Date: Tue, Jun 12, 2007 12:26 PM
Subject: Comment Letter-Suction Dredge Mining

Dear Sirs:

I will not use up any of your valuable time citing the the plethora of studies that have shown that Suction Dredge Mining when conducted within "existing rules and regulations" harms neither the environment or fish. Conversely it has been shown time after time that at periods of low water the oxygen and food that are added/liberated by Suction Dredging are a boon for the fish.

Respectfully

Edward J. Fenner
