Members of the Board:

You may not remember me, I stood in front of you in Merced CA.

Please explain yourselves, how can you call a drought at the same time as we
are requesting flood relief funds? The only way that I can see it is under

ground water levels are low, Rain and Snow are both above. The only way to refill
that water is to give the farmers what they need as 26 to 40 percent will restock where we are low. The water is
there. We will grow the food that we all need and disperse the water to the under ground storage
