

Governor Brown,

The State Board is moving too fast. Implementation of your order needs to be balanced across differing climate zones. I'm being pressured with many issues that your order is not sensitive to.....such as, process water for power plants in my district that contribute 600+megawatt of voltage stability and generation to the grid. Also, football/soccer field player safety on fields in valley communities where temperatures are higher than coastal communities. I want to make your conservation goal work, but the State Board's rush to regulate is creating confidence problems with your constituency.

Harry Starkey
