rpurdy@waterboards.ca.gov.

Los Angeles Regional Water Quality Control Board

REVISED
Notice of Public Meeting
Thursday, April 5, 2012
9:00 a.m.

Meeting Location:

The Metropolitan Water District of Southern California
Board Room
700 North Alameda Street
Los Angeles, California

Agenda

The Regional Board strives to conduct an accessible, orderly, and fair meeting. During the meeting, the Chair will conduct the meeting and establish appropriate rules and time limitations for each item. The Board will only act on items designated as action items. Action items on the agenda are staff proposals, and may be modified by the Board as a result of public comment or Board member input. Additional information about Regional Board meeting procedures is included after the last agenda item.

To ensure a fair hearing and that the Regional Board Members have an opportunity to fully study and consider written material, unless stated otherwise, written materials must be provided to the Executive Officer **not later than 5:00 p.m. on March 26, 2012. Please consult the agenda description for specific items, because certain items may have an earlier deadline for written submissions. If you are considering submitting written materials, please consult the notes at the end of the agenda. Failure to follow the required procedures may result in your materials being excluded from the hearing record; however, failure to timely submit written materials does not preclude a person from testifying before the Board.**

INTRODUCTORY ITEMS

1. **Roll Call.**
2. **Order of Agenda.** The agenda items are numbered for identification purposes only and may not necessarily be considered in this order.
3. **Approval of draft meeting Minutes for the March 1, 2012 Board meeting.**
[Ronji Moffett, (213) 576-6612]
4. **Board Member Communications.**
 - 4.a. Ex Parte Disclosure. Board Members will identify any discussions they may have had requiring disclosure pursuant to Government Code section 11430.40.

MARIA MEHRANIAN, CHAIR | SAM UNGER, EXECUTIVE OFFICER

320 West 4th St., Suite 200, Los Angeles, CA 90013 | www.waterboards.ca.gov/losangeles

Los Angeles Water Board Meeting Agenda

- 4.b. Board Member Reports. The Board Members may discuss communications, correspondence, or other items of general interest relating to matters within the Board's jurisdiction.
- 5.a. **Executive Officer's Report.**
[Sam Unger, (213) 576-6605]
6. **Update from State Board.** [Fran Spivy-Weber, (916) 341-5607]
7. **Public Forum.** Any person may address the Board regarding any matter within the Board's jurisdiction provided the matter does not appear elsewhere on this agenda, has not been scheduled to appear on a future agenda, and is not expected to be imminently scheduled for the Board's consideration. Remarks will be limited to three (3) minutes, unless otherwise directed by the Chair. If a person intends to use a PowerPoint presentation or other visual aid, you must contact Ronji Moffett, (213) 576-6612, at the Regional Board at least 48 hours prior to the meeting to arrange for equipment use and be prepared to load any PowerPoint presentation on the computer prior to the meeting to assure the orderly conduct of the meeting.

UNCONTESTED ITEMS

(Items marked with an asterisk are expected to be routine and noncontroversial. The Board will be asked to approve these items at one time without discussion. Any Board member or person may request that an item be removed from the uncontested calendar. The Chair will determine the appropriate time to consider an item removed from the consent calendar.)

Waste Discharge Requirements that Serve as NPDES Permits**Termination-**

- *8. City of Santa Clarita, Santa Clarita (Drainage Benefit Assessment Areas No. 6 and No. 18); NPDES No. CA0061638 [Jau Ren Chen, (213) 576-6656]

Other Business-

- *9. Consideration of a tentative Resolution approving the Los Angeles County Sanitation Districts' proposed Special Study for the Joint Water Pollution Control Plant. (Comment submittal deadline was March 5, 2012) [Brandi Outwin-Beals, (213) 576-6664]
- *10. Consideration of a tentative Resolution approving the City of Los Angeles' proposed Special Study for the Hyperion Treatment Plant. (Comment submittal deadline was March 5, 2012.) [Brandi Outwin-Beals, (213) 576-6664]
- *11. Consideration of a tentative Resolution approving the City of Los Angeles' proposed Special Study for the Terminal Island Water Reclamation Plant. (Comment submittal deadline was March 5, 2012) [Brandi Outwin-Beals, (213) 576-6664]
- *12. Consideration of a tentative Resolution approving the City of Oxnard's proposed Special Study for the Oxnard Wastewater Treatment Plant. (Comment submittal deadline was March 5, 2012) [Brandi Outwin-Beals, (213) 576-6664]

Los Angeles Water Board Meeting Agenda

Non-NPDES State Discharge Requirements**Renewal-**

- *13. Ventura Regional Sanitation District (Malibu Bay Club Wastewater Treatment Plant), Waste Discharge Requirements Order No. 01-008, CI No. 5774, file No. 72-006; County of Ventura. (Comment submittal deadline was March 9, 2012) [Mercedes Merino, (213) 620-6156]

Termination-

- *14. PanAmerican Seed Company, Order No. 87-93, CI No. 4246, File No. 62-76, Santa Paula. (Comment submittal deadline was March 9, 2012) [Mercedes Merino, (213) 620-6156]
- *15. ConocoPhillips Company - 76 Station No. 6965, Order No. R4-2004-0110, CI No. 8773, Long Beach. (Comment submittal deadline was March 2, 2012) [David Koo, (213) 620-6155]

ACTION ITEMS**Other Business-**

16. Consideration of a tentative Resolution adopting the Petroleum Underground Storage Tank Fund. *Emergency, Abandoned, and Recalcitrant (EAR) Account* Fiscal Year 2012-2013, Annual Priority List for the Los Angeles Region. (The public will be provided the opportunity to comment on this matter.) [Dixon Oriola, (213) 576-6747]

Waste Discharge Requirements and Time Schedule Order-

17. Consideration of revised tentative Waste Discharge Requirements and Time Schedule Order for the California Department of Water Resources (William E. Warne Power Plant), Castaic; NPDES No. CA0059188. (Comment submittal deadline was March 5, 2012) [Jau Ren Chen, (213) 576-6656]

17.1 Waste Discharge Requirements

17.2 Time Schedule Order

Other Business

18. Consideration of tentative Cease and Desist Order requiring the City of Avalon to cease and desist alleged discharges of waste in violation of requirements in Regional Board Order No. R4-2008-0028 and State Water Board Order No. 2006-0003-WQ and to implement actions to achieve wasteload allocations assigned to the City's discharges of waste. (Comment submittal deadline was March 15, 2012) [Russ Colby, (213) 620-6373; L.B. Nye, (213) 576-6785]

INFORMATION *(This matter is for informational purposes only. No voting will take place on this matter.)*

19. Informational overview by the City of Signal Hill's on the City's illicit Connection/illicit Discharge program, sediment control procedures, and treatment control best management practices (BMPs) to comply with the existing Los Angeles County MS4 Permit.

WORKSHOP**NOTE: The Workshop will not begin before 1:30 p.m.**

20. Workshop on the issuance of a new Los Angeles County Municipal Separate Storm Sewer System (MS4) NPDES Permit. Staff will make a presentation on provisions related to non-stormwater discharges through the MS4 and ~~the incorporation of TMDL related requirements~~ minimum control measures as outlined in the staff working proposal. Permittees and other interested persons will have the opportunity to make oral comments subject to time limits. *(The Board may provide general feedback to staff on development of the permit; however, no action or voting will take place at this workshop.)* [Renee Purdy, (213) 576-6622; Ivar Ridgeway, (213) 620-2150]

CLOSED SESSION

21. As authorized by the Government Code section 11126, the Regional Board will be meeting in closed session. Closed session items are not open to the public. Items the Board may discuss include the following: [Jennifer Fordyce (JF) (916) 324-6682; Frances McChesney (FM) (916) 341-5174]

- 21.1 *State Department of Finance, State Water Resources Control Board and Los Angeles Regional Water Quality Control Board v. Commission on State Mandates*, Los Angeles County Superior Court Case No. BS130730. [Challenging the Commission's decision that portions of the LA MS4 permit created unfunded State mandates]. (JF)
- 21.2 *In re Halaco Engineering Company*, United States Bankruptcy Court, Central District of California, Northern Division, No. ND-02-12255 RR [Regarding a CDO and CAO at the Oxnard Property]. (JF)
- 21.3 *In re: Los Angeles Region Water Permit- Ventura County*, Commission on State Mandate Test Claim No. 11-TC-01 [Regarding a test claim filed by Ventura County Watershed Protection District and the County of Ventura alleging that portions of Order No. R4-2010-0108 created an unfunded state mandate]. (JF)
- 21.4 *In re: Petition of City of Redondo Beach for Review of Administrative Civil Liability Order No. R4-2008-0058-M, SWRCB/OCC File A-2124* [Challenging assessment of mandatory minimum penalties for violations of Order Nos. 99-057 and R4-2005-0016]. (FM)
- 21.5 *In re: Petition of Signal Hill, Downey, et al, for Review of Order No. R4-2009-0130, SWRCB/OCC File A-2071* [Challenging the incorporation into the MS4 Permit of the Waste Load Allocations from the Los Angeles River Watershed Trash TMDL.] (JF)
- 21.6 *In re: Kinder Morgan, Inc., Chevron Corp., et al for Review of Revised Cleanup and Abatement Order No. R4-2008-0006, SWRCB/OCC File A-2085* [Challenging the revised cleanup goals in the order]. (FM)
- 21.7 *In re: Upper Santa Clara River Chloride Total Maximum Daily Load Requirements Imposed by the Los Angeles Regional Water Quality Control Board in Resolution R4-2008-0012*. Commission on State Mandates Test Claim No. 10-TC-09 [Regarding a test claim filed by the Santa Clarita Valley Sanitation District of Los Angeles County alleging that portions of Resolution R4-2008-0012 created an unfunded state mandate]. (JF)

Los Angeles Water Board Meeting Agenda

- 21.8 *Joan C. Lavine v. State Water Resources Control Board and Los Angeles Regional Board*, Los Angeles County Superior Court Case No. BS128989 [Challenging the Basin Plan Amendment prohibiting on-site wastewater disposal systems in the Malibu Civic Center Area]. (FM)
- 21.9 *Charles Conway et al. v. State Water Resources Control Board and Los Angeles Regional Water Quality Control Board*, Ventura County Superior Court Case No. 56-2011-00399391-CU-WM-VTA [Challenging the McGrath Lake TMDL for polychlorinated biphenyls (PCBs), pesticides, and sediment toxicity]. (JF)
- 21.10 Consultation with counsel about:
- (a) A judicial or administrative adjudicatory proceeding that has been formally initiated to which the Regional Board is a party;
 - (b) A matter that, based on existing facts and circumstances, presents significant exposure to litigation against the Regional Board;
 - (c) A matter which, based on existing facts and circumstances, the Regional Board is deciding whether to initiate litigation. (JF/FM)
- 21.11 Consideration of the appointment, employment, or evaluation of performance about a public employee. (JF/FM)
22. **Adjournment of Current Meeting.** The next meeting will be held on May 3, 2012 beginning at 9:00 a.m. at the City of Simi Valley Council Chambers, located at 2929 Tapo Canyon Road, 2929 Tapo Canyon Road, Simi Valley, California.

*

NOTICE

Ex Parte Communications: An ex parte communication is a communication to a board member from any person, about a pending matter, that occurs in the absence of other parties and without notice and opportunity for them to respond. The California Government Code prohibits the board members from engaging in ex parte communications during permitting, enforcement, and other "quasi-adjudicatory" matters. The Regional Board discourages ex parte communications during rulemaking and other "quasi-legislative" proceedings. The ex parte rules are intended to provide fairness, and to ensure that the board's decisions are transparent, based on the evidence in the administrative record, and that evidence is used only if stakeholders have had the opportunity to hear and respond to it. Ex parte rules do not prevent anyone from providing information to the water boards or requesting that the water boards take a particular action. They simply require that the information come into the record through proper channels during a duly noticed, public meeting. A board member who has engaged or been engaged in a prohibited ex parte communication will be required to publicly disclose the communication on the record and may be disqualified from participating in the proceeding. For more information, please look at the ex parte questions and answers document found at www.waterboards.ca.gov/laws_regulations/docs/exparte.pdf

Procedures: The Regional Board follows procedures established by the State Water Resources Control Board. These procedures are established in regulations commencing with section 647 of title 23 of the California Code of Regulations. The Chair may establish specific procedures for each item, and consistent with section 648, subdivision (d) of title 23 of the California Code of Regulations may waive nonstatutory provisions of the regulations. Generally, all witnesses testifying before the Regional Board must affirm the truth of their testimony and are subject to questioning by the Board Members. The Board does not, generally, require the

Los Angeles Water Board Meeting Agenda

designation of parties, the prior identification of witnesses, or the cross examination of witnesses. Generally, speakers are allowed three minutes for comments. Any requests for an alternate hearing process, such as requesting additional time to make a presentation, should be made to the Executive Officer in advance of the meeting, and under no circumstances later than 5:00 p.m. on the Thursday preceding the Board meeting. The provisions of this paragraph shall be deemed superseded to the extent that they are contradicted by a hearing notice specific to a particular agenda item.

Written Submissions: Written materials (whether hand-delivered, mailed, e-mailed, or facsimiled) **must be received prior to the relevant deadline** established in the agenda and public notice for an item. If the submitted material is more than 10 pages or contains foldouts, color graphics, maps, or similar items, 12 copies must be submitted prior to the relevant deadline.

Failure to comply with requirements for written submissions is grounds for the Chair to refuse to admit the proposed written comment or exhibit into evidence. (Cal. Code Regs. tit. 23, § 648.4(e).) The Chair may refuse to admit written testimony into evidence unless the proponent can demonstrate why he or she was unable to submit the material on time or that compliance with the deadline would otherwise create a hardship. If any other party demonstrates prejudice resulting from admission of the written testimony, the Chair may refuse to admit it.

Administrative Record: Material presented to the Board as part of testimony that is to be made part of the record must be left with the Board. This includes photographs, slides, charts, diagrams, etc. All Board files pertaining to the items on this Agenda are hereby made a part of the record submitted to the Regional Board by staff for its consideration prior to action on the related items.

Accessibility: Individuals requiring special accommodations or language needs should contact Dolores Renick at (213) 576-6629 or drenick@waterboards.ca.gov at least ten working days prior to the meeting. TTY/TDD Speech-to-Speech users may dial 7-1-1 for the California Relay Service.

Availability of Complete Agenda Package: A copy of the complete agenda package is available for examination at the Regional Board Office during regular working hours (8:00 a.m. to 5:00 p.m. Monday through Friday) beginning 10 days before the Board meeting. Questions about specific items on the agenda should be directed to the staff person whose name is listed with the item.

Continuance of Items: The Board will endeavor to consider all matters listed on this agenda. However, time may not allow the Board to hear all matters listed. Matters not heard at this meeting may be carried over to the next Board meeting or to a future Board meeting. Parties will be notified in writing of the rescheduling of their item. Please contact the Regional Board staff to find out about rescheduled items.

Challenging Regional Board Actions: Pursuant to Water Code section 13320, any aggrieved person may file a petition to seek review by the State Water Resources Control Board of most actions taken by the Regional Board. A petition must be filed within 30 days of the action. Petitions must be sent to State Water Resources Control Board, Office of Chief Counsel; ATTN: Phil Wyels, Assistant Chief Counsel; 1001 "I" Street, 22nd Floor; Sacramento, CA 95814.

Los Angeles Regional Water Quality Control Board

TO: Los Angeles County MS4 Permittees and Other Interested Persons

FROM: Renee A. Purdy, Chief *Renee A. Purdy*
Regional Programs Section

DATE: March 28, 2012

SUBJECT: TRANSMITTAL OF STAFF WORKING PROPOSAL ON LA COUNTY MS4 PERMIT -
NON-STORM WATER DISCHARGE PROVISIONS

As staff committed to in previous workshops on the renewal of the Los Angeles County MS4 Permit, attached is a working proposal of the permit provisions related to the **Non-Storm Water Discharge Prohibitions**. Staff of the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) is distributing to Los Angeles County MS4 Permittees and other interested persons the attached staff working proposal for preliminary review and discussion purposes only.

Please note the following: Staff will accept both written and oral comments on these working proposals. Please be advised, however, that these staff working proposals neither constitute a "draft permit" or a "proposed permit" as defined in Title 40 Code of Federal Regulations (40 CFR) sections 122.2 or 124.6. Further, distribution of these staff working proposals for review and discussion does not constitute a public comment period pursuant to 40 CFR sections 124.10 or 124.17. Accordingly, while staff will accept and consider written comments on these working proposals, staff does not intend to formally respond to written comments received that pertain to the working proposals. In addition to, or in lieu of, written comments, Permittees and interested persons are also encouraged to make oral comments to staff during telephone conversations, in-person meetings, and/or at the upcoming board workshop on April 5, 2012. Staff looks forward to input on this working proposal from Permittees and other interested persons.

For written and oral comments on this working proposal regarding the Non-Storm Water Discharge provisions to be considered by staff in preparing the forthcoming draft Los Angeles County MS4 Permit, comments need to be made and/or submitted no later than **April 18, 2012**. Written comments should be submitted by e-mail to iridgeway@waterboards.ca.gov and rpurdy@waterboards.ca.gov.

Staff previously released a working proposal regarding the permit provisions for "**Minimum Control Measures**" on March 21, 2012 with a comment deadline of April 6, 2012. In order to provide Permittees and interested persons time following the April 5, 2012 board workshop to finalize comments on the permit provisions for "Minimum Control Measures", staff is **extending the deadline for comments to April 13, 2012.**

Written comments received will be included in the administrative record for the renewal of the Los Angeles County MS4 Permit, but will not be provided to the individual Los Angeles Water Board members. When a draft permit is released, interest persons will be provided an opportunity to submit written comments in compliance with 40 CFR sections 124.10 or 124.17. Consistent with federal regulations, staff will prepare responses to significant comments received on the draft permit submitted in compliance with the public notice and will make comments and responses available to the Los Angeles Water Board members.

Staff looks forward to further discussions on this working proposal. Please do not hesitate to contact Mr. Ivar Ridgeway, Chief, Storm Water Permitting at (213) 620-2150 or myself at (213) 576-6622 if you wish to schedule a meeting with us or if you have any questions or comments.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

Part III. DISCHARGE PROHIBITIONS

A. Non-Storm Water Discharges

1. General Definitions

- a. **Non-Storm Water Discharge:** Any discharge into the MS4 or from the MS4 into a receiving water that is not composed entirely of storm water.
- b. **Storm Water:** Storm water runoff, snow melt runoff, and surface runoff and drainage related to precipitation events (pursuant to 40 CFR § 122.26(b)(13); 55 *Fed. Reg.* 47990, 47995 (16 November 1990)).
- c. **Illicit Discharge:** Any discharge into the MS4 or from the MS4 into a receiving water that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes any non-storm water discharge, except those non-storm water discharges regulated by a separate NPDES permit; the non-storm water discharges specifically identified in Part III.A.3 of this Order; and non-storm water discharges resulting from emergency fire fighting activities (pursuant to 40 CFR § 122.26(b)(2)).
- d. **Authorized Non-Storm Water Discharge:** Authorized non-storm water discharges are certain categories of discharges that are not composed entirely of storm water but contain only minimal amounts of pollutants and therefore do not result in significant environmental effects. (See 55 *Fed. Reg.* 47990, 47995 (16 November 1990)).
- e. **Receiving Water:** A “water of the United States” into which waste and/or pollutants are or may be discharged.

2. Effective Prohibition of Non-Storm Water Discharges. Each Permittee shall, within its respective jurisdiction, effectively prohibit non-storm water discharges into the MS4 and from the MS4 to receiving waters except where such discharges are either specifically authorized by a separate individual or general National Pollutant Discharge Elimination System (NPDES) permit or conditionally authorized in accordance with sections A.3 through A.6 below.

3. Exemptions from Effective Prohibition. The following categories of non-storm water discharges are conditionally authorized as specified below in all areas regulated by this Order with the exception of direct discharges to Areas of Special Biological Significance (ASBS) within Los Angeles County. Exemptions from the effective prohibition on non-storm water discharges into

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

the MS4 and from the MS4 directly to an ASBS are identified in section A.4 below.

- a. Those that are regulated by a separate individual or general NPDES permit for non-storm water discharges, including, but not limited to:
 - i. Discharges of non-process waste water regulated by NPDES Permit No. CAG994003, including, but not limited to:
 - (a) Air conditioning condensate;
 - (b) Swimming pool filter backwash water;
 - (c) Swimming pool drainage, where the discharge is not authorized below or is otherwise prohibited by a Permittee; and
 - (d) Groundwater seepage.
 - ii. Discharges of low threat hydrostatic test water¹ regulated by NPDES Permit No. CAG674001;
 - iii. Discharges of ground water from construction and project dewatering² regulated by NPDES Permit No. CAG994004;
 - iv. Discharges of ground water from potable water supply wells³ regulated by NPDES Permit No. CAG994005;
 - v. Discharges of treated ground water from investigation and/or cleanup of volatile organic compound (VOC) contaminated sites regulated by NPDES Permit No. CAG914001;

¹ Low threat hydrostatic test water means discharges resulting from the hydrostatic testing or structural integrity testing of pipes, tanks, or any storage vessels using domestic water or from the repair and maintenance of pipes, tanks, or reservoirs.

² Discharges of ground water from construction and project dewatering include treated or untreated waste water from permanent or temporary construction dewatering operations; ground water pumped as an aid in the containment and/or cleanup of a contaminant plume; ground water extracted during short-term and long-term pumping/aquifer tests; ground water generated from well drilling, construction or development and purging of wells; equipment decontamination water; subterranean seepage dewatering; incidental collected storm water from basements; and other process and non-process waste water discharges that meet the eligibility criteria and could not be covered under another specific general NPDES permit.

³ Discharges covered by this permit include ground water from potable water supply wells generated during the following activities: ground water generated during well purging for data collection purposes; ground water extracted from major well rehabilitation and redevelopment activities; and ground water generated from well drilling, construction, and development.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

- vi.** Discharges of treated ground water and other waste waters from investigation and/or cleanup of petroleum fuel contaminated sites regulated by NPDES Permit No. CAG834001;
 - vii.** Short-term, intermittent discharges from utility vaults and underground structures regulated by NPDES Permit No. CAG990002; or
- b.** Those that fall within one of the categories below, provided they are not a source of pollutants that causes or contributes to an exceedance of applicable Receiving Water Limitations in Part V. and/or Water Quality Based Effluent Limitations in Part VI.D., and meet all required conditions specified in Table X or as otherwise specified or approved by the Regional Water Board Executive Officer:
- i.** Natural springs;
 - ii.** Flows from riparian habitats and wetlands;
 - iii.** Diverted stream flows, authorized by the State or Regional Water Board;
 - iv.** Dewatering of lakes;
 - v.** Rising ground waters, where ground water seepage is not otherwise regulated by a separate NPDES permit⁴;
 - vi.** Uncontaminated ground water infiltration⁵;
 - vii.** Uncontaminated pumped ground water, where not otherwise regulated by a separate NPDES permit⁶;
 - viii.** Landscape irrigation;
 - ix.** Discharges from potable water sources, including water line flushing (supply and distribution system releases), where not otherwise regulated by a separate NPDES permit⁷;

⁴ A NPDES permit for discharges associated with ground water dewatering is required within the Los Angeles Region.

⁵ Uncontaminated ground water infiltration is water other than waste water that enters the MS4 (including foundation drains) from the ground through such means as defective pipes, pipe joints, connections, or manholes. Infiltration does not include, and is distinguished from, inflow. (See 40 CFR § 35.2005(20).)

⁶ Ibid.

⁷ Potable water distribution system releases means sources of flows from drinking water storage, supply and distribution systems (including flows from system failures), pressure releases, system maintenance,

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

- x. Gravity flow from foundation drains, footing drains, and crawl space pumps, where ground water seepage is not otherwise regulated by a separate NPDES permit;
- xi. Air conditioning condensate, where not otherwise regulated by a separate NPDES permit;
- xii. Dechlorinated/debrominated swimming pool/spa discharges,⁸ where not otherwise regulated by a separate NPDES permit;
- xiii. Dewatering of decorative fountains;
- xiv. Non-commercial car washing by residents or by non-profit organizations;
- xv. Street/sidewalk wash water⁹; and
- xvi. Flows from emergency fire fighting activities (i.e., flows necessary for the protection of life or property).¹⁰

4. Exemptions from Effective Prohibition within an ASBS. The following non-storm water discharges to the MS4 and from the MS4 directly to an ASBS are conditionally authorized pursuant to the California Ocean Plan as specified below, provided that:

distribution line testing, fire hydrant flow testing; and flushing and dewatering of pipes, reservoirs, vaults, and minor non-invasive well maintenance activities not involving chemical addition(s) where not otherwise regulated by NPDES Permit No. CAG674001 or NPDES Permit No. CAG994005. Releases from potable water supplies or distribution systems not otherwise regulated by an existing NPDES permit shall be allowed with the implementation of appropriate and effective BMPs (as specified in Table X and consistent with American Water Works Association guidelines, and/or as required by the Regional Water Board Executive Officer) until such time as a general NPDES permit is adopted that addresses those types of releases.

⁸ Authorized dechlorinated/debrominated swimming pool/spa discharges do not include swimming pool/spa filter backwash or swimming pool/spa water containing bacteria, detergents, wastes, algaecides, or cyanuric acid in excess of 50 parts per million, or any other chemicals including salts from pools commonly referred to as “salt water pools” in excess of applicable water quality objectives.

⁹ Authorized non-storm water discharges of street/sidewalk wash water only include those discharges resulting from use of high pressure, low volume spray washing using only potable water with no cleaning agents at an average usage of 0.006 gallons per square feet of sidewalk area in accordance with Regional Water Board Resolution No. 98-08. Authorized non-storm water discharges of street/sidewalk wash water do not include hosing of any sidewalk or street with a garden hose with a pressure nozzle.

¹⁰ Discharges from vehicle washing, building fire suppression system maintenance (e.g., sprinkler line flushing), and other routine maintenance activities are not authorized to be discharged to the MS4.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

- a. The discharges are essential for emergency response purposes, structural stability, slope stability or occur naturally, including the following discharges:
 - i. Discharges associated with emergency fire fighting activities (i.e., flows necessary for the protection of life or property)¹¹;
 - ii. Foundation and footing drains;
 - iii. Water from crawl space or basement pumps;
 - iv. Hillside dewatering;
 - v. Naturally occurring groundwater seepage via a storm drain; and
 - vi. Non-anthropogenic flows from a naturally occurring stream via a culvert or storm drain, as long as there are no contributions of anthropogenic runoff.
 - b. The discharges fall within one of the categories in sub-part A.3 and are specifically authorized by the Los Angeles Water Board.
 - c. Authorized non-storm water discharges shall not cause or contribute to a violation of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations in this Order or the water quality objectives in Chapter II of the Ocean Plan or alter natural ocean water quality in an ASBS.
- 5. Permittee Requirements.** Each Permittee shall develop and implement procedures to ensure all conditionally authorized non-storm water discharges into the MS4 and from the MS4 into receiving waters identified in sections A.3 and A.4 above comply with the applicable conditions specified in Table X. These procedures shall include, at a minimum, the following:
- a. Procedures for ensuring that all necessary permits and water quality certifications are obtained by a discharger prior to discharge to the MS4 as specified in Table X.
 - b. Procedures for ensuring a discharger has explored and considered alternatives to discharge to the MS4, including for example, water conservation, reuse of water and ground water recharge, and has determined no feasible or economical alternative to discharge to the MS4 exists.

¹¹ *Ibid.*

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

- c. Procedures to minimize the discharge of landscape irrigation water into the MS4. For landscape irrigation water to be discharged, each Permittee shall, within its respective jurisdiction:
 - i. Enact a municipal ordinance that specifies landscape irrigation standards to minimize irrigation runoff and eliminate irrigation overspray. The Permittee shall have legal authority to enforce the ordinance and levy fines. In addition, the Permittee may coordinate with the local water purveyor(s), where applicable, to enforce landscape water use efficiency requirements for existing landscaping.
 - ii. Coordinate with the water purveyor(s) within its jurisdiction to develop and implement a work plan that results in a coordinated outreach and education program to minimize the discharge of irrigation water and pollutants associated with irrigation water consistent with Part VI.C. of this Order (Public Information and Participation Program).
6. If the discharger¹² of the non-storm water discharge is not a named Permittee in this Order, the Permittee shall require the discharger to provide advanced notification to the Permittee of the discharge, obtain local permits, conduct appropriate monitoring, and/or implement additional BMPs and/or control measures as a condition of the approval to discharge into the Permittee's MS4, according to its local authorities.
7. Each Permittee shall evaluate the monitoring data collected pursuant to Attachment X (Monitoring and Reporting Program - Non-Storm Water Outfall Based Monitoring), and any other relevant information, and determine whether any of the categories of non-storm water discharges identified in sections A.3 and A.4 above is a source of pollutants that causes or contributes to an exceedance of applicable Receiving Water Limitations in Part V. and/or Water Quality Based Effluent Limitations in Part VI.D.

If the Permittee determines that any one of the categories of non-storm water discharges identified in sections A.3 and A.4 above is a source of pollutants that causes or contributes to an exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations, the Permittee shall report its findings to the Regional Water Board in its annual report. Based on this determination, the Permittee shall also either:

¹² Dischargers not named a Permittee in this Order may include, but are not limited to, potable water supply and distribution agencies, wastewater treatment agencies/sanitation districts, and other Federal, State, and local governmental entities.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

- a. Prohibit the non-storm water discharge category from entering the MS4 or receiving waters; or
 - b. Impose conditions in addition to those in Table X, subject to approval by the Regional Water Board Executive Officer, on the non-storm water discharge category such that the discharge category will not be a source of pollutants that causes or contributes to an exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations; or
 - c. Require the discharger to obtain coverage under a separate State or Regional Water Board permit prior to discharge to the MS4.
8. If a Permittee demonstrates that a specific non-storm water discharge from a potable water supply or distribution system not otherwise regulated by a separate NPDES permit, but required by state or federal statute and/or regulation, caused *[further definition to be provided]* a short-term exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations during a specific sampling event, the Permittee shall not be found in violation of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations for that specific sampling event. Such demonstration must be based on monitoring data from the specific non-storm water discharge, other relevant information regarding the specific non-storm water discharge as identified in Table X, and documentation of the state or federal statute and/or regulation requiring such non-storm water discharge, including the conditions under which the specific discharge was required.
- a. Upon a demonstration that such a discharge has caused a short-term exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations during a specific sampling event, the Permittee shall immediately take actions to:
 - i. Evaluate the potential long-term effects of such continued discharges on the receiving water;
 - ii. Identify alternative discharge pathways to less sensitive receiving waters in coordination with the discharger;
 - iii. Impose conditions in addition to those identified in Table X, subject to approval by the Regional Water Board Executive Officer, on the discharge such that it will not be a source of pollutants that causes or contributes to an exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations; and/or

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

Table X. Required Conditions for Authorized Non-Storm Water Discharges

Discharge Category	General Conditions Under Which Discharge to the MS4 is Allowed	Applicable NPDES Permit for Which Coverage is Required Prior to Discharge to the MS4 and/or Receiving Waters ¹³	Conditions/BMPs that are Required to be Implemented Prior to Discharge to the MS4 and Receiving Waters
All Discharge Categories	See discharge specific conditions below.	--	Evaluate alternative means of disposal (e.g., sanitary sewer, land disposal) or opportunities for capture, reclamation, and reuse. Segregate authorized non-storm water discharges from potential sources of pollutants to prevent introduction of pollutants to the MS4 and receiving water.
Natural Springs	N/A	N/A	Segregate authorized non-stormwater discharges from potential sources of pollutants to prevent introduction of pollutants to the MS4 and receiving water.
Flows from riparian habitats and wetlands	Discharge allowed only if all necessary permits/water quality certifications for water diversions are obtained prior to discharge.	N/A	All necessary permits and water quality certifications must be obtained prior to diverting flows to the MS4. Discharges shall comply with all conditions specified in permits and water quality certifications.
Diverted stream flows	Discharge allowed only if authorized by the State or Regional Water Board.	N/A	Discharges shall comply with all conditions specified by the State or Regional Water Board.

¹³ The general orders/NPDES permits identified are those currently available to dischargers under which authorization to discharge could be provided. Alternatively, a discharger could seek authorization for the non-storm water discharge under an individual NPDES permit.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

Discharge Category	General Conditions Under Which Discharge to the MS4 is Allowed	Applicable NPDES Permit for Which Coverage is Required Prior to Discharge to the MS4 and/or Receiving Waters ¹³	Conditions/BMPs that are Required to be Implemented Prior to Discharge to the MS4 and Receiving Waters
Dewatering of lakes	Discharge allowed only if all necessary permit/water quality certifications for dredge and fill activities, including water diversions, are obtained prior to discharge.	N/A	<p>All necessary permits and water quality certifications must be obtained prior to dewatering.</p> <p>Ensure procedures for advanced notification by the lake owner / operator to the Permittee(s) within 72 hours of planned discharge.</p> <p>Immediately prior to discharge, visible trash on the shoreline or on the surface of the lake shall be removed and disposed of in a legal manner.</p> <p>Immediately prior to discharge, the MS4 inlet to which the discharge is directed, and the MS4 outlet from which the water will be discharged to the receiving water, shall be inspected and cleaned out.</p> <p>Discharges shall be volumetrically and velocity controlled to prevent resuspension of sediments.</p> <p>Measures shall be taken to stabilize lake bottom sediments.</p> <p>Ensure procedures for water quality monitoring of pollutants of concern¹⁴ that may be mobilized by the lake dewatering through the MS4 to a receiving water.</p> <p>Ensure record-keeping of lake dewatering by the lake owner / operator.¹⁵</p>

¹⁴ Pollutants of concern include, at a minimum, trash and debris, including organic matter, TSS, and any pollutant for which there is a Water Quality Based Effluent Limitation in Part VI. for the lake and/or receiving water.

¹⁵ Permittees shall require that the following information is maintained by the lake owner / operator: name of discharger, date of notification, method of notification, location of discharge, discharge pathway, receiving water, date of discharge, time of the beginning and end of the

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

Discharge Category	General Conditions Under Which Discharge to the MS4 is Allowed	Applicable NPDES Permit for Which Coverage is Required Prior to Discharge to the MS4 and/or Receiving Waters ¹³	Conditions/BMPs that are Required to be Implemented Prior to Discharge to the MS4 and Receiving Waters
Rising ground waters	Discharge from ground water seepage allowed only if authorized under a separate NPDES permit.	NPDES Permit No. CAG994003 – Discharges of Nonprocess Wastewater to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties	Discharges shall comply with all NPDES permit conditions for the discharge.
Uncontaminated ground water infiltration	N/A	N/A	None
Uncontaminated pumped ground water	Discharge is allowed only if authorized under a separate NPDES permit.	NPDES Permit No. CAG994003 – Discharges of Nonprocess Wastewater to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties NPDES Permit No. CAG994004 – Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties NPDES Permit No. CAG990002 – Discharges from Utility Vaults and Underground Structures to Surface Waters	Discharges shall comply with all NPDES permit conditions for the discharge. Pursuant to NPDES Permit No. CAG990002, whenever there is a discharge of 50,000 gallons or more from utility vaults and underground structures to the MS4, the discharger (i.e., utility company) shall contact the appropriate Permittee(s) with jurisdiction over the MS4, including but not limited to the Los Angeles County Flood Control District, within 24 hours of the discharge.

discharge, duration of the discharge, flow rate or velocity, total number of gallons discharged, type(s) of sediment controls used, pH of discharge, type(s) of volumetric and velocity controls used, and monitoring data. Records shall be made available upon request by the Permittee or Regional Water Board.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

Discharge Category	General Conditions Under Which Discharge to the MS4 is Allowed	Applicable NPDES Permit for Which Coverage is Required Prior to Discharge to the MS4 and/or Receiving Waters ¹³	Conditions/BMPs that are Required to be Implemented Prior to Discharge to the MS4 and Receiving Waters
Landscape irrigation using potable water	Discharge allowed if potable landscape irrigation due to runoff is minimized through the implementation of an ordinance specifying water efficient landscaping standards, as well as an outreach and education program focusing on water conservation and landscape water use efficiency.	N/A	<p>Implement BMPs, including Integrated Pest Management (IPM), to minimize runoff and prevent introduction of pollutants to the MS4 and receiving water.</p> <p>Implement water conservation programs to minimize discharge by using less water.</p> <p>Utilize water delivery rates that do not exceed the infiltration rate of the soil.</p> <p>Promote erosion repair (i.e., cover or repair areas of exposed soils in yards/landscaping).</p>
Landscape irrigation using reclaimed or recycled water	Discharge of reclaimed or recycled water runoff from landscape irrigation is allowed if the discharge is in compliance with the producer and distributor operations and management (O&M) plan, and all relevant portions thereof, including the Irrigation Management Plan.	N/A	Discharges must comply with applicable O&M Plans, and all relevant portions thereof, including the Irrigation Management Plan.

LA County MS4 Permit – Non-Storm Water Discharge Prohibitions

Discharge Category	General Conditions Under Which Discharge to the MS4 is Allowed	Applicable NPDES Permit for Which Coverage is Required Prior to Discharge to the MS4 and/or Receiving Waters ¹³	Conditions/BMPs that are Required to be Implemented Prior to Discharge to the MS4 and Receiving Waters
Potable drinking water supply and distribution system releases	<p>Discharge of ground water from potable water supply wells is allowed only if authorized under a separate NPDES permit (see below).</p> <p>Discharge of other potable drinking water supply and distribution releases allowed after implementation of specified BMPs.</p>	N/A	<p>Implement BMPs to prevent introduction of pollutants to potable water supply or distribution system release prior to discharge to the MS4 and receiving water. BMPs shall be consistent with CA-NV American Water Works Association BMP Manual for Drinking Water System Releases and other applicable guidelines.¹⁶</p> <p>Ensure procedures for advanced notification by the water supplier to the Permittee(s) within 72 hours of planned discharge and as soon as possible after an unplanned discharge.</p> <p>Ensure procedures for monitoring of pollutants of concern¹⁷ that may be mobilized by the potable water supply release through the MS4 to a receiving water.</p> <p>Ensure record-keeping by water supplier(s) for all discharges greater than [<i>volume to be determined</i>].¹⁸</p>

¹⁶ See, for example, Awwa Research Foundation and US EPA. Environmental Impacts of Non-Treatment Discharges from Drinking Water Utilities. Prepared by Narasimham Consulting, Inc. (2007); Golden State Water Company Water Pollution Control Program – Potable Water Distribution System Releases for Unincorporated Areas of Los Angeles County (last updated June 2007) and City of Los Angeles Department of Water and Power Pollution Prevention Plan for Water System Discharges (last updated April 2008).

¹⁷ Pollutants of concern include, at a minimum, trash and debris, including organic matter, TSS, and any pollutant for which there is a Water Quality Based Effluent Limitation in Part VI. for the receiving water.

¹⁸ Permittees shall require that the following information is maintained by the water supplier(s) for all discharges (planned and unplanned) greater than [*volume to be determined*]: name of discharger, date of notification (for planned discharges), method of notification, alternatives to discharge considered and justification for finding of infeasibility of capture and reuse or ground water infiltration, location of discharge, discharge pathway, receiving water, date of discharge, time of the beginning and end of the discharge, duration of the discharge, flow rate or velocity, total number of gallons discharged, total number of gallons captured for reuse or infiltrated to ground water, type of dechlorination equipment used, type of

Los Angeles Regional Water Quality Control Board

SPEAKER REQUEST CARD

Date: 4-5-12

I wish to speak during the Board Meeting:

- I wish to speak on Agenda Item No. 20 Minimum Control Measures
- I wish to speak during Public Forum on a non-agenda item.

I do not wish to speak but I do want to express the following position:

- I support Agenda Item No. _____
- I oppose Agenda Item No. _____

Name: Stephen Mejia

- Representing Self
- Representing: _____

Unless exempted by the Board, comments are limited to three (3) minutes.

Los Angeles MS4 Permit: Board Workshop

Metropolitan Water District

April 5, 2012

Storm Water Management Program: Minimum Control Measures

- Outlined in 40 CFR 122.26(d)(2)(iv)
 - Industrial / Commercial Program
 - Development Construction Program
 - Illicit Connections/Illicit Discharges Elimination Program
 - Public Agency Activities Program
 - New Development/Redevelopment Program
 - Public Information and Participation Program

Minimum Control Measures Customization

- Staff working proposal represents baseline, or default requirements
- Permittees may propose *customized actions* to achieve equivalent pollutant control
 - Based on water quality conditions in the area under the Permittee's jurisdiction or within the watershed management area
 - Executive Officer approval required

Minimum Control Measure - Public Information and Participation Program

- Increase public awareness and knowledge about the adverse impacts of storm water pollution, and change the behavior of target audiences to reduce pollution.
- Flexibility to customize based on water quality issues in implementation area
- Implementation scale
 - Individual jurisdiction
 - Watershed
 - County wide

Public Information and Participation Program – Key Elements

- Public Participation
 - Mechanisms for public reporting
 - Events to involve the public in pollution prevention and clean-up
- Residential Outreach
 - PSAs/advertising campaigns addressing targeted issues
 - Distribute activity specific educational materials at retail locations
 - Provide schools with educational materials on stormwater pollution (*"Erase the Waste" or CEEIN materials may be used*)
 - Maintain website with educational materials / links

Minimum Control Measure – Industrial/Commercial Sources

- Ensure implementation of BMP and eliminate illicit connections/discharges from industrial/commercial facilities to control the discharge of pollutants to the MS4

- Flexibility to customize based on
 - Inspection history
 - Industrial sectors
 - Subwatershed areas

Industrial/Commercial Facilities Control Program – Key Elements

- Watershed-based database of all industrial and commercial facilities
- Outreach & business assistance program
- Two inspections of all designated industrial/commercial facilities within 5 years
 - Ensure BMP implementation (CASQA BMP manual)
 - Verify permit coverage and No Exposure Condition (if Necessary)
- Progressive enforcement, where necessary
- Significant Difference from 2001
 - No corporate outreach
 - Prescriptive BMP implementation (CASQA manual)

Minimum Control Measure - New Development and Redevelopment

- Minimize the impacts of development and significant redevelopment projects on water quality and hydrology
- Flexibility to customize through incentives for replenishing groundwater and retrofitting existing development
- Key Requirements
 - On-site retention of the storm water runoff volume resulting from the 85th percentile, 24-hour storm or the 0.75 inch 24-hour storm, whichever is greater
 - Off-site mitigation required where on-site retention is technically infeasible

Minimum Control Measure- New Development and Redevelopment

■ Storm Water Management Options

- Most Preferred: On-site retention or Off-site regional groundwater replenishment
- Medium Preferred: Off-site infiltration/bioretention or Retrofit of existing development (e.g. green streets)
- Least Preferred: On-site biofiltration systems, sized to treat 1.5 times the water quality design volume that could not be addressed by any of the other management options

Minimum Control Measure- New Development and Redevelopment

- Significant Differences from 2001
 - Prioritization of on-site retention
 - The allowance for groundwater replenishment projects and retrofit projects in lieu of on-site retention
 - Prioritization of off-site retention over on-site biofiltration
 - Greater specificity of biofiltration BMP design
 - Requirement to monitor effectiveness of treatment BMPs

Minimum Control Measure- New Development and Redevelopment

Hydromodification

- Applies to “Natural Drainage Areas”
- Requirements
 - On-site retention of 95th percentile, 24-hour storm, or
 - BMP implementation to ensure the runoff flow rate, volume, velocity, and duration do not exceed pre-development condition for 2-year, 24-hour rainfall event
 - The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study
- Significant Difference
 - The inclusion of very specific and detailed hydromodification requirements

Minimum Control Measure – Development Construction Program

- Ensure implementation of BMPs to reduce the contribution of pollutants from construction activities to the MS4

- Key Requirements
 - Inventory of grading permits, encroachment permits, demolition permits, building permits, or construction permits
 - Development, review and written approval of a Erosion and Sediment Control Plan (ESCP)
 - BMP implementation (per CASQA or Caltrans manual)
 - Education outreach for construction site operators

Minimum Control Measure – Development Construction Program

- Significant Difference(s)
 - Electronic Inventory
 - Elimination of Local SWPPP Requirement
 - Prescriptive BMP implementation (e.g. CASQA manual and Caltrans Manual)
 - Tiered BMP Approach
 - e.g. Non-storm water management listed for larger sites
 - Risk Level BMP Implementation
 - e.g. Sites discharging to sediment/siltation require enhanced BMPs
 - Inspection frequency related to risk level

Minimum Control Measure –Illicit Connections and Illicit Discharges Elimination

- Effectively prohibit non-storm water discharges to the MS4
- Key Requirements
 - MS4 mapping
 - Implementation of Non-Stormwater Outfall-Based Monitoring Program to Detect IC/IDs
 - Development procedures for conducting source investigations for IC/IDs
 - Development of procedures for eliminating for IC/IDs
 - Mechanism for public reporting of illicit discharges
 - Spill response plan

Minimum Control Measure –Illicit Connections and Illicit Discharges Elimination

- Significant Difference(s)
 - Elimination of illicit connection screening for all MS4 pipes of a given size
 - Use of field sampling/monitoring to identify potential ICs/IDs
 - Development of a protocol to eliminate ICs/IDs

Minimum Control Measure – Public Agency Activities Program

- Minimize storm water pollution impacts from permittee owned or operated facilities and activities

- Key Requirements
 - Maintain an inventory and map of all Permittee-owned or operated facilities

 - Implement activity specific BMPs (such as catch basin cleaning, open channel maintenance, street sweeping, and appropriate pesticide application)

 - Conduct inventory of retrofitting opportunities

 - Training of employees and contractors

Minimum Control Measure – Public Agency Activities Program

- Significant Difference(s)
 - Implementation of prescriptive BMPs (e.g Caltrans Manual)
 - Implementation of an Integrated Pesticide Management Program
 - Inventory of retrofitting opportunities

LA County MS4 Permit Reissuance Board Workshop

Non-Storm Water Discharges
April 5, 2012

LA County MS4 Permit Outline

Discharge Prohibitions

Part 1

- **Non-Storm Water Discharge Prohibition**✓

Effluent Limitations

Part 7

- TMDL Water Quality Based Effluent Limitations (see “TMDL Provisions” below)

Receiving Water Limitations

Part 2

- Applicable numeric and narrative water quality objectives/criteria for the receiving water

Special Provisions

Part 4

- Watershed Management Programs
- **Minimum Control Measures**✓
- TMDL Provisions

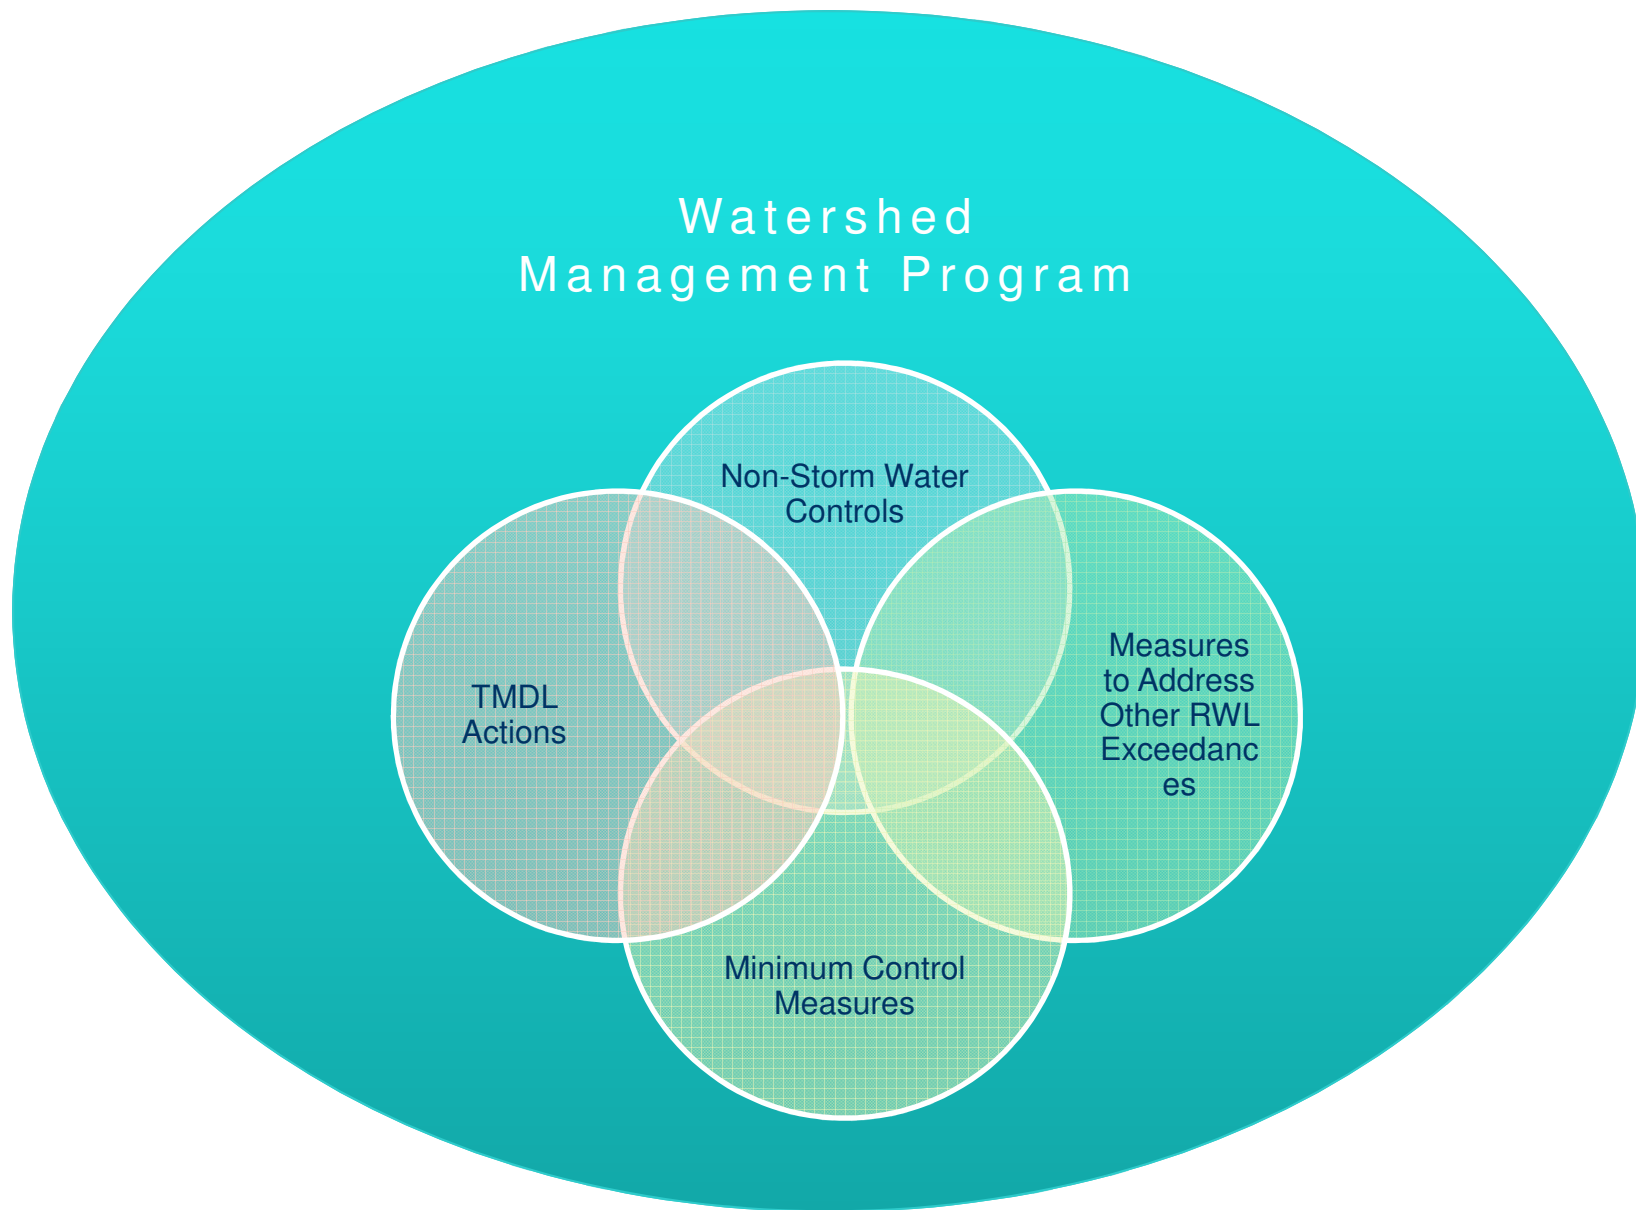

Standard Provisions

Part 6

Monitoring and Reporting Provisions

Attachment

PERMIT STRUCTURE

Background

- Non-storm water discharges = discharges not composed entirely of storm water
- MS4 permits must effectively prohibit non-storm water discharges into MS4s
- How?
 - Regulate non-storm water discharges to the MS4 under separate NPDES permit
 - Implement management program to eliminate illicit discharges into MS4

Background

- What about non-storm water discharges that commonly occur in urban environments?
- Some exemptions allowed
 - Discharges covered under an NPDES permit
 - Categorical exemptions
 - Municipalities may need to impose controls/BMPs
 - Discharge only allowed if not a source of pollutants

Background (cont.)

- Order No. 01-182
 - Non-storm water discharge prohibition
 - IDDE program requirements
 - List of exempted non-storm water discharges
 - Categorical exemptions (e.g., natural flows, emergency fire fighting , urban)
 - Discharges covered under an NPDES permit

Evaluation of Current Approaches

- IDDE program effectiveness
 - Review of annual reports
 - Inspections
- Results of dry-weather monitoring data from mass emission stations
 - Based on annual reports from 2005 to 2011
 - Provides 15 dry-weather data sets for each station

Results of IDDE Program Evaluation

- Widespread presence of persistent non-storm water discharges
 - Poor understanding of the source(s) and characteristics
 - Limited actions to address these persistent discharges
- Widespread exceedances of WQS during dry weather

Summary of Evaluation

- More detailed provisions needed to:
 - Implement effective controls on exempted categories of non-storm water discharges
 - Evaluate potential impacts from exempted categories
 - Take action if a non-storm water discharge is identified as a source of pollutants

Working Proposal - 1

- All exempted categories still included, e.g.
 - Potable water supply discharges
 - Fire fighting flows
- Table of conditions/BMPs that must be met for discharge to be allowed
- Requirements to support Permittees' authority to require discharger to provide notification, conduct monitoring, and implement BMPs

Working Proposal - 2

- Provision for Permittees to evaluate monitoring data to assess whether any exempted discharge is a source of pollutants
- Provisions requiring Permittees to take action if an exempted discharge is a source of pollutants
 - Prohibit the discharge
 - Impose additional controls
 - Require discharger to obtain coverage under a separate NPDES permit

Working Proposal – 3

Potable Water Supply Discharges

- Often required by state or federal regulations
- If a potable water supply discharge caused an exceedance of a water quality standard, the MS4 Permittee would not be found in violation of the receiving water limitation
 - Demonstration required – based on monitoring data from the discharge and other information

Working Proposal - 3 (cont.) Potable Water Supply Discharges

- Follow-up action by MS4 Permittee
 - Evaluate potential long-term effects of continued discharges
 - Identify alternative discharge pathways in coordination with discharger
 - Impose additional controls
 - Require discharger to obtain coverage under a NPDES permit

Conclusion

- Addition of more specific conditions/BMPs for exempted non-storm water discharges similar to Ventura County MS4 Permit
- More explicit procedures for evaluating exempted discharges and taking action if they are a source of pollutants
- Provisions to address concerns regarding potable water supply discharges and fire fighting flows

Comments on the Working Proposals for Minimum Control Measures and Non- Stormwater Discharges

Shahram Kharaghani, PhD, PE, BCEE

City of Los Angeles

Watershed Protection Division

April 5, 2012

City of LA Supports a Watershed Approach for the Permit

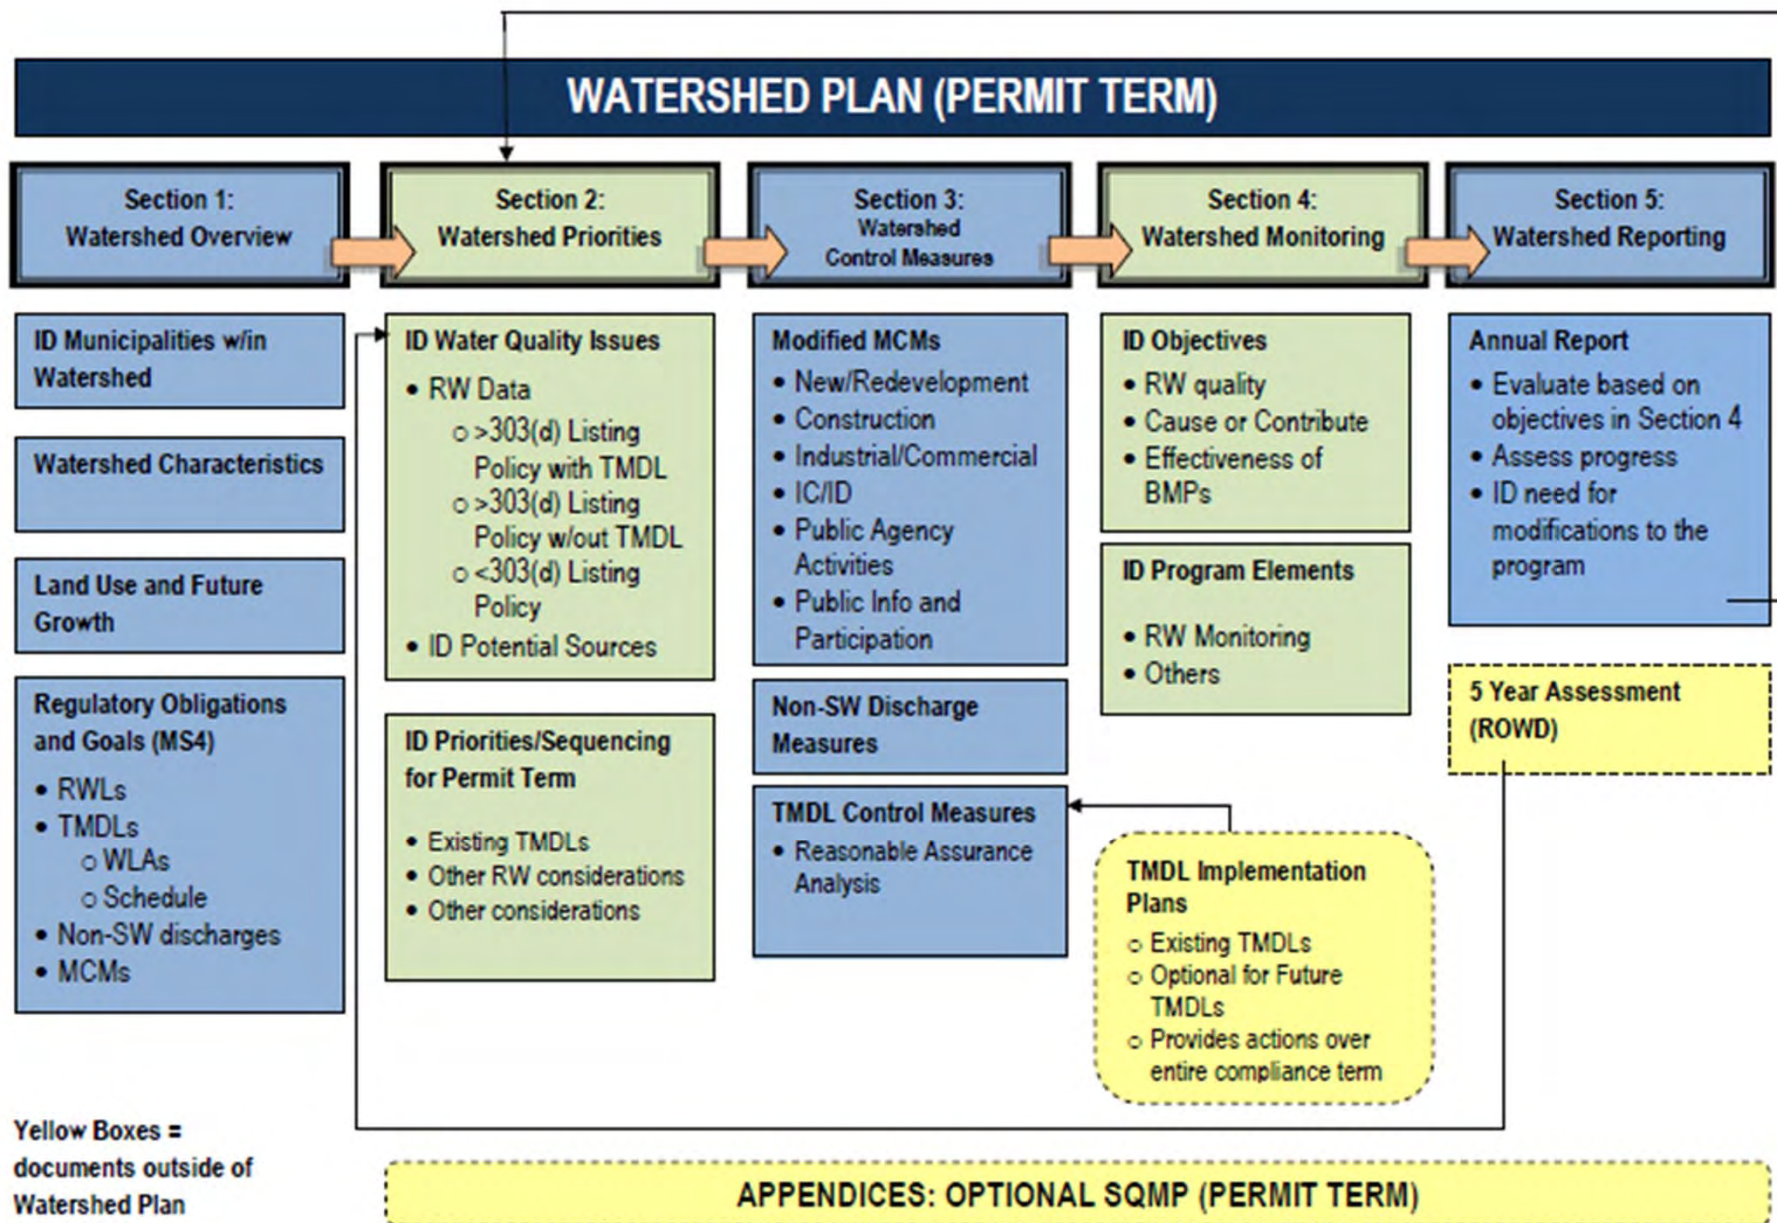

- Benefits of Watershed Approach
 - Focuses resources on highest priorities in watershed, consistent with recent guidance from USEPA
 - Provides for efficient and effective approach to addressing water quality issues
 - Encourages collaboration
 - Customizes program elements to make the focus protection of beneficial uses in receiving waters

City of LA Supports a Watershed Approach for the Permit

- Benefits of a Watershed Approach (con't)
 - TMDLs
 - Implementation plans address water quality issues at watershed scale
 - TMDLs will drive a significant portion of implementation actions in Permit term

How to Achieve a Watershed Approach in the Permit

- Provide for a Watershed Plan that integrates all requirements of the Permit
- Within Watershed Plan, allow for customization
- Structure Permit to include a new section (Section 8) that details the requirements and contents of a Watershed Plan
- Executive Officer approval

Non-Stormwater Discharges

Ray Tahir

Cities of Azusa, Baldwin Park, Carson, Claremont, Compton, Duarte, El Monte, Gardena, Glendora, Irwindale, Lawndale, Lomita, Pico Rivera, San Fernando, San Dimas, San Gabriel, South El Monte, and West Covina

NSW Discharges

- Proposed Non-stormwater Discharge Requirements are:
 - excessive given that there is no outfall data from permittee MS4s to characterize non-stormwater-related issues
 - Regional Board does not have federal legal authority to comply with proposed new NSW discharge requirements

NWS Discharges

- Working NSW proposal does not include other pieces that are needed to evaluate their content and impact including
 - Definition of WQBEL (staff incorrectly uses it interchangeably with water quality standard)
 - Receiving water limitation language (is it the same as it is in the current permit or will it change?)
 - Outfall monitoring requirements for non-stormwater and how it will be used to determine if a NSW discharge is a pollutant source requiring prohibition (as an illicit discharge) or coverage under a separate NPDES permit)

NSW Discharges

➤ Issue: RB Staff Proposes to:

- Require currently exempted non-stormwater discharges to comply with receiving water limitations (RWLs) and WQBELs
 - If a single outfall monitoring sample reveals an exceedance of non-stormwater discharges detected through outfall monitoring permittees would have to (1) prohibit the discharge; or (2) or require the discharge to be covered under an NPDES permit

- Problem #1:
 - One round of outfall monitoring is NOT enough to determine whether an exempted non-stormwater discharge requires prohibition or coverage under a separate MS4 permit
 - There is an inherent difficulty in distinguishing non-stormwater discharges from an outfall or other sampling point within the MS4 to locate its origin or source from the time the exceedance is detected
 - Non-stormwater discharges generally do not contain pollutants that are likely to exceed water quality standards in a receiving water – with the possible exception of chlorine and excessive sediment
 - Monitoring of such discharges over the 5 year term of the permit is needed to have more data points to conclude if such discharges are in fact sources of pollutants (landscape irrigation, residential car washing, etc.)
 - Monitoring on a “pilot” basis should be done for specific NSW sources (e.g., residential sources (for landscape overspray and residential car washing)
 - Regional Board should also be aware that non-stormwater discharges from cities located upstream of a spreading ground are likely not to cause an impairment to a downstream beneficial use

NSW Discharges Rio Hondo Spreading Grounds

NWS Discharges

➤ NWS Discharge Issues

- Problem #2:
 - RB staff proposes to impose additional “conditions” on already exempt or conditionally exempt discharges
 - For example: All NSW discharge categories are to
 - Evaluate alternative means of disposal (e.g., sanitary reclamation, and reuse)
 - Segregate authorized (unsure of what this really means) of non-storm water discharges from potential sources of pollutants to prevent introduction of pollutants to the MS4 and receiving water.
 - But RB staff has no data to base these increased requirements on – non-stormwater outfall monitoring needs to be done to justify adding conditions (need to do NSW outfall monitoring over the 5 year term of the permit to see if these conditions are justified)
 - Staff is being arbitrary

Concerns

➤ NWS Discharge Issues

▪ Problem #3:

- RB staff proposes to make a non-stormwater discharge exceedance of a water quality standard (includes TMDLs) a receiving water violation – for example:
 - *If a Permittee demonstrates that a specific non-storm water discharge from a potable water supply or distribution system not otherwise regulated by a separate NPDES permit, but required by state or federal statute and/or regulation, caused [further definition to be provided] a short-term exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations during a specific sampling event, **the Permittee shall not be found in violation of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations for that specific sampling event.***
- But a permittee would be in violation if these requirements are not complied with

NWS Discharges

➤ NWS Discharge Issues

- Problem #3 (continued)
 - Permittees **cannot** be held responsible if a NSW discharge exceedance occurs because the Regional Board does not have the authority under federal stormwater regulations to compel compliance
- Problem #4
 - RB staff proposes to mandate that *an authorized non-storm water discharges shall not cause or contribute to a violation of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations in this Order or the water quality objectives*
 - RB does not have the legal authority under federal regulations to impose this requirement on permittees which in effect would make a municipality responsible for assuring that NSW discharges do not exceed water quality standards
 - RB staff confuses WQBELs with Water Quality Standards

NSW Discharges

- Why RB Staff Cannot Impose Stringent NSW Discharge Requirements on Permittees
 - Congress, under Section 402 (p) of the Clean Water Act, created two sets of standards: one for stormwater and another for stormwater
 - Stormwater pollution is to be reduced (NOT ELIMINATED) **FROM THE MS4** to the maximum extent practicable (MEP) through control measures (BMPs) [see 402(p)(3)(B)(iii)]
 - Non-stormwater discharges are only to be prohibited **TO THE MS4** [see 402(p)(3)(B)(ii)]
 - The two standards are very different in terms of compliance expectations
 - California MS4 permits (except Ventura and L.A.) and federal regulations use “from the MS4” to mean stormwater while “to the MS4” applies only to non-stormwater (must be emphasized that the MS4 permit is stormwater permit)
 - Staff has not made this important distinction

NSW Discharges

➤ NWS Discharge Issues

- Non-stormwater Discharges Require a Different Compliance Standard than Stormwater Discharges
 - Congress intended non-stormwater only to be prohibited to the MS4 -- with the exception of 18 exempted categories (e.g., potable water, landscape irrigation, residential car washing, etc.)
 - Prohibited non-stormwater discharges are known as ‘illicit discharges’
 - Certain exempted discharges have been conditioned on BMPs (e.g., charitable car washes should prevent wash water from entering catch basins)

Non-Storm Water Discharges

- RB Does Have Not Legal Authority to require permittees to prevent or prohibit non-stormwater discharges from exceeding water quality standards in the receiving water or outfall
 - Congress intended the elimination of non-exempted non-stormwater discharges to be achieved through the illicit discharge and connection detection and elimination (ICID/DE) program by requiring permittees to:
 - Encourage public reporting of discharges through a hotline
 - Respond to reports of illicit discharges
 - Take enforcement action against those who cause illicit discharges
 - Force the removal of illicit connections (a connection through which an illicit discharge passes)
 - Establish legal authority to compel sources of illicit discharges and connections to eliminate them
 - Require exempted discharges to be conditioned on BMPs if a municipality determines that they are source of pollutants or that these and other NSW discharges be permitted by the permitting agency (State Board/Regional Board)

NSW Discharges

- RB Staff is proposing to override Congress' mandate by revising permit language to require
 - Each Permittee, within its respective jurisdiction, effectively prohibit non-storm water discharges into the **MS4 and from the MS4 to receiving waters** except where such discharges are either specifically authorized by a separate individual or general National Pollutant Discharge Elimination System (NPDES) permit or conditionally authorized
 - Federal regulations only require a prohibition on non-stormwater discharges **to the MS4** (not from it to the MS4 and not to a receiving water)
 - Other Regional Boards in the State abide by this requirement
 - Includes MS4 permits issued by the Santa Ana Regional Board to the counties of Orange (North) Riverside, and San Bernadino
 - Also includes MS4 permits issued by San Diego Regional Board to South Orange County and San Diego County

NSW Discharges

<p>NWS Language Proposed by Los Angeles Regional Board Staff</p>	<ul style="list-style-type: none"> • <i>Each Permittee shall, within its respective jurisdiction, effectively prohibit non-storm water discharges into the MS4 and from the MS4 to receiving waters except where such discharges are either specifically authorized by a separate individual or general National Pollutant Discharge Elimination System (NPDES) permit</i>
<p>NWS Language in Santa Ana Regional Board-Issued MS4 Permits</p>	<ul style="list-style-type: none"> • <i>In accordance with the requirements of 40 CFR 122.26(d)(2)(i)(B) and 40 CFR 122.26(d)(2)(i)(F), the permittees shall prohibit illicit/illegal discharges (non-storm water) from entering into the MS4 unless such discharges are either authorized by a NPDES permit, or not prohibited in accordance with Section III.3, below. (See current North Orange County MS4 Permit, Part III.1)</i> • <i>In accordance with the requirements of 40 CFR 122.26(d)(2)(i)(B) and 40 CFR 122.26(d)(2)(i)(F), the Permittees shall continue to prohibit illicit connections and illegal discharges (non-storm water) from entering their respective MS4s. (See current Riverside County MS4 Permit, II.A)</i> • <i>In accordance with the requirements of 40 CFR 122.26(d)(2)(i)(B) and 40 CFR 122.26(d)(2)(i)(F), the Permittees shall prohibit illegal connections and illicit discharges (non-storm water) from entering the MS4 unless such discharges are either authorized by a NPDES permit (See current San Bernadino County MS4 Permit, IV.A)</i>
<p>NWS Language in San Diego Regional Board-Issued MS4 Permits</p>	<ul style="list-style-type: none"> • <i>Each Co-permittee must effectively prohibit all types of non-storm water discharges into its MS4 unless such discharges are either authorized by a separate National Pollutant Discharge Elimination System (NPDES) permit; or not prohibited in accordance with sections B.2 and B.3 below. (See current South Orange County MS4 Permit, B.III)</i> • <i>Each Co-permittee shall effectively prohibit all types of non-storm water discharges into its MS4 unless such discharges are either authorized by a separate National Pollutant Discharge Elimination System (NPDES) permit; or not prohibited in accordance with sections B.2 and B.3 below. (See current San Diego County MS4 Permit, B.I)</i>

NSW Discharges

- NSW Limitation to MS4 Confirmed by Office of Chief Counsel
 - Senior Staff Counsel (Catherine Hagan, Office of Chief Counsel) wrote to the Chairman of the San Diego Regional Board in 2009 the following:
 - MS4 permits *shall include a requirement to effectively prohibit non-stormwater discharges **into the storm sewers*** (note: it does not say *from the storm sewer and to the receiving water*); and shall require controls to reduce the discharge of pollutants to the maximum extent practicable
 - These are the two separate standards required for MS4 permits: one to prohibit non-stormwater discharges **TO THE MS4**; the other to use controls (BMPs) reduce pollutants in stormwater discharges **FROM THE MS4**
 - Federal regulations require *MS4 programs to include an element to detect and remove illicit discharges and improper disposal **into the storm sewer*** (Note: again not from it and to a receiving water)

NSW Discharges

- Prohibiting a NSW discharge that causes or contributes to a receiving water exceedance is extra-legal because NSW discharges are only prohibited to the MS4, not from it to a receiving water and **therefore should be removed**
- Prohibiting a NSW discharge that exceeds a water quality based effluent limitation (WQBEL) is not possible **because a WQBEL only applies to stormwater (non non-stormwater)**
- A WQBEL is a BMP (see or surrogate parameter (if numeric per USEPA's 2010 guidance memorandum) – **it is not a water quality standard** – and see *Divers' and Environmental Conservation Organization v. State Water Resources Control Board* and TMDL Waste Load Allocations in California MS4 Permits in your folder

NSW Discharges

- Bottom Line: RB Staff should:
 - eliminate the proposed NSW revisions that extend the prohibition to “from the MS4” and require nothing else other than prohibiting illicit discharges
- However, it is recommended that NWS discharge prohibition language be revised to read as follows:
 - *The Permittees shall effectively prohibit non-storm water discharges into the MS4 and directly into a receiving water.*
 - This language is proposed because permittees need the legal authority to prohibit NSW discharges from private property that do not enter the MS4 but do enter a receiving water directly through an on-site connection (catch basin or other drain)

NSW Discharges

- Bottom Line (continued)
 - RB Staff should:
 - not further condition already exempted discharges until NSW outfall monitoring is performed over the term of the next MS4 permit and
 - delete any reference to NSW discharge compliance with receiving water limitations and WQBELs – they are not applicable to NSW prohibitions

NSW Discharges

- However, it is recommended that NWS discharge prohibition language be revised to read as follows:
 - *The Permittees shall effectively prohibit non-storm water discharges into the MS4 and directly into a receiving water.*
 - This language is proposed because permittees need the legal authority to prohibit NSW discharges from private property that do not enter the MS4 but do enter a receiving water through an on-site connection (catch basin or other drain)

Non-Stormwater Discharge (directly from private property to a receiving water)

Minimum Control Measures

- Support LASP's position on MCMs
- MCMs are the heart of the MS4 program and more time is needed to discuss and revise proposed requirements
- Many of the MCMs propose additional requirements that are justified by stormwater monitoring at the outfall
- Requiring infiltration for groundwater storage is not a stormwater program issue – it is water conservation-related and therefore should not be reflected in the MS4 permit

NSW Discharges

Thanks!

Community Water System Discharges & The Los Angeles County MS4 Permit

A Joint Presentation by the Association of California Water Agencies, the California-Nevada Section of the American Water Works Association, and the California Water Association for the Los Angeles Regional Water Quality Control Board Workshop

April 5, 2012

Los Angeles, California

Background

Why Community Water Systems
Discharge into Storm Drains

Community Water Systems

- ❖ CWSs are regulated by the State of California, through the Department of Public Health's (DPH) Drinking Water Program, under authority of the Safe Drinking Water Act (SDWA).
- ❖ The DPH issues permits to operators of CWSs based upon their ability to comply with the requirements of the SDWA.
- ❖ Some requirements for CWSs are found in statute, others in regulations, and others still in the requirements of specific permits.

How Water Is Delivered To A Customer

Community Water Systems

- ❖ A majority of CWSs augment their supply with purchased surface water
- ❖ Only a handful of CWSs in Los Angeles County actually treat surface water
- ❖ The vast majority of surface water is imported

Community Water Systems

- ❖ Chapter 13 - “Operator Certification”
- ❖ Chapter 15 - “Domestic Water Quality and Monitoring Regulations”
- ❖ Chapter 16 “California Waterworks Standards”
- ❖ Article 4 “Materials and Installation of Water Mains and Appurtenances”
- ❖ Article 5 “Disinfection Requirements”
- ❖ Article 6 “Distribution Reservoirs”
- ❖ Article 8 “Distribution System Operations”

Community Water Systems

- ❖ CWSs are required to install “flushing valves” which may be a specifically designed “blow-off” or a conventional fire hydrant.
- ❖ This article mandates minimum velocities (2.5 ft/s) and flows for flushing (e.g. for a 10 inch main, the flow must be at least 600 g/m).
- ❖ Article 2, Section 63770 states that CWSs: “... shall utilize only certified distribution operators...(3) Oversee the **flushing**, cleaning, and pigging of existing water mains...”
- ❖ Section 64600 requires CWSs to develop “Water System Operations and Maintenance Plans” which includes... (3) The schedule and procedure for **flushing** dead end mains, and the procedures for disposal of the flushed water including dechlorination;
- ❖ **Flushing requires discharge**

Water Quality

Discharges from CWSs are Generally of Very High Quality as Compared to Other Discharges

Environmental Impacts of Non-Treatment Discharges From Drinking Water Utilities

Subject Area:
Environmental Leadership

“Typically [Non-Treatment Discharges] comply with Federal and State drinking water standards and contain low levels of suspended solids and other constituents”

Community Water Systems

CWSs are legally obligated to flush and discharge under threat of adverse legal action from Department of Public Health for the protection of public health

Problem

Why Community Water Systems
are Coming into Conflict with
MS4 Permittees

The MS4 Permit

- ❖ The Existing and Proposed Language in the MS4 Permit Puts a Large Incentive on Permittees to Achieve a “Zero Discharge of Non-Stormwaters”
- ❖ Notice of Violations and Third Party Lawsuits have incentivized a Zero Discharge Policy
- ❖ A Zero Discharge Policy is the only secure “Safe Harbor” that an MS4 Permittee has.
- ❖ Discharges from CWSs prevent MS4 Permittees from Achieving a Zero Discharge of Non-Stormwater Objective

Conflict

The MS4 Permit and TMDLs

- ❖ The Most Difficult Part of the MS4 Permit to Comply with are the Numeric Limits created by the Total Maximum Daily Load (TMDL).
- ❖ There is Already Conflict Between CWSs and MS4 Permittees and There Are Only 2 or 3 TMDLs in the Permit
- ❖ In a Few Years There Will be Over 30 TMDLs.
- ❖ The is Effectively Creates a “Zero Discharge Policy” for Non-Stormwaters for a Majority of Los Angeles County
- ❖ Conflict Between CWSs and MS4 Permittees is Bound to Increase as more TMDLs are Incorporated into the MS4 Permit

Conflicts

- ❖ MS4 Permittees have fined CWSs for Routine Discharges
- ❖ MS4 Permittees have banned the discharges from CWSs
- ❖ MS4 Permittees have required CWSs to obtain NPDES Permits and Waste Discharge Requirements which declare our waters to be wastes.
- ❖ Declaring drinking water to be a waste raises all sorts of legal problems
- ❖ This will only get worse in the future

Solution

How Changes to the MS4 Permit
Can Avoid Conflict Between
Community Water Systems and
MS4 Permittees

Collaborative Alternative

- ❖ The MS4 Permit Could Give Regulatory Relief to MS4 Permittees for those Situations where an Exceedance in a Receiving Water was Caused by or Contributed to by a Discharge from CWSs
- ❖ In Exchange for this Relief, MS4 Permittees Would Take on Additional Responsibilities – Specifically Ensuring that CWSs Complied with Enhanced Best Management Practices (BMPs).
- ❖ CWSs would get Regulatory Relief from the MS4 Permittees for their discharges.
- ❖ In Exchange for this Relief CWSs Would Put into Practice a BMP Manual with all Agreed Upon BMPs.
- ❖ MS4 Permittees and CWSs would sign a Memorandum of Understanding (MOU) Binding CWSs to the practice of these Enhanced BMPs.
- ❖ The MOU would be the Tool MS4 Permittees would use to Enforce the new responsibilities.

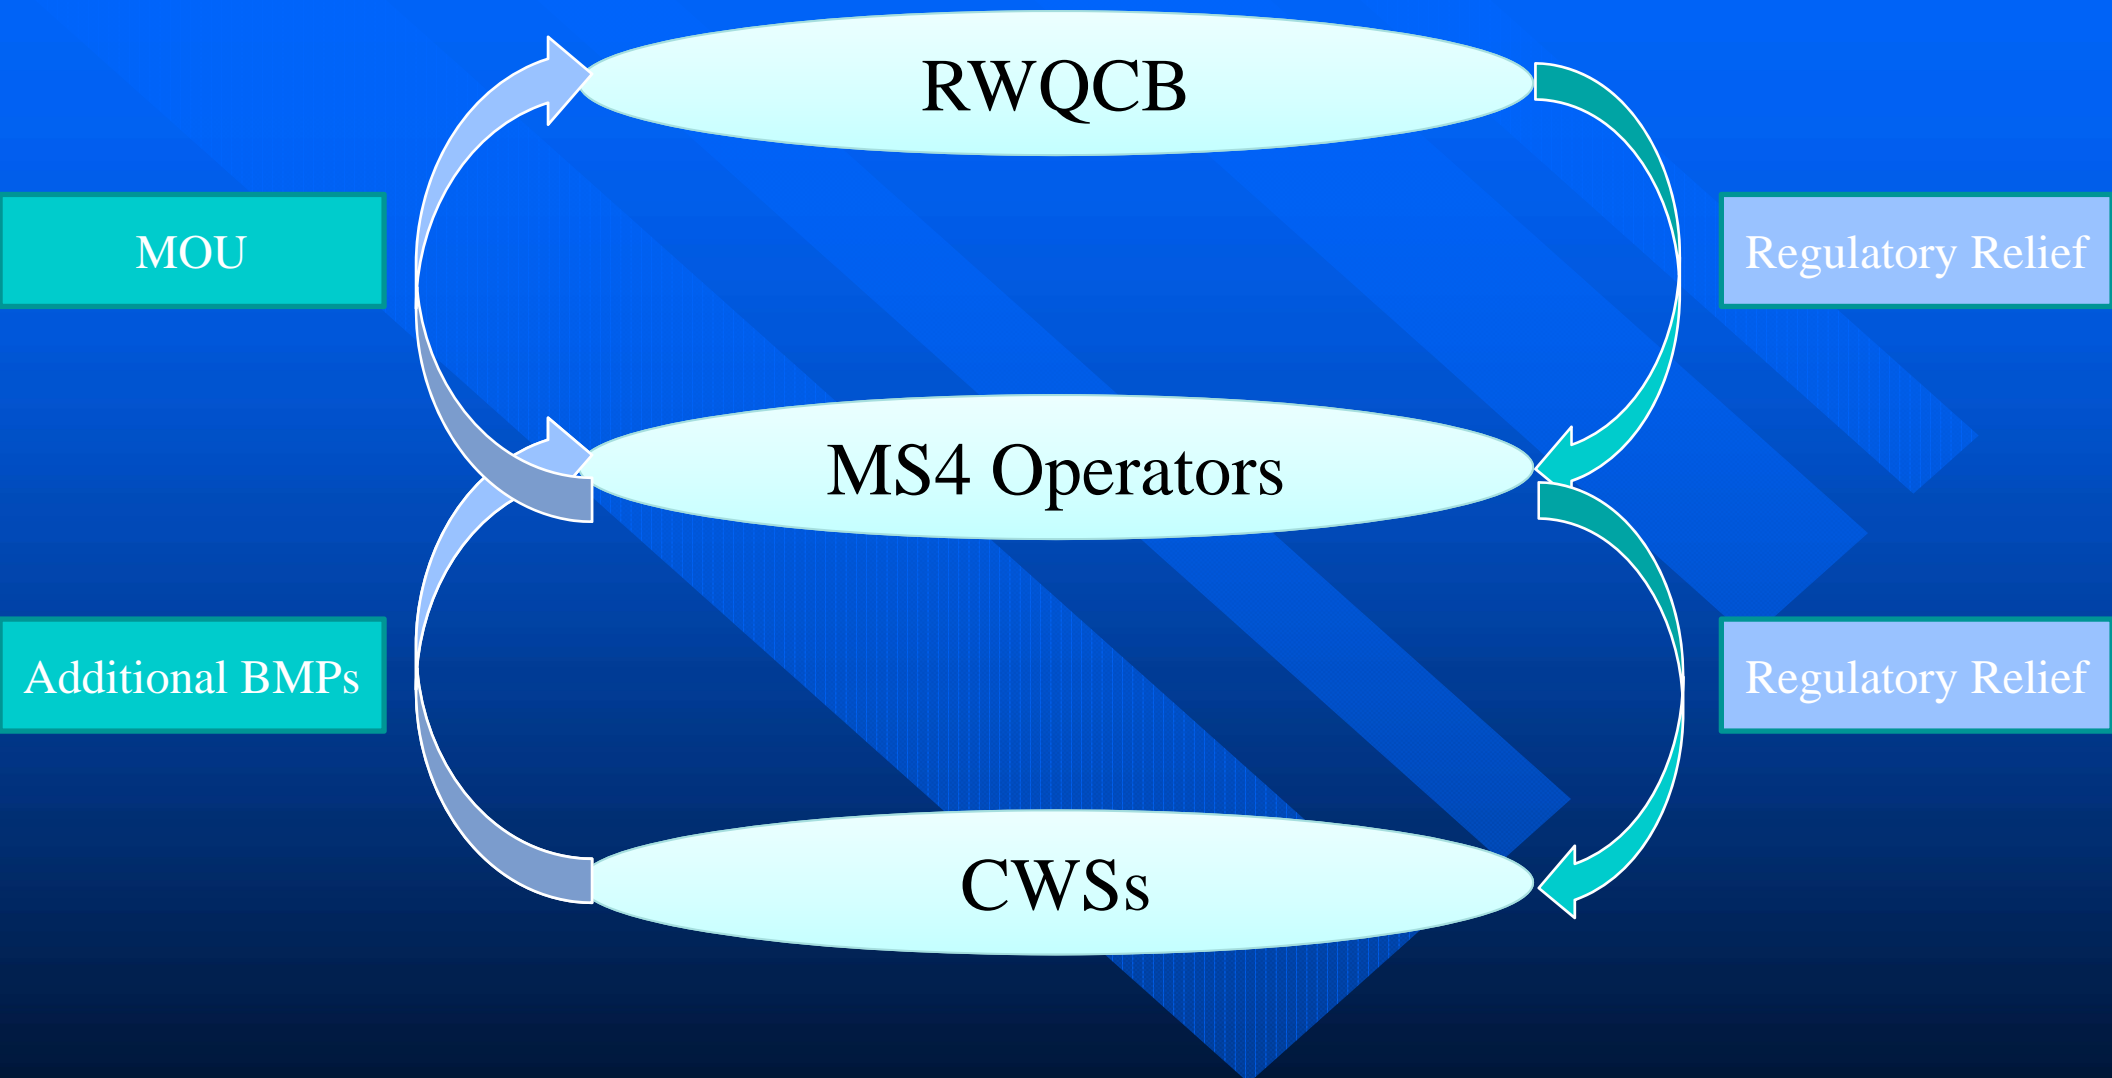

Enhanced BMPs

- ❖ Advanced Notification to MS4 Permittees by CWSs of Planned Discharges
- ❖ Dechlorination of Discharges (Currently in Use)
- ❖ Sediment Control Procedures (Currently in Use)
- ❖ Record Keeping and Sharing.

Regulatory Relief

- ❖ A. Non-Storm Water Discharges
- ❖ 3. Exemptions from Effective Prohibition.
- ❖ c. Legally Mandated Discharges
- ❖ 1. Discharges from potable water sources, including water line flushing (supply and distribution system releases), where not otherwise regulated by a separate NPDES permit;
- ❖ If a Permittee demonstrates that a specific non-storm water Legally Mandated Discharge caused a short-term exceedance of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations during a specific sampling event, the Permittee shall not be found in violation of applicable Receiving Water Limitations and/or Water Quality Based Effluent Limitations for that specific sampling event. Such demonstration must be based on relevant information regarding the location, date, time and duration of the discharge, the discharge pathway and receiving water(s) of the flows, and an estimate of the volume of the Legally Mandated non-storm water discharge.

Cooperation

Numeric Standard for Real World?

Jason Wen, Ph.D., P.E.
City of Downey

- Fire Hydrant > 1800
- Total Drinking Water Cost : \$628/AF

Copper as Example

- Drinking water Action Level = 1300 ug/L
 - Sampling: 50/every 3 years
 - TMDL (wet) ~ 11 – 17 ug/L
 - Each Hydrant/every 3 years > 1800/3 years
 - Standard = 118 x lower
 - Sampling Frequency = 3600% more
 - Costs = ???
- 

Weak Base Demonstration Study

City of Glendale, California

425 gpm
Influent of 40 ppb Cr(VI)
Lead/lag bed configuration
pH adjustment with carbon dioxide

City of Glendale, California  ARCADIS

Treatment Facility

Portable ???

RCF Demonstration Study

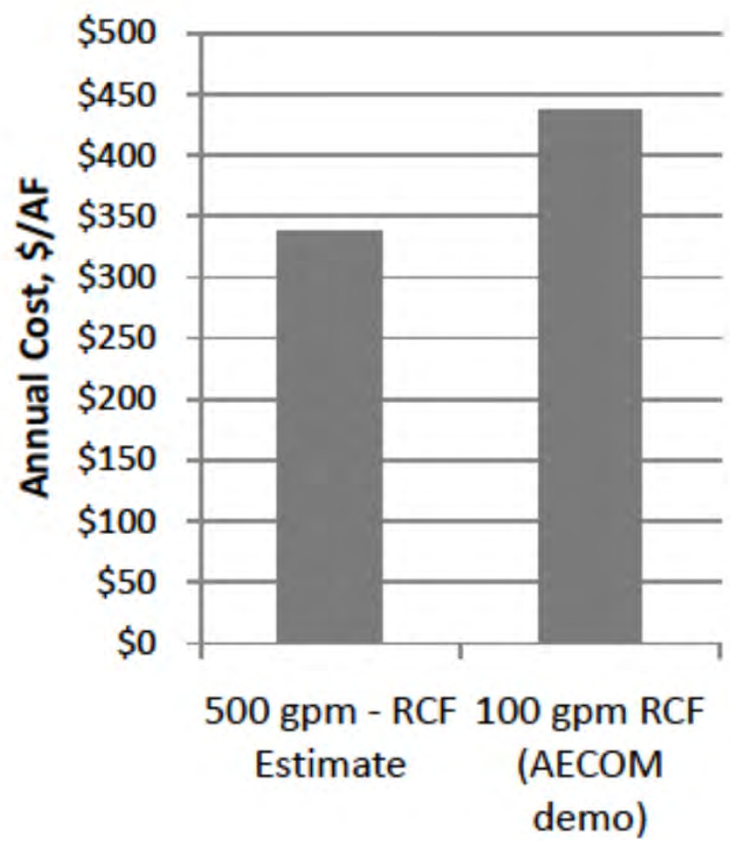

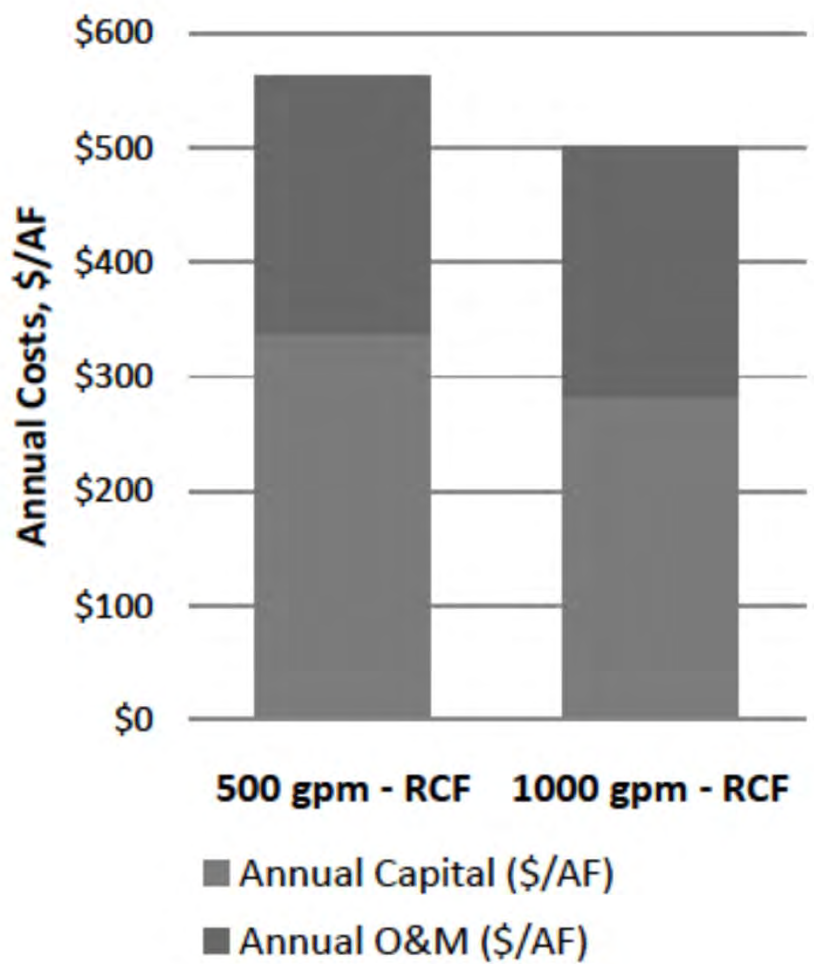

City of Glendale, California

100 gpm
Influent of 80 ppb
Variable reduction time, with and without aeration, granular media filtration, passive solids dewatering

City of Glendale, California

Original RCF Cost Information Compared with Actual Demonstration Costs

**10-20 mins
Flushing**

Summary

?\$!?\$!?\$!?!?!?

MS4 Permit Renewal Minimum Control Measures Staff Working Proposal

County of Los Angeles

Frank Wu
Senior Engineer

Regional Board Public Workshop
April 5, 2012

3 preliminary comments

1. Permit approach
2. LID Program
3. Inventory of retrofitting opportunities

Permit approach

- ▶ Current proposal would divert finite resources from TMDL programs.
- ▶ Need more bang for the buck.
- ▶ Minimize MCMs to focus more resources on highest priority areas.

LID Program

- County LID program (since 2009) endorsed by Heal the Bay and the development community.
- Details of proposed LID program are problematic:
 - Stormwater Quality Design Volume (SWQDv)
 - Alternative compliance process
 - Monitoring and benchmarks for treatment BMPs
- Simplify LID program.

Inventory of Retrofitting Opportunities

1. Very daunting based on initial review.
2. Retrofitting is generally is very costly.
3. Little short term benefits.
4. Will continue to work with staff to find balance.

In closing

- ▶ Simplify minimum control measures.
- ▶ Allow permittees to focus on highest priorities.

Thank You

Comments on the Development of the Greater LA County MS4 NPDES Permit

April 5, 2012
LARWQCB Workshop

LA PERMIT GROUP

*A collaborative effort to negotiate the
Los Angeles County MS4 NPDES Permit*

History

- * Los Angeles Stormwater Quality Partnership (LASQP)
 - * Members from throughout the County
- * LA Permit Group
 - * began January 2011
 - * 61 municipalities

LA PERMIT GROUP

*A collaborative effort to negotiate the
Los Angeles County MS4 NPDES Permit*

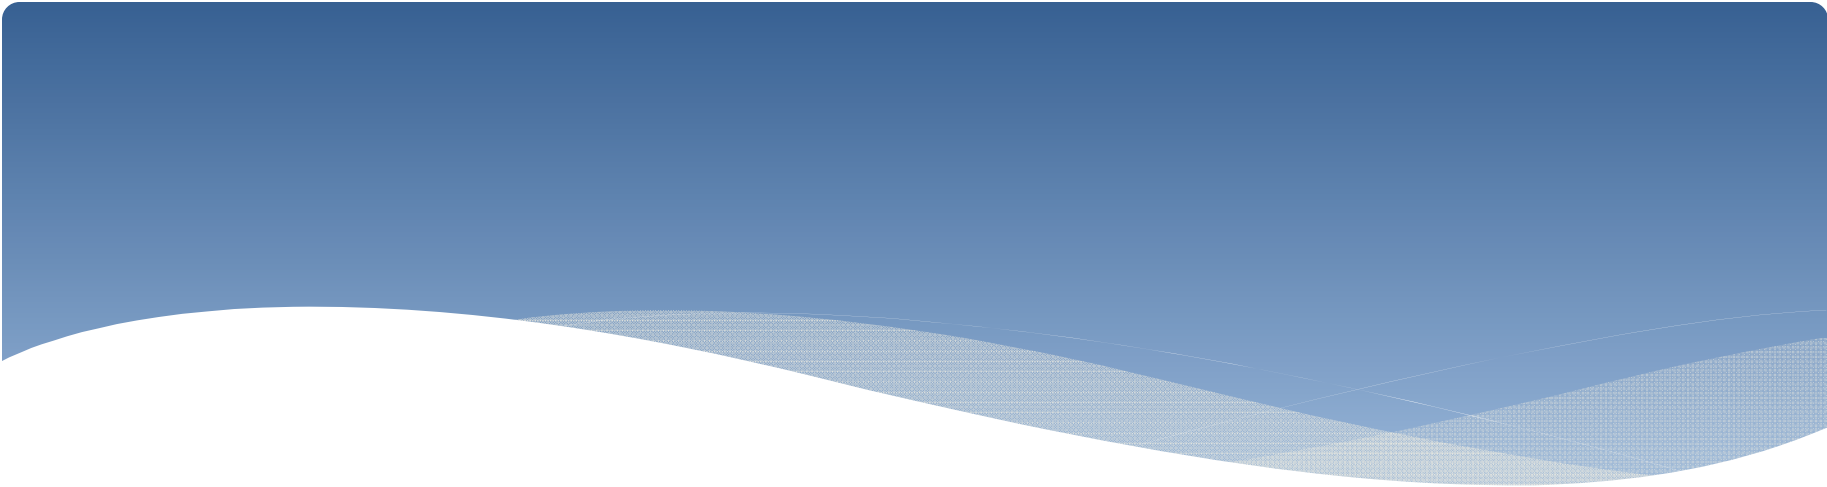

LA Permit Group

61 Voting Agencies

- * Agoura Hills
- * Alhambra
- * Arcadia
- * Artesia
- * Azusa
- * Bell
- * Bell Gardens
- * Bellflower
- * Beverly Hills
- * Bradbury
- * Burbank

- * Santa Monica
- * Sierra Madre
- * South El Monte
- * South Gate
- * Torrance
- * Vernon
- * West Covina
- * West Hollywood
- * Westlake Village

Overall Themes

- * What is the best way of achieving progress towards the the water quality goals?
 - * Integrated, regional planning
 - * Integrated, regional monitoring
 - * Prioritization
 - * Sustainability

“A policy’s value must be measured not only in terms of it’s appeal, but also in light of its implementability”

- Jeffrey L. Pressman and Aaron Wildavsky

Staff Working Proposals

Fiscal Resources

- * Limited control to increase stormwater fees (Prop 218)
- * MCMs + TMDLs goes beyond resources municipalities currently have available
- * Health, Safety, Quality of Life, other regulatory requirements and clean water all need to be developed in balance of each other

Non-Storm Water Discharges

Potable Water Discharges

&

Urban Activities

NSWD

Potable Water Discharges

The Regulatory Relief model as defined in the Staff Working Proposal is not one that Permittees are willing to accept;

- * Too much **responsibility is transferred** to the Permittee without a clearly **defined problem/need**,
- * The **burden of proof** is too high and a responsibility of the Permittee **NOT the discharger**.

NSWD

Potable Water Discharges

Potable water and fire discharges should be “exempted” and the permittees should receive regulatory relief if it such an exempted discharge that causes or contributes to an exceedance.

NSWD

Urban Activities

Regional Board staff's Presentation from 12/15/2011

“ .. Widespread presence of persistent dry weather flows .. ”

AND

“ .. No program in place to address these persistent flows .. ”

NSWD

Urban Activities

Existing Programs and Results

City of Santa Clarita

City of Malibu

NSWD

Urban Activities

Changes –

Another NPDES Permit (**Expand**)

Category A - Natural Flows (**Conditioned**)

Category B – Emergency Fire Fighting Activities (**Conditioned**)

Targeted –

Category C – Incidental to Urban Activities

Starting Point – the current LA MS4 and Ventura Permit

NSWD

Urban Activities

Natural Springs

Condition –Segregate flow to prevent introduction of pollutants . . .

Comments: Should be unconditionally exempt.

NSWD

Urban Activities

Flows from riparian habitats and wetlands

Condition – Provided that all necessary permits or authorizations are received prior to discharge . . . Prior to discharge **the Permittee shall ensure** the discharger complies with all conditions of the authorization.

Comments: This is a natural condition and should not be regulated.
Should be unconditionally exempt.

NSWD

Urban Activities

Diverted Stream Flows

Condition – Discharge allowed only if authorized by the State or Regional Water Board. Prior to discharge **the Permittee shall ensure** the discharger complies with all conditions of the authorization.

Comments: Conditions of the “Authorization” should include “Prior notification to all affected MS4 Permittees.”

NSWD

Urban Activities

Dewatering of lakes

Condition – Discharge allowed only if all necessary permit/water quality certifications for dredge and fill activities, including water diversions, are obtained prior to discharge. Prior to discharge **the Permittee shall ensure** the discharger complies with all conditions of their authorization, etc.

Comments: -

NSWD

Urban Activities

Rising ground water

Condition – Ground water dewatering requires a separate NPDES Permit, AND Segregate flow to prevent introduction of pollutants . . Permittee is in compliance.

Comments: Exemption conflicts with condition . . . Dewatering is not associated with a natural condition. Conditions of the “Authorization” should include “Prior notification to all affected MS4 Permittees.

NSWD

Urban Activities

Uncontaminated pumped ground water

Condition – Discharge allowed only if authorized under a separate NPDES permit. Prior to discharge **the Permittee shall ensure** the discharger complies with all NPDES permit conditions.

Comments: -

NSWD

Urban Activities

Gravity flow from foundation drains, footing drains, and crawl space pumps

Condition – Discharge allowed only if authorized by a separate NPDES permit. Discharge allowed only if authorized by the State or Regional Water Board. Prior to discharge **the Permittee shall ensure** the discharger complies with all conditions of the NPDES Permit.

Comments: Conditions should be removed. Allow for existing plan check processes to address necessary NPDES permit requirements.

NSWD

Urban Activities

Air conditioning condensate

Condition – Discharge allowed only if authorized by a separate NPDES permit. Discharge allowed only if authorized by the State or Regional Water Board. Prior to discharge **the Permittee shall ensure** the discharger complies with all conditions of the NPDES Permit.

Comments: Conditions should be removed. Allow for existing plan check processes to address necessary NPDES permit requirements.

NSWD

Urban Activities

Reclaimed and potable landscape irrigation runoff.

Condition – Permittee implements conservation programs to minimize this type of discharge by using less water, ensure proper operations and maintenance, etc.

Comments: General Support

NSWD

Urban Activities

Non-commercial car washing by residents or nonprofit organizations

Condition – Discharges allowed after implementation of specific BMPs, etc

Comments: Should be unconditionally exempt.

Minimum Control Measures

General Requirements

The LA Permit Group supports the language provided in Section “a” since it provides the permittee the ability to work with Regional Board staff on tailoring a program that best suits the municipalities needs based on experience and characteristics of the

Legal Authority

Fiscal Resources

Public Information and Participation Program

No significant Issues

Industrial/Commercial Facilities Program

Major Issue:

- * Transfer of Responsibilities onto the Municipality

Planning and Land Development Program

Requirement:

Section 8.b.i.(1).(g) – Development projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution, prior to completion of the project(s) , are:

Streets, roads, highways, and freeway construction of 10,000 square feet or more of impervious surface area shall follow USEPA guidance [Green Streets] to the maximum extent practicable.

Suggestion:

We support the Green Streets guidance; recommend increasing the threshold.

Planning and Land Development Program

Preferred BMPs:

Infiltration → Capture/Use → Biofiltration

- * Allow combination of above as well as offsite mitigation;
- * Biofiltration systems to treat 1.5*SWQDv – Over-sizing does not improve water quality;
- * Allow alternative SUSMP/LID programs as equivalent based on well defined criteria;

CONSTRUCTION PROGRAM COMMENTS

(Base on the Staff Working Proposal dated 3/21/2012)

Applicable to all activities involving soil disturbance (Denuded Hillsides vs. Backyard Patio)

Requirements:

- * **Use electronic tracking system to inventory grading, encroachment, demolition, building and construction permits**
- * **Prior to issuance of grading/building permit, approve ESCP**

Suggestion:

Establish reasonable thresholds, excessive number of projects and parameters to keep track of and manage (i.e. L.A. issues 40,000 building permits/year).

Construction Program

Requirements:

- * **The ESCP must include the elements of a SWPPP including risk-based BMPs**
- * **ESCP should include a Rain Event Action Plan (REAP)**

Suggestion:

Support 1-acre threshold provided by State General Construction Permit

- * **Never intended for small sites (typical SWPPP cost is \$20,000 per project)**
- * **Keep the <1-acre SWPPP requirement basic**

Construction Program

Requirement:

The Permittee shall inspect all phases of construction including

- 1) prior to land disturbance,**
- 2) Grading & Land Development**
- 3) Streets and Utilities,**
- 4) Vertical Construction,**
- 5) Final Landscaping and Site Stabilization**

Suggestion:

The requirement is overtly burdensome and they serve no benefit. The only reasonable inspection would be during the grading phase and upon project completion and as part of existing inspections.

Construction Program

Requirement:

The ESCP/SWPPP must include the rationale for the selection and design of the proposed BMPs including quantifying the expected soil loss from different BMPs.

Suggestion:

Remove - This requirements may exceed the cost of the construction of the project itself.

Construction Program

Requirement:

Each Permittee shall require that for projects disturbing 1 acre or more, the ESCP/SWPPP be certified in accordance to GCP.

Suggestion:

Remove - The State is responsible for GCP and collects fees accordingly

Construction Program

Requirement:

The Permittee shall ensure that all staff whose primary job duties are related to implementing the construction storm water program are adequately trained;

Suggestion:

Remove - The requirement that municipal staff be trained similar to QSD/QSP training is excessive. Some basic training on the CGP may be needed, but not to this degree.

Public Agency Activities Program

Major Issues:

- * Contract vs. Large Cities
- * Provide NAICS and SICs
- * Existing Development for Retrofitting Opportunities
- * Additional Trash Management Practices
- * Infiltration from Sanitary Sewer to MS4/Preventive Maintenance

IC/ID Program

- * The proposed “non-stormwater outfall based monitoring program” should be part of the Integrated Watershed Monitoring Program.
- * Outfall should be defined as “major outfall” (36” or greater in size)
- * Legal authority lies with Regional Boards

Minimum Control Measures

- Major Theme of Comments

- * **Provide the requirement, allow the Permittee the flexibility to implement**
- * **Provide the time necessary to comply with the requirements**
 - Some requirements affect agency budgeting processes, contracting agreements, and stakeholder involvement
- * **Requirements should be based on a clear nexus to water quality benefits**
- * **Consider the cost to comply**

4

5 MS. MEHRANIAN: Good morning. We would start the
 6 meeting of the Los Angeles Water Quality Control Board.
 7 And Board Member Munoz, will you please lead us

8 in the Pledge of Allegiance.
9 MS. MUNOZ: Thank you.
10 (Pledge of Allegiance)
11 MS. MEHRANIAN: Will you please do the roll call.
12 MS. MOFFETT: Yes.
13 Ms. Camacho?
14 MS. CAMACHO: Present.
15 MS. MOFFETT: Ms. Diamond?
16 MS. DIAMOND: Here.
17 MS. MOFFETT: Ms. Glickfeld?
18 MS. GLICKFELD: Present.
19 MS. MOFFETT: Ms. Lutz?
20 MS. LUTZ: Present.
21 MS. MOFFETT: Ms. Mehranian.
22 MS. MEHRANIAN: Here.
23 MS. MOFFETT: Ms. Munoz?
24 MS. MUNOZ: Here.
25 MS. MOFFETT: Mr. Stringer?

0009

1 Mr. Yee?
2 MR. YEE: Here.
3 MS. MEHRANIAN: Sam, on Item 2, Order of the Agenda?
4 MR. UNGER: Thank you, Madam Chair.
5 There are no changes to the Order of the Agenda;
6 however, I would like to announce that the Board has a
7 proclamation for Dr. Mark Gold for his 25 years of
8 service and advocacy for environmental causes and water
9 quality. So I would suggest that we do that now.
10 But before we do that, I would like to just make
11 one announcement to all people here attending the meeting
12 and remind them that the Board is able to hold these
13 meetings at this facility due to the good graces of the
14 Metropolitan Water District; and as part of their rules
15 and out of respect to this facility, which is absolutely
16 a wonderful facility, centrally located and available
17 with public transportation and such, it's requested,
18 demanded, that you do not bring food or drink into this
19 meeting room.
20 So I wanted to let everyone know that we have
21 that request to make that statement from MWD. And,
22 again, we're very grateful for them allowing us to use
23 that facility.
24 So with that, I would recommend that we proceed
25 with the proclamation.

0010

1 MS. MEHRANIAN: This is a proclamation to Mark Gold
2 of Heal the Bay for all the work and the vision and the
3 years that he's spent improving, protecting and improving
4 the water quality, and I want to read this and then
5 there's going to be a few people from the Board that
6 will -- that would like to say a few words. I'll read
7 this:

8 "The Los Angeles Regional Water Quality
9 Control Board, April 15th, 2012: Whereas

10 while working on his Ph.D. in environmental
11 science and engineering at UCLA, Mark Gold
12 joined Heal the Bay as its first employee in
13 1988 when he was hired to be its staff
14 scientist; and whereas Mark Gold, guided by
15 his mentor, the late Dorothy Green, the
16 founding president of Heal the Bay, was
17 named Executive Director of Heal the Bay in
18 1994 and president in 2006; and whereas
19 Mark Gold has left an enduring legacy while
20 at Heal the Bay for 23 years and has
21 represented its members and millions of
22 beachgoers with integrity, persistence, and
23 perseverance; and whereas under his
24 leadership, the beach report card was
25 created to evaluate beaches statewide,

0011

1 coastal cleanup dates at statewide beaches
2 reminds people of their personal connection
3 and responsibility to protecting our
4 beaches, the Santa Monica Aquarium for the
5 pier educates people and their families
6 about the living ocean; and whereas
7 Mark Gold has been a visionary leader of
8 water sustainability in Southern California
9 as he led efforts to bring about low impact
10 development, rainwater capture reuse and
11 recycling; and whereas Mark Gold has
12 testified at Los Angeles Regional Water
13 Quality Control Board more than 100 times
14 over the last two decades, his passion of
15 water quality protection and his scientific
16 solution-based advocacy has helped the Board
17 understand significant and effective ways to
18 improve water quality; and whereas
19 Mark Gold's efforts with other water quality
20 scientists to conduct epidemiology studies
21 has led to greater understanding and fast
22 analysis methods of impact of pathogens in
23 the ocean; and whereas Mark Gold's
24 leadership at Heal the Bay has led to
25 legislation such as controlling marine

0012

1 debris, improved standards and protection of
2 water quality in areas using septic systems,
3 banning the use of single-use plastic bags;
4 and whereas everyone who enjoys the
5 incredible ocean and beaches in Southern
6 California has Mark Gold to thank for his
7 tireless efforts to keep our water safe and
8 clean.

9 "And now, therefore, be it resolved
10 that the Los Angeles Water Quality Control
11 Board congratulates Mark Gold on his

12 achievements at Heal the Bay, thanks him for
13 his advocacy for water quality protection,
14 and looks forward to his continued
15 leadership while at UCLA's School of the
16 Environment and Sustainability."

17 Should we take a photo?

18 DR. GOLD: Thank you.

19 MS. MEHRANIAN: Should we take a photo?

20 MS. GLICKFELD: Sam, before we all come up, is there
21 a camera?

22 MR. UNGER: There will be several cameras.

23 Mark, the Board is willing to entertain your
24 101st testimony.

25 MS. MEHRANIAN: We have two members of the Board that
0013

1 asked for time to speak, and we will open it to other
2 Board members.

3 The first one will be Board Member Fran Diamond,
4 as a person who has chaired the Board for so many times
5 and being on the Board would like -- and has seen so
6 closely the work that Mark Gold did, would like to say a
7 few words. And then we'll have Board Member Madelyn
8 Glickfeld, as a past Board Member of Heal the Bay, would
9 like to say a few words. And anyone else from the Board
10 who would like will have time, and then I know from the
11 State Board, we have Fran Spivy-Weber and she would like
12 to say a few words. So we're going to be here for a
13 little while on this, Mark.

14 Please.

15 MS. DIAMOND: Well, Mark, I think I first started
16 working with you and met you actually about 1990 when I
17 was working for State Controller Gray Davis as a special
18 assistant on the environment and was supposed to know a
19 little bit about a lot of issues statewide and so I said,
20 "Well, what about water? Who should I talk to about
21 water?" And then Controller Gray Davis said, "Well,
22 there are a few people you should talk to, but number
23 one, you need to talk to Mark Gold." And that was when I
24 first met you. I called you and I said, "I'm supposed to
25 meet with you because I hear you know something about
0014

1 water," and that was a very generous thing for you to do.

2 You spent time with me, kind of giving me a
3 perspective on statewide water issues, and I came to know
4 that you are always very generous with your time; and
5 over the years, I know, having worked with you and still
6 working with you with the City of Los Angeles on
7 Proposition O, a city that had the worst sewer overflow
8 problems, probably in our region, came to be a city that
9 was not only in compliance, but did so much good and is
10 continuing to do so much good on water quality; but a lot
11 of it was because you were willing to give them your time
12 and sit down not just to criticize them, but to work with
13 them and continue to work with them, and I know you work

14 with cities all over the region, anyone who wants to
15 improve water quality. And it's been wonderful to see
16 you do that and the generosity of your spirit and your
17 time has been an amazing example to set for everybody who
18 wants to improve water quality.

19 I would say that your passion for your mission,
20 coupled with your scientific background and your candor,
21 and sometimes your brutal honesty at our meetings, has
22 helped us all to see a perspective on water quality and
23 helped us to look at the full picture.

24 You have a great legacy and I think the legacy
25 that Maria read, a lot of the things that you have begun
0015

1 at Heal the Bay, the score card, I don't know any family
2 that doesn't sometimes check the score card to find out
3 which beach they should go to on any given beautiful
4 summer day; the aquarium, which I have gone to many times
5 with my grandchildren, which opens up the world to the
6 ocean and the living ocean become real for the children;
7 the amount of effort that you've put in to legislation,
8 to initiatives, to environmental education around the
9 state, I think the legacy that you have at Heal the Bay
10 is an ongoing dynamic one. It's not over, because the
11 next generation, the children who already know because of
12 their experiences through the efforts of Heal the Bay and
13 your leadership, I feel that the problems that we face in
14 all environmental areas, but particularly in water, is
15 the education of the children because they "get it," and
16 a lot of the reason they "get it" is because of the
17 education that you have found to be a primary element of
18 Heal the Bay and the work there.

19 So I want to thank you for the generosity of
20 your time, your presentations to us, the education that
21 you have given to many people throughout the state,
22 particularly the children; and the fact that you're now
23 going to UCLA to help educate and energize the next
24 generation of advocates and leaders in water quality is
25 wonderful, so it's ongoing. And we thank you for all
0016

1 that you've done and all that you're going to do, and
2 congratulations.

3 DR. GOLD: Thank you so much.

4 MS. MEHRANIAN: Board Member Glickfeld?

5 MS. GLICKFELD: Well, I can't follow that. Thank you
6 very much.

7 A few weeks ago, there was a roast for Mark and
8 Fran and I put together something. We started out saying
9 we've gone over the 100 times that he testified and that
10 we were going to give some quotes from him and there was
11 a look of complete terror on his face because he
12 remembered what he said in those 100 times. We made up
13 what we were going to say; he thought we actually went
14 back through the record and did this. But at any rate,
15 we roasted him. A lot of the people in the audience

16 would have been very happy to be there.

17 I'm very lucky in that I have known Mark for a
18 long time. My first time I met you was when I was on the
19 Coastal Commission and you testified and I got to know
20 Heal the Bay then, and I think that between you and
21 Dorothy Green and some of the other founders of Heal the
22 Bay, you sort of reinvented the environmental nonprofit
23 to being a group that not only advocated based on
24 emotions and local concerns, but used science and used
25 education, and you are not only in the regulatory arena.

0017

1 Some people probably thought you slept here in
2 between the meetings and only came to life at the
3 meetings, but your life outside this area and the
4 contributions that you made not only to try to find
5 affirmative solutions to water quality and water supply
6 problems, but to assist in finding the resources that
7 local governments need to get these problems solved and
8 sitting down face to face with local governments and
9 solving problems, that's an example that I hope Heal the
10 Bay continues with and that I hope that other nonprofits
11 continue to emulate.

12 Thank you very much for being the advocate for
13 the millions of Los Angeles residents who care about
14 their creeks and their rivers and the ocean and want the
15 quality of life that clean water brings. Thank you.

16 MS. MEHRANIAN: Thank you.

17 Should we go to Fran Spivy-Weber and then come
18 back to the Board, if anyone else from the Board would
19 like to say anything?

20 MS. SPIVY-WEBER: I'll be brief because so much has
21 already been said, but I think the real honor here is to
22 this Board. You have listened to Mark Gold. Some of you
23 are new; some of you haven't heard him very often. But
24 the Boards in the past have taken -- have taken wisdom
25 from Mark's comments and his analysis and the hard work

0018

1 that he's done behind the scenes to make sure the science
2 is as right as could be; and when you're in a Board
3 situation where you're listening to everyone, it's
4 extremely important to hear from a group that is really
5 quite small. It seems quite large, the environmental
6 voice; but, in fact, it's really quite, quite small.
7 There are not that many organizations that show up at
8 Board meetings and actually contribute positively and
9 constructively to the dialogue, and I think it is
10 something that you have benefited from, particularly
11 here, and so has the State Board.

12 Heal the Bay has not just been very active here
13 at the Regional Board, but they have been very active at
14 the State Board level and it is a great benefit, and
15 unfortunately we don't get very many people coming to the
16 State Board with views that have the depth that Heal the
17 Bay brings.

18 The other thing that Mark has done is that he
19 has worked with his staff. He's given the time to his
20 staff and he has a fabulous staff that is going to carry
21 on that tradition and that excellence that he's set up,
22 so I am looking forward to that and I am very much
23 looking forward to his role at UCLA because I agree it's
24 going to be exciting. Thank you.

25 MS. MEHRANIAN: Board Member Lutz wants to say a few
0019 words.

1 MS. LUTZ: You know, Mark, "Heal the Bay" and
2 "Mark Gold" is synonymous. When someone says "Heal the
3 Bay," what's the first thing they think? They think of
4 Mark Gold. When someone says "Mark Gold," you know
5 they're talking about Heal the Bay, and that is really a
6 true testament for the legacy and to the importance that
7 you brought to water quality and the awareness around
8 this region and, as Fran says, not just even this region,
9 but at the State level, and that is -- that is your
10 legacy.
11

12 That's what I think you are going to be leaving
13 with Heal the Bay. Your ability to not just take an
14 organization and grow it to the point where everybody
15 knows who Heal the Bay is. Everybody knows who you are.
16 Like I said, they're synonymous; but to grow it to a
17 point where you are consistent in your message, you're
18 very strong in the science; you can always be counted on
19 speaking to us to be very clear in where Heal the Bay
20 would like to see this Board work and work with the
21 constituents and work with the stakeholders.

22 I think consistency has been over the years very
23 important because as a Board member, if there's
24 inconsistency from anybody, you sometimes don't know
25 where to go. You don't know how much stake to put into
0020

1 the comments that are, but you and the staff that you've
2 trained and the staff that you have given of yourself to
3 have risen to a level where your message is consistent;
4 the things that you're saying have factual basis behind
5 it, and I think that is where you are going to actually,
6 as Fran says, shine in your next role, in your new role,
7 because you're going to be able to take those skills that
8 you've given to the Boards, to the staff at Heal the Bay,
9 and you're going to take those just wide all throughout,
10 through UCLA and abroad, because all of the people, the
11 young minds that you touch at UCLA, are going to move on
12 and they're going to spread it nationwide, not just here.

13 So you really -- the things that you've done at
14 Heal the Bay have been amazing. Where you're going to go
15 from here is another amazing step and I congratulate you
16 and hope for the best in your new endeavor.

17 Thank you very much for everything you've done.

18 DR. GOLD: Thank you.

19 MS. MEHRANIAN: Yes.

20 MS. MUNOZ: Hi, Mark. I wanted to personally thank
21 you and congratulate you for your wavering strong ethic
22 that you've had since I've met you and, I guess, beyond.

23 You are one of the most persistent and
24 passionate and stubborn individuals I've ever met because
25 I, too, am like that and I was real surprised to meet

0021

1 someone that had those values that were just as equal to
2 me. Also, the way I've described my relationship with
3 you with folks the last couple of years is that since I
4 met you, we've been learning how to tango, and we finally
5 got the steps right and now you're leaving Heal the Bay.
6 I guess we continue our dance as you move towards UCLA
7 and I want to thank you because I know that we didn't
8 always agree, but you would always listen and I would
9 always listen to you and you're a remarkable man who
10 believes that people can have disagreements and have very
11 active conversations and discussions and still try to
12 reach the best solution, because at the end of the day
13 all we want is a better world, a better life for our
14 families and our children and our communities.

15 So thank you for your continued stubbornness. I
16 hope you never lose that value.

17 MS. MEHRANIAN: Thank you.

18 Yes. Larry?

19 MR. YEE: Mark, this is the first opportunity that
20 we've had a chance to meet, but you are partially to
21 blame for my being here. I'm not sure whether to thank
22 you yet or not.

23 I have not had the benefit of your 100
24 presentations to this Board. I just wonder if you have
25 any DVD that I could --

0022

1 MR. UNGER: What goes on here stays here.

2 MR. YEE: Anyway, congratulations. Thank you.

3 DR. GOLD: Thank you so much.

4 MS. MEHRANIAN: Yes, please, Maria.

5 MS. CAMACHO: I don't want to be the only one not
6 congratulating you, Mark. I'm obviously a new member of
7 the Board so when I heard that you were venturing to
8 UCLA, I was thinking, Oh, did I miss the fun of all those
9 presentations? But congratulations and I recently met
10 with your colleague, Ms. James, and so I know that your
11 legacy is definitely there and I know that the staff at
12 Heal the Bay and your team is going to be right there
13 walking the steps that you've taught them. So
14 congratulations.

15 DR. GOLD: Thank you so much.

16 MS. MEHRANIAN: Go ahead. Mark, do you have anything
17 in your defense?

18 DR. GOLD: Yeah, exactly.

19 Well, first of all, thank you so much. I'm
20 incredibly flattered by all the kind words and I know you
21 didn't always think such kind things of me, depending on

22 what I was saying in any given testimony. So I really
23 appreciate that.

24 And one of the things I just really wanted to
25 emphasize is that Heal the Bay would not be what Heal the
0023

1 Bay is without the Regional Water Board and without the
2 State Water Board. You are really the two agencies that
3 we've worked most closely with and had the strongest
4 relationships with and hopefully had the greatest impact
5 on protecting this incredible resource we have in
6 California, our coastal waters and water quality inland
7 as well and our water supply.

8 And, you know, it really started with the
9 Regional Boards. Some of my closest friends -- you know,
10 and it didn't start out that way -- are Regional Board
11 staff. You know, I've known Deb and Y.R. and, you know,
12 Sam and others forever, you know, and, you know, it's one
13 of those things where I don't think there's anybody out
14 there, especially not my wife or people who work for me
15 or anything, that, you know, agree with me all the time.
16 But -- and as well they shouldn't. But the prospect of
17 sitting down and trying to figure out how to protect
18 these valuable resources, 'cause they're so important for
19 public health and the environment, has really been an
20 incredibly rewarding and enriching opportunity for me and
21 something that frankly, I think in my new job, I'm going
22 to sorely miss.

23 I love being an advocate and I love sitting down
24 and negotiating on very complex issues. This is the
25 first County Stormwater Permit that won't have my
0024

1 fingerprints on it, you know, from the standpoint of
2 having worked on it. I've worked on every single
3 Stormwater Permit that's ever come before here and so,
4 you know, I know that obviously with Kirsten and her
5 training also at our Regional Water Quality Control Board
6 up north before she started working for Heal the Bay,
7 obviously water quality is in very capable hands at Heal
8 the Bay and I never would have made the move to UCLA
9 without knowing that there was that sort of support and
10 expertise still at Heal the Bay.

11 But the relationships I've made both with the
12 Board members and with staff members have been absolutely
13 incredible and one of the things I really want to
14 emphasize is I'm not dying. I'm not moving to another
15 country. I'm still local and I'd really love it if you
16 guys take me up on, you know, an offer to be a resource,
17 you know; that if there are complex problems, whether
18 they're in, you know, recycled water or water quality or
19 whatever the case may be, I'm here to help. We're both
20 State employees; right? So we both work for the State of
21 California and so I think there's a real opportunity for
22 our relationship to continue, but to grow in a different
23 direction, and I'd like to think that, you know, the 25

24 years I spent testifying before you trying to entertain
25 you, you know, gives me a little bit of a different

0025

1 perspective and some expertise in the field that
2 hopefully can be of some value to the State of California
3 in the future. So I hope you take me up on that.

4 And, again, thank you so much for everything and
5 hopefully it won't be too long before I see you all
6 again. Thanks.

7 MS. MEHRANIAN: Thank you, Mark. Thanks a lot.
8 Thank you.

9 We move on to Item 3, Approval of the Draft
10 Meeting Minutes for March 1, 2012. If there are any
11 changes --

12 MS. LUTZ: I have a question. Because I was only at
13 a portion of the meeting, should I be recusing myself
14 from the minutes or I can go ahead and vote on them?

15 MS. GLICKFELD: The meeting was adjourned before you
16 left.

17 MS. LUTZ: That's true because that was a Study
18 Session.

19 MS. MC CHESNEY: That's right.

20 MS. LUTZ: Okay. Then that answers it. I just
21 wanted to make sure I didn't step on something I
22 shouldn't be doing.

23 MS. MEHRANIAN: Motion for approval?

24 MR. YEE: Motion.

25 MS. MEHRANIAN: Second?

0026

1 MS. LUTZ: Second.

2 MS. MEHRANIAN: All in favor.

3 (Whereupon the motion was passed)

4 MS. MEHRANIAN: Okay. Great. Moving on to Item 4,
5 Board member communications.

6 Board Member Camacho, do you want to start?

7 MS. CAMACHO: Yes. I did have lunch with Ms. James
8 from Heal the Bay and we discussed their education
9 component. It was just a training of the organization
10 itself, the work that they used to do when CRA was around
11 on projects, the joint efforts that they work on with
12 other organizations. We discussed the aquarium at the
13 pier, their funding sources, the pier education and their
14 beach report card, and how they work with the cities to
15 receive the data. So that's what we discussed.

16 MS. MEHRANIAN: Thank you.

17 Board Member Glickfeld?

18 MS. GLICKFELD: Yes. Thank you, Madam Chair.

19 I was invited last week to an all-day workshop
20 organized by the California Water Foundation, which is an
21 initiative of the Resources Legacy Fund and the Southern
22 California Water Committee and the Natural Resources
23 Defense Council.

24 The Water Foundation is trying to facilitate an
25 effort to bring together people from across Los Angeles

0027

1 County to actually figure out how to ramp up storm water
2 capture for water supply augmentation. Luckily for me,
3 they did not talk about the permit at all so I never had
4 to leave the room, but there were -- Board Member
5 Spivy-Weber was there and a number of people across the
6 Region that were there and there were people from the
7 development community and the Flood Control District was
8 there, and there was some very productive discussions
9 about what needed to happen to incentivize and finance
10 storm water capture. I am hoping that that effort
11 continues and if I continue to be involved, I'll give
12 regular reports.

13 MS. MEHRANIAN: Board Member Diamond?

14 MS. DIAMOND: I have nothing to report.

15 MS. LUTZ: I have nothing to report.

16 MS. MEHRANIAN: Board Member Munoz?

17 MS. MUNOZ: Yes. I met with three members of the
18 staff for Heal the Bay. We talked about the importance
19 of watershed education in the inland cities, projects
20 that Mujeres de la Tierra is taking on, which is my
21 nonprofit, and issues regarding the green coalition and
22 their leadership.

23 Also, I went to a park opening in the city of
24 El Monte, Mariposa Park, which is a park that our
25 organization was involved in.

0028

1 MS. MEHRANIAN: Thank you. Board Member Yee?

2 MR. YEE: Nothing.

3 MS. MEHRANIAN: I would report on, I think at this
4 part of the agenda, the meeting that we had with
5 Supervisor Mark Ridley-Thomas's office and also I would
6 follow up on the chair's meeting. I think I should do a
7 summary of what happened in the chair's meeting.

8 So on the Mark Ridley-Thomas meeting, we had a
9 meeting with the staff and Deidre Jenkins was in
10 attendance, and we discussed the issue that is still
11 outstanding and she committed that -- or explained that
12 they're making a parcel available, looking to find or
13 identified a few parcels that are available -- will be
14 available at a low cost to Exxon for funding, either in a
15 lease or buying capacity, and that they're providing
16 pro bono work to Ms. Jones, the owner of the day care
17 center.

18 And also, Ms. Jenkins told us that the Regional
19 Board should be actively following up with Exxon, which
20 we said we are, and that we should go after Exxon and not
21 the County and the supervisor's office and we said, we
22 are, we are following up with them. And we have a
23 meeting scheduled on the 11th, April 11th, to follow up
24 with Exxon.

25 At the same time, I will let Sam, in his report,

0029

1 elaborate on a little bit of where we brought an order at

2 the same time and we're following up with it. So as we
3 discussed last time, we're doing parallel tracks of
4 following up on this. So that was the meeting on the
5 County supervisor's office.

6 Anything, Sam, that you would want to add or you
7 would do this in your report?

8 MR. UNGER: I don't have anything to add on that
9 item, but I will be talking about other items with Ujima
10 and the Former Athens Tank Farm during my report.

11 MS. MEHRANIAN: Sure.

12 And then we had the March 26th meeting where all
13 the chairs met of all the different boards and Fran
14 Spivy-Weber, of course, was running the meeting and the
15 State Board members were there.

16 And some of the items that I would summarize,
17 that I have summarized and I will make it available to
18 all the Board members, but I'll just go through them
19 quickly right now: There was a significant action by
20 other Regional Boards, including MS4 permits and other
21 developments in San Diego, and the Ag Waiver was a big
22 discussion item that was adopted last month in Central
23 Coast Region. And then for Region 4, we informed other
24 regions about the end of the Consent Decree between NRDC
25 and USEPA and how we're finishing off the last Consent

0030

1 Decree of TMDLs and MS4 permits under the development
2 that we're doing. There was a lot of attention to MS4
3 that we're doing and they understood how complicated ours
4 is in terms of having 80-some different jurisdictions and
5 40 TMDLs in it, so how much more complex it is than the
6 others.

7 There was a brief update on the budget process
8 and we're informed that the recent hirings was going to
9 be slowed down in the near future.

10 And there was a legislative update that focused
11 on two bills. The first was Senate Bill 965, which seeks
12 to ease some of the ex parte rules. The result is --
13 this resulted in a spirited discussion by the chairs.
14 Many of the chairs saw that -- I know that this is an
15 issue that was discussed in this Board. Many of the
16 chairs did not support easing the ex parte, the ex parte
17 rules, because they felt that they would somewhat then,
18 you know, open to so many approaches that they will get
19 from stakeholders and it will be demanding too much of
20 their times, and they are volunteers in these positions.
21 So they don't think it's a good idea.

22 The second was S.B. 900, which would reduce the
23 number of Board members to seven, eliminating the
24 categorical appointment and eliminate the Colorado Region
25 Board. So that was a discussion that took a while.

0031

1 And then we of course brought up the -- or did a
2 summary of how we saw the whole ex parte in our Board and
3 how there was an issue that I know I remembered it was

4 discussed when we had our new Board members join that
5 "ex parte" could be working as -- I almost wanted to say
6 this social or environmental justice issue where you have
7 communities that are affluent and educated. They can
8 come to you, bring the issues, raise their -- you know,
9 raise their concerns. Yet the communities that are at
10 disadvantaged and don't have that kind of skills and
11 expertise, kind of stay behind and the ex parte works
12 against them. And we kind of like talked about this and
13 Lauffer was our -- you know, was interested in this
14 concept. So we discussed a little bit; and then
15 process-wise, he said that -- Michael Lauffer said that
16 they're going to be discussing this internally and
17 they're going to take it to the governor's office at some
18 point, some of the concerns, pros and cons, and have some
19 discussion and then come back with us responding to the
20 input that we've had.

21 And then other than that, we were then addressed
22 by California EPA Secretary Matt Rodriguez and Deputy
23 Undersecretary Gordon Burns. Mr. Rodriguez appeared to
24 be very knowledgeable on Water Board structures and he
25 knew exactly how this works.

0032

1 He was concerned about groundwater resources and
2 feels strongly that we need to improve our groundwater
3 regulation. His office sees itself as a resource to
4 support and integrate to the various agencies and boards
5 under Cal EPA, and then also he talked a little bit about
6 current peripheral canal and the importance of this
7 project; that this year, you know, it's something that is
8 on the governor's plate and agenda and he's adamant about
9 moving on with that, different paradigms in which the
10 resources and ecosystem resources can both be enhanced
11 while they're working on the peripheral canal.
12 "Alternative conveyance measures," I think, is the right
13 term these days. And then places a high value on the
14 process, transparency, and practicality in solving
15 problems.

16 Then there was an update on State Water --
17 Statewide Groundwater Strategic Work Plan and Sam Unger
18 provided a comment that it seemed to be nutrient-centric
19 when looked at by the whole state, and in our region, we
20 are more challenged by industrial wastes. He advocated
21 that a TMDL approach should be used in addressing
22 groundwater basins and will be working to bring this
23 information to the working draft.

24 And finally, we talked about scheduling the fall
25 Water Quality Coordinating Committee. And unfortunately

0033

1 for us, it's that -- there's a date conflict that they
2 want to have this on the 9th. Am I right, Sam?

3 MR. UNGER: It's on the 1st.

4 MS. MEHRANIAN: And that's where our meeting is.

5 MS. GLICKFELD: Can we change our meeting?

6 MS. MEHRANIAN: So yeah. That's something that we
7 would like to discuss today and finalize.
8 MR. UNGER: Well, I think what I'm going to recommend
9 is that Ronji poll you all individually after today's
10 meeting by e-mail and we'll suggest some dates in
11 November and we'll agree on a date then and then we'll
12 adjust our calendar --
13 MS. MEHRANIAN: Sure.
14 MR. UNGER: -- for that month.
15 MS. CAMACHO: Sorry. Really quickly, so they are
16 proposing November 1st?
17 MS. MEHRANIAN: For that meeting.
18 MS. CAMACHO: And it's in Sacramento.
19 MR. UNGER: Sacramento.
20 MS. CAMACHO: All day?
21 MS. GLICKFELD: Two days.
22 MS. LUTZ: It's usually two days.
23 MR. UNGER: Yeah, and all the Board members can go.
24 MS. LUTZ: So it's usually the afternoon of one day
25 and the morning of the following day --

0034

1 MS. CAMACHO: So November 1st --
2 MS. LUTZ: -- so we really only have to stay over one
3 night.
4 MS. GLICKFELD: I would really -- I know the Board
5 would have just said this, but I would really encourage
6 all our new members to go. It's highly valuable to see
7 how other boards are working and to deal with -- learn
8 more about what the State Board is doing to help or not
9 help us.
10 MS. MEHRANIAN: Right.
11 And just to finish this, Board Member Camacho
12 had a few questions that she directed to me right before
13 this meeting for discussions and some input that she had.
14 One of them was how do we learn about the other
15 boards and what they do and what levels? First of all, I
16 think these meetings are very good just because the
17 issues are so different from region to region and for us,
18 it's such an educational process and I will share with
19 you a little more details on it. But at the same time,
20 so that I just wanted -- it was clarified for me, too,
21 that there's an E.O. to E.O. level meeting that is every
22 week. There's a conference call, and then there's also
23 monthly meetings, and we can always ask Sam for whatever
24 you need to know or he can debrief you on that. So that
25 was something that I learned in that level; a lot of

0035

1 technology and sharing happens.
2 And then also, you discussed -- one of your
3 questions was to know about the legislative policy and
4 all the legislation that comes out that impacts water
5 quality and impacts this Board. Yes, it does and there
6 is a legislative policy office that has all this that we
7 can always regularly ask them for briefings and Sam

8 probably can help us with that.

9 So those are some of the comments that -- and I
10 have some more that I'll share with you later.

11 MS. CAMACHO: Sure.

12 MS. MEHRANIAN: That was the report from the chair's
13 meeting.

14 MS. GLICKFELD: I just have a question on -- we have
15 a Board Reorg- -- we have a State Board and Regional
16 Board Reorganization Bill. There's one out every single
17 year.

18 MS. LUTZ: Yeah.

19 MS. GLICKFELD: And is this one -- it would be nice
20 to hear from Board Member Spivy-Weber about is this the
21 same bill? Is this going anywhere this year or not?

22 MS. MEHRANIAN: Sure. We'll do.

23 Okay. That's all we have on the ex parte Board
24 member communication. I think we move on to the E.O.
25 report.

0036

1 Mr. Unger?

2 MR. UNGER: There's a timer on. That may be a good
3 thing. I'll try to be brief.

4 I just want to report to you on our two large
5 cleanup sites and there were two items from your
6 directives checklist, items that you asked me to check in
7 on, and finally just one quick item on MS4 issues and
8 beach water quality from last summer.

9 So first is the Former Athens Tank Farm,
10 otherwise known as the Former Ujima Village site, and
11 basically I just want to update you on the off-site
12 characterization and the day care relocation.

13 As I reported last month, we've received
14 preliminary results from our first step-outs from the
15 site to the east and to the southeast. The preliminary
16 results have been confirmed, unfortunately, and the soil
17 vapor plume has migrated from the Former Athens Tank Farm
18 into the neighborhood east and south of the park. There
19 appears to be high levels of light hydrocarbons vapors at
20 a depth of about 35 feet, but fortunately as you move
21 closer to the surface, the vapor plume appears to
22 attenuate.

23 Based on this information, we have issued three
24 directives on Exxon this month. The first is to continue
25 the delineation of the plume and find out how far it

0037

1 extends, where exactly it extends. The second is to
2 initiate indoor air testing on nearly 40 homes in the
3 Willowbrook area that overlie this vapor plume. And the
4 third is to initiate interim remediation by soil vapor
5 extraction. Again, all this is off site in the
6 Willowbrook area.

7 We've also submitted all our data to the
8 Department of Toxic Substances Control to review the risk
9 assessment work and at this point, we have not yet

10 determined that health risks are elevated due to the
11 underground hydrocarbons, which is fortunate.

12 We have also asked the Los Angeles County
13 Department of Public Health to also independently review
14 the data and DTSC's work.

15 And so just real quickly, I just wanted to put
16 up a slide real quickly, if Alex has it, just to give you
17 an idea of our activities on this site over the past four
18 years. And essentially what we started off when we first
19 took over as lead agency on the site in 2008, there was a
20 lot of work that was done. Our activities slowed down as
21 we just focused on the park area and the Former Ujima
22 Tank Farm area; but as you can see, for the last two
23 years, we've stepped up things quite markedly and the
24 2012 is only for the first three months of this and it
25 does not include the work that we just ordered that I

0038

1 just told you. So we really expect a dramatic increase
2 in both Board activities and the activities in the
3 remediation to respond to community concerns.

4 I want to just give quick kudos to Art Heath and
5 Thizar Williams and Teklewold Ayalew. All this is
6 essentially being done by three staff with some help from
7 Paula and me, but it's really an incredible amount of
8 material to receive, to review, and turn around quickly
9 into other orders so that we can try to get to a
10 resolution of this issue as quickly as we can.

11 Chair Mehranian had spoke to you about the
12 meeting that we had with the County supervisor's office,
13 so I'm not going to repeat that other than to say we know
14 that the Board has asked Exxon to appear. Exxon is
15 reluctant due to the class-action lawsuit that they're
16 under -- considering on this site; however, we will have
17 a meeting early next week with Chair Mehranian and myself
18 with the Exxon folks to see what we can do to try to move
19 along the relocation of the day care center.

20 So that's basically it for the Former Athens
21 Tank Farm.

22 The Kast site: Last month, I reported to you
23 that most of the site testing, if not all of it, had been
24 shut down again due to the litigation. There is a
25 class-action lawsuit against Shell Oil on that site, but

0039

1 I reported to you that we were hopeful that there was
2 going to be a ruling which would open things up so we
3 could get on to the site and start doing some work.

4 I'm pleased to report that that ruling did come
5 in and we are going to be continuing and completing the
6 work over the next several months on all the indoor air
7 testing. We have started. Pilot activities have begun
8 in terms of different excavation techniques and Shell is
9 looking at various in-situ technologies for the site,
10 too, which may prove to be beneficial as we go into a
11 full-scale remediation.

12 So here we are a year since we issued the pilot
13 testing Cleanup and Abatement Order and we're really
14 getting started now, so I'm happy to report that.

15 The residents, of course, find some of the work
16 to be very intrusive, but we're trying to limit that as
17 best we can, trying to work in some areas that are public
18 rights-of-ways rather than on the individual homes. But
19 in order to address some of their concerns, we are going
20 to meet with residents on a one-on-one basis in May at
21 their request and we are working with the City of Carson
22 to have a meeting room and things like that where
23 Dr. Ayalew, Thizar Williams, and other staff will be
24 available to meet with residents on a one-on-one basis.

25 We have done that once before, before the work
0040

1 had been shut down. We found that to be very beneficial
2 where they can get their questions answered very
3 efficiently there. So we expect to have those meetings
4 starting sometime in May.

5 On to two issues on the Board checklist that --
6 and both of them Board Member Munoz had asked for some
7 information. First, you had asked staff investigate the
8 roles of pipelines in discharging waste over various
9 areas in our region and so staff had arranged a meeting
10 and we held a meeting with Cal Fire -- and I'll explain
11 this in a minute. First, just to let you know, we came
12 up to speed quite a bit to let you know that the State
13 regulates pipelines really under two different agencies
14 in accordance with the materials that they carry and
15 essentially whether they're liquid hydrocarbons or
16 whether they're natural gas.

17 So we focused our work on the liquid pipelines
18 and we met with Bob Gorham and he's with Cal Fire.
19 They're the agency that implements the regulations,
20 federal regulations for regular pipeline testing. The
21 agency's been in existence for roughly 20 years and
22 essentially, they've developed guidelines and rules and
23 regulations for regular pipe testing every five years.
24 Mr. Gorham was very informative to us to show statistics
25 on the number of pipeline leaks and things like that that

0041
1 happened 20 years ago for what's happening now and due to
2 their program, there's been a major reduction in the
3 number of leaks from pipelines due to the rehabilitation
4 and the regular testing.

5 Basically, they are also notified on all spills
6 and we get copies of those notifications, but we're going
7 to get further details of their reports with us on a
8 regular basis. So if there is a spill from a pipeline or
9 a leak from a pipeline, we'll have better information
10 about it. And I think what was most interesting to staff
11 on this is as we look at sites for cleanup with
12 pipelines, they have developed quite a GIS information
13 database by which they have pipelines, what they think is

14 a complete inventory and location of all the pipelines in
15 Los Angeles and Ventura Counties.

16 We are working right now to work with them to
17 get that database into our system so our staff can use it
18 when they're doing their work on site cleanups to see if
19 there's any nearby pipelines. Typically, it's been a
20 rather lengthy and rigorous exercise to try to find out,
21 you know, if they are pipelines, number one; number two,
22 who owns and operates those pipelines; and three, what
23 the recent testing was. So I think it's -- we're
24 working, like I say, with Cal Fire. They're
25 under-resourced, but we're doing the best we can to try

0042

1 to get that database into our shop, into our staff's
2 hands, so they can do a more complete job when they're
3 looking at their cleanup orders and such.

4 So thank you for that, that initiative. I think
5 it's going to -- there's a lot of information that's
6 available that we're going to be able to put our hands
7 on.

8 You also asked us to investigate the nature and
9 extent of hydraulic fracturing, which is also known as
10 fracking in our region, and it's f-r-a-c-k-i-n-g. And so
11 on March 13th, a number of staff met with the Division of
12 Oil, Gas, and Geothermal Resources in their office in
13 Southern California. Their regions somewhat overlap ours
14 in the sense that the office handles essentially
15 Los Angeles and Ventura Counties and basically what they
16 do is they regulate the USEPA underground injection
17 program in these counties, and so what that means
18 basically is that there are wells into the oil fields.
19 When oil is produced from various fields, it comes up and
20 brings up some water with it. They try to then circulate
21 that water back into the oil fields to keep essentially
22 the same pressure on to operate those fields, and they
23 operate that program.

24 DOGGR informed us that there are about 8,000
25 active UIC wells inside of Los Angeles and Ventura

0043

1 Counties. Going back to the history of oil exploration
2 and production in these counties, they think there's as
3 many as 40- to 50,000 well bores that may have been
4 installed since the early days.

5 They also informed us that hydraulic fracking is
6 not under the jurisdiction of the USEPA underground
7 injection program. So that was in the Federal Energy
8 Bill of 2005 that it was removed from these regulations
9 and so at this point, they have very little information
10 on where and to what extent fracking occurs in the state.

11 Basically, with the overwhelming work that they
12 have, they are looking at ways to prioritize things and
13 on a State level, there is a Memorandum of Understanding
14 between DOGGR, which is the Division of Oil, Gas, and
15 Geothermal Resources -- I'll refer to them as DOGGR --

16 and Regional Boards that dates back to 1988 regarding
17 underground injection. And in that MOU, if DOGGR staff
18 feels there's a concern about the effects of a well field
19 or well operations on water quality, they can seek what
20 is known as an informal opinion from the Regional or
21 State Board; and over the past 25 years, this MOU has not
22 been used very extensively, to my knowledge.

23 I don't think I found an instance of its use
24 previously, but you may recall that just last year, DOGGR
25 did request an informal opinion from the Regional Board

0044

1 staff on the Inglewood oil field and last September, I
2 issued such an opinion stating that groundwater in the
3 vicinity of Inglewood oil field is of great importance
4 and deserving of the highest level of protection.

5 So if you need to get a copy of that letter, I
6 think I've distributed it once before, but if you want to
7 see a copy, I can get that to you.

8 DOGGR has placed the Inglewood oil field, in
9 particular, under what is known as an Area of Review, and
10 so what that means is that other wells in the vicinity
11 must be evaluated for their potential to possibly
12 discharge their injectate, their water, into an aquifer
13 and possibly impact that aquifer. And so what that means
14 basically is their fracking activities are somewhat
15 limited by the fact that to complete this AOR, this Area
16 of Review, they have to inventory and evaluate all the
17 other well bores that are in place.

18 I also had a telephone conversation with
19 representatives of PXP, the operator of the Inglewood oil
20 field, and they informed me that they have some pilot
21 fracking tests under way at this time in the oil field.
22 And in response to that, I also had a phone meeting with
23 State Board staff -- and for the Board members who were
24 around last year, you may remember John Borkovich. He
25 was the GAMA program member. I reached out to him and he

0045

1 and his staff were very, very helpful and they're trying
2 to essentially, I guess, coordinate their database with
3 information that they have from DOGGR.

4 Mr. Borkovich informed us that there are two
5 other groundwater production wells within one mile of the
6 Baldwin Hills area and he also informed me about
7 A.B. 591, and this bill would define hydraulic
8 fracturing, fracking, and would require the person
9 carrying out the hydraulic fracking to provide the list
10 of the chemical constituents used in the fracking fluid
11 and the amount of water and fracking fluid that is
12 recovered from the wells.

13 The bill would require the State Oil and Gas
14 supervisor on or before January 21st, 2013, and annually
15 thereafter, to prepare and transmit to the legislature a
16 comprehensive report on the hydraulic fracturing in the
17 exploration of oil in California. The bill made it

18 through the assembly, I understand, and right now it is
19 in the -- and through the Senate Environmental Quality
20 Policy Committee, but it is held in the Senate
21 Appropriations Committee at this time in their suspense
22 file.

23 So staff will continue to work with State Board
24 staff on the oil productions here in our area.
25 Mr. Borkovich has committed that he can make some

0046

1 resources available. As you know, our resources are tied
2 to cost recovery in the cleanup sites, so we're hoping we
3 can get some direction and coordination with State Board
4 staff on this and we continue to do that.

5 And, again, thank you for that initiative. I
6 think it's really -- it's going to really help us carry
7 out our mission in protection of water quality on the
8 groundwater side.

9 And then finally, last month, you may recall
10 when I had to announce to you that the schedule for the
11 MS4 is being delayed to September and Heal the Bay came
12 and gave a list of water quality exceedences of last
13 summer, Board members expressed concern about the
14 bacterial exceedences and what would be done this summer.

15 I wish to report to you that earlier this month,
16 we sent out 17 letters to the County and 16
17 municipalities asking them to provide information on what
18 they know about the exceedences, the BMPs that have been
19 installed, that the Board installed at those locations
20 during the summer dry weather; and we asked that any such
21 information regarding the BMPs that have been implemented
22 to be sent to us by the end of this month. So we're
23 expecting to have a lot more information which may help
24 us on the new permit and other matters as well.

25 And that's about it for me this month.

0047

1 MS. MEHRANIAN: Great. Questions?

2 Yes, please.

3 MS. GLICKFELD: I have -- first of all, on the --
4 your report was very helpful today. Thank you very much,
5 Sam. Thank you very much for acting on the request of
6 the Board on the beach bacteria exceedences. I also want
7 to commend you on the approach, which is to write a
8 letter and to seek compliance and find out what people
9 are doing, not to just send a Notice of Violation. So I
10 really appreciate that we take -- we should take that
11 kind of step as a first step every time we see these
12 kinds of exceedences; and as we now are finishing the
13 TMDL development stage, we really should be focusing in
14 on the most productive way to work with our dischargers
15 on compliance and avoiding enforcement where we can, just
16 working with them in a positive way on compliance. So I
17 wanted to thank you about that.

18 On the subject of the Kast site, a couple of
19 things, and there is another site that I noticed in the

20 remediation program that I haven't seen before, which is
21 called -- it's on page 8 of your report and it's called
22 the Former HY "C" Tank Farm. Every time I see "tank
23 farm" now, it gets my attention and I wanted to know
24 whether or not -- first of all, what's on top of this
25 little tank farm? Is it industrial or residential? And

0048

1 are we talking about problems of the scope that we've
2 seen in the Athens and Kast site?

3 MR. UNGER: I'm going to ask Art Heath to come up and
4 help me out with this one.

5 MS. GLICKFELD: While he's doing that, I wanted to
6 note that since we don't have a press person or anyone
7 doing public relations, I now have a reminder on Google
8 alerts for this -- for the L.A. Regional Water Board and
9 one thing that came up from the USC News was the Carousel
10 site, really, and I'd like to share this piece. I'm
11 going to circulate it.

12 MS. LUTZ: I got the same one.

13 MS. GLICKFELD: Yes, and it really gives us a little
14 map which shows how extensive the impacts are on the
15 subdivision, but it also talks about how long and
16 uncomfortable and disruptive this process is being, and I
17 really appreciate the fact that staff is trying to do it,
18 make it go fast; but I think the Board also has to note,
19 has to figure out at some point if this is going to be a
20 ten-year process or a five-year process. What -- what
21 can we do for those residents who just want to get out,
22 just want to get out? They can't sell their houses.
23 They can't live there in peace.

24 So I just raise that issue with you, so I'm
25 asking about both the HY "C" and the Kast site.

0049

1 MR. UNGER: Go ahead on the HY "C".

2 MR. HEATH: Good morning. Arthur Heath, Chief of the
3 Remediation Section. I don't have a lot of details
4 specifically about the site, but it's within the Port of
5 Los Angeles. A lot of their properties are being
6 redeveloped in terms of they're bringing down the tank
7 farms. They're going through assessment, cleanup, and
8 typically most of the redevelopment will be, you know,
9 commercial or a continuing industrial type of activities
10 there. But specifically, I really don't know what's
11 being planned for this particular site.

12 MS. GLICKFELD: So this is basically a vacant site at
13 this point?

14 MR. HEATH: I really couldn't tell you that.

15 MS. GLICKFELD: It would be great if you could come
16 back with some information on it.

17 And the other point that I'd like you to come
18 back with is whether or not there's actually impact on
19 ocean waters, whether there's any testing you're
20 requiring to find out whether it's just polluted soil and
21 whether there's migration in the groundwater.

22 MR. HEATH: Through our process of a lot of these
23 sites that are next to the Harbor, we definitely look at
24 that, whether they're impacting the Harbor or not. Some
25 are, and so that's being considered in terms of

0050

1 assessment and cleanup again.

2 MS. GLICKFELD: Okay. You know, Sam, I would like to
3 see us -- I had raised this when we first got into the
4 seriousness of the Ujima and the Kast site and I
5 suspected and the Board suspected that there were lots of
6 these, and there's got to be a more systematic way of
7 discovering them and I'm wondering whether or not, given
8 the State boards -- and this is something for Board
9 Member Spivy-Weber; maybe she can help us with this.

10 Given the State Board's and our interest and our
11 important interest in looking at groundwater and
12 groundwater supply, some parts of our region are
13 depending up to 90 percent on groundwater's water supply
14 and some people are drinking unsafe water. So it would
15 be to our advantage to be able to do some kind of
16 historic analysis, GIS analysis, to find out where these
17 tank farms are and to what extent this is a regionwide
18 problem for us.

19 We have more industrial sites in Los Angeles
20 County than almost the rest of the state combined, so
21 it's a special issue where we should be seeking that kind
22 of help and I would ask that you do so.

23 MR. UNGER: Okay. Thank you. Yeah. We will.

24 MS. GLICKFELD: And then my last question is I'm
25 looking at our Monthly Enforcement Report, and it's very

0051

1 different this month than it's been in the past. There
2 are well over 100 NOV's for construction permits and I was
3 wondering whether this is some kind of -- now that we're
4 winding down the MMP process, whether this is some kind
5 of a new initiative and what are people doing wrong that
6 they're getting all these NOV's? Are they not complying,
7 are they not getting permits, or how is it that we
8 identified all of these?

9 MR. UNGER: Primarily, we identify most of them
10 through inspections, and our inspection group has been
11 out very vigorously. I mean, we went through a whole
12 series. You may recall that we had a whole series of
13 these before we had these benchmark exceedence letters
14 and things like that. So through review of those, the
15 responses to those benchmark exceedence letters and
16 through inspections now that we're through that process,
17 staff has been more available to go out and carry out
18 inspections.

19 MS. GLICKFELD: Do we ever provide workshops to the
20 construction industry working with industrial trade
21 groups so that we can educate people rather than have to
22 fine them?

23 MR. UNGER: We have worked with State Board and they

24 come down occasionally to provide such workshops, but we
25 have not initiated those on our own yet. Maybe -- I
0052

1 think I'm hearing from you maybe we might look into that.

2 MS. LUTZ: I may be able to help with that. I know
3 that the municipalities, on a regular basis, hold
4 workshops in their own municipality for construction
5 crews that are coming. That's something that, at least
6 in the region I'm at, they even work together and do
7 regional updates. Particularly when something changes
8 with the SUSMP rules, they will do that; but I think it
9 is, but I think it would be great if we could coordinate
10 some of that.

11 MR. UNGER: Let me -- I'd like to get back with you
12 on that because essentially it comes from two -- I think
13 this comes from two different areas. One is our current
14 MS4 permit, as you just mentioned, Board Member Lutz, and
15 the other is from the State permit that we implement in
16 the regions so -- with the general construction.

17 I think, at some point, it may be worthwhile for
18 us to come back to you with an information item
19 essentially on how essentially construction works here,
20 how regulation of these sites is carried out, under which
21 of the two mechanisms, and what we can do and we can get
22 that point.

23 MS. GLICKFELD: Just the last point. This is all the
24 construction general permit?

25 MR. UNGER: Right.

0053

1 MS. GLICKFELD: This is not the NPDES permit.
2 Something's obviously going on.

3 MS. LUTZ: I might suggest, too, that after the Board
4 completes the new MS4, that that's a good time to sit
5 down with all of the construction companies and, you
6 know, have a big kind of "Let me explain to you what's
7 new" kind of thing and so maybe we should put that on our
8 calendar to start working towards once this permit is
9 done and it's got all the changes in it, and we can have
10 the State Board come and assist and talk about their
11 permit at the same time.

12 MR. UNGER: Okay. I'll work with Ejigu Solomon and
13 Ivar Ridgeway to coordinate these activities.

14 MS. MEHRANIAN: Anything else? Questions?

15 MS. DIAMOND: I was only going to mention that, as
16 Board Member Lutz just said, many of the municipalities
17 probably are doing these kinds of things and we just
18 don't know about that.

19 MS. LUTZ: Yeah.

20 MS. DIAMOND: So given the staff resources that we
21 have and don't have, possibly we could be working with
22 the cities to coordinate that and the Regional Board
23 would be part of the program that already exists and
24 expand it, participating in it rather than coordinating
25 it.

0054

1 MS. LUTZ: Yeah. I think that's what I just asked,
2 but --

3 MS. DIAMOND: I think that would be a better way for
4 us to go, to have it happen and not be responsible for
5 coordinating the whole thing, but be a part of it.

6 MS. MEHRANIAN: Okay. Board Member Munoz?

7 MS. MUNOZ: Sam, thank you for a thorough and solid
8 report and for getting back to me on the pipeline,
9 getting back to us on some of the fracking issues. I do
10 have a couple of comments about that, but I want to talk
11 to you -- I want to ask you about the 40 homes that
12 you're going to be doing indoor testing. Can you explain
13 the process? How you notify the folks? How long it
14 takes? Do you get back to the folks when you find out
15 the results? 'Cause I think it's real important that --
16 I know if someone knocked on my door and said they needed
17 to do indoor testing because of impacts to something
18 going on in a local industry, it would scare me and
19 especially if I had four or five children, I'd be real
20 upset. So can you walk me through that process, when you
21 do that and who does that?

22 MR. UNGER: Actually, the processes are a bit
23 different in the two sites in Kast and Willowbrook, next
24 to Ujima, because in the Kast site we are working
25 essentially through the litigants in the class-action

0055

1 lawsuit. So essentially what happens there is the Water
2 Board directs Shell. Shell then informs the plaintiffs'
3 attorneys that certain properties need to be tested due
4 to the fact of -- due to the conditions beneath the
5 property, that the levels are at a sufficient level, and
6 then the plaintiffs' attorneys then get back with
7 essentially Shell's attorneys and the schedule's formed.

8 That's what was totally shut down essentially up
9 and through this month when the Court ordered essentially
10 that a certain number of properties had to be made
11 available every week. So in the Kast site, it works
12 through the class-action lawsuit.

13 When we're talking about Willowbrook, it's a
14 different procedure and what we are planning on doing at
15 Willowbrook is for the first 40 homes that we're looking
16 at, we're going to -- staff is going to knock on doors.
17 We have a notice that is drawn up. We have an
18 information video on our website that people can go to
19 and sort of see what's entailed in the testing and at
20 this point, it's going to be up to those homeowners to
21 provide us access. I'm not sure that we're going to get
22 100 percent agreement to do the testing, but nonetheless,
23 it's still going to provide us some very good information
24 on generally what's going on in the neighborhood.

25 So here, our first approach for the Willowbrook

0056

1 area is to look for voluntary agreement. We're working

2 out with Exxon right now that there's going to be a
3 relocation package such as there is at Kast where the
4 people can leave the house and pick a hotel in the nearby
5 area; and in that case, the responsible party picks up
6 the charges for those. It's -- that part of the process
7 has worked very smoothly in the Kast site because they'll
8 accommodate pets and, you know, it just -- you know, it
9 is very accommodating to try to make it as less intrusive
10 as possible, but still to be told that you have to move
11 out of your home for two or three days, there's
12 definitely an impact on people and there's no getting
13 around it because that's what it takes to do the tests.

14 MS. MUNOZ: So when you knock on the doors, you talk
15 to the people, do you tell them specifically what you're
16 testing for?

17 MR. UNGER: Yes.

18 MS. MUNOZ: And then when you get the results, how do
19 you go back to them and inform them what the results are?

20 MR. UNGER: Well, again, we haven't gotten to that
21 point with the Ujima site. We will -- what we're finding
22 through our work at Kast is when we can access the
23 residents one on one, that seems to be the most effective
24 way to transmit information. So that's what we will do.
25 That's what we will do at the Willowbrook site next to

0057

1 Ujima.

2 At Kast, it goes back differently where
3 essentially the results go to the attorneys, then to the
4 plaintiffs' attorneys, and then from the plaintiffs'
5 attorneys to the homeowner.

6 MS. MUNOZ: I just want to make sure that when you
7 are going into homes that are not English-speaking homes,
8 whether they be Korean, Spanish, or others, that you take
9 professional translators and information in the language
10 in which they speak and read, 'cause I think that's very
11 critical when you're talking about, you know, potential
12 toxins found in their homes, that they truly understand
13 what's taking place, what's going to happen, and the next
14 steps, 'cause it is a very fearful process where you do
15 understand it. So if you don't understand it fully, it
16 becomes even more devastating.

17 MR. UNGER: Yes, thank you. Just to let you know, we
18 are finalizing our request for access, the written
19 request for access, and we are working with State Board
20 to have it translated into Spanish at this time.

21 MS. MUNOZ: Great. I have a couple of -- thank you
22 so much for the information on the fracking and
23 pipelines.

24 Every time I come to a Board meeting, I see a
25 number of sites that we're doing cleanup or real

0058

1 concerned and we're doing testing. Have we ever taken
2 the approach of trying to prevent a lot of these
3 situations from occurring by providing -- I know we're

4 doing the TMDLs, but providing strong guidance and
5 encouragement to those industries who have done this
6 historically in many parts of L.A. and Ventura County so
7 they can prevent that from doing that in the future?

8 I think the point here is not to get to a point
9 where we don't have these similar reports over and over
10 and over again and since we know that we have one of the
11 largest oil field sites in urban area in the country that
12 affects a million people, plus others that are in
13 Long Beach and other places that we would take, I guess,
14 a more -- a different approach, a more, for me,
15 reasonable approach and rational approach of talking to
16 them before we have to start doing cleanups and having
17 impact to environment and community health.

18 MR. UNGER: Well, to the extent -- thank you. I
19 appreciate that, but -- and believe me, it's not pleasant
20 for me to come here and report to you that these sites
21 are in the state that they are, but one thing I'm sure
22 you all know, you know, the condition of these sites
23 dates back to early in the last century, not this
24 century. I mean, in the '10s and '20s are the very
25 vigorous oil industry here in the Los Angeles basin. So
0059

1 that's one thing to deal with.

2 The other is we do -- the manner in which we try
3 to address that now, first of all, is we're more active
4 in responding to EIRs and things like that and making our
5 concerns known, you know, when we do see some of these
6 sites that could potentially affect water resources and
7 whatever -- we're on the phones with our attorneys all
8 the time, asking what we can say and what we can do in
9 order to try to prevent these.

10 I would say, back to my point, that this
11 contamination is legacy. There are other laws in place
12 and other regulations in place such that these types of
13 situations hopefully will not occur again. I think
14 there's other regulations. There's other regulatory
15 bodies such as DOGGR, things like that, that are trying
16 to prevent these types of situations from occurring
17 again. There's other standards and things like that that
18 we do look to, we do invoke, we do get involved.

19 In discussions on like at the Port of
20 Los Angeles, for example, when people want to put in a
21 new tank farm there, what sort of containment is going to
22 be used and things like that. So to some extent, we do
23 get involved in that and to my knowledge, we're involved
24 to the extent that we're legally allowed to be involved.

25 MS. MUNOZ: And my last comment: Could you just keep
0060

1 the Board informed on issues and updates on the fracking
2 issue that's taking place I guess not just here, but
3 throughout the state?

4 MR. UNGER: Yes, I will. Yeah. We had a very -- a
5 very vigorous and a good dialogue with Mr. Borkovich, and

6 I'm sorry you didn't get a chance to meet him last year.
7 I think he reported to our Board. It was a very good
8 report on the general state of groundwater in the state
9 of California and he's committed to help us and to keep
10 us better informed. He's well aware, again, of the oil
11 production legacy both in this county and in
12 Ventura County as well, parts of Ventura County.

13 MS. MUNOZ: Thank you so much.

14 MS. DIAMOND: I'd like to just comment on that, about
15 the fracking. I do know that there is going to be a
16 hearing. I don't know -- there's no date set yet, but in
17 the not too distant future, members of the Legislature,
18 including Senator Fran Pavley, Assemblymember Betsy
19 Butler, and Assemblymember Holly Mitchell, are going to
20 be doing some type of a town hall on the issue of water
21 and all of the associated issues, including fracking,
22 because some of the area where you're -- where you've
23 been talking about, the Inglewood oil farms, the oil
24 drilling is in Assemblymember Mitchell's district, but
25 there's the whole concern about the Biona leading out

0061

1 into the Pacific Ocean. So there are going to be
2 hearings held and I'll let you know and let the Board
3 know when they occur.

4 MR. UNGER: And two little quick things I just
5 remembered. I think you heard about it earlier, but,
6 again, we came to a milestone in the Consent Decree
7 between NRDC and USEPA. We still have one other TMDL to
8 do in the Ventura River for nutrients and algae and such
9 as that; but other than that, it was quite an
10 accomplishment. The entire staff, we had a little
11 in-house party, a potluck lunch, and I really want to
12 thank all the staff on the TMDL, as well as the Board,
13 for having the courage and the foresight to adopt and
14 implement these TMDLs, to guide us as we move forward to
15 clean waters. So that was quite an item.

16 And I just wanted to say one other thing. We
17 have started a regular phone call -- Paula, Deb, and I --
18 with Judie Panneton at the State Board because we do not
19 have press support like we had previously and we expect
20 to speak with her -- we speak with her regularly. We
21 keep her updated. She's been very proactive and you've
22 probably seen that we've had some press in this past
23 month. So that's how we've been able to do it. So we're
24 trying to work as best we can without someone in the
25 office directly, and she's been very -- she's very

0062

1 skilled and very helpful.

2 MS. MEHRANIAN: Board Member Camacho, that was one of
3 the issues you had. So we can do updates, regular
4 updates for you.

5 MS. CAMACHO: That's great.

6 MS. MEHRANIAN: Okay. Any more questions?

7 MR. YEE: Yes. I had a question. Once you issue an

8 NOV, what happens next?

9 MR. UNGER: Well, several things can happen after we
10 issue a Notice of Violation. Basically, generally
11 Notices of Violation are accompanied by either requests
12 or orders for information; and if we receive that
13 information, we evaluate that information for, as we call
14 it, a compliance evaluation to see if it is -- if what is
15 reported possibly as an exceedence is truly an exceedence
16 of an order or a permit, and then we take several -- we
17 have several paths to go from that point, some of which
18 result in civil liability penalties. Others can result
19 in orders such as Cease and Desist Orders or Cleanup and
20 Abatement Orders.

21 MR. YEE: Thank you.

22 MS. MEHRANIAN: Thank you very much. Thank you for
23 your report, Sam.

24 MS. LUTZ: Thank you, Sam.

25 MS. MEHRANIAN: Oops. One more.

0063

1 MS. LUTZ: No. I said thank you.

2 MS. MEHRANIAN: Oh, I thought you had a question. We
3 have an update from State Board Fran Spivy-Weber.

4 MS. SPIVY-WEBER: Thank you. Since Madelyn didn't
5 mention it, I'll mention that John Borkovich is an alum
6 from UCLA and he is going to be your friend in terms of
7 not only helping to give you the information about
8 groundwater conditions, but give it in a way that you can
9 actually understand it because he does a lot of mapping
10 and pictorial efforts through the State Board through
11 GAMA and so you can go on to GAMA, you can look up the --
12 you can go on to the map, you can find where you live,
13 and you can look and see what wells are nearby. I don't
14 know if he has all the tank farms in there, so that'll be
15 something --

16 MR. UNGER: There's quite a few.

17 MS. SPIVY-WEBER: But I know he would have those that
18 have come to light. So he is someone I think you're
19 going to be seeing a lot of over the next year or two.

20 You asked particularly about the reorganization,
21 the Board reorganization; and as I think Madelyn pointed
22 out, these bills come up fairly often and rarely do they
23 go very far, but this is not a bill. There is a bill for
24 reorganization. That's true. It's a Steinberg bill so
25 it's, you know, it's got some oomph behind it; but more

0064

1 importantly, I would say that some of -- some of what is
2 in the Steinberg bill has and some that is not in the
3 Steinberg bill has appeared in the governor's Finance
4 Report and that is going to be -- it's a report that came
5 out in January and it was the one that said that they
6 would reduce the size of the boards to seven; and the way
7 in which it would be done, they would eliminate Region 7,
8 which is Imperial, and would eliminate the
9 classifications, but then describes how the Board members

10 would be selected to try to get a diverse geographic and
11 expertise approach without having particular
12 classifications.

13 We will know -- so it's serious. We will know
14 whether or not it's going to be carried any further when
15 the governor's May revise comes out. Usually it's around
16 the middle of May. And if it gets -- if it gets
17 incorporated into the May revise and gets accepted
18 through the budget process, it will be -- we will know
19 for sure in -- well, whenever the budget is adopted.
20 Usually the May revise comes right before the budgeted
21 options. Last time, it came a little bit early. But
22 anyway, so it'll be May and June when we will know if
23 this is going to happen.

24 Now, it gets phased in. So I can answer more
25 questions as we get closer, but the Finance Letter is
0065

1 available. It's online and so if you are interested in
2 reading more details about this in terms of -- I guess
3 you've got eight people now and it would be through
4 attrition that you would reduce down to seven in most of
5 the boards. Only Region 9 and Region 7 would be affected
6 in terms of all the Board members having to resign and
7 then they would have to piece together a new Board made
8 up of Board members from Region 7 and Region 9, but
9 that's not your problem.

10 MS. GLICKFELD: On this issue, first of all, if
11 they're going to do a bill, can they please consider the
12 10 percent rule, the issue that keeps so many people off
13 the Board?

14 MS. LUTZ: But that's a federal rule. Is that the
15 not the Clean Water Act.

16 MS. SPIVY-WEBER: Well, there's some work on that as
17 well and certainly Steinberg's Bill is looking at that.

18 MS. GLICKFELD: If we could just have a rule to
19 automatically disqualify people from voting on anything
20 they had a 10 percent interest in, that would seem to me
21 we should at least ask if that would comply because way
22 too many people are disqualified from being on this Board
23 for all the wrong reasons, it seems to me.

24 MS. SPIVY-WEBER: Exactly.

25 MS. GLICKFELD: Are we going to eliminate all the
0066

1 classifications? So that means that the governor can
2 appoint municipalities representatives or not appoint
3 agricultural representatives or not? So they will just
4 be taking a pool of people?

5 MS. SPIVY-WEBER: That's right. That's the reason
6 it's a little bit iffy as to whether or not it will
7 actually happen.

8 MS. GLICKFELD: Right.

9 MS. SPIVY-WEBER: Again, that's -- because it's in
10 the Finance Letter and because it's part of the May
11 revise, it's -- I would say, the chances are higher that

12 something will actually happen. Whether all of that
13 happens, you know, it's a political world, so I don't
14 know.

15 In terms of budgets, from everyone that I've
16 talked to, no one is anticipating that there will be a
17 late budget this year, so that's good news.

18 For -- most of the State Board and Regional
19 Board's budget is now fee supported and at our Board
20 meeting next Tuesday, we are going to be discussing an
21 information item which is the Resource Alignment Report,
22 which the State Board asked staff to put together, and
23 it's a report that displays and discusses and assesses
24 really how aligned are the fees that people are paying to
25 us to the work that we're doing and then, perhaps more

0067

1 importantly, to the priorities that we have set as
2 Regional Boards and as a State Board.

3 This Resource Alignment Report is the first of
4 probably several reports that will be coming out, but it
5 gives you a picture of where we are right now, which is
6 largely pretty good.

7 There are two areas where our fees and
8 expenditures are a little out of whack. One is on our
9 401 certifications for free licensing for dam --
10 basically dam relicensing issues, which again doesn't so
11 affect here, but the other is in the irrigated ag
12 programs. More staff time is being spent in those areas
13 than there is money to cover them and in this new fee
14 world in which we are moving, this is a concern because
15 certainly both of those areas are very important. That's
16 why we're spending more time in them, but figuring out
17 how to actually pay for the work that we do and then to
18 pay for the priorities that we've set is a challenge.

19 So I would -- I believe the report -- certainly
20 it will be up by next Tuesday 'cause that's when we have
21 our Board meeting. I think it goes up on the web today
22 and so you might want it look at it. It's very
23 interesting and it shows some areas where we will need to
24 do some -- certainly some more work; but one of the big
25 challenges is a number of fees come in to one fund, but

0068

1 they come in from different fees, and so the inference
2 will be how pooled are those fees; and that's certainly a
3 legal issue, but it's something that certainly the
4 stakeholders are going to be very interested in. And
5 we're going to be discussing this with them as well, but
6 it will have an effect on all of us because we are more
7 and more not only being scrutinized for the way in which
8 we spend the money that people are giving to us or
9 required to give to us for doing our work, but we want to
10 do that, too. We want to be as responsive as possible.

11 So I would urge you to look at this Resource
12 Alignment Report. It will be on the web and it's -- if
13 you're interested and can't find it, let me know or let

14 Sam know.

15 We had a low-impact -- we will have at our Board
16 meeting on Tuesday the Low-Threat Underground Storage
17 Tank Case Closure and Draft Substitute Environmental
18 document hearing and we will be voting on that in May.
19 This is -- as you know, you've got lots and lots of
20 underground storage tanks in your area as well as
21 throughout the state and we are considering a policy on
22 closing some of those that are considered low threat and
23 doing it in a -- through a policy mechanism so that it is
24 done sort of more broadly and actually there would be
25 more areas brought into it. This is quite controversial

0069

1 because there are a lot of people who are very concerned
2 about that. It has arisen because, again, the cost of
3 continuing to do the updates on closure for these
4 low-cost -- low-threat sites is expensive and sometimes
5 those are getting the funding and some of the more --
6 perhaps more important sites are not. And so it's a
7 priority choice. It's going to be a lively debate at the
8 State Board on Tuesday and, again, a vote is scheduled
9 for May the 1st. So that, too, will be a very lively
10 discussion. I don't know exactly how it's going to all
11 shape up, but it will affect your program and others
12 because if it does get adopted in some form close to what
13 it is right now, there will be a much larger number of
14 sites closed.

15 Another favorite topic for all of you is
16 septic, our on-site wastewater treatment system. We had
17 a staff workshop yesterday. We're going to have a Board
18 hearing on May 2nd. This is for our Septics Policy, the
19 latest Septics Policy. Hopefully this one will make it
20 through. And we'll have a Board vote -- we have a Board
21 vote scheduled for June the 19th, so it's on a fairly
22 fast track.

23 After it -- assuming that it does go through
24 June the 19th, it would have to go through the
25 Administrative Law Office and that takes a while. So it

0070

1 probably would not be out as a real policy until early
2 next year, maybe June or July -- pardon me, maybe January
3 or February, and the emphasis in this new rendition of
4 the policy -- and, again, I think you -- I hope you will
5 look at it -- is that there's a lot of emphasis on local
6 planning and local enforcement and local activities
7 working very closely with the Regional Board.

8 So I would -- I would urge you and, Sam, I would
9 urge you to once -- if this does get adopted in June, to
10 set up an information meeting with the Board to go
11 through what is going to be required, because at the
12 hearing, at the staff workshop yesterday, the City of
13 Los Angeles was there and they were concerned about some
14 of the issues with the policy.

15 So it would be very important to give you a

16 heads up early before you get into actually -- actual
17 implementation; and lest you think that a whole lot of
18 stuff is going to be thrown on you all at once, there is
19 a time period -- I think a three-year time period -- for
20 this implementation activity to take place and so it
21 won't be immediate, but it would be something good to be
22 in front of early. So that is coming up very soon.

23 We've started the Ocean Desalination Policy. We
24 had a scoping session last Friday and there are three
25 reports. One is out right now, one is coming out very

0071

1 soon, and a third one is coming out. So this scoping
2 deadline, I believe, is Friday.

3 Because these reports will be coming out over
4 the next several -- over the next month or two, there
5 will be many opportunities for people who are interested
6 in ocean desalination to write in and I would recommend
7 that those who are interested or who are concerned that
8 their scoping comments are not being taken seriously or
9 that they have more to say than they have time to say by
10 Friday, there will be plenty of opportunities,
11 particularly if you use these reports when they come out,
12 to add to your ideas as to what we should be looking at.

13 And finally, three big policies that you're very
14 interested in: The Toxicity Policy -- oh, yes. Well,
15 due to some very unfortunate situation, we have had to
16 send the Toxicity Policy out for our own peer review.
17 EPA was doing a peer review, but we've not been able to
18 get from Washington D.C., not from Region 9 -- we've not
19 been able to get all the comments posted and so we've had
20 to go out to another peer review; and in talking with
21 Jonathan, it looks like that peer review report will
22 be -- will not be available to us until May or June. So
23 sorry about that.

24 The Trash Policy should be out in the summer.
25 We've got a very active group that's helping to put that

0072

1 together, and it's -- it would be -- we would hope that
2 it would be voted on or up for a vote at least in
3 February, January or February of next year.

4 And the Constituents of Emerging Concern: We
5 got a grant from the Packard Foundation or there was a
6 grant from Packard Foundation to expand the focus on the
7 Constituents of Emerging Concern to the coastal areas and
8 oceans near marine ecosystems, particularly near shore,
9 and that is in internal review and Deb has been able to
10 contribute to that internal review, and that will be out
11 to the public for comments in a few weeks.

12 And I did have one other thing. There is a
13 recycled water bill, the water reuse had worked on and
14 has had introduced it. It's quite large. It's about 49
15 pages and it is trying to consolidate a lot of the
16 water -- or the recycled water components that are spread
17 throughout the Water Code into one place; but because

18 it's pulling things from all different parts of the Water
19 Code, it's quite complex and it is getting a lot of
20 attention.

21 There is a hearing on Tuesday in the Assembly on
22 this bill and we are following it extremely closely.
23 We're working with water reuse. We are internally.
24 We're -- again, Deb is on the -- on our advisory group to
25 review the bill and it's -- but, again, it's so big and
0073

1 so, so large that I don't know exactly what's going to
2 happen to it, whether it'll be divided up in parts or
3 only a small part of it will be considered this year or
4 if they're just going to keep it all together. That's
5 still being determined and I suspect after this hearing
6 on Tuesday, we'll know a lot more.

7 MS. LUTZ: Fran, do you happen to know the bill
8 number on that one?

9 MS. SPIVY-WEBER: I don't.

10 MS. SMITH: I can send it to you. I think it's 28.

11 MS. LUTZ: A.B. 28?

12 MS. SMITH: 2853 or something? It's four numbers.

13 MS. SPIVY-WEBER: Yeah. It's four numbers. I did
14 not bring that with me. I'll look and see if I have it
15 with me, if I can get it to you. But the Assembly
16 committee where it will be heard is Huffman's committee
17 and it's the Water Parks and Wildlife and so it's
18 Tuesday, Water, Parks, and Wildlife, and that's the
19 subject of the hearing. But I will get a copy of it for
20 you.

21 MS. SMITH: It's 2398.

22 MS. LUTZ: 2398. Thank you.

23 MS. DIAMOND: Fran, can I ask you a question on just
24 legislation in general? When you get updates from the
25 legislative -- the person responsible for updating you on
0074

1 legislation, is it possible for you to forward some of
2 that to us so that we can keep current on the key water
3 bills?

4 MS. SPIVY-WEBER: Right. Yes. We get a list of the
5 top priority bills that we're tracking and those that
6 we're actively engaged in and those that we're just
7 tracking. Right now, the bills are just getting -- the
8 latest bills are just getting -- the spot bills are being
9 turned into real bills and so it's very much in flux, but
10 we should have a report out, I would say, in probably
11 another week or so, and I know Sam gets it.

12 MR. UNGER: Yeah. I can provide those. I don't
13 know. Does everybody want those?

14 MS. DIAMOND: Yeah, I think so.

15 MS. LUTZ: Very helpful.

16 MR. UNGER: When I receive them from Office of
17 Legislative Affairs, I'll just forward them on to you.

18 MS. DIAMOND: Great. Thank you.

19 MS. MEHRANIAN: Very good.

20 MS. SPIVY-WEBER: Well, thank you very much.
21 MS. MEHRANIAN: Thank you very much.
22 MS. LUTZ: Thanks, Fran.
23 MS. MEHRANIAN: I think we need -- we have the public
24 forum right after, but I think we need a break.
25 You need a break, right, for the court reporter?

0075

1 So it's now 10 minutes to 11:00. Let's say 11:05?

2 MR. UNGER: 11:00.

3 MS. MEHRANIAN: 11:00? Okay.

4 (Recess)

5 MS. MEHRANIAN: We're back in session.

6 Let's start with Item 7, which is Public Forum.

7 We have two cards.

8 One is Mike Solomon from United Water
9 Conservation District in Ventura County and he requested
10 15 minutes. If you can do it shorter, we would really
11 appreciate it. We have a tight, tight schedule today.
12 Could you do it in a little shorter?

13 MR. SOLOMON: Absolutely. I'll speed through it.

14 MS. MEHRANIAN: Like seven minutes?

15 MR. SOLOMON: Thank you.

16 First of all, members of the Board and Sam, for
17 giving me the opportunity to talk. I'm representing not
18 only United Water Conservation District, but Supervisor
19 Kathy Long, Rob Roy and Ventura County Ag Coalition, and
20 Steve Bachman, Dr. Steve Bachman.

21 I never thought I would be up in front of this
22 Board as much as I have been. I certainly never wanted
23 to be the poster boy for a NOI, but I did hear something
24 when you were giving the award to Mark Gold that -- a
25 word that I'm going to use here, "brutal honesty." I'm

0076

1 going to use that throughout mine, and I do appreciate
2 that you appreciate brutal honesty.

3 The only reason I'm here is I want to give you a
4 little history and there's a couple of new Board members.
5 I wanted to give them a little bit of history of what
6 we've been dealing with on the Chloride TMDL in the Upper
7 Santa Clara River and I'd like to leave you with the
8 following messages: We need to keep the pressure on L.A.
9 Sanitation District to comply with the law in a timely
10 fashion. Their self-imposed delays should not be
11 acceptable. We need to make this a priority.

12 You've made a ruling. Four years ago, you made
13 a ruling and we're still sitting around doing nothing but
14 hoping something else will happen.

15 I would say this also: Your staff gets it. I'd
16 even say the L.A. Sanitation District staff gets it.
17 It's the Santa Clara Valley Sanitation District Board
18 that doesn't get it. They don't want to get it and they
19 believe they have political clout that's greater than
20 this Board's enforcement authority.

21 So with that, I'll go on to the next one,

22 please. Do I have the clicker or -- thank you.

23 The TMDL's from 2002: It's the chloride
24 degradation of the waterways by Santa Clara Valley
25 Sanitation District that releases from their Saugus and
0077

1 Valencia Wastewater Treatment Plants. Several players
2 are involved: United Water Conservation District, who
3 has the responsibility down the Santa Clara River in
4 Ventura County of protecting the groundwater in the seven
5 groundwater basins. You have the Ventura County Ag
6 Coalition of over a thousand members. You have
7 Ventura County. You have several Upper River water
8 purveyors and you have the Santa Clara Valley Sanitation
9 District.

10 I think the important thing for some of the new
11 members I want to make clear is this was a collaborative
12 effort we worked on together. Santa Clarita was not
13 forced to do anything. We worked with them to come up
14 with a resolution to help them get to where they needed
15 to be and I'll show you that in a minute.

16 It was hugely successful at this Board and at
17 the State Board level. In fact, we got a lot of
18 accolades for how hard we worked together and how long we
19 worked together to come up with something that was really
20 a win-win situation. As soon as it was signed, MOU was
21 signed in 2008, Santa Clarita Valley Sanitation District
22 said, "We're not going to do it. So what are you going
23 to do to us?" So what happens now? And that's a
24 question I have for this Board.

25 Next, please. This is the area we're talking
0078

1 about. This is from the TMDL. The green area is
2 Reach 7, the purple is Reach 6, blue is Reach 5, and the
3 other is red, and Ventura County is Reach 4. That's when
4 the -- with the Chloride TMDL at 100 milligrams per
5 liter.

6 Next, please. Why is this important to
7 Ventura County? We have over a \$2 billion a year ag
8 economy, hugely important to our county. The USEPA says
9 that this Alternative Water Resource Management plan
10 ensures the agricultural beneficial use of the water is
11 protected. The TMDL protects salt-sensitive crops;
12 strawberries and avocados, which are two of our top five
13 crops.

14 I think another thing I want to point out to you
15 is we hear constantly from the Sanitation Board members
16 that it's bad science. The public of Santa Clarita says
17 it's bad science. It's their own science; they did it.
18 We accepted it and they did it, so how can they say it's
19 bad? It's very frustrating to us. Finally, we're
20 concerned because they're dumping their crap into the
21 river and damaging our crops and adding costs to our
22 farmers.

23 Next, please. So we worked with them and we

24 came up with -- along with the Regional Board, we broke
25 that one reach that was in the Ventura County section

0079

1 into Reach 4B and 4A, as you can see, and some
2 conditional site-specific objectives were set at 117
3 versus 100 and we upped it to 130 during critical
4 conditions or drought. So we gave -- the science said
5 that drought, salt-tolerant plants could handle this
6 without being damaged and so we said, "We'll work with
7 that. That's good."

8 Next, please. Quickly, I want to show you the
9 red dots and the orange dots give you an idea when the
10 chlorides are greater than 100 or over 117. In this case
11 with the red, this is what it looked like in 2005
12 (indicating). Next, 2010; and now look at 2011, the
13 recent data. The problem's not getting any better. It's
14 just moving westwardly and now past the Piru Creek where
15 it comes together with the Santa Clara River. So don't
16 let anybody fool you. The problem's not getting better.
17 It's just moving along and causing us more and more
18 trouble.

19 Next, please. The conventional approach that
20 L.A. San was looking at to deal with the 100 milligrams
21 per liter TMDL, they were going to construct a desal
22 plant. They wanted to put a brine line down the river,
23 basically, and dump it out to the ocean. The cost was
24 about 500 million. Working with the Regional Board,
25 especially Sam, the site-specific -- the conditional

0080

1 site-specific and objective and the science, getting it
2 up to 117 milligrams per liter, we came up with this
3 Alternative Water Resources Management plan that dropped
4 the cost down to about 250 million and that included
5 Ventura County's participation by us, the cost, and
6 running a plant along the way.

7 Next. So that Memorandum of Understanding was
8 signed in 2008 by all those parties I mentioned before
9 including Santa Clara Valley Sanitation District. Their
10 signature's clearly on it. It revises the TMDL to 117
11 and I won't go into the other details. You know that.

12 Next, please. So like I said, it was sort of a
13 love fest here at the Regional Board in 2008 and 2009.
14 We received accolades. There was two groups that were
15 just opposed that came together and solved a problem and
16 we were like friends. It was nice. We were working
17 together and we came up with a great idea and the
18 Sanitation District even represented to you, your Board,
19 and the State Board, they've made commitments; that if
20 you give in and give that conditional site-specific
21 objective of 117 so that we can go ahead with this AWRM
22 project, they'll -- here are the commitments they'll go
23 with and they'll get going right away.

24 Next, please. So what's happened since then?
25 Yeah, in November of 2008, they got Measure S passed,

0081

1 which removes water softeners. We have seen
2 improvements. But if you look at the MOU, the MOU says,
3 You have to remove water softeners and there would be
4 improvements. So we expected that. Nobody should think,
5 "Oh, that solved everything."

6 But what happened is in May 2009, the
7 Santa Clara Valley Sanitation District, they decided not
8 to vote on it to fund any of the work on the AWRM. Their
9 comment was, "Measure S is enough. We don't have to do
10 any more." They told staff, "Go out and look for
11 funding." They even asked us to support them in looking
12 for state and federal funding. We agreed. We said,
13 "Look, we've been working together hard. We'll go out
14 there and help you. We'll beat the bushes, too, with
15 state and federal representatives." But there wasn't any
16 luck; and the reason there wasn't any luck is the
17 Sanitation District wanted it all funded. They didn't
18 want to pay for anything. They wanted 100 percent
19 funding. They weren't going to settle for a 10 million
20 help there. So we had no luck.

21 So we go back to Santa Clara Valley Sanitation
22 District -- we're in July 2010 -- and they do a Prop 218
23 vote to get funding, get some initial funding, because
24 remember all they have to do is some design work and
25 studies until 2015 to get the process going.

0082

1 They refused to increase the rates, and I'll
2 show you the rates. They refused to increase the rates
3 even though they didn't even get close to the required
4 "no" vote of the public. They got 7,000 out of 35,000
5 votes that were possible and they still voted "no"
6 against it, and the local paper there started bashing
7 Ventura County, oh, we were greedy, we wanted them to fix
8 our problems, which is as far from the truth as you can
9 imagine, and I'll show you that.

10 Next, please. So in 2010, they did a Prop 218.
11 They didn't get their "no" vote and they said "no." In
12 2011, they did a 218 vote for money they needed because
13 they weren't funding their Sanitation District properly,
14 and I'll show you this -- it's really interesting -- so
15 you can see what we're dealing with. I'll show you the
16 rates. Almost nothing's been done other than the
17 Measure S, other than going out and trying to come up
18 with other ideas, and the constant misinformation that's
19 out there that it's not their problem; it's
20 Ventura County that drives us nuts. We're not the ones
21 dumping the water into the river; they are.

22 So real quick, I'm going to go. Here's 2010
23 when they put out the 218 vote to the public. That's
24 where the public has a chance to say "no" if you get a
25 50 percent vote plus one. They put this thing together.

0083

1 Here are the rates and in that yellow part it says, "Use

2 the enclosed envelope." They enclosed an envelope that
3 was stamped and ready to go, addressed.

4 Next page. The second page of that says -- it
5 does say, "If we don't approve this, we're going to have
6 to pay a fine," but look down at the bottom. They have
7 this protest form that they even include that shows you
8 bring your scissors out, cut it, and fill it in. Still,
9 they only got 7,000 votes out of this and they had Board
10 members literally soliciting the grocery stores trying to
11 get people to vote "no."

12 Next, please. Now, in 2011 when they wanted an
13 increase because the Sanitation District couldn't operate
14 anymore, this is the 218 they put out. That area that's
15 yellow (indicating) says, by the way, any money you
16 approve here will not be used to fix the chloride issue.

17 Look over to the right there. Do you see
18 anything that talks about how to do the protest like you
19 saw on the other one? There was this huge protest with
20 directions on the one that had the Chloride TMDL issues,
21 but here it has nothing and on the next page -- next
22 page -- they have this little thing that says, "This is
23 how you protest." There's no cut-out form; there's no
24 envelope or anything. My gosh, they didn't get enough
25 votes to kill it either. They went ahead and approved

0084

1 this one. But you can see what we're dealing with. When
2 it's something they need, great; but when it's something
3 that needs to be done, they basically try to make it not
4 happen. And even though they didn't get the "no" vote,
5 they still said, "We're not going to do it."

6 So here are the rates we're looking at right
7 now, and it's important to note that Santa Paula,
8 Fillmore, and Piru, they had huge problems with their
9 sanitation problems. They had huge problems and they
10 were -- these aren't rich communities. In fact, Piru is
11 designated as an impoverished community. Look at the
12 rates they are paying per month. I did put up City of
13 Oxnard and Ventura. That's there for information. Back
14 in '10, '11, Santa Clarita was pick 16.58. That 17.92
15 was the increase that I showed you where they avoided
16 showing people how to protest and these are the rates
17 that they're going to approve to just deal with the
18 operational costs of the plant. They had to approve
19 something and move on.

20 The thing I find really interesting about the
21 Santa Clarita Valley Sanitation District's bill also,
22 they're on your property tax so these people not only pay
23 the highest, but they get to deduct it on their federal
24 income tax returns, which blows me away, and yet these
25 people up in Santa Paula, Fillmore, and Piru, they've got

0085

1 to pay it out of their pocket.

2 Next, please. So here are the rates. The rates
3 on the left side are what the Board was given to say,

4 "Hey, we have to implement the AWRM. We've got to do
5 studies." On the left side, that's what the rates would
6 have been. On the right is what they've approved just to
7 operate. There's very little difference and, in fact, if
8 the AWRM was fully implemented, constructed, the rate
9 would have only have gone up to \$55 in the year 2022. So
10 the rate increases were nominal.

11 MS. MC CHESNEY: Mr. Solomon, I think the chair was
12 giving you seven minutes and your buzzer went over quite
13 a while ago.

14 MR. SOLOMON: Okay. Then I'll let you know we had
15 letters that came out from Michael Antonovich, the County
16 Supervisor, that gave some really ludicrous statements
17 about, hey, help us so we don't have to comply with the
18 Clean Water Act -- next -- and basically saying that
19 making the water fishable and swimmable is all that was
20 needed.

21 So in other words, he's basically saying we can
22 dump ocean water down the river because fish can live it
23 and you can swim in it, so what the heck? I'll skip
24 that.

25 All I can say is we've tried everything we can
0086

1 in Ventura County. We've visited Santa Clarita. We've
2 given presentations. In fact, a presentation we gave to
3 the Canyon County folks, the press was there. They came
4 up and talked to us and they said, "You know, you guys
5 have been real consistent with your statement. What we
6 keep hearing from Santa Clarita is off the wall and
7 changes from over and over."

8 We're frustrated. Please help us. The only way
9 we can get through to these folks is to get to their
10 Board members and people have to start being fined.
11 Otherwise, they're not going to do anything. They're
12 working on two different alternatives right now that the
13 public doesn't support and there's no proof that it will
14 work.

15 So I'd ask you to help us and make this a
16 priority. Thank you.

17 MS. MEHRANIAN: Thank you, Mr. Solomon. Thank you.

18 MS. DIAMOND: Well, the only thing I would like to
19 say to staff is can you let us know what the next steps
20 are? I think the question that Board Member Yee asked
21 before is the right question. What happens next? And
22 this has been going on for so long, we're all frustrated.

23 I think I met with you, Sam, with the
24 councilwoman from Santa Clarita last year.

25 MR. UNGER: That's right.

0087

1 MS. DIAMOND: And this is very frustrating to all of
2 us.

3 MS. LUTZ: And I met with them when I was Chair.

4 MS. DIAMOND: And it's just -- it feels like we're
5 stuck in quicksand right now in a way and, meanwhile, the

6 breadbasket of Ventura County is suffering.

7 MR. UNGER: Yes. Staff agrees. Staff has -- as you
8 may recall, I guess the one thing I would say that's not
9 in that chronology is we issued a Notice of Violation
10 last year, and I think all I can say at this point is
11 that staff is actively working on enforcement options
12 with the Santa Clarita Sanitation District and I don't
13 know exactly when we'll be able to report to you, but I'm
14 hoping it's sometime this calendar year on where we go
15 from this Notice of Violation.

16 MS. DIAMOND: So you're assuring us that this is a
17 very high priority with staff?

18 MR. UNGER: Oh, absolutely, yes.

19 MS. GLICKFELD: Madam Chair --

20 MS. MEHRANIAN: Yes.

21 MS. GLICKFELD: -- so the last time the Sanitation
22 District came to report on this, they told us we had
23 authorized under the TMDL an alternative of meeting a
24 lower level of salt by other methods and -- where they --
25 they have an alternative to do the proposed MOU approach

0088

1 or to actually reach a lower-level of salt pollution
2 through another method and they said, "We have chosen to
3 use this other method." Are they making progress on it?
4 Are they now within the realm of compliance with the TMDL
5 deadlines or are they not?

6 MR. UNGER: No. They are making progress, but
7 they're -- in our view, in staff's view, at this point
8 they are not in compliance with their permit
9 requirements. Recall that this TMDL has been brought
10 into their permits for the Valencia and the Saugus
11 plants, which is a good thing; and at this point,
12 although they are making efforts to go with the
13 lower-salt alternative that they've reported to you that
14 they favor, they are not in compliance at this point with
15 their permit on these issues. So that's why we issued an
16 NOV, a Notice of Violation, and that's why we are very
17 actively discussing compliance options with them at this
18 time.

19 MS. MEHRANIAN: Board Member Lutz?

20 MS. LUTZ: Sam, the directors at County Sanitation
21 have changed in the last few months.

22 MR. UNGER: Yes.

23 MS. LUTZ: I asked them twice to come and introduce
24 themselves to us, which I don't think they're here
25 today -- I don't think see them out there -- but I think

0089

1 that it's important that we hear from them, considering
2 that there's a new manager, and get their point of view.

3 MR. UNGER: I'll reach out to Grace Kast and inform
4 her that the Board is interested in hearing from her and
5 try to get her to speak to you either as an information
6 item or public comments as soon as possible.

7 MS. LUTZ: Well, I think it's -- I mean, like I said,

8 I've asked twice that they make themselves available to
9 come introduce themselves to the public during the public
10 forum; and it's been three months I think I've been
11 asking and they have not come forward. But I think it's
12 important that this Board see the new face there and hear
13 from the new director.

14 MR. UNGER: I will convey that message.

15 MS. MEHRANIAN: Can you please help to facilitate
16 that. Thank you, Sam.

17 MR. YEE: Well, I would agree that it would be nice
18 to actually hear from the new faces on their board, but I
19 think this has just drug on far too long and to me, to
20 wait until the end of the calendar year, I think -- and
21 just hearing everything and coming from Ventura County, I
22 follow this issue off and on -- that, you know, it's time
23 that something needs to happen and I just find it a
24 little bit unacceptable to wait until the end of the
25 year.

0090

1 MR. UNGER: Well, maybe -- I'm going to ask Frances
2 to clarify what she can about the status of where we are.

3 MS. MC CHESNEY: Yeah. What I just want to say is
4 there was the Notice of Violation. The staff is working
5 on enforcement options and because the parties to that
6 enforcement -- possible enforcement aren't present, we
7 can't really talk about the details. It wouldn't be
8 appropriate. But I suspect that something will happen a
9 lot sooner than December; you know, more like the fiscal
10 year.

11 MR. YEE: Good.

12 MS. MEHRANIAN: Thank you. Anything else?

13 Okay. The next speaker is Hannah Koo, L.A.
14 County Department of Public Works.

15 MS. KOO: Good morning.

16 My name is Hannah Koo. This is Bruce Hamamoto.
17 We are with the Los Angeles County Department of Public
18 Works and we're here to share with you about one of the
19 projects that we're currently working on called the
20 Hancock Park Pit 91 Drainage Project over at the La Brea
21 Tar Pits.

22 The project involves the installation of a
23 permanent sewer connection diverting the water from the
24 tar pit lake from the storm drain system now into the
25 sanitary sewer system.

0091

1 So here (indicating) you see here is just an
2 aerial view of the site. This is the Page Museum site.
3 Over at the bottom corner of the south part of the site,
4 you'll notice the lake pit right along Wilshire
5 Boulevard. So this is located in sort of the Mid City
6 area along Wilshire. The permanent sewer connection is
7 going to be installed just to the west of the lake,
8 you'll see here in red, extending from the west end of
9 the lake pit out into Wilshire Boulevard, connecting into

10 the City's sanitary sewer system.

11 Here is just sort of a schematic sketch showing
12 the proposed clarifier system for the discharge that's
13 going to be coming out of the lake pit, and I'll get into
14 a little bit more detail in the next couple of slides.
15 As I explained earlier, the discharge will be going into
16 the City's sewer system as sort of a batch discharge.

17 The first clarifier is basically a settling
18 chamber allowing all the heavier particles and solids to
19 settle to the bottom. There's these -- there's going to
20 be a WER wall allowing the solids to settle and there's
21 these oil absorbent pillows; and then in the second
22 clarifier, it collects more of the finer materials.
23 There are three chambers here and there are these wire
24 mesh panels with oil-absorbent media capturing the oils
25 and lighter particles.

0092

1 This is basically the Phase I portion of the
2 project.

3 The Phase II includes future landscaping around
4 the lake pit, what you see here on these photos. Where
5 we are now, basically the project has completed the
6 design portion of the Phase I, which was the design of
7 the permanent sewer connection. It is slated for
8 construction to be completed by the end of this summer,
9 and that's pretty much it. It's just a brief description
10 about the project.

11 MS. MEHRANIAN: Questions?

12 I have a question. What happened before?

13 MS. KOO: What happened before?

14 MS. MEHRANIAN: Before this whole measure was taken.

15 MS. KOO: Right. Well, the water from the lake pit
16 was previously discharging into the storm drain system,
17 and so now what the County has proposed is to install a
18 permanent connection, a six-inch pipeline to the sanitary
19 system, so we're no longer discharging all of the oil
20 from the tar into the storm drain system.

21 MS. MEHRANIAN: And then one more question.

22 MR. UNGER: Excuse me. Chair Mehranian, Paula may
23 want to add to it, but the subject of these previous
24 discharges were subject to enforcement action by the
25 Regional Board.

0093

1 MS. MEHRANIAN: Thank you.

2 And then the maintenance of -- because you have
3 a lot of equipment there that does all this, is there
4 like a permanent maintenance on this or --

5 MS. KOO: The museum basically maintains all of these
6 clarifiers and chambers and they're cleaned out annually.

7 MS. MEHRANIAN: Annually?

8 MS. KOO: Right.

9 MS. MEHRANIAN: All of them?

10 MS. KOO: Uh-huh. That's correct.

11 MS. MEHRANIAN: Thank you.

12 Any other questions? Thank you.

13 Oh, I'm sorry.

14 MS. CAMACHO: This could be totally off the wall, but
15 I'm just going to go for it. Is this an opportunity to
16 educate the public of some of the cleaning, water quality
17 efforts that you're going through? Because I know I live
18 in that area and there's people there all the time --

19 MS. KOO: Right.

20 MS. CAMACHO: -- and I think this is an opportunity;
21 and I've always thought of how can we demonstrate -- how
22 can the cities or the counties demonstrate all of the
23 hard work that you do in creating quality of water? And
24 so I know this is kind of a random question, but I don't
25 know if there's a way that you would -- even if it's like

0094

1 placards or a sign or something small that could lead to
2 just some type of education to the public who maybe don't
3 know. They just see a tar pit and a dinosaur.

4 I mean, it's really a great park and a great
5 area. So it's educational in that way, but there's other
6 things that --

7 MS. MEHRANIAN: And, Board Member Camacho, I think
8 the students go there all the time.

9 MS. CAMACHO: Oh, right.

10 MS. MEHRANIAN: It could be such an awareness
11 campaign.

12 MS. CAMACHO: Anyway just a question --

13 MS. KOO: To answer your question, the Phase II
14 portion, which is the landscaping, which the funding
15 hasn't really been in place yet, I think that's actually
16 a good point that you bring up. There's a lot of
17 opportunity I think for an educational experience at the
18 tar pits. So maybe things such as signage when we get
19 into the landscaping phase, we'll definitely look into
20 that.

21 MS. CAMACHO: Thank you.

22 MS. KOO: Thank you.

23 MS. MEHRANIAN: Wonderful.

24 Yes, please.

25 MS. GLICKFELD: I would note that we've been having

0095

1 issues with oil sheen in the Biona watershed for a long
2 time and I'm hoping that when you clean this up, we're
3 not going to have that problem anymore. So thank you
4 very, very much for the work you're doing. We don't
5 often get a chance to say thank you to the County, but I
6 want to make sure I say thank you when we can and this is
7 one of the times that we can. Thank you for complying
8 and thank you for doing such a good job.

9 MS. DIAMOND: I would just like to say that a good
10 example of signage that's being done is at the L.A. Zoo
11 with some of the Proposition O money that was used to
12 renovate the parking lot so that it would use -- it would
13 use water quality features, and there are signs all over

14 to educate all those people who park at the Zoo, and I
15 think that might be something that you could look at just
16 as an example of what you could be doing. "Why are we
17 changing? Why is" -- 'cause a lot of times when you do
18 those kinds of changes, it makes it more difficult for
19 people. "Why are they digging this up now? Why are we
20 being inconvenienced?" And so the answer to that
21 question, especially if it's educational, I think, would
22 be great.

23 MS. KOO: Sure.

24 MR. HAMAMOTO: I was hoping to be able to respond to
25 Madelyn about in the Biona, there is sometimes the oil
0096

1 sheen and this project would definitely remove some of
2 that, but the area overall experiences natural oil
3 seepage and so we wouldn't anticipate that to be a
4 complete removal of all oils on this one project.

5 MS. MEHRANIAN: Anything else?

6 Thank you. Thanks a lot.

7 MS. KOO: Thank you.

8 MS. MEHRANIAN: The next speaker is David McNeill,
9 Baldwin Hills Conservancy.

10 MR. MC NEILL: Good morning, members of the Board,
11 staff. I'm David McNeill with the Baldwin Hills
12 Conservancy. I'm also a representative of the Community
13 Advisory Panel for the Baldwin Hills Community Standards
14 District.

15 I'm sure you're all familiar with the
16 Baldwin Hills area. We have a large oil field operating
17 in the middle of approximately, I think, 200,000
18 residents as well as a large urban park. This has
19 brought -- a situation that's kind of come to a hilt in
20 terms of monitoring important elements, whether it's
21 soil, water, or air as they're impacted by the operations
22 of oil drilling in the area.

23 We've worked with Sam. We've had a couple of
24 meetings in the last year or so and I've had a lot of
25 conversations with Mr. Albright up in Sacramento with
0097

1 regards to what we can do to make sure the safety of our
2 water stays intact in Baldwin Hills, one of the most
3 important things I'm focused on.

4 There is a long list, of course, of ideas and
5 concepts, but one of the things I'm focused on right now
6 is the soil. You have land treatment units on-site. I
7 don't know if you can call them tank farms as well, but
8 you guys issue permits for those land treatment units.

9 I am curious as the soil is remediated with
10 microbes and all the monitoring that is being done
11 there -- I have asked this question several times. There
12 are about 100,000 cubic yards of dirt going through there
13 a year and I'd ask, what happens to that dirt after it's
14 been "cleaned," quote, unquote? What is the status of
15 that dirt? What is the makeup of it relative to its

16 safety and its use on-site? Can human contact be
17 interfaced with it? Can it be used to grow things in?

18 And I'm not sure what agency handles that, but
19 it would be a very interesting thing to find out in terms
20 of the kind of soil that's being recycled and reused in
21 the Baldwin Hills throughout in the sense that there are
22 public landowners as well as private landowners that will
23 be addressing that soil, moving forward. So that's one
24 important aspect I want to keep track with as you guys
25 monitor the land treatment units and the soil that is

0098

1 there.

2 The other one is just water monitoring, water
3 quality monitoring. I know there's some monitoring
4 stations throughout the perimeter of the park -- of the
5 oil field that are monitored for water quality, the
6 groundwater. I'm not sure how old those are and how many
7 there are relative to the activity that's being stepped
8 up in the oil field, but I'd certainly like to have more
9 information or at least a recommendation relative to
10 whether or not there's a need to increase the amount of
11 water monitoring stations. I know most of them are dry
12 because we live in a desert a lot of the time, but I'm
13 not really sure what we can do to increase the ability to
14 gather information and maintain good monitoring of water
15 quality in the Baldwin Hills.

16 So these are two things that I hope to work
17 together on moving forward and maybe get some answers and
18 continue moving forward to make sure that the
19 Baldwin Hills are safe and as clean as possible under
20 these issues that they're operating currently.

21 MS. MEHRANIAN: Thank you very much. Questions?

22 MR. MC NEILL: That was great timing.

23 MS. GLICKFELD: I'd just ask the staff to see if they
24 can sit down with David and at least illuminate what his
25 path is to finding out about the questions he's asking,

0099

1 particularly what standard the oil field soil remediation
2 is being set to and who's setting the standards so he
3 could be apprised of the health of the soils and what
4 they can be used for.

5 MR. UNGER: Yes. We've sat down at least once and as
6 a result of that meeting, we have to two types of permits
7 in the Baldwin Hills area regarding the oil field
8 operations; one is for the soils, as discussed, and staff
9 is now reviewing those permits.

10 MS. GLICKFELD: So you'll be able to tell us and him
11 what level of -- what appropriate uses are for these
12 areas after -- when they're finished being remediated?

13 MR. UNGER: Yes.

14 MS. GLICKFELD: Because there is the Baldwin Hills
15 Conservancy trying to build a park there and they want to
16 be careful about what areas they acquire and how they
17 design them and what public access there is.

18 MR. UNGER: Yeah. What we're looking at is the
19 requirements of those permits and seeing if they're
20 suitable for unrestricted use or restricted use.

21 MS. GLICKFELD: Thank you.

22 MS. MEHRANIAN: Anything else?

23 Next speaker is Damon Nagami at NRDC.

24 MR. NAGAMI: Thank you. Good morning, Madam Chair
25 and Board members. Also here is my colleague, Lark

0100

1 Galloway-Gilliam with Community Health Council. We'll be
2 speaking on the same issue, so we may want to coordinate
3 our comments.

4 We are here to bring the issue of fracking in
5 the Baldwin Hills to your attention, so I was pleased to
6 hear Mr. Unger's report this morning. Fracking is
7 happening in Southern California. There was an
8 L.A. Times article that just came out on Monday. State
9 lawmakers are showing interest, and with good reason.

10 The Inglewood oil field in the Baldwin Hills is
11 the largest urban oil field in the country. More than a
12 million people live within a few miles of the oil field,
13 as Board Member Munoz said earlier. We're concerned
14 about potential contamination of the groundwater beneath
15 the oil field which is currently designated as potential
16 or existing supply of -- for drinking water or other
17 municipal uses or MUN.

18 Under a July 2011 settlement, the oil field
19 operator, PXP, is required to conduct a study to examine
20 the feasibility and potential impacts of fracking
21 activities. The public's been invited to weigh in on the
22 scope of this study and it's my understanding that a
23 Regional Board staffer has provided comments.

24 With this fracking study under way, we requested
25 a public meeting on fracking which was held about a month

0101

1 ago and more than a hundred people showed up. The room
2 was packed to overflowing. This was where many in the
3 community first learned of these fracking activities in
4 the Baldwin Hills and they expressed great concern,
5 especially about potential groundwater contamination,
6 which comprised almost half of all the comments that came
7 in from the public as a result of this meeting.

8 Folks were also troubled by remarks from State
9 officials at DOGGR, the oil and gas drilling regulatory
10 agency, who said that they don't know where fracking is
11 happening or what potential impacts might arise from the
12 practice. No state regulations cover fracking and the
13 governor and the legislature are starting to take some
14 heat for this, as well as DOGGR.

15 You heard earlier about Assembly Bill 591, which
16 could be the first regulations on fracking, but they only
17 require disclosure of the chemicals that are in fracking
18 fluids and the amount of water and finally we're starting
19 to know where this is happening. The Regional Board has

20 also already expressed concern about groundwater under
21 the oil field. Mr. Unger sent a letter to DOGGR last
22 November urging the agency to take appropriate measures
23 to protect groundwater underlying the oil field and we
24 appreciate that, but that was before the issue of
25 fracking really came to the fore.

0102

1 We do have a meeting scheduled with Regional
2 Board staff on the 19th to discuss this further, so we
3 appreciate that. In the meantime, I wanted to give the
4 Board a heads up about this and a couple of suggestions
5 going forward.

6 You may want to invite staff from other programs
7 besides Remediation to weigh in on the scope of this
8 fracking study if they do have concerns. You may want to
9 hold an informational session on fracking at an upcoming
10 Regional Board meeting, and you may want to invite DOGGR
11 to attend an upcoming meeting to explain how it plans to
12 ensure groundwater quality beneath the oil field.

13 And one thing that Mr. Unger said about being
14 involved in the EIR process: There was an EIR for future
15 oil development at the Baldwin Hills oil field and the
16 Regional Board was not involved in those discussions.
17 There was some talk about a gag order, that's -- we
18 always heard there was some reason why the Regional Board
19 couldn't weigh in. So there actually hasn't been any
20 discussion or oversight from the Regional Board on this
21 oil field for a very long time.

22 I'm going to pass this along to my colleague.

23 MS. GALLOWAY-GILLIAM: Good morning.

24 My name is Lark Galloway-Gilliam. I am the
25 Executive Director of the Community Health Council.

0103

1 We're a nonprofit advocacy organization situated in south
2 Los Angeles, and more specifically within a half mile of
3 this oil field, and I appreciate the opportunity to come
4 before you today to really articulate what I think is a
5 growing concern in our community about this bill.

6 Damon is right that in 2008, when the EIR was
7 completed, we had written to the Water Board, but you
8 were unable to really respond at that time or comment on
9 that oil field because of the ongoing litigation or some
10 order from the governor, we were told. So that was a
11 real important missing piece from us.

12 We had no idea that fracking was happening, that
13 the amount of water that's being injected into this oil
14 field is something that I think is unprecedented. You
15 may recall -- I've lived in Los Angeles long enough --
16 that we had the Baldwin Hills Dam that collapsed. I
17 won't tell you what year because that will date me, but
18 that was a result -- finally it was determined that that
19 was a result of this oil field. That's been significant
20 subsidence in this field, but there were a number of
21 natural water-collecting pond-like things in this field

22 and of course the park where many of us exercise. I go
23 out there at least twice a week and walk around that
24 field and you can see the large deposits of water in that
25 field.

0104

1 What concerns us beyond what is happening with
2 the injection of this water, what happens to that water,
3 what happens to the runoff, which is one of the things we
4 had hoped would have been discussed by this Board in the
5 EIR. What is happening to the runoff and the storm water
6 as a result of the oil that is being percolated out of
7 this field? You can look at that barren land and you can
8 see that the soil is damaged at a point as just a part of
9 the regular process; and when the rain comes down in
10 L.A., and it does come down every once in a while, the
11 amount of water that comes out of that area is tremendous
12 and of course that is dumping into the sewer system and
13 we have no idea what its content is.

14 So it's going to be very important for this
15 Board to step up at this time and be a part of the study
16 that is happening. It was a study that we required as
17 part of the settlement. We had to sue the County to
18 improve some of the standards that were adopted through
19 the County Ordinance. We didn't get everything that we
20 wanted and clearly part of it was establishing this
21 regional -- MACC, what is it called? The --

22 MR. NAGAMI: MACC, Multiple Agency Coordination
23 Committee.

24 MR. DIAMOND: Which think staff from this agency are
25 supposed to be a part of as an effort to get the

0105

1 agencies -- 'cause we see a lot of the pointing of the
2 fingers between DOGGR and Air Quality and Regional Board.
3 So we want folks sitting at the table together and we
4 hope that the staff in this agency will take that
5 responsibility seriously and be at the table at all
6 times.

7 And then as Damon said, I think it would be
8 really important for you to have a conversation with
9 DOGGR to really understand what's happening, what's the
10 impact on the water table as to what's happening with
11 runoff.

12 So thank you for this opportunity to raise this
13 issue and know that we are part of what we call the
14 Greater Baldwin Hills Alliance. We have over 300
15 residents who are involved in this on a regular basis who
16 are deeply concerned about this oil field. We don't
17 quite understand and don't have the luxury of years of
18 knowledge that some other communities have about this and
19 so we really rely on this agency to be our eyes and ears
20 and technical experts and to make sure that we are
21 protected. We need you desperately to step up to the
22 plate and be a very active agent in this issue around
23 fracking and then the ongoing operation of that field.

24 Thank you so much.
25 MS. MEHRANIAN: Great. Thank you.

0106

1 Questions?

2 MS. MUNOZ: Thank you for the presentations from the
3 public on this.

4 I think the one thing that -- you've heard me
5 speak up about the oil fields since I first came on the
6 Board. One of the things that I haven't mentioned that
7 really troubled me is that the leaders that were involved
8 with this plight were from Culver City, other surrounding
9 neighborhoods, Ladera Heights, Baldwin Vista, et cetera,
10 et cetera. They were professional people. They were
11 folks of all races and ages and ethnicities, but it was
12 so wonderful to see that none of those things mattered
13 because what everybody's focus was was the health of
14 their children and their neighborhoods; and one of the
15 failures that we had during that time as a Board is that
16 we did not respond to anybody, including me. I mean, we
17 did not respond to the EIR. We felt very much alone, as
18 well as AQMD. There was silence and maybe it was a big
19 mix-up. Maybe there's a good explanation, but we have a
20 big oil field in that area and now we have community
21 people coming to us saying, "Can you help us? Can you be
22 with us?" Because the truth is, as Ms. Galloway-Gilliam
23 stated, we are not experts and we rely on regulatory
24 agencies to fill in those gaps for us and to inform us
25 and educate us and be our advocates and the scientists

0107

1 and so on and so forth.

2 So I really would like us to seriously consider
3 that this be given a top priority for staff and for the
4 Board so that we do not have -- so we instill a little
5 more confidence in those million residents that live near
6 or around there.

7 I do believe that Mr. Unger and staff have been
8 very responsive in the last couple of months, meeting
9 with community members and leadership, and I really want
10 to thank you for that. Mr. Unger has kept me informed
11 and I'm really pleased with the direction they're taking
12 and I just want to emphasize that we need to continue
13 that, because when you lose the faith and you lose the
14 goodwill of the people in the community, it's really hard
15 to regain it and I think we're moving in that direction
16 right now. But we really -- the stuff on the oil well is
17 all about time lines and deadlines and if you miss it,
18 you miss it and you can't recapture that, as we weren't
19 able to recapture it a couple of years ago.

20 So I really urge that we take this very
21 seriously and that we lead on this in a very courageous
22 manner, as I think we need to. Thank you.

23 MS. MEHRANIAN: Thank you. There are no more
24 cards --

25 MS. CAMACHO: Sorry. I think, just to reiterate what

0108

1 Maria -- what Irma was just saying, I think it would be
2 interesting to figure out a way -- I know the staff has a
3 lot, obviously, on our plates, on your plates, but I
4 think it would be interesting to try to see if there's a
5 way to create some kind of subcommittee or some kind of
6 group, whether it's staff and Board members, who can be a
7 part of just some dialogue on how we can bring these
8 folks together to discuss these issues. And I think it's
9 obviously an important matter and, you know, it impacts a
10 lot of people's lives.

11 And so if there's a way to create a sense of a
12 dialogue or bringing different parties together to sit
13 around the table, I think it would be important to bring
14 that up, as Irma is saying, to, you know, a top or a
15 section of our priority list.

16 MS. MUNOZ: Ms. Camacho, I think that's a great idea.
17 There is actually monthly meetings of the Community
18 Advisory Panel that's made up of all the leaders of the
19 neighborhood. It would be a really good step for staff
20 to attend the next meeting, whether it's to listen and to
21 coordinate that with Mr. McNeill, who chairs the CAP,
22 because it's -- our question is we just want to know, and
23 the oil company doesn't feel any sense of obligation to
24 let anybody know if the reason we have so many cancer and
25 so much respiratory diseases and asthma with our children

0109

1 has anything to do with what they're doing there and you
2 want to know and, you know, it's been years and years and
3 years.

4 So I would encourage the staff that they attend
5 the next CAP meeting and coordinate it with Mr. McNeill
6 so we start having a presence there because I do think we
7 have a lot of hope that's being placed on the work that
8 we can do in the Baldwin Hills oil well.

9 MS. MEHRANIAN: Yes, please.

10 MR. YEE: Yes. As long as the newest members are
11 speaking, I guess I'd better chime in as well.

12 If I'm reading my tea leaves correctly, I think
13 fracking in the state is going to be a huge, huge
14 environmental challenge and issue. There's an old
15 Scottish definition of leadership and that is very simply
16 "to go forward and show the way."

17 I think we have an opportunity with
18 Baldwin Hills to do that, so I can only echo the
19 sentiments of my two Board members and suggest that this
20 be a very high priority in moving forward.

21 MS. GLICKFELD: The question I have is that I hear
22 three Board members and I'm not sure they're all asking
23 for the same thing and it might be worthwhile for the
24 chair to think about what's being said and maybe come
25 back to us with a proposal. Should the Board be involved

0110

1 as a subcommittee on fracking? Do we want to develop a

2 connection, a more formal connection between the staff
3 and the Community Advisory Committee? I mean, what is it
4 that's appropriate for us to do?

5 MS. MEHRANIAN: Yeah. Actually, I agree with you and
6 I was actually going to defer to Sam right now because I
7 did hear there's the suggestions; and the other side of
8 this is that every other day there's an article in the
9 newspaper. You know that this is becoming an important
10 issue and we're at the forefront of this and I'd like to
11 ask Sam to comment on what do you think or what your
12 suggestions are for us to get ahead of this and not,
13 like, you know, trail the rest of the movement?

14 MR. UNGER: Let me assure you that the message has
15 been received and I think I would rather defer on saying
16 anything because it tends on some authorities and
17 activities that we have that we may wish to execute in
18 the Baldwin Hills/Inglewood field. So if I could get
19 back with you with a formal plan in the future --

20 MS. MEHRANIAN: That's correct.

21 MR. UNGER: -- rather than trying to think out loud.

22 MS. MEHRANIAN: Figure out how -- what the plan of
23 action is.

24 MS. GLICKFELD: But, also, you know, it's not only
25 communicating to the Board. It's that we have somebody

0111

1 working -- specifically working for us that takes on
2 environmental justice duties. This would seem to be a
3 ripe area for you to investigate that so that we can --
4 whatever you're thinking about doing and you're sharing
5 with us and the public, that they're sharing it within
6 that realm, too, so everyone knows, that they're on the
7 same page.

8 MS. MEHRANIAN: Could we put this on the agenda for
9 next time so we revisit this issue?

10 MR. UNGER: I would ask that maybe I just report back
11 to you during the E.O. report.

12 MS. MEHRANIAN: That would be great. Yes, please do.
13 Great. Thank you.

14 We have no more cards and then on the agenda
15 items, we are at Item 8, Uncontested Items. And on the
16 calendar --

17 MR. UNGER: Yeah. Let me. We have a calendar right
18 now that has Items 8, 9, 10, 11, 12, 13, 14, and 15 on
19 our Consent Calendar.

20 MS. MEHRANIAN: Right.

21 MR. UNGER: I've also been informed on Item 17 that
22 the Discharger is here, but there are no issues and he's
23 agreeable to placing that on the Uncontested Calendar as
24 well.

25 MS. MEHRANIAN: Let's see if the Board members agree.

0112

1 MR. UNGER: So I would recommend that we --

2 MS. GLICKFELD: Which item?

3 MS. MEHRANIAN: 17.

4 MS. GLICKFELD: That's fine.
5 (Whereupon Ms. Munoz exited the proceedings)
6 MS. LUTZ: So I will move the Uncontested Items 8, 9,
7 10, 11, 12, 13, 14, 15, and 17.
8 MR. YEE: Second.
9 MS. MEHRANIAN: All in favor?
10 So moved.
11 (Whereupon the motion was passed)
12 MR. UNGER: There is one more thing, if I might --
13 and I know we announced the order of the agenda, but I
14 think we have some representatives here from the City of
15 Avalon that need to be on a boat at 12:30.
16 Is that correct?
17 So I was wondering if we could switch. So if
18 we -- and I think if you have a very brief discussion,
19 perhaps we could accommodate their schedule.
20 MS. LUTZ: They're not going to make a 12:30 boat.
21 MR. UNGER: No. They have to leave here by 12:30.
22 MS. MEHRANIAN: At 1:30, the public hearing starts;
23 right?
24 MR. UNGER: Right.
25 MS. MEHRANIAN: So after this, we go into closed
0113

1 session.
2 MR. UNGER: Well, we have two other items.
3 MS. MEHRANIAN: So how are we going to --
4 MR. UNGER: My suggestion is that we take Item 19
5 now. Staff has a very abbreviated report for you and
6 then we let the City of Avalon speak.
7 MS. DIAMOND: You mean 18, not 19.
8 MR. UNGER: Excuse me. 18, yes; not 19. Correction,
9 18. And then we go back and we try to do 16 before
10 lunch.
11 MS. MEHRANIAN: But, see, this is what we can't do.
12 It's 12:00. You need at least an hour and a half for
13 your closed session.
14 MS. MC CHESNEY: No. No.
15 MS. MEHRANIAN: How much do you need?
16 MS. MC CHESNEY: Closed session is probably 20
17 minutes.
18 MS. MEHRANIAN: Is that true, Sam, because you and I
19 were talking. Didn't you say there were a few more
20 items?
21 MR. UNGER: I think -- I think we can cut it down.
22 Certainly it's not an hour and a half.
23 MS. MC CHESNEY: At the most would be 45 minutes
24 total is what we need.
25 MS. MEHRANIAN: So at 12:30 we should break here
0114

1 because we can't make the people who come for a public
2 hearing wait for long, and the Board members will need an
3 hour for the closed session.
4 So we have 15 minutes for each of these items.
5 Is that doable?

6 MR. UNGER: We'll try. Let's try.
7 MS. MEHRANIAN: Let's try for that.
8 MS. DIAMOND: 15 minutes for Catalina?
9 MS. MEHRANIAN: It can't be more than that.
10 MS. GLICKFELD: That's ridiculous.
11 MR. UNGER: Well, my suggestion is that we start with
12 Catalina, we see how long it takes, and then we'll make a
13 decision at that point.
14 MS. MEHRANIAN: Right, but we're going to break at
15 12:30 because we need an hour and we can't make the other
16 people wait when they come for a workshop.
17 MR. UNGER: Okay.
18 MS. MEHRANIAN: Let's start.
19 MS. MC CHESNEY: Maria, there's a script for Item 18.
20 MS. MEHRANIAN: Okay. Hearing procedures, City of
21 Avalon Cease and Desist Order, Los Angeles County. This
22 is the time and place for a public hearing to consider
23 the issuance of a Cease and Desist Order for the City of
24 Avalon in Los Angeles County.
25 This hearing will be conducted in accordance

0115

1 with the meeting procedures published with the meeting
2 agenda and with the applicable Notice of Public Hearing.
3 At this time, evidence should be introduced on
4 whether the proposed Cease and Desist Order should be
5 adopted. All persons expecting to testify, please stand
6 at this time, raise your hand, and take the following
7 oath.

8 (Whereupon all prospective witnesses were
9 collectively sworn)

10 MS. MEHRANIAN: Following the staff report, the
11 Discharger shall have 15 minutes to present testimony and
12 Heal the Bay has requested 12 minutes to also present
13 testimony. All other interested persons shall have three
14 minutes to present their testimony. A timer will be
15 used. Please state your name and your affiliation and
16 whether you have taken the oath before testifying, and we
17 will begin the testimony with our staff.

18 MR. COLBY: Good afternoon, Chair Mehranian, members
19 of the Board. My name is Ross Colby. I'm a staff
20 environmental scientist with the Enforcement Unit of the
21 Regional Board. I'm going to make this --

22 MS. MEHRANIAN: Can you speak up?

23 MR. COLBY: Sure. Again, Russ Colby with the
24 Enforcement Unit. We're going to go through these slides
25 very quickly. I do have Dr. L.B. Nye here with the TMDL

0116

1 Unit if you have any specific questions on the TMDL.

2 So the purpose of this presentation is to brief
3 you on the basis of the Cease and Desist Order that we're
4 going to issue.

5 MS. GLICKFELD: Excuse me. As a point of
6 clarification, if you could just stop for a minute, they
7 have 29 minutes on the clock.

8 MS. MEHRANIAN: We're not doing the 29 minutes;
9 right? That's from before, the clock.

10 MR. COLBY: No. We're going to do it in five
11 minutes.

12 MS. GLICKFELD: That would be great if somebody could
13 reset that so you could --

14 MS. MEHRANIAN: Okay. Could you?

15 MR. COLBY: So we're going to present the basis of
16 the CDO to you and present a recommendation for the Board
17 to consider.

18 The city of Avalon is home to roughly 3800
19 permanent residents. The city also is a major tourist
20 destination which attracts upwards of one million
21 visitors a year. Avalon Bay is also currently on the
22 cleanwater list of impaired waters because of bacteria
23 pollution. The beach is often posted as unsafe for
24 swimming. As you can see in the foreground here on the
25 left-hand side the lower picture, there's a posting,

0117

1 "Unsafe for swimming." Avalon beaches consistently
2 receive poor grades on Heal the Bay's beach report card
3 and a recent U.C. Irvine study has also suggested that
4 Avalon's leaky sewers are contributing to the bacterial
5 pollution here.

6 For all the reasons I've just mentioned,
7 Regional Board staff feel that a Cease and Desist Order
8 is appropriate. However, we have a unique situation here
9 where we have an opportunity to also address the bacteria
10 contamination here through the issuance of a TMDL and we
11 can do that through a Cease and Desist Order because it's
12 a single regulatory action and also because there's a
13 single responsible party here.

14 The City of Avalon has an NPDES permit for the
15 Avalon Wastewater Treatment Facility. They're permitted
16 with this Board. They discharge up to 1.2 million
17 gallons per day into the Pacific Ocean. They are --
18 there's also a Statewide General WDR for sanitary sewer
19 systems under which the City was enrolled on August 17th
20 of 2006.

21 Just background: The collection system again
22 serves a population of 3800 permanent residence, upwards
23 of a million visitors per year, 11 miles of gravity
24 sewers, two pump stations, just over one mile of force
25 mains, and the sewage is tributary to the Avalon

0118

1 Wastewater Treatment Facility.

2 Some provisions that are in the statewide
3 general SSO WDR that basically prohibits the discharge of
4 wastewater to waters of the United States: Any SSO that
5 results in a discharge that also creates a nuisance is
6 prohibited, and that the enrollee shall properly manage,
7 operate and maintain all parts of the sewer system and
8 similar prohibitions in their NPDES permit as well.

9 Some background: Section 13301 gives the

10 Regional Board the authority to issue a Cease and Desist
11 Order. The Water Code Section 13267 authorizes the
12 Regional Board to require the Discharger to submit
13 technical or monitoring enforcement which is required.

14 Briefly, the SSO history here: They've had six
15 sanitary sewer overflows in the last 12 years. A total
16 of 54,000 gallons were discharged from the system, of
17 which just over 49,000 were discharged to the Pacific
18 Ocean. Four of those were due to poor operation and
19 maintenance and two were due to operator error.

20 On October 28, 2010, the Regional Board, along
21 with the USEPA and the Attorney General's office,
22 inspected the City's collection system for compliance
23 with the SSO WDR. A number of findings came out of that
24 increased efforts to eliminate SSOs, report all their
25 SSOs, conduct supplemental training, and so on. The

0119

1 Inspection Report is in your binder for reference.

2 Enforcement actions we've taken to date: We've
3 issued three 13267 Investigative Orders and one Notice of
4 Violation. The City's responses were timely and
5 complete.

6 Ongoing actions -- and Mr. Charlie Wagner here
7 from the City of Avalon is here to probably go over more
8 detail. Just quickly, they've already implemented some
9 practices to improve their operation and maintenance and
10 they've also committed expenditure of almost \$6 million
11 in improvements.

12 We have a number of TMDL slides that deal with
13 the Avalon Bay Bacteria TMDL. I'm going to breeze
14 through these because the TMDL follows the same approach
15 as other Bacteria TMDLs which the Board has adopted.
16 Again, Dr. Nye is here available if you have any
17 questions.

18 MS. MEHRANIAN: Okay.

19 MR. COLBY: So I'll just highlight a few requirements
20 that are in the CDO. They need to develop an SSO
21 Emergency Response Plan. They need to update their
22 current Sewer System Management Plan. They need to
23 submit a plan on how they're going to comply with the
24 wasteload allocations that are included in the TMDL.
25 They need to develop a route control program, a FOG

0120

1 program -- a fats, oil, and grease control program. They
2 need to develop an Illicit Discharge Elimination Program.
3 They need to complete a Sewer Condition Assessment,
4 update their System Evaluation and Capacity Plan; prepare
5 and implement a Capital Improvement Plan as long as -- as
6 well as a 10-year and a 20-year financial plan on how to
7 pay for any improvements that may come out of those
8 studies.

9 By June 30th of 2015, discharges shall not
10 result in detectable levels of fecal indicator bacteria
11 within Avalon Bay. By April 1st, 2016, no allowable

12 exceedences during summer dry weather. By November 1st
13 of that same year, they must achieve compliance with the
14 allowable number of winter dry weather exceedences; and
15 by November 1st, 2017, achieve compliance within the
16 allowable number of wet weather exceedence days and
17 geometric mean targets.

18 So we've received a couple of comments from Heal
19 the Bay. Overall, they were -- they expressed support
20 for the CDO and reiterated the importance of addressing
21 water quality issues at the beach. There were a couple
22 of concerns that we addressed in the CDO itself. If Heal
23 the Bay still has some issues, I'm sure they will comment
24 on that.

25 So staff recommends that you adopt the draft
0121

1 Cease and Desist Order as proposed. That concludes our
2 presentation. Thank you.

3 MS. MEHRANIAN: Thank you.

4 Now we'll have the -- we have Avalon. I'm going
5 to ask both Avalon -- Avalon has 12 minutes -- 15 minutes
6 and then Heal the Bay has 12 minutes. I would like to
7 ask you guys to reduce your presentation by --

8 MR. WAGNER: I'm sorry. I couldn't hear what you
9 said.

10 MS. MEHRANIAN: I was going to request that both
11 speakers -- you and then later on is Heal the Bay -- you
12 have 15 minutes and they have 12. I wanted both of you
13 to reduce it by five minutes.

14 MR. WAGNER: I think I can do that.

15 MS. MEHRANIAN: Wonderful. Thank you.

16 MR. WAGNER: I'd like to just hand one exhibit --
17 that's going to be my slide show -- to the members, if I
18 may.

19 Chairman and members of the Board, my name is
20 Charlie Wagner. I'm the Chief Administrative Officer of
21 the City of Avalon and I'd like to start my presentation
22 by doing something that's probably not very common from
23 people who are receiving a Cease and Desist Order, which
24 is I would like to thank your Board staff for the help
25 that they've given us as we've gone through this journey

0122

1 for the last four months. Russ, Paula, L.B., Deb, and
2 staff have been fair to us. They've been good listeners
3 and we feel like the City of Avalon has gotten a fair
4 shake since the first draft of the Cease and Desist Order
5 was issued.

6 We're here today, all of us, the City of Avalon,
7 the Board, and Heal the Bay. We all have the same goal.
8 We want a clean and pristine Avalon Bay, and the City has
9 been working on that goal since 1988 through a series of
10 public improvements of slip lining, lateral replacements,
11 renovations of lines and manholes in the downtown area,
12 adopting holding tank regulations, and surface water
13 management.

14 Right now as we speak today, the City is
15 spending \$5.8 million on public improvements, primarily
16 to trench and replace sewer lines, to slip line where
17 slip lining is acceptable and to rehabilitate manholes,
18 not as an inconsequential amount of money. In the city
19 of Avalon, \$5.8 million is equal to about one-third of
20 our annual budget.

21 Over the last 24 months in particular, we have
22 done a lot of activities. We came to realize about two
23 years ago that all of the past efforts that I talked
24 about have not been successful so 19 months ago in
25 September of 2010, we issued a RFP for a professional

0123

1 firm to come in and develop a Sewer Master Plan for us.

2 The next month, in October of 2010, we served a
3 Notice of Default to the contractor who managed our sewer
4 system. We did not manage our sewer system with City
5 staff. We had a master contract with a private purveyor.
6 We gave them a Notice of Default of not doing their job
7 in November of 2010.

8 14 months ago, in December of 2010, we began our
9 Sewer Master Plan; and 15 months ago, in January of 2011,
10 we hired a new firm, Environ Strategies, who are here
11 today to take over the management of our sewer system and
12 our wastewater treatment plant.

13 In April of last year -- I'm sorry. In April of
14 last year, the firm that we hired, RBF, issued this
15 800-page report called Avalon Sewer and Manhole Condition
16 Assessment. They made 800 pages worth of evaluation of
17 our 11-mile collection system. They made a series of
18 recommendations of improvements in categories depending
19 on "urgent" to "can wait," and on the same month of March
20 of 2011, the City Council authorized a \$5.2 million
21 contract to RBF and Environ Strategies to make the
22 improvements that are in this plan.

23 We started working on doing the physical
24 reconstruction in September of 2011. It's ongoing today.
25 I gave you a map. You can see the map on the screen; but

0124

1 if you look at the map in person, it's pretty
2 straightforward. It's the entire city of Avalon sewer
3 collection system. There's really only four colors that
4 you need to look at there. Red means we're going to
5 replace the entire sewer main on those streets where you
6 see that or do spot repairs. Blue means we're going to
7 be doing slip lining. Black means the sewer lines were
8 determined to be okay through the CCTV process, and
9 yellow indicates lines that had been approved in the
10 previous activities.

11 If you were involved -- if you came over to our
12 city in the last month, you would see what you see on
13 your screen there. You would see this work taking place.
14 There's a brand-new sewer line that's going down Marilla
15 Avenue. You can see the bay in the background that goes

16 all the way up from the top of a main street to the bay.
17 You would see a new line being installed in the alley in
18 the area that we call The Flats. You can see new
19 laterals being installed to the property line on main
20 business streets such as Sewer Avenue -- Sumner Avenue.
21 You would see a new main being installed in
22 Vieudelou Avenue, one of the main streets out of town.

23 You would see workers who are trimming sewer
24 laterals coming from private properties and attaching
25 them to the new sewer lanes that are in the street. You

0125

1 would see our construction crew putting the fine touches
2 on the two pipes that they're going to join together to
3 make a new main in one of the streets. Here you can see
4 them measuring a manhole that's being installed at the
5 top of one of our streets that's going to facilitate the
6 cleaning program that we need to do.

7 These improvements are not just limited to the
8 sewer system. Here's a picture of one of the three
9 aeration basins that we have at our wastewater treatment
10 plant. Our new firm, over this course of this
11 wintertime, has drained each of those three aeration
12 basins to provide maintenance to them. They estimate to
13 me that there hasn't been maintenance on those basins for
14 the last three years and they took nearly 10 tons of grit
15 that had accumulated on the base of those basins. As
16 that work is done, the plant's going to operate more
17 efficiently and our effluent, which meets all of your
18 standards, will be even cleaner.

19 On Tuesday night, just two nights ago, our City
20 Council authorized another \$450,000 to be spent to hire
21 consultants to meet the terms that are required in the
22 CDO that Russ just took you through and I want to
23 emphasize to you that we -- these are activities that we
24 voluntarily agreed to do in our first meeting with your
25 staff in December of 2011. We didn't wait until today to

0126

1 start this activity. We've been working on it for the
2 last four months.

3 It's true that we have agreed to all the
4 conditions in the report, but there is one condition,
5 number 33, that was put in at the request of Heal the
6 Bay. What it states is that if a test fails in our bay,
7 that we should retest every day until the test succeeds.
8 We feel that that's a waste of money. When the bay is
9 tested and it fails, a posted sign is put on the beach.
10 The sign is not taken down until the bay is tested
11 positive again. If we do that, we're going to be
12 spending thousands of dollars doing tests and not one of
13 those dollars is going to go towards solving the problem,
14 putting in the infrastructure to create solutions, not
15 one.

16 What we suggested as our counterproposal to your
17 staff was that we retest the third day after a failure,

18 approximately halfway between the normal testing cycle.

19 Finally, there's one issue that I want to bring
20 to your attention about -- in the Exhibit 3, it talks
21 about and Russ mentioned that there's been six sanitary
22 overflows over the last five years, and in one part of
23 the materials that you have, it implies that those
24 sanitary overflows happened at Avalon Beach. If you look
25 at that slide, the arrow on the left shows where Avalon
0127

1 Beach is. The arrow on the right points one mile to the
2 east of our main city where there's a big sewer lift
3 station called the Pebbly Beach Lift Station. That's
4 where every one of those six sanitary overflows happened;
5 not on Avalon Beach.

6 So I have two slides to conclude my
7 presentation. I want to restate again there's no
8 daylight between the City of Avalon, between you, and
9 between Heal the Bay. We all want to have a clean and
10 pristine Avalon Bay and right now, as I stated, we're
11 spending \$6 million to make that happen.

12 I have recently invited the staff from Heal the
13 Bay to come over. I do have a date to do that in one
14 week from now to show them the progress that we're
15 making, and I would invite any of you to take advantage
16 of that as well because we are pretty proud of the work
17 that we are doing and that we have been embarked on for
18 the last two years to solve this important problem.

19 And that concludes my presentation. If you have
20 any questions, I'll be happy to answer them.

21 MS. MEHRANIAN: Questions? We'll ask you questions
22 after.

23 MR. WAGNER: Okay. Thank you.

24 MS. MEHRANIAN: Heal the Bay.

25 MS. JAMES: Good afternoon. Kirsten James with Heal
0128

1 the Bay. I'll make this short so we can save on some
2 time.

3 As was mentioned before, Heal the Bay strongly
4 supports moving forward with this CDO and TMDL. As you
5 know, I myself have been before you many times. My
6 predecessors have as well, speaking to the severity of
7 the issues at Avalon and how action is desperately needed
8 in this area. So we're excited to see this item finally
9 up and I just want to go over a little bit of the
10 history, since Heal the Bay has been working on this for
11 a long, long time.

12 You all by now are familiar with our beach
13 report card and unfortunately Avalon has been on our
14 beach bummer list for eight of the last ten years. You
15 can see here all the rankings. You know, it's been
16 number one on numerous occasions, and this is a ranking
17 of the top ten most polluted beaches throughout the
18 state. So you can see the severity of the beach water
19 quality issue at Avalon.

20 This just goes into a little bit more detail
21 here (indicating) shows the percentage of exceedences of
22 the bacteria water quality standards by year. As you can
23 see, sometimes there's as much as 100 percent exceedences
24 of our beach water quality standards.

25 Unfortunately, 2011 was inadvertently left off
0129

1 this slide, but we see the similar ranges from 46 percent
2 exceedence to 93 percent. So this is just to demonstrate
3 the severe problem we've been seeing at Avalon.

4 Again, just more evidence: Many of the
5 prominent universities in our state have looked at this
6 beach in particular and have again identified problems
7 linking it to the wastewater plant.

8 You know, we've seen a lot of action since 1999
9 when we first started on this through studies,
10 identifying the problem, and also some work from Avalon;
11 but unfortunately we've seen these more as Band-Aid
12 solutions and not really getting to the crux of the
13 problem. So we're very encouraged by what Avalon
14 presented earlier today and are hopeful that we're on the
15 right track here; but for these many reasons, we really
16 believe that it's critical that we move forward today
17 with both the CDO and the TMDL so that both of these
18 actions can work in tandem and really get us on the right
19 track for where we need do be.

20 Staff did a great job of answering our concerns
21 and questions. We appreciate the retesting requirement
22 that they put in. We think this is really important so
23 we can really understand what is going on if there are
24 exceedences and trace those problems, track those
25 problems; and this is consistent with other TMDLs. So we

0130
1 appreciate their change and modification on that point.

2 There is one clarification that I would
3 appreciate to be made within the CDO and that is a
4 specification that the geometric mean be a rolling
5 geometric mean. This is really important because using
6 something like a calendar month where you just basically
7 start again on the 1st of the month and calculate for the
8 calendar month is really arbitrary and so, you know, the
9 Ocean Plan, which is the reigning document here, requires
10 a rolling geo mean and we believe that this should be
11 specified so we have that calculation on a rolling basis,
12 and this helps us track and abate chronic problems.

13 Staff gave the reasoning that this is going to
14 be addressed in a future reopener of TMDLs, but we don't
15 know when that's going to happen. We don't want to put
16 all of our eggs in that basket, so we ask that you make
17 that clarification today.

18 So just to summarize, we're encouraged by what
19 we heard from Avalon, but we believe this action is
20 necessary today and hopefully the next time I come before
21 you, we'll be talking about how Avalon Beach is on our

22 beach record card honor roll and no longer on our beach
23 bummer list.

24 So thank you very much.

25 MS. MEHRANIAN: Thank you.

0131

1 Okay. Questions. You want to get started,
2 Larry?

3 MR. YEE: I would just like to applaud all of the
4 cooperative and collaborative efforts that have gone into
5 addressing this problem. I think it's terrific, as
6 opposed to the situation we heard earlier about
7 Ventura County and Santa Clarita Valley Sanitation
8 District. So thank you to all of you.

9 MS. MEHRANIAN: Board Member Munoz?

10 MS. MUNOZ: No.

11 MS. LUTZ: I just would like to echo my colleague's
12 comments on the collaborative effort. I think the nice
13 thing is we know that this collaborative effort started
14 very early on and that Avalon really, you know, went and
15 took the responsibility and looked at what was happening
16 and started to work with our staff and with the
17 environmental communities to try to eliminate this. You
18 have a very aggressive program and I'm cheering you on in
19 your program. So thank you.

20 MR. WAGNER: Thank you.

21 MS. MEHRANIAN: Board Member Diamond?

22 MS. DIAMOND: Well, as someone who has spent a number
23 of occasions there with my entire family, including my
24 four grandchildren, I am very happy to see that progress
25 is going to be made because knowing what I -- we all know

0132

1 too much about water quality and we know enough -- I knew
2 enough not to allow my grandchildren to swim in
3 Avalon Bay. We were on the other side of the island
4 where it's beautiful and the water quality was safe; you
5 know, but yet at the same time that we saw your beautiful
6 picture, we saw the danger sign and even in the picture,
7 there were always children swimming in those beaches that
8 I knew were not safe.

9 So that was -- you know, I don't want to be the
10 "beach bummer" today in my comments, but we're all so
11 serious about this because so many young children are
12 impacted when you talk about and read about the fact that
13 the worst quality water is in the ankle-deep water in the
14 sand -- and in the sand; not just in the water, but in
15 the sand -- and that is of great concern to me because we
16 know that these are babies playing in the sand and little
17 children who can't go further than ankle-deep.

18 So I was struck by the report on the Inspection
19 Summary which was an attachment in our binder that talked
20 about the time in 2010 when EPA Region 9, along with
21 Regional Board staff and State Attorney General's staff,
22 visited Avalon and again and again, there seemed to be
23 almost a shocking lack of procedure; the fact that there

24 were supposed to be procedures, forms filled out and
25 response time and 9-1-1 calls, all of these things again
0133

1 and again, that were not done in a timely fashion or
2 according to the permit that you do -- that you have and
3 that you did have then, and so I'm -- I'm hopeful, but
4 I'm also cautious.

5 And so I want to just ask you, what confidence,
6 what assurance, can you give us that the new -- that the
7 CDO and the TMDL with its requirements will be -- will be
8 complied with and all of the procedures that will be
9 required of you under this will be followed, since under
10 the permit, they really weren't? There was a real -- to
11 me, it was kind of shocking how there were no procedures
12 that were not being -- and the procedures were not being
13 followed.

14 MR. WAGNER: Well, I have three points that I'd make
15 to your comments.

16 First of all, with respect to the conditions
17 that weren't being met, I fully acknowledge that that was
18 the case and as I pointed out in my slide show, the
19 people who were responsible for ensuring that the City of
20 Avalon do that are no longer working in the city of
21 Avalon. They've been replaced and that was through a
22 negotiated legal settlement.

23 Second of all, how can you be sure that these
24 things are going to be happen? You can be sure in two
25 ways: The first and foremost to you is that we have to
0134

1 provide reports to your staff. In the CDO is a
2 requirement for reporting and proving that each of these
3 steps has been done, and been done in accordance with the
4 schedule that's been laid out.

5 Most importantly to me is I will give you my
6 personal word that every one of these things will be
7 made, done, and they'll be done properly and they'll be
8 done ahead of the schedule that's being required because
9 I am committed to making sure that the City of Avalon
10 does what it should do.

11 MS. DIAMOND: Well, I thank you for that response and
12 I look forward to going back there again.

13 MR. WAGNER: You can come on our side of the island.
14 It's beautiful over there, too.

15 MS. DIAMOND: I know it's beautiful. That's not a
16 question. I look forward to going there and being able
17 to swim in Avalon.

18 MR. WAGNER: I join you in that looking forward.

19 MS. MEHRANIAN: Before we continue with the Board
20 members, there was one card that listed two items
21 together and it was stuck under the other card items and
22 that was the Baykeepers. If you would like to testify, I
23 think we can let you testify right now and then we'll
24 continue with the Board members.

25 MS. GLICKFELD: Do we need to reopen the hearing?

0135

1 MS. MC CHESNEY: Well, I don't think you closed the
2 hearing yet.

3 MS. MEHRANIAN: You want to --

4 MS. GAUR: Yeah.

5 MS. MEHRANIAN: Did you take the oath?

6 MS. GAUR: I did.

7 MS. MEHRANIAN: Go ahead.

8 MS. GAUR: Good afternoon. Madam Chair and members
9 of the Board. Tatiana Gaur with Santa Monica Baykeepers,
10 staff attorney. My comments are going to be very brief.

11 We are supportive of the CDO and generally of
12 the TMDL, imposing a TMDL to clean up the waters in
13 Avalon Bay. However, what I wanted to ask and what I'm
14 really -- we are really concerned about is whether staff
15 has looked into using a different and better reference
16 beach for that TMDL, because we don't think -- and as far
17 as I recall, when the Santa Monica Bay Beaches TMDL --
18 the TMDL that originally used Leo Carrillo as a reference
19 beach, said this is not -- Leo Carrillo is not the best
20 beach and a better beach should be sought for our TMDLs,
21 for our bacterial TMDLs.

22 At that point, there wasn't enough data. There
23 were some other considerations. Now we have a lot of
24 data. We also know that there's better references,
25 cleaner-reference beaches. So we believe that at least

0136

1 other reference beaches should be evaluated, should be
2 considered, and staff should inform us why those other
3 reference beaches, potential reference beaches, weren't
4 chosen.

5 For example, Nicholas Beach is a much cleaner
6 beach in our bay, less exceedences. Why are we sticking
7 with a beach that has actually turned out to not really
8 be a good beach, just as staff thought? I don't know.
9 And I believe the public is entitled to know why, why
10 Regional Board staff is using Leo Carrillo and not
11 another beach. Thank you.

12 MS. MEHRANIAN: Thank you.

13 Should we continue?

14 MS. GLICKFELD: Yes. Thank you, Madam Chair.

15 Well, it's interesting that that testimony came
16 up because that was my question. I know Leo Carrillo
17 Beach very well. It's like a small city on a summer
18 weekend. It has -- there's a lot of use of that beach.
19 It's intensively used by beachgoers and overnight
20 campers; and as we know, State Parks, which operates and
21 owned the beach and the overnight camping facilities, is
22 miserably behind in their upgrade of their septic
23 systems.

24 So I would recommend to the staff that we
25 actually change the CDO to provide for another reference

0137

1 beach, if that would be possible to do today, or have the

2 staff go back. We could approve this today and the staff
3 could go back and relook at this issue and see if there's
4 a better control site than Leo Carrillo is and make that
5 subject to the E.O.'s approval.

6 DR. NYE: This is L.B. Nye with the TMDL section and
7 I can answer, you at least in part, and that is the
8 reference beach, the reference beach we're using, is a
9 question we've been looking at very closely recently.

10 As you know, it was in a number of our other
11 Bacteria TMDLs that we looked again at the reference
12 beach and there is a lot of new data and studies done by
13 SCWRP and others and we actually have, right now, out for
14 public comment, a series of Basin Plan amendments for
15 five different Bacterial TMDLs, but we looked very
16 closely at the question of reference beach and which one
17 we're using and why and should we change and looked very
18 closely at the question of geo means.

19 Right now, those reconsiderations are scheduled
20 to be before you in June to what we -- I think what we
21 recommend is that we bring all that new analysis and
22 staff recommendations to you in June; and then based on
23 your decision then, may perhaps update the amendment to
24 reflect those decisions, because then we'll have the full
25 public comment on the beaches and the full public comment

0138

1 on the geo means also.

2 MS. GLICKFELD: Could we put language into the permit
3 today which acknowledges that this is going to be subject
4 to revision based on our action in June?

5 MS. MC CHESNEY: Yes, and you could also make that as
6 part of your motion, too, included in that.

7 MS. GLICKFELD: Could you help us with some language
8 on that?

9 MS. MC CHESNEY: Yes. Include in your motion that
10 the cease and desist include a reopener to revise the
11 reference beach as appropriate.

12 MS. GLICKFELD: And I could see that "at the end of
13 this year" if I wanted to. Thank you.

14 DR. NYE: Okay.

15 MS. GLICKFELD: Don't go anywhere 'cause I have
16 questions. One of the things that is clear is there's
17 been an incredible amount of good scientific work done
18 here and I don't think without that scientific work, both
19 by SCWRP and by Heal the Bay and others working together
20 with the City, we would be where we are today. So it's
21 really a great example of science actually making a
22 difference. But what the science really points out is
23 that the pollution is from these leaking pipes going into
24 the groundwater and the groundwater migrating into the
25 ocean. It's not so much the sewer spills that are

0139

1 further away --

2 DR. NYE: Yes.

3 MS. GLICKFELD: -- although those may be having an

4 effect through other means, but it's that.

5 So as they increase -- as they do this massive
6 improvement and surveillance of the -- both the operating
7 of the treatment plant and the replacement of all these
8 leaking lines, the staff report talks about the length of
9 time that it will take for groundwater to clean itself
10 once there's not a continuous source of bacteria leaking
11 into it, but there isn't any kind of regulation in the
12 Cease and Desist Order to require that groundwater reach
13 a certain standard, a health standard or a bacteria
14 standard by a certain time.

15 So it's all of the -- all of the directives are
16 to basically improve the quality of water being
17 discharged at the discharge plant, as opposed to
18 remediating the problem in the groundwater.

19 If you could just explain to me, "Don't worry
20 about that. As soon as we do all of this work, the title
21 and other factors will just clean this water up by
22 itself, it'll go away," then I feel good. Otherwise, I'm
23 asking you why we don't have some kind of a deadline for
24 cleaning up the ground water.

25 DR. NYE: Well, there's a deadline for discharges to
0140

1 groundwater and there's deadlines at the beach where the
2 groundwater is seeping out. It is a little bit --

3 MS. GLICKFELD: I understand it that way, but thank
4 you though.

5 DR. NYE: -- of an unknown of how long is it going to
6 take the bacteria that are living in the groundwater to
7 die without a continual support of, you know, a new
8 leakage. And, you know, there's not, you know, real
9 good "everybody knows it's only two years or everybody
10 knows it only six months" kind of answer I can give you.

11 I think the City of Avalon is very aware of that
12 and has, you know, included in that study that you have a
13 summary of in your package, you know, looked at different
14 techniques to remediate the groundwater if that becomes
15 necessary.

16 MS. GLICKFELD: Is there anything in the monitoring
17 section of the permit -- the Cease and Desist order that
18 would give you information of the quality of the
19 groundwater as a source?

20 DR. NYE: Is there -- no, there's no groundwater
21 monitoring required by the CDO.

22 MS. GLICKFELD: So ten years from now, we wouldn't
23 know, or how we would know whether this water gets
24 cleaned up?

25 DR. NYE: Well, we'll know at the beach, the water
0141

1 that's seeping from it.

2 MS. GLICKFELD: So we're not going to directly
3 monitor the groundwater, but we are going to directly
4 monitor not just at the site where the water is
5 discharging, but along the beach where the water could be

6 seeping from groundwater. So we will know whether water
7 is -- where water quality continues to be impacted there.
8 And if --

9 DR. NYE: Yes.

10 MS. GLICKFELD: -- three years from now, the water is
11 still impacted from there, what would be our action?

12 DR. NYE: Well, the requirement is to meet the TMDL
13 in summer dry weather in four years. So if they're still
14 exceeding in four years, I know that they -- and there's
15 mention of a couple different kinds of study that they
16 might do in the CDO. There's a couple of scientific
17 paths that they might go down to discover maybe is it
18 really the -- is the bacteria pollution in the
19 groundwater still there and still supplying the beach
20 even if the discharge to the groundwater has been turned
21 off? So they have that.

22 MS. GLICKFELD: Well, you know, I would just state my
23 concern would be -- is if we don't know how fast this
24 groundwater will be self-cleaning through tidal exchanges
25 that we should have a period -- we should have something

0142

1 in the Cease and Desist Order, which has the staff review
2 this issue in a certain period of time and evaluate
3 whether or not we have to do something further to have
4 the City pump and treat the water. You know, I hate to
5 add anything. They're spending a fortune and I'm hoping
6 that it works out that they don't have to do anything --

7 MR. WAGNER: May I speak to that question?

8 MS. GLICKFELD: -- and maybe the City could address
9 what they're planning on doing.

10 DR. NYE: Do you want Charlie to speak to the
11 question?

12 MR. WAGNER: May I speak to the question?

13 MS. GLICKFELD: My question specifically is what
14 happens if the groundwater stays polluted for a longer
15 period of time and there's not enough exchange with the
16 ocean to clean it up?

17 MR. WAGNER: We're going to -- there's two -- we are
18 getting -- we are going to participate or create two
19 science studies that are optional in the CDO, but we're
20 going to do them.

21 One is going to be -- it's going to be conducted
22 by Dr. Stanley Grant from UCI, who's the author of one of
23 your exhibits. Well, first, I think it's a
24 cause-and-effect relationship in our mind. The readings
25 on the beach are a reflection of the groundwater. So if

0143

1 the readings on the beach stop, we can make an assumption
2 that the groundwater is no longer there; but we're going
3 to do two things to try and get ahead of the curve on
4 that.

5 One is today as we speak, we don't know what
6 kind of a life that bacteria in the ground has today and
7 so we're going to conduct some studies to try and put our

8 arms around that. Even tomorrow or by the end of the
9 summer when we have a completely -- a sewer system with
10 integrity on it, we're going to have this legacy bacteria
11 that's in the ground to deal with. We're going to
12 conduct a study to try and understand, number one, what
13 is the life, expected life, of that bacteria if we're not
14 continuing to contribute to it?

15 The second thing that we're going to do is we're
16 going to -- we did some pilot studies on remediation and
17 we're going to go -- we're going to go further on one of
18 them about doing a certain remediation effort to try and
19 neutralize that legacy bacteria while it's there; so not
20 just waiting for nature to take its course, but to hasten
21 it along.

22 MS. GLICKFELD: So this is very helpful. I just want
23 to know whether or not we can incorporate those things
24 that the City is already planning to do to address this
25 problem into the Cease and Desist Order so that something
0144

1 that five years from now when you're not here and you're
2 not here and you're not here, if there's a problem, we
3 already know what the City's supposed to do.

4 MR. WAGNER: You want to make those voluntary studies
5 mandatory? The City of Avalon will accept it.

6 MS. LUTZ: They're already in the permit, Madelyn, or
7 in the Cease and Desist Order. It's just now they're
8 listed as voluntary. That's the only difference.
9 They're already there.

10 MS. MEHRANIAN: So make it mandatory?

11 MS. DIAMOND: He's suggested it and I think that's a
12 good idea.

13 MS. GLICKFELD: That would be a great solution, if
14 the staff could make that change.

15 MR. WAGNER: Fine.

16 MS. GLICKFELD: And my last thing is about the
17 rolling mean, L.B.

18 DR. NYE: Yes.

19 MS. GLICKFELD: The rolling mean -- is the Ocean
20 Plan -- does the Ocean Plan require that we use the
21 rolling mean?

22 DR. NYE: That is not staff's interpretation of how
23 the Ocean Plan is done.

24 MS. GLICKFELD: So what is your interpretation and
25 why do you think it's not a good idea to use the rolling
0145
1 mean?

2 DR. NYE: Well, actually, what the staff's -- the
3 current recommendation that's out for public comment is a
4 rolling geo mean. For a number of reasons, we really
5 think the rolling is the way to go and, as I said, I
6 think that would be the recommendation we'll be making to
7 you in June.

8 MS. GLICKFELD: So when that change is made, again,
9 that could be incorporated into this?

10 DR. NYE: Yes.

11 MS. GLICKFELD: That's --

12 DR. NYE: And we would want them to get all of our
13 Bacteria TMDLs using the same calculation method.

14 MS. GLICKFELD: Okay. Thank you.

15 I will be happy to make a motion when we finish
16 our discussion.

17 MS. MEHRANIAN: Yes. Board Member Camacho?

18 MS. CAMACHO: I have a question for staff. I'm just
19 curious to understand staff's view on the City of
20 Avalon's request for the preference of three days after
21 rather than the daily retesting, if someone can --

22 DR. NYE: We think the retesting is a good idea and I
23 think that since they have to submit to us a Compliance
24 Plan, that they could suggest a method to comply with
25 that provision, because it is -- it is often not very

0146

1 practical to test the next day because you don't get the
2 results from one day until later in the day and you have
3 to have them sent out.

4 So the way they do it in Santa Monica Bay, for
5 instance, is they sample not the very next day, but the
6 day after and the day after that and they wait a day to
7 see if they need to go out and sample again.

8 So if the City of Avalon were to suggest that,
9 to propose that in their Compliance Plan, I think that
10 the Executive Officer or staff would recommend that that
11 would be a good way to approach it, the same way that
12 they do in Santa Monica Bay.

13 MS. CAMACHO: Okay. That was my concern, is how
14 feasible it is to actually get it organized every day.

15 Thank you.

16 MS. MEHRANIAN: I have one question.

17 When Avalon was making the presentation, there
18 was this item that, you know, they brought up regarding
19 testing and saving and having the savings put towards the
20 work that they're doing right now. I'd like to hear that
21 and I'd like to understand exactly what they're proposing
22 and what does that mean to us, if you could help -- you
23 know either, you know --

24 MR. DIAMOND: That's the --

25 MS. MEHRANIAN: -- I'd like to hear their view and

0147

1 I'd like to hear your interpretation of it.

2 MR. WAGNER: Our view is the well is not bottomless
3 on the amount of money that we can spend on this problem.
4 We're already spending \$6 million. I would hate to spend
5 \$50,000 on testing which is not going to solve the
6 problem that we came here to solve today. I'd rather
7 spend that on infrastructure improvements.

8 MS. MEHRANIAN: Can you tell me, then, now, your
9 interpretation of that? What does that mean to what your
10 recommendation is, staff?

11 DR. NYE: Well, I think bacterial testing is pretty

12 inexpensive. The biggest part of it is the labor cost,
13 is the cost of sending someone out there to take the
14 sample. Actually, analyzing is pretty inexpensive and it
15 is directly applicable to human health to the people
16 swimming at the beach to know what the conditions are
17 there. So it's very useful information also.

18 MR. WAGNER: But the beach is going to be -- right
19 now, the beach is required to be tested from April until
20 October and we're testing it 52 weeks a year under this
21 CDO. So there's going to be twice as much information
22 available to the public as a result of this CDO.

23 MS. MEHRANIAN: And I have one more question. What
24 is the downside of what was described?

25 DR. NYE: The downside of --

0148

1 MS. MEHRANIAN: Of what he just described.

2 DR. NYE: Just you don't know how long the
3 exceedences persist necessarily or if there's any period
4 of time where there is an exceedence, if you have a run
5 of weeks, for every week you get it, you don't know if
6 you're going up and down.

7 MS. MEHRANIAN: If we were going to give them certain
8 thresholds, time lines for this testing, and not ask it
9 to be continuous, would that resolve the problem?

10 I'm trying to -- you know, I think it's a real
11 issue what they're bringing up. We want to use the
12 dollars very sufficiently, yet we don't want to, you
13 know, jeopardize the water quality and if something
14 really bad is going to come out of it, I don't want to
15 vote for it; but I want to know if we can help them out
16 with saving that to do it and still, you know, fulfill
17 everybody's goal.

18 MR. UNGER: Chair Mehranian, I was just going to
19 suggest that the protocol that is used after a beach is
20 posted is that it's not, quote, unquote, "unposted" until
21 they get clean samples. So whether that's one day later
22 or three days later, if they were to sample three days
23 later, it would stay posted for those three days. So it
24 seems like it's just a question of the availability of
25 the beach for recreational use. It's not a public health

0149

1 issue.

2 MS. DIAMOND: Can I just ask a question?

3 Are you saying then that if we were to make the
4 change that the City of Avalon is asking for that the
5 beaches could theoretically be closed longer than they
6 have to be? And if that's true, then there's other --
7 that would also deprive them of tourism dollars if the
8 beaches were closed. Am I understanding that correctly,
9 Sam, what you just said?

10 MR. UNGER: Well, posted, not closed. And I don't
11 have anything to say about the tourism dollars, but --

12 MS. DIAMOND: Are you saying they could be closed
13 potentially longer than if they were to do it the way the

14 permit -- the CDO now requires it to be?

15 MR. UNGER: I'm going to let Mr. Wagner speak --

16 MR. WAGNER: The current procedure --

17 MS. DIAMOND: Can you go to the mic, please?

18 MR. WAGNER: I'm sorry.

19 MS. DIAMOND: Thank you.

20 MR. WAGNER: The current process is County of Health
21 tests the bay on Tuesday. If they get a positive result,
22 the signs go up on Wednesday. The signs stay up for
23 seven days until the next testing time. The signs stay
24 up until the next testing time. It could be 7 days, 14
25 days, 21 days until a nonpositive reading is taken place.

0150

1 My position to you is that that sign is going to
2 be up there for every failure. The public will be duly
3 notified and so to retest every day is just financially
4 punitive. It doesn't solve the problem.

5 MS. MEHRANIAN: I think that L.B. gave us that
6 explanation; that if it's not every day and it's once
7 every three days, you still accomplish what we need to
8 accomplish. Meanwhile, they accomplish their savings,
9 cost savings. Am I right?

10 DR. NYE: Yes.

11 MS. SMITH: I was going to add one other thing to the
12 mix. I checked with Renee on what we have for the
13 Santa Monica Beaches TMDL, and we have every other day,
14 every two-day sampling. So it could be consistent with
15 that and it's a little less than what we have now and a
16 little more than what Avalon is asking, but that's
17 another possibility. It's at your discretion.

18 MS. MEHRANIAN: Okay. So could we put that in the
19 Monitoring Program?

20 MS. GLICKFELD: Two times -- every other day.

21 MS. MEHRANIAN: What did you suggest? Every other
22 day or once every three days?

23 MS. SMITH: Once every two days.

24 MS. LUTZ: If I may, as L.B. explained to us, they're
25 going to submit a report, a Monitoring Report or a

0151

1 monitoring schedule, and L.B. and Mr. Unger will agree to
2 that. So I don't know that we need to be so specific
3 today.

4 MS. MEHRANIAN: I agree.

5 MS. LUTZ: I think we should let them do their
6 suggestion and let our staff work as per our standards.
7 That is our procedure.

8 MS. MEHRANIAN: I'm going to go for that. I just
9 want to make sure that they accomplish their cost
10 savings, because it's not a punitive measure, but it's
11 something to really help them with their water quality
12 and once they are -- now that they are in this process,
13 why stop and make them do things that are just spending
14 their dollars?

15 So with that, I think if there's no more

16 questions --

17 MS. LUTZ: I think we're ready.

18 MS. MEHRANIAN: -- I think we're ready.

19 MS. DIAMOND: Is what was just -- what we have just
20 said correct? I guess that's what I'm asking for from
21 staff. You've heard us --

22 MS. SMITH: Ms. Diamond, for clarity, on page 19 of
23 21 in the Order, it's 1825 with the Bates stamp,
24 Provision 31 does specifically say, "If sampling is found
25 to be out of compliance with the single-sample, City

0152

1 shall sample daily the sample sites." So if you wanted
2 to delegate that to Mr. Unger to play with in the
3 Monitoring Plan approval, we could say "or as" --

4 MS. MC CHESNEY: "Directed by the Executive Officer."

5 MS. SMITH: -- "directed by the Executive Officer
6 during Work Plan approval." We could add that in so we
7 could have that option --

8 MS. MEHRANIAN: That's appropriate.

9 MS. SMITH: -- delegated to the Executive Officer.

10 MS. MEHRANIAN: That's true.

11 MS. SMITH: I would suggest that.

12 MS. GLICKFELD: I'd be happy to make a motion.

13 MS. MEHRANIAN: Yes.

14 MS. GLICKFELD: That incorporating the staff
15 recommendation for changes, I would move approval; and
16 then I want to clarify that we are making the groundwater
17 studies and remediation that the City proposes mandatory,
18 as opposed to just voluntary, that we're going to change
19 the language in the Cease and Desist Order to make it
20 mandatory; and that should this Board in the following
21 year make changes to the reference beach or to the method
22 of calculating -- can you give me language?

23 MS. MC CHESNEY: The geometric means.

24 MS. GLICKFELD: -- incorporating the geometric mean
25 as a standard in our other TMDLs, that that would

0153

1 automatically go back to the Executive Officer for change
2 in this case, the rolling geometric mean.

3 MS. MEHRANIAN: Very good.

4 MS. GLICKFELD: Is the language I just gave --

5 MS. LUTZ: And then there's the thing they just
6 suggested.

7 MS. MC CHESNEY: Yeah. She incorporated that.

8 MS. GLICKFELD: The staff recommendation with that
9 incorporation.

10 MS. MC CHESNEY: So can I just clarify? I'll just
11 summarize. So it would be revising Paragraph 31 to say
12 daily -- "sample daily or as approved by the Executive
13 Officer" in their report. Number two would be to revise
14 the two parameters studies to be mandatory instead of --
15 or is it the other way -- mandatory -- and number three
16 would be to reopen the Cease and Desist Order to include
17 the geometric mean and the reference beach upon approval

18 by the Board.

19 MS. GLICKFELD: Well, we wouldn't be approving
20 something more general by the Board. What is it we're
21 approving that's more general that would trigger this?

22 MS. SMITH: Today you would be approving the actual
23 numeric effluent, the standards to be achieved.

24 MS. GLICKFELD: I mean when in June? When L.B. said
25 we'd be looking at the reference beach issue and the way
0154

1 of measuring the geometric mean, what is that called, so
2 that I can put that into language?

3 MS. SMITH: The method of evaluating compliance with
4 the geometric mean.

5 MS. GLICKFELD: Okay.

6 MS. MC CHESNEY: Okay.

7 MS. MEHRANIAN: And second?

8 MS. DIAMOND: I'll second.

9 MS. MEHRANIAN: All in favor.

10 (Whereupon the motion was passed)

11 MS. MEHRANIAN: Mr. Unger, will you please tell us
12 and the audience what happens now. We take a break now
13 and we come back. What happens?

14 MR. UNGER: I think Ms. Fordyce has to announce the
15 Closed Session calendar, number one. We need to break
16 for lunch and do Closed Session, and what I would suggest
17 is that we do the item -- the EAR Account, Number 16,
18 soon after lunch and if we have to truncate the workshop
19 to only discuss one item, we can do that or we just go a
20 little later this afternoon. And Info Item Number 19
21 would then follow the workshop.

22 MS. MEHRANIAN: Say that again.

23 MR. UNGER: We could have the info item follow the
24 workshop. We can do the workshop. We'll try to be as
25 concise and --

0155

1 MS. GLICKFELD: Aren't we required to start the
2 workshop at 1:30?

3 MR. UNGER: No sooner than 1:30.

4 MS. LUTZ: I have a question about that. If the
5 information item is going to follow the workshop, since I
6 leave for the workshop, do I have to stay around for the
7 option of coming back.

8 MR. UNGER: Then we'll do Item 16 and 19 then. We're
9 hoping that the information item can be fairly concise.
10 I'm seeing a nod from Mr. Watson that yes, he will.

11 Yes, thank you, Mr. Watson. So do both items
12 before we open --

13 MS. MEHRANIAN: Can we move that item to the next
14 meeting, the information item?

15 MR. UNGER: Is City of Signal Hill -- can we move the
16 information item to the following Board meeting?

17 MR. WATSON: Yeah. We'd be okay with that.

18 MR. UNGER: Yes.

19 MS. MEHRANIAN: So when we come back, we'll do

20 Item 16.

21 MR. UNGER: And we'll announce that Item 19 is
22 continued and then we'll open the workshop.

23 MS. MEHRANIAN: Wonderful. Great.

24 MS. FORDYCE: I need to announce the Closed Session
25 items.

0156

1 MR. UNGER: Yes, we need to announce the Closed
2 Session items.

3 MS. FORDYCE: During Closed Session, the Board will
4 discuss Items 21.10, subdivision (a) and subdivision (b).
5 (Lunch recess)

6 MS. MEHRANIAN: We're back in session and we have
7 Agenda Item Number 16 and we'll have a staff report.

8 MS. LUTZ: And very quickly.

9 (Whereupon all prospective witnesses were
10 collectively sworn)

11 DR. RONG: Thank you. I hope -- is this on?
12 Thank you. I hope your lunch was as good as mine.

13 Good afternoon, Chair Mehranian and members of
14 the Board. My name is Yue Rong, also known as Y.R. I am
15 the manager of the Regional Board Underground Storage
16 Tank Program. Also present with me today is Mr. Steve
17 Linder, manager of USEPA Region 9 Underground Storage
18 Tank Program, my counterpart at EPA, who will discuss the
19 EPA I-710 Corridor Project in our region.

20 Item 16 is a resolution nominating seven UST
21 cleanup sites for emergency, abandoned, and recalcitrant
22 account funds for the coming fiscal year.

23 Next slide, please.

24 Before I provide more details on the EAR
25 resolution, please allow me to briefly talk about our

0157

1 Regional Board Underground Tank Program. Some of these
2 are resource pictures.

3 They say a picture is worth a thousand words.
4 This slide shows, from the bottom right, counter
5 clock-wise, a leaking UST, removal of the leaking UST,
6 and replacement of the USTs. The Regional Board UST
7 program oversees cleanup of the contaminated soil and
8 groundwater that result from leaking USTs in order to
9 protect groundwater quality and human health.

10 Our Regional Board UST program is a relatively
11 large program. From a nationwide perspective, we are
12 ranked about 10th place in terms of total numbers of
13 leaking UST cases. I checked the data last week and it's
14 around 13 so far. Therefore, our program is bigger than
15 most of the states in the nation. This is because we
16 have more vehicles and more gasoline storage and,
17 therefore, more leaking storage tanks as well.

18 From a statewide perspective, we have more than
19 one-third of the total state cases among all nine
20 regional boards.

21 Next slide.

22 This slide shows the current tally cases of
23 leaking UST cases among all nine regional boards. As you
24 can see, as of last month, we have a total of 1,239
25 cases, which accounts for about 37 percent of the leaking

0158

1 UST cases statewide.

2 Next slide, please.

3 Okay. Let's go back to EAR account. "EAR"
4 stands for emergency, abandoned, and recalcitrant. The
5 acronym will be used throughout this presentation.

6 An emergency site is where immediate action is
7 needed to require to protect human health, safety, and
8 the environment. An abandoned site is where a
9 responsible party cannot be identified or located. A
10 recalcitrant site is where responsible party is either
11 unable or unwilling to take the required corrective
12 action.

13 The EAR account is a State fund used to initiate
14 corrective action at the leaking UST sites that are
15 classified as either emergency sites, abandoned sites, or
16 recalcitrant sites. All of this year's proposed
17 nomination sites are under the recalcitrant category due
18 to the responsible parties' poor economic conditions. I
19 do want to point out that the resolution before you only
20 nominates EAR sites for funding; it does not determine
21 responsible parties for the cleanup part.

22 All this year's nominations are related to the
23 USEPA I-710 Corridor Project and we wanted to highlight
24 our joint effort with EPA on this project, and
25 Steve Linder of USEPA will present more details on this

0159

1 project, which combines the Federal UST program with
2 Environmental Justice and the Brownfield programs.

3 Next slide, please.

4 EAR account is a subaccount under the UST
5 Cleanup Fund. Both the EAR account and the UST Cleanup
6 Fund are state funds administrated by the State Board.
7 However, they are different.

8 EAR account is funds provided directly to the
9 Regional Board or local agencies and the State Board will
10 seek cost recovery, which may include a lien on the
11 property. Funds are not provided to any responsible
12 party. If the Regional Board receives the funds, it may
13 conduct the corrective action itself or enter into
14 contract with the Department of General Services.

15 On the other hand, the UST Cleanup Fund is a
16 reimbursement fund which does not require payback of the
17 funds. Owners and operators must apply for the funds by
18 submitting a claim to the State Board.

19 So how are individual sites nominated for the
20 EAR account? Each year, the State Board surveys the
21 Regional Boards and local agencies to obtain a list of
22 nominated and eligible sites. The State Board thereafter
23 develops an EAR Annual Site List to identify sites

24 eligible to EAR account funding statewide. The State
25 Board generally grants funding in May of each year.

0160

1 Nominations are based on the criteria that the
2 site has to be: One, either an emergency, abandoned, or
3 recalcitrant site; two, a leaking UST site; and three,
4 must have a regulatory directive for cleanup.

5 The EAR account is funded by annual \$5 million
6 appropriation from the UST Cleanup Fund. The EAR account
7 is under-utilized because, one, it's a UST Cleanup Fund
8 existence and, two, the likelihood of a lien on the
9 property.

10 Next slide, please.

11 Okay. If the Regional Board approves the
12 resolution, the next steps are: State Board will
13 consider and approve its Annual Site List; the EAR
14 funding will be dispensed to the Department of General
15 Services; and the next step would be the General Services
16 contractor will perform the work at the site. As a
17 reminder, the property owner or responsible party will
18 not get any portion of the funds. The Regional Board
19 staff will oversee the fieldwork and the direct the work
20 until the site is granted closure.

21 Next slide, please.

22 This year, staff is proposing that Board
23 nominate six new sites for EAR account funding, plus one
24 renewed site that was from last year's nomination. All
25 seven sites are in the USEPA I-710 Corridor Project area.

0161

1 The purpose of this year's nominations are:
2 One, to move these sites forward in the cleanup process;
3 two, collaborate with USEPA Region 9; and three,
4 effectively use available EAR funding.

5 This map shows the seven nominated sites in
6 yellow dots. And as you can see, one is located in
7 Bell Gardens, one is in Lynwood, one is in Compton, and
8 four are in Long Beach.

9 As you can see, the sites are all adjacent to
10 the I-710 Corridor area. Details of each sites are
11 presented in the agenda binder. All seven sites are
12 identified as recalcitrant sites.

13 Next slide.

14 Okay. Staff provided opportunity for the
15 public, property owners, and the responsible parties to
16 review and comment on the resolution of nominated sites.
17 We received one timely comment letter by the deadline and
18 one late comment letter after the deadline.

19 As of yesterday afternoon at 4:00, we received
20 another comment back; and also this morning there is one
21 property owner that showed up. So it will make a total
22 of four that we've received.

23 Next slide, please.

24 Let's talk about comment number one, which as
25 you can see is on pages 16-25 to 16-29. DSY is the

0162

1 current property owner of Sanchez Auto Sales, which
2 alleged it is not a responsible party, but supported
3 funding. Staff response, which you can see in pages
4 16-30 to 16-31, and the purpose of -- our response is the
5 purpose of today's action is to nominate sites for EAR
6 account funding. The resolution does not determine
7 responsible parties. However, I should know that staff
8 believes DSY is appropriately named as a responsible
9 party. Consistent with the State Board precedence,
10 current property owners are generally responsible for
11 cleanup, along with other responsible parties. For this
12 site, DSY is a responsible party because it currently
13 owns the site. However, the former owner, Sanchez, is
14 also a responsible party.

15 Next slide, please.

16 We received comment number two from former G & M
17 Oil Company and their contention is neither G & M Oil
18 Company nor George Pearson is a responsible party.
19 Again, the staff response is -- this response and also
20 the comments aren't in your binder because of the late
21 submittal. The staff's responses are basically the same,
22 and the purpose of today's action is to nominate sites
23 for EAR account funding. The resolution does not
24 determine responsible parties.

25 However, I do want to note that the staff named

0163

1 G & M Oil as a responsible party based on determinations
2 by both the L.A. County Department of Public Works and
3 the State Board's Division of Financial Assistance that
4 G & M Oil was a responsible party and the former
5 landowner. Since receiving the letter, staff have
6 started investigating the facts, but are unable to make a
7 final determination on this issue given the short amount
8 of time. We will continue to investigate this matter
9 further. However, for the purpose of today's action,
10 staff has provided you with a change sheet to address
11 some of the comments. I do believe that's been
12 distributed to you.

13 MS. FORDYCE: It's the yellow.

14 DR. RONG: It's the yellow-colored sheet.

15 The changes are in the Table of Contents and in
16 the pages of 16-1, 16-6, 16-12 and 16-13. The first
17 change is to now refer to the site as the "Juarez
18 Property" site instead of the "Former G & M Oil" site.
19 Second, staff agrees that G & M Oil should not be
20 considered a recalcitrant party since G & M Oil was never
21 issued any directives. Third, as staff continue to
22 investigate whether G & M Oil and/or George Pearson are,
23 in fact, responsible parties, I recommend identifying
24 those entities for the time being as "potentially
25 responsible parties."

0164

1 Next slide, please.

2 Okay. Staff have determined the comments
3 received do not affect intent of the resolution, which is
4 to nominate sites for funding and not to determine the
5 responsible parties for cleanup. Nominating sites for
6 EAR account funding will only do good for the site and
7 for the environment by allowing the cleanup process to
8 proceed.

9 Next slide, please.

10 Okay. Before I conclude my presentation, I
11 would like to invite Steve Linder, USEPA Region 9
12 Underground Storage Tank Program Manager, to provide more
13 information on the EPA I-710 Corridor Initiative.

14 MS. MEHRANIAN: Mr. Linder, before you start, there
15 was 15 minutes allocated for that. Could you do it a
16 little --

17 MR. LINDER: I'll go as fast as I can. I can talk
18 very fast.

19 MS. MEHRANIAN: It's just that we have the workshop
20 after and I don't want people to wait too much longer.

21 MR. LINDER: I'm excited to be here.

22 MS. LUTZ: Don't make the reporter crazy.

23 MR. LINDER: What?

24 MS. LUTZ: Don't make the reporter crazy. Don't talk
25 that fast.

0165

1 MR. LINDER: Okay. I'm Steve Linder. I manage the
2 Underground Storage Tank Program for USEPA Region 9. The
3 UST program is in the Waste Division within USEPA.

4 We're very excited about the proposal to use the
5 EAR account. We feel the EAR account is a very important
6 tool in the tool chest of tools needed to deal with older
7 underground storage sites.

8 We have a study area going. We are calling it
9 the I-710 Corridor. This is a map showing where we're
10 looking. Within this area, there are approximately 500
11 open leaking underground storage tank sites.

12 Next slide, please.

13 So what we formed was a collaborative
14 multi-agency effort to look at accelerating cleanup and
15 improving compliance within this area.

16 Next slide.

17 Why are we involved as EPA? Well, there are
18 national program goals for leaking tank commitments and
19 we actually have commitments to Washington D.C. for
20 cleanups completed for our region. We have a cooperative
21 agreement with the State Board. California receives
22 almost \$6 million a year in federal funding for its UST
23 program and I sit up in Sacramento with Kevin Graves and
24 we negotiate grant agreements on a yearly basis and --
25 looking for target projects and we decided looking at

0166

1 these older cases in the I-710 area was a very important
2 project. So we actually dedicated some of the federal
3 funding to this area.

4 So we have a partnership. We've also been
5 working with Cal EPA.

6 Next slide, please.

7 So why focus on the 710? Well, there are a very
8 large number of older, dormant, leaking underground
9 storage tank cases called "stuck cases" in this area.
10 Out of those 500 cases, the majority of them are over 15
11 years old and some of them close to 20 years old. This
12 is an economically disadvantaged area. There are --
13 we're looking for opportunities to pilot strategies to
14 address the more difficult sites within the state because
15 we did a study statewide looking at the older cases and
16 we heard over and over again that there are a lot of
17 cases out there that just get back-burnered. They're put
18 on a shelf because "they're too hard to deal with;"
19 "We'll wait for later; we have plenty of work to do right
20 now."

21 And we looked at that and said, we need to
22 really make sure that none of these sites get left
23 behind. It's politically unacceptable to have 20-, 30-,
24 40-year old cases, so we need to at least assess the
25 sites and figure out if something needs to be done and
0167

1 look for strategies.

2 This whole effort -- and the Tank Program
3 complements an overall multi-agency effort in this I-710
4 area to look at environmental conditions. There's
5 something called the Southern California Enforcement
6 Collaborative and I've got one slide or two slides
7 forward that shows the EPA website on it, but there's
8 been a lot of effort from the Air Program, the Water
9 Program, our Superfund program in this particular area,
10 looking at ways to improve the environmental conditions.

11 Next slide, please.

12 So this is an example of a stuck site. This is
13 not one that's being nominated for EAR. This is actually
14 a site that we should be out on next week doing an
15 assessment with Federal LUST Trust Fund money and I
16 invite -- on Thursday, I'd invite Board members to come
17 out. We're actually going to do a press availability
18 session, a visual of that as we pull out the old tanks
19 that have never been attested, never been removed. This
20 particular site was destroyed during the L.A. riots 20
21 years ago and it's sat looking like this for the last 20
22 years.

23 There's a lot of these types of sites that look
24 like this in this area. So there's a huge universe of
25 cases. If you look at L.A. County, just the County
0168

1 boundaries, 1774 cases is the count that I got out of
2 GeoTracker just the other day. Compared to the rest of
3 Region 9, the states of -- the states of Arizona, Nevada
4 and Hawaii combined have fewer cases than what are in
5 L.A. County. So that's why we're involved here. That's

6 why we're very interested.

7 So Y.R.'s got a huge caseload. His partner
8 agencies, L.A. County, L.A. City, Long Beach, have a lot
9 of work as well. We're working with all of them, trying
10 to figure out ways to help and directing some of the
11 federal resources in this direction to get some of these
12 cases taken care of.

13 This is just a screen shot from the L.A.
14 Enforcement Collaborative. If you want more information,
15 go to USEPA's website and look at all the work being done
16 in this area.

17 Next slide, please.

18 So once again, the project partners: We're
19 working with the local communities as well. They're very
20 supportive of the work happening in this area.

21 Next slide, please.

22 We're looking at using very -- various different
23 funding tools to try to address these sites, so the EAR
24 is one of the very important tools in the toolbox. As I
25 mentioned before, we're also using Federal Leaking Tank

0169

1 Trust Fund money. We're trying to get sites into the
2 Orphan Site Cleanup Fund where possible, and we're also
3 planning a number of targeted Brownfield assessments on
4 sites. So we're looking at whatever tools we have
5 available, trying those different tools and trying to
6 figure out different ways to basically break loose these
7 stuck cases.

8 Next slide, please.

9 So this just talks about some of the initial
10 pilot sites we're looking. At so EAR is just one of
11 several tools, again, that we're trying to use to try to
12 address the sites within the study area.

13 Next slide, please.

14 And this slide just shows a map of kind of some
15 of the locations of the various different sites so far
16 that we've identified to put some effort into.

17 Next slide, please.

18 And these are just some visuals of types of
19 sites. These are actually ones that have been proposed
20 for EAR. They sit vacant, they're eyesores in the
21 community, and a lot of them have problems that really
22 are unknown right now. We want to move these sites
23 forward. They've been sitting for a long time, in our
24 opinion. The responsible parties have known they're
25 responsible for these sites for a very long time and they

0170

1 haven't done anything and, again, the EAR account is a
2 very good tool to have available for these sites.

3 My understanding is that to use the EAR account
4 on a site doesn't necessarily mean it has to be used. If
5 there are responsible parties or other parties come
6 forward with a different approach, that can be taken as
7 well. It's just getting the sites approved for EAR in

8 advance is an important thing.

9 I look at some of the other sites or other
10 states in my region like Arizona, for example. A third
11 of their cases are actually State lien cases. They have
12 a program similar to the EAR program and they found that
13 to being very, very effective at getting the difficult
14 sites assessed and done.

15 MS. MEHRANIAN: Thank you.

16 DR. RONG: Next slide --

17 MS. FORDYCE: Y.R. has two more slides.

18 DR. RONG: Well, we're finished.

19 The Board options: Adopt the resolution with
20 the change sheet as proposed by staff or modify the
21 resolution as a logical outgrowth of comments, and
22 decline to adopt the resolution.

23 So the next slide will be our recommendation.
24 Of course we recommend that the Board adopt our
25 resolution with the change sheet, as proposed by staff.

0171

1 And Steve and I both are happy to answer any questions
2 you may have.

3 MS. MEHRANIAN: Great. That's it? Thank you.

4 MR. UNGER: Yeah.

5 MS. MEHRANIAN: We have the speaker cards.

6 Rene Juarez.

7 Please note that we have a three-minute timer on
8 each speaker.

9 MS. MOFFETT: Madam Chair, she's coming to interpret
10 for her father.

11 MS. MEHRANIAN: Did you swear in?

12 MR. JUAREZ: (Comments as translated by his daughter)

13 Hello. Good afternoon. His name is Rene
14 Juarez. I'm his daughter. I'm going to be translating.

15 He knows you're very busy. He appreciates the
16 time that you've given him to speak and he's going to try
17 and be as brief as possible.

18 So he's saying he purchased the property in 2002
19 and that G & M had the property for several years and the
20 salesperson, Jerry, who did the contract for G & M stated
21 that they hadn't been requested to do anything with the
22 cleanup phase of the soil. So Jerry informed him that it
23 could be a lot of years prior to him receiving anything
24 from the State saying what the process of cleaning up the
25 soil is. So Jerry informed him because he had low

0172

1 income, he would be able to qualify for grants to remedy
2 the problem. So he didn't -- he wasn't informed as to
3 what the process was or what the expenses would be. All
4 in all, he's applied for grants. He's been denied
5 because --

6 (Interruption in the proceedings)

7 MS. DIAMOND: Could someone get a doctor. Call 911,
8 somebody. Get her some water.

9 MR. JUAREZ: (In English) Okay. I'm want to try for

10 myself.

11 (In Spanish) He would appreciate for this grant
12 to pass because we have been denied other grants and this
13 would make a difference. He would cooperate in every
14 possible way for the processing and cleaning up the soil.

15 (In English) Thank you very much, and I'm sorry.
16 Excuse me.

17 MS. LUTZ: Please feel better.

18 MS. MEHRANIAN: Next speaker, Neill Brower.

19 MR. BROWER: Good afternoon. My name is Neill Brower
20 with Jeffer, Mangels, Butler & Mitchell, and we represent
21 G & M Oil and George Pearson and we understand the
22 purpose here isn't to designate responsible parties, but
23 we want to object to both of our clients being listed as
24 potentially responsible parties on this; and to the
25 extent that any public funds are expended for the 906

0173

1 Rosecrans site and it leads to cost-recovery actions, we
2 would object to cost-recovery actions against our
3 clients.

4 Neither G & M nor George Pearson is a
5 potentially responsible party here. G & M, to start,
6 never owned, operated, leased or held any interest in the
7 property at any time. Their sole action was at the
8 direction of George Pearson, coordinating the removal of
9 the USTs on the site at the time, along with the removal
10 of about 110 tons of affected soils around the USTs. So
11 the only activity they ever took was to mitigate actions
12 at the site.

13 As to Mr. Pearson, he bought the site at a
14 bankruptcy auction, held the property for only a very
15 short period of time and never operated the site, took no
16 action that either caused or exacerbated contamination at
17 the site, and held it for the purpose of reconveyance.
18 He directed G & M to remove the tanks and paid for that
19 removal, as well as the removal of the soils, with his
20 own money.

21 Under similar circumstances, the State Board has
22 held that prior land owners were not considered
23 responsible parties, and an example of that would have
24 been State Water Board Order No. 9213 and here
25 Mr. Pearson, unlike the owner in 9213, actually undertook

0174

1 some activity to address conditions at the site, which
2 the other owner never did. He lost money on the site.
3 He sold to people who represented that they were
4 experienced owners and operators of former gasoline
5 stations who conducted their own diligence and who
6 indemnified Mr. Pearson in connection with the sale.

7 I just want to refer back again to our letters
8 to staff of March 22nd and March 29th, and again I'd like
9 to thank, actually, Dixon Oriola and Jennifer Fordyce for
10 their responsiveness.

11 Thank you very much.

12 MS. MEHRANIAN: Thank you. Next speaker is --

13 MR. JUAREZ: Can I finish what I said?

14 MS. MEHRANIAN: We'll give you -- let's finish with
15 the cards. We'll let you come back because I know you
16 didn't finish.

17 Donna Yamini?

18 MS. YAMINI: Good afternoon, Madam Chair and members
19 of the Board. My name is Donna Yamini. I represent the
20 DSY Eastern Properties, LLC. This is Mr. Elias Donay.
21 He's one of the members of the LLC.

22 We are here to request that the Board nominate
23 the site for funding on the EAR account and we would like
24 to let the record reflect that the DSY has not been
25 responsible for the contamination on the site.

0175

1 In the staff report, it indicates that they are
2 being identified as a potential responsible party and we
3 want to make clear that that is not the case.

4 The contamination occurred sometime in 2004 when
5 the site was owned by Mr. Trinidad Sanchez, who operated
6 Sanchez Auto Sales. At the time, the USTs were removed,
7 so it was a contaminated soil. From what we understand,
8 the Department of Public Works issued a couple of
9 directives in 2006 to Mr. Sanchez. Those directives were
10 not followed through by Mr. Sanchez and we believe that
11 it was at that time, around 2006, that the property was
12 abandoned.

13 In 2002, the property was foreclosed on and DSY
14 purchased the property in February of 2011. So the
15 property really had been out of use and abandoned when my
16 client purchased it. In fact, it was completely gutted.
17 The plumbing was all gutted, it was vandalized, and it
18 was basically a shell of a building that wasn't being
19 used.

20 So we -- at the time of purchasing, we did the
21 research to determine if there would be any funding
22 because DSY basically is owned by four families that
23 pooled their money together to be able to buy an
24 investment property. They invested some money then to be
25 able to build it to lease it out so that it can become a

0176

1 profitable business and they don't have any assets to be
2 able to determine the level of contamination on the
3 property and to be able to do the cleanup. So that's why
4 we are seeking funds through you.

5 Our concern is that if we are forced to cleanup
6 the fund -- the site without any funds, that we won't be
7 able to afford it and the property will be abandoned yet
8 again.

9 I just want to make clear that this client, DSY,
10 has never been issued a directive. It was two prior --
11 two owners ago, and that's why we believe that they are
12 the responsible party and not us. In fact, we tried to
13 reach Mr. Sanchez, wrote him letters, with no response.

14 So allowing DSY to be nominated and get the
15 funds will help them clean up the site and stop the
16 threat to groundwater quality. Thank you so much.

17 MS. MEHRANIAN: Thank you. Steve Zacks?

18 MR. ZACKS: Good afternoon. My name is Steve Zacks.
19 I'm here for the Long Beach Hot Mix Asphalt Plant.
20 Hanson Aggregates West is a named responsible party for
21 this site and Hanson Aggregates West is now a part of
22 Lehigh-Hanson and that's who I work for.

23 Lehigh-Hanson is requesting that this site not
24 be included in the EAR program and the reason for this
25 request is in our written comments.

0177

1 We found out about this Long Beach site being
2 proposed for inclusion in the program on March 14th when
3 another party forwarded us an e-mail they had received
4 from the Water Board, and we got a copy of the case
5 summary for this site prepared by Board staff.

6 The Board had sent a letter to Hanson Aggregates
7 about this site back in April of 2000. Hanson, at that
8 time, responded in May of 2000 and the review of
9 Lehigh-Hanson files did indicate that the 2000 letter is
10 the last correspondence that we received from the Board
11 on this site and that's prior to us contacting Board
12 staff last month.

13 We did send an e-mail on March 16th to Board
14 staff that we were aware of the site's nomination for
15 funding in the EAR program and that we're going to go
16 ahead and investigate the ownership of the site.

17 We did that and our review found that
18 Sully Miller, who's named as another responsible party
19 here, formerly was part of Hanson and in 1999, most of
20 the assets, but not this particular site, were sold by
21 Hanson to an entity that took the name Sully Miller. So
22 when it was determined that Hanson -- Lehigh-Hanson does
23 own this site and we notified Board staff about that, we
24 found out, which was on April 4th. And so we sent that
25 e-mail approximately three weeks after we first heard

0178

1 that we were being included in this for -- or proposed to
2 be included in this EAR program.

3 We believe it's not accurate to find that
4 Lehigh-Hanson has been recalcitrant in view of our
5 response in these last three weeks. We request that the
6 site not be included in the EAR program. In this case,
7 you have an owner who has sent you an e-mail in writing
8 saying we are taking responsibility for this site.
9 Instead, what we'd like to do is meet with your staff to
10 determine what further actions need to be taken for
11 characterizing the release and determining the remedial
12 actions.

13 Thank you.

14 MS. MEHRANIAN: There's one more: Tha Yin.

15 MR. YIN: Good afternoon, Madam Chair and Board

16 members. My name is Tha Yin. I'm a trustee for the
17 property located at 2990 Pacific Avenue in Long Beach.
18 I bought the property about 20 years ago from
19 County of Los Angeles at the tax sale auction. Several
20 years later, I removed all the underground storage tanks
21 and removed I don't know how many hundred tons of dirt
22 and I just want to let you know that I already signed a
23 contract to have the water test done and report to the
24 Water Board. Even though I never sold a drop of gasoline
25 since I bought this property from the County, I am

0179

1 committed to work with the Water Board to close my case.

2 Just a note to let you know that I do not work
3 at the convenience store, the location, since I bought
4 the property and I held three jobs.

5 And the points about the responsible party, that
6 you are the responsible parties for the cleanup, I
7 believe the County of Los Angeles should be also the
8 party because I bought it from the County; but the
9 problem is that the County confiscated a foreclosure from
10 the previous owner who sold gasoline. So I don't know
11 the technicality about this, but the bottom line is that
12 I'm committed to work with the Board to have this case
13 close.

14 Thank you.

15 MS. MEHRANIAN: Sure. We should ask Mr. Juarez to
16 come back, if anybody in the audience could translate.

17 MR. UNGER: Yeah. We do have a Spanish-speaking
18 staff, but not here today.

19 MS. MEHRANIAN: Anyone in the audience that could
20 translate for us for a second?

21 MS. MC CHESNEY: It's okay if Irma does it.

22 MR. UNGER: She prefers not to do it.

23 MS. MEHRANIAN: Adan is coming.

24 MR. JUAREZ: (Comments as translated by Mr. Ortega)

25 I'd like to mention the following: when the

0180

1 contract was done with the gentleman named Jerry, who was
2 a representative of G & M, he stated that "I have a lot
3 of experience in dealing with gasoline stations and
4 things of this type."

5 I never in my life have had any association with
6 gasoline stations or anything of that sort. When he
7 listed this item, I was neglectful in noticing that he
8 had stipulated these things. That's all I wanted to say.
9 This (indicating) is a copy of the contract.

10 MS. MEHRANIAN: Thank you, Mr. Ortega.

11 Thank you, Mr. Juarez.

12 We're done with the cards.

13 MS. FORDYCE: Can I note two things, because it might
14 help in your conversations with each other.

15 One is I do want to assure you that this
16 resolution in and of itself, and including the attachment
17 with the list of the sites, in no way makes any

18 determination that anyone's a responsible party. Those
19 are done through separate orders and separate directives.
20 So in some of these cases, there have been multiple
21 directives; sometimes there's been one. But this action
22 itself is not determining who's the responsible party.

23 Two is I wanted to just make you aware that on
24 page 16-5, which is page two of the resolution,
25 number 3 -- it's on page 16-5.

0181

1 MR. UNGER: Bates stamp.

2 MS. FORDYCE: Bates stamp page 16-5, page two of the
3 resolution. So number 3 states that the Executive
4 Officer is authorized to add, delete, or modify the sites
5 identified in Attachment A during the fiscal year as
6 necessary.

7 So as you can tell, we can received one timely
8 comment letter, we received a couple late ones, and we've
9 heard some new stuff today. So in order to really fully
10 evaluate the information we've received, you can
11 certainly modify the list if you want to today. You
12 don't have to because you would be providing the
13 Executive Officer authority to modify the list at a later
14 date.

15 MS. MEHRANIAN: Okay. Board Member Yee, do you want
16 to get us started?

17 MR. YEE: I'll pass.

18 MS. LUTZ: I have a couple of questions. They're
19 really procedural. I mean, I want to -- I'm hoping staff
20 And probably mostly Jennifer can help me understand.

21 When these -- when we make a recommendation, it
22 goes to the State Board and they're going to determine
23 which one of these or all of them receive this funding;
24 correct?

25 DR. RONG: Yes.

0182

1 MS. LUTZ: So what is the responsibility and the
2 commitment of the person or the entity that is deemed the
3 responsible party?

4 DR. RONG: They are still responsible under the law,
5 which means that if you contaminated the site, you're
6 responsible to clean it up. However, this funding is
7 different than the -- sometimes the cleanup will move so
8 slowly because of many, many reasons; the transfer of the
9 site or the responsible party cannot be identified. Then
10 in these kind of circumstances, the EAR account is the
11 right use because with the EAR account, the State
12 contractors perform the cleanup work. They will put a
13 lien on the property. Therefore, it allows the site to
14 be cleaned up and then the responsible party, if it
15 exists or not exists, we'll sort it out later.

16 MS. LUTZ: Okay. So let's -- in a scenario, let's
17 say I own one of these properties and I may or may not be
18 recalcitrant or whatever and it goes through our process
19 here. It goes up to the State Board. They approve it.

20 They then -- then the agency comes. They clean it up.
21 The cost of the cleanup, we're talking about the
22 total cost of the cleanup or will it or will the money --
23 so I guess it's a two-part. One is, will the funds that
24 they receive be for the total cleanup or just partial of
25 it? And the second thing is, so then you said that

0183

1 the -- then a lien is placed on the property and I'm
2 assuming that's to pay that money back to the State?

3 DR. RONG: That's correct. For the second question,
4 yes, the answer is correct. The first question is, it
5 depends. We're asking for either 500,000 or 750- --

6 MS. LUTZ: You put a max.

7 DR. RONG: But that's for this year. So we have to
8 see. Go inside and see how bad the situation is. Maybe
9 it will never use that much; maybe that's not enough. If
10 not the case, maybe this case will be renominated next
11 year. There is a ceiling of 1.5 million for one site,
12 funding for even five years or three years, but for this
13 year, it's just a start.

14 MS. LUTZ: So if we put a site in and we say we put
15 \$5,000 (sic) on our request and it goes through, but they
16 start working on it and they find out it's going to take
17 \$250,000 --

18 DR. RONG: Possibly.

19 MS. LUTZ: -- who's responsible for the remainder
20 part and do they start working and max 500- -- 5,000 and
21 then it stays in that state until either we renominate
22 it, it gets more money, or -- I'm just trying to
23 understand the process and how it affects the owners.

24 DR. RONG: Yes. We will renominate them until they
25 use all the 1.5 million. The difficult part is if you

0184

1 use your 1.5 million. Then that will be a problem.
2 Let's assume you used the 1.5 million and they still need
3 money; it's still not cleaned up. In that case, that
4 would be a very difficult situation.

5 MS. LUTZ: A worry. But we can't nominate and say,
6 "for whatever amount it takes up to 1.5 million to just
7 get it cleaned." We have to give an amount to the State
8 first and then they assess whether that covers it or not?
9 I guess I just don't understand why we can't just do it
10 once.

11 DR. RONG: I understand your question. So you're
12 saying put a lien on a property until I recuperate it and
13 I give you a second chance. No, it doesn't work that
14 way. The total ceiling is 1.5 million and you nominate
15 it this year, next year, and the following year until the
16 maximum is there.

17 When the State decides to put a lien on the
18 property and recuperate that money back, that's another
19 tax. It's not directly related.

20 MS. FORDYCE: Let me also add that from what I
21 understand, the EAR account has about \$5 million

22 annually --

23 MS. LUTZ: For the entire state.

24 MS. FORDYCE: -- statewide, so if you were to give
25 1.5 million to every site, you would easily max out.

0185

1 MS. LUTZ: Right.

2 MS. FORDYCE: So you have to do -- for some of these
3 sites, you see \$75,000, \$100,000. You do that for this
4 year and then next year they can put it on the next
5 year's list for additional funding.

6 MR. LINDER: Can I add a little bit? I think it may
7 actually clarify because we've actually talked quite a
8 bit with your colleagues up in Region 5, the Sacramento
9 Region, because they're actually using EAR fairly
10 extensively.

11 It's very different than other programs because
12 it's actually State contractors that do the work and the
13 purpose is really a budget. There's a cost cap, a
14 statutory cap, of 1.5 million per site just like the
15 regular State Fund, but there's a \$5 million
16 appropriation every year and what the people in
17 Sacramento that manage this pot of money do is determine
18 a site budget on an annual basis. That's why they're
19 asking for a budget, but the total cap that can be spent
20 on the site is 1.5 million and it is actually typically
21 State contractors through the General Services
22 Administration in Sacramento that do the work.

23 MS. LUTZ: Okay. Having been involved with
24 Brownfields and cleanups and things like that, I'm -- and
25 I don't want to be overly critical of the program, but

0186

1 \$5,000 gets nothing. It's not going to -- it's not going
2 to get anybody -- any site clean or even the amounts that
3 were hearing, that's one of my main questions.

4 The amounts that we listed are not going to make
5 it to get these site clean, so I still am unclear. If we
6 bring these up to the State and they approve them, how
7 long do we -- and we get to keep recommending them until
8 they actually get the site clean, but it's an ongoing
9 process. So how many years is it going to take to clean
10 one site? I'm just wondering, does it make more sense to
11 say, we have 1.5 million, boom, you get it, and then hit
12 them off this way so we get these cleaned up? I mean, I
13 don't know that we're making much progress in these
14 little increments year after year after year.

15 DR. RONG: Absolutely, I understand your concern.
16 Well, I have seen all the sites. I have seen some sites
17 be cleaned out in six months. I have seen some sites,
18 ten years, still pumping, still pumping. But it's hard
19 to say, but it's worth trying. We have the six sites.
20 We did not nominate 100 sites. We nominated six sites.
21 See what happens.

22 Best-case scenario would be we go there, take a
23 handful of soil samples, and you determine that it's a

24 low risk. Then the site can be closed. Then the site
25 can move on to their right land use. So that's the
0187

1 best-case scenario.

2 The worst-case scenario of course is you see the
3 1.5 and then you're stuck. So yeah, there's two ends of
4 the spectrum, but there are also sites located right in
5 between.

6 MS. LUTZ: So if you've got a property owner and the
7 property owner says, "I do not want to be part of this
8 process," do we force them?

9 DR. RONG: Well, what I forgot to really relay to you
10 in the slides, actually, yes, this is just a nomination
11 resolution. Once we get the money, we do have a decision
12 to make. Well, if the property owner says, "I do it
13 myself. I don't like the lien. I have the money and
14 I'll do it myself," fine. We don't have to use the
15 money. So the money that is being allocated is
16 unnecessary and doesn't have to be used.

17 MS. LUTZ: So what if they don't have the money to do
18 it themselves and they still don't want us to nominate
19 them?

20 DR. RONG: That would be a conflict with our goal.
21 Our goal is to clean up the sites. So we're trying to do
22 cleanup.

23 MS. LUTZ: So we do it in spite of the owner's -- we
24 would do it in spite of their --

25 DR. RONG: Not necessarily, but I think we are going
0188

1 to have a variety of communications with the owners. The
2 owner's concerns will be that they -- I think after
3 today's resolution, there are at least four sites, the
4 owners showed up yesterday and we're happy to see that.
5 That's sort of a purpose of this resolution as well and
6 then we'll start next week where we can have a
7 communication with them.

8 MS. LUTZ: So if there are --

9 MS. MEHRANIAN: Excuse me. Sam?

10 MS. LUTZ: Oh --

11 MR. UNGER: Sam, if an RP or owner comes to us with
12 some sort of commitment to clean up the site, either
13 voluntarily or, you know, work under a directive under
14 the Health and Safety Code to clean up the site, we could
15 certainly take that into account and honor their wishes
16 to not be nominated through this account. So I think
17 that's the case possibly with one of the owners today.
18 But, again, we got a comment so late that we can't really
19 evaluate that like it is. I think that's why Jennifer
20 put you to page 16-5, so we can continue those
21 discussions and see what people's commitments are to
22 cleaning up their sites.

23 MS. LUTZ: But I would imagine that there are people
24 out there who own sites who would love to have this kind
25 of assistance to help clean it up and so I guess I'm

0189

1 wondering if we've got owners who are not -- who don't
2 want to do this, how can we make this happen with willing
3 partners and not have this friction?

4 DR. RONG: I'm not sure there is a friction yet,
5 because --

6 MS. LUTZ: I don't know. We just heard four people
7 come up and say, take me out of this; don't make me. So
8 I think that's friction.

9 DR. RONG: At least two sites. I think my
10 understanding is they were implying we're going to do it
11 myself; but in that case, that's money allocated to them
12 that's really not going to hurt them.

13 MR. UNGER: Board Member Lutz, I think one of the
14 owners said they'd like to work with the program. They
15 just had an issue being named a responsible party.
16 Again, that's something we can negotiate on the staff
17 level to move the site forward. Those are the types of
18 issues we can work out. But yes, three of them did
19 say that they -- but we also heard one of them say
20 they're ready to commit.

21 Again, we got this information late. We
22 couldn't really discern if -- we could work through that.
23 If you were to approve this resolution, we could work
24 through those issues and identify the truly recalcitrants
25 and if there are other enforcement issues.

0190

1 MS. MEHRANIAN: Board Member Munoz, did you want to
2 add something?

3 MS. MUNOZ: Yes. Could you just quickly review the
4 process for me on how you notify a property owner that
5 you've -- this property you've targeted to have cleaned?
6 Do they get a letter? Do they get a visit? What
7 happens?

8 DR. RONG: Yes. There is -- actually, this package
9 is mailed to them so they have an opportunity to comment.
10 Before the package, of course each site has our
11 directive. That's why -- that's a qualification for a
12 nomination. So they must have our directive letter. So
13 if that letter reached them -- if they did not somehow,
14 somehow did not receive it or did not get it, I know
15 there's a package that's sent to them so they're aware of
16 they're being nominated for the process, and then some of
17 them come here saying, "I want out" and, okay, tomorrow,
18 next week when we start communicating with them, "Why do
19 you want out? If you want to take responsibility doing
20 the cleanup, that's fine," then some people still want in
21 and if there's funds that are being allocated, there will
22 be a letter sent to them.

23 MS. MUNOZ: So the property owners who are here, when
24 did they get that letter? Is it two months ago? Two
25 weeks ago?

0191

1 DR. RONG: I think it's two weeks. We give them two

2 weeks.

3 MS. MUNOZ: Okay.

4 DR. RONG: Ten days.

5 MS. FORDYCE: One was --

6 MS. MUNOZ: A letter like this, number one, if it is
7 two weeks, I'm not sure that is ample time at all to give
8 a property owner --

9 DR. RONG: I agree. I agree. Absolutely I agree
10 because that's -- that part is not really crucial.
11 Crucial is the week after when we start communicating.
12 I'm really glad they came forward so we can start
13 dialoguing.

14 This is a nomination. Nominating your site, it
15 is not necessary you are a bad site or something. It's
16 just I needed to have some allocation money for next year
17 in case I need to use it, and hopefully I won't have to
18 and they come forward and will clean up the environment.
19 That would be fine. So if you're saying, well, it's not
20 enough for me and why we need to negotiate with us, yeah,
21 the door's open.

22 MS. FORDYCE: I think the question was when do they
23 receive notice? They were not notified two weeks ago.
24 They had a two-week comment period. They were actually
25 notified late February.

0192

1 DR. RONG: The direct letter, a long time ago.

2 MS. FORDYCE: Yes, the packets.

3 MR. UNGER: When do the letters go out to dispatch?

4 DR. RONG: I think two weeks ago.

5 MS. FORDYCE: It was not two weeks ago.

6 DR. RONG: It wasn't?

7 MS. MUNOZ: Well, when you figure out the length was,
8 the point of my question and my concern is the following.
9 We had one or two gentlemen here who came before the
10 Board who did not know how to speak English and I'm sure
11 they don't know how to read English. So when a letter
12 comes to them at their house that would include this, the
13 first communication is, you know, if you don't -- whether
14 it be English, Spanish, or whatever the language is that
15 you have to make sure that they understand what you have
16 sent to them.

17 The people are here because they've gotten a
18 very serious letter from a regulatory agency and they're
19 not sure if you're going to take the property away from
20 them. They're not sure what. People panic and they come
21 here, and it just seems to be a process that could be a
22 little more humane and a process that could be different
23 so that we don't have folks coming very alarmed.

24 These are -- I was told in the very beginning
25 that most of these properties are in underserved

0193

1 economically depressed areas and so many of the folks who
2 probably own properties had to pool their moneys
3 together, so it's not business as usual is what I'm

4 saying to you. So my concern is treating the public with
5 high regard, high respect, and giving them the
6 opportunity to figure this out, not having to come here
7 to do it, you know. So I'm not sure how we can change
8 the process for that to happen and if this is -- is this
9 the first time we've done this or is this like
10 continuous, every year we do this?

11 DR. RONG: This is the first time we did not take it
12 as a consent item. Before, there was a consent item; we
13 did not discuss. I think I heard your message. Thank
14 you very much for your comments, and I think we are
15 ready -- ready to deal with that.

16 Why I say that is because in our monthly -- I
17 have come together with the USEPA to coordinate with the
18 USEPA. This bilingual thing has been in our discussion,
19 our agenda. I think we can use some of the federal
20 government resources and try to get this language issue
21 to deal with. On our staff, there is many, many
22 bilingual staff as well. Absolutely, that's our concern
23 because --

24 MS. MUNOZ: I don't want you to misunderstand, I
25 don't this is an important premise. I think it's very

0194

1 important, especially with the number of tanks and
2 contamination that you've identified. So it is
3 important.

4 What I am addressing is the process and how it's
5 done, how we communicate with members of the public.

6 DR. RONG: With the process, I have to apologize a
7 little bit. The decision has to be made and a decision
8 has to be made by State Board, so that's why we have to
9 bring it to you every April. Every, I think, February,
10 State Board is sending down the solicitation letter. We
11 cannot start earlier. I cannot start last June or last
12 September. So the time is pretty pressing; but, however,
13 I do believe that the communication with the responsible
14 party or current owner, it's not that crucial for this
15 moment. I think it's crucial after this when we're
16 starting the dialoguing with them. How we can resolve
17 these things? If you like the account, fine. If you
18 don't like it, we'll find some other way. That's what's
19 important.

20 MS. MEHRANIAN: I would like to move and then we'll
21 come back again. It's like we're getting stalled.

22 Please.

23 MS. DIAMOND: I guess what I wanted to say is that we
24 have to be -- I have to be brought back, and maybe some
25 of the other Board members, to exactly what it is we're

0195

1 asking to approve today.

2 I think there is a lot of misunderstanding from
3 people who are here today thinking that if we were to
4 approve this resolution that they would be responsible
5 for doing things that they are very surprised about and

6 don't understand and are scared about. So it seems to me
7 that what we've -- the State Board asked us -- if I'm
8 reading this resolution correctly, the State Board asked
9 the Regional Board to contact the local agencies to
10 identify these very critical sites where there have been
11 abandoned underground storage tanks that are creating
12 significant water quality issues, and then we are today
13 to adopt a resolution requesting these funds from the EAR
14 account to be used for sites. You've recommended seven.

15 So today, are we approving a resolution that
16 would say, these are the seven sites that if we get the
17 money, when we get the money, these would be the sites
18 that the EAR accounts would be for and it has nothing to
19 do with who is responsible? That's not an issue before
20 us today, who the responsible party is.

21 DR. RONG: That's correct. All staff is asking for
22 us to do is to nominate several sites, approve a list for
23 the nominations.

24 MS. DIAMOND: Now, if we approve this list, as I
25 understand it, today and some of these sites don't want

0196

1 the EAR funds, they want to volunteer, they want to do it
2 in different ways, those sites can be changed even if we
3 approve this resolution today; is that correct?

4 DR. RONG: Yes, that's correct.

5 MS. DIAMOND: So all we're doing today is -- if we
6 pass this is to accept the EAR funding for sites --

7 DR. RONG: That's correct.

8 MS. DIAMOND: -- in this region.

9 DR. RONG: You're nominating it to the State Board,
10 asking State Board to approve it.

11 MS. DIAMOND: Okay.

12 DR. RONG: So later when we work with our counsel to
13 determine who's a recalcitrant, who's responsible, the
14 site may have changed hands many, many times, but that's
15 not crucial to this resolution. The resolution is just
16 to provide a list of sites, and it might be --

17 MS. DIAMOND: Thank you. That's very helpful, and I
18 just wanted to --

19 MS. MEHRANIAN: Questions?

20 MS. DIAMOND: And I think in the future we should
21 always be sure that the people who receive notices --
22 'cause we send it out and we want it to be sent out to
23 everybody that could be involved -- that they understand
24 as well as we what's before us and whether they have
25 reason to be concerned for their own -- it may not help

0197

1 everybody, but at least it would provide them some
2 comfort that we're not asking them to do anything or
3 requiring anything of them.

4 DR. RONG: I agree. Thank you.

5 MS. MEHRANIAN: Thank you. Please.

6 MS. GLICKFELD: Just a comment, which is I'm going to
7 bring us back to the big picture, which is that we have

8 1200 underground tanks. We are ninth in the nation in
9 terms of these tanks. These cases have been before our
10 Board for decades and we, for a variety of reasons, and
11 part of it is the difficulty of assigning responsibility
12 and part of it is people owning land that they can't use
13 because of problems on it, we need to make some effort to
14 move ahead with these properties as we were told by
15 USEPA.

16 I strongly support the use of the EAR fund
17 because we then can help the landowner who owns the
18 property now by getting his property cleaned up. They
19 benefit because it can go back into use again, the
20 community benefits from going back into use, and
21 hopefully because we're going to put a lien on the
22 property the government money that starts this process
23 comes back so we can use it again. Is that all correct?

24 DR. RONG: Yes. Thank you.

25 MS. GLICKFELD: And I just think that we -- for

0198

1 whatever reason, you want to be much more careful about
2 how much emphasis gets put on who's responsible, the
3 parties, and making sure that everybody gets notice and
4 understands this process, but knows that they're not
5 required to participate in it. But somebody has to clean
6 these sites up and that's our job. Our job is to get
7 these sites cleaned up, all 1200 of them. That's it.

8 MS. MEHRANIAN: Thank you.

9 DR. RONG: Thank you.

10 MS. MEHRANIAN: Questions? No? Yes.

11 MR. YEE: Yes. I just want to add to that, that if
12 we only do six or seven sites a year, that's going to
13 take us over 200 years to do.

14 MS. MEHRANIAN: I was just thinking about this.

15 MR. UNGER: This isn't our only source of funding to
16 clean up underground storage tanks.

17 MR. YEE: Oh, okay, 'cause if we're seriously
18 interested in water quality, we're going to have to
19 expedite these processes.

20 DR. RONG: To tell you the truth, at the beginning we
21 were discussing with USEPA they wanted to nominate way
22 more than six. I said, "Let's try it the first year and
23 see what's going on." So that's my conservative
24 approach, but next year it may not be six. It may be
25 sixty. I don't know. We'll have to see how that works.

0199

1 MR. YEE: What if we sent out letters to all 1200
2 sites and asked them who would like to participate? You
3 might get some people who immediately come and get on it
4 or all of them not interested.

5 DR. RONG: My understanding, as I indicated in the
6 slides, is they're under-utilized because there are
7 simply no takers. Why? Because there is a USEPA fund
8 that's a reimbursed fund that they can go to and, two,
9 the lien on their property is not that attractive. So

10 we're trying. We're trying. If someone's got the right
11 use for them, great.

12 MS. MEHRANIAN: Anybody else on the Board that has
13 questions?

14 I have one. Regulatory-wise, let's say, as you
15 mentioned, that there's 1200 sites or 1200 sites with
16 tanks. What is our jurisdiction on putting together
17 certain kinds of regulations that no matter what, these
18 should be -- you know, create the list and create the
19 procedure that this should be addressed, as the Water
20 Board? I mean, I'm trying to understand do we have any
21 jurisdiction -- do we have any tools or mechanisms that
22 we can use to make sure that we address or have a process
23 that is kind of you can't go around it, but you have to
24 address it, and what would that be if the answer is
25 "yes"?

0200

1 MS. FORDYCE: I can address that. I think one thing
2 to point out is the 1200 cases are total cases. These
3 are not all -- the 1200 cases, the 1239 figure, are not
4 1239 abandoned, emergency, or recalcitrant sites. It's
5 total sites. So for many of those sites -- and I don't
6 know the percentage.

7 DR. RONG: Most of them qualify for Cleanup Fund.

8 MS. FORDYCE: A lot of them, the responsible parties
9 are doing the work under our directives and there's some
10 where we've issued directives and they're not doing the
11 work because they're abandoned or emergency or
12 recalcitrant and they're not. So to qualify for the EAR
13 account, you have to be qualified. That means you're
14 emergency, abandoned, or recalcitrant. Sites that don't
15 qualify for EAR account might qualify for the UST Cleanup
16 Fund and that's the reimbursement fund that Y.R.
17 mentioned.

18 MS. MEHRANIAN: So the second part of my question is
19 from the ones -- okay. Would you know at least
20 what percent -- what percent that is?

21 MS. FORDYCE: Not at all.

22 MS. MEHRANIAN: Could we come up with that
23 percentage? I mean, could somebody tell us what it is?

24 DR. RONG: I will say 7, 8 or 10 percent, something
25 like that.

0201

1 MS. MEHRANIAN: Sorry.

2 DR. RONG: 7, 8 or 10 percent, something like that.

3 MS. GLICKFELD: So that would be 120.

4 MS. MEHRANIAN: So let's say it's 120 and you said
5 there's different mechanisms available, funds. Could we
6 like put together some kind of a road map, a master plan
7 of these are the sites and these will be the mechanisms
8 through which we're going to address it in this kind of
9 time line?

10 DR. RONG: It's a little difficult because if there's
11 120 sites, I know them. That will be hard for me to

12 know. Most of them I don't. Just like this, I try to go
13 about --

14 MS. MEHRANIAN: Let's take the ones you know because,
15 as Larry said, if we don't do anything like this, it's
16 going to take 200 years to clean these things and I'm
17 trying to see if we can have a path or a road map.

18 MR. UNGER: Chair Mehranian, what I'd suggest -- we
19 hear what you're saying and what I would suggest is after
20 we get over this action here today, that we sit down
21 after this funding cycle with our Tank --

22 MS. MEHRANIAN: Okay.

23 MR. UNGER: -- Program and we talk about sites which
24 are not being addressed through the normal --

25 MS. MEHRANIAN: Wonderful.

0202

1 MR. UNGER: -- UST Tank Fund to try to come up with a
2 strategy, if you will --

3 MS. MEHRANIAN: Let's do that.

4 MR. UNGER: -- that we can present to you in an
5 information item at some later date. It's not going to
6 be next month.

7 MS. MEHRANIAN: Right, but let's think in that
8 direction.

9 MR. UNGER: Yeah. We can --

10 MS. MEHRANIAN: Wonderful. We'll entertain a motion.

11 MS. DIAMOND: I'll entertain a motion to adopt the
12 Resolution Number RX -- I don't know -- 12-XXX that's
13 before us here.

14 MS. GLICKFELD: Just a point of clarification, that
15 the motion -- I would second it if you just clarify
16 that -- so the audience understands that no one is
17 obligated to take these funds. They are obligated to
18 clean up, but they are not obligated to --

19 MS. DIAMOND: I think we have to adopt the resolution
20 and it says it in there.

21 MS. LUTZ: Fran, is that with the change sheet?

22 MS. DIAMOND: With the change sheet.

23 MS. LUTZ: I'll second that.

24 MS. MEHRANIAN: All in favor?

25 (Whereupon the motion was passed)

0203

1 MS. MEHRANIAN: This concludes the agenda items and
2 we can move to the workshop. I want to apologize for the
3 delays. The items on the agenda took longer and I know
4 that the workshop was noticed at 1:30, so we're like
5 about an hour and a half late and I apologize to the
6 audience and for the ones who are here for the workshop.

7 And Board Member Lutz needs to leave, and Board
8 Member Yee needs to leave at 4:30.

9 MR. UNGER: Well, it's a workshop.

10 MS. GLICKFELD: Are we on break?

11 MS. MEHRANIAN: Do you need a break? Five minutes?

12 MS. GLICKFELD: Five minutes.

13 (Recess)

14 MS. MEHRANIAN: We're back in session. Please take
15 your seats. We are starting with -- we're getting
16 started with our workshop.

17 And, Deb, are you going to start us off?

18 MS. SMITH: Yes. I was going to introduce it.

19 Good afternoon. For the record, my name is
20 Deborah Smith and I am the Chief Deputy Executive Officer
21 here at the Board. I'm here to introduce Item 20, which
22 is a Board workshop on the reissuance of the L.A. County
23 MS4 permit.

24 As you know, staff have been diligently working
25 on the permit and we have been meeting with many

0204

1 stakeholders on a regular basis in the last few months.

2 The workshop today is focused on two topics:
3 non-storm water discharges and minimum control measures.
4 To facilitate a productive workshop, we have prepared a
5 staff working proposal for each of these topics and sent
6 that out to folks. These proposals represent staff's
7 current thinking on these matters.

8 We are here to hear and consider stakeholder
9 comments and, unlike last month's workshop, which was
10 noticed as a staff workshop, today's workshop is noticed
11 as a Board workshop in which Board members can question
12 staff and stakeholders about the comments.

13 Staff will not be responding conclusively today
14 on any of the comments on the working proposal, but will
15 be glad to clarify any issues for the Board and will
16 consider stakeholder and of course Board comments when we
17 develop a tentative permit for comment.

18 We intend to notice one more workshop to discuss
19 TMDLs, receiving water limitations, and Watershed
20 Management Plans, which is a new concept we've been
21 working on in the last week or so.

22 For today's workshop, staff will be addressing
23 each topic separately with non-storm water discharges
24 kicking it off, and I would mention that I guess we'll
25 start off with that item and sort of see where we are

0205

1 timewise to see if we can get through the second item,
2 but hopefully we can.

3 So unless there are any other questions, I'm
4 going to turn it over to Renee to kick off the first
5 topic.

6 MS. PURDY: Good afternoon. My name is Renee Purdy
7 and I am the section chief of the Regional Program
8 Section here at the Regional Board. And as Deb said, I
9 am going to be kicking the workshop off with the first
10 topic and then, assuming we get through that, we'll move
11 on to the second one and Ivar will be leading that one
12 off.

13 Before we delve into the two specific topics
14 that we have on our agenda today, though, I wanted to
15 step back just for a moment to look at the bigger picture

16 and put these two detailed working proposals that we are
17 going to discuss today in the context of the full permit
18 and I thought it would be helpful to first show you an
19 outline of the developing L.A. County permit and where
20 the two pieces that we're discussing today fit into that.

21 I've highlighted in bold the two topics for
22 today and I would just also note that we have discussed a
23 number of the other parts of the developing permit,
24 including the Water Quality-Based Effluent Limits, TMDL
25 Provisions and Monitoring Requirements, though as Deb

0206

1 said, we do plan on having another workshop once we have
2 working proposals for some of these other key components
3 such as the TMDL Provisions, the Receiving Water
4 Limitations, and as she mentioned, the Watershed
5 Management Program aspect of the permit.

6 I've also noted here where each part of the
7 developing permit aligns with the current L.A. County
8 permit and it just indicates which sections and some of
9 you probably are more familiar than others; but just for
10 the sake of the audience as well, this provides kind of
11 an alignment with the existing permit.

12 The next thing that I want to do is I want to
13 place the two topics for today in the context of our
14 decision early on last fall to structure the permit in
15 such a way to allow watershed-based management, to
16 facilitate integrated approaches to addressing discharges
17 from the MS4, and I just want to say, I think at times,
18 it is easy to lose sight of the forest through the trees;
19 and for those of you that have gone through the working
20 proposals, there are a lot of trees in there and so I
21 thought it would be helpful to take a step back and kind
22 of look at how these all fit together and integrate
23 ultimately.

24 So what I wanted to do is just show you the two
25 pieces that we're talking about today, which is the

0207

1 non-storm water controls and then the -- I'm sorry it's a
2 little bit light -- minimum control measures are two
3 pieces, and you can even see there that there is some
4 integration between these two pieces. The other two
5 pieces that we will be talking about later and we've
6 touched on before are, one, the provisions to address
7 TMDLs and then also the receiving water limitations
8 language in the process for addressing exceedences and
9 receiving water eliminations that aren't otherwise
10 covered by TMDLs.

11 And the thing that I want to point out is that,
12 as you can see, I've made all of these overlapping
13 because there is a lot of overlap among all these various
14 types of strategies, control measures, and BMPs in each
15 of these four areas and what we intend is that once the
16 complete permit is developed, all of these will basically
17 work together within a Watershed Management Program.

18 So I realize that today we're talking about two
19 very detailed proposals kind of in isolation, but I just
20 want to remind people that where we're headed is towards
21 a permit that will integrate all of these types of
22 strategies and control measures in a wholistic way within
23 the concept of a Watershed Management Program, as we
24 discussed last fall.

25 So I just wanted to give you that as an overview
0208

1 to kind of put this in context, because I know that we
2 really are getting into a lot of the details in the
3 proposals that we put out and I wanted to let people know
4 that we haven't lost sight of the forest through the
5 trees. We're trying to keep that forest in mind and
6 eventually when we have the full tentative proposal out,
7 then I think that will become much more clear.

8 So with that, what I want to do now is move on
9 specifically to the non-storm water discharges, and what
10 I'd like to do first is just start off by giving you some
11 background information on how Congress and EPA
12 anticipated that we would regulate non-storm water
13 discharges through the MS4, through MS4 permits.

14 And just to begin, non-storm water discharges
15 are basically discharges to the MS4, and from the MS4 to
16 the receiving water, that are not composed entirely of
17 storm water.

18 Clean Water Act Section 402(p)(3)(B) -- that's a
19 mouthful -- basically said that MS4 permits must
20 effectively prohibit non-storm water discharges to the
21 MS4. And so one of the questions that you might have is,
22 what does it mean to effectively prohibit these
23 discharges through the MS4?

24 And basically, according to EPA, that means two
25 things. It means either that these non-storm water

0209
1 discharges to the MS4 should be permitted under a
2 separate NPDES permit, or they should not be allowed into
3 the MS4; and MS4 permittees, according to the 1990
4 rulemaking on the storm water and MS4 permits, are
5 required to have a program in place that will detect and
6 eliminate illicit discharges of non-storm water through
7 the MS4.

8 That said, in 1990, EPA did receive significant
9 comments that some non-storm water discharges that
10 commonly occur in urban environments should be allowed
11 into the MS4 and USEPA agreed in part and clarified that
12 MS4 permits do not have to prohibit certain discharges of
13 non-storm water through the MS4 in all cases. The
14 implementing regulations for the Clean Water Act 402 list
15 types of non-storm water discharges that may be exempt
16 from the effective prohibition as long as they are not
17 sources of pollutants to the MS4 and to receiving waters,
18 and USEPA gave states the authority to include permit
19 conditions that require municipalities to control any of

20 these types of non-storm water discharges through the use
21 of BMPs and/or requiring that they be separately
22 permitted to ensure that they aren't a source of
