

# CV-SALTS Annual Report

# Presentation Outline

- Background
- Resolution Reporting Requirements
- Implementation Strategy
  - Addressing Nitrate Drinking Water Issues
  - Sustainable Salt Management
- Moving Forward

# CV SALTS

Central Valley

Salinity Alternatives for Long-term Sustainability

- Collaborative Basin Planning Effort
- Utilizing Stakeholder Process to Develop Salinity and Nitrate Management Plan

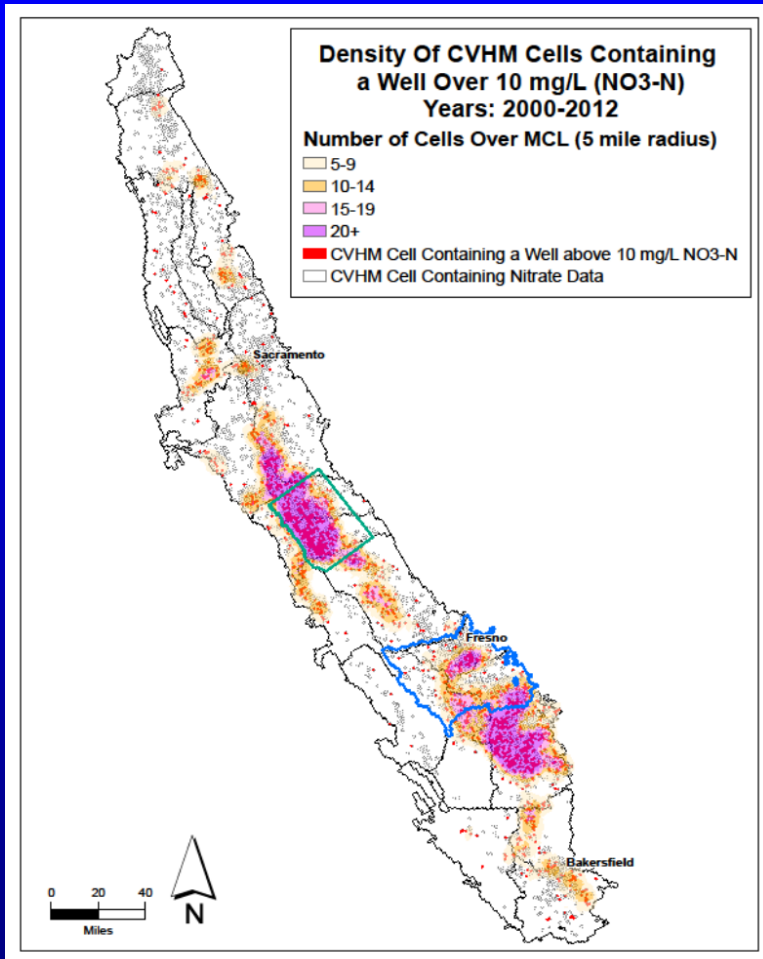

# Central Valley Salt Issues

More salt enters the region than leaves

- Impacts (current/legacy)
  - Agricultural Production
  - Drinking Water Supplies
- Economic Cost
  - Direct Annual: \$1.5 Billion
  - Statewide annual income impact: \$3.0 Billion
- Diverse Sources

# Central Valley Nitrate Issues

- Legacy Conditions
- Direct Impacts
  - Drinking Water Supplies
- Economic Costs
  - Treatment
  - Alternate Supply
- Diverse Sources

# CV-SALTS Goals

Safe Drinking Water in Areas  
with Nitrate Impacted  
Groundwater

Environmental and  
Economic Sustainability

# Cleanup and Abatement (CAA) Funds \$5-million Seed Money

- \$1.2-million (Res. #2009-0023)
- \$3.8-million (Res. #2010-0042)

# Res. #2010-0042 Requirements

- Annual Report at Public Hearing
  - Expenditures to Date
  - Services Provided
  - Contribution from Stakeholders
  - Accomplishments
  - Timeline to Complete Work

# CVSC 27 Member Benefit

## Non-Profit

- County of San Joaquin
- City of Stockton
- Stockton East Water District
- The Wine Institute
- City of Tracy
- California Rice Commission
- City of Manteca
- City of Modesto
- San Joaquin River Group
- City of Vacaville
- City of Fresno
- City of Davis
- Westlands Water District
- California Resources Corporation
- California Association of Sanitation
- Central Valley Clean Water Association
- California League of Food Processors
- Tulare Lake Drainage District/ Tulare Lake Basin Water Storage District
- San Joaquin Valley Drainage Authority
- Sacramento Regional County Sanitation
- Western Plant Health Association
- East San Joaquin Water Quality Coalition
- California Cotton Growers and Ginners
- Southern San Joaquin Valley Water Quality Coalition
- Dairy CARES/Western United Dairymen
- Pacific Water Quality Association
- Los Angeles County San District

# Expenditures for Services and Stakeholder Contributions

	Since July 2008
CAA Resolution #2009-0023	\$1,113,024
CAA Resolution #2010-0042	\$1,788,850
Central Valley Salinity Coalition (CVSC) expenditures and direct match through September 2014*	\$1,593,145
Additional Stakeholder Contributions --Treatment/Feasibility studies; basin planning support; water quality data	\$12,875,291
<b>Total:</b>	<b>\$17,363,120*</b>

\*Does not include in-kind service participating on committee(s)

# Services Provided/Accomplishments

## Data Compilation and Modeling

- ✓ Conceptual Model
- ✓ GIS Beneficial Use/ AGR Zone Efforts

## Beneficial Use

- Tulare Lake Groundwater
- MUN in Ag Dominated Water bodies

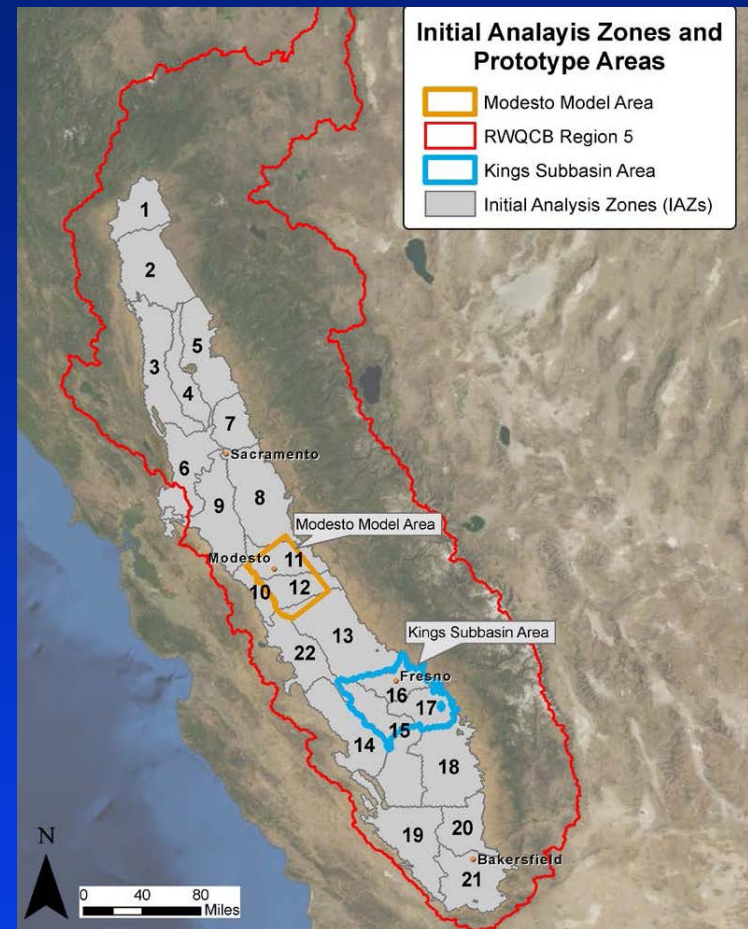

## Water Quality Objectives

- ✓ Aquatic Life
- ✓ Stock Watering
- ✓ Salt Effects on Irrigated Ag
- ✓ Salt Effects on MUN

- Lower San Joaquin River

## Implementation

- SSALTS (Accumulation/Transport)
- Alternate Compliance Strategy (Legacy Nitrate)

# Services in Progress

## CAA Co-Funded Projects

- Administrative, Technical & Facilitation Support
- Phase II Conceptual Model
- SSALTS Phase 3
- Case studies to ground truth policy and implementation options
  - MUN Surface Water
  - MUN/AGR Groundwater
  - Lower San Joaquin River (Objectives/Implementation)
  - Early Implementation (safe drinking water)

**Stakeholders  
Have Contributed  
83% of Total  
Costs to Date**

# Summarized CV-SALTS Workplan Schedule

Figure 2 - Summarized CV-SALTS Workplan Schedule

Technical Area	Primary Activities	SNMP Support	2012	2013	2014	2015	2016 (May) Final SNMP
Conceptual Model Development	Initial Conceptual Model	<ul style="list-style-type: none"> <li>Source identification</li> <li>Assimilative capacity</li> <li>Loading estimates</li> </ul>	→				
	Phase 2	<ul style="list-style-type: none"> <li>Preliminary SNMP (technical elements)</li> <li>Background WQ/ assimilative capacity calculation methods</li> <li>Management zone study</li> </ul>			→		
	Phase 3	<ul style="list-style-type: none"> <li>Antidegradation analysis</li> <li>Monitoring/Surveillance plan</li> <li>Economics analysis</li> </ul>				→	
Data Development	GIS – Phase 2	<ul style="list-style-type: none"> <li>Baseline database</li> </ul>	→				
	Agriculture Zone Mapping	<ul style="list-style-type: none"> <li>AGR implementation tools</li> </ul>		→			
Beneficial Use Studies	Tulare Lake Bed MUN Archetype	<ul style="list-style-type: none"> <li>MUN implementation tools</li> </ul>	→				
	MUN Beneficial Use in Agriculturally Dominated Water Bodies Archetype	<ul style="list-style-type: none"> <li>MUN implementation tools</li> </ul>	→				
Water Quality Objectives	Salinity-related Effects on Agricultural Irrigation Uses	<ul style="list-style-type: none"> <li>Evaluation of science behind establishment of salinity related objectives</li> </ul>	→				
	Salinity Effects on MUN-related Uses of Water		→				
	Stock Watering Study		→				
	Aquatic Life Study		→				
Implementation Planning	Strategic Salt Accumulation Land and Transport Study (SSALTS)	<ul style="list-style-type: none"> <li>SNMP implementation measures to manage salt and nitrate on a sustainable basis</li> </ul>	→				
	Salt/Nitrate Management Alternatives Assessment				→		
Lower San Joaquin River Committee	Technical Analyses (salt loading characterization, modeling)	<ul style="list-style-type: none"> <li>Coordination with CV-SALTS</li> <li>SNMP development activities to ensure consistency</li> </ul>		→			
	Basin Planning Activities (WQOs, SED, economics, monitoring, implementation)			→			

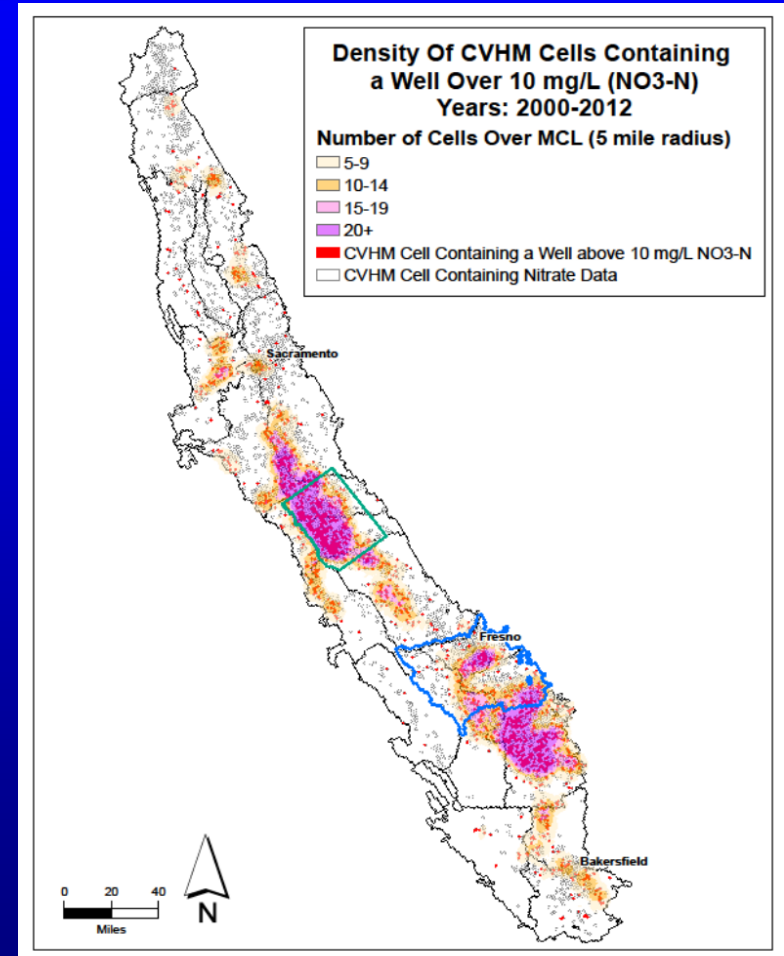

# Implementation Strategy

- Addressing Nitrate Drinking Water Issues
- Sustainable Salt Management

# Addressing Nitrate in Drinking Water

- Addressing legacy nitrate will take years (i.e., decades)
- Beneficial use protection needs to occur much sooner
- Current regulatory scheme could result in prohibited discharges without addressing drinking water

# Key State Board Orders that control WDRs

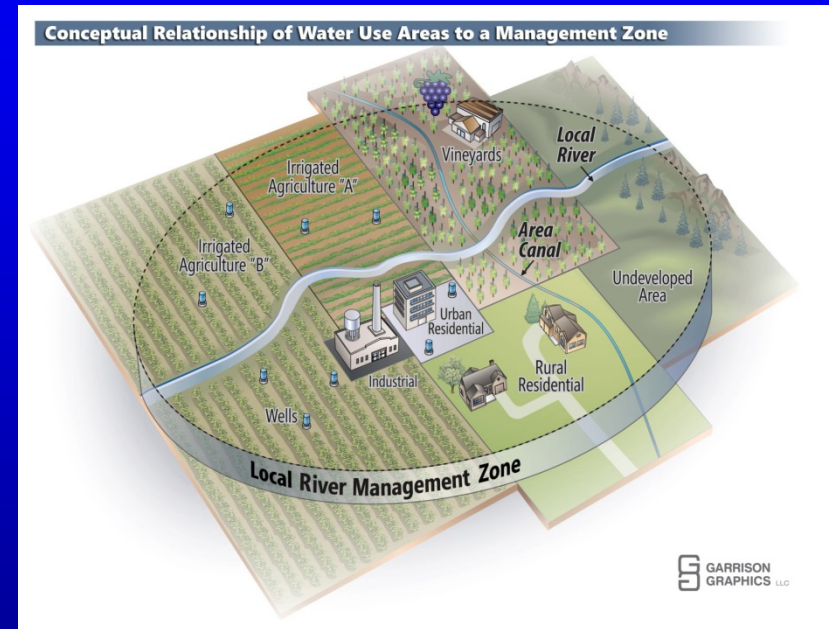

- Order No. 73-4 – Rancho Caballero
  - (*WDRs must implement Basin Plan*)
- Order No. 81-5 – City of Lompoc
  - (*Sets principles for establishing limits depending on if constituent is in receiving water above or below the water quality objective*)
- Order No. 88-12 – San Diego Co. Milk Producers
  - (*May need to prohibit the discharge*)

# Order No. 88-12 – San Diego Co. Milk Producers

- Water exceeds objectives, thus limits are required
- Limits could be applied beneath root zone of irrigated field or at point of discharge
- But, in this case, dairy unable to meet potential limits
- Unless new data and information is provided showing assimilative capacity, discharges should be prohibited

# Need Alternative Compliance Strategy

- Would give Regional Board *authority* to permit discharges that cannot meet objective
- Prioritize:
  1. Safe Drinking Water
  2. Reduce Impacts
  3. Managed Restoration

At Regional Water Board Discretion

# Benefits of Alternative Compliance Strategy

- Addresses nitrate drinking water issues sooner – becomes an enforceable provision in WDR
- Prohibiting discharges provides no benefit and harms the Central Valley's economy
- Allows for implementation of long-term compliance strategies

# Example of Alternative Compliance Strategy

## Offset

- Allowing discharge, along with proposed offset program (e.g., well-head treatment, point of use treatment, connection to surface water supply), will result in better water quality or user protection than if discharge prohibited

## Assimilative Capacity

- Must show maximum benefit to people of the state, cannot unreasonably impact beneficial uses

# Timeline for Alternative Compliance Strategies

**2015** - Complete outline of policy principles

**Early 2016** – Complete SNMP

**2017** – Basin Plan Amendment

**2018** – Revise WDRs to include Alternative Compliance Strategies

**2019** – Begin implementation

# Ongoing Nitrate Actions in Existing Ag WDRs

## Groundwater Assessment Reports

- Two approved, others in progress

## Farm Evaluation Reports

- Most sent to growers, currently being returned and compiled

## Nitrogen Management Plan

- Template approved, to growers now

## Grower Outreach & Education

- Extensive efforts this winter

# SSALTS – Identify Sustainable Salt Management Alternatives

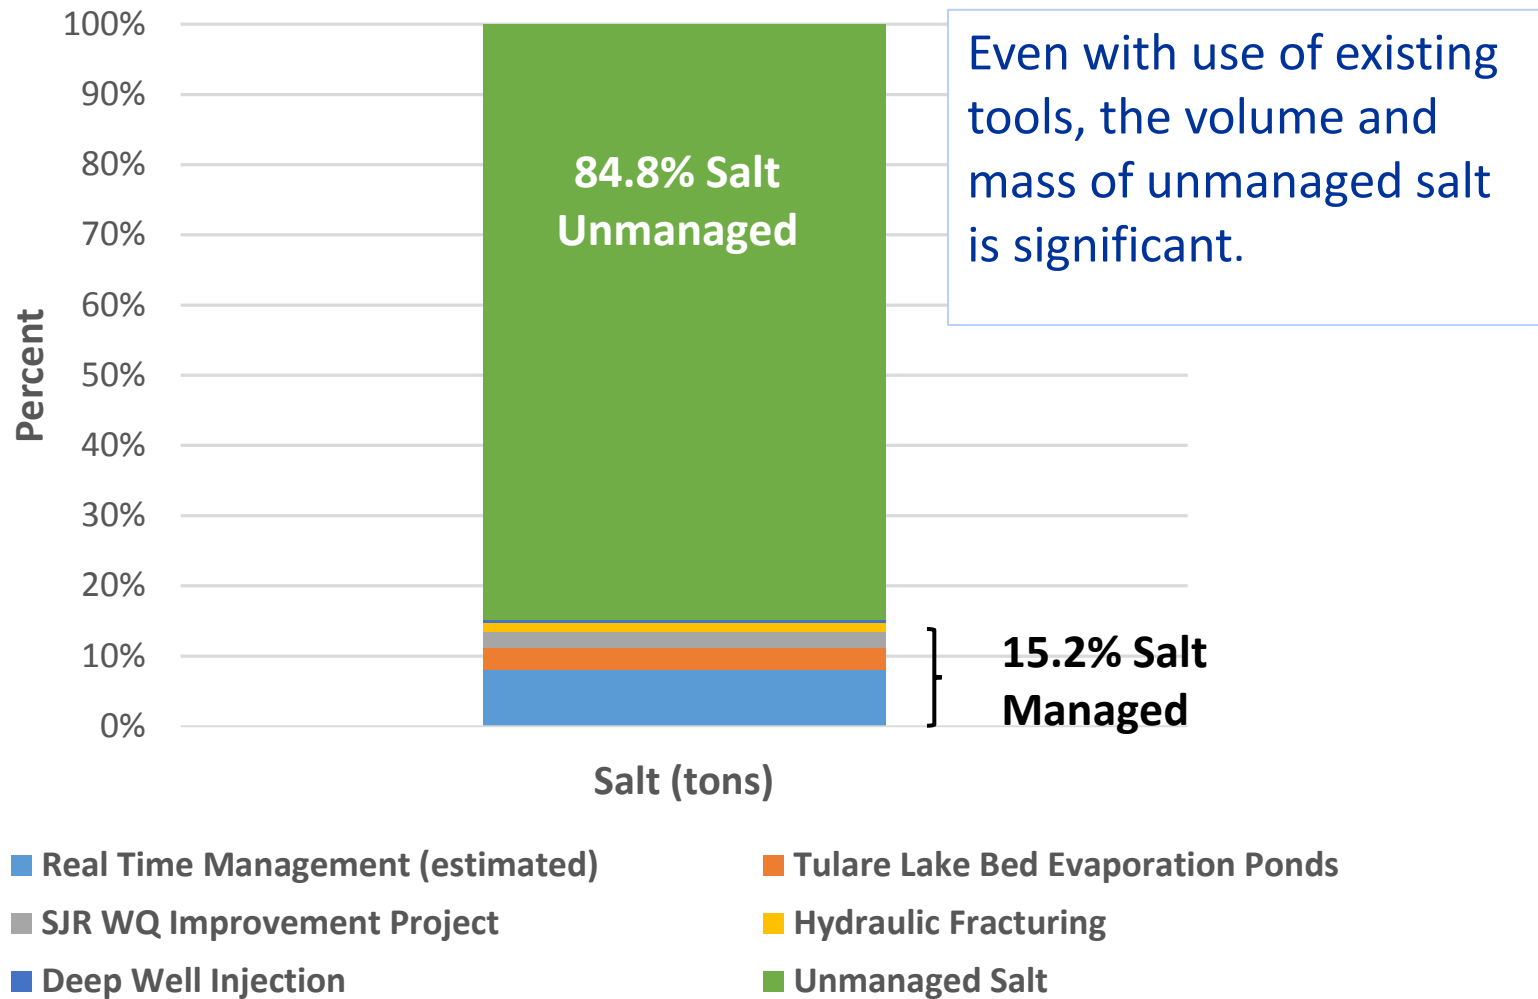

- SSALTS investigating:
  - Magnitude of the problem
  - Requirements to achieve sustainability
  - Available salt management tools - now vs. future
  - Implementation measures for inclusion in the SNMP

# Key Salt Management Alternatives

Treatment & Salt Recovery Technology	Brine Disposal and Storage
<ul style="list-style-type: none"><li>• Mature Technologies<ul style="list-style-type: none"><li>• Reverse Osmosis</li><li>• Ion Exchange</li><li>• Lime Softening</li><li>• Evaporation Ponds</li></ul></li><li>• Emerging Technologies<ul style="list-style-type: none"><li>• Smart Integrated Membrane System (SIMS)</li><li>• WaterFX Aqua4 System – Multi-effect Distillation</li><li>• Zero Discharge Distillation by Veolia – Electrodialysis Metathesis</li><li>• New Sky Energy – Temperature Control and Electrodialysis</li><li>• Element Renewal – addition of polymers to remove trace elements</li></ul></li></ul>	<ul style="list-style-type: none"><li>• Brine Supply for Hydraulic Fracturing</li><li>• Deep Well Injection</li><li>• Salt Management Disposal Areas<ul style="list-style-type: none"><li>• Landfills</li><li>• Dedicated Disposal Sites</li><li>• San Joaquin River Improvement Project</li></ul></li><li>• San Joaquin River Real Time Management</li><li>• Transport Brine Out of Valley<ul style="list-style-type: none"><li>• Truck/Rail Brine</li><li>• Regulated Brine Line</li><li>• Bay Area WWTP</li><li>• New, permitted Bay Area Outfall</li></ul></li></ul>

# Achieving Salt Sustainability – Example Scenario from Southern Part of Central Valley

# Achieving Sustainability Requires Having the Means to Move Salt Out of the Central Valley

- Central to all evaluated salt management alternatives is a ***regulated Central Valley brine line***
- Concept level analysis completed
  - Alternative Central Valley routes
  - Preliminary Brine Discharge Alternatives
    - Via existing East Bay Municipal Utility District outfall
    - Via an alternative outfall to San Francisco Bay
  - Concept-level cost estimate – Capital and O&M

# Conceptual Level Costs for Regulated Brine Line Alternative – Outfall to San Francisco Bay

Implementation of this alternative would yield product water with an estimated value of \$909M/year

# Regulated Brine Line Concept vs. No Action

# Moving Forward

- Continued Plan Development
- Extensive Outreach

# Outreach Target Audiences

- Federal, State & Local Policy Makers
- Agricultural Interest
- POTWs & Stormwater Agencies
- Industrial / Manufacturing Interest
- Environmental Justice Interest
- Environmental Advocacy Interest
- Water Supply and Delivery Interest

# Moving Forward

- Continued Plan Development
- Extensive Outreach
- Short/Long-term Funding

# Short/Long-Term Funding

- Local Partnerships
- State
- Federal

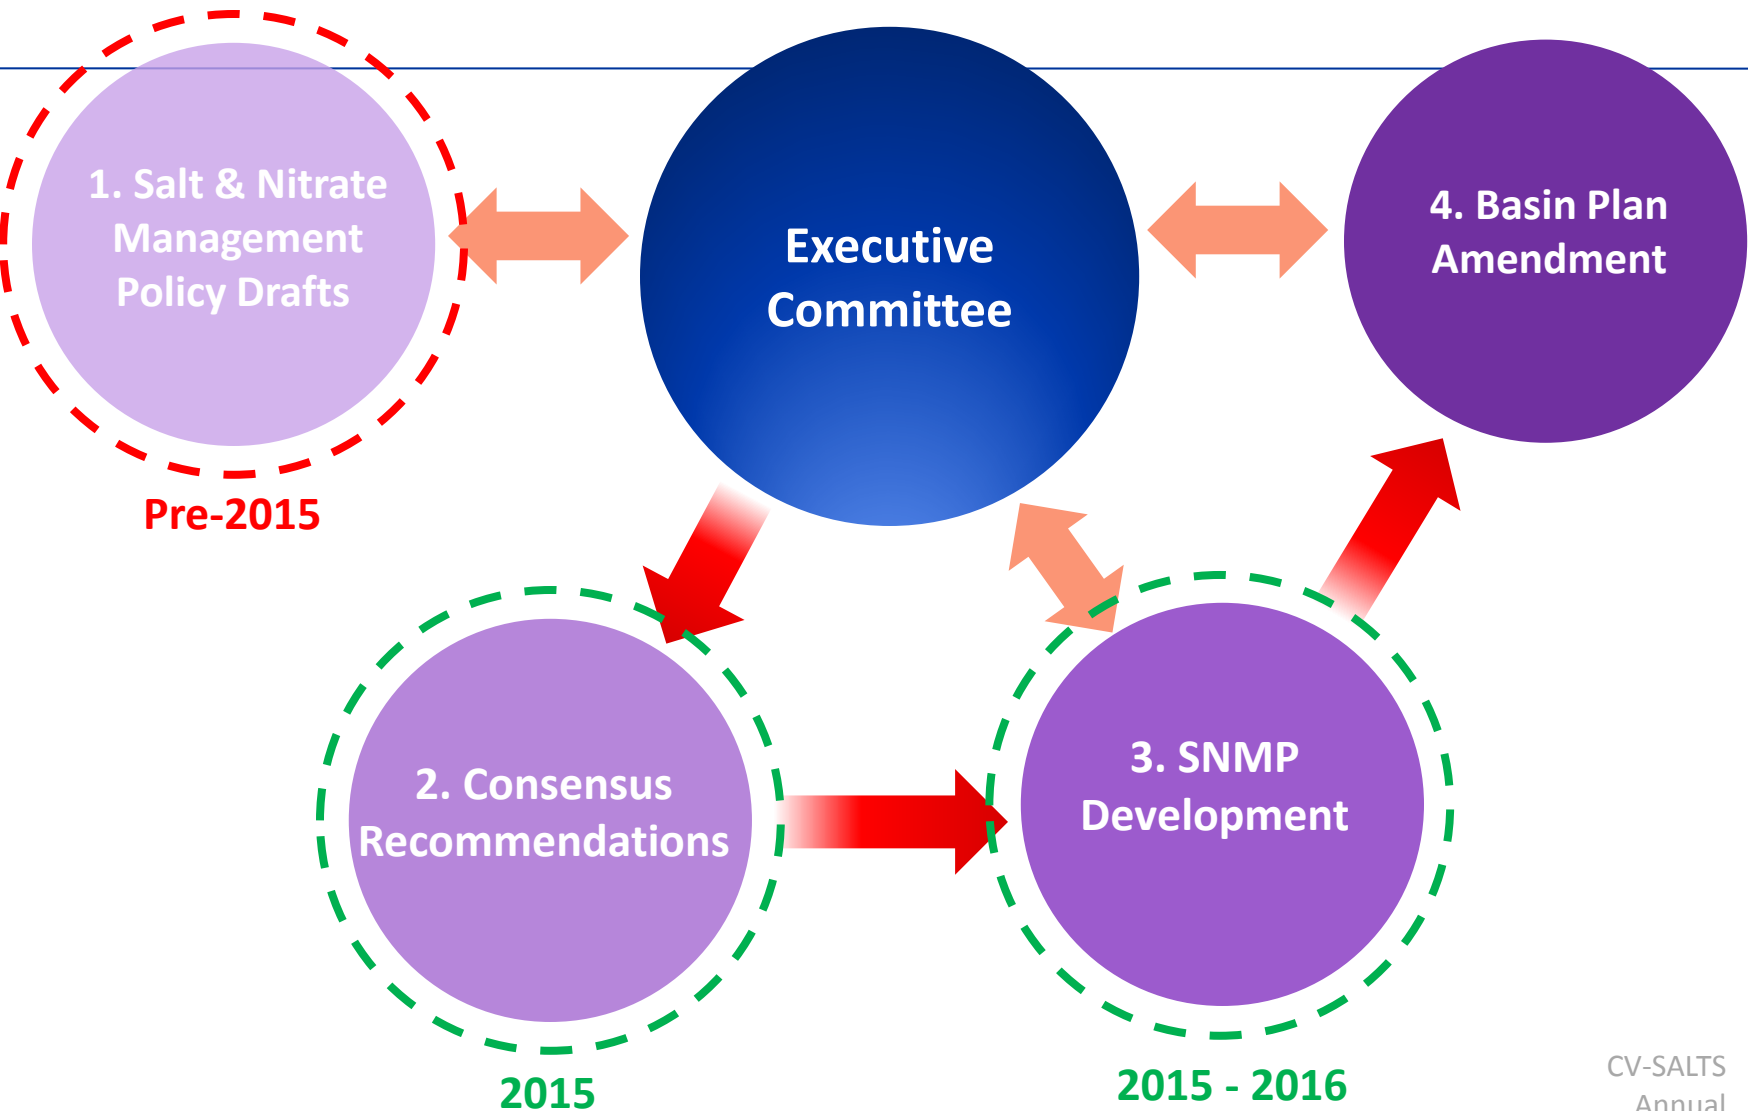

# Anticipated Outcomes

- Compliance with Recycled Water Policy
- Updated Central Valley Basin Plans
- Implemented Strategies that:
  - Address Nitrate Drinking Water Issues
  - Achieve Salt Sustainability

# Questions?

# Extra Slides

# Policy Discussion Process

# Policy Discussion Topics - 2015

## Near Final

- AGR – Agricultural Irrigation
  - “Limited AGR” use for high salinity groundwaters
  - Narrative objective translation procedure
- Application of Secondary MCLs to MUN
- Principles for calculating background water quality and assimilative capacity
- Alternative compliance strategies, e.g. alternate water supplies, offsets, etc.
- Benefits and limitations of existing regulations/policies that determine salt and nitrate management
- Evaluating BPTC, BMPs, and “best efforts”
- Maximum benefit guidance

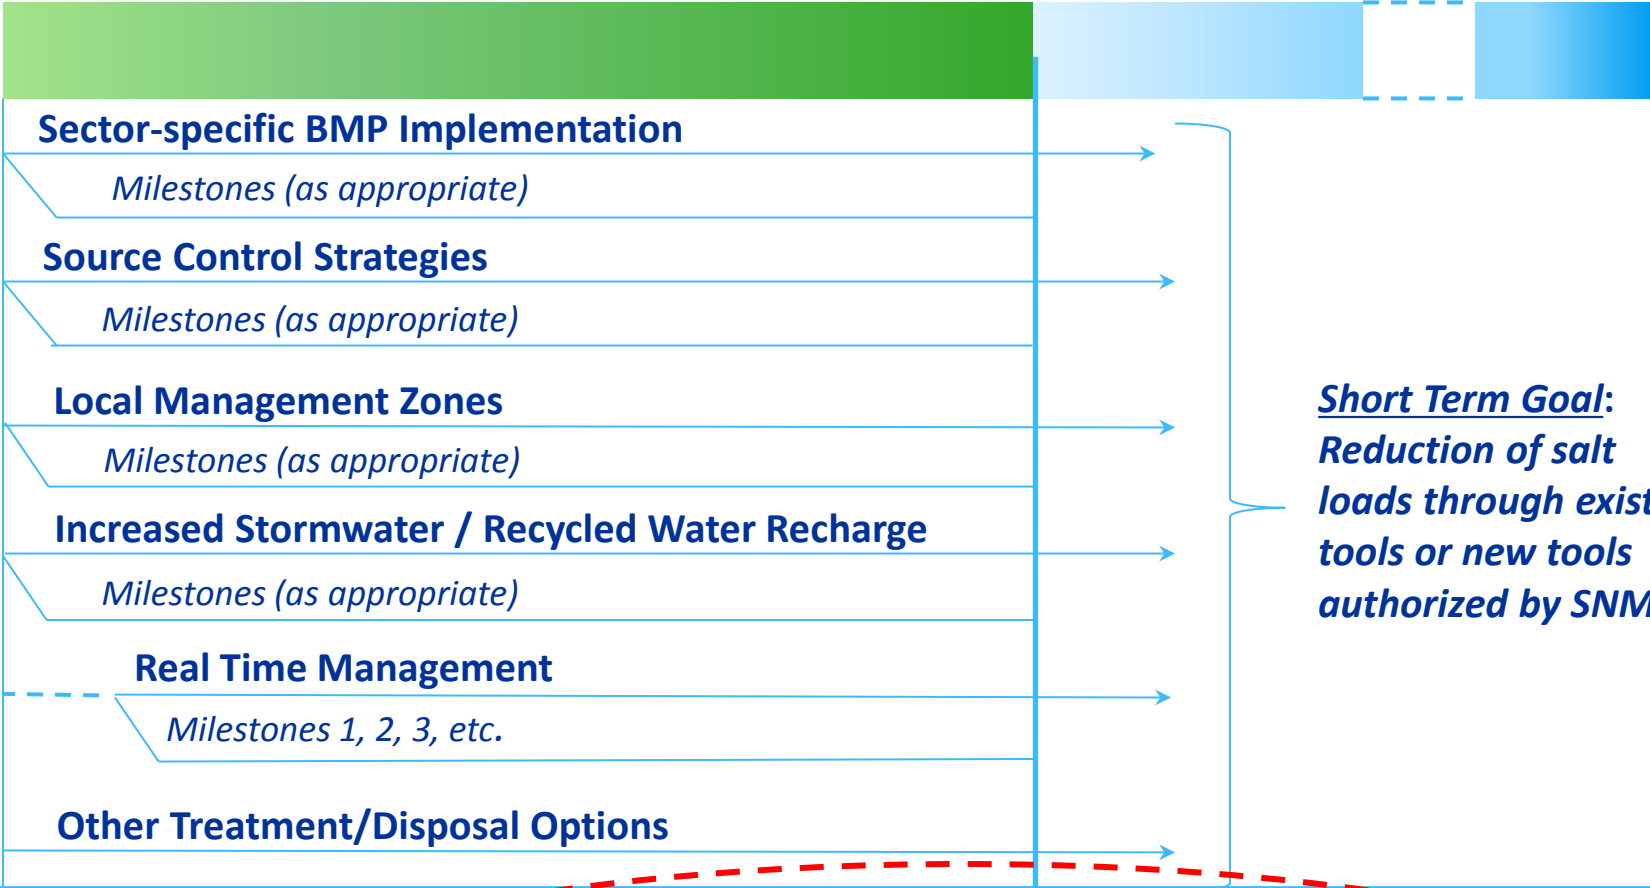

## Ongoing

- Water Quality Objectives
  - Consideration a “Limited-MUN” Use
  - Narrative objective for “General Constituents”
  - Salinity objectives for livestock watering
- Further delineation of surface water bodies and/or groundwater basins
- Methods to characterize trends in assimilative capacity and assess effect of discharge on available assimilative capacity
- Pollutant trading, offset programs and long-term compliance schedules in groundwaters
- Integrate SNMP with other state policies, e.g., conservation, stormwater harvesting, recycled water reuse, groundwater recharge, drought management

# Salt Management - Conceptual Phased Implementation

Short Term Phase: Years 1 - 20

Long Term Phase: Years 20 - 50

**Short Term Goal:**  
Reduction of salt loads through existing tools or new tools authorized by SNMP

**Long Term Goal:**  
Achieve salt balance, focusing on high priority areas first

Brine Line Development

Milestone 1, 2, 3, etc.

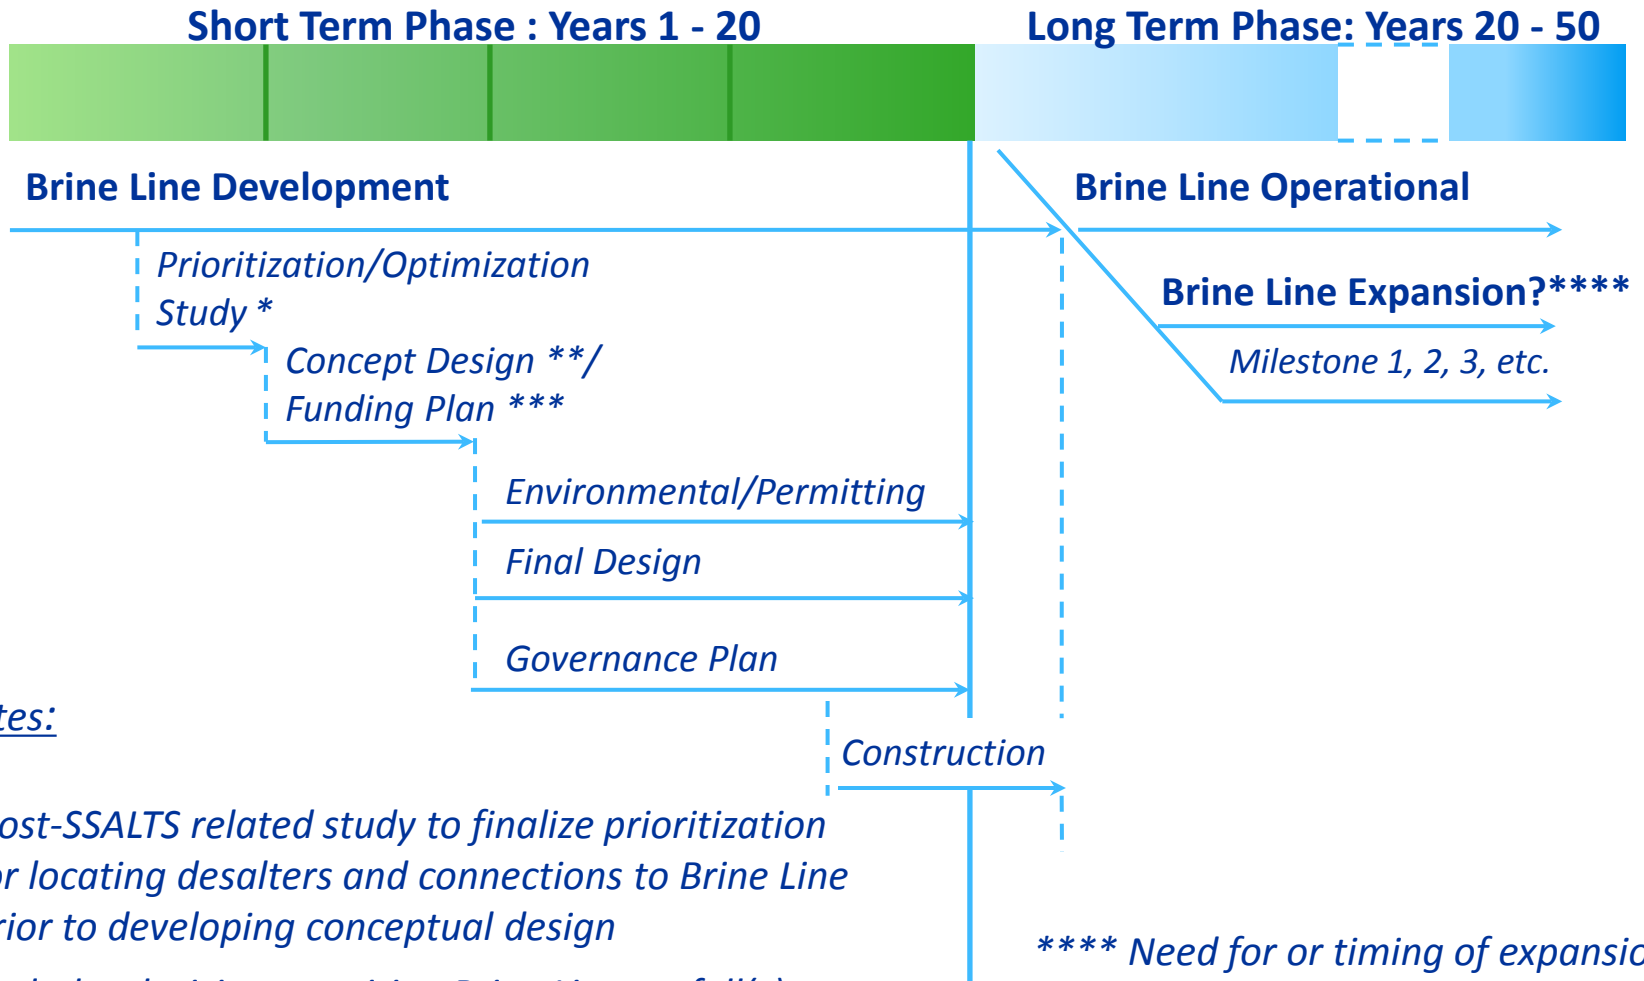

Brine Line Operational

Brine Line Expansion?

CV-SALTS  
Milestone 1, 2, 3, etc.

# Conceptual Phased Implementation of Brine Line with Example Milestones

Notes:

\* Post-SSALTS related study to finalize prioritization for locating desalters and connections to Brine Line prior to developing conceptual design

\*\* Includes decisions on siting Brine Line outfall(s)

\*\*\* Funding Plan explicitly confirms the existence of federal, state, local and permittee funding)

\*\*\*\* Need for or timing of expansion greatly dependent on original design
