**Categories:** Yellow Category

I oppose the State Water Board's proposal to unjustifiably increase unimpaired flows on the Tuolumne River because such an increase will have potentially irreversible negative effects upon surface water supply availability, groundwater sustainability, jobs, labor income, tax base and the greater socioeconomic backbone of the regions served by Modesto Irrigation District (MID) and Turlock Irrigation District (TID).

Further, I implore State Water Board staff and board members to give greater consideration to the benefits of non-flow measures before considering this unfounded and misguided flow-first proposal.

Thank you,

Ted Heilman
