

**DEPARTMENT OF THE ARMY
REGIONAL GENERAL PERMIT (RGP) NUMBER 60
FOR REPAIR AND PROTECTION ACTIVITIES IN EMERGENCY SITUATIONS**

NUMBER: RGP 60 (199700652)

ISSUED BY: U.S. Army Engineer District, Sacramento, Corps of Engineers, 1325 "J" Street, Sacramento, California 95814-2922

EXPIRATION: December 31, 2009

PERMITTEE: General public

NOTE: The term "you" and its derivatives, as used in this permit, means the permittee or any future transferee. The term "this office" refers to the appropriate district or division office of the Corps of Engineers having jurisdiction over the permitted activity or the appropriate official of that office acting under the authority of the commanding officer.

After you receive written verification for your project under this RGP from this office, you are authorized to perform that work in accordance with the terms and conditions and any project-specific conditions specified below.

DESCRIPTION: This RGP authorizes discharges of dredged or fill material and/or work or structures in waters of the United States, including wetlands, for necessary repair and protection measures associated with an emergency situation. An "emergency situation" is where there is a clear, sudden, unexpected, and imminent threat to life or property demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property or essential public services (i.e., a situation that could potentially result in an unacceptable hazard to life or a significant loss of property if corrective action requiring a permit is not undertaken immediately).

LOCATION: Within those parts of the State of California within the boundaries of the Sacramento District Regulatory Branch and the State of Nevada.

PERMIT CONDITIONS:

1. Time Limit: The time limit for completing work authorized under this RGP is within 6 months of starting the work in accordance with condition 7 below.

2. Notification: You must notify the office identified on the attached list, in writing and as early as possible, and shall not begin the activity until notified by this office that the activity may proceed under the authority of this RGP. You should also simultaneously notify the appropriate agency identified in condition 3 below.

a. Contents of Notification: Your notification must include the following information:

(1) The name, address, telephone number (and e-mail address, if available) of the applicant and any designated agent, including contractors; and

(2) The location of the proposed project. This should include identification of the affected water(s) and the latitude and longitude of the site. The project boundaries should be depicted on a copy of a U.S. Geologic Survey [USGS] topographic map, or other location map with sufficient detail to clearly identify the exact location and extent of the project. Detailed directions to the project site should also be provided; and

(3) A description of the nature of the imminent threat to life or property, and the proposed project's purpose and need; and

(4) A description of the work proposed to rectify the situation. This should include scaled drawings with plans and sections with approximate existing and proposed contours, showing the project area and approximate acreage and/or linear feet of potential disturbance to waters relative to the ordinary high water line and/or limit of wetlands; and other construction details, including type and quantity of materials and equipment proposed to be used for the project and the approximate amount of time to complete the work.

(5) A description of existing conditions at the project site. This should include anticipated environmental impacts resulting from the proposed work, including the type and extent of vegetation and/or habitat which would be disturbed or lost due to the project, and photographs showing pre-project site conditions.

(6) A description of any mitigation (avoidance, minimization and/or compensation) proposed to offset impacts to waters of the United States, and associated habitat.

(7) Identification of any federally listed or proposed species or designated or proposed critical habitat which may be affected by or which is in the vicinity of the project. Non-federal permittees shall not begin work on the activity until notified by the this office that the requirements of the Endangered Species Act (ESA) have been satisfied and the activity is authorized. You should contact this office and/or personnel at the ESA agencies listed below, including FWS and/or NMFS, concerning the potential presence of listed or proposed species, or designated or proposed critical habitat, in the project area. You should provide the name and other pertinent information for ESA personnel you contacted to this office. If the project may affect Federally listed or proposed endangered species or designated or proposed critical habitat, you should include a list of measures which would be taken to minimize harm to the species and/or habitat.

Note: If you are proposing to undertake a number of separate projects at different sites, you may optionally submit a comprehensive notification providing all of the above information for each of the separate sites.

b. Form of Notification: The standard Application for Department of the Army Permit form (ENG 4345) available in "Regulatory Permits" on our District's Website at www.spk.usace.army.mil, or a letter (including e-mail) may be used for notification, provided all of the information required in Special Condition 2.a. above is included.

3. Agency Coordination: Upon receipt of a notification, this office will immediately provide, by facsimile, e-mail, delivery, overnight mail or other expeditious manner, a copy of the notification package to the appropriate offices of the U.S. Environmental Protection Agency (EPA), the U.S. Fish and Wildlife Service (FWS) and/or the National Marine Fisheries Service (NMFS), the California Department of Fish and Game (CDFG) and/or the Nevada Department of Wildlife, the California State Water Resources Control Board (SWRCB) and the appropriate Regional Water Quality Control Board (RWQCB) and/or the Nevada Division of Environmental Protection (NDEP) and the Nevada Division of State Lands (NDSL), and the appropriate State Historic Preservation Office (SHPO), as appropriate. These agencies will be requested to telephone, e-mail or facsimile this office, as expeditiously as possible, a response indicating whether or not they intend to provide substantive, site-specific comments regarding the proposed project, and if so, when the comments will be provided. If notified that comments will be provided by an agency, we will allow a short time frame, determined by this office on a case-by-case basis considering the nature of the emergency, to provide their comments before making a decision on the proposed project.

We will fully consider comments from Federal or State agencies, received within the specified time frame, concerning the proposed activity's compliance with the conditions of their authority and the need for mitigation to reduce the project's adverse environmental effects to a minimal level. We will indicate the results of that consideration in the administrative record associated with the notification and will provide an informal response to the commenting agency by e-mail, facsimile, telephone or other expeditious means.

4. Mitigation: You must avoid and minimize discharges of dredged or fill material into Waters of the United States to the maximum extent practicable. Staging and temporary and long-term material disposal areas must be located outside of waters of the U.S., including ephemeral and intermittent drainages and wetlands and other special aquatic sites, and associated riparian and floodplain zones, to the maximum extent practicable.

Compensation for unavoidable, adverse project impacts may be required as a condition of authorization by this office. Required compensatory mitigation should be on site or within the same watershed and state.

We will consider the functions and values of the aquatic resource (e.g., habitat value, aquifer recharge, sediment conveyance or retention, flood storage), the permanence of the project's impacts on the resource, and the potential long-term effects of the action on remaining functions and values of the impacted aquatic resource, when determining the acceptability of appropriate and practicable mitigation. To be practicable, the mitigation must be available and capable of being done considering costs, existing technology, and logistics in light of the overall project purposes. Examples of mitigation that may be appropriate and practicable include, but are not limited to, reducing the size of the project, establishing wetland or upland buffer zones to protect aquatic resource values, replacing lost aquatic resource functions and values by creating, restoring, or

enhancing similar resources to offset adverse project impacts. In certain cases, you may consider purchases of mitigation bank credits, contributions to wetland trust funds, or in-lieu fees to organizations such as State, County or other governmental or non-governmental natural resource management organizations, where they would contribute to the restoration, creation, replacement, enhancement, or preservation of similar aquatic resources. To advance the national goal of no net loss of aquatic resources, replacement ratios should equal or exceed 1:1.

5. District Engineer's Decision: In reviewing the notification for the proposed activity, this office will determine whether the activity will result in more than minimal individual or cumulative adverse environmental effects or may be contrary to the public's interest. The applicant may submit a proposed mitigation plan with the notification to expedite the process. This office will consider any mitigation the applicant has included in determining whether the net adverse environmental effects for the proposed work are minimal. In certain circumstances you may be required to develop and implement a final mitigation plan after the project is under way or completed.

If we determine the activity complies with the terms and conditions of this RGP and the adverse individual and cumulative effects are minimal, we will notify you of this determination and include any additional situation-specific conditions deemed necessary. If we determine the adverse effects of the proposed work are more than minimal, we will notify you the project does not qualify for authorization under this RGP and instruct you on the procedures to seek authorization under an individual permit or other general permit. In some cases we may verify the project is authorized under this RGP subject to you submitting a mitigation proposal that would reduce the adverse effects to a minimal level prior to any work in waters.

6. Minimal Impacts: Work authorized by this RGP must be the minimum necessary to alleviate the emergency and is generally limited to repair, rehabilitation or replacement of pre-existing structures or fills. The RGP may not be used to upgrade existing structures or fills or for any work which would have more than minimal adverse effects on the aquatic environment. Separate authorization may be required for those projects.

7. Start Work Date: You must initiate any project authorized under this RGP within seven (7) days of receiving authorization to proceed from this office. If the repair or rehabilitation work can be delayed beyond this immediate time frame, the situation may not be an emergency. If the project start time can be delayed for more than a week, the imminent threat is likely to have diminished in magnitude as well as immediacy. Further, this RGP does not authorize long-planned-for projects, or previously contemplated projects for which a prior application was not submitted in a timely manner. An applicant's failure to plan and obtain prior authorization for work which would have alleviated the emergency does not obligate this office to authorize work under this RGP.

8. Site Access: You must allow representatives from this office to inspect the authorized activity at any time deemed necessary to ensure the project is being or has been accomplished in accordance with the terms and conditions of this RGP.

9. Tribal Rights: No activity or its operation may impair reserved tribal rights, including, but not limited to, reserved water rights and treaty fishing and hunting rights.

10. Water Quality Certification: If a conditioned Section 401 water quality certification has been issued for your project, you must comply with the conditions specified in the certification as special conditions to this permit. For your convenience, a copy of the certification is attached if it contains such conditions.

For California permittees on non-tribal land: The SWRCB issued the attached water quality certification for this RGP on March 30, 2004.

For Nevada permittees on non-tribal Land: The NDEP issued the attached water quality certification for the RGP on October 12, 2004.

For permittees on certain tribal lands in EPA Region IX: The EPA issued the attached water quality certification waiver for this RGP and emergency work conducted under particular Nationwide Permits on October 19, 2004.

11. Endangered Species: No activity is authorized under this RGP which is likely to jeopardize the continued existence of a threatened or endangered species or destroy or adversely modify designated critical habitat as identified under the Federal Endangered Species Act (ESA). Authorization of an activity by the RGP does NOT authorize the "take" of a listed threatened or endangered species, as defined under the Federal ESA.

You shall notify this office if any listed or proposed species or designated or proposed critical habitat may be affected by or is in the vicinity of the project. You shall not begin work on the activity until notified by the DE that the requirements of the ESA have been satisfied and the activity is authorized. You should contact this office and/or personnel at FWS and/or NMFS concerning the potential presence of listed or proposed species, or designated or proposed critical habitat, in the project area. In some cases the FWS and NMFS may be able to make a priori determinations that listed species are not present.

Information on the location of listed or proposed threatened or endangered species and their designated or proposed critical habitat can be obtained directly from the FWS or NMFS or from their websites at: USFWS – <http://endangered.fws.gov/> and/or NMFS – http://www.nmfs.noaa.gov/prot_res/overview/es.html. In some circumstances programmatic biological opinions and incidental take statements may be applicable and use of this RGP is then subject to the permittee complying with all terms and conditions of those documents. Information on the presence of listed or proposed species at a specific project site may not be available. In such cases, the nature of the emergency may prevent an applicant from conducting the surveys necessary to make a reasonable determination. If suitable habitat occurs on the project site, the applicant may assume federally listed species or critical habitat are present and request the emergency provisions of Section 7 of the ESA be implemented.

12. Historic Properties: No activity which may affect historic properties listed, or eligible for listing, in the National Register of Historic Places is authorized until the requirements of the National Historic Preservation Act have been satisfied.

You must notify this office if the work may affect any potentially eligible historic properties and shall not begin work until notified by this office the requirements of the National Historic Preservation Act have been satisfied. Information on cultural resources may be obtained from the State Historic Preservation Offices, State Information centers and the national Register of Historic Places. Impacts to such resources must be avoided to the maximum extent practicable. If such resources are impacted because of actions related to work in waters of the United States, you shall provide a full report of the action and the impacts incurred by the resource to this office within 45 days of initiating work in waters of the United States for the action. The Corps, the SHPO and/or the Advisory Council for Historic Preservation will then jointly make a determination as to appropriate procedures and/or mitigation to be addressed. If you discover any previously unknown historic or archeological remains while accomplishing the activity authorized by this RGP, you must immediately notify the Corps Regulatory Branch who will initiate the Federal and State coordination required to determine if the remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places.

13. Erosion and Siltation Controls: Every effort must be made to ensure any dredged or excavated material is not likely to be washed into any Waters of the United States, including wetlands. Appropriate erosion and siltation controls, such as sedimentation basins, and/or "certified weed free" straw bales, siltation or turbidity curtains, or other means designed to minimize turbidity in the watercourse, shall be used and maintained in effective operating condition during construction. All exposed soil and other fills, as well as any work below the ordinary high water mark or mean high tide line, must be stabilized at the earliest possible time to preclude additional damage to the project area through erosion or siltation.

14. Bank Stabilization: Any stream banks affected by the work must be stabilized and planted with appropriate native riparian vegetation, in similar densities to adjacent undisturbed streambanks, concurrently with project completion, to protect against subsequent erosion and minimize adverse effects on fish and wildlife habitat resources. Riprap may not be used as stabilization unless you have demonstrated vegetative or bioengineering erosion control measures are not practicable. Project design and construction must allow for subsequent establishment of native riparian vegetation in any riprap areas (i.e., vegetated riprap).

15. Equipment: When feasible, heavy equipment working in wetlands must be thoroughly cleaned, free of leaks and placed on mats. The permittee must implement any other appropriate and practicable measures to minimize adverse impacts, such as compaction and vegetation disturbance, in wetlands and to minimize discharges of pollutants and soil disturbance in waters. These measures include the use of wide-treaded equipment or floatation devices.

16. Suitable Material: Only clean, non-erodible material which is free from toxic pollutants may be in waters of the United States, including wetlands. (See Section 307 of the Clean Water Act). Examples of unsuitable material, include: trash; contaminated soils, or other material pollutants; tires; vehicle bodies; farm machinery; metal junk, including barrels; appliances; wire; asphalt; biodegradable building materials (including wood debris, sheet rock and roofing); material with exposed pipe or rebar; chemically treated materials subject to leaching in an aquatic environment; or other deleterious materials. Clean broken concrete may be allowed on a case-by-case basis, provided it is free of exposed rebar and asphalt, and only where immediate stabilization is needed and natural materials are not available. Individual pieces of broken concrete must be no more than 3-feet wide and placed in a manner which will preclude them from being carried away by

potential flows. Concrete may need to be removed once the emergency is alleviated. Locally native trees, tree tops, tree roots or rocks are permissible, provided they are properly anchored.

17. Wild and Scenic Rivers: No activity may occur in a component of the National Wild and Scenic River System, or in a river officially designated by Congress as a "study river" for possible inclusion in the system while that river is in an official study status, unless the appropriate Federal agency with direct management responsibility for that river has determined in writing that the proposed activity would not adversely effect the Wild and Scenic River designation or study status. Information on Wild and Scenic Rivers may be obtained from the appropriate Federal land management agency in the area (e.g., FWS, National Park Service, U.S. Forest Service, Bureau of Land Management).

18. Aquatic Life Movements: No activity may substantially disrupt the movement of those species of aquatic life indigenous to the water body, including those species that normally migrate through the area. Culverts may only be used if they are essential to the success of the emergency project. Culverts should be installed only on a temporary basis and must impede expected water flows. Culverts and other temporary fills must be removed and the affected stream reach restored to pre-project conditions, using best management practices and locally native vegetation, immediately once the emergency has subsided.

19. Shellfish Production: No discharge of dredged or fill material may occur in areas of concentrated natural or commercial shellfish production, unless the discharge is directly related to a shellfish harvesting activity which has otherwise been authorized.

20. Spawning Areas: Discharges in spawning areas during spawning seasons must be avoided to the maximum extent practicable.

21. Waterfowl Breeding Areas: Discharges into breeding areas for migratory waterfowl must be avoided to the maximum extent practicable.

22. Navigation: No activity may cause more than a minimal adverse effect on the course or capacity of a navigable water. You understand and agree that, if future operations by the United States require the removal, relocation, or other alteration of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, you will be required, upon due notice from the Corps of Engineers, to remove, relocate, or alter the structural work or obstructions caused thereby, without expenses to the United States. No claim shall be made against the United States on account of any such removal or alteration.

23. Water Supply Intakes: No discharge of dredged or fill material may occur in the proximity of a public water supply intake except where the discharge is for repair of the public water supply intake structures or adjacent bank stabilization.

24. Obstruction of High Flows: The project must not permanently restrict or impede the passage of normal or expected high flows in the watercourse.

25. Adverse Effects from Impoundments: If the discharge creates an impoundment of water, adverse effects on the aquatic system caused by the accelerated passage of water and/or the restriction of its flow shall be minimized to the maximum extent practicable.

26. Proper Maintenance: Any structure or fill authorized by this RGP shall be properly maintained, including maintenance to ensure public safety, unless it would contribute to other adverse conditions to private or public property. In such situations, corrective measures must be taken to rectify these adverse conditions. Such measures may include removal and/or redesign of the original emergency corrective action, or appropriate mitigation as determined through coordination with you and the appropriate Federal and State agencies.

27. Removal of Temporary Fills: All temporary structures, work and fills, including cofferdams, shall be removed in their entirety immediately after the emergency situation is alleviated. Any areas affected by temporary construction, dewatering and access work, including staging areas, must be returned to their pre-existing elevations and revegetated with appropriate native riparian or wetland vegetation common to the area, upon completion of the authorized work.

28. Post-project reports: You must provide a written report to this office, to this office and the appropriate agencies listed in condition 3, as soon as practicable and no later than 45 days of completing any activities under this RGP. Failure to provide a timely report following completion of the work may be considered a violation (33 CFR Part 326.4(d)) and subject to appropriate enforcement actions. The report must include the following:

(a) The name, address, telephone number (and/or e-mail address) of the applicant, and any designated agent; and

(b) The location of the proposed project, including identification of the affected water(s) and the latitude and longitude of the site. The project boundaries must be depicted on a copy of a U.S. Geologic Survey [USGS] topographic map, or other location map with sufficient detail to clearly identify the exact location and extent of the project. Detailed directions to the project site must also be provided; and

(c) The purpose and need to retain any of the discharges, structures or other work completed in response to the emergency; and

(d) A description of work completed, including scaled drawings with plan and cross sections, showing the project area and acreage and/or linear feet of water(s) impacted, construction details, including current contours relative to the ordinary high water line and/or limit of wetlands; quantities (in cubic yards) and types of materials used; and

(e) A description of conditions at the project site, including photographs showing pre- and post-project site conditions, environmental impacts resulting from the work, including the type and extent of vegetation and/or habitat disturbed or lost and any mitigation proposed to offset those impacts. This must include the name, type (e.g., river, streambed, lake, reservoir, riparian area, seasonal wetland, etc.) and description of all temporary and permanent adverse impact(s) in acres and/or linear feet, compensatory mitigation in acres/cubic yards/linear feet, and any other mitigation (avoidance or minimization) implemented in project completion.

(f) Information on the project's effects on federally listed or proposed endangered species or designated or proposed critical habitat. Where the work may affect has the (notification must be provided to FWS and/or NMFS as appropriate) including temporary/permanent adverse impacts, mitigation measures used to minimize impacts and any compensatory mitigation to minimize harm to the species and/or habitat and provide a copy of the report to the FWS and/or NMFS, as appropriate. If mitigation was determined to be appropriate for a specific project or group of projects, a mitigation proposal must be submitted to this office for review and approval. We will forward the report to the appropriate agencies for their review and comment.

****Note: If you undertook a number of separate projects at separate sites, you may optionally submit a comprehensive report providing all of the above information for each of the sites.**

29. Maintenance: You must maintain the activity authorized by this permit in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party in compliance with Condition 30 below. Should you wish to cease to maintain the authorized activity or should you desire to abandon it without a good faith transfer, you must obtain a modification of this permit from this office, which may require restoration of the area.

30. Transfer: If you sell the property associated with this permit, you must obtain the signature of the new owner on written documentation which includes their name, address and telephone number and confirmation they understand and will abide by all conditions of this permit, and any case-specific special conditions of verification, and forward a copy of that documentation to this office to validate transfer of this authorization.

FURTHER INFORMATION:

1. Congressional Authorities: Activities conducted under this RGP are authorized pursuant to Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403) and/or Section 404 of the Clean Water Act (33 U.S.C. 1344).

2. Limits of this authorization:

- a. This permit does not obviate the need to obtain other federal, state, or local authorizations required by law.
- b. This permit does not grant any property rights or exclusive privileges.
- c. This permit does not authorize any injury to the property or rights of others.
- d. This permit does not authorize interference with any existing or proposed Federal projects.

3. Limits of Federal Liability: In issuing this permit, the Federal Government does not assume any liability for the following:

- a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.
- b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.
- c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.
- d. Design or construction deficiencies associated with the permitted work.
- e. Damage claims associated with any future modification, suspension, or revocation of this permit.

4. Reliance on Applicant's Data: The determination of this office that issuance of this permit is not contrary to the public interest was made in reliance on the information you provided.**5. Reevaluation:** This office may reevaluate its decision on this permit, or on the verification that any particular activity qualifies for this RGP, at any time circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to, the following:

- a. You fail to comply with the terms and conditions of this permit.
- b. The information provided by you proves to have been false, incomplete, or inaccurate.
- c. Significant new information surfaces which this office did not consider in reaching the original public interest decision.

Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 or enforcement procedures such as those contained in 33 CFR 326.4 and 326.5. The referenced enforcement procedures provide for the issuance of an administrative order requiring you to comply with the terms and conditions of your permit and for the initiation of legal action where appropriate. You will be required to pay for any corrective measures ordered by this office, and if you fail to comply with such directive, this office may, in certain situations (such as those specified in 33 CFR 209.170), accomplish the corrective measures by contract or otherwise and bill you for the cost.

This permit becomes effective when the Federal official, designated to act for the Secretary of the Army, has signed below.

/s/

Andrew J. Rosenau, Chief,
Sacramento District Regulatory Branch
(For the District Engineer)
23 December 2004
