Subject: Comment Letter - 2016 Bay-Delta Plan Amendment & SED

Follow Up Flag: Follow up
Flag Status: Flagged

I am sending this to voice my opposition to Assembly member, Frank Bigelow's letter to Chairwoman Felicia Marcus. He is requesting the destruction of California by taking more water for an area that continues to overplant permanent crops. The river diversions from the California Delta and out to sea have already exceeded healthy levels that are damaging long term food chains. These farmers have over drafted our aquifers to the point of the earth sinking, taking water that took thousands of years to accumulate. They have switched from row crop to permanent crops to grow nuts using migrant workers to be shipped overseas. How is that good for America?

Mister Bigelow has an investment along with his parents that if he can get his hands on more water, he can make millions developing land they own. The environmental laws were already a compromise when enacted, why get rid of them for greed? The percentage of water diverted is already excessive. Save California.
