THE PROVISIONS

The Provisions include the following three elements: (1) new beneficial use categories and definitions related to tribal traditional and cultural uses of water (CUL), tribal subsistence fishing (T-SUB), and subsistence fishing by the general population (SUB); (2) five fish tissue mercury water quality objectives to protect the health of humans that consume fish at a recreational rate (commercial and sport fishing beneficial use (COMM)), subsistence rates (T-SUB and SUB), wildlife (wildlife habitat (WILD), and rare, threatened, or endangered species (RARE) beneficial uses) from the harmful effects of mercury; and (3) a program of implementation to achieve the water quality objectives for the COMM, WILD, and RARE beneficial uses.

Beneficial Uses

To address direction in Resolution No. 2016-0011, the State Water Board has developed three new beneficial uses that could be designated to waters by Regional Water Boards as appropriate: Tribal Traditional and Cultural Use (CUL); Tribal Subsistence Fishing (T-SUB); and Subsistence Fishing by the general population (SUB).

Water Quality Objectives

New statewide mercury water quality objectives for human health are needed to update the level of protection for recreational consumers of fish. In addition, fish consumption studies indicate higher consumption rates for some groups than were used in U.S. EPA's 2001 recommended mercury criteria. The U.S. Fish and Wildlife Service has found that U.S. EPA's 2001 mercury criteria, if applied, would not be protective of certain threatened or endangered species present in California. Therefore, the Provisions would establish the following five statewide mercury water quality objectives:

- Sport Fish Water Quality Objective;
- Tribal Subsistence Fishing Water Quality Objective;
- Subsistence Fishing Water Quality Objective;
- Prey Fish Water Quality Objective; and
- California Least Tern Prey Fish Water Quality Objective.

The Program of Implementation

The Provisions include implementation provisions to control mercury pertaining to:

- Municipal wastewater and industrial discharges;
- Storm water discharges;
- Discharges from closed or closing mine sites;
- Nonpoint source discharges,
- Discharges from dredging activities, and
- Discharges related to projects that establish or restore wetlands.
