I oppose the State Water Board's proposal to unjustifiably increase the flows on the Tuolumne River because such an increase will have potentially irreversible negative effects upon surface water availability, groundwater, jobs, etc.

If the State Water Board wants water why doesn't somebody in the government come up with an idea that would use Governor Brown's tunnel idea and instead direct the tunnels to send the water back once it reaches the close to the bay to the water storage in the Sierra's so that we can have a continual unimpaired water flow.
