Subject: Comments for May 6th Workshop on Order WR 2009-0027-DWR

4/23/09

Jeannie Townsend
Clerk to the Board
State Water Resources Control Board
1001 I Street
Sacramento, CA 95814

Randy Poole
General Manager/ Chief Engineer
Sonoma County Water Agency
PO Box 11628
Santa Rosa, CA 95406

Dear Chairman Hoppin and Members of the Board,

I am writing to express my concern regarding impacts related to Order 2009-0027- DWR and modifications in permit terms that would reduce those impacts. The reduction in flows will cause severe impacts to water quality, recreation, community water systems, over-summering juvenile salmon and Steelhead as well as the lower River economy that depends on a healthy Russian River.

I have lived in the lower River area for 10 years and have seen how the past low water years of 2004 and 2007 caused the river to become horribly degraded. I am particularly outraged that Vineyard s like Gallo can illegally divert water from the river to protect crops from frost, with little repercussion (a handslap of a \$67/day fine? You're kidding right?) . With this kind of criminal theft of water by the vineyards in the region, the river's valuable ecosystem and the lower river community which relies on tourism of a healthy river, are expected to pay the price. If there is low flow, the water will be too low to provide for valuable recreation that attracts tourists to the river area. Also, and more importantly, the ecosystems of the lower river area will suffer. I have witnessed a severe degradation in the quality of the river since I have been here, and 2004 and 2007 saw a visibly degraded water quality.

In order to reduce the impacts from reduced flows under Order 2009-0027-DWR we urge you on May 6 to take action to protect water quality and beneficial uses in the Russian River.
Specifically we urge you to:

- Increase frequency of chemical water quality monitoring to every two weeks with results posted promptly on a public website to proactively prevent water quality problems such as algae blooms from increased nutrient concentrations
- Include new provisions in the order to require flow changes in response to violations in water quality standards or as needed to protect juvenile ESA listed fish over the summer, the water agency released water to protect grapes from frost on April 14 to 16th so we expect increases to protect water quality as well
- Installation of additional gauges as needed to ensure instantaneous flow compliance levels are maintained, in 2004 and 2007 compliance levels were violated under previous orders
- A minimum of 25% mandatory conservation for SCWA customers and all users downstream of Dry Creek to help maintain flows and conserve water in case of multi-year drought.

- Mandatory conservation by all permitted water diversions upstream of Dry Creek including agricultural and rural residential diversions and streamside wells pumping underflow
- Additional prohibitions in the Order on diversions that are not permitted in critically dry conditions or if needed a separate order restraining those unpermitted diversions to protect water storage in Lake Mendocino and maintain higher flows
- Keep order prohibition on commercial turf irrigation in SCWA service area and expand to include all commercial turf using water from the Russian River

We believe that modifying the order to include these provisions will improve protection of water quality, juvenile endangered fish and likely result in somewhat higher flows due to reduced diversions. We greatly appreciate your consideration of our comments.

Sincerely,

Sabrina Alonso
