

Celebrating Restoration and Partnerships at the Gambonini Mine Site

From this...

...to this

Come help us celebrate
on Friday, October 21

1403 Marshall-Petaluma Rd.
11:00 am - 12:30 pm

Since 1999, the Water Board, U.S. EPA, and the Marin Conservation Corps have been working together on a Superfund (CERCLA) cleanup of the historic Gambonini Mine site. The project has become a case study in state-federal partnerships, successful mine remediation, and effective, low-cost, low-tech mercury reduction using simple revegetation, erosion control, and stream restoration techniques. Thanks to a host of local and regional, public and private participants, the entire Walker Creek ecosystem has benefited from work at the mine and throughout the watershed.

Come help us celebrate our success and spread the word about mercury mitigation measures and partnerships that really work!

Please wear heavy shoes and field-appropriate clothing. Field tours will be available following the program.

For more information or to R.S.V.P., call Jill Marshall at 510.622.2388, or email jamarshall@waterboards.ca.gov.

...to post-remediation monitoring
(check out those grasses!)
