Change Petition to License 7070

GIVE REASON FOR PROPOSED CHANGE

This petition is being filed to amend the description of the Place of Use actually being irrigated by License 7070.

When License 7070 was amended in 1996 it expanded the place of use to a total of 213 acres. The area illustrated on the map submitted that accompanied this amendment was prepared by Ralph Gunby of the State Water Resources Control Board and George Thiel of Resource Management and Development.

The area delineated on the map did not accurately portray the acres that are actually irrigated under the License and in fact included parcels that were not (and had not) been owned by the License holder.

This error did not come to light until the ranch manager was contacted by the staff of the State Water Resources Control Board regarding verification of the address for this license. At that time it was related to him by staff that the place of use under License 7070 included areas not part of the Rolling "A" Ranch property. Therefore, to rectify this situation and ensure that the full extent of this water right is protected, this petition to change the place of use is being filed.

The change in the place of use to License 7070 will not increase nor decrease the total duty of the water granted under said License. All terms and conditions associated with License 7070 are being complied with.
