

STATE OF CALIFORNIA
REGIONAL WATER QUALITY CONTROL BOARD
SAN FRANCISCO BAY REGION

STAFF SUMMARY REPORT – Cherie McCaulou
MEETING DATE: September 13, 2006

ITEM: 6.D

SUBJECT: **Honeywell International Inc., for the property located at 8333 Enterprise Drive, Newark, Alameda County** – Adoption of Final Site Cleanup Requirements

CHRONOLOGY: October 1998 - Site Cleanup Requirements adopted
March 2005 - Site Cleanup Requirements amended

DISCUSSION: This site is one of a cluster of sites in Newark where soil and groundwater has been impacted by volatile organic compounds. The Board has already adopted final Site Cleanup Requirements for three of these sites: FMC, Ashland, and Jones-Hamilton. The final Site Cleanup Requirements would approve a discharger-proposed cleanup plan, set cleanup standards, and establish a schedule for cleanup plan implementation.

We received comments from the Alameda County Water District objecting to the proposed cleanup standards for shallow groundwater. These comments were unexpected given the tenor of prior input from District staff. We recommend that this item be continued to allow for further discussions with the District and Honeywell.

RECOMMEN-
DATION: Continue the item
