E. **Purpose of Use** – Specify number of acres irrigated, stock watered, persons served, etc.

Irrigation 10,000 acres; Stockwatering _____; Domestic _____;
Other (specify) AGRICULTURE

Parcel Number(s) of Place of Use: 017-110-033-000

F. **Changes in Method of Diversion** – Describe any changes in your project since your previous statement was filed. (New pump, enlarged diversion dam, location of diversion, etc.)

G. Please answer only those questions below which are applicable to your project.

1. Conservation of water

a. Are you now employing water conservation efforts? YES NO ___

Describe any water conservation efforts you have initiated:

See Attached Conservation Policy

b. If you are claiming credit for water conservation under section 1011 of the Water Code for your claimed pre-1914 appropriative right, please show the amount of water conserved:

Reduction in Diversions:

Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

Reduction in consumptive use:
Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

I have data to support the above surface water use reductions due to conservation efforts. YES _____ NO _____

2. Water quality and wastewater reclamation

- a. Are you now or have you been using reclaimed water from a wastewater treatment facility, desalination facility or water polluted by waste to a degree which unreasonably affects such water for other beneficial uses? YES _____ NO X
- b. If you are claiming credit due to the substitution of reclaimed water, desalinated water or polluted water in lieu of a claimed pre-1914 appropriative right under section 1010 of the Water Code, please show amounts of reduced diversions and amounts of substitute water supply used:

Amount of reduced diversion:
Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

State the type of substitute water supply: _____

Amount of substitute water supply used:
Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

I have data to support the above surface water use reductions due to the use of a substitute water supply. YES _____ NO _____

3. Conjunctive use of surface water and groundwater

- a. Are you now using groundwater in lieu of surface water? YES _____ NO X
- b. If you are claiming credit due to the substitution of groundwater for a claimed pre-1914 appropriative right under section 1011.5 of the Water Code, please show the amounts of groundwater used:

Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

I have data to support the above surface water use reductions due to the use of groundwater. YES _____ NO _____

I understand that it may be necessary to document the water savings claimed in "F" above if credit under Water Code sections 1010 and 1011 is sought in the future.

I declare that the information in this report is true to the best of my knowledge and belief.

CONTINUATION

GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA

There are two principal types of surface water rights in California. They are riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return flows from use of groundwater, or other "foreign" water to the natural stream system.

An appropriative right is required for use of water on non-riparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. After the formation of the California Water Commission back on December 19, 1914, new appropriators have been required to obtain a permit and license from the State. Appropriative rights can be granted to waters "foreign" to the natural stream system.

Statements of Water Diversion and Use must be filed by riparian and pre-1914 appropriative water users as set forth in Water Code section 5100 with specific exceptions. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversions, and (3) assists the State to determine if additional water is available for future appropriators.

The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include: (1) Statements of Water Diversion and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

DIV. OF WATER RIGHTS
SACRAMENTO

GLENN-COLUSA IRRIGATION DISTRICT WATER MANAGEMENT AND CONSERVATION POLICY

I. INTRODUCTION

The Board of Directors requests your careful attention to the District's Water Management and Conservation Policy so that it may be implemented to maximize water management and water conservation this year. It is a strong Program that requires cooperation and close communication between water users and District personnel. As in the past, the Program will be monitored and enforced to ensure its success. The Board will consider future recommendations to improve the Program and you will be notified, in writing, of any revisions during the course of the season.

IT IS THE DISTRICT'S STAFF AND EACH WATER USER'S OBLIGATION TO MAKE THIS WATER MANAGEMENT AND CONSERVATION PROGRAM A SUCCESS.

II. GENERAL WATER MANAGEMENT AND CONSERVATION PROVISIONS

1.0 **Incorporation into the District's Rules and Regulations:** In addition to the following special water management and conservation measures which are hereby incorporated within the *Rules and Regulations* of the District, all District *Rules and Regulations* must be complied with in order to avoid violation and substantial monetary penalties. Copies of the *Rules and Regulations*, together with this Water Management and Conservation Policy, are available upon request, and all water users are required to review them prior to irrigating.

2.0 **Designation of "responsible party":** In order to promote direct communications between the District and the persons responsible for irrigation practices, the water application forms include a place to designate a person responsible for irrigating to be contacted in the event of a problem. "Responsible party" is the term used throughout the Water Management and Conservation Policy. "Responsible party" could include landowner, tenant, designated irrigator, or another agent associated with the water applicant. However, the landowner has the ultimate financial responsibility for unpaid violations of the Water Management and Conservation Policy.

3.0 **Acreage measurements:** Responsible parties are reminded that all measurements of acreage will be based upon the District maps and figures.

4.0 **Water quality:** The District will monitor water quality at key points within its water distribution system, and blend water supplies as necessary to maintain water electrical conductivity equal to or less than 1.00 ds/m throughout the distribution system.

5.0 **Waste of water:** Rule 16 of the Glenn-Colusa Irrigation District's *Rules and Regulations* states "If, in the opinion of the District Manager, a consumer is wasting water, either willfully, carelessly, negligently or on account of defective private conduits, the District may refuse the delivery of water until the wasteful conditions are remedied, or the District may reduce the water inflow into the consumer's fields to a flow that would be reasonable if such wasteful conditions were remedied. Wasteful water use practices include, but are not limited to, (1) using water on roads, vacant land, or land previously irrigated, (2) flooding any portions of a consumer's land to an unreasonable depth or using an unreasonable amount of water in order to irrigate other portions of such land, (3) using water on land that has been improperly prepared for the economical use of water, and (4) allowing an unnecessary amount of water to escape from any tailgate. The District Manager reserves the right to refuse delivery of water when, in the opinion of the District Manager, the proposed use, or method of use, will require excessive quantities of water which constitute waste."

6.0 **Water orders and changes in water deliveries:** The District will strictly enforce its rule that all water orders and changes in water deliveries must be requested no later than 1:00 p.m., each day and all water orders must include the field delivery turnout number. Under most circumstances, the requested water will be delivered 24 hours later (the next day); however, system conveyance constraints may require up to 3 days to fulfill some requests (Rule 13 of the *Rules and Regulations*). **ALL WATER MUST BE ORDERED PRIOR TO DELIVERY USING THE FIELD DELIVERY TURNOUT NUMBER.**

7.0 **No alterations of gates and valves:** The responsible party or their designated irrigator are strictly prohibited from altering a District valve, gate, or water delivery facility under the terms of this Water Management and Conservation Policy and the District *Rules and Regulations*. During a constraint period, a meter will not be utilized to limit capacity delivered to a responsible party until all responsible parties have been metered.

III. RICE LANDS – SPECIAL WATER MANAGEMENT AND CONSERVATION RULES

1.0 **Rice field spillage provisions:** Water may be reasonably spilled from rice fields using the following method, provided that it is implemented, enforced, and monitored by the responsible party: **Each field must be fitted with a standard approved measured weir board containing a notch as specified on the attached Exhibit "A". In addition, a 3-1/2" board must be placed on top of the notched weir board to allow for greater operational flexibility and day to day fluctuations (a standard, finished 2"x 4" or 1"x 4" will be accepted). Any flow over the top of these boards will be deemed to be a violation of the Policy. Due to the potential for smaller fields with smaller notches to experience notch plugging causing a higher incidence of flow fluctuations, rice fields of 50 acres or less may substitute a 50 acre notched board with a board on top, or a notched board without a board on top with equal flow potential (contact your water operator for notch sizes required without a board on top). When using the notched board without a board on top, any flow above the notch will be deemed a violation of the Policy.**

2.0 **Exemption for release of water:** During the stand establishment period or other water quality situation, there will be an exemption for release of additional water, over and above the spillage allowed under Section III, 1.0. This will require a 24-hour notice and coordination with the District and can be allowed and employed under one of the following two conditions:

(i) **Crop stress:** If a field develops a toxicity or water condition which threatens a portion of the crop, the responsible party may apply to the District watermaster or his designee for an additional release of water. In addition, he must demonstrate evidence of pH, water quality or other source of the water problem. He must also provide a written recommendation from a licensed PCA, who has personally inspected the problem field. The District will act upon the recommendation within 24 hours after the receipt of all required support information. The notice must designate the

field, and the District's drain into which the water will be drained. If herbicides prevent the water from being drained into a District drain, the responsible party will designate the number of set aside acres, not to exceed 5% of his irrigated acreage, into which drainage water will be ponded. The grower will not make a release or take action until approval is obtained from the watermaster. Release under this provision will not be subject to an additional charge.

(ii) **"Leathers Method" rice stand establishment:** No release of water may occur until the grower has placed an order, 24 hours in advance, with the water operator of his intent to release an amount of water in excess of that allowed under Section III, 1.0, above. When the demand for water during the spring flooding season exceeds the District's ability to deliver, a first-come, first-served system of priority is normally employed for fields drained under the "Leathers Method".

3.0 **Maintenance of field water facilities and associated works:** Prior to commencement of irrigation water deliveries, the designated rice field drainage box(s) to be fitted with the notched weir board with a board on top must be identified to the water operator. The approved method for draining must be installed and maintained at all times.

4.0 **Drainage of water during the crop maturation period:** Drainage of water from rice fields during the crop maturation period, which is not covered under Sections III, 1.0, and 2.0, must be coordinated with the water operator. Requests for drainage must be made 24 hours in advance, and may be granted on a limited case by case basis.

5.0 **Draining rice fields at the end of the season:** At the end of the irrigation season, the responsible party must terminate water deliveries at least two (2) days prior to requesting the release of water for the purpose of draining and drying his fields. The request must be made to the water operator at least 24 hours before the date the responsible party proposes to release the water. The water operator will coordinate all drainage to ensure the capacity of the drains is not exceeded, to avoid flooding of adjacent fields. No charge will result from end of season draining under this provision.

IV. OTHER CROPS – WATER MANAGEMENT AND CONSERVATION RULES

Growers are expected to irrigate efficiently and are encouraged to conserve water whenever and wherever possible. When irrigating crops other than rice such as row crops, orchard or pasture, a "reasonable" spill shall be allowed at the end of the field. A "reasonable" spill will be defined as that amount of spill which could be assumed as necessary to allow sufficient coverage and penetration of water for the applicable crop. Any spill in excess of "reasonable" will be deemed a violation of this Policy and will be subject to monetary penalties in accordance with Section V 4.0 of this Policy.

V. VIOLATION PROVISIONS

1.0 **Uniform enforcement:** The District will, to the degree practicable, employ uniform practices regarding monitoring and enforcing its conservation rules. The General Manager and Board will enforce the Water Management and Conservation Policy.

2.0 **Water loss due to rodents, crayfish, or other unanticipated causes:** If an interior or exterior field berm, levee, pipe, or ditch is breached due to rodents, crayfish or other unanticipated causes, and water is lost, no violation will be pursued so long as the responsible party provides for immediate repair of the breach within 12 hours of its discovery by the responsible party, District or any other source. Notice of the breach must be provided to the District immediately by the responsible party.

The responsible party will not be allowed any increased water delivery due to the loss of water in the field, and the delivery gate(s) will be fixed at the flow rate(s) ordered prior to discovery of the breach for five days following the repair of the breach.

3.0 **Determination of violation:** Without excluding other violations previously mentioned, any form of violation such as a failure to notify the water operator of drainage, a breach or loss of water not caused by rodents, crayfish or other causes which cannot be anticipated, or any other violations of these special conservation rules, shall be deemed a violation and notice shall be promptly provided to the person accepting financial responsibility on the water application. Once the first violation has been issued, District staff will attempt to contact the responsible party by telephone to help avoid a second violation and allow the situation to be corrected as quickly as possible. A failure by the District to notify the responsible party shall not invalidate the violation notice.

4.0 **Monetary penalties:** A violation upon a field will give rise to monetary penalties. The other powers of the District as provided in the *Rules and Regulations* are also available. The charge for the first violation shall be Two Hundred Fifty Dollars (\$250.00). The second violation upon a field, whether or not it is of the same rule, or a result of the same condition or circumstance, shall give rise to a charge of Five Hundred Dollars (\$500.00), and the charge for the third or subsequent violations upon a field shall be Seven Hundred Fifty Dollars (\$750.00).

5.0 **Written notice of violation:** Written notice of the violations will be delivered by mail to the person accepting financial responsibility on the water application and will be payable within ten (10) days of the billing date. Failure to pay the violation within 10 days of the billing date of the notice of violation will result in an additional charge of ten percent (10%) of the total water charge for all of the acres within the field. If the grower chooses to appeal the violation to the General Manager, fines will not be collected until after the appeal hearing. Any protests must be received promptly, in writing, no later than ten days after receipt of the violation and include the water user's detailed account of the alleged violation.

NONE

F. Please answer only those questions below which are applicable to your project.

1. Conservation of water

a. Are you now employing water conservation efforts? YES NO

Describe any water conservation efforts you have initiated: The District regulates and monitors the amount of tailwater leaving irrigation lands. The District also uses a total of 37 drain recapture sites within its boundaries, reclaiming an average of 164,000 acre-feet annually.

b. If you are claiming credit for water conservation under section 1011 of the Water Code for your claimed pre-1914 appropriative right, please show the amount of water conserved:

Reduction in Diversions:

Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

Reduction in consumptive use:

Year _____ (AF/MG) Year _____ (AF/MG) Year _____ (AF/MG)

I have data to support the above surface water use reductions due to conservation efforts. YES _____ NO _____

ITEM	CONTINUATION

GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA

There are two principal types of surface water rights in California. They are riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return flows from use of groundwater, or other "foreign" water to the natural stream system.

An appropriative right is required for use of water on non-riparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State. Appropriative rights can be granted to waters "foreign" to the natural stream system.

Statements of Water Diversion and Use must be filed by riparian and pre-1914 appropriative water users as set forth in Water Code section 5100 with specific exceptions. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversions, and (3) assists the State to determine if additional water is available for future appropriators.

The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include: (1) Statements of Water Diversion and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

SUPPLEMENTAL STATEMENT OF WATER DIVERSION AND USE

If the information below is inaccurate, please line it out in red and provide current information.
 Notify this office if ownership or address changes occur during the coming year.

PLEASE COMPLETE AND RETURN THIS FORM BY JULY 1, 1999

OWNER OF RECORD: GLENN-COLUSA IRRIGATION DIST

GLENN-COLUSA IRRIGATION DIST
 PO BOX 150
 WILLOWS, CA 95988

STATEMENT NO: S007368

SOURCE: COLUSA BASIN DRAIN, MILE 29.84
 TRIBUTARY TO: SACRAMENTO RIVER
 COUNTY: COLUSA
 DIVERSION

TELEPHONE NUMBER:
 (530) 934-8881
 YEAR OF FIRST USE: 1920
 PARCEL NO:

WITHIN: NW¼ OF NW¼ SECTION 31, T15N, R1W, MB&M.

A. Water is used under: Riparian claim _____ Pre 1914 right X Other (explain): _____

B. Year of first use (Please provide if missing above) _____

C. Amount of Use - Enter the amount of water used each month. If monthly and annual use are not known, check the months in which water was used.

Amounts below are: Gallons _____ Acre-feet X Other _____

Year	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	Total Annual
1996	0	0	0	0	1121	798	3875	3664	141	0	0	0	9599
1997	0	0	0	190	1930	2944	2782	1645	0	0	0	0	9491
1998	0	0	0	0	704	77	3484	3613	308	0	0	0	8186

D. Purpose of Use - Specify number of acres irrigated, stock watered, persons served, etc.

Irrigation 9520 acres; Stockwatering _____; Domestic _____;

Other (specify) _____

E. Changes in Method of Diversion - Describe any changes in your project since your previous statement was filed. (New pump, enlarged diversion dam, location of diversion, etc.)

None

F. Please answer only those questions below which are applicable to your project.

1. Conservation of water

- a. Describe any water conservation efforts you may have started: The District regulates and monitors the amount of tailwater leaving irrigated lands. The District also uses a total of 38 drain recapture sites within its boundaries, reclaiming an average of 150,000 acre-feet annually.
- b. _____

c. If credit toward beneficial use of water under claimed pre 1914 appropriative water right for water not used due to a conservation effort is claimed under section 1011 of the Water Code, please show the amounts of water conserved:

19 _____ (af/mg) 19 _____ (af/mg) 19 _____ (af/mg)

2. Water quality and wastewater reclamation

- a. Are you now or have you been using reclaimed water from a wastewater treatment facility, desalination facility or water polluted by waste to a degree which unreasonably affects such water for other beneficial uses? YES _____ NO X

STATE WATER RESOURCES CONTROL BOARD
DIVISION OF WATER RIGHTS
P.O. BOX 2000, SACRAMENTO, CA 95812-2000
(916) 657-2170

b. If credit toward use under a claimed pre 1914 appropriative water right through substitution of reclaimed water, desalinated water or polluted water in lieu of appropriated water is claimed under section 1010 of the Water Code, please show amounts of reduced diversions and amounts of reclaimed water used:

19 _____ (af/mg) 19 _____ (af/mg) 19 _____ (af/mg)

3. Conjunctive use of surface water and groundwater

a. Are you now using groundwater in lieu of surface water? YES _____ NO X

b. If credit toward use under a claimed pre 1914 appropriative right through substitution of groundwater in lieu of appropriated water is claimed under section 1011.5 of the Water Code, please show the amounts of groundwater used:

19 _____ (af/mg) 19 _____ (af/mg) 19 _____ (af/mg)

ITEM CONTINUATION

GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA

There are two principal types of surface water rights in California. They are riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or divert water which originates in a different watershed, or return flows from use of groundwater.

An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State.

Statements of Water Diversion and Use must be filed by riparian and per 1914 appropriative water users. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversions, and (3) assists the State to determine if additional water is available for future appropriators.

The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include: (1) Statements of Water Diversion and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

INSTRUCTIONS: Please complete Items A, B and C. Item D should be completed if you replaced all or part of your regular water supply with reclaimed or polluted water. RETURN THIS FORM BY JULY 1, 1989. (Additional information on reverse side of this form.)

A. Amount of Use - Fill in the amount of water used each month. If monthly and annual use are not known, check the months in which water was used. Amounts below are: Gallons Acre-feet _____ (other)

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Total Annual
1986	0	0	0	0	0	0	0	0	0	0	0	0	0
1987	0	0	0	0	270	540	20	40	0	0	0	0	1190
1988	0	0	0	0	190	710	1500	1740	70	0	0	0	4210

B. Purpose of Use - Specify number of acres irrigated, stock watered, persons served, etc.

Irrigation Irrigation of agriculture lands (mainly rice). 9520 acres of

Stockwatering water diverted under this license is comingled with water diverted

Domestic under other licenses. 9520 acres based on actual acres in service

Other (specify) area.

C. Changes in Method of Diversion - Describe any changes in your project since your previous statement was filed. (New pump, enlarged diversion dam, location of diversion, etc.)

None

D. If part of the water listed in Part A consists of reclaimed or polluted water, please indicate the annual amounts of reclaimed or polluted water in the space below.

All of the above
