Margarete

I understand the meeting just ended for the Water Quality Permit and I hope that was a productive meeting. As a resident who's property line abuts the creek, I am keenly aware of the differing perspectives on how to address flood protection of this area. As I couldn't attend the meeting today, my hope is that the time was spent around water quality and not about the Pope-Chaucer bridge and the downstream flood abatements that should be tested before further work is done. I support the work your team does, and just hope that we can continue flood discussions with the proper forum when we can view how effective the current work is before we pay for more.

Thanks for your time in reading this email,

Stephen
