### **Notifications**

#### **A. Public Participation 30-day Notice**

The Regional Board intends to issue a no further action letter for remediation of an unauthorized release of petroleum fuel wastes from a leaking underground storage tank (UST) at Building 33360 at Marine Corps Base Camp Pendleton, California. This notification is made pursuant to California Code of Regulations, Title 23, Chapter 16, Article 11, section 2728. UST site 33360 is an active gasoline station where soil was contaminated by gasoline due to a piping leak. In October 2008, approximately 475 cubic yards of gasoline-impacted soil was excavated. Confirmation soil samples indicate that about 3.5 cubic yards of gasoline-impacted soil remain in place. No petroleum hydrocarbon fuel wastes were detected in groundwater at levels above their respective detection limits. The residual concentrations of fuel constituents do not appear to pose a threat to human health or the environment and the unauthorized release case may be closed. Additional details about this UST case are available from the GeoTracker website at: [https://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0607302086](https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0607302086) Provided no significant issues arise during the public notification period the Regional Board will issue a no further action letter in January 2010. (Helen Yu)

#### **B. Public Participation 30-day Notice**

The Regional Board intends to issue a no further action letter for remediation of an unauthorized release of petroleum fuel wastes from a leaking underground storage tank (UST) at Building 21578 at Marine Corps Base Camp Pendleton, California. This notification is made pursuant to California Code of Regulations, Title 23, Chapter 16, Article 11, section 2728. UST site 21578 is located in an area where groundwater has no designated beneficial uses (Water Quality Control Plan for the San Diego Region, 1994). Results of site investigations indicate that petroleum hydrocarbon fuel waste remain in soil and groundwater. No non-aqueous phase fuel waste was found at the site. Based upon the relatively small extent of soil and groundwater contamination the residual concentrations of fuel constituents do not appear to pose a significant threat to human health or the environment under current site conditions and the unauthorized release case may be closed. Additional details about this UST case are available from the GeoTracker website at: [https://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0607301574](https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0607301574) Provided no significant issues arise during the public notification period the Regional Board will issue a no further action letter in January 2010.
