**Subject:** RE: Request to Amend the ESJWQC MRPP and QAPP  
**Date:** Monday, November 19, 2012 8:22:00 AM

---

Good morning, Lindsay-

I have reviewed the triazine validation package submitted with the ESJWQC's request to update the monitoring program. The submitted information includes summary data for the method detection limit (MDL) study, raw data for the initial calibration (ICAL), and a method blank. The following information is missing:

- (1) raw data for the MDL study (filenames should be 1024014-1024020 based on the MDL summary sheet)
- (2) any calibration verification data (recovery of secondary standards after ICAL completion)
- (3) complete information for the initial precision and recovery (IPR) - raw data and summary of calculations
- (4) surrogate recovery data for the MDL, ICAL, IPR and method blank samples

Note that values on Form 6, Initial Calibration, don't correspond to raw data sheets with the same file names (1024003-1024010). Perhaps some of the missing data were mistakenly tabulated on Form 6 (e.g. IPR), but that is just a hypothesis and you or the lab will be able to explain the discrepancy.

The data listed above are needed to complete the review of the validation package for triazines; please submit the missing information as soon as possible. Feel free to contact me for any questions or clarifications regarding the requested information.

Thanks,

Jelena
