**Subject:** comment letter on suction dredgeing

if the environutz are so concerned that suction dredgers stir up Hg what happens during a big storm. when the water runs fast does that contribute to the problem of flouring the Hg. what about the fishermen? and the boaters. if the enviromental impact is so great shouldn't they also be removed from the water just as what your trying to accomplish with the suction dredger? at least the dredger can REMOVE some of the Hg in the river. shouldn't this be a good thing? what about the state of CA put in place a program where the dredger can turn in the Hg he has recovered? what about the kurks has anyone checked them to see if they are poisoned by Hg since they net and consume the most fish. when will assembly woman wolk file paper work giving the karuks federal tribe status. i'm sure the state would recieve more in tax reveune once the casino is built
