PETITION FOR CHANGE INVOLVING WATER TRANSFERS

Separate petitions are required for each water right. Mark all areas that apply to your proposed change(s). Incomplete forms may not be accepted. Location and area information must be provided on maps in accordance with established requirements. (Cal. Code Regs., tit. 23, § 715 et seq.) Provide attachments if necessary.

- Point of Diversion** Wat. Code, § 1701
- Point of Rediversion** Wat. Code, § 1701
- Place of Use** Wat. Code, § 1701
- Purpose of Use** Wat. Code, § 1701
- Temporary Urgency** Wat. Code, § 1435
- Temporary Change** Wat. Code, § 1725
- Long-term Transfer** Wat. Code, §§ 382, 1735
- Instream Flow Dedication** Wat. Code, § 1707

Application Permit License Statement

I (we) hereby petition for change(s) noted above and described as follows:

Point of Diversion or Rediversion – Provide source name and identify points using both Public Land Survey System descriptions to ¼-¼ level and California Coordinate System (NAD 83).

Present:

Proposed:

Place of Use – Identify area using Public Land Survey System descriptions to ¼-¼ level; for irrigation, list number of acres irrigated.

Present:

Proposed:

Purpose of Use

Present:

Proposed:

Instream Flow Dedication – Provide source name and identify points using both Public Land Survey System descriptions to ¼-¼ level and California Coordinate System (NAD 83).

Upstream Location:

Downstream Location:

List the quantities dedicated to instream flow in either: cubic feet per second or gallons per day:

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Will the dedicated flow be diverted for consumptive use at a downstream location? Yes No
If yes, provide the source name, location coordinates, and the quantities of flow that will be diverted from the stream.

Proposed New User(s)

Provide the names, addresses, and phone numbers for all proposed new user(s) of the water right.

Rec'd
Ch# 1010
\$ 850.00
EYE

Amount of Water to be Transferred

acre-feet will be transferred. If the basis of right is direct diversion, the average rate of diversion for the maximum 30-day period of use is cubic feet per second or million gallons per day.

General Information – Provide the following information, if applicable to your proposed change(s).

Have you attached an analysis which documents that the amount of water to be transferred or exchanged would have been consumptively used or stored in the absence of the proposed temporary change or long-term transfer? Yes No

Have you attached an analysis of any changes to streamflow, water quality, timing of diversion or use, return flows, or effects on legal users from the proposed temporary change or long-term transfer? Yes No

Have you attached an analysis that shows the proposed temporary change or long-term transfer will not unreasonably affect fish, wildlife, or other instream beneficial uses? Yes No

I (we) have access to the proposed point of diversion or control the proposed place of use by virtue of:
 ownership lease verbal agreement written agreement

If by lease or agreement, state name and address of person(s) from whom access has been obtained.

Reclamation has executed an agreement with RD 1004.

Give name and address of any person(s) taking water from the stream between the present point of diversion or rediversion and the proposed point of diversion or rediversion, as well as any other person(s) known to you who may be affected by the proposed change.

See supplement

All Right Holders Must Sign Below: I (we) declare under penalty of perjury that this involves only the amount of water which would have been consumptively used or stored in the absence of the proposed temporary change, and that the above is true and correct to the best of my (our) knowledge and belief.

Background and Proposed New User

For the second year of a consecutive two-year pilot project, up to 14,354 acre-feet (AF) of CVP water would be conveyed by Reclamation District No. 1004 (RD 1004) from the Sacramento River via the Princeton Pumping Plant through about 15 miles of RD 1004's conveyance system, and would thence flow for about another 27 miles through Butte Creek and Butte Slough, thence the East Borrow Ditch (EBD) (Sutter Bypass) to the points of delivery at Sutter National Wildlife Refuge (SNWR). Reclamation's revised Map No. 214-202-825, enclosed with this petition, shows the proposed route from the Princeton Pumping Plant to the SNWR.

Water would be conveyed from September 2018 through January 2019, in accordance with a general agreed upon schedule that serves to help meet SNWR needs and to provide pilot study information to further determine feasibility of such a conveyance action. Prior to the first year of this two-year pilot project for which the State Water Board issued a temporary transfer order dated October 30, 2017, Reclamation had not been able to deliver CVP water to the SNWR; the U.S. Fish and Wildlife Service had been exercising its own licensed rights to provide limited amounts of water to the SNWR. The proposed transfer/exchange would assist Reclamation in identifying a satisfactory conveyance route to meet SNWR's water scheduling requirements.

The pilot project is a two-year project. Reclamation would thereafter file a change petition pursuant to Cal. Water Code §1701 et seq. to address the future delivery of water (current CVP water and any future CVP acquired component) to the SNWR if Reclamation implements this conveyance alternative as the long-term method for providing refuge water supplies.

The following documents are relevant to the proposed transfer/exchange.

- The Memorandum of Understanding Between the U.S. Bureau of Reclamation and the U.S. Fish and Wildlife Service Providing for Project and Acquired Water Supplies to the Sacramento, Delevan, Colusa, and Sutter National Wildlife

Refuges, California, Contract No. 01-WC-20-1757, was executed on January 19, 2001 (2001 Memorandum) on file with the State Water Board and also available at the following site.

https://www.usbr.gov/mp/cvpia/3406d/env_docs/final/1757_fws_cnt_11-15-00.pdf). The 2001 Memorandum provides, among other things and subject to stated conditions and provisions, that during each year Reclamation shall convey CVP water to the U.S. Fish and Wildlife Service in quantities of CVP water required to provide each refuge with Level 2 (L2) supplies as set forth in Exhibit B to the 2001 Memorandum. Exhibit B provides for 20,500 AF of L2 water supplies for the SNWR. The 2001 Memorandum implements refuge water supply requirements under Section 3406(d) of the Central Valley Project Improvement Act (Title 34, P.L. 102-575) (CVPIA) for these refuges.

- Final National Environmental Policy Act (NEPA) Environmental Assessment and California Environmental Quality Act (CEQA) Initial Study, Refuge Water Supply Long-Term Water Supply Agreements, Sacramento River Basin, January 2001 (U.S. Bureau of Reclamation, U.S. Fish and Wildlife Service, and California Department of Fish and Wildlife).
- CVPIA Final Programmatic Environmental Impact Statement (CVPIA PEIS), October, 1999.
- Sutter National Wildlife Refuge Water Supply Conveyance Study, January 2015, p. 5-19, Alternative 2 (without construction) (Conveyance Study), on file with the State Water Board.
- Environmental Assessment (Pilot EA), Sutter National Wildlife Refuge Reclamation District No. 1004 Refuge Level 2 Water Conveyance Pilot Project, 17-16-MP, on file with the State Water Board and located within the following site.
https://www.usbr.gov/mp/nepa/nepa_project_details.php?Project_ID=30122

Period of Transfer/Exchange

The period for the proposed temporary transfer/exchange is from September 1, 2018, through January 31, 2019.

Points of Diversion and Rediversion

On March 22, 2005, Reclamation and RD 1004 executed a Sacramento River Settlement Contract (SRSC) renewal (on file with the State Water Board, and also available at the following site. https://www.usbr.gov/mp/cvpia/3404c/lt_contracts/2005_exec_ets_sac_river/05_sacriver_reclamation_1004.pdf, Contract No. 14-06-200-890A-R-1, for 56,400 AF of Base Supply and 15,000 AF of CVP water. The RD 1004 currently authorized points of diversion and rediversion from the Sacramento River for Base and CVP supplies include the Princeton Pumping Plant at River Mile 111.8L (Located N2274336

E6559738 CA State Plane Feet, Zone 2, NAD 83) being within the SE ¼ of Section 18,
T18N, R1W, M.D.B.&M.)

Present Points of Diversion and Rediversion

The points of diversion and rediversion are on file with the State Water Board for the
subject CVP Applications.

Proposed Points of Rediversion to be Added

For the subject CVP Applications, the proposed points of rediversion to be added are as
follows, as shown on Map No. 214-202-825 (CA State Plane Feet, Zone 2, NAD 83):

Intake facility for SNWR, Located N2165336 E6628641 California Coordinate
System, Zone 2, NAD 83, being within the NE1/4 of Section 32, T15N, R2E,
M.D.B.&M.

Intake facility for SNWR, Located N2146337 E6636302 California Coordinate
System, Zone 2, NAD 83, being within the NW ¼ of Section 22, T14N, R2E,
M.D.B.&M.

Places of Use

Present Places of Use

The places of use are the same as on file with the State Water Board for the subject CVP
Applications. See Map 214-208-12581, on file with the State Water Board.

Proposed Places of Use to be Added

No change. The water diverted and rediverted from the Sacramento River would be used
within the places of use authorized for the subject CVP Applications.

Purposes of Use

Present Purposes of Use

The combined purposes of use for the subject CVP Applications are irrigation, domestic,
incidental domestic, municipal, stockwatering, preservation and enhancement of fish and
wildlife, water quality control, and recreational, as on file with the State Water Board.

Proposed Purposes of Use to be Added

No change.

Season of Use, Direct Use, and Storage

Present Season of Use, Direct Use, and Storage

The present season of use, season of direct use, and season of storage are as specified in the subject CVP Applications on file with the State Water Board.

Proposed Season of Use, Direct Use, and Storage

No change.

Proposed New Users (transferees)

Implementation of the proposed transfer/exchange includes the following proposed new users (transferees), consistent with implementation of the proposed transfer/exchange:

- U.S. Fish and Wildlife Service, whose mission is to conserve, protect, and enhance fish and wildlife and their habitats, would receive the water for use within the SNWR pursuant to the 2001 Memorandum.

Counties of Storage and Use

The proposed transfer/exchange water is presently stored within the following counties:

Contra Costa, Glenn, Sacramento, Tehama, and Shasta.

The proposed transfer/exchange water will be placed to beneficial use within the following county within the existing CVP authorized places of use:

Sutter.

Amount of Water to be Transferred/Exchanged

A total maximum of up to 14,354 AF would be rediverted for transfer/exchange and conveyed through the RD 1004 facilities. Assuming 17% combined losses in the RD 1004 conveyance system and in Butte Creek, and using a conveyance loss formula accepted by Reclamation to calculate conveyance losses, up to 12,000 AF of water would be available at the intake facilities for Sutter NWR (see: Table 5-11 and Section 5.5, loss discussion in the Conveyance Study).

The maximum rate of rediversion at the RD 1004 facilities is 75 cubic feet per second (cfs).

This temporary transfer/exchange facilitates the delivery of L2 supplies to the SNWR pursuant to the 2001 Memorandum by enabling the exchange of CVP supply for limited historic diversions by the U.S. Fish and Wildlife Service under its licensed applications 11632 and 11349, as well as by enabling delivery of up to 12,000 AF of CVP supply,

under the pilot project. Absent the transfer/exchange, the CVP water under the subject CVP Applications would have remained in storage. Reclamation would not increase the allocation of CVP water to the U.S. Fish and Wildlife Service beyond the quantity authorized under the 2001 Memorandum as a result of this transfer/exchange. This transfer/exchange only involves water (1) that is part of the allocated supply provided through the 2001 Memorandum, (2) that was diverted consistent with all applicable regulatory requirements, (3) that would otherwise remain under the dominion and control of Reclamation as currently authorized under the subject CVP Applications, and (4) that would otherwise not be available for use by others in the downstream water supply.

Reclamation, in coordination with the California Department of Water Resources, would monitor and publicly post river stage and flow conditions at the following locations during all periods when transfer/exchange water under the pilot project is likely to be flowing at these locations:

Princeton Pumping Plant (Sacramento River Mile 164.4);
USGS Stream Gage (Butte Creek NR Meridian);
USGS Stream Gage (Sutter Bypass at Long Bridge).

An Appendix A - Streamflow Monitoring Plan is included in the Pilot EA.

General Information

The total quantity of water proposed to be transferred/exchanged under this petition will be up to 14,354 AF of water. Reclamation would redivert Sacramento River flows at the Princeton Pumping Plant on the Sacramento River. Flows would continue through RD 1004's conveyance system¹, thence to Butte Creek, Butte Slough, EBD (Sutter Bypass), and then be rediverted at the intakes to SNWR for delivery. See Map No. 214-202-825, enclosed with this petition.

The proposed rediversion and use of flows for this transfer/exchange is described and analyzed as the Proposed Action in the Pilot EA.

Sections 3.7 and 3.8 of the Pilot EA address impacts relevant to water resources and fish and wildlife resources, respectively.

As explained in Section 3.8.2.2 (Environmental Consequences) of the Pilot EA, the proposed transfer/exchange would not alter CVP operations or release patterns from CVP facilities, or the maximum volume of water delivered to CVP contractors. The proposed transfer/exchange is a water management action to support existing uses and conditions regarding the SNWR. The proposed delivery of CVP refuge water supplies is described and analyzed at the program-level under various alternatives included of the CVPIA

¹ RD 1004's conveyance includes an underground delivery pipe from the Princeton Pumping Plant, thence conveyance through Drumheller Slough, thence (1) continuing to and through the Cutoff, thence an unnamed conveyance along a levee to and through Dredger Cut, thence to Butte Creek, and/or (2) the Main Canal, thence the Borrow Pit Waterway to and through Dredger Cut, thence to Butte Creek.

PEIS. The proposed temporary change will not change or affect the manner in which Reclamation will make CVP water available to CVP contractors under current approved operations. The CVPIA PEIS provides that the proposed transfer/exchange would have no impact on water resources, land use, biological resources, and cultural resources. Section 3.7.2 (Environmental Consequences) provides that the proposed transfer/exchange would not increase or decrease the amount of CVP water any contractor receives under contract with Reclamation. There would be no adverse impacts to RD 1004 or to any other local water users or districts and their respective CVP water supplies resulting from the proposed transfer/exchange. Regular coordination among the parties involved would ensure that Reclamation's obligations to deliver water to other CVP contractors, refuges, and other requirements would not be adversely impacted. Because the transfer/exchange would only influence water conveyance from the point of diversion on the Sacramento River to the point of diversion at the SNWR, upstream operations, including power production, would not be affected.

The proposed transfer/exchange would be subject to the following parameters.

- No native or untilled land (fallow for three consecutive years or more) will be cultivated with the water involved in this action.
- The purposes of water use are consistent with existing authorized purposes of use.
- The delivery of CVP refuge water will be limited to existing supply and will not increase overall consumptive use.
- The delivery of CVP refuge water will not lead to any land conversion.
- The delivery of CVP refuge water will comply with all applicable Federal, State, Local or Tribal laws or requirements imposed for the protection of the environment and Indian Trust Assets (ITAs).
- The delivery of CVP refuge water will not alter the flow regime of streams, creeks, ponds, pools, wetlands, etc.
- The proposed transfer/exchange does not include construction or modification of facilities.

As discussed above, Reclamation is legally obligated to provide water to the SNWR consistent with provisions of the CVPIA and the 2001 Memorandum. Subarticles 12(b) and 12(c) of the CVP long-term water service contract renewals provide that in a year where Reclamation is unable to deliver sufficient water to meet the maximum amount of water under subarticle 3(a) to which the Contractor is entitled due to Reclamation taking action to meet legal obligations, Reclamation shall apportion the available project water supply among the Contractor and others entitled under existing contracts and future contracts and renewals thereof to receive CVP water consistent with the contractual obligations of the United States. CVP interim contract renewals have similar provisions. For the SNWR itself, subarticle 9(a) of the 2001 Memorandum subjects the refuge to up to a 25% reduction of CVP L2 water supplies under Shasta "Critical Year", similar to

constraints on the availability of water for SRSC and other CVP water rights settlement contracts.

The proposed transfer/exchange would not affect water delivery obligations to other contractors and refuges. There would be no expansion of existing obligations, or increases in demands, to provide CVP water supplies.

Therefore, the proposed transfer/exchange would not injure or unreasonably affect any legal user of water, nor increase the amount of water Reclamation is entitled to use under the subject CVP Applications.

The proposed transfer/exchange would not alter CVP operations or release patterns from CVP facilities, or the maximum volume of water delivered to CVP contractors. The proposed transfer/exchange is relatively small compared to many other Sacramento River diversions, and, in the aggregate, accounts for a minor share of the volume of water rediverted from the Sacramento River. Princeton Pumping Plant is a screened facility to prevent adverse impacts to fisheries; the water would be rediverted only through appropriately screened diversions from the Sacramento River, further limiting the potential for impacts to fish species.

Section 3.8.2.2 of the Pilot EA provides that the proposed transfer/exchange would support existing uses and conditions on the SNWR and would be implemented in accordance with existing regulatory constraints and guidance. The proposed transfer/exchange would be implemented in compliance with the USFWS 2008 Biological Opinions (BO) and the NMFS 2009 BO (and 2011 amendment) governing the long-term operations of the CVP and State Water Project. The proposed temporary diversion is relatively small compared to many other Sacramento River diversions, and, in the aggregate, accounts for a minority share of the volume of water diverted from the Sacramento River. The proposed transfer/exchange would result in a minor shift in the location of water use. Potential effects to fish species or habitat from the proposed transfer/exchange have been analyzed in the USFWS 2008 BO and the NMFS 2009 BO as part of general operations of the CVP. Because this action occurs entirely within the Sacramento Basin and North of Delta, there are no concerns for species that are present South of Delta. Operations associated with the proposed transfer/exchange would be within the historic limits covered by the consultations for the CVPIA PEIS. A full assessment of the fishery resources and Endangered Species Action considerations is included in Appendix B to the Pilot EA— Biological Technical Memorandum.

Therefore, the proposed transfer/exchange would not unreasonably affect fish, wildlife, or other instream beneficial uses.

Access

Reclamation has obtained access to RD 1004 facilities by virtue of a two-year conveyance agreement for the rediversion of up to 28,708 AF of water from the

Sacramento River (two-year pilot project). A copy of an executed conveyance agreement between Reclamation and RD 1004 is on file with the State Water Board.

Persons Taking Water

Diverters downstream of the Princeton Pumping Plant and between the Princeton Pumping Plant and the intakes to the SNWR are on file with the Board and/or are discussed in the Pilot EA.

Other Persons Who May Be Affected

The proposed transfer/exchange involves the redirection of previously stored CVP water. Reclamation is unaware of other persons who may be affected by the redirection of these flows.

Reclamation's point of contact at the Central Valley Regional Water Quality Control Board is Nichole Morgan, (916) 464-4848.

Reclamation's point of Contact at the California Department of Fish and Wildlife is Tracy McReynolds, 530-895-5111.

A copy of this petition has been furnished to the California Department of Fish and Wildlife, the Regional Water Quality Control Board, and the appropriate Boards of Supervisors (see dated cover letter).

ENVIRONMENTAL INFORMATION FOR PETITIONS

This form is required for all petitions.

Before the State Water Resources Control Board (State Water Board) can approve a petition, the State Water Board must consider the information contained in an environmental document prepared in compliance with the California Environmental Quality Act (CEQA). This form is not a CEQA document. If a CEQA document has not yet been prepared, a determination must be made of who is responsible for its preparation. As the petitioner, you are responsible for all costs associated with the environmental evaluation and preparation of the required CEQA documents. Please answer the following questions to the best of your ability and submit any studies that have been conducted regarding the environmental evaluation of your project. If you need more space to completely answer the questions, please number and attach additional sheets.

DESCRIPTION OF PROPOSED CHANGES OR WORK REMAINING TO BE COMPLETED

For a petition for change, provide a description of the proposed changes to your project including, but not limited to, type of construction activity, structures existing or to be built, area to be graded or excavated, increase in water diversion and use (up to the amount authorized by the permit), changes in land use, and project operational changes, including changes in how the water will be used. For a petition for extension of time, provide a description of what work has been completed and what remains to be done. Include in your description any of the above elements that will occur during the requested extension period.

See attachment.

Insert the attachment number here, if applicable:

1

Coordination with Regional Water Quality Control Board

For change petitions only, you must request consultation with the Regional Water Quality Control Board regarding the potential effects of your proposed change on water quality and other instream beneficial uses. (Cal. Code Regs., tit. 23, § 794.) In order to determine the appropriate office for consultation, see: http://www.waterboards.ca.gov/waterboards_map.shtml. Provide the date you submitted your request for consultation here, then provide the following information.

Date of Request

See cover letter.

Will your project, during construction or operation, (1) generate waste or wastewater containing such things as sewage, industrial chemicals, metals, or agricultural chemicals, or (2) cause erosion, turbidity or sedimentation?

Yes No

Will a waste discharge permit be required for the project?

Yes No

If necessary, provide additional information below:

[Empty text box for additional information]

Insert the attachment number here, if applicable:

Local Permits

For temporary transfers only, you must contact the board of supervisors for the county(ies) both for where you currently store or use water and where you propose to transfer the water. (Wat. Code § 1726.) Provide the date you submitted your request for consultation here.

Date of Contact

See cover letter.

For change petitions only, you should contact your local planning or public works department and provide the information below.

Person Contacted: Date of Contact:

Department: Phone Number:

County Zoning Designation:

Are any county permits required for your project? If yes, indicate type below. Yes No

- Grading Permit
- Use Permit
- Watercourse
- Obstruction Permit
- Change of Zoning
- General Plan Change
- Other (explain below)

If applicable, have you obtained any of the permits listed above? If yes, provide copies. Yes No

If necessary, provide additional information below:

[Empty text box for additional information]

Insert the attachment number here, if applicable:

Federal and State Permits

Check any additional agencies that may require permits or other approvals for your project:

- Regional Water Quality Control Board Department of Fish and Game
- Dept of Water Resources, Division of Safety of Dams California Coastal Commission
- State Reclamation Board U.S. Army Corps of Engineers U.S. Forest Service
- Bureau of Land Management Federal Energy Regulatory Commission
- Natural Resources Conservation Service

Have you obtained any of the permits listed above? If yes, provide copies. Yes No

For each agency from which a permit is required, provide the following information:

Agency	Permit Type	Person(s) Contacted	Contact Date	Phone Number

If necessary, provide additional information below:

Insert the attachment number here, if applicable:

Construction or Grading Activity

Does the project involve any construction or grading-related activity that has significantly altered or would significantly alter the bed, bank or riparian habitat of any stream or lake? Yes No

If necessary, provide additional information below:

Insert the attachment number here, if applicable:

Archeology

Has an archeological report been prepared for this project? If yes, provide a copy. Yes No

Will another public agency be preparing an archeological report? Yes No

Do you know of any archeological or historic sites in the area? If yes, explain below. Yes No

If necessary, provide additional information below:

See Attachment.

Insert the attachment number here, if applicable:

Photographs

For all petitions other than time extensions, attach complete sets of color photographs, clearly dated and labeled, showing the vegetation that exists at the following three locations:

Along the stream channel immediately downstream from each point of diversion

Along the stream channel immediately upstream from each point of diversion

At the place where water subject to this water right will be used

Maps

For all petitions other than time extensions, attach maps labeled in accordance with the regulations showing all applicable features, both present and proposed, including but not limited to: point of diversion, point of rediversion, distribution of storage reservoirs, point of discharge of treated wastewater, place of use, and location of instream flow dedication reach. (Cal. Code Regs., tit. 23, §§ 715 et seq., 794.)

Pursuant to California Code of Regulations, title 23, section 794, petitions for change submitted without maps may not be accepted.

All Water Right Holders Must Sign This Form:

I (we) hereby certify that the statements I (we) have furnished above and in the attachments are complete to the best of my (our) ability and that the facts, statements, and information presented are true and correct to the best of my (our) knowledge. Dated at .

NOTE:

- **Petitions for Change** may not be accepted unless you include proof that a copy of the petition was served on the Department of Fish and Game. (Cal. Code Regs., tit. 23, § 794.)
- **Petitions for Temporary Transfer** may not be accepted unless you include proof that a copy of the petition was served on the Department of Fish and Game and the board of supervisors for the county(ies) where you currently store or use water and the county(ies) where you propose to transfer the water. (Wat. Code § 1726.)

Description of Proposed Changes

For the second year of a two-year consecutive pilot project, up to 14,354 acre-feet (AF) of Central Valley Project (CVP) water would be conveyed by Reclamation District No.1004 (RD 1004) from the Sacramento River via the Princeton Pumping Plant. Reclamation would divert Sacramento River flows at the Princeton Pumping Plant on the Sacramento River. Flows would continue through about 15 miles of RD 1004's conveyance system, to Butte Creek, thence for about 27 miles through Butte Creek, Butte Slough, East Borrow Ditch (EBD) (Sutter Bypass), and then be diverted at the intakes to the Sacramento National Wildlife Refuge (SNWR) for delivery. See Map No. 214-202-825, enclosed with this petition, which shows the proposed route from the Princeton Pumping Plant to the SNWR delivery points.

A total maximum of up to 14,354 AF of CVP water would be diverted for transfer/exchange and conveyed through the RD 1004 facility. Assuming 17% combined losses in the RD 1004 conveyance system and in Butte Creek, and using a conveyance loss formula accepted by Reclamation to calculate conveyance losses, up to 12,000 acre-feet of water would be available at the intake facilities for the SNWR. The maximum rate of diversion at the RD 1004 facilities is 75 cubic feet per second (cfs) for this temporary transfer/exchange, and the action would occur through January 31, 2018.

The Preferred Alternative for Refuge Water Supplies in the Programmatic Environmental Impact Statement for the Central Valley Project Improvement Act (CVPIA, Title 34 of Public Law 102-575) (CVPIA PEIS), assumed Levels 2 and 4 water supplies, subject to hydrologic shortages with a maximum shortage of 25 percent of the Level 2 (L2) quantities. These supplies include CVP L2 and Level 4 refuge water with figures of, annually, 30,000 AF at the refuge boundary, with delivery assumptions that include 3,333 AF losses, and 33,333 AF diverted. (See: Final NEPA Environmental Assessment and California Environmental Quality Act (CEQA) Initial Study, Refuge Water Supply Long-Term Water Supply Agreements, Sacramento River Basin, January 2001, U.S. Bureau of Reclamation, U.S. Fish and Wildlife Service, and California Department of Fish and Wildlife.)

In January 2001, Reclamation, the U.S. Fish and Wildlife Service, and the California Department of Fish and Wildlife issued the Final National Environmental Policy Act (NEPA) Environmental Assessment and California Environmental Quality Act (CEQA) Initial Study, Refuge Water Supply, Long-Term Water Supply Agreements, Sacramento River Basin (2001 EA). On January 19, 2001, Reclamation issued a Finding of No Significant Impact (2001 FONSI) No. 01-02-MP, Refuge Water Supply – Long Term Agreements. The 2001 EA and 2001 FONSI addressed the impacts related to the execution of these agreements, including a Memorandum of Understanding between Reclamation and the U.S Fish and Wildlife Service for delivery of water to the SNWR. That action is pursuant to Sections 3406(d)(1) and 3406(d)(2) of the CVPIA for the provision of firm water supplies to national wildlife refuges (NWRs). The 2001 FONSI found that, among other things, execution of the agreements: (1) would not adversely affect fish, wildlife, or plant species; (2) would cause no significant effects on species listed pursuant to the

Federal Endangered Species Act; (3) would not cause on-refuge water quality and the quality of water downstream of the refuges to change; (4) would not cause conditions on adjacent farmlands to change; and (5) would not cause changes to on-refuge habitats to change recreation activities thereupon.

On January 19, 2001, Reclamation executed the Memorandum of Understanding Between the U.S. Bureau of Reclamation and the U.S. Fish and Wildlife Service Providing for Project and Acquired Water Supplies to the Sacramento, Delevan, Colusa, and Sutter NWRs California (2001 Memorandum, Contract No. 01-WC-20-1757). Exhibit B to the 2001 Memorandum calls for, among other water quantities and sources, the making available and/or conveyance of 20,500 AF per year of CVP L2 Water Supplies for the SNWR.

The 2001 EA and 2001 FONSI, as well as the 2001 Memorandum, are available at: https://www.usbr.gov/mp/cvpia/3406d/env_docs/.

In January 2015, Reclamation issued the SNWR Water Supply Conveyance Study (2015 Study). The 2015 Study includes Alternative 2, conveying 23,500 AF of CVP water to the SNWR from the Princeton Pumping Plant by utilizing RD 1004 facilities and Butte Creek for conveyance. The 2015 Study states that it would be prudent to conduct a pilot study of this alternative to evaluate the reliability and efficiency of conveying SNWR water through the Butte Creek system.

Reclamation has prepared an Environmental Assessment (Pilot EA) entitled Sutter National Wildlife Refuge Reclamation District No. 1004 Refuge Level 2 Water Conveyance Pilot Project, 17-16-MP, located within the following website: https://www.usbr.gov/mp/nepa/nepa_project_details.php?Project_ID=30122. The purpose of the Pilot EA is to evaluate and disclose potential environmental impacts associated with entering into an agreement with RD 1004 to convey Refuge Level 2 CVP water to the Sutter NWR as part of a two-year pilot refuge water conveyance project. The proposed diversion and use of flows for this transfer/exchange is described and analyzed as the Proposed Action in the Pilot EA.

Section 3.6 (Land Use) of the Pilot EA states that there would be no development or land conversion under the proposed transfer/exchange; CVP water would only be conveyed to actively managed wetlands through existing facilities. The proposed transfer/exchange would modify water supply reliability but would not change CVP contract amounts or deliveries from within historical ranges and, therefore, land use would not change.

As explained in Section 3.8.2.2 (Environmental Consequences) of the Pilot EA, the proposed transfer/exchange would not alter CVP operations or release patterns from CVP facilities, or the maximum volume of water delivered to CVP contractors. The proposed transfer/exchange is a water management action to support existing uses and conditions regarding the SNWR. The proposed delivery of CVP refuge water supplies is described and analyzed at the program-level under various alternatives included of the CVPIA PEIS. The proposed temporary change will not change or affect the manner in which Reclamation will make CVP water available to CVP contractors under current approved operations. The CVPIA PEIS provides that the proposed

transfer/exchange would have no impact on water resources, land use, biological resources, and cultural resources.

Section 3.8.2.2 of the Pilot EA also provides that the addition of a maximum average of 75 cfs during the transfer/exchange may have insignificant effects on water quality and volume between the Princeton Pumping Plant and the point of rediversion at the SNWR. Any potential effects are expected to be positive and associated with increased water quality and quantity, and the volume of water being delivered to the SNWR will not be outside the range of historic flows and therefore it is expected that there will be no determinable effects on wildlife or habitat as a result of the transfer/exchange.

Monitoring would occur to determine the actual temporary increase in flow. Based on the temporary nature of the action, the volume of water involved, and the projected flow rate, the addition of this refuge water and the increase in flow would not cause significant adverse impacts to Butte Creek hydrology. Additional flow in the EBD is expected to be less than 75 cfs during most of the duration of the proposed transfer/exchange. A lesser flow is expected due to losses along the Butte Creek stretch.

An Appendix C – Water Quality Monitoring Plan is included in the Pilot EA.

Coordination with Regional Water Quality Control Board

Reclamation's point of contact at the Central Valley Regional Water Quality Control Board is Nichole Morgan, (916) 464-4848.

Federal and State Permits

Reclamation's point of contact at the California Department of Fish and Wildlife is Tracy McReynolds, Senior Environmental Scientist, (530) 895-5111.

Archeology

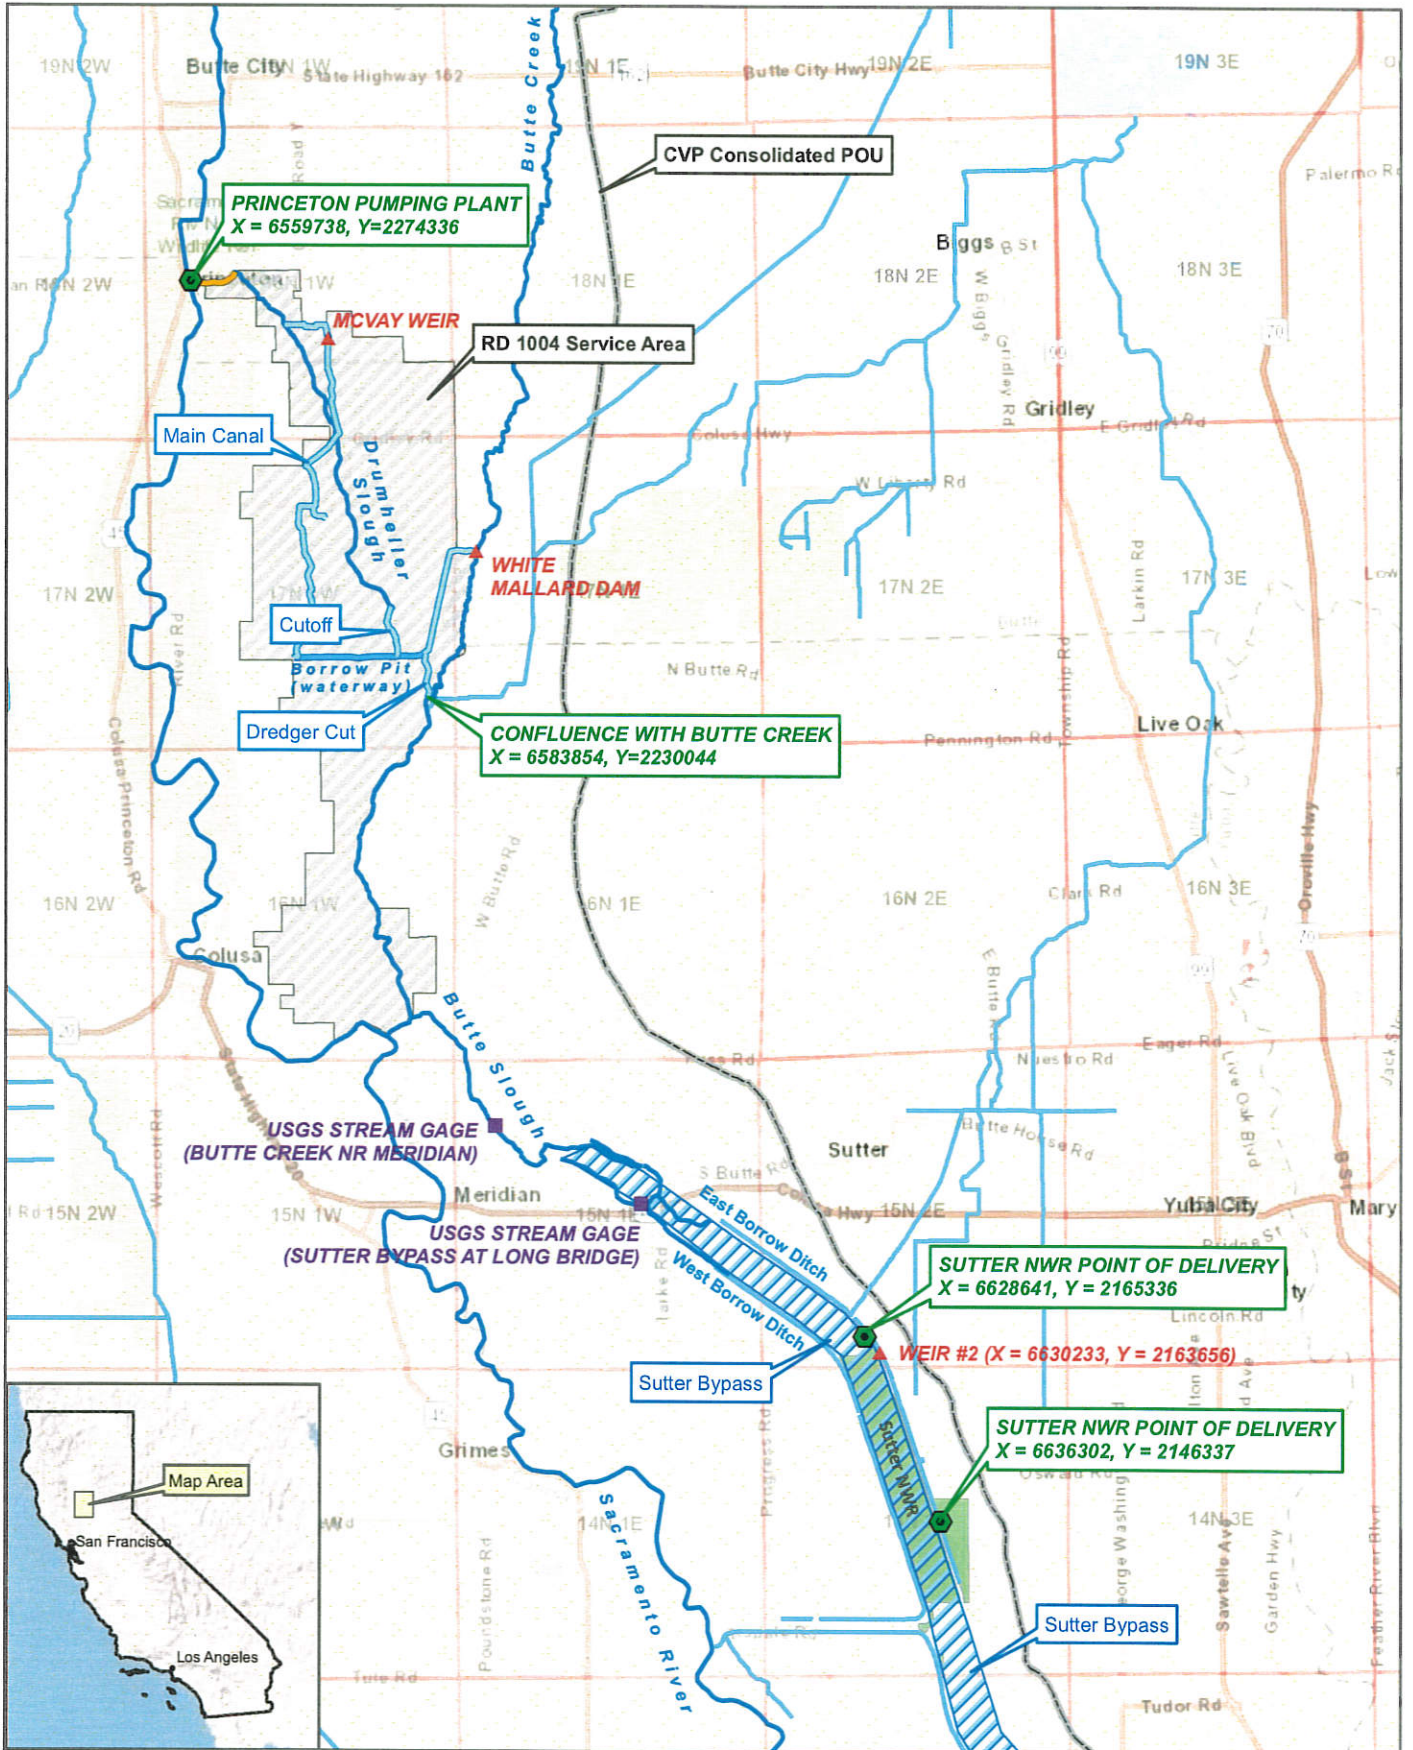

Section 3.1 (Cultural Resources) and Section 3.2 (Indian Trust Assets) of the Pilot EA provide, respectively, that the proposed transfer/exchange would result in no significant impacts to cultural resources and would result in no impacts to Indian Trust Assets.

Photographs

Photographs of the proposed points of rediversion using existing facilities and proposed places of use are on file with the State Water Board. Representational photographs are also presumed to be on file with the State Water Board.

Maps

Reclamation's revised Map No. 214-202-825, enclosed, displays the locations of the proposed points of diversion, the location of where water will be used, and the existing CVP authorized places of use consistent with Map No. 214-208-12581 on file with the State Water Board.
