

# Multi-species ecosystem effects analysis & flow criteria evaluation

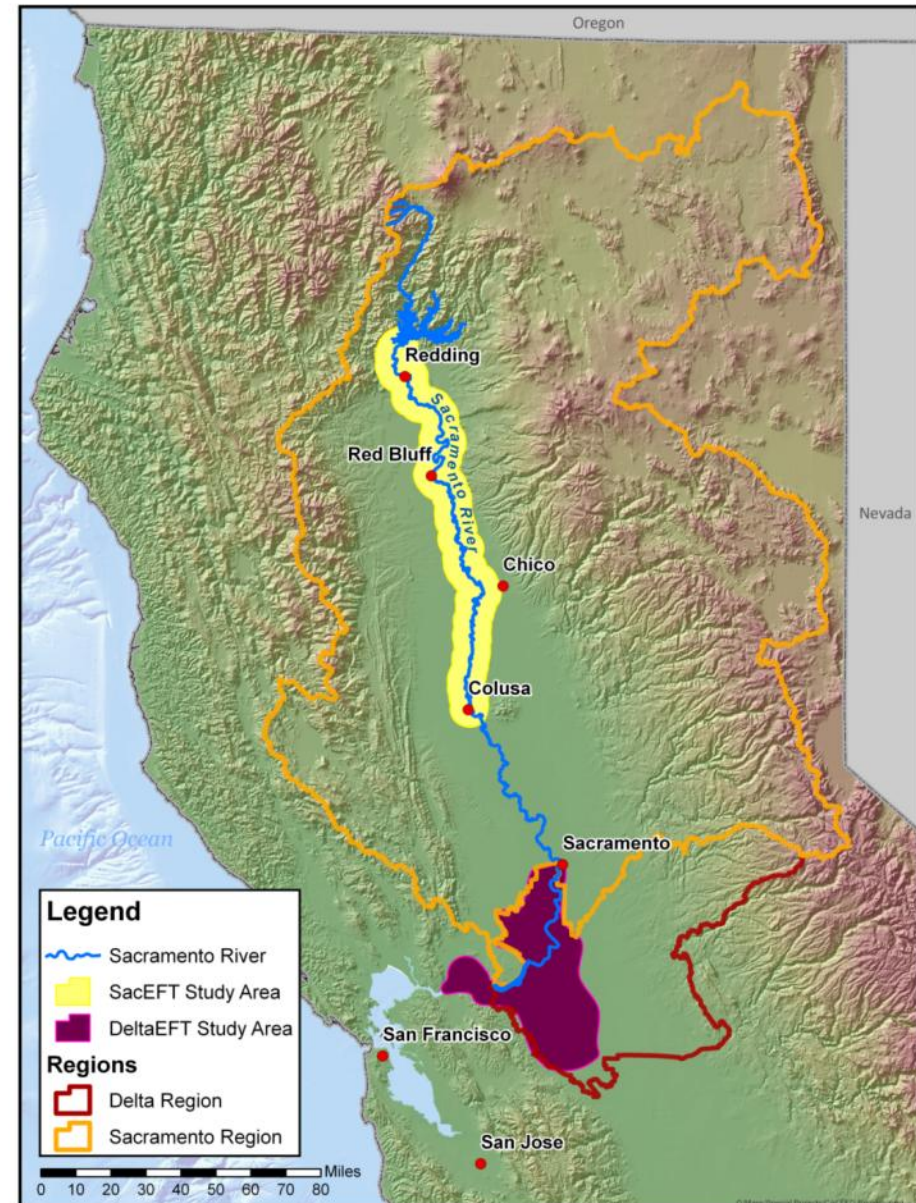

# DeltaEFT

Delta Ecological Flows Tool

# EFT's Geographical Scope

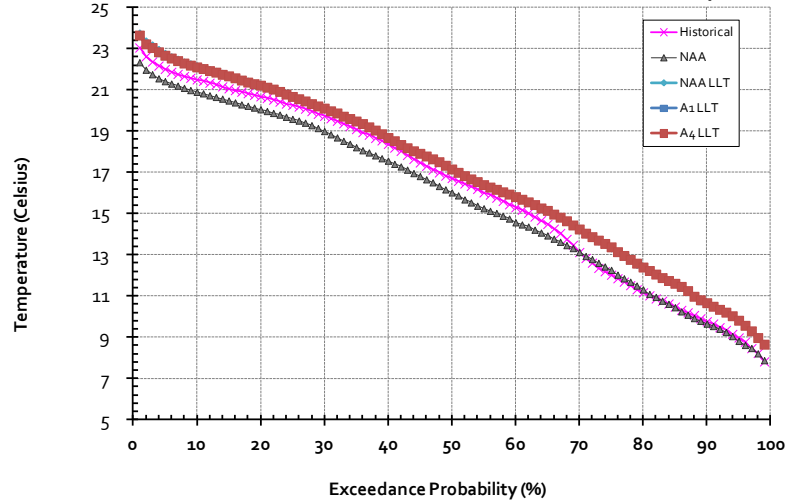

Sacramento EFT  
Keswick Dam to Colusa

Delta EFT  
Delta region including  
Suisun Marsh

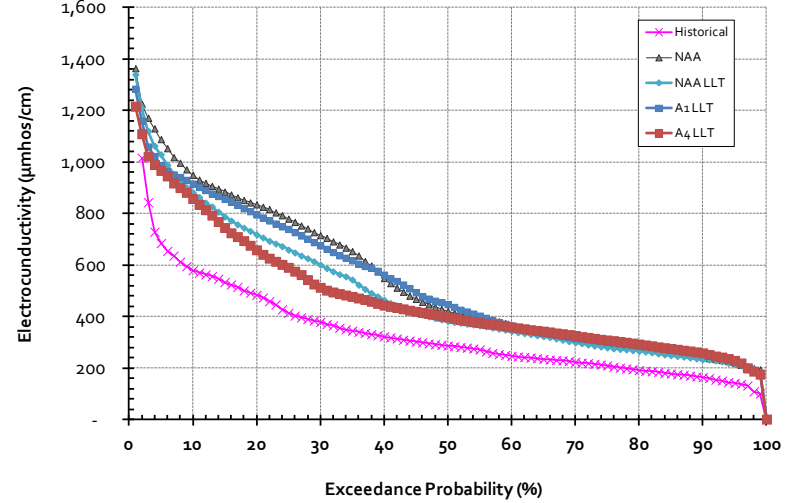

# Multiple management questions

SUISUN BAY A MALLARD IS CA: Temperature

OLD RA BACON ISLAND CA: EC

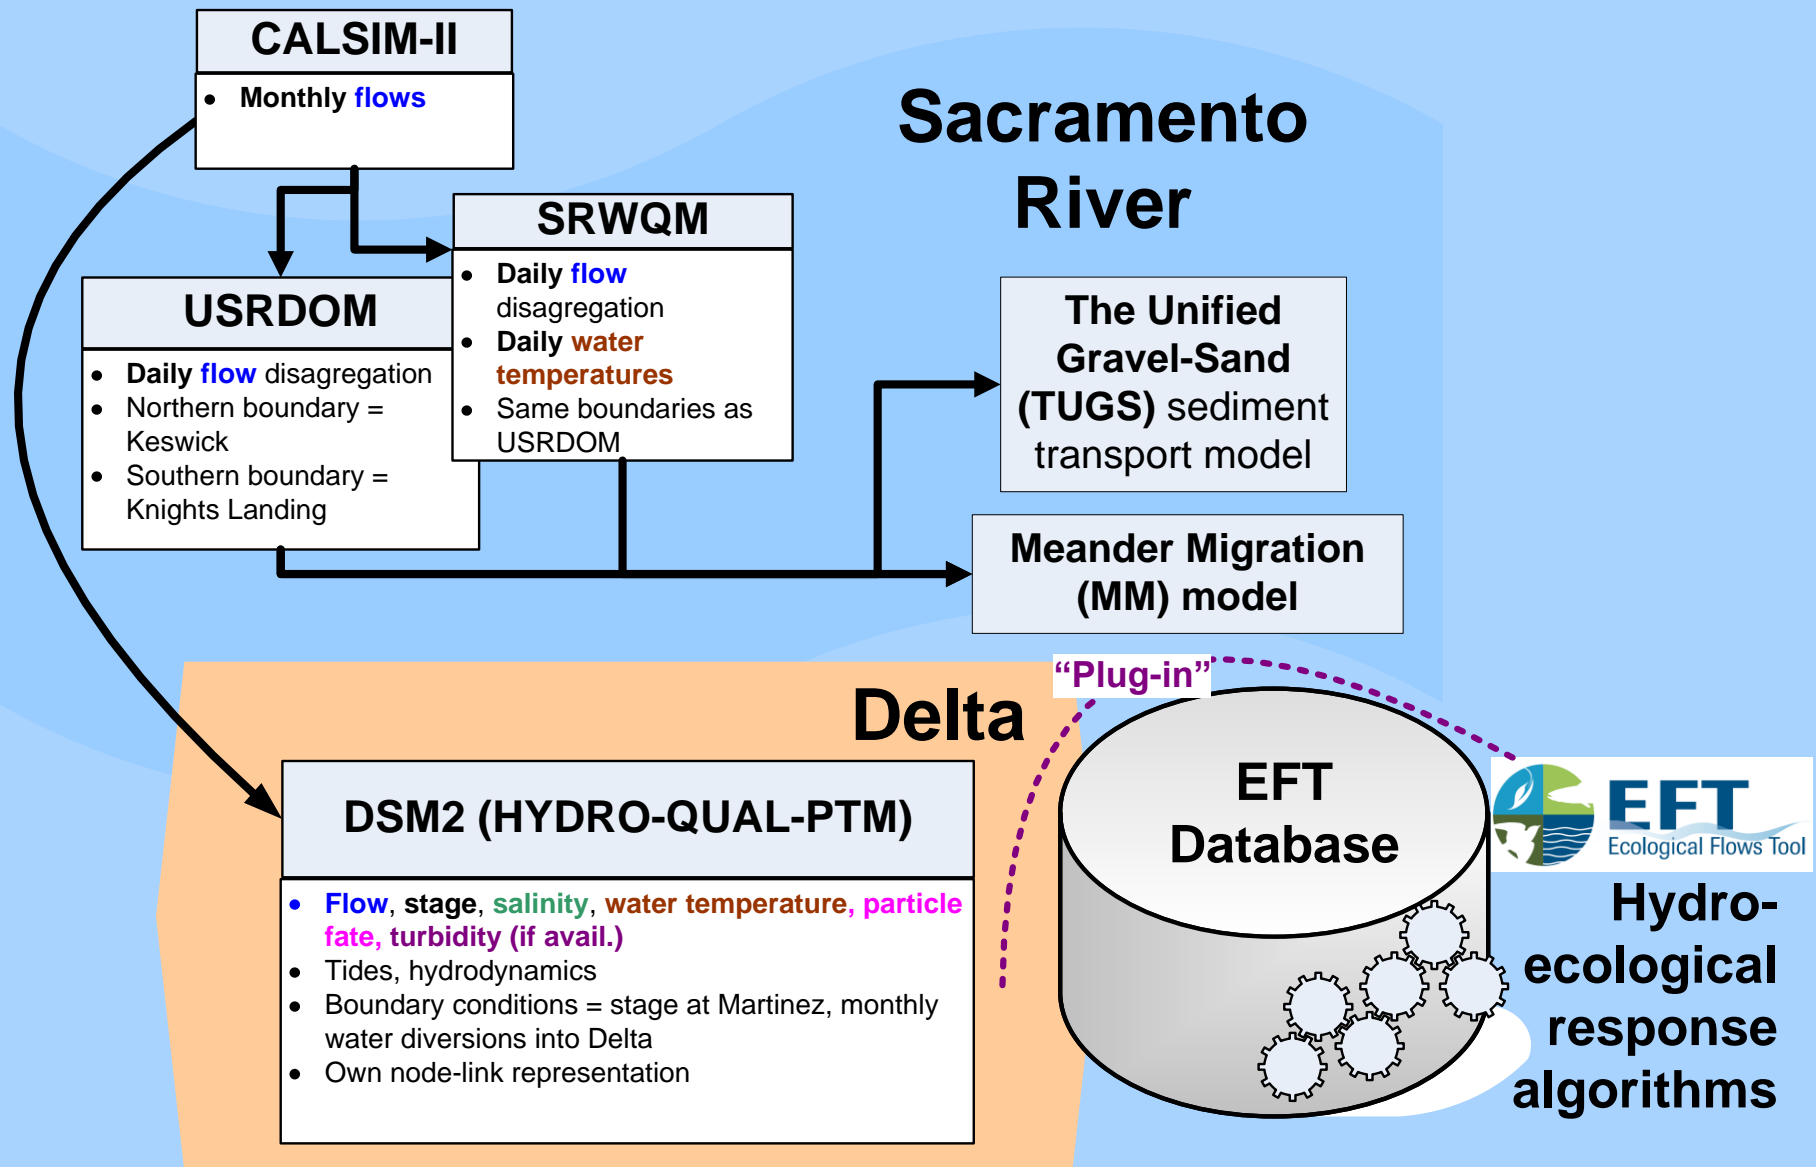

Water operation rules and guidelines. (e.g., flood Yolo bypass more frequently)

1969

# EFT: plug-in to preferred hydrologic & water quality models

# SacEFT focal species & habitats

**Steelhead**  
*(Oncorhynchus mykiss)*

**Chinook Salmon**  
*(Oncorhynchus tshawytscha)*

**Green Sturgeon**  
*(Acipenser medirostris)*

**Bank Swallow**  
*(Riparia riparia)*

**Western Pond Turtle** *(Clemmys marmorata)*  
Proxy: Large Woody Debris  
Recruitment

**Fremont Cottonwood**  
*(Populus fremontii)*

# DeltaEFT focal species & habitats

Steelhead  
(*Oncorhynchus mykiss*)

Chinook Salmon  
(*Oncorhynchus tshawytscha*)

Delta Smelt  
(*Hypomesus transpacificus*)

Splittail  
(*Pogonichthys macrolepidotus*)

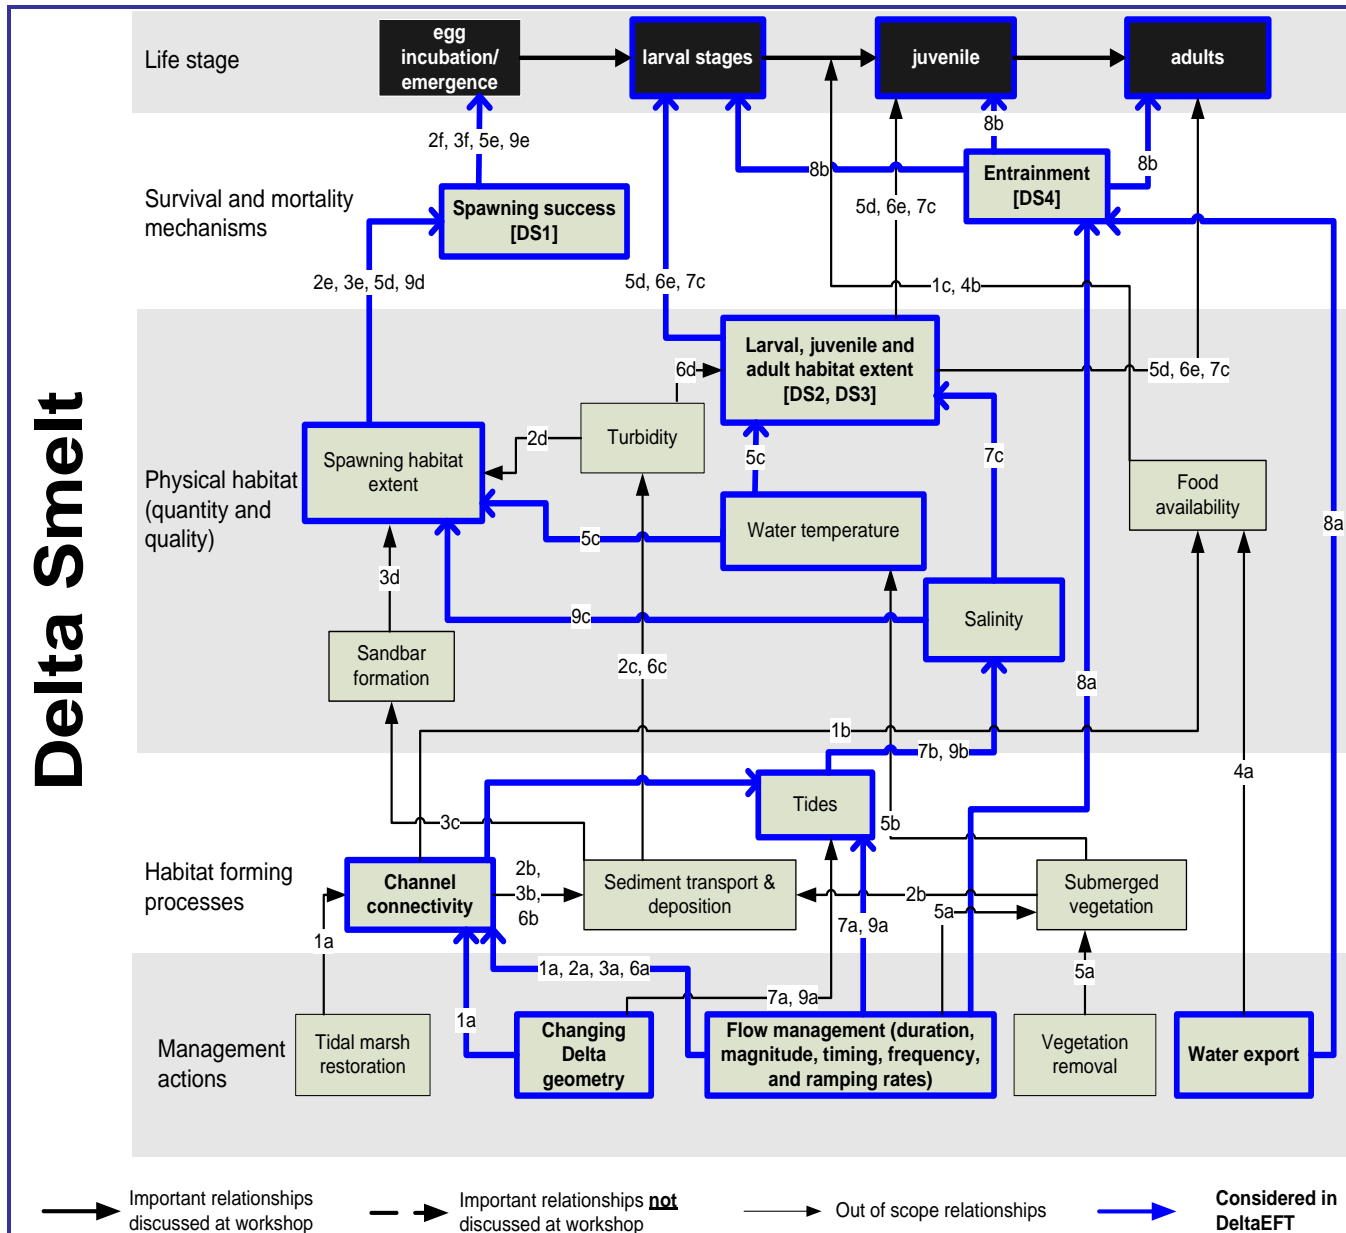

Tidal Wetlands

Invasive deterrence  
(*E. Densa*, *Corbicula*,  
*Corbula*)

# Performance indicators based on causally reasoned, functional relationships

# SacEFT indicators

	<b>Focal Species &amp; Habitats</b>	<b>Performance Measures</b>
<b>Sacramento River</b>	Fremont cottonwood (FC)	FC1 – Successful Fremont cottonwood initiation FC2 – Cottonwood seedling scour.
	Bank swallow (BASW)	BASW1 – Habitat potential/suitability BASW2 – Risk of nest inundation and bank sloughing during nesting
	Western pond turtle	LWD1 – Index of old vegetation recruited to the Sacramento River mainstem.
	Green sturgeon (GS)	GS1 – Egg-to-larvae survival
	Chinook salmon, Steelhead trout (CS)	CS1 – Area of suitable spawning habitat (ft <sup>2</sup> ) CS3 – Egg-to-fry survival (proportion) CS5 – Redd scour risk CS6 – Redd dewatering (proportion)
		CS2 – Area of suitable rearing habitat (ft <sup>2</sup> ) CS4 – Juvenile stranding (index)

# DeltaEFT indicators

	<b>Focal Species &amp; Habitats</b>	<b>Performance Measures</b>
<b>Delta Ecoregion</b>	Chinook & Steelhead (CS)	CS7 – Smolt weight gain in alt. migration corridors CS9 – smolt mortality index as a function of passage time (negatively correlated with CS7) CS10 – smolt temperature preference index (departures from optimum v. weight gain)
	Delta smelt (DS)	DS1 – spawning success index
		DS2 – index of habitat suitability
		DS4 – entrainment risk (index)
	Splittail (SS)	SS1 – proportion of maximum potential spawning habitat (index)
	Fresh / brackish tidal wetlands (TW)	TW1 – brackish wetland area
		TW2 – freshwater wetland area
	Invasive species deterrence (ID)	ID1 – Brazilian waterweed suppression
		ID2 (Corbula), ID3 (Corbicula) – invasive clam larvae and recruit suppression

# EFT: Not developed in a vacuum

# Cumulative Effects & Multiple Mechanisms (DeltaEFT)

<b>2060s</b>	Strong beneficial impact owing to project alternative and/or climate & demand state	<b>Impact measure</b>	<b>Baseline Reference Case NAA-Current vs. Alternative Scenarios</b>							
+5% to +9%	Small beneficial impact owing to project alternative and/or climate & demand state		<table border="1"> <tr> <td><b>NAA-LLT</b> (Scenario 225)</td> <td><b>A1-LLT</b> (Scenario 226)</td> <td><b>A4-LLT</b> (Scenario 228)</td> <td></td> </tr> </table>	<b>NAA-LLT</b> (Scenario 225)	<b>A1-LLT</b> (Scenario 226)	<b>A4-LLT</b> (Scenario 228)				
<b>NAA-LLT</b> (Scenario 225)	<b>A1-LLT</b> (Scenario 226)			<b>A4-LLT</b> (Scenario 228)						
-3% to +4%	Negligible impact owing to project alternative and/or climate & demand state									
-4%	Slight negative impact owing to project alternative and/or climate & demand state									
-5% to -9%	Small negative impact owing to project alternative and/or climate & demand state									
≤ -10%	Strong negative impact owing to project alternative and/or climate & demand state									

High-level summary:  
*% change in number of simulation years having a favorable rating*

Impact Measure	Sub-Metric	NAA-LLT (Scenario 225)	A1-LLT (Scenario 226)	A4-LLT (Scenario 228)
<b>Delta Smelt</b>	Spawning success (DS1)	0	0	0
	Habitat suitability (DS2)	0	0	0
	Entrainment risk (DS4)	0	6	11
<b>Splittail</b>	Splittail habitat (Yolo) (SS1)	2	82	82
<b>Tidal Wetlands</b>	Tidal wetland area (brackish) (TW1)	-35	-35	-35
	Tidal wetland area (freshwater) (TW2)	-29	-29	-29
<b>Invasive deterrence</b>	Egeria suppression (ID1)	-6	3	-3
	Corbula suppression (ID2)	0	-3	-3
	Corbicula suppression (ID3)	0	0	0
<b>Fall Chinook</b>	Yolo Bypass rearing (CS7)	-29	-29	-29
	Smolt temperature stress (CS10)	-12	-12	-12
	Smolt predation risk (CS9)	0	-6	-6
<b>Late Fall Chinook</b>	Yolo Bypass rearing (CS7)	-12	13	13
	Smolt temperature stress (CS10)	-6	-6	-6
	Smolt predation risk (CS9)	-6	-6	-6
<b>Spring Chinook</b>	Yolo Bypass rearing (CS7)	-6	0	0
	Smolt temperature stress (CS10)	-12	-12	-12
	Smolt predation risk (CS9)	-7	-7	-7
<b>Winter Chinook</b>	Yolo Bypass rearing (CS7)	-19	6	12
	Smolt temperature stress (CS10)	-31	-31	-31
	Smolt predation risk (CS9)	0	0	0
<b>Steelhead</b>	Yolo Bypass rearing (CS7)	-13	-13	-13
	Smolt temperature stress (CS10)	-6	-6	-6
	Smolt predation risk (CS9)	-6	-6	-6

# Key Message

The **climate of 2060s** (and its associated sea level) + increased human water demands = **strong downward impacts on most DeltaEFT performance measures**

Exceptions: 1) Yolo Bypass habitats, which benefit from notching of the Fremont Weir under the A1 and A4 alts and 2) Delta smelt entrainment which is reduced by lessening of frequency of reverse flows in Old and Middle Rivers under A1/A4 operations.

DeltaEFT - Delta Smelt Entrainment Report

Old and Middle River (OMR) Flows

Old and Middle River (OMR) Flows

# Question 1: What types of analyses should be completed?

1. Determine priorities for ecological needs & develop alternative ecological flow regimes x water year class
  - Include both flow and non-flow actions
2. Test alternative eFlow regimes (& paired non-flow actions) vs. other beneficial uses.
  - What would these guidelines do to ability to meet established rights & standards? Which ones have least impact on water deliveries, power production, water temperatures, etc.?

# Question 1: What types of analyses should be completed?

3. Effects on major linked eco-regions (Sacramento, San Joaquin).
4. Develop more specific statements of frequency different targets needed & characterize within year trade-offs (e.g., “species  $x$  over species  $y$  if...”).
5. Resilience of strategies vs. future climate change effects on water supplies, demand and sea level.

# Question 2: What tools should be used?

## Advantages & limitations?

Tool	DeltaEFT, SacEFT
Advantages	Limitations
<ul style="list-style-type: none"><li>• More representative: <b>multiple focal species &amp; habitats.</b></li><li>• <b>Rapid scenario comparison</b> – trade-offs in one framework.</li><li>• <b>Eco-regions linked: Sacramento &amp; Delta.</b></li><li>• <b>Broad synthesis of science &amp; advice of experts.</b></li><li>• Evaluate <b>multiple actions</b> (<i>gravel, channel migration, floodplain activation, conveyance, operations</i>).</li><li>• <b>Intuitive outputs simplify communication.</b></li><li>• <b>Speed / agility</b> – EFT effects analyses can be run in “days” and “weeks” (rather than months/years).</li><li>• <b>Plug-in</b> to <u>any</u> hydrodynamic / water quality model.</li><li>• <b>Extensible. Improve/add</b> performance indicators as science evolves. Design anticipates being refined over time.</li><li>• <b>“Goldilocks” level of detail.</b> Not as data hungry &amp; assumption rich as life-cycle models.</li></ul>	<ul style="list-style-type: none"><li>• Does not permit a definitive assessment of population level benefits (not a life-cycle tool).</li><li>• As with other tools, criteria &amp; thresholds identified by EFT need to be accompanied by monitoring &amp; adaptive management.</li><li>• Does not consider effects on other beneficial uses (water deliveries, power, etc.)</li><li>• Not applicable to real-time decision making.</li></ul>

# Question 2: What tools should be used? Advantages & limitations?

Tools	WEAP, CALVIN, CALSIM-USRWQM/USRDOM, DSM2, <b>etc.</b> & related hydro-power, water temperature models	
Advantages	Limitations / Challenges	
<ul style="list-style-type: none"><li>• <b>Numerous.</b> These tools have multiple applications &amp; are <i>essential</i> to planning.</li><li>• Physical hydrosystem effects on water deliveries, storage, exports, water temperature, power generation, flood control for SWP and CVP.</li><li>• Scenario evaluation - tradeoffs.</li></ul>	<ul style="list-style-type: none"><li>• Options for integrating and <u>accurately representing</u> ecological criteria / guidelines into operations.</li><li>• Ability to “unwind” and “re-constrain” hydrosystem to rapidly evaluate ecological flow regime criteria (rather than simply cumulatively add ever more low-priority constraints).</li><li>• Economic evaluations not always included. (Including economic benefits of fish/wildlife/recreation).</li><li>• Future climate / sea level / demand and resilience of boundary conditions &amp; calibration assumptions?</li></ul>
