Operations and Accounting:

Water stored underground would be extracted by overlying permitted private wells for irrigation use within the Applicant's entire service area during the 2021/2022 irrigation season. The Applicant and landowners intend to use a magnetic flow meter system to measure the amount of groundwater pumped on agricultural lands. Groundwater monitoring wells are installed, and additional wells will be installed along the recharge corridor which, along with streamflow measurements, will be used to determine the amount of water applied to the fields.
