Subject: Suction Dredge Comments

Just a short comment on your review of regulations on dredging and water "quality" issues.

All past issues to stop dredging have revolved around fish. Now we move to "water quality"

(people). I have been dredging for the past 9 years and have noticed that I am recovering more and more LEAD, plastic and MERCURY from the rivers. I would thing that the water board would be more interested in removing these other TOXIC heavy metals than silt, from our drinking water.

Thank you

Joe wyse
