Jeanine Townsend, Clerk to the Board  
State Water Resources Control Board

My email is to oppose the State Water Board regarding the proposed Plan Amendment and the Substitute Environmental Draft (SED) of the Bay-Delta Water Quality Plan.

You, State Water Resources Control Board want to send 350,000 acre-feet of water out to sea. This is enough domestic water for 2 million people each year and 100,000 acre-feet of water for farmland.

As a California voter and farmer there needs to be a comprehensive solution with other agencies, and local stakeholders to fix California's water storage/release, habit's, domestic use, and farmland. Science has proven we can fix the struggling fish populations by control predators, restore habitat, and utilize functional flows.

Thank You

John Kenney
