Re: Resolution No. R8-2006-0024

Dear Resource Control Board,

Please accept our comments regarding the Resolution No. R8-2006-0024.

We are in favor of resolving the water drainage problems in the Quail Valley areas, where there is improper functioning septic systems, or where there is the possibility of septic systems causing a potential for contamination to other ground water supplies.

We are concerned however for the residents, existing property owners, new property owners or investors in other areas of Quail Valley, where the likely hood of installing a new septic system that could cause a future problem, is slim or non existant.

As one example, when the original larger area sewer proposal was drawn up, it was not found to be necessary to provide future sewer lines to our area, of Quail Valley.

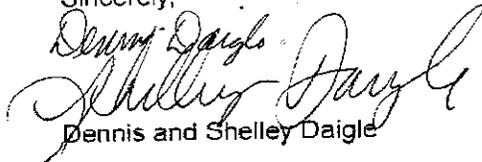

As we understand the new requirement we see that there would be no way to immediately or in the near future verify that the proposed plan and implementation of sewer systems for areas four(4) and nine(9) or that an acceptable design is in place, could be verified.

As we see it, this resolution would stop all development in Quail Valley for some time and could create hard ship for those who have recently bought there property, need to expand there existing property, or sell there property.

This would place Quail Valley at a disadvantage as far as sales, growth and development as compared with areas immediately adjacent to Quail Valley , where similar conditions may exist but where these same restrictions do not apply.

We are in hope there can be a more equitable solution that can be adopted, to ensure that those affected are fairly considered and treated.

Sincerely,

Dennis and Shelley Daigle
