1.0 EXECUTIVE SUMMARY

1.1 INTRODUCTION

This Executive Summary has been prepared according to the California Environmental Quality Act (CEQA) Guidelines Section 15123 for the Environmental Impact Report (EIR) for the Shipyard Sediment Remediation Project. This EIR has been prepared by the San Diego Water Board to analyze the proposed project's potential impacts on the environment, to discuss alternatives, and to propose mitigation measures for identified potentially significant impacts that will minimize, offset, or otherwise reduce or avoid those environmental impacts.

1.2 SUMMARY OF PROJECT DESCRIPTION

The proposed Shipyard Sediment Remediation Project (proposed project) is the dredging of sediment adjacent to shipyards in the San Diego Bay; the dewatering, solidification of the dredged material (onshore or on a barge); the potential treatment of decanted water (anticipated disposal to the sanitary sewer system); and the transport of the removed material to an appropriate landfill for disposal. The study area for the sediment removal project is located along the eastern shore of central San Diego Bay, extending approximately from the Sampson Street Extension on the northwest to Chollas Creek on the southeast, and from the shoreline out to the San Diego Bay main shipping channel to the west.

The San Diego Water Board stipulated that several agencies and/or parties caused or permitted the discharge of waste to the Shipyard Sediment Remediation Site that has resulted in the accumulation of waste in the marine sediment. The contaminated marine sediment has caused conditions of contamination or nuisance in San Diego Bay that adversely affect aquatic life, aquatic-dependent wildlife, human health, and San Diego Bay beneficial uses.

The purpose of the project is to implement a Tentative Cleanup and Abatement Order (CAO) issued by the California Regional Water Quality Control Board, San Diego Region (hereinafter referred to as the San Diego Water Board). The Tentative CAO established alternative cleanup levels for the project that are the lowest technologically and economically achievable levels as required under California Code of Regulations (CCR) Title 23 section 2550.4(e).

1.3 ALTERNATIVES

The following four alternatives to the proposed project were selected for consideration, as required by CEQA:

- **Alternative 1:** No Project/No Development
- **Alternative 2:** Confined Aquatic Disposal (CAD) Site
- **Alternative 3:** Convair Lagoon Confined Disposal Facility (CDF)
- **Alternative 4:** CDF with Beneficial Use of Sediments

Please see Chapter 5.0 for more information regarding the proposed alternatives.

1.4 AREAS OF CONTROVERSY

Pursuant to State CEQA Guidelines Section 15123, this EIR acknowledges the areas of controversy and issues to be resolved that are known to the San Diego Water Board or were raised during the scoping process.

Issues and concerns raised at the scoping meeting held on January 21, 2010, and comments submitted in writing during the Notice of Preparation (NOP) process included: (1) concerns regarding disproportionate impacts to low-income and/or minority communities (environmental justice); (2) release of contaminants during the cleanup activities and the effects to marine biological resources; (3) additional information regarding a confined aquatic disposal alternative; and (4) question about the need for an EIR for a CAO. The Draft EIR addresses each of these areas of concern in detail.

Environmental justice is addressed in Appendix H and in each of the topical sections included in Chapter 4.0. The potential for release of contaminants during the cleanup activities is addressed in Sections 4.2, Hydrology and Water Quality; Section 4.3, Hazards and Hazardous Materials; and Section 4.5, Biological Resources. Additional information regarding a confined aquatic disposal alternative is included in Chapter 5.0 of this EIR. Although the IS had anticipated that the EIR would not further evaluate a CAD alternative, one has been included (Alternative 2) and evaluated in this Draft EIR in response to this comment on the NOP. Although one of the shipyards questioned the need for an EIR for the Tentative CAO, the San Diego Water Board has determined that the proposal under consideration is a “project” as defined by CEQA Guidelines section 15180, that the undertaking may have a significant impact on the environment, and that that an EIR must be prepared.

If the EIR is certified, the San Diego Water Board may choose to approve the proposed project or one of the alternatives. If the San Diego Water Board approves the proposed project, or one of the alternatives, a determination may be made at that time or in the future with regard to the most appropriate staging area site for the sediment removal.

1.5 SUMMARY OF IMPACTS AND MITIGATION MEASURES

Table 1.A identifies the project environmental impacts, a significance determination, proposed mitigation measures, and level of significance after mitigation is incorporated into the project. Table 1.A also identifies cumulative impacts resulting from the proposed project in conjunction with the related cumulative projects. Environmental topics addressed in this EIR include: Transportation and Circulation, Hydrology and Water Quality, Hazards and Hazardous Materials, Noise, Biological Resources, Air Quality, and Climate Change and Greenhouse Gas (GHG) Emissions.

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
TRAFFIC AND CIRCULATION			
Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.	With the implementation of project traffic for Staging Areas 1 through 4, significant impacts are forecast at the Interstate 5 (I-5) southbound ramp/Boston Avenue intersection and the roadway segment of Boston Avenue between 28th Street and the I-5 southbound ramp.	4.1.1: Should one or more of Staging Areas 1 through 4 be selected, the contractor shall require, and the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall verify, that the project-related truck traffic is routed on Harbor Drive (southbound) to the Civic Center Drive access to Interstate 5 (I-5) for the duration of the dredge-and-haul activity. Haul, delivery, and employee traffic shall be discouraged at the I-5 southbound ramp/Boston Avenue intersection and on the roadway segment of Boston Avenue between 28th Street and the I-5 southbound ramp.	Less than significant
	If existing parking areas are used for the dewatering and treatment of sediment, the displacement of parking could result in a shortage of parking needed for employees in these areas.	4.1.3: Should one or more of Staging Areas 1 through 4 be selected, the responsible parties, in consultation with the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board), San Diego Unified Port District (Port District), and City of	Less than significant

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>San Diego, shall prepare a Parking Management Plan (PMP) to identify appropriate substitute parking areas, shuttles, and commuter routes, as necessary, to meet the need created by the short-term loss of employee parking spaces. The need for off-site parking shall be based on anticipated employment during the dredge period (which may be reduced compared to existing conditions as a result of the dredge activity displacing some ship building/repair activity), and the loss of parking in the selected staging area. The PMP shall be approved by the City of San Diego Traffic Engineer prior to the initiation of dredging, and its implementation shall be verified by the San Diego Water Board.</p>	
<p>Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand</p>	<p>The project trip generation is below the Congestion Management Plan (CMP) trip generation thresholds. In addition, the proposed project is for the dredge, treatment, and removal of sediment,</p>	<p>No mitigation is required.</p>	<p>Less than significant</p>

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
measures, or other standards established by the county congestion management agency for designated roads or highways.	and will not result in any long-term changes to shipyard operations or operational traffic impacts. Therefore, the proposed project will not conflict with the applicable CMP.		
Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.	The project would not result in a permanent change to air traffic patterns.	No mitigation is required.	Less than significant
Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).	The dredge, treatment, and transport of sediment does not include any operational changes to the shipyard or other facilities, or long-term improvements to circulation or transportation facilities, and would not create hazardous conditions related to transportation design features.	No mitigation is required.	Less than significant
Result in inadequate emergency access.	The proposed project traffic will use existing streets that currently experience truck traffic as a result of port industrial and marine uses in the area. No temporary or permanent street closures are required. As noted in the	No mitigation is required.	Less than significant

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
	Initial Study (IS), there would be no change to existing emergency access routes.		
Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.	Bayshore Bikeway Segment 5 could be implemented prior to or during the active dredge period, and there is the potential for project-related tuck trips to interfere with the implementation and/or operation of the bikeway.	4.1.2: Should Staging Area 5 be selected, the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall consult with the San Diego Association of Governments (SANDAG) and the San Diego Unified Port District (Port District) on the implementation status of Segment 5 of the Bayshore Bikeway in order to locate the staging activity away from the planned bike path. The consultation shall include information regarding the specific location, configuration, and operation of the temporary staging area, as well as appropriate bikeway safety and access considerations. If Staging Area 5 is selected, the contractor shall implement the staging area as agreed to by the agencies.	Less than significant

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
Cumulative Traffic Impacts	Cumulative projects are not expected to use the same haul routes as the proposed project.	No mitigation is required.	Less than significant
HYDROLOGY AND WATER QUALITY			
Violate any water quality standards or waste discharge requirements.	The project activities could degrade water quality by introducing sediments and contaminants into the water column that could increase turbidity and degrade acceptable levels of habitat quality for organisms in the water column. In addition, the primary and secondary constituents of concern could be released when bed sediments are suspended in the water column.	4.2.1: During dredging operations, the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall verify that the contractor/dredge operator is using automatic rather than manual monitoring of the dredging operations, which will allow continuous data logging with automatic interpretation and adjustments to the dredging operations for real-time feedback for the dredge operator. Automatic systems shall also be used to monitor turbidity in the vicinity of the dredging operations to facilitate real-time adjustments by the dredging operators to control temporary water quality effects. The automatic systems shall include threshold level alarms so that the operator or other appropriate project personnel recognize that a particular system within the	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>operation has failed. If the threshold-level alarms are activated, the dredge operator shall immediately shut down or modify the operations to reduce water quality constituents to within threshold levels. The San Diego Water Board shall further verify that the contractor/dredge operator is using visual monitoring and recording of water turbidity during the dredging operations, including the temporary cessation of dredging if exceedances of the turbidity objective in the Basin Plan occur. Water quality sampling for contaminants of concern (COCs) shall be required if silt curtains are not deployed during any phase of the in-water activities.</p> <p>4.2.2: During dredging operations, the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall verify that the dredge contractor is implementing</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>standard Best Management Practices (BMPs) for minimizing resuspension, spillage, and misplaced sediment during dredging operations, as the deposition of such material would increase turbidity and compromise cleanup efforts. Such BMPs shall include, but not be limited to, the following:</p> <ul style="list-style-type: none"> • The contractor shall not stockpile material on the bottom of the San Diego Bay floor and shall not sweep or level the bottom surface with the bucket. • The contractor shall use and maintain double silt curtains that encircle the area of dredging and shall minimize the times in which these curtains are temporarily opened, to contain suspended sediments. • The contractor may use air curtains in conjunction with silt curtains to contain re-suspended sediment, to 	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>enhance worker safety, and allow barges to transit into and out of the work area without the need to open and close silt curtain gates.</p> <ul style="list-style-type: none"> • The contractor shall ensure the environmental clamshell bucket is entirely closed when withdrawn from the water and moved to the barge. This action requires extra attention when debris is present to make sure debris does not prevent the bucket from completely closing. Two closure switches shall be on each side of the bucket near the top and bottom to provide an electrical signal to the operator that the bucket is closed. Use of the switches shall minimize the potential of sediment leaking from the bucket into the water column during travel to the surface. • The contractor shall not overfill the digging bucket because overfill 	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>results in material overflowing back into the water. Use of instrumentation such as Clam Vision[®] shall allow the operator to visualize in real time the depth of cut that shall be designed to prevent overflowing.</p> <ul style="list-style-type: none"> The contractor shall utilize wide-pocket material barges having watertight containments to prevent return water from re-entering San Diego Bay. The contractor shall not overfill the material barge to a point where overflow or spillage could occur. Each material barge shall be marked in such a way to allow the operator to visually identify the maximum load point. The marking should allow sufficient interior freeboard to prevent spillage in rough water such as ship wakes during transit. Initiating the material barge marking shall minimize impact of load spillage 	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>during transit to the unloading area.</p> <ul style="list-style-type: none"> • The contractor shall not use weirs as a means to dewater the scow and shall allow additional room for sediment placement. Preventing this action shall minimize the introduction of turbidity to the water column. • The contractor shall place material in the material barge such that splashing or sloshing does not occur, which could send sediment back into the water. Splashing can be controlled by restricting the drop height from the bucket. • If the use of a grate to collect debris is required, the contractor shall not allow material to pile up on the grid and flow or slip from the grid back into the water. The debris scalper shall be positioned in such a way as to be totally contained on the shore side of the unloading operations. 	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>The dredge operator shall visually monitor for debris build-up and alert the support personnel on the barge to assist in clearing the debris, as necessary. Debris that is derived from dredging activities shall be removed from the grate by the environmental clamshell bucket and placed in a contained area on the dredge barge or in a second material barge for subsequent removal to the onshore dewatering facility.</p> <ul style="list-style-type: none"> The contractor shall restrict barge movement and work boat speeds (i.e., reducing propeller wash) in the dredge area. The remedial design should identify the various areas where this operational control should be used. <p>4.2.3: During dredging operations, the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall verify that the contractor is deploying inner- and outer-</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		boundary floating silt curtains fully around the dredging area at all times. Double silt curtains shall be utilized for containment of the dredge area; configurations, technologies, and actual locations of silt curtains in relation to the dredge barge shall be finalized during the design phase of the project. The floating silt curtain shall be comprised of connected lengths of Type III geotextile fabric. A continuous length of floating silt curtain shall be arranged to fully encircle the dredging equipment and the scow barge being loaded with sediment. The silt curtain shall be supported by a floating boom in open water areas (such as along the bay ward side of the dredging areas). Along pier edges, the contractor shall have the option of connecting the silt curtain directly to the structure. The contractor shall continuously monitor the silt curtain for damage, dislocation, or gaps and immediately fix any locations	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>where it is no longer continuous or where it has loosened from its supports. The bottom of the silt curtain shall be weighted with ballast weights or rods affixed to the base of the fabric. Where feasible and applicable, the floating silt curtains shall be anchored and deployed from the surface of the water to just above the substrate. If necessary, silt curtains with tidal flaps may be installed to facilitate curtain deployment in areas of higher flow. Air curtains may be used in conjunction with silt curtains to contain resuspended sediment, enhance worker safety, and allow barges to transit into and out of the work area without the need to open and close silt curtain gates.</p> <p>4.2.4: Throughout the remediation process of dredging and application of the clean sand covers, the contractor shall conduct water quality monitoring to demonstrate that implementation of the remedial activities does not result in</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>violations of water quality objectives in the Basin Plan outside of the construction area. The contractor shall submit weekly water quality reports to the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board). If water quality objectives are violated, the San Diego Water Board may temporarily halt activity and impose additional required measures to protect water quality.</p> <p>4.2.5: Prior to initiation of dredging activities, the contractor shall determine the swing radius of the unloading equipment and shall place a steel plate (swing tray or spill plate) between the material barge and the hard cape to prevent spillage from falling directly into the water. The steel plate shall be sufficiently large enough to cover the swing radius of the unloading equipment. The spill plate shall be designed to prevent any “drippings”</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>from falling between the material barge and dock where the unloading equipment is stationed. The spill plate shall be positioned so that any “dripped” material/water either runs back into the material barge or onto the unloading dock, which shall be lined with an impermeable material and beamed to contain excess sediment/water. The steel plate shall be designed to prevent any water or sediment from re-entering San Diego Bay. As a secondary containment measure, filter fabric material shall be placed over the spill plate and between edges of the barge and unloading dock to prevent any drippings from falling into San Diego Bay. Upon completion of unloading a material barge, the spill plate shall be cleaned as necessary so that any dried sediment is not discharged or released to the atmosphere. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board)</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>shall be responsible for ensuring adherence to the requirements of this measure.</p> <p>4.2.6: During dredging activities, the contractor shall ensure that the environmental clamshell bucket is entirely closed when withdrawn from the barge and moved to the truck. In addition, the contractor shall ensure that the bucket is completely empty of sediment prior to being moved back to the barge to minimize sediment being spilled over the dock. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall be responsible for ensuring adherence to the requirements of this measure.</p> <p>4.2.7: During final design of the clean sand covers, the sand layer thickness shall designed to prevent substantial perturbation (mixing and overturning)</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>of underlying contaminated sediments, erosion (e.g., propeller wash), and the upward chemical migration into the clean sand covers. The clean sand cover design shall physically isolate the sediments from benthic or epigenetic organisms to prevent the uptake of bioaccumulative contaminants (i.e., polychlorinated biphenyls [PCBs]) by aquatic organisms either directly from the sediments or by foraging on benthos. The physical isolation component of the clean sand covers may include separate sub-components for isolation, bioturbation, and consolidation. The clean sand covers shall be designed to stabilize the contaminated sediments being covered and prevent them from being resuspended and transported off site. In addition, the clean sand covers shall be designed to be resistant to erosion, including propeller wash, flow, and tidal-induced erosion. The final engineering plans shall include the</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>source and type of sand required for subaqueous application of the clean sand covers. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall review and have approval authority for the final engineering plans, and shall verify implementation. A regulatory oversight contractor may be used by the San Diego Water Board.</p> <p>4.2.8: During application of the clean sand covers, the contractor shall place the initial layers of the clean sand cover in thin lifts by hydraulically placing the material from a barge in order to reduce the vertical impact and lateral spreading of the clean sand cover material and the potential for resuspending the contaminated surface sediments. Controlled placement shall also minimize the mixing of the clean sand covers and underlying sediment by allowing the sediment to slowly gain</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>strength before subsequent layers are deposited. Operational controls such as silt curtains shall also be employed during placement of the clean sand covers. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board), with the assistance of a regulatory oversight contractor, shall be responsible for ensuring adherence to the requirements of this measure.</p> <p>4.2.9: Prior to dredging operations, a Dredging Management Plan (DMP) shall be prepared. The contractor shall implement the measures listed in the DMP during dredging operations. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall be responsible for review and approval of the DMP. The DMP shall contain Standard Operating Procedures (SOPs) for the project to assist the dredge contractor in preventing accidental</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		spills and providing the necessary guidelines to follow in case of an oil or fuel spill. In addition to providing SOPs to prevent accidental oil/fuel spills during construction activities, the DMP shall address the identification of dredging needs, a methodology and process for determining dredging priorities and scheduling, the feasibility and requirements for expedited permitting, Quality Assurance Project Plan (QAPP) to comply with regulatory requirements, alternatives for control and operation of dredging equipment, and Best Management Practices (BMPs) to implement in the event of equipment failure and/or repair. Typical BMPs for equipment failure or repair shall be identified in the DMP and could include: communication to project personnel, proper signage and/or barriers alerting others of potentially unsafe conditions, all repair work to be conducted on land and not over water,	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>repair work involving use of liquids to be performed with proper spill containment equipment (e.g., spill kit), and a contingency plan identifying availability of other equipment or subcontracting options. Furthermore, the DMP shall specify that water discharges to San Diego Bay are prohibited; therefore, the barge shall implement measures necessary to capture all return water and prevent discharge to San Diego Bay. In addition, the DMP shall include, at a minimum, the following measures to prevent accidental oil/fuel spills during construction activities:</p> <ul style="list-style-type: none"> • As an operational control element, all oil and fuel shall be housed in a secondary containment structure to ensure that any spill or leakage is prevented from entering the water column. • Personnel involved with dredging and handling the dredged material 	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>shall be given training on the potential hazards resulting from accidental oil and/or fuel spills. This operational control shall provide the personnel with an awareness of the materials they are handling as well as the potential impact to the environment.</p> <ul style="list-style-type: none"> • All equipment shall be inspected by dredge contractor personnel before starting the shift. These inspections are intended to identify typical wear or faulty parts that may contain oil or fuel. • Personnel shall be required to visually monitor for oil or fuel spills during construction activities. • In the event that a sheen or spill is observed, the equipment shall be immediately shut down and the source of the spill identified and contained. Additionally, the spill shall be reported to the applicable 	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>agencies presented in the DMP.</p> <ul style="list-style-type: none"> • The shipyards currently have oil/fuel spill kits located at various locations on site for routine ship repair operations. All personnel associated with dredging activities shall be trained on where these spill kits are located, how to deploy the oil sorbent pads, and proper disposal guidelines. The dredging barge shall have a full complement of oil/fuel spill kits on board to allow for quick and timely implementation of spill containment. • The floats on the silt curtains will serve as oil booms in the event that a spill occurs. This operational control shall be the last line of defense against accidental oil/fuel spill occurrences. <p>The San Diego Water Board shall be responsible for verifying adherence to the requirements of this measure.</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>4.2.10: The containment area constructed around the dewatering containment cell shall be designed to consist of berms (K-rails and/or dry dock blocks) surrounding the area that restrict decanted water/storm water to the land adjacent to the dewatering containment and prevent the water from flowing into San Diego Bay or the water table if a breach in the pad were to occur. If any area(s) adjacent to the dewatering containment cell are unpaved, a liner shall be utilized if necessary to prevent infiltration. The containment cell shall be designed as a “no discharge” facility and in a manner that prevents storm water runoff/run-on from adjacent areas to the cell from entering the dewatering area. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall review and approve the design of the dewatering</p>

		<p>operator and the appointed project safety personnel shall be required to immediately notify the NMFS (Southwest Division) and shall submit a written, follow-up report within 24 hours of the incident. Any injured sea turtle or marine mammal shall be transported to an agency-approved treatment facility. The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) shall verify implementation of this mitigation measure.</p> <p>4.5.9: A qualified biologist familiar with the California least tern and other special-status seabirds and waterfowl shall be retained and be on site to assess the roosting and foraging behavior of special-status seabirds and waterfowl at the Shipyard Sediment Site and selected staging area(s) immediately prior to and during the initial start-up phase of dredging and clean sand cover</p>	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		<p>placement activities. Once it has been determined that activities are not adversely affecting seabirds and waterfowl, the biologist shall not be required to be on site continuously; however, monitoring shall be performed at least once per week (or more often if required by the resource agencies) to adequately assess whether substantial adverse impacts to special-status seabirds and waterfowl are resulting from project activities (e.g., disrupting nesting or foraging activities, harassing roosting birds). The biologist shall be present during either of the selected dredge scheduling options. In the event of an imminent threat to California least tern and/or other special-status species, the monitor shall immediately contact the contractor's construction manager. In the event the construction manager/contractor is not available, the monitor shall have the authority to redirect or halt construction activities if determined to be necessary. The California</p>

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
		Game (CDFG) shall be notified not less than 30 days in advance and shall be given the opportunity to provide recommended measures to minimize impacts from increased noise and human activity to species in the Sweetwater Marsh Unit of the San Diego Bay National Wildlife Refuge (NWR). All agency-recommended measures (or agency-approved substitute measures, if recommended measures are infeasible) shall be implemented throughout the duration of project activities in Staging Area 5. The biological monitor shall inspect the site at least every 2 weeks during project activities that are conducted during the nesting season (conservatively February 1 through August 31) and shall report monthly to the San Diego Water Board and CDFG.	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFG or USFWS.	Potential Staging Area 5 is adjacent to the Sweetwater Marsh Unit of the San Diego Bay National Wildlife Refuge (NWR), which provides habitat for a variety of special-status species. Off-site indirect effects associated with the proposed project that could affect areas within the NWR would be limited to potential increases in noise and human activity at Potential Staging Area 5.	See Mitigation Measures 4.5.10 and 4.5.11, above.	Less than significant
Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.	No known federally protected wetlands exist within the project site.	No mitigation is required.	Less than significant

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
<p>Substantial interference with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.</p>	<p>Patches and beds of eelgrass are present within the project area and would be adversely affected by dredging activities through direct removal.</p> <p>Dredging and placement of clean sand cover will result in the loss of the majority of benthic infauna within the remedial footprint. The dredged areas and clean fill sand are expected to be recolonized by a more diverse assemblage of benthic invertebrates compared to existing conditions, and benthic biomass (i.e., productivity) will be higher, which would benefit the benthic foraging fishes of the Bay.</p>	<p>See Mitigation Measure 4.5.1, above.</p> <p>No mitigation is required.</p>	<p>Less than significant</p> <p>Less than significant</p>
<p>Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.</p>	<p>The proposed project would not conflict with any local policies or ordinances protecting biological resources.</p>	<p>No mitigation is required.</p>	<p>Less than significant</p>

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?	The proposed project would not conflict with an adopted HCP, NCCP, or other approved local, regional, or state habitat conservation plan.	No mitigation is required.	Less than significant
Cumulative Biological Resources Impacts	The project is relatively small in area compared to the Bay overall, and dredging activities occur throughout the Bay periodically under existing conditions; therefore, it is not expected to substantially change the ecosystem composition (if anything, removal of toxic sediments is intended to improve ecological function) or result in permanent habitat loss.	No additional mitigation is required.	Less than significant
AIR QUALITY			
Conflict with or obstruct implementation of the applicable air quality plan	The Regional Air Quality Strategy (RAQS) is based on local General Plans; projects that are deemed consistent with the General Plan are found to be consistent with the air	No mitigation is required.	Less than significant

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
	<p>quality plan. The proposed project is a short-term remedial dredge-and-haul project that would not result in long-term changes to existing or planned land uses and would not conflict with the City of San Diego or National City General Plans.</p>		
<p>Violate any air quality standard or contribute substantially to an existing or projected air quality violation</p>	<p>Emissions of particulate matter (PM₁₀ and PM_{2.5}) generated during dredging and dewatering activities will be relatively small and will not exceed the thresholds of significance for particulate matter. Therefore, construction activities associated with the project would result in less than significant adverse impacts related to PM₁₀, PM_{2.5}, and fugitive dust.</p> <p>A Health Risk Assessment (HRA) was performed for the potential exposure to emissions from project-related haul truck traffic. The HRA results indicate an exposure to risk that would not exceed the San Diego Air Pollution</p>	<p>No mitigation is required.</p> <p>No mitigation is required.</p>	<p>Less than significant</p> <p>Less than significant</p>

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
<p>Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)</p>	<p>Control District (APCD) criterion for cancer nor chronic or acute health risks.</p> <p>Construction equipment/vehicle emissions during the dredging and drying of the sediment would result in nitrogen oxides (NO_x) emissions that would exceed the City-established daily emissions threshold for that pollutant. While adherence to San Diego APCD rules and regulations (Mitigation Measures 4.6.1 through 4.6.7) and implementation of mitigation measures (Mitigation Measures 4.6.8 through 4.6.14) would reduce this impact, impacts would remain significant and adverse.</p>	<p>4.6.1: The contractor shall be required by contract specifications to minimize obstruction of through traffic lanes adjacent to the site. If necessary, a flag person shall be retained by the construction supervisor to maintain safety adjacent to existing roadways. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) prior to the initiation of dredging. The San Diego Water Board shall verify implementation of this measure.</p> <p>4.6.2: During dredging and dewatering activities, the contractor shall support and encourage ridesharing and transit incentives for the construction crew. These specifications shall be included in</p>	<p>Significant and unavoidable</p>

	odors.	apply a mixture of Simple Green and water (a ratio of 10:1), or similar solution, to the dredge material to accelerate the decomposition process and reduce odor impacts. Contract specifications shall be included in the proposed project construction documents, which shall be reviewed by the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) prior to the initiation of dredging. The San Diego Water Board shall verify implementation of this measure.	

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
Cumulative Air Quality Impacts	San Diego Unified Port District (Port District) projects could be under construction at the same time as the proposed project. Should multiple projects be underway at the same time, it is anticipated that the additional NO _x emissions could result in significant cumulative air quality impacts. Construction activities for the Shipyard Sediment Remediation Project would also contribute to construction-related adverse cumulative air quality impacts because the San Diego Air Basin (SDAB) is presently in nonattainment for ozone (O ₃), and the project, in conjunction with other planned projects, would contribute to the existing nonattainment status for O ₃ .	See above.	Significant and unavoidable
CLIMATE CHANGE AND GHG EMISSIONS			
Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.	The proposed project will result in short-term emissions associated with the use of construction equipment. There will be no ongoing increase in contribution to global warming because	No mitigation is required.	Less than significant

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
	<p>there are no permanent on-site stationary sources, and there is no ongoing increase in the number of vehicular trips coming to and from the project site. Therefore, the proposed project's contribution to global climate change (GCC) in the form of greenhouse gas (GHG) emissions is less than significant.</p>		
<p>Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs</p>	<p>The proposed project would not conflict with the potential measures to bring California to the emission reduction targets based on California Climate Action Team (CAT) strategies, the City of San Diego Climate Action Plan, and the City of National City Draft Climate Action Plan.</p>	<p>No mitigation is required.</p>	<p>Less than significant</p>
<p>Cumulative Climate Change or GHG Emission Impacts</p>	<p>The proposed project will result in short-term emissions associated with the use of construction equipment for dredging treatment and haul activities. There will be no ongoing increase in contribution to global warming because there are no permanent on-site stationary sources and there is no</p>	<p>No mitigation is required.</p>	<p>Less than significant</p>

Table 1.A: Summary of Project-Specific Impacts, Mitigation Measures, and Level of Significance

Threshold of Significance	Potential Environmental Impact	Mitigation Measures	Level of Significance After Mitigation
	ongoing increase in the number of vehicular trips coming to and from the project site. Therefore, the proposed project's contribution to GCC in the form of GHG emissions is less than cumulatively significant.
