Subject: Letter Report, ~~Second~~ Half-Semi Annual 2014 Groundwater Monitoring Report, Morning Star Packing Company, LP

Dear Mr. Childs:

Enclosed is the semi-annual groundwater monitoring report prepared in accordance with Order No. R5-2013-0144. Although groundwater sampling is only required twice annually under the Monitoring and Reporting Program, Morning Star has continued with quarterly groundwater monitoring. Quarterly groundwater monitoring provides additional information regarding groundwater quality and enables the use or more robust analysis of conditions and trends.

The following items were requested in the Semi-Annual Groundwater Monitoring and Reporting Program:

1. Results of semi-annual monitoring of the groundwater in tabular format.

The results of groundwater monitoring activities for the monitoring wells are included as **Attachment A**.

2. A narrative description of all preparatory, monitoring, sampling, and analytical testing activities for the groundwater monitoring. The narrative shall be sufficiently detailed to verify compliance with the WDRs, this MRP, and the Standard Provisions and Reporting Requirements. The narrative shall be supported by field logs for each well documenting depth to groundwater; parameters measured before, during, and after purging; method of purging; calculation of casing volume; and total volume of water purged.

Field logs for the sampling activities are included as **Attachment B**. Prior to sampling, the groundwater elevations are measured. The monitoring wells are then purged a minimum of three well volumes or until temperature, pH and electrical conductivity have stabilized. Samples are collected and returned to the certified lab and tested for the different constituents.

3. Calculation of groundwater elevations, determination of groundwater flow direction and gradient on the date of measurement, comparison of previous flow direction and gradient data, and discussion of seasonal trends if any;

Groundwater elevations for the wells are shown in Table 1 and Table 2.

Table 1. Groundwater Elevations on February 2014

Monitoring Well Number	Elevation
MW1	89.82
MW2	86.68
MW3	86.43
MW4	87.73
MW5	83.38
MW6	83.61
MW7	80.66
MW8	73.81
MW9	71.12

Table 2. Groundwater Elevations on May 2014

Monitoring Well Number	Elevation
MW1	93.48
MW2	88.01
MW3	87.18
MW4	90.07
MW5	84.47
MW6	81.36
MW7	81.00
MW8	72.64
MW9	73.37

Groundwater sampling for this quarter was generally consistent with historic results. Groundwater in the vicinity of the processing facility usually flows toward the north and slightly east. This quarter, the results are consistent with historical results. Gradients for the four monitoring wells located near the settling pond are presented in Table 3.

Table 3. Groundwater Gradients in MW 1, 2, 3 and 4

	Gradient (ft/1000ft)		
Date	MW1 to MW2	MW1 to MW3	MW1 to MW4
2/21/07	4.40	2.09	4.99

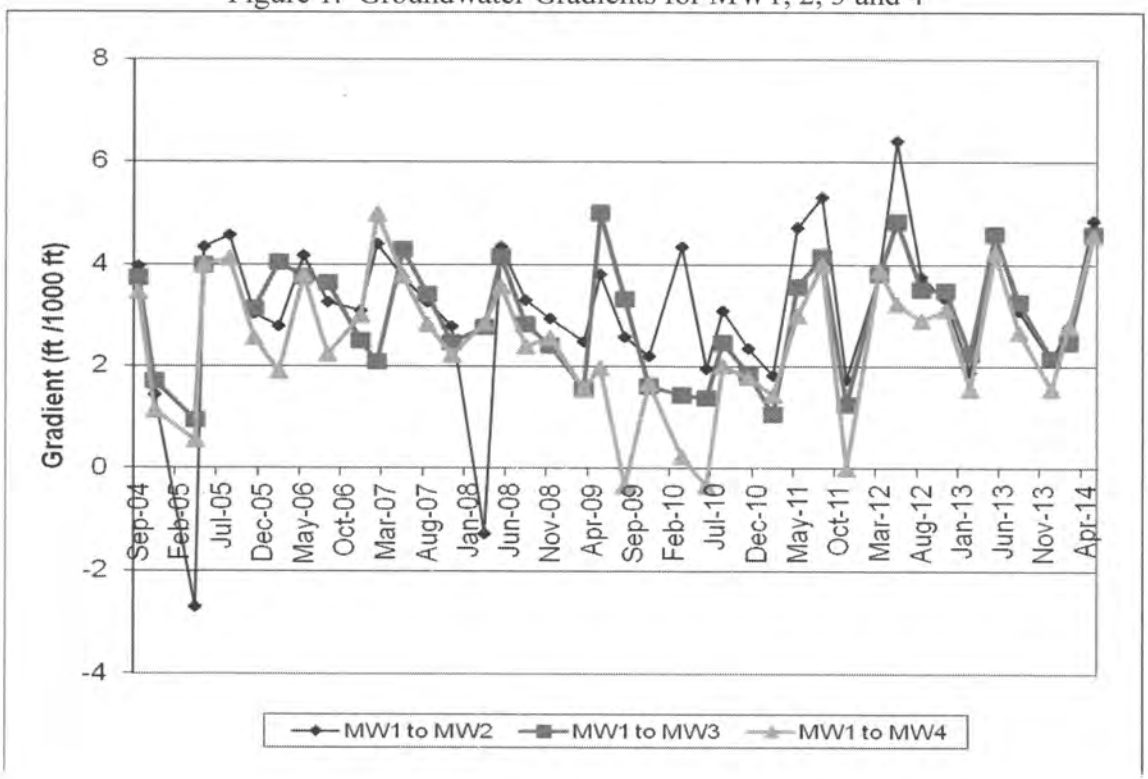
12/2/13	2.12	2.16	1.55
2/17/14	2.79	2.47	2.79
5/12/14	4.86	4.58	41.55

** Measurements from MW2 and MW3 taken on 3/13/2009.*

Groundwater gradients continue to appear to be highest during the summer and lowest during the winter months. Figure 1 below provides a graph of gradients for MW1, 2, 3, and 4.

Figure 1. Groundwater Gradients for MW1, 2, 3 and 4



Groundwater in the cropped area north of the processing facility generally moves toward the northeast. This quarter, groundwater gradients are consistent with historical results. Groundwater gradients for these wells are included as Table 4.

Table 4. Groundwater Gradients in MW 5, 6, 7, 8, and 9

	Gradient (ft/1000ft)			
Date	MW5 to MW6	MW5 to MW7	MW5 to MW8	MW 5 to MW9
2/21/07	0.52	0.16	1.53	1.37
5/23/07	0.94	0.33	1.92	1.97
11/27/07	0.74	0.43	1.90	1.64
3/7/08	0.61	0.46	1.93	1.48

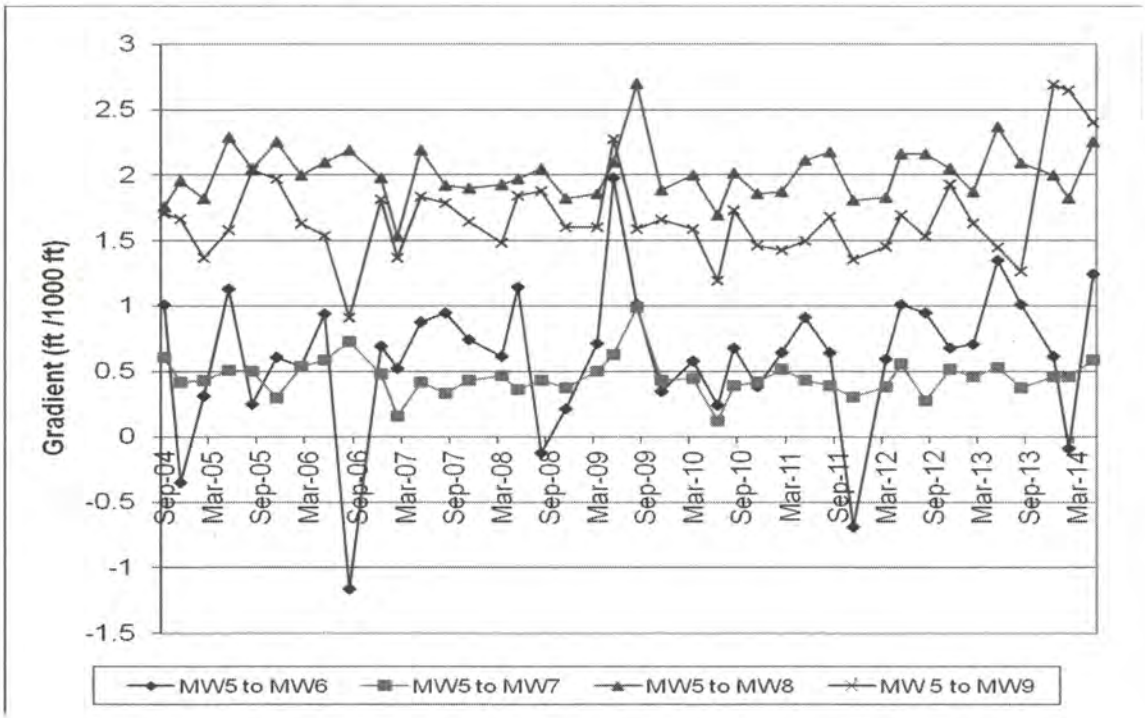
5/15/13	1.35	0.53	2.37	1.45
8/5/13	1.01	0.37	2.09	1.26
12/2/13	0.61	0.46	2.00	2.69
2/17/14	-0.09	0.46	1.82	2.65
5/12/14	1.24	0.58	2.25	2.40

No clear seasonal trends are evident in the groundwater gradients in the cropped area. A graph of the gradients is provided below in Figure 2.

Figure 2. Groundwater Gradients for MW5, 6, 7, 8 and 9



Groundwater flow direction was calculated using the EPA OnSite Hydraulic Gradient Calculator. Results from this analysis are provided **Attachment C** and summarized in Table 5:

Table 5. Site Groundwater Flow Direction Results

Date	Flow Direction (degrees from North)
2/17/14	12.29
5/12/14	17.35

4. A narrative discussion of the analytical results for all groundwater locations monitored including spatial and temporal trends, with reference to summary data tables, graphs and appended analytical reports (as applicable).

The parameters and variability of water quality samples for MW1, 2, and 3 have remained consistent with past results. The results have been graphed to determine if any of the results are trending upward or downward. Samples from this quarter are consistent with historical data. The graphs of the sampling results for each monitoring well have been included as **Attachment A.**

Results from MW4, 5, 6, 7, 8, and 9 are consistent with previous sampling events. No trends are evident at this time and no seasonal trends have been identified.

The results from this sampling event are consistent with previous events with no upward trends or degradation evident. Natural spatial variability between the wells is evident in both the upgradient and downgradient wells.

5. A comparison of monitoring data to the groundwater limitations and an explanation of any violation of those requirements.

A statistical analysis consistent with the methods outlined in the Groundwater Limitations Compliance Assessment Plan was performed to determine if the results from the past four samples are consistent with the limitations outlined in the MRP. A summary of the groundwater constituent limitations is provided in Table 6.

Table 6. MRP Groundwater Constituent Limitations

Constituent	Compliance Wells	Limitations
Nitrate Nitrogen	MW2, MW6, MW7, MW8	10 mg/L (MCL)
Nitrate Nitrogen	MW3, MW9	Current Groundwater Quality
Manganese	MW2, MW3, MW6, MW9	0.05 mg/L (MCL)
Manganese	MW7, MW8	Current Groundwater Quality

Background nitrate concentrations from the wells were first checked for normalcy to ensure that the statistical analysis performed was relevant to the data. For the wells compared to the MCL, where the data was found to be normal a one-sample t-test was performed. Where the sample was no normal, a one-sample Wilcoxon signed rank test was used. In all cases, the null hypothesis that the mean of the concentrations from current sampling events was less than the MCL was proven true.

For MW3 and MW9, the most recent four samples were compared to the background data from the well to determine if the mean of the samples were statistically the same. A Wilcoxon-Mann-Whitney sample 1 vs. sample 2 test was performed with a 95% confidence interval to determine if the sample mean/medians were the same. For both wells, the tests showed that the mean/median results were statistically similar.

In MW7 and MW8, the manganese concentrations from the four most recent tests were compared with background data from the wells to determine if the sample mean/median has remained the same. Tarone-Ware sample 1 vs. sample 2 tests were performed. The results concluded that the current samples are equivalent to the background samples.

MW2, MW3 and MW6 had either non-detect results or results that was lower than the manganese MCL. No further analysis on these wells was needed to determine if they had maintained compliance.

MW9 was analyzed using a one-sample Wilcoxon Signed Rank tests with for samples with non-detects. The most recent four constituent concentration results were compared with the MCL. The results showed that the well was in compliance.

Results from the statistical analysis are included as **Attachment D.**

6. Summary data tables of historical and current water table elevations and analytical results.

Summary data tables for the monitoring wells are included with **Attachment A**.

7. A scaled map showing relevant structures and features of the facility, the land application area and irrigation check boundaries, the locations of monitoring wells and other sampling stations, and groundwater elevation contours referenced to mean sea level datum.

See **Attachment E**.

8. Copies of laboratory analytical report(s) for groundwater monitoring.

See **Attachment F**.

Respectfully,

Hilary A. Reinhard, P.E.

5/21/2014

Dear Mr. Oliveira,

Enclosed to this note you will find the analytical laboratory reports for 9 well water samples we sampled on May 12, 2014.
If you would please review these data and call us if you have any questions or comments.
The unused portion of these samples will be discarded 30 days after date of this reports unless we receive further instruction

Sincerely yours,

Ahmed Modabber
Lab. director

Analyte	Method #	RL(mg/l)	Conc. (mg/l)
EC (umhos/cm)	SM 2510 B	1. umhos/cm	1312.
PH	SM 4500-H B	1.00-14.00	7.27
TDS (total dissolved solid)	SM 2540 C	5.00 mg/l	850.
FDS (fixed dissolved solid)	SM 2540 E	5.00 mg/l	833.
TKN (total k nitrogen)	SM 4500-N C	0.10 mg/l	0.22
Nitrogen in nitrate form (N-NO3)	SM 4500-NO3 E	0.05 mg/l	3.54
Nitrate (NO3)	SM 4500-NO3 E	0.20 mg/l	15.64
Sulfate (SO4)	SM 4500-SO4 D	5.00 mg/l	73.65
Fe (dissolved)	SM 3111B	0.01 mg/l	ND
Mn (dissolved)	SM 3111B	0.01 mg/l	ND
Cl	SM 4500-Cl C	1.00 mg/l	66.2
Coliform (total)	SM 9221 B	2.00MPN/100 ml	< 2 MPN/100 ml

Field Data

Water level(ft)	Well Depth(ft)	PH	EC (umhos/cm)	Temp. (C)
5.16	18.	8.81	1227.	22.37
