**Subject:** Water Control for Rolling Hills

Dear Sir/Madam:

36% reduction that is more than one in 3 water sprinklers to be stopped. For 2 yrs I have been reducing my water consumption for showers and land. While I have a big land, but 80% of them down the hill having no sprinklers. Balance 20% I have reduced water consumption already. Further consumption is only going to make it a desert. It is not fare to tag Palos Verdes area for 36% while others at 15%.

**A fare approach is to have everyone reduce 25% water consumption from their prior water bills, not penalize one more than the other. We all use water and we all should reduce by the same%.**

**Please consider and make it a fare reduction for all. Thank you.**
