Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## Work Order Narrative

---

Work Order: 16-09-0110

Page 1 of 1

---

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/02/16. They were assigned to Work Order 16-09-0110.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Detections Summary

Client: Geosyntec Consultants  
 924 Anacapa Street, Suite 4A  
 Santa Barbara, CA 93101-2177

Work Order: 16-09-0110  
 Project Name: CG Roxane / SB0794  
 Received: 09/02/16

Attn: Kevin Coffman

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

**Follow Up Flag:** Follow up  
**Flag Status:** Flagged

Good morning Tina,

I'm just Following up on our conversation from yesterday. For the sample were we had our 250 ml glass H<sub>2</sub>S<sub>04</sub> bottle break (phosphate I think) I believe, we can use additional volume from the 2x25ml glass or 2x1L Amber H<sub>2</sub>S<sub>04</sub> to run the broken bottle.

please note on the COC I need to make a correction. I had left the field for phosphate blank when the bottle broke. It needs to be filled in. My photo is unreadable so I can't send a revised COC. I will need a copy of the COC sent to Kevin Coffman for correction.

Michael

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## Work Order Narrative

---

Work Order: 16-09-0112

Page 1 of 1

---

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/02/16. They were assigned to Work Order 16-09-0112.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## SAMPLE ANOMALY REPORT

DATE: 09 / 02 / 2016

## **SAMPLES, CONTAINERS, AND LABELS:**

- Sample(s) NOT RECEIVED but listed on COC
  - Sample(s) received but NOT LISTED on COC
  - Holding time expired (list client or ECI sample ID and analysis)
  - Insufficient sample amount for requested analysis (list analysis)
  - Improper container(s) used (list analysis)
  - Improper preservative used (list analysis)
    - No preservative noted on COC or label (list analysis and notify lab)
  - Sample container(s) not labeled
  - Client sample label(s) illegible (list container type and analysis)
  - Client sample label(s) do not match COC (comment)
    - Project information
    - Client sample ID
    - Sampling date and/or time
    - Number of container(s)
    - Requested analysis
  - Sample container(s) compromised (comment)
    - Broken
    - Water present in sample container
  - Air sample container(s) compromised (comment)
    - Flat
    - Very low in volume
    - Leaking (not transferred; duplicate bag submitted)
    - Leaking (transferred into ECI Tedlar™ bags\*)
    - Leaking (transferred into client's Tedlar™ bags\*)

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## Work Order Narrative

Work Order: 16-09-0242

Page 1 of 1

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/03/16. They were assigned to Work Order 16-09-0242.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Page 1 of 1

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## Work Order Narrative

---

Work Order: 16-09-0478

Page 1 of 1

---

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/08/16. They were assigned to Work Order 16-09-0478.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

#### 4 Express Package Service

To most locations.

Packages up to 150 lbs.  
For packages over 150 lbs., use the  
FedEx Express Freight US Airbill.

#### Next Business Day

FedEx First Overnight  
Earliest next business morning delivery to select locations. Friday shipments will be delivered on Monday unless Saturday Delivery is selected.

FedEx Priority Overnight  
Next business morning.\* Friday shipments will be delivered on Monday unless Saturday Delivery is selected.

FedEx Standard Overnight  
Next business afternoon.\* Saturday Delivery NOT available.

#### 2 or 3 Business Days

FedEx 2Day A.M.  
Second business morning.\* Saturday Delivery NOT available.

FedEx 2Day  
Second business afternoon.\* Thursday shipments will be delivered on Monday unless Saturday Delivery is selected.

FedEx Express Saver  
Third business day.\* Saturday Delivery NOT available.

#### 5 Packaging

\* Declared value limit \$500.

FedEx Envelope\*  FedEx Pak\*  FedEx Box  FedEx Tube

Other

#### 6 Special Handling and Delivery Signature Options

Fees may apply. See the FedEx Service Guide.

Saturday Delivery  
NOT available for FedEx Standard Overnight, FedEx 2Day A.M., or FedEx Express Saver.

No Signature Required  
Package may be left without obtaining a signature for delivery.

Direct Signature  
Someone at recipient's address may sign for delivery.

Indirect Signature  
If no one is available at recipient's address, someone at neighboring address may sign for delivery. For residential deliveries only.

#### Does this shipment contain dangerous goods?

One box must be checked.

No  Yes As per attached Shipper's Declaration.  Yes Shipper's Declaration not required.  Dry Ice Dry Ice, UN 1845 \_\_\_\_\_ kg

Restrictions apply for dangerous goods — see the current FedEx Service Guide.

Cargo Aircraft Only

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## Work Order Narrative

---

Work Order: 16-09-0590

Page 1 of 1

---

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/09/16. They were assigned to Work Order 16-09-0590.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Glossary of Terms and Qualifiers

Work Order: 16-09-0590

Page 1 of 1

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## Work Order Narrative

---

Work Order: 16-09-0591

Page 1 of 1

---

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/09/16. They were assigned to Work Order 16-09-0591.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Sample Summary

Client: Geosyntec Consultants 924 Anacapa Street, Suite 4A Santa Barbara, CA 93101-2177	Work Order: Project Name: PO Number: Date/Time Received: Number of Containers:	16-09-0591 CG Roxane / SB0794  09/09/16 10:20  20
Attn: Kevin Coffman		

Sample Identification	Lab Number	Collection Date and Time	Number of Containers	Matrix
QCTB-04-090816	16-09-0591-1	09/08/16 00:00	2	Aqueous

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

\*To most locations.

Packages up to 150 lbs.  
For packages over 150 lbs., use the  
FedEx Express Freight US Airbill.

## Next Business Day

FedEx First Overnight  
Earliest next business morning delivery to select locations. Friday shipments will be delivered on Monday unless Saturday Delivery is selected.

FedEx Priority Overnight  
Next business morning.\* Friday shipments will be delivered on Monday unless Saturday Delivery is selected.

FedEx Standard Overnight  
Next business afternoon.\* Saturday Delivery NOT available.

## 2 or 3 Business Days

FedEx 2Day A.M.  
Second business morning.\* Saturday Delivery NOT available.

FedEx 2Day  
Second business afternoon. Thursday shipments will be delivered on Monday unless Saturday Delivery is selected.

FedEx Express Saver  
Third business day.\* Saturday Delivery NOT available.

## 5 Packaging

\*Declared value limit \$500.

FedEx Envelope\*  FedEx Pak\*  FedEx Box  FedEx Tube  Other

## 6 Special Handling and Delivery Signature Options

Fees may apply. See the FedEx Service Guide.

Saturday Delivery  
NOT available for FedEx Standard Overnight, FedEx 2Day A.M., or FedEx Express Saver.

No Signature Required  
Package may be left without obtaining a signature for delivery.

Direct Signature  
Someone at recipient's address may sign for delivery.

Indirect Signature  
If no one is available at recipient's address, someone at a neighboring address may sign for delivery. For residential deliveries only.

## Work Order Narrative

---

Work Order: 16-10-0502

Page 1 of 1

---

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 10/07/16. They were assigned to Work Order 16-10-0502.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## SAMPLE ANOMALY REPORT

DATE: 10 / 07 / 2016

**SAMPLES, CONTAINERS, AND LABELS:**

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired (list client or ECI sample ID and analysis)
- Insufficient sample amount for requested analysis (list analysis)
- Improper container(s) used (list analysis)
- Improper preservative used (list analysis)
- No preservative noted on COC or label (list analysis and notify lab)
- Sample container(s) not labeled
- Client sample label(s) illegible (list container type and analysis)
- Client sample label(s) do not match COC (comment)
  - Project information
  - Client sample ID
  - Sampling date and/or time
  - Number of container(s)
  - Requested analysis
- Sample container(s) compromised (comment)
  - Broken
  - Water present in sample container
- Air sample container(s) compromised (comment)
  - Flat
  - Very low in volume
  - Leaking (not transferred; duplicate bag submitted)
  - Leaking (transferred into ECI Tedlar™ bags\*)
  - Leaking (transferred into client's Tedlar™ bags\*)

\* Transferred at client's request.

**Comments**

(1) received container  
 for Dissolved Metals lab filtered  
 instead of Dissolved Metals  
 field filtered.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## Work Order Narrative

---

Work Order: 16-09-0766

Page 1 of 1

---

### **Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 09/12/16. They were assigned to Work Order 16-09-0766.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

### **Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

### **Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

### **Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

### **Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

<b>Qualifiers</b>	<b>Definition</b>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## SAMPLE RECEIPT CHECKLIST

**APPENDIX I**

**DATA VALIDATION SUMMARY**

**Crystal Geyser**  
**Stage 2A Data Validation Summary**

**10/13/16**

**Summary of the Stage 2A Data Validation of Eurofins Calscience Laboratory Reports 16-08-1807, Supplemental Report 1, 16-09-0004, 16-09-0242, 16-09-0110, 16-09-0112, 16-09-0478, 16-09-0590, 16-09-0591 and 16-10-0502**

Water samples associated with the laboratory reports referenced above were analyzed for volatile organic compounds (VOCs) by EPA methods 5030C/8260B, semivolatile organic compounds (SVOCs) by EPA methods 3510C/8270C, calcium, magnesium and sodium by EPA method 200.7, total and dissolved metals (including mercury) by EPA methods 3020A/3005A/6020 and 7470A, total alkalinity and bicarbonate alkalinity as CaCO<sub>3</sub> by Standard Method 2320B, ammonia nitrogen by Standard Method 4500-NH3 B/C, nitrate-nitrite as N by Standard Method 4500-NO3 E, anions (chloride and sulfate) by EPA method 300.0, total phosphorus by Standard Method 4500 B/E, total phosphate by Standard Method 4500 B/E, total kjeldahl nitrogen (TKN) by Standard Method 4500-N Org B, total nitrogen by calculation, total dissolved solids (TDS) by Standard Method 2540 C and surfactants (methylene blue active substances, MBAS) by Standard Method 5540C.

Solid samples in laboratory report 16-08-1807, Supplemental Report 1 were analyzed for total and dissolved California (CA) Title-22 metals (CAM-17) metals by EPA methods 3050B/6010B and 7471A, SVOCs by EPA methods 3545/8270C and VOCs by EPA methods 5030C/8260B.

The samples were analyzed by Eurofins/Calscience, Garden Grove, California.

The data were validated at an EPA Stage 2A data validation level, based on the USEPA National Functional Guidelines for Superfund Organic Methods Data Review, August 2014 (EPA 540-R-014-002), USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, August 2014 (EPA 540-R-013-001), as well as by the pertinent methods referenced by the data package and professional and technical judgment.

Based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives, with the following exceptions.

The nondetect results of VOCs in samples SS-01-160823 and SS-02-160823 are R qualified as rejected, based on professional and technical judgment and gross exceedance (more than two times) of the VOC extraction holding time of 48 hours.

Due to matrix spike/matrix spike duplicate (MS/MSD) recoveries less than 20%, the nondetect result of vinyl acetate in sample SS-02-160823 was R qualified as rejected.

The remaining qualified data should be used within the limitations of the qualifications.

The chain of custody (COC) forms in the reports did not list total nitrogen; however, this analysis was reported.

The COCs in reports 16-09-0478, 16-09-0590 and 16-09-0591 did not list collection times for the trip blanks. The laboratory assigned collection times of 00:00 to these trip blanks.

The COC in report 16-08-1807, Supplemental Report 1 listed only metals analyses for the solid samples. Additional analyses (VOCs and SVOCs) were reported for the solid samples, based on email communications from the client included in the laboratory report.

There were two copies of the COCs in reports 16-09-0004 and 16-09-0478. The second copy in report 16-09-0004 was corrected to remove 'lab-filtered' from the total metals request for analysis. The second copy in report 16-09-0478 was unreadable.

The Calscience sample receipt checklist in report 16-09-0004 indicated that the aliquots for total metals for samples MW-14-W-18.5-160830 and MW-15-W-24-160830 were received unpreserved. Additional information from the laboratory indicated that acid was added to these two samples and they were digested more than 24 hours after the acid addition. The pH of these two samples at digestion were <2. No qualifications were applied to the data.

The Calscience sample anomaly form in report 16-09-0110 indicated that the 1-liter SVOC bottle for sample MW-03-090116 was received broken; therefore, SVOCs were not reported for this sample. In addition, broken bottles were received for samples MW-15-090116 (total phosphate) and QCTB-090116-2 (VOCs). Additional bottles were available for these two samples and the results were reported. In addition, the COC did not indicate total phosphate analysis of sample MW-03-090116. An email from the client requesting total phosphate analysis of this sample was included in the laboratory report.

The Calscience sample anomaly form in report 16-09-0478 indicated that an equipment blank was collected with the samples, but not listed on the COC, QCEB-02-090616. The equipment blank was analyzed for the full suite of water analyses.

The Calscience sample anomaly form in report 16-09-0590 indicated that one vial of sample MW-11-090816 was received broken. Sufficient volume for this sample was available for the analyses requested.

Incorrect error corrections were performed on the COCs in reports 16-08-1807, Supplemental Report 1 and 16-09-0110, instead of single line through, initialing and dating the corrections.

The samples were prepared and analyzed within the method specified holding times, with the following exceptions.

The VOCs soil analyses for the samples in report 16-08-1807, Supplemental Report 1, were requested and prepared six days after sample collection. Therefore, based on professional and technical judgment and gross exceedance (more than two times) of the VOC extraction holding time of 48 hours, the nondetect results of VOCs in samples SS-01-160823 and SS-02-160823 were R qualified as rejected.

The MBAS analyses of samples MW-09-090716 and MW-13-090716 were performed several hours outside the 48-hour holding time. Therefore, based on professional and technical judgment, the

nondetect results of MBAS in these two samples were UJ qualified as estimated less than the reporting limit (RL).

The results for the laboratory method blanks, equipment blanks, trip blanks, laboratory control samples (LCSs), LCS/LCS duplicate (LCSD) pairs, MS/MSD pairs, laboratory duplicates and surrogates were within the laboratory specified acceptance criteria, with the following exceptions.

An MS/MSD was reported for mercury using sample B-02-W-15.5-160823-DUP. The relative percent difference (RPD) result was high and outside the laboratory specified acceptance criteria. Therefore, the concentration of mercury in sample B-02-W-15.5-160823-DUP was J qualified as estimated.

An MS/MSD was reported for VOCS using sample SS-02-160823. One or both of the recoveries of the following compounds were low and outside the laboratory specified acceptance criteria: Bromobenzene, n-butylbenzene, 4-chlorotoluene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,2-dichloropropane, naphthalene, 1,2,3-trichlorobenzene and 1,2,4-trichlorobenzene. Therefore, the nondetect results of these compounds in sample SS-02-160823 were UJ qualified as estimated less than the RLs. The MS/MSD recoveries of vinyl acetate were 7% and 1%, both outside the laboratory specified acceptance criteria and less than 20%. Therefore, the nondetect result of vinyl acetate in sample SS-02-160823 was R qualified as rejected. The MSD recovery and RPD of acetone were high and outside the laboratory specified acceptance criteria. Since acetone was not detected in sample SS-02-160823, no qualifications were applied to the data.

The LCS recovery of vinyl acetate in batch 160830L005 was low and outside the laboratory specified acceptance criteria. Therefore, the nondetect results of vinyl acetate in the associated samples were UJ qualified as estimated less than the RLs.

An MS/MSD was reported for chloride and sulfate using sample MW-03-090116. The chloride recoveries were low and outside the laboratory specified acceptance criteria. Therefore, based on professional and technical judgment, the concentration of chloride in this sample was J- qualified as estimated with a low bias.

The LCS/LCSD recoveries of 3,3-dichlorobenzidine in batches 160909L01 and 160912L01 were high and outside the laboratory specified acceptance criteria. Since this compound was not detected in the associated samples, no qualifications were applied to the data.

An MS/MSD was reported for chloride and sulfate using sample MW-09-090716. The sulfate recoveries were high and outside the laboratory specified acceptance criteria. Therefore, based on professional and technical judgment, the concentration of sulfate in this sample was J+ qualified as estimated with a high bias.

The LCS recovery of bromoform was low and outside the laboratory specified acceptance criteria in batch 160910L024. Therefore, based on professional and technical judgment, the nondetect results of bromoform in the associated samples were UJ qualified as estimated less than the RL.

The LCS recovery of vinyl acetate was low and outside the laboratory specified acceptance criteria in batch 160909L045. Therefore, based on professional and technical judgment, the nondetect results of vinyl acetate in the associated samples were UJ qualified as estimated less than the RL.

The LCS recovery of pyridine was low and outside the laboratory specified acceptance criteria in batch 161007L11A. Therefore, based on professional and technical judgment, the nondetect result of pyridine in the associated sample was UJ qualified as estimated less than the RL.

LCSs were not analyzed with the TKN data. Therefore, based on professional and technical judgment and no accuracy data, the concentrations of TKN in the samples were J qualified as estimated and the nondetect results were UJ qualified as estimated less than the RL.

An equipment blank was collected on 9/6/16 and reported in lab report 16-09-0478. Sodium was detected at a concentration greater than the RL, 0.882 mg/L. Since the sodium concentrations in the associated samples were greater than ten times the equipment blank concentration, no qualifications were applied to the sodium data.

An equipment blank was collected on 9/7/16 and reported in lab report 16-09-0590. Calcium and magnesium were detected at concentrations greater than the RLs, 2.35 mg/L and 0.224 mg/L, respectively. Therefore, the concentrations of calcium and magnesium in the associated samples greater than the equipment blank concentrations and less than ten times the equipment blank concentrations were J+ qualified as estimated with high biases; the concentrations of calcium in the associated samples greater than the RL and less than the equipment blank concentration were U qualified as not detected at the reported concentrations.

It was noted that equipment blanks were not collected with the samples in reports 16-08-1807, Supplemental Report 1 and 16-09-0004.

The total metals concentrations were greater than the dissolved metals concentrations, with the following exceptions.

Dissolved antimony was detected in samples MW-15-W-24-160830, MW-12-W-11.5-160829 and MW-12-W-8-160829 and total antimony was not detected. Dissolved vanadium and zinc were detected in sample MW-14-W-18.5-160830 and total vanadium and zinc were not detected. The laboratory noted that the total metals analyses were reported from 1:10 dilutions of these samples due to matrix interferences; the dissolved metals analyses were reported from undiluted samples. Therefore, the nondetect total antimony, vanadium and zinc results in the samples were elevated due to dilutions to concentrations greater than the dissolved metals concentrations. No qualifications were applied to the data, based on professional and technical judgment.

Dissolved antimony was detected sample MW-15-W-14-160830 and total antimony was not detected. Therefore, based on professional and technical judgment, the concentration of dissolved antimony was J qualified as estimated and the nondetect result of total antimony was UJ qualified as estimated less than the RL in sample MW-15-W-14-160830.

The total molybdenum concentration in sample MW-14-W-18.5-160830 was less than the dissolved molybdenum concentration. Therefore, due to an RPD >30% and professional and technical judgment, the total and dissolved molybdenum concentrations in sample MW-14-W-18.5-160830 were J qualified as estimated.

The total zinc concentration in sample MW-03-090116 was less than the dissolved zinc concentrations. No qualifications were applied to the data, since the RPD between the results was less than 30%.

The total antimony, arsenic and molybdenum concentrations in samples MW-04-090816 and MW-04-090816-DUP were less than the dissolved antimony, arsenic and molybdenum concentrations. The total arsenic, molybdenum and vanadium concentrations in sample MW-05-090816 were less than the dissolved arsenic, molybdenum and vanadium concentrations. The total arsenic concentration in sample MW-08-090716 was less than the dissolved arsenic concentration. The total arsenic, molybdenum, nickel and vanadium concentrations in sample MW-13-090716 were less than the dissolved arsenic, molybdenum, nickel and vanadium concentrations. No qualifications were applied to the data for these samples, since the RPDs between the results were less than 30%.

The total arsenic, barium, molybdenum and zinc concentrations in sample MW-10-20161006 were less than the dissolved arsenic, barium, molybdenum and zinc concentrations. No qualifications were applied to the data for this sample, since the RPDs between the results were less than 30%.

Three field duplicates, B-02-W-15.5-160823-DUP, MW-04-090816-DUP and OW-8US-090616-DUP, were collected with the samples in reports 16-08-1807, Supplemental Report 1, 16-09-0590 and 16-09-0478. Acceptable precision (relative percent difference, RPD  $\leq$ 30%) was demonstrated between the field duplicates and the original samples, B-02-W-15.5-160823, MW-04-090816 and OW-8US-090616-DUP, respectively, with the following exceptions.

The RPDs for dissolved antimony, vanadium and zinc in field duplicate pair B-02-W-15.5-160823/B-02-W-15.5-160823-DUP were greater than 30%. Therefore, based on professional and technical judgment, the concentrations of dissolved antimony, vanadium and zinc in this field duplicate pair were J qualified as estimated.

Dissolved zinc was detected in the original sample but not in the field duplicate in field duplicate pair MW-04-090816/MW-04-090816-DUP, resulting in a non-calculable RPD between the results. Therefore, based on professional and technical judgment, the concentration of dissolved zinc was J qualified as estimated and the non-detect result was UJ qualified as estimated less than the RL in the field duplicate pair.

Dissolved selenium was detected in the field duplicate but not in the original sample in field duplicate pair OW-8US-090616/OW-8US-090616-DUP, resulting in a non-calculable RPD between the results. Therefore, based on professional and technical judgment, the concentration of dissolved selenium was J qualified as estimated and the non-detect result was UJ qualified as estimated less than the RL in the field duplicate pair.

**DATA QUALIFIER DEFINITIONS**

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

**Stage 2A Data Validation Summary**

**10/3/16**

**Summary of the Stage 2A Data Validation of BC Laboratories Work Orders 1624332, 1624806, 1625015 and 1625972**

The water samples were analyzed for total coliform and fecal coliform by Standard Methods 9221B and 9221E by BC Laboratories, Inc., Bakersfield, California.

The data were validated at an EPA Stage 2A data validation level. The data were reviewed based on USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, August 2014 (EPA 540-R-013-001), as well as by the pertinent method referenced by the data package and professional and technical judgment.

Based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data are usable for meeting project objectives.

The chain of custody (COC) forms were not included in the laboratory reports; copies of the COCs sent to the laboratory were sent by the client to the data validator.

The samples were analyzed within the 24-hour holding time specified by the method for non-potable water for non-compliance purposes.

The positive and negative control results were not included in the laboratory reports; they were sent by the client to the data validator. The results were within the laboratory specified acceptance criteria.

Two field duplicate samples, OW-8US-090716-DUP and MW-04-090816-DUP, were collected with the samples in reports 1624806 and 1625015, respectively. Acceptable precision (relative percent difference, RPD  $\leq$ 30%) was demonstrated between the field duplicates and the original samples, OW-8US-090716 and MW-04-090816, respectively. The RPDs between the results were 0%.

**Crystal Geyser**  
**Stage 2A Data Validation Summary**

**10/3/16**

**Summary of the Stage 2A Data Validation of Eurofins Calscience Laboratory Report 16-09-0766**

Air samples associated with the laboratory report referenced above were analyzed for volatile organic compounds (VOCs) by EPA method TO-15. The samples were analyzed by Eurofins/Calscience, Garden Grove, California.

The data were validated at an EPA Stage 2A data validation level and were reviewed based on the USEPA National Functional Guidelines for Superfund Organic Methods Data Review, August 2014 (EPA 540-R-014-002), as well as by the pertinent method referenced by the data package and professional and technical judgment.

Based on this Stage 2A data validation covering the quality control (QC) parameters listed below, the data as qualified are usable for meeting project objectives. Qualified data should be used within the limitations of the qualification.

The samples were analyzed within the method specified holding time.

The results for the laboratory method blanks, laboratory control samples/laboratory control sample duplicate (LCS/LCSD) pairs and surrogates were within the laboratory specified acceptance criteria.

A field duplicate sample, SV-01-5-083016-DUP, was collected. Acceptable precision (relative percent difference, RPD  $\leq 30\%$ ) was demonstrated between the field duplicate and the original sample, SV-01-5-083016, with the following exceptions.

The RPD for acetone was  $>30\%$ . Therefore, based on professional and technical judgment, the concentrations of acetone in the field duplicate pair were J qualified as estimated. In addition, 2-butanone, trichloroethene and vinyl acetate were detected in one sample, but not in the other in the field duplicate pair, resulting in noncalculable RPDs between the results. Therefore, based on professional and technical judgment, the concentrations of these compounds were J qualified as estimated and the non-detect results were UJ qualified as estimated less than the RLs.
