

State of South Carolina
Section 303(d) List for 2002

BUREAU OF WATER

South Carolina Department of Health and Environmental Control

EPA Approved August 7, 2002

www.scdhec.net/water

Introduction

The South Carolina Department of Health and Environmental Control (Department) developed this priority list of waterbodies pursuant to Section 303(d) of the Federal Clean Water Act (CWA) and Federal Regulation 40 CFR 130.7 last revised in 1992. The list identifies South Carolina waterbodies that do not currently meet State water quality standards after application of required controls for point and nonpoint source pollutants. Pollution severity and the classified uses of waterbodies were considered in determining priority ranking of the list. Use attainment determinations were made using water quality data collected from 1996 to 2000. The list will be used to target waterbodies for water quality improvement measures, including Total Maximum Daily Loads (TMDLs).

Over the past three decades, impacts from point sources to waterbodies have been substantially reduced through point source controls achieved via National Pollutant Discharge Elimination System (NPDES) permits. Since 1990, steady progress in controlling nonpoint source impacts has also been made through implementation of South Carolina's Nonpoint Source Management Program. The continued expansion and promotion of these and other state and local water quality improvement programs in conjunction with TMDL development and implementation is expected to be effective in reducing the number of impaired waterbodies.

In compliance with 40 CFR 25.4(c), the Department issued a public notice in regional newspapers March 8, 2002 to ensure statewide notice of the Department's intent to update its list of impaired waterbodies. Public input was solicited. The notice included a person to contact for information regarding the development of the list and asked for comments regarding the draft list and methodology. The notice allowed for a thirty nine day comment period in which to respond. The Department also provided notice to more than three hundred and fifty interested parties that included environmental groups, industries, private individuals, local governments, universities, research groups, other state agencies, and the EPA. The Department also posted the public notice and the draft list on its Internet website. A copy of the notice of availability of the draft list is provided (Appendix A).

Additional public input was solicited during public workshops conducted in locations within targeted basins during development of Watershed Water Quality Assessments. Since the 2000 listing cycle, the Department has held multiple workshops in the Pee Dee and Santee basins, and has held numerous public meetings in other basins that included discussions of impaired waterbodies and feedback from stakeholders. The workshop and other meetings are held in part to obtain public input on the • 303(d) prioritization process and to solicit ideas for solutions from the public. Public participation in the • 303(d) process will continue in accordance with the Department's watershed approach.

Methodology for Delisting Waterbodies from the 2000 303(d) List

The Department reviewed the final 2000 • 303(d) list as the starting point for the development of the 2002 • 303(d) list. All waterbodies on the 2000 • 303(d) list were evaluated for appropriate inclusion on the 2002 • 303(d) list as defined in 40 CFR 130.2(j), and the August 27, 1997, EPA Guidance Memorandum, National Clarifying Guidance for State and Territory • 303(d) Listing Decisions.

As outlined in 40 CFR 130.7(b)(6)(iv) and the National Clarifying Guidance, the Department prepared a list of good cause justifications for the differences between the 2000 and the 2002 • 303(d) lists. A compilation of waterbodies that were included on the 2000 • 303(d) list, but not included on the 2002 • 303(d) list is included below. Good cause for de-listing of waterbodies from the 2000 • 303(d) list include the following: 1) the most recent data and information indicate that water quality standards are being met, 2) a TMDL has been developed and approved, and 3) the listing analysis conducted for the 2000 list contained errors (e.g., laboratory reporting error, QA/QC requirements not met, legal ruling). Any one or combination of these reasons may be used by the Department to de-list waters.

Some waterbodies that were listed on the 2000 • 303(d) list have been renamed or found to be in another watershed. These waterbodies appear on the 2002 • 303(d) list under the new name or appropriate watershed. Waterbodies listed for "BIO" (biological impairment cause unknown) on the 2000 list have been removed for BIO if a pollutant responsible for the impairment has been identified. These waterbodies remain on the list for that pollutant and TMDLs will be developed for the pollutant of concern.

Waterbodies that appeared on the 2000 • 303(d) list that do not meet these justifications for good cause de-listing remain on the 2002 • 303(d) list.

Methodology for Listing: the South Carolina 2002 303(d) List

In accordance with federal guidelines, the Department evaluated waterbodies identified as impaired for appropriate inclusion on the 2002 • 303(d) list. The Department uses a watershed approach, as encouraged in the August 8, 1997, EPA Guidance Memorandum: New Policies for Establishing and Implementing Total Maximum Daily Loads, to perform its permitting and water quality monitoring. This approach divides the state into five major river basin groups. Permitting and monitoring are performed according to a schedule that cycles through all basins in a five-year period.

The Department has an extensive fixed ambient surface water-monitoring network throughout the State with more than 700 stations. The SCDHEC monitoring effort also includes 500 shellfish sanitation stations, 75 aquatic macroinvertebrate stations, approximately 100 fish tissue stations, and selected phytoplankton stations. The cyclical nature of our permitting, monitoring, and data analysis results in a dynamic • 303(d) list.

As new waters are monitored, new impaired sites may be discovered which require listing. As a result of increased monitoring, more specific federal guidance, and changes in S.C. water quality standards, some waterbodies have been added to the 2002 • 303(d) list. In compliance with water quality standards (Regulations R.61-68), waterbodies with standards excursions which are attributable solely to natural conditions are not included on the South Carolina's 303(d) list.

The Department has considered the South Carolina Short List of waterbodies which was prepared in 1989 pursuant to Section 304(l) of the CWA. This one-time 304(l) Short List identified waterbodies where the State did not expect applicable water quality standards to be achieved after technology-based requirements had been met due entirely or substantially to point source discharges of 307(a) toxics. The 304(l) Short List was considered as required, but not used for development of the 2002 303(d) list since those water quality problems have already been addressed. If current data and information on water quality for the specific water bodies included on the 1989 304(l) list ever indicate less than full support of uses, they will be included on the 303(d) list.

Sources of Data and Information and Their Use

For this listing cycle, the Department actively solicited data and information for the specific purpose of 303(d) listing. The solicitation notice was published in an area wide newspaper and a copy of the notice was mailed to the same mailing list used for the 303(d) public notice of drafting mentioned above. The Department also placed the solicitation notice on its Internet website. A copy of the solicitation notice is provided (Appendix B). In response to this solicitation notice, the Department received three inquiries requesting further information on data needs and requirements. The Department considered data and information from these and other contributors. The entire list of contributors is given below.

Multiple sources of information were used to compile the South Carolina 2002 303(d) list. The Department reviewed readily available data and information collected by the Department as well as from other sources, including that received through solicitation. For the 2002 303(d) list, the Department considered chemical, biological, and tissue data and information that had been obtained by the following:

DHEC: Environmental Quality Control

- Water chemistry and biological data from over 700 surface water and sediment monitoring sites
- Approximately 500 shellfish growing monitoring sites
- Fish, oyster, and crab tissue monitoring data
- Stream macroinvertebrate assessments
- Lake water quality assessment data (314)
- Environmental Surveillance Oversight Program (Savannah River Site)
- State Nonpoint Source Management Plan (319)
- 304(l) Short List
- State Shellfish Restoration Committee
- State Watershed Water Quality Assessments
- Special studies or general knowledge

Other biological data

- Adler Biological Consulting
- Coastal Science Associates, Inc.
- E.T.T. Environmental, Inc.
- North Carolina Department of Environment and Natural Resources
- Shealy Environmental Services, Inc.
- South Carolina Public Service Authority (Santee Cooper)
- Swearingen Ecology Associates

- United States Fish and Wildlife Service
- South Carolina Department of Natural Resources

Other tissue data

- Georgia Department of Natural Resources
- National Marine Fisheries Service
- United States Environmental Protection Agency
- North Carolina Department of Environment and Natural Resources
- Florida Department of Environmental Protection
- University of Texas

Other chemical data

- United States Geological Survey
- South Carolina Public Service Authority (Santee Cooper)
- Haile Mining Company
- Breedlove Dennis Young and Associates, Inc.

In order to ensure the validity and accuracy of data and information used, the Department developed an evaluation plan. The Department's Quality Assurance Management Plan (QAMP) has been approved by the EPA as part of its requirements under Section 106 of the CWA. All data and information sources used for the 2002 303(d) list were reviewed in accordance with the QAMP. All data and information were readily accessible and met the Department's criteria for quality assurance. A checklist of QA/QC considerations used by the Department can be found at: www.scdhec.net/water/pubs/qaqc.pdf.

The following is a brief description of how the above data and information were used by the Department to make support determinations for aquatic life, recreation, and other designated uses.

Determination of Attainment of Classified Uses

Physical, chemical and biological data were evaluated, as described below, to determine if water quality met the water quality criteria established to protect the State classified uses defined in Regulation 61-68, [Water Classifications and Standards \(www.lpittr.state.sc.us/regs/2572.doc\)](http://www.lpittr.state.sc.us/regs/2572.doc). To determine the appropriate classified uses and water quality criteria for specific waterbodies and locations, refer to Regulation 61-69, [Classified Waters](http://www.lpittr.state.sc.us/coderegs/chap61/61-69.htm), in conjunction with Regulation 61-68. These regulations are located on the world wide web at: www.lpittr.state.sc.us/coderegs/chap61/61-69.htm. The use attainment decision process follows the basic approach set forth in the USEPA guidance for the preparation of state 305 (b) water quality assessments.

Aquatic Life Use Support

One important goal of the Clean Water Act and State standards is to maintain the quality of surface waters to provide for the survival and propagation of a balanced indigenous aquatic community of fauna and flora. The degree to which aquatic life is protected (Aquatic Life Use Support) is assessed by comparing

important water quality characteristics, and the concentrations of potentially toxic pollutants to numeric criteria.

Support of aquatic life uses is determined based on the percentage of numeric criteria excursions and, where data are available, the composition and functional integrity of the biological community. Among the parameters assessed are: dissolved oxygen, pH, toxicants (priority pollutants, heavy metals, chlorine, ammonia), nutrients, and turbidity. If the conclusion for any one parameter is that the criterion is not met, then it is concluded that aquatic life use is not supported and the waterbody is thus listed in this report.

A number of waterbodies have been given waterbody-specific criteria for pH and dissolved oxygen, which reflect natural conditions. To determine the appropriate numeric criteria and classified uses for specific waterbodies and locations, please refer to Regulation 61-68, Water Classifications and Standards, and Regulation 61-69, Classified Waters.

For DO and pH, if 10 percent or less of the samples contravene the appropriate criterion, then the criterion is said to be fully supported. A percentage of criterion excursions equal to or greater than 11% indicates impairment and results in inclusion on the current 303(d) list, unless excursions are due to natural conditions. Blackwater systems in the Sandhills and coastal plain are characterized by naturally low pH and dissolved oxygen concentrations, as are tidally influenced systems along the coast.

For toxicants such as (heavy metals, priority pollutants, chlorine, ammonia), if the appropriate acute aquatic life criterion is exceeded more than once in five years, representing more than 10 % of the samples collected, the criterion is not supported. If the acute aquatic life criterion is exceeded more than once, but in less than or equal to 10 % of the samples, the criterion is considered partially supported but still listed.

For turbidity in all waters, and for waters with numeric total phosphorus, total nitrogen, and/or *chlorophyll-a* criteria, if the appropriate criterion is exceeded in more than 25 percent of the samples, the criterion is not supported and the waterbody is listed.

For aquatic life uses, the goal of the standards is the protection of a balanced indigenous aquatic community. Therefore, biological data is the ultimate deciding factor, regardless of chemical conditions. If biological data indicated a healthy, balanced community, the use is considered supported even if chemical parameters do not meet all applicable criteria.

Macroinvertebrate community assessment data are used to directly determine aquatic life use support. Aquatic and semi-aquatic macroinvertebrates are identified to the lowest practical taxonomic level depending on the condition and maturity of specimens collected. The EPT Index (Ephemeroptera, Plecoptera, Trichoptera) and the North Carolina Biotic Index (BI) are the main indices used in analyzing macroinvertebrate data.

Recreational Use Support

The degree to which the swimmable goal of the Clean Water Act is attained (Recreational Use Support) is based on the frequency of fecal coliform bacteria excursions. Standards for primary contact recreation were derived from public health data that estimate the potential risks to humans of contracting water borne illnesses after swimming due to exposure to pathogens. For fecal coliform bacteria, an excursion is an occurrence of a concentration greater than 400/100 ml for all Classes. If 10 percent or less of the

samples are greater than 400/100 ml then recreational uses are said to be fully supported. A percentage of criteria excursions of 11% or greater indicates impairment of recreational uses and the waterbody is listed.

Fish/Shellfish Consumption

Fish/shellfish consumption use support is determined by the occurrence of advisories or bans on human consumption or harvesting for a given waterbody or shellfish harvesting area. For the support of consumption uses, an advisory which prohibits, restricts or places harvesting conditions for fish and/or shellfish consumption or harvesting indicates nonsupport of uses.

Note: Fish consumption advisories are updated annually in March. For background information and the most up-to-date advisories please visit the DHEC Bureau of Water webpage at <http://www.scdhec.net/water/> and click on "Advisories" beneath the Water Program Index.

A more detailed discussion of DHEC's use attainment determination methodology is contained in Appendix C.

Methodology for Priority Ranking

The Department utilized a point system for prioritizing the waterbodies on the South Carolina •303(d) list. This approach is based on an evaluation of data and information by the watershed managers and other staff within the Department. This process ranks waterbodies based on the severity of the water quality impairment and the impaired use of the waterbody. The process involves an evaluation of each waterbody for all of the following factors: potential impacts to endangered species, the severity of the pollution, the uses of the water bodies, public support, and for waterbodies impaired by fecal coliform bacteria, the potential for primary contact recreation (swimming). Staff assigned numeric values for each factor. Points were totaled separately for each pollutant listed at a site. Based on the total numeric score, each impaired waterbody was given a priority ranking of 1, 2, or 3 with 1 being highest priority.

- **Aquatic Endangered Species:**
Species present and potentially adversely affected by pollutant (2 points)
- **Severity of Pollution:**
Nonsupport of classified use (2 points)
- **Classification:**
Outstanding Resource Waters (ORW) or Trout Waters (TN) (2 points)
TPGT, TPT, or SFH (1 point)
- **Public Support:**
High (2 points)
Some (1 point)
- **Likely Primary Contact Recreational Use (for impairment by fecal coliform bacteria):**
Yes (1 point)
No/Unknown (no points)

Waterbodies listed for fish consumption were assigned a priority ranking based on the degree of restriction and coverage of the advisory. Waterbodies in which "Do not eat any" was advised for at least one species received highest priority. Waterbodies in which limited weekly consumption was advised were listed with a

lower priority. Waterbodies listed for shellfish consumption were assigned a priority ranking based on recommendations of the State Shellfish Restoration Committee.

TMDL Development: Methodology for Targeting Impaired Waterbodies

The 303(d) list serves to identify those sites that need additional management actions to meet water quality standards. TMDL (Total Maximum Daily Load) development is one way in which the Clean Water Act 303(d)(1)(C) intended to promote these management actions. TMDLs will be developed for all 303(d) listed sites.

A TMDL is a calculation of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards. It is the sum of the allowable loads of a given pollutant from all contributing point and nonpoint sources. It also incorporates a margin of safety and consideration of seasonal variation. The TMDL document specifies the level of pollutant reductions needed for use attainment, and management recommendations for achieving these reductions. Targeting for TMDL development of the priority ranked waterbodies is necessary to focus limited technical and monetary resources. TMDLs targeted for completion over the next two years were based on the following factors:

- Priority ranking in the 303(d) list
- Adequacy of existing and readily available data and information for TMDL development
- Adequacy of existing technical tools for TMDL development
- Hydrologic connection, allowing nesting or bundling of TMDLs
- Identified funding or cooperators
- Degree of public interest and support for improvement of the waterbody
- Ongoing activities and water quality related initiatives in the watershed
- Recreational, economic, and aesthetic importance
- Other national and Departmental priorities and policies

In cooperation with EPA Region IV, SC DHEC Bureau of Water is developing TMDLs. At the time of publication of this list, thirty five TMDLs have been approved by EPA in South Carolina. A list of these approved TMDLs is found in Appendix D. An updated listing of approved and draft TMDLs can be found at DHEC's TMDL web page: <http://www.scdhec.net/water/html/tmdl.html>. These TMDLs have been incorporated into The Department's Continuous Planning Process as required under The Clean Water Act. A program for accelerated TMDL development is currently underway. DHEC Watershed Program staff have initiated a process for implementation of approved TMDLs.

The List

The South Carolina 2002 • 303(d) list is the first attachment. Waterbodies are listed by point locations; however, the impairment is considered to extend for some distance upstream and/or downstream of the point location listed. The Department will determine the extent of the impairment of the waterbodies during TMDL development.

Waterbodies targeted for completion in the next two years are noted by an asterisk (*) on the list. The column headings included on the South Carolina 2002 • 303(d) list refer to the following:

Waterbody - Waters of the State.

Impaired Site - Brief description of the location of the impaired waterbodies.

Station Number - The Department's station code where samples were collected.

Basin - One of eight major basins contained in the State.

County - County in which sampling site is located.

Hydrologic Unit - Sub-basin unit in which the water body is located.

Impaired Use - Use support impairment for aquatic life and/or recreational uses.

Recreational Use (Swimming):	REC
Fish Consumption:	FSH CON
Shellfish Harvesting:	SFH
Aquatic Life Use:	AL

Cause - Pollutant(s) that resulted in nonsupport of the uses listed. The parameters are denoted as follows:

Cesium: CS	Macroinvertebrate: BIO
Chromium: CR	Mercury: HG
Copper: CU	Phosphorus: P
Dissolved Oxygen: DO	Polychlorinated Biphenyls: PCB
Fecal Coliform Bacteria: FC	Strontium: SR
Hydrogen Ion Concentration: PH	Zinc: ZN
Lead: PB	

Priority - Ranking assigned to the site.

Area Description - Shellfish harvesting area

Acres - Acreage of impaired shellfish harvesting waters associated with the site.
